Those two *Iesuites* went to *Sciauquin*, and offered their Watch with a triangle Glasse presenting variety of colours, a thing admired of the *Chinois* as a precious Iewell: both which were exceeding welcome to the Vice-roy, who assigned them a conuenient station in a Suburbian Temple, called *Thien-min-zu*, whither he often sent them diuers viands, and often admitted them in Visitation to his Palace. There they abode foure or fiue moneths, often visited in that Temple by principall men and Magistrates of the Citie, and were in hope of their perpetuall continuance, hauing obtayned licence of the Secretarie also for *Ricius* to come, who was preparing for the Voyage, when all was disturbed on a sudden, the Vice-roy being I know not for what fault, depriued of his place. He fearing least in the chiefe Citie the presence of Strangers might further hurt him, dismissed the *Iesuites* so, as hee permitted them to stay at *Canton*, commanding the Magistrate there to prouide them a house and ground. The *Chinois* call that Citie *Quam-chen* which the *Portugals* (by the name of the Prouince deluded) call *Canton*. They well knew that his commission was of no force, yet they went, and the *Haitau*, to whom the Charter was directed was absent, and no regard being had thereof, they were not permitted to ascend the bankes, and therefore with griefe returned to *Amacao*. *Pasius* presently sayled according

Iesuites first *China* station. Three cornered Glasse. *Quam-chen* the true name of *Canton*.

cording to the Viſitors appointment to *Iapon*, and after diuers yeeres labour there, was Vnder-prouinciall of the *China* and *Iaponian* Miſſions: and when both of thoſe expeditions were by the Generals order made a Prouince, he was declared Viſitour thereof, and came to *Amacao*, to take order for *China*, where within few moneths he died.

Paſius dieth long after.

§. II.

Iaponian *Embaſſage to the Pope*; *Of* Nabunanga *and* Quabacondono *their gouernment*; Corai *inuaded, Embaſſage from* China, TAICOSAMAS *Temple, and* OGOSHOSAMAS *ſucceſſion.*

HAuing mentioned that Embaſſage of *Iaponian* Kings ſent to the Pope by procurement of the *Ieſuites*, out of their writings I haue heere added for further illuſtration, the acts of the publike Conſiſtorie in this forme of words.

Iaponian Embaſſage to the Pope. *Ed dit Hen. Cuickius.*

Pope *Gregorie* the thirteenth, ſitting in the Hall deſigned for entertaynment of Kings, and their Embaſſages on the three and twentieth of March, 1585. in the morning, in a moſt ample Seſſion of the Cardinals of the Holy *Romane* Church, and in a great aſſembly of Princes and Prelates with greateſt induſtry, and moſt frequent attendance of all Orders: *Mantius* and *Michael* (who was alſo of the Prince of *Omur*) two Legates of *Iaponian* Kings, were brought in, and one of the two *Iaponian* companions of the ſame Embaſſage, of principall Nobilitie, to wit, *Martine*, for *Iulian* the other of them was withholden by ſickneſſe.) After ſolemne adoration of the Pope, and the kiſſes of his bleſſed feet, receiued of him with great demonſtration of beneuolence and charitie, they went aſide into a place appointed them with great modeſtie. Afterwards, the Letters of the Kings which they had brought are publikely read, being tranſlated out of the *Iaponian* Tongue into the *Italian*, and thence into the *Latine*. Firſt, that

King of *Bungos* Letter.

of *Francis* King of *Bungo*, who therein profeſſeth the *Diuine bountie in ſending the* Ieſuites *foure and thirtie yeeres before into thoſe parts, whoſe ſeed had taken ſome rooting in his breaſt, which hee aſcribes to the Popes prayers and merits. And had it not beene for his age, warres, and ſickneſſe, hee would haue viſited thoſe holy places, and haue kiſſed his holy feet, and ſet them on his head, and receiued his bleſſing, his breaſt croſſed by his moſt holy hand: but ſo detayned, had thought to haue ſent his ſiſters ſonne, the Lord* Ierome, *Sonne of the King of* Fiunga *his Embaſſadour, whoſe Couſin-german* Mantius *in his abſence he now ſent; thankes him for the Relikes ſent him, &c. Ian.* 11. 1582. Inſcribed, *To the great and moſt holy Pope to be adored, and holding on Earth the place of the King of Heauen.* Subſcribed, Francis *King of* Bungo, *proſtrate at your Bleſſedneſſe moſt holy feet.* Not much vnlike was the tenour of the ſecond Letter, ſent from *Protaſius* King of *Arima*, who detayned by diuers lets, had ſent his Couſin-german in his roome, to his *Holineſſe, which with ſincere and humble minde hee adoreth.* Inſcribed, *To the great and holy Lord whom I adore, holding the roome of God.* The Prince of *Omur* ſent alſo the ſaid *Michael* his Brothers Sonne with a Letter of like import, inſcribed. *With lifted vp hands adoring I offer theſe to the moſt holy Lord the Pope, Vicar of the great God.* Subſcribed in ſubſtance as the firſt.

After this, ſilence was commanded; and in the name of the ſaid Kings and Legates, *Gaſper Gonſaluas* a *Portugall Ieſuite* made an Oration vnto the Pope, comparing and preferring this Embaſſage with that of certaine *Indians* to *Auguſtus*, and the conuerſion of *Britaine* by the firſt *Gregorie* with this of *Iapon*, and other Ilands by the Thirteenth, ſucceeding * and exceeding that, now fallen from the Pope; applying *Eſays* Prophecies of the Churches encreaſe to this *Ieſuits-call* Haruеſt, and magnifying the great glories of that Pope, founder of Seminaries, and magnified *extra anni Soliſq; vias*. *Antonio Buccapadulio* anſwered in the name of the Pope, *That* Francis *King of* Bungo, Protaſius *King of the* Arimans, *and* Bartholmew *his Vncle, Prince of* Omur, *hath ſent you their kinſmen to him from the remote* Iaponian *Ilands to the veneration of that power in preſence, which by Gods bounty he holdeth, they haue done godly and wiſely. For there is one Faith, one* Catholike *Church, one made Gouernour ouer the ſaid Church, and Paſtor of* Chriſts *Flocke, that is, of all* Catholikes *thorow the World, in the ſucceſſion of* Peter, *the* Roman *Biſhop. That they acknowledge and profeſſe this, together with the myſteries of the orthodoxe Faith, our moſt holy Lord reioyceth, and giueth immortall thankes to the Diuine bounty, and iudges this to be the moſt true ioy which proceedeth from the ſtudie of Gods glorie, and the ſaluation of Soules. Therefore moſt willingly, together with theſe his venerable Brethren, Cardinals of the* Roman *Church, hee embraceth the teſtification of their Faith, Obedience, Deuotion. He wiſheth and prayeth that by their example other Kings and Princes alſo of thoſe Ile, and of the whole World, reiecting the worſhip and errour of Idols, may know the true God, and whom he hath ſent* Ieſus Chriſt; *for this is life eternall.*

* But that *Hortus deliciarum Anglia* was more worth then both *Indies* to the Pope. See *ſup. lib.* 8. *c.* 6. *&c.*

This the moſt acceptable myſterie of Papall Faith.

This done, the Conſiſtorie was diſmiſſed. The Legates when they had attended the Pope, after the cuſtome, into the inner roomes, were firſt entertayned of the Popes brothers ſonne, the Cardinall of Saint *Sixtus*, with a Banket; after that admitted to the Popes priuate and familiar

miliar conference, they diſcourſed by Interpreters with him of many things, touching the Iourney and Religion: then went to Saint *Peters* Church, and the holy Threſholds of the Apoſtles piouſly ſaluted, at night were honourably brought to their lodging.

This was prepared and furniſhed in the *Ieſuites* Colledge by the Popes appointment at their first comming to *Rome*, the two and twentieth of March, who alſo ſent two troops of Horſe to guard them. They went from their Charet to the Temple, and whiles they praiſed God, and worſhipped at the greateſt Altar, the Students of the *German* Colledge in a double Quire ſang, *Te Deum laudamus*. The Legates next day had audience as yee haue heard; their Veſtment was parti-coloured and embroidered, a ſhort Sword on the left hand, an *Arab* Dagger on the right, the other part of their habite *Iaponian*. The pompe of all ſorts, and the Ordnance attended them to the *Vatican*, & there the *Italian* Garriſon, and *Heluetian* Guard with their Peeces and military Muſicke receiued them. Then were they lead into the Hall, and after all things there finiſhed, the Legates carried the Popes traine at his departure. And on the fiue and twentieth day, feſtiuall for the Annuntiation, the Pope going on ſolemne Proceſſion, theſe Legates rode in the laſt place. What ſhould I ſay more? (ſayth our Authour) it cannot be told, how all magnifie the mercy of God which brings farre more at this time from the Eaſt and Weſt to the Catholike Church, then the Deuill hath ſeduced in the North.

Extract. è literis Romanis.

See the laſt chap. of my *Pilg. l. 9.*

Theſe *Iaponian* Lords returned into *India*, 1586. as *Valignanus* writeth, and were much endangered by a tempeſt. Their returne into *Iapon* is ſignified by the Letters of *Michael* to the Archbiſhop of *Ebora*, teſtifying their arriuall the one and twentieth of Iuly, 1590. at *Nangaſach* with the ſaid *Valignanus*; and by the Letter of *Don Sancius*, Sonne and Succeſſour to *Bartholmew* Prince of *Omur* to Pope *Xiſtus* the fifth, with thankes for the wood of the Croſſe, and the Sword ſent his Father which ſhould be kept amongſt his principall Iewels. *Protaſius* alſo the King of *Arima* wrote to the *Great and moſt holy Pope Xiſtus* or *Sixtus* in this manner.

Popes preſents

On the ſixteenth of the ſixth Moone, which was the one and twentieth of Iuly, 1690. *heere arriued the Father Viſitour of the Societie of* Ieſus, *with* Cingiua Don Michael *my kinſman*, Don Mancius, *and other companions which I had ſent to* Rome *to put their heads vnder your Holineſſe feet. Whoſe comming did as much reioyce me, as if a thouſand Autumnes had comne to me, and ten thouſand yeeres had beene added to my life.* Don Michael *related with what honour and fauour hee was entertayned of your Holineſſe, of King* Philip, *and other* Catholike *Princes, for which I render thoſe thankes which Pen and Paper cannot expreſſe. He deliuered me Letters alſo which your Holineſſe vouchſafed mee, fauourably reckoning mee amongſt the* Chriſtian *Kings. Hee brought me alſo part of the holy Wood of the true Croſſe, a Hat, and a Sword, which your Holineſſe is wont to ſend to* Chriſtian *Kings and Princes. Which fauour and ſtudies are ſuch, and ſo eſteemed of mee, that I haue determined to conſecrate them to eternall memory, and to place them amongſt my chiefe Treaſures, and the Ornaments and Monuments of my poſteritie. And this honour conferred on mee is ſuch, that greater cannot be in this life, and it redounds vnto a future good life. I had determined (according to the order preſcribed of your H. in his Letters, and as the fauour, and ſo great benefits beſtowed on mee deſerued) to haue receiued the ſaid Preſents with all the celebritie and pompe that might be in my Kingdome: but the Father Viſitour ſhewed mee that reſpect was to be had of the tyrannie and great hatred wherewith* Quabacondono *the Lord of all* Iapon, *perſecuteth the Fathers and* Chriſtians *theſe three yeeres together; and this feaſt to be deferred till he returneth from* Meaco, *whither hee is going in Embaſſage from the Vice-roy of* India *to* Quabacondono, *&c. The ninth yeere of the* Era *called* Tenſcio, *the tenth of the eighth Moone, which is the two and twentieth of September, An.* 1590.

Papall fauours, with little coſt buying much eſteeme.

Pompe preſcribed.

At your Highneſſe feet,

Arimano, Seiurino, Daibu Don Protaſius.

This *Quabacondono* (as *L. Froes* writeth) was now growne the greateſt Monarch that euer *Iapon* had, hauing aſcended thereunto from a baſe eſtate, which was (as hee hath diuers times with his owne mouth confeſſed) to cut wood, and to carrie it to the Market to ſell for his daily food. *Nobunanga* his Predeceſſor had growne to great height, ſuch as many ages had not there ſeene. In *Frenoiama* eight hundred yeeres before, a King of *Iapon* had builded 3800. Temples, with houſes adioyned for the *Bonzis*, which employed themſelues in the ſtudie of the Lawes and Sects: for whoſe quietneſſe he remoued the Husbandmen, and builded them two ſtreets, allowing to their maintenance about the third part of the Cuſtomes (or Rents) of the *Vomen* Kingdome. Thus became it a fountaine of their ſuperſtitions. In time thoſe Temples diſperſed in ſixteene Vallies were leſſened to 800. and the *Bonzian* diſcipline, and ſtudies melted into pleaſures, hardned into Armes, and ranged into robberies, ſo that they fired *Meaco* with great ſlaughter, and oppoſed *Nobunanga*: who hauing deſtroyed the Militarie *Bonzi* (called *Icoxos*) and taken away their Caſtles, inuaded *Frenoiama*, profeſſing he feared not their Gods. On the top of a Hill was the Temple of *Quanon*, to whom prayers and pilgrimages were made for health, wealth, and long life; and yeerely ſolemnities and Playes with huge pompe and coſt were made in his honour (to which the *Gibon* feaſt at *Meaco* ſucceeded) with frequency of men, deuices

The *Bonzian Quanon* and Popish *Corpus Christi* Playes like by *Iesuites* testimonie.

deuices of work-men, and such order, that it may appeare that Satan there imitates the anniuersary solemnitie of *Corpus Christi* amongst vs. Thither the *Bonzi* had gotten, but it, and they, and their streets were destroyed, and foure hundred Temples with their furniture burned. At *Facusangin* also were a thousand houses of the *Bonzi* by themselues, besides Monasteries, which he destroyed. *Xinguea* the King of *Cainochum* had forced his Father to exile, and imprisoned his elder Brother, and then seized on the Kingdome: after which he shaued his beard and haire, and became a *Bonzo*, and would needs repaire *Frenoiama*, and stiling himselfe, *Chiefe in the house of the Kings and of Religions*, gathered an Armie. *Nabunanga* wrote to him, calling himselfe, *Tamer of Deuils, and enemie of Sects*. Hee proceeded first against the *Bonzi* with these terrours; and after would needs himselfe be worshipped, but eighteene dayes after in a conspiracy of his owne against him, he was slaine, and his dispersed. *Quabacondono* succeeded, and in greatnesse of attempts and ambition exceeded.

Shauelings.

Faxiba made *Quabacondono.*

Quabacu signifies, the Chist of treasure.

This *Quabacondono* is a title which *Faxiba* assumed, and is as much, as *Treasurer*. These titles are giuen by the *Vo*, or *Dairi*, descended of the ancient Kings, and now enioying a strange Empire, which is to giue titles of honour, (for which all great men haue their Factors with him) and is esteemed as a God, not suffered to tread on the ground (that were deposition) nor often seene, and gets much treasure out of those *Titles*, which he so often changeth, that the King of *Bungo* was by the *Iesuites* obserued foure and thirty times to haue altered his appellations. There is a high Priest, who with Papall power authorizeth Sects, confirmeth and consecrateth the *Tundi* or Bishops which are nominated by the Kings, and enioyeth Royall reuenues. The *Quingue* is the third person, and hath power ouer Iudgements and Warres. But the *Lords of Tensa*, that is, such as haue power to get into their hands *Meaco*, and the Region adioyning, are really chiefe Lords, and command the State, though in seeming ceremonie (as the *Turkes* to their *Mufti*, and more manifestly the *Soldans* of *Egypt* to their *Califas*) they yeeld a seeming subiection; the *Dairi* not daring to crosse them.

Cos. Turrianus.

The 3. chiefe men in *Iapon*. The *Vo*, High Priest and *Quingue*.

A greater then they.

Faxiba Cicugendono obtayned that title of *Quabacondono* (*Dono* is a generall title of honour) the next to the *Dairi*, and hauing subiected *Iapon*, minded to conquer *China*, by the way of *Corai*. The King of *Corai* sent his Embassadour to him with three hundred attendants in vaine, he minding to send and place in those new Conquests all the suspected Princes of *Iapan*, and to eternize his owne name, being exceeding vain-glorious. He tooke from the *Bonzi* their Lands: and after that, making ditches round about *Meaco*, hee forced them all to dwell together neere the said ditches: which reducing their discrepant Sects to an vnformed *Chaos* together, made many of them forsake their profession. Hee enioyed euery foot of Land in *Iapon*, gaue, or remoued, or depriued Kings at pleasure, tooke away all Armes from the Rustikes; forbad all contentions and fights vpon paine of death, if any guilty hereof fled, punishing the kindred, or seruants, or neighbours, crucifying them. He administred iustice very seuerely without partiality, or pardoning any man: and had almost put to death the *Meacon Bonzi* for their Concubines if the Gouernour of *Meaco* had not interposed and vndertaken their amendment. Hee neuer suffered the Souldiers to be idle, but vsed them in warres or buildings. The Vice-roy sent him an Embassage and Presents; the foure *Iaponian* Lords which had beene in Europe attending *Valignanus* the Embassadour. *Quabacondono* would needs heare these *Iaponians* play *Europaan* Musicke, which they had there learned: and made great shewes of kindnesse to them all, and sent this Letter with Presents to the Vice-roy.

Meaco the chiefe Citie of *Iapon*.

Corai.

Organtinus Brixiensis.

Sir, I haue receiued Letters which your Lordship from so remote Regions sent mee, in opening and reading whereof I seemed to see the length of the leagues by land and sea. This Kingdome of Iapon *as you wrote, contayneth aboue sixtie States or Iurisdictions, in which before haue beene great disorders and warres, no peace nor quiet. For many wicked men, Traitors to their Countrey conspired to denye obedience to their* * *King, a thing which from my youth hath vexed me. And long since I bethought mee of a course to subiect this People, and to pacifie the whole Kingdome: and layed for a foundation three vertues, to wit, Gentlenesse and affabilitie of speech in conuersing with men; Prudence in considerate iudging of things, and egregious fortitude and courage of minde: by the aide whereof I haue subdued all this Nation, and haue brought all the Kingdomes into this forme of one Empire, wicked men being extinct, and worke-men which labour in the fields promoted. And I haue so restored peace and quietnesse to these Kingdomes, and in few yeeres haue so setled and stablished the Monarchie of* Iapon, *that it is now like a great Rocke which cannot be remoued. Whence it is come to passe that in all foure parts of the Kingdome they haue a King eminent in much wisedome; and the King likewise hath all of them obedient. And in this order I haue declared and exercised the power of a good Captaine, to whom these Kingdomes are subiect; by taking away the wicked, and rooting out all Robbers by sea and land. So the people, families, and all places of the Kingdome enioy maruellous quiet. I haue also determined to inuade the Kingdome of* China, *and in few dayes I will take ship and doubt not of victorie. When I shall possesse it, your Lordship may more easily communicate with mee in all things.*

Quis tulerit Gracchos &c.

* The *Dairi*, the titular King.

China inuasion. Reckoning without his Host.

Now concerning the Fathers, * Iapon *is the Kingdome of* Chamis, *whom wee hold to be the same with* Scin, *which is the beginning of all things. This* Scin *is the substance and the very being of all things; and all things are one and the same with* Scin, *and into* Scin *are resolued. Who in* Scina *is*

Iaponian Theologie.

* The *Iesuits.*

called

called Iutto, *and in* Teſcincu Buppo. *Further, in the obſeruation of the Lawes of this* Chamis *conſiſteth all the Politicall gouernment of* Iapon, *which being neglected, there is no difference betwixt Lords and Subiects: if it be kept, the vnion and concord is perfected which ought to bee twixt the Father and Sonne, the Husband and wife. Therefore the whole, both internall and externall gouernment of Men and Kingdomes is placed in the conſeruation of this vnion and policie. Now the Fathers formerly haue entred theſe Kingdomes to preach another Law for the ſauing of men: but becauſe wee are inſtructed and ſettled in the Lawes of* Chamis, *we deſire no other Law: for the diuerſities of Lawes and opinions are hurtfull and preiudiciall to the Kingdome. Wherefore I commanded the Fathers to depart out of* Iapon, *and haue forbidden them to preach their Law, nor will I that hereafter they preach any new Law in this Kingdome. Although theſe things be ſo, yet I greatly deſire that a ſtable communication may remayne betwixt vs: for ſo this Kingdome ſhall bee free from Theeues, by Land and Sea. And I giue leaue to all Merchants which bring merchandiſe, to ſell them all without let. I deſire your Lordſhip to approue the ſame. I receiued all the gifts which you ſent out of thoſe Southerne parts, as it is written in your Letters. I likewiſe ſend ſome others out of theſe Kingdomes, with a memoriall of the gifts, and the names of them which haue giuen. The Legate will declare the reſt, wherefore I will bee no longer. Dated 20. yeere of Tenſoij, 25. of the ſeuenth Moone.*

Chriſtian Religion alway by the Deuill and his acculed for a State-diſturber.

Ieſuites baniſhed.

In the end was the Seale and Subſcription. It was written in a leafe eight palmes long, foure broad, painted with golden Flowers, and put in a red ſilke bagge wrought with Gold and ſiluer; and that incloſed after the *Iapon* manner in a Boxe, which for the price and workmanſhip was ſo admirable, that the ſubtiltie and excellence of the worke might amaze all *Europeans*. Within it was couered and without, with Vroſci (made of Gold beaten into powder) diſtinguiſhed with Flowers of Gold and Siluer, ſo inſerted in the Vroſci that none could diſcerne the coniunction, but he which knew the making of the Boxe. It had alſo Roſes, and gold Chaines to tye the Boxe; which Boxe was put into another Bag, and that into another Boxe very artificiall. The gifts were Armours, Armes, and other things very precious.

Iaponian workmanſhip.

He aſſembled his Lords about this *China* Warre, which durſt not expreſſe any other opinion, hee hauing proteſted, that hee would not heare his Sonne diſſwade him, if he were aliue againe, and if any ſhould hinder him, it ſhould coſt him his life. Thus for ſome moneths ſpace nothing might be ſeene elſe, but prouiſion for Ships, Armes, Munitions, and neceſſaries for the Warre. Hee made a Catalogue of all his Lords, exempting none from the expedition, and ſetting euery one his number of followers. To *Auguſtine* a *Chriſtian* Lord hee gaue the fauour of firſt impreſſion into *Corai*, other Lords ſtaying ſtill at *Suſcima* eighteene leagues diſtant. *Corai* is adioyning to the Continent of *China* at one end, diuided by a great Riuer from *China*, and tributarie to the King of *China*; it is in length about an hundred leagues, and ſixtie broad: the people vnlike the *Chinois* in language and bodily ſtrength, but following their lawes, cuſtomes, and gouernement. They are better Archers then at any other weapons: and not comparable to the *Iaponians*, except in ſhipping, wherein they and the *Chinois* exceed. Yet at this time they were deſtitute of that defence, and *Auguſtine* gaue them a great ouerthrow. Before *Quabacondono* would goe, he made his Brothers Sonne by the *Dairi* to be entituled *Quabacondono*, as his Heire and Succeſſour, contenting himſelfe with the title of *Taicoſama*, that is, *Great Lord*. All the *Iaponian* Princes were commanded to be preſent at the tranſlation, to giue him obedience; to whom the *Dairi* gaue the Fortreſſe of *Meaco*, and the Palaces of *Quabacondono*, making him Lord of *Tenſa*. But his Vncle held the ſway of all in his owne hands, and after hauing a * Sonne of his own, cauſed this his Nephew with ſome others to croſſe himſelfe (that is, to cut his breaſt acroſſe, his bowels falling out, and ſome one of thoſe which died with him, cutting off his head.

Preparation for inuaſion of *Corai*.

Corai deſcribed: ſee my *China* Map.

* This is that *Fireiſama* of whom you reade in Capt. *Saris*, and Maſter *Cocke*, depriued by *Ogoſhoſama*.

Auguſtine with a Fleet of eight hundred ſayles entred *Corai*, and tooke two Fortreſſes, the *Coraians* being driuen from the walls by the *Iaponders* Gunnes, vnknowne to the other, and fiue thouſand of them ſlayne. This wanne him great credite with *Taicoſama*, who promiſed him much, yet performed little. Hee defeated alſo an Armie of twenty thouſand, and after another of foureſcore thouſand, and the King fleeing into *China* tooke the *Meaco*, or Royall Citie of *Corai*. *Taicoſama* ſent him a Horſe, and a Sword, the honour that *Nabunanga* was wont after any great Victorie to doe to him. The *Coraians* ſeeing their King with his troops in ſafety, fled with their prouiſions into Woods and Hills, and would not thence bee brought by any promiſes. The *Iaponian* poſſeſſed of the Fortreſſes wanted men to till the ground, and therefore muſt needes want neceſſaries: the wayes alſo were by the *Coraians* vpon all occaſions aſſaulted. There are two hundred thouſand *Iaponians* at this preſent in *Corai*, and *Auguſtine* is in the extreme borders adioyning to *China*, ſeparated notwithſtanding by a Riuer three leagues broad, abounding in ſhips, and the ſhores fortified with multitudes of men, ſo that the ſucceſſe is doubtfull.

1592. Wide Riuer betwixt *China* and *Corai*.

Froes in his Epiſtle, 1595. writeth that there were then an hundred and ninety *Ieſuites* in *Iapon* and *China*: that *Taicoſama* not ſucceeding in his *Coraian* expedition, returned to *Meaco*, and quarrelled the new *Quabacondono* out of his life, who with fiue others at *Taicos* command executed themſelues after the *Iaponian* manner. *Auguſtine* meane while endeauoured an Embaſſage to bee ſent from the King of *China*, who thinking himſelfe *Lord of the World*, ſent to

190. *Ieſuites*.

Digitized by Google

Taicosama, that it was an vnmeet thing that He, whose industrie and valour had subdued three-score and sixe Kingdomes of *Iapon* to his Empire, should permit the *Dairi* a priuate man, and Subiect to the King of *Iapon* to hold his former place of dignitie. And if hee would depriue him thereof, hee promised to send him a Crowne, and the title of King, and by the same Legates to treate further about the *Iaponians* forsaking *Corai*. Two Embassadours were sent from *Pequin* to *Augustine* to *Corai*: who presently sent word to *Taico*, the Embassadours abiding with him, because of the solemne entertaynment which *Taico* intended for the renowme of his name to all posteritie. The Nobles exhaust in the former expedition were yet now enforced to new braueries and expences. Hee caused at *Ozaca* a Hall to bee erected, with a thousand *Tatami* (very elegant Mats) the timber costly, and gilding incredible. Yet by store of raynes a great part thereof fell downe, which hee intended soone to repaire, hauing an hundred thousand men at worke there both night and day in great miserie, standing with their feet in the water. If any runne away they are killed. Before this Hall hee erected a Theatre for Comedies, exceeding stately and costly with artificiall paintings of Vrusci. Hee repaired the Tower of *Ozaca* seuen stories high. The gilded Plates or Tiles, the Bridge called, *The Bridge of Paradise*, the new Citie of *Fuscimo* which he builded, and other his immane expenses (the Offerings to his Idoll of Fame,) I omit. Hee caused his little Sonne to goe with great State to *Sandai* to the *Dairi*, that is, to bow his head thrice before him downe to the Mats, who entertayned him with a solemne feast, with great Iubilee in alteration of names and titles of honour to the Nobles.

China Embassage.

Huge Palace, and preparation for entertainment of the *Chinois*.

Taico had settled peace thorow all *Iapon* from Warres, from Robbers by land, and from Rouers by sea, which before continually infested all with Piracies (one of which *Noximandono* is mentioned by the *Iesuites* in this time to haue had a great Fleet of ships, and to haue forced a great part of the Coast to yeerely tribute vnto him, to bee freed from his Robberies) onely the *Dairi* had higher title: and a Crowne and Scepter seemed wanting to his realitie of Regalitie and Souerignitie already possessed. And now whiles hee intended to exceed himselfe in his entertaynment of the Embassadours, one of them hating this long detention or imprisonment in *Corai*, fled; which newes *Augustine* sent to both Courts. From *China* the Legacy was renewed, the Delinquents kindred punished. Meane while the two and twentieth of Iuly, 1596. at *Meaco* it rayned ashes, wherewith the houses, hills, and trees were couered as with snow, and a great myst accompanied it. At the same time at *Ozaca* and *Sacaia* it rayned sands. At *Meaco* after the showre of ashes came another of haires, long and white like the hoary haires of an old womans head, but softer, and not so smelling when cast into the fire. In the Northerne Kingdomes of *Iechu*, *Iechingo*, *Scimano*, and *Nota*, the land and houses were couered with them. A Comet appeared in August: on the thirtieth whereof followed an Earthquake as a warning to a greater on the fourth of September, which threw downe *Taicos* magnificent Hall with a thousand *Tatames*, in which hee had purposed to entertayne the *China* Legates; and the Tower of seuen lofts, and another Tower, and almost all the buildings of the Fortresse, and the Store-houses, which were very large, and stored with Corne, and halfe the houses of *Ozaca*, all in halfe an houre, sixe hundred people being buried in the ruines. It made a noise like Thunder, and like the waues beating on the shoare. The Earth opened in many places. A great new Temple and a Monastery fell downe, and the same day in which the *Iesuite* had heard a *Bonzi* in the same Temple inuiting to call vpon *Amida*, and much depredicating his mercies. The next day at *Meaco* was a noise greater then of the greatest Cannons that euer were heard, dreadfull to man and beast, and wee said the Letanies on our knees, but scarsely could keepe on our knees for the Earth-quake. Others forsooke their houses, lamented their dead (fiue hundred being ouerwhelmed; and fifteene or twenty Temples) called on their *Amida*: and some ranne to *Fuscimo* (*Taicos* new Citie for him and his Nobles) whereof the best part was ruined, and much harme happened in many other places. *Taicos* Palace at *Fuscimo* fell downe, and oppressed seuenty women, himselfe escaped into the Kitchin vntouched: and the relations of that Earth-quake would yeeld a booke alone. *Taico* yet would seeme to dominere ouer Nature, and leuell a very huge Hill with the Valley, to erect new Palaces. And because hee could not entertayne at *Fuscimo* the *China* Embassadours, he receiued them at *Ozaca*. The solemne state and pompe I omit. They had audience the twentieth of October.

China Presents and Letters.

The Kings Letter was written in a plate of Gold very great and ponderous, inclosed in a golden Coffer, wherein also was the Vest, and royall Crowne for *Taico*, and in another was a Crown for *Mandocorasama* his Wife with title of *Queene*. Hee sent also twenty Vests of *Quingui* with title and dignity of *China* for twenty Lords (the first of which was *Augustine*) by him named, and as many for those whom *Taico* should name. In the Epistle of the King were these words, *Futatabi cioscen vocasu cotonacare*, that is, *Thou shalt not returne againe into* Corai, *and if thou returnest, thy dignitie shall no longer aduantage thee*, words importing their vassallage to the *Chinois*. The Embassadour and *Taico* were equall in sitting on the *Tatamis*; the chiefe Lords of *Iapon* were present; and after the taste of their * *Chia*, *Taico* receiued the Epistle or golden plate, and layd it on his head, and the Vests, going in to put them on. At his returne the *Chinois* adored him,

* *chia* an herb vsed in warme water in all entertaynments in *Iapon* and *China*.

Digitized by Google

him, and a feast followed with pompous plenty: which was continued other dayes. But when the Legates moued him to pull downe his Forts in *Corai*, and to pardon the *Coraians*, hee brake into exceeding furie, and commanded them backe to *Corai*, and extruded them in great haste out of the Countrey with inhumane vsage.

About this time *Peter Martines* first Bishop of *Iapon* came thither. *Taico* died Sept. 16. 1598. hauing taken politike order for the State, and as foolish for himselfe to be made a God, prescribing the forme of his Temple: One was crucified for speaking of his death. Word was sent by the Gouernours which *Taico* had appointed as protectors for his Sonne, to the *Iaponian* Lords in *Corai*, to returne, and so after seuen yeeres that warre had end. What euents followed after in *Iapon*, you may see in my *Pilgrimage*, and somewhat also before in Captayne *Saris*, and Master *Cocks* relations: *Taicosamas* posteritie rooted out, and *Ogasha Sama* seizing the Soueraignetie to himselfe. So much harder is it to be a Man then a God, and easier to bequeath a Temple and tytle of *Camm*, and diuine worship as to a new *Faciman* or *Mars* (all which his Executors performed and caused to be effected; his body not burned after the wont, but as he had prescribed, put in a Chest and translated to that sumptuous Temple, where he is worshipped as the principall of all the *Cami*) with an Image erected to him, (seene by Cap. *Saris*) then to bequeath long life to himselfe, accomplishment to his *Coraian* designes, or sure succession to his posteritie, in all which hee fayled. But we will with our persecuted *Iesuites* leaue *Iapon*, and ship our selues for *China*.

Bish. of *Iapon*.

§. III.

RVGGERIVS *enters againe into* China *with* RICIVS, *and is forced backe to* Amacao; *thence sent for againe by the Vice-roy.* Sande *and* Almeida *are sent to them, and enter the Countrey as farre as* Cequion, *and returne to* Sciauchin.

IT is a custome in *China*, that of all Charters granted by the Magistrates a copie is kept in the Registrie, and the execution, or what hath therein beene done, subscribed at the end. The succeeding Vice-roy finding the copie of that Charter granted to the *Iesuites* at their departure, without such subscription (because nothing had beene done therein) wrote to *Canton*, to the *Aitao*; he (which then was absent) to the *Anfam* or *Hiam-xan*, the Gouernour of the Citie, and he being ignorant thereof, to the Port-gouernours at *Amacao*. They went to the Bishop, and by him were sent to our Colledge where they were shewed the sealed Charter: but there being then *Melchior Carnerus* Patriarch of *Ethiopia* (which expedition was dissolued) *Capralis*, *Gomez*, *Pasius*, and other principall *Iesuites*, it was thought fit, that it should not be deliuered to the Souldiers, but carried by two *Iesuites* to the *Aitao*: and *Raggerius* with *Ricius* were therein employed, the *China* Captaines also consenting that they should goe to *Anfan*, thence by the *Ci-hien* or Gouernour, to be sent to *Canton*. This *Ci-hien* when they came thither would haue sent it and not them, which they refused, whereupon he grew angry, cast it on the ground, and commanded them to returne backe; saying, that a deposed Vice-royes grant could no way benefit them. They went to their Inne, and there consulted to goe without his leaue, deceiuing a Ship-master with sight of the said Charter, who tooke them into his ship; but terrified by others, cast them out againe with their goods. At this time came a message to the *Ci-hien* of his Fathers death, whereupon (according to the *China* Custome) he lost his office and returned home during his three yeeres mourning. They by this occasion, and a weightier cause, (money giuen to the Successour) and the Notaries subtiltie in a seeming seruice to the Common-wealth, were sent in manner as prisoners to *Canton*, as strangers found there.

Sup. l. 7. in fine.

Ci-hien a Gouernour of a *Hien* or Citie.

The *Aitao* notwithstanding gaue them kinde entertaynment. They petitioned, shewing, that *they were Religious men which had passed so many Seas allured by the fame of* China, *there to spend their dayes: and desired nothing but a small piece of ground to raise thereon a little house to the Lord of Heauen, and they would be further burthensome to none, but procure liuelihood of their owne mens benevolence.* They mentioned nothing of *Christian* Religion, lest it might cause suspicion, and bee a let to them; the *Chinois* thinking too well of themselues, that strangers should teach them any thing, which they haue not already more complete in their owne Bookes. Rebellions haue also begunne vnder colour of new Sects. The *Aitao* or high Admirall commended their desires, but said, it belonged to higher Magistrates, and could onely bee granted by the *Ciai-yuen* (the Visitour of the Prouince) or the Vice-roy. They desired that hee would at least let them stay there in the Palace of the King of *Siams* Legates, till the *Portugals* Mart came, and in meane time they would trye what they could doe with the Visitour or Vice-roy. This hee granted, but the same day repeated, professing that he feared the Visitor (if out of Mart-time he should finde strangers there) whose censure is dreadfull to euery Magistrate. He therefore commanded them presently to packe for *Amacao*. They were comne backe to *Anfan*, and found things in worse case then before. For at the gates of the Citie they found an Edict set vp by *Co* the

Money brings the *Iesuites* to *China*, and procures them residence.

new Vice-roy, blaming the *China* Interpreters which had put into the heads of Stranger-priests to learne the *China* language and Characters, and to desire some place for to erect a sacred and priuate house, threatning those interpreters if they persisted. In this dispayre of proceeding, they had not beene a weeke gone, when from *Sciauquin*, the seate of the Vice-roy, one of his guard came to *Amacao* and brought the *Ci-fu*, (so they call the Gouernour of that Prouince) his Letters Patents by the Vice-royes authoritie, inuiting the Fathers to *Sciauquin*, there to receiue a piece of ground for a Church and dwelling-house. The cause hereof was an offer made by the Fathers (when they were sent away from *Sciauchin*, by the deposed Vice-roy to *Canton*) of a summe of money to any which should procure of the New Vice-roy license for their returne. One of the meanest Souldiers in name of Interpreter to the Societie had put vp a Petition to the Vice-roy, who sent it to the Gouernour of the Region called *Guam-puon*, of *Coquien* Prouince) to bee dispatched, who gaue the former Letters Patents to the Souldier, which brought them himselfe to *Macao*. They with great ioy, as seeing the Diuine hand herein, made ready for the iourney, which the former expenses and late Ship-wrackes (especially of the *Iapon* Ship in the Ile *Leuquiceo*, which alone hath most of the wealth of the Citie in it) made difficult; but *Gaspar Viegas* charitably bestowed the expense, seconded also by others.

Liuqueceo.

Viegas bountie.

Friars in *China*, see *cap.* 3.

Thus full of hope they set sayle, and in *Canton*, both now and when before they were dismissed from *Sciauquin*, they found *Spaniards*. Then, a Ship which from the *Philippinas* was bound for New *Spaine*, was wracked at the Ile *Nan-tau*, on the *Canton* coast; the men which escaped were kept in durance: And now, seuen or eight *Franciscan* Friars, which had gone from the same *Philippinas* for *Cauchinchina*, hearing the King was become a *Christian*, and in their returne were wracked on the Ile *Hainan*, and taken and spoyled, and presented to the Magistrates for Pirats, whose libertie these *Iesuites* procured, promising all recompence at *Amacao*. Hence they had set foorth in the beginning of September, 1583. and in the same moneth came to *Sciauquin*, in that Souldiers companie, by whom they were conueyed to the Gouernours Palace, and kneeling before him made request as in the Souldiers mentioned Petition had beene contayned, and were kindly answered, that they should goe about the Citie and spye out some conuenient place for their purpose, which hee doubted not to procure of the Vice-roy for them.

Anno 1583.

Sciauquin tower.

At the same time at *Sciauquin*, they were erecting by the common charge of the Eleuen Cities of that Iurisdiction, a Tower (whereof one floore was now raysed, to which they intended to adde nine others aboue it) in a pleasant place by the Riuers side, a myle and more from the Citie, the Suburbes continuing further then it. In the same place they set foorth a Temple, and therein erected a Statue to the Gouernour, whose sixe yeeres gouernment had well deserued of the learned, and of the vulgar. A piece of that field in which the *flourishing Tower* (so they called it) was building, they desired, which hee liked well, and promised to further them with the Vice-roy. The *Iesuites* at their former departure, had left an Altar with one *Cin Nico*, who had placed the same in a conuenient place, for want of Images inscribing aboue, it *Thien Chu* in Cubicall letters, that is, *To the Lord of Heauen*. Hee made also thereunto diuers Incenses, and at set times yeelded diuine honors before it; which much reioyced the Fathers, seeing that there was one found which inuoked the true God. And this man gaue them entertaynment, till they had receiued the Vice-royes answer, approuing their request; and the next day the Gouernour set foorth a plot of ground for them with straight caution to obserue the Lawes of *China*, and to admit no Strangers companions to dwell with them; which they promised. Much was the concourse and admiration of people, much the wonder at their triangle Glasse, the Image of our Ladie, a wrought Handkerchiffe, with which they presented the Gouernour; but hee returned all afterward, fearefull of Bribe-imputation. Much trouble arose about that place, and another was assigned them, where they began to build and were forced to pawne their precious triangle Glasse, to fit it for their vse; they obtayned also an ample Charter from the Vice-roy, and two Patents from the Gouernour which protected them from wrongs.

Temple and statue to Gouernours.

Ignoto Deo. Wilde Christianitie.

Iesuites build a house, at first meane, after greater.

In these beginnings they made little mention of the Gospell, but imployed their spare time in learning the Language and Characters, by a Holy life seeking to insinuate themselues into the peoples good liking. Their habite was like the modestest of the *Chinois*, a long Gowne with large sleeues: Their house had two Cells, and betwixt them a Hall with an Altar in the midst, on which they set the Image of the Blessed Virgin, carrying her Sonne. They called their God, *Thien-cui, Lord of Heauen*; for the *Chinois* want the *D.* which caused that they could not giue any name more fit: and this name continueth to this day, although they vse others also, as *Highest Ruler of all, First beginning of all*, and the like. The blessed Virgin is called the *Great Mother of God*. This Image on the Altar, all which visited them both Magistrates, Students, Priests, and common people, did religiously worship, kneeling and (after their rite) knocking lightly the ground with their fore-heads. They admired the excellencie of the Picture and colours without ceasing. But when it began to bee rumoured, that they worshipped a Woman for *God*, they tooke away that Picture and substituted the Image of *Christ*. After this, they painted the ten Commandements in the *China* language, which many approued. Some brought them Incense for holy vses, and some bestowed their Almes; others also Oyle for the Lampe which burned

ned before the Altar; and the Fathers commended their Law, as agreeing to the light of Nature. The first which was Baptised, was a poore diseased man cast foorth by his parents, whom they instructed, and a little before his death baptised. The reliefe which they bestowed on him before, caused a rumour amongst the vulgar, that those Strangers knew by the mans complexion, that hee had a precious stone in his head, the cause of all that benificence. The *Chinois* much admired the Bookes, of which the Fathers had store, the artificiall binding, gilding, cost, goodlinesse of the Print, and their studiousnesse in the *China* bookes; and receiued with great applause a Booke of *Christian* learning which they printed. Yea, the Gouernour after the *China* rite would needs doe them publike honour, which is done by sending a goodly Table with Cubitall letters in praise of them, with the Magistrates name, and the date inscribed in lesse letters. Two of these with great pompe hee sent vnto them, the one to bee set ouer the entrance with inscription, *The house of the flowre of Diuine men*; the other to bee placed in the Hall, inscribed, *The holy Nation of the West*: which wanne them great reputation, this Magistrate being much reputed for learning and vertue.

First Baptisme

Fancies of the vulgar.

Tables of honour.

Our wants caused *Ruggerius* to intreat leaue to goe to *Amacao* for supply, which hee obtayned with a faire Ship and thirtie Rowers. The Gouernour requested also, that a Clocke might bee made for him. But the pouertie of the *Amacaons*, their Ship not being come from *Iapon*, and the Colledge enioying no Rents, caused him to send the workman to *Sciauquin*, to make it there; which hee tooke in good part. Now the *Chinois* are a people suspicious of Strangers, especially those ruder parts of the Prouince of *Canton*, and much muttered at the *Portugals* Commerce, saying, they made all things dearer, and the profit came but to few. They gaue an odious appellation to the *Portugals*, calling them *Deuils*. To this, Fame had added a spurre, reporting that their famous Tower was the worke of Strangers, (which had no ground but that their house was building at the same time) and the *Flourishing Tower*, was stiled the *Strangers Tower*. They therefore in *Ruggerius* absence offered great abuses by throwing stones, being angrie that they kept their house shut, which they would haue had made an Idoll Temple, alway open to all. One boy in throwing stones, was taken by the seruant and brought in, but at others request soone dismissed. Hereupon two neighbours conspired, to set a fellow on worke to accuse these strangers for seducing Children, as they had done this youth his brother, (so they agreed) and kept him three dayes, with intent to sell him for a Slaue at *Amacao*. The two neighbours offered to bee witnesses hereof. The accusation was put vp in pittifull manner, and the Gouernour much moued, the Father fetched into Court by an Officer, before hee could haue leasure to write his answer. The Interpreter had filled his sleeues with stones, which hee powred out in Court as witnesses of their abuses. The Iudge smelt the businesse, and by examination of the Tower workman which had seene it, found out the knauerie, and rewarded it with terrible whipping; and forbad all abuses to bee offered to them.

False accuser truely rewarded.

Ricius his skill in the Mathematickes which hee had learned, being an Auditor of *Clauius* at *Rome*, was no small helpe to them. They had a Cosmographicall Map in *Europæan* Characters, hanging in their Hall, which the learned beheld with great pleasure, much desiring to see it in *China* characters, little knowing, as little hauing to doe with the rest of the world. They had Maps pretending a Description of the world, but presented onely their fifteene Prouinces, with the Sea and a few Ilands, and the names of such Kingdomes as they had heard of, all which Kingdomes scarcely equalled one Prouince of *China*. They now wondred much to see themselues straightned in an Easterne corner of the world, and *Ricius* at the Gouernours request, published it in *China* characters: and inserted, as hee saw cause, the rites of the world and the *Christian* holies. They haue a conceit, that the Heauens are round, the Earth square, and their Empire to bee seated in the midst thereof; hee therefore so projected his Description, that he presented *China* in the midst. They that before thought basely of all other men, as if else-where were no King, nor Republike, nor Bookes, began to be better conceited of *Europæans*, and to bee better prepared for the seed of the Gospell: and might hereby also lesse feare *Europæan* forces so remote from them. This worke hee often reuised and corrected, till it came at last both to the two Royall Cities, and to the Kings house. The workeman at the same time finished the Clocke, and both were together presented to the Gouernour, who at his owne cost published the Map, and soone after restored the Clocke, because hee had none which knew how to order it.

Ricius his Map.

The world vshers the *Iesuits* Gospell.

The Ship comming from *Iapon*, *Ruggerius* well releeued returned, whereby the house was finished, their debts payed, and the building with stories, the disposition of the windowes, furniture, faire situation on the Riuer with goodly prospect, and *Europæan* rarities, brought many, euen great Magistrates, to behold it. *Ricius* proceeded to make Spheares of Brasse and Iron; hee Printed also Globes, and made Sunne-dyals, which hee gaue to the Magistrates. And by his lectures on these subiects, he got reputation of the best Astrologer in the world, they esteeming others by themselues. The Gouernour was about this time aduanced to a higher Dignitie, called *Lin-si-tau*, hauing the rule of two or three Regions and all the Townes therein not remouing from *Sciauquin*: and as the *Chinois* are superstitious obseruers of Auguries, he conceiued that he proued

prooued the luckier man by thi, familiaritie with our men, which hee signified when they came to him, with a present to gratulate these honours.

See that *Bull. sup. l. 2. c. 1.* Gaine separates the subiects of one Crowne, without separation of state. Apply this to the quarrell twixt the *English* and *Dutch* in the *Indies*. And hereby you see the *Iesuites* instruments of secular affaires *Edw. Menese*, whose Booke you haue in the 9. booke. *tom. 1.*

In the *Philippinas* the newes of the *Iesuites* successe caused the Gouernour to send the Treasurer *Iohn Baptista Romanus* to *Amacao*, with Father *Alfonso Sancius* a *Spanish Iesuite*, with a Watch and other presents and letters to the *Iesuites*, to procure an Ambassage from the King of *Spaine* to *China*. The *Iesuites* had with petitioning brought the businesse to good forwardnesse, when they receiued contrary mandates from *Amacao*, it being likely to prooue the destruction of that Citie, if the *Spaniards* with their plentie of Siluer from *Peru* and New *Spaine*, should haue trade in *China*; neither did this belong to the *Spaniards*, but to the *Portugals*, according to the Composition betwixt the two Kings made by *Alexander* the sixth: and although they are both subiect now to one Crowne, yet their priuiledges remayne distinct without confusion. Thus both the Magistrate aduised, and their superiour the Rector prohibited them to proceed. Yet the former working was not ceased by Silence, till the *Amacaon* Magistrates laboured with diuers reasons to diuert the Ambassage. *Capralis* the Rector was desirous to see their house, and they procured the *Linsitaus* leaue, so that hee came thither, viewed all, and Baptised both the youngman before mentioned which kept the Altar, and a learned man which read the *China* Bookes to the Fathers, this called *Paul*, the other *Iohn*, the first *China* Conuerts. *Valegnanus* made Prouinciall of *India*, hearing of this successe, sent thither Father *Edward Sande*, and Father *Antonie Almeida*: and obtained of the Vice-roy *Edward Menese*, an annuall stipend for this mission. They came to *Amacao* in Iuly, 1585.

F. *Edw: Sande.*

At the same time it seasonably hapned, that *Linsitau* was commanded from the Court, to procure of the Strangers at *Amacao*, certaine goodly feathers for the King. He furnished a faire ship and sent *Ruggerius* thither, and brought with him Father *Edward Sande*, who went to salute *Linsitau*, and gaue him no meane gift of our Commodities to procure abode, whereof nothing so pleased him as a triangle Glasse. Hee giues him leaue to stay, on condition that they admit no other companion. In *Linsitaus* place had succeeded another of *Cequion* Prouince, a great friend of the Fathers, who being to goe to *Pequin* about some affayres of his Office euery third yeere, was feasted at our house (where the Magistrates were often solemnly entertayned) and then offered to carrie one of ours with him in his iourney, at least as farre as *Cequion* his owne Countrey. They willing to erect some new seate, least some disaster might in a moment strip them easily of one and all, agreed that *Ruggerius* and *Sande* should goe, and receiued licence for entring the Prouinces of *Cequian* and *Huquan*, and places adioyning. This was the Mart time whither *Ruggerius* went, and found *Almeida* come thither with the *Portugals*. Thither also a Brother of *Lusitau* was gone with much Merchandise of Silke, (the most whereof is made in the *Cequian* Prouince) which the *Portugals* bought at his price by the Fathers intreatie, who therefore tooke the Fathers, his brothers friends, to his Citie in *Cequian*, called *Sciauhin*, (a name somewhat neere the other, but in *China* a little difference prooueth great) the natiue place of both the Gouernours.

Antonie Almeida, Licenle for *Cequian.*

Strange course for names. *Iesuites* change their names.

The *Chinois* haue a custome to be called by many names, and no man calls them by their proper name, (but themselues in naming or writing themselues, or sometimes their superiours) without iniurie: they taking a greater name, which others giue them for more honour. Now the Fathers had yet assumed no other name, but their seruants called them by their proper name, a thing amongst the *Chinois* reputed barbarous. They therfore *(to become all things to all, to winne all to Christ)* then followed that fashion, and euer since at their first entrance assume a new Name. Their Iourney is thus written by *Almeida*.

Almeidas Letter to Ed. *Sande.* Rector at *Xauchin* or *Sciauchin*, contracted.

On the eleuenth of the Kalends of December, 1585. wee departed from Canton. *The third day the Ship happened to bee on fire, some imputing that vnluckinesse to vs: but without much harme it was quenched. Whiles wee sayled through the* Canton *Prouince, wee seldome came in sight and neuer went out of the Ship till wee came to* Moylimpor. *I can therefore relate nothing of that Prouince, but that there were very many Cities, and Townes very frequent, and steepe high Mountaines, betwixt which that Riuer slideth to diuers tracts of the Prouince stored with waters, Wares and Shipping. Euery where wee beheld sumptuous Edifices dedicated to the worship of Deuils, and of Ships almost infinite multitude; and of water-Fowle innumerable store, and herds of Goats feeding by the Woods, to the seuenth of the Ides of December. Then wee arriued at* Moilim *a Citie, neere which is the beginning of that Riuer, whose course being swift, wee were drawne by ropes and rowed with Oares against it. Into this Citie wee should hardly haue found admission, the passage being by a Bridge with two Iron chaynes, opened onely and shut at the will of the Gouernour. But our Conductor hauing acquaintance with the* Linsitau, *wee had present entrance, hardly able to passe for the multitude of Ships, there wayting. Wee were there well entertayned, and on Sunday and Munday sayd Masse. On Tuesday wee went to a Citie eight miles distant, there regaining the commoditie of another Riuer. All that way was paued with stones; in which we passe a Mountaine, on the top whereof was an arch with an inscription of his name, who had facilitated that way, otherwise difficult. The weather was vnseasonable, rainie and cold perhaps because the whole way in manner was Mountainous. I doe not remember that euer I saw way so frequented, not then when Merchants resort to publike Faires: for all the Merchandise from* Nanquin, *and the places adioyning are brought*

Moilim.

brought hither. Also the Merchants which inhabit the remotest Cities in that way, on both sides had Partners for the conueying of their Wares, very fitly; for our Conductor had nothing to doe but to deliuer one hundred and fiftie Packes of Wares with other prouisions for the way, to his Hoast, which all bee should find in his Inne in the next Towne. These Partners also prouide Horses for the Seruants and Seats for the Masters to bee carried in by two Porters defended from the Raine by Sumbreros, *or Shadowes which they carrie in their hands. When bee had passed halfe the way, wee changed our Seats and Porters, and had others to the Inne; to these nothing is due but some small gratuitie, the Hoast beeing paid for all: and a Seat is at as easie a rate here, as a Horse in our Countrey, with great commoditie and frequencie of Innes. In the Euening we came to the Towne* Faquen, *and staid there two dayes, such concourse of Citizens comming to see vs, that we were almost ouer-whelmed, and were glad to get a ship-board on Friday. On Saturday we sailed downe the streame, fifteene dayes continuing our course, in which wee hired three Barkes, in one of which we only were carried. On both Bankes many and faire Townes walled about, present themselues to the view of Passengers, seeming as bigge as* Canton, *which made mee meditate of the facilitie of conueying the Gospell in these parts, we making all this way with as great tranquilitie of bodie and minde, that wee might in the ship pray or studie and doe other things as commodiously, as at home.*

Seats and Porters in the high-wayes.

Faquen.

Great Cities thicke.

On the sixteenth of the Kalends of Ianuary, we came to a most frequent Citie far greater then Canton, *where the* Tutan *or Vice-roy of the Prouince* Chianſi *resideth. It is high walled diuided into three parts, a Riuer flowing thorow with a Bridge of Barkes, ioyning two parts of the Citie. On this Bridge customes are paid, but our Conduct being the* Lancitan *Brother passed without search. And although we feared to be examined by the Magistrate, yet no man troubled vs, they being not so inquisitiue in other parts as in* Canton *Prouince, about strangers: yea, they entertayne them more honourably euery where then your Worship at* Xauchin. *About halfe a mile from this Bridge another Riuer ioyneth with this, which runneth by the other side of the Citie, and makes the third part of the Citie. I wished the Fathers a Colledge in this place both for the fertilitie of the soyle and holsomnesse of the Aire. Hauing prouided necessaries for the rest of our Iourney in this Citie, wee went aboard and in the space of sixe or seuen dayes going downe the streame, we beheld on both sides very goodly Woods, and many Poles of wood on the Bankes necessary for those cold Regions, and holding on our course passed by seuen Cities, or more, famous for greatnesse and Merchandise: and on Christmas Euen came to the greatest Citie of all* Chianſi, *where wee staid that night for that Solemnitie. But hee which then was borne exercised our patience with a grieuous North-wind, whereby the Riuer water (otherwise cleere) was so troubled that on Christmas day wee could not drinke it. For the Riuers course is North-ward, which therefore by a North-wind is so moued.*

Metropolitan Citie of Chianſi.

All this way is apparent in the new Map.

The next day sailing by a Citie which by the sight we iudged greater then Lisbone, *in one dayes passage further, we came to the way which leads to* Nanquin, *where diuers Riuers ioyning together make a kind of Crosse with great commoditie for Trade and passage. For a Barke well defended against wind and weather, conuenient for two Gentlemen with their Seruants and baggage, may here be hired for twentie or thirtie dayes, at an easier rate then a man shall pay for Horses from* Coimbra *to* Lisbone. *For from* Canton *to* Moilin *fifteene dayes iourney, for a ship which carried two hundred Packes of Merchandize of diuers kinds, we paid but nine* Iaes, *and seuen for those three which wee hired for twentie dayes more. After that, leauing the Northerne way which goeth to* Nanquin *or* Lanquin, *wee turned West-ward against the streame, yet with benefit of the wind fauoring vs, we went fifteene and sometimes twentie * miles a day: in which space sailing by very large fields we arriued at a Citie where faire Porcelane is made, thence carried into* India *and* Europe. *Wee passed by many Woods also and some Cities. The cold meane-while was so great, that one day all was couered with Snow. The Riuer decreased, and on the third of the Nones of Ianuarie, they vnladed the Merchandise into ten lesse Boates, and sailed two dayes, wee came to a large Citie, to which wee had entry by a Bridge borne vp with fiftie painted Barkes.*

New Riuer.

Nine Taeis.

* These miles seeme to bee intended Spanish leagues.

Cold Region.

On the Nones of Ianuary wee came to Gouli, *a Citie at the end of our Nauigation by that Riuer. Here in celebrating Masse wee were thronged by the multitude. And a Priest of the Idols inuited vs, which then performed to his Idols Ceremonies at his House, Altars there erected, & Priests inuited, & Hymnes vsed, where he and those* Bonzi *vsed vs kindly. Here wee obserued that the Deuill counterfeited the Ceremonies of the Catholike Church. We went thence by the foot way carried in portable seats as before sixe or seuen miles: and then entred the Prouince of* Ciquion, *at the Sun-set entring the Citie* Cuixion. *On the Ides of Ianuarie we againe went a ship-board holding our course by another Riuer which in that Citie first beginneth to be Nauigable, the slow streame lingring with vs three dayes, in which yet we saw eight Cities, about which we found vnmeasurable quantitie of Oranges, very high Hils abounding with Trees and vnder-woods, betwixt which that pleasant Riuer sweetly slides, receiuing from euery place new Tributes of waters that it proueth now as large as that of* Canton *Prouince. And although* China *haue name of fertilitie, yet here appeared some prints of* Iaponian *sterilitie. For in fiue dayes space we could get nothing but Rapes and Rice, and a little fish. On the eleuenth of the Kalends of February, we passed by a large Citie twice as great as* Canton, *as those which knew the Region affirmed: for we by reason of Snowes and Mists could see nothing but some high Towres. At Sunne going downe wee came to a Towne, against which a Bow-shot distant on the other side of the Riuer, wee were*

Papists and Paynims Ceremonies alike.

Sciaubin or Ciquion like Venice.

were forced to take a new ship, and causing our ship to bee drawne (a light hanged out at the Mast) the next morning we came to the Citie Ciquion, *the end of our iourney. In this Citie, which as Father* Rogers *(or* Ruggerius*) is wont to say, is a type and representation of* Venice, *God hath prouided vs of a good House, on one side hauing the Citie, on the other the Riuer for prospect, with conuenient Roomes and a Garden, and a fit place for a Chappell. On both sides of vs dwell Idolatrous Priests, which yet vse vs kindly, and daily come to heare our Doctrine, as doe others in great multitudes, that we cannot yet auoide their frequent concourse to heare and see vs. To the chiefe of them we shewed our Altar erected to the Immortall God, which they beheld with great reuerence, worshipping the Image of our Sauiour. And the greatest Magistrates were so affected with our* Christian *Ceremonies, that they said they would not suffer vs to depart. Some of them inuited and entertayned Father* Rogers: *one of them of farre greater ranke then the Gouernour of the Citie, who then mourned for his Mother, and inuited vs by his Steward to her Funerall Solemnitie; whom we answered that our Prayers auayled not but to the worshippers of the true God. He vsed the Father with very great respect, giuing him the higher place at table, and accompanying him at the parting to the vtmost gate of his Palace, seeming much delighted with the Mysteries of our Faith. Three others greater then the Gouernour haue comne to visit vs, and others come so frequent that it is troublesome. The Priests also giue vs good lookes, whatsoeuer they thinke. The Ædifices both publike and priuate, the streets and Lanes of the Citie are larger and fairer then in the Citie of* Canton. *The Citizens also in grauitie of manners, and ciuilitie of Habit, differ not a little from the Inhabitants of* Canton *and* Sciauchin. *There is no Citie in* Portugall, Lisbon *excepted, that is any way for greatnesse comparable. The singularities I shall write at another time.* Ciquion *the fourth of the Ides of Februarie, 1586.*

Prouincials Letter. Fortie *Chinois* compared to 40000. *Iaponian* Conuerts.

The Prouinciall of *India* writ to the Generall that at their returne to *Xauchin* they found fortie Christians added to the Church, which number in those beginnings in the ample and barbarous Kingdome of *China*, may be equalled to fortie thousand Christians in the *Iaponian* Prouinces: from *Goa* 14. Kal. Ian. 1587.

§. IIII.

False Brethren and others accusations detected, they are expelled Sciauchin: *erect a Seat at* Xaucum. *Monasterie of* Nanhoa *and other things of note in those parts. They alter their habit; Voyage to* Nanquin; *the Lake, Riuers, Idols and other Rarities.*

Ioius cals that Citie where they resided *Sciaubin*, and saith, it is a principall Citie, though not the Metropolitan of the Prouince, noble in commerce, in scituation (in the midst of a fresh water Lake) in wits and learned men. They baptized there *Linsitaus* Father and two or three Infants, which then dying they thrust into Heauen at vnwares. *Sixtus* the Pope granted a great Indulgence to the Societie, to further the *Iaponian* and *Chinese* businesse: and *Aquaviva* the Generall sent them three Watches and an artificiall Clock, which was great, yet mooued by wheeles without waights, and strucke also the quarters to the great admiration of the *Chinois*. Others sent Pictures, one the worke of *Gaspar Coelius* who first taught the *Iaponians* and *Chinois* the *European* Painting to the great good of both Churches. But the Kinsmen of *Linsitau* seeing such flocking to the Fathers grew suspicious of danger, and caused them to bee recalled, and *Linsitau* also to be estranged from them. Also one *Tansiao-hu* a great acquaintance of *Linsitau*, with purpose to get somewhat from the Fathers, questioned *Ruggerius* why hee had not seene Mount *Vu-tau* in the Prouince of *Hu-quam*, a famous resort of Pilgrimes; who answered that hee durst not without the Magistrates leaue: I will procure it, saith hee, and did so. In the way *Ruggerius* went to the Mother Citie of *Quam-si*, where hee visited one of the Royall bloud, not knowing that such haue nothing to doe with the State, and was not admitted, but bidden first to goe to the Vice-roy, to whom he went and had no injury, nor yet wonted humanitie, but was bidden to prosecute his Pilgrimage and not to stay there. *Linsitau* hearing of this, sought to shift his hands of them, and with much adoe they obtayned that two might bee permitted to stay in their house.

Coelius first teacher to paint.

Vutan a holy place haunted by Pilgrimes.

New Conuert, a false Knaue.

Another danger happened by one *Martin* a new Conuert which had made two other Conuerts beleeue that the Fathers could by a certaine herbe turne Quick-siluer into siluer, and by that meanes maintayned themselues. Now the *Chinois* being exceedingly affected to that Alchymisticall vanitie, these gaue money to buy a Wife, and other costs to that false brother who vndertooke to learne of Father *Ruggerius* and to teach the other two that Science. And hauing gotten what he could of them, he also borrowed the Triangle-Glasse of the Fathers, with which hee ranne away. The Gouernour one day desiring to see it, they told him who had stolne it, and he sent an Officer which found him out and brought him bound. Hee, to bee reuenged of the Fathers, accused one of them of Adultery; and the Husband of the pretended Adulteresse (partner in

Digitized by Google

in the Conspiracie) put vp a Petition against *Ruggerius*, who vpon inquisition was found at the time named to haue beene in *Quam-si*, two moneths journey thence. The Accuser hoped to get some-what, being poore, to stop his mouth, which they refused vtterly, and hee for feare fled, together with his Wife. The Father was iudicially cleered, and *Martin* in his presence receiued twentie cruell stripes, and condemned to the Gallies, was sent to *Linsitau* who had first committed him to confirme the sentence; who added sixtie stripes more, and being beggered and cast in bonds he was forsaken of all his Friends, and (the Fathers meane-while releeuing him) dyed within few dayes of the wounds. He which had gotten the Glasse from *Martin*, another Conuert, came and restored it to them, lest it might breed him danger being found with him.

Martin whipped to death.

Linsitau was preferred to a higher dignitie in the Prouince of *Hu-quam*. To him the Citie had erected a Temple, and on the Altar had set his Statue; before the Altar a great Harth for burning incense: Candlestickes were also magnificently placed; and at his departure the whole Citie there visited him, and after their rite, pulled off his old Boots (Bootes are the ensignes of Magistracy) and put on new, putting the old in a Chist, and locking them vp to bee reserued for a monument of his worth. *Ruggerius* went to *Amacao*, and *Matthew* got leaue for Father *Edward* the Superiour to returne to *Sciauquin*. The new Conuerts which had lost their moneys by *Martins* death, deuised new tumults against the Fathers; the Riuer (which is a mile broad) ouerflowing, damnified the houses of the Citie, whence grew occasions of new abuses to Ours. The Visitour endeauoured to procure Legation from the Pope to *China*, and *Ruggerius* was sent to *Europe* on that businesse, which tooke little effect by the death of diuers *Popes*; hee spending the rest of his life at *Salerne* in the Kingdome of Napies.

Manner of honouring good Magistrates.

R. goeth into *Europe*.

Ricius was alone a good while, till *Almeida* came to him. His Clocke, by the Diall to the eyes, and by selfe-striking to the eares, caused no little wonder. But a new calumnie much endangered them made to the *Ciai-yuen*. For certaine old men of *Canton*, which are honoured for that in their whole liues they neuer haue accused any, nor beene accused of any, enioying therefore a yeerely feast out of the publike treasure, a peculiar Vest, and diuers other immunities, put vp a Petition, admonishing of the danger of the *Amacaons*, and especially those Spies which had builded houses of diuers stories, and euery day proceed with new arts, giuing money toward the building of *Sciauquin* Tower to get entrance into that Citie, sayling to and fro without impediment, dangerous to the State. This is that which our Bookes fore-tell, *Yee haue sowen thornes and nettles in a gentle soyle, yee haue brought in Serpents and Dragons into your houses. That of* Amacao *is like a sore on the hands or feet easily cured at leasure, but this of* Sciauquin, *an vlcer seizing vn the breast and heart timely to be remedied*, &c. The Visitour reputed a seuere man committed it to the *Haitu*, and at last it came to the Gouernour of *Sciauchin*, who then being at *Pequin* to performe the customary trienniall visitation to the King, *Phan* his colleague (our friend, then Lieutenant) assisted vs with his Counsell, and they gaue their Glasse to the new *Linsitau*, who ended the quarrell with the Visitour, as being a false calumnie.

Priuiledged old men.

Their elegant Petition is whole in *Ricius*, too long for this place.

The two Marts prouided them of exhibitions and *European* Presents from *Canton*, and their Clocke, Mathematike Instruments, Geographicall Maps, Pictures, and Bookes, with Musicall Instruments, had procured them much visitation, and much estimation of *Europe*, and some fruit thereof in Conuersions. Neither was this Station vnprofitable to *Amacao*, helping their affaires with the Magistrates, in businesses with the Vice-roy, in cases of shipwrackes, in reducing fugitiue slaues. It happened at that time the Vice-roy dying, his Successour would not through superstition enter his Palace till hee had pulled it quite downe and built it anew at the Kings charge. Meanewhile spending his time in *Canton* Prouince, he was made against vs and banished vs. But the Magistrates being our friends, and order comne then from *Pequin* to buy Scarlets of the *Portugals*, F. *Mat. Ricius* was employed, and got their good liking, but not leaue by any meanes of the Vice-roy to stay at *Sciauchin*. Yea, hee forced vpon the Gouernour the execution of his Mandate to packe them away, offering money for the house, which they refused to take, saying, a house built for Gods seruice might not be sold, and it were ill merchandise to take sixtie pieces of Gold for sixe hundred which it had cost them.

Iesuites merit their exhibition by seruice to the state.

Iesuites banished.

Iesuites house cost 600. pieces of Gold, which in *China* is a great summe.

When they came at *Canton* the Admirall was absent, and whiles they waited for him the Vice-roy sent a Barke for them to returne, and then permitted them to chuse any other place of residence. *Ricius* chose *Nanhium* in the Prouince of *Quiansi* (or *Quamsi*, or *Chiansi*) which hee refused not, but wished them first to trye at *Nanhoa*, or at *Xauceum*, commending them to the Assistant of the Gouernour thereof, then present, and gaue *Ricius* a bundle of bookes of his owne acts in token of good will, who thanked him with his fore-head to the ground, after their fashion. They departed from *Sciauchin* on the Assumption day, 1589. They came to the place called *Sanceui*, or Three-waters, where the Riuers of *Xauceum* from the North falls into a great Riuer: there they vse to change ships, to haue others fitted in other fashion to sayle against the streame. In eight dayes sayling to the North, they came to the place where the Gouernours seruant stayed for them to bring them to the Temple or Monasterie of *Nanhoa*, part of which the Vice-roy had giuen them if they liked it. This Monasterie they found in a goodly Plaine, enuironed with pleasant Hills, enriched with hand-set fruit-bearing trees, watered with a

Nanhoa Monasterie of 1000. Monkes.

Riuret

Riueret in the midst: the goodliest Hill, graced with a plentifull Fountaine, was the Seat of the Temple, a great pile; nigh which was the Monasterie wherein a thousand Priests (by the impious piety of the Ancestrie, Lords of that ground) had their abode.

Lusus Legend. The originall thereof was a man which liued about eight hundred yeeres since, called *Lusu*, who is reported to haue flourished in great reputation of holinesse, by reason of his austere course of life; with a chaine girded to his bare flesh, wonted to sift Rice, and to beate it lightly after their manner, as much as serued for the daily food of a thousand Monasteries. With that chaine his flesh putrified, so that wormes bred therein: of which if any happened to fall to the ground, he placed it there againe, saying, *Hast thou nothing to eate? why doest thou runne away?* There is his carkasse preserued and that famous Temple built to his worship, to which is concourse of Pilgrimes out of all the Kingdome, euery-where he and all his being much reputed. These Ministers of the Deuill are diuided into twelue Stations, each hauing his Superiours, and ouer all an Abbot. When the Father came thither sent by the Vice-roy, they supposed hee had come to be their Abbot and to reforme their abuses; for they not only had their Concubines and Bastards, but robbed by the high-wayes. Now all the Idoll Priests are as subject to the Magistrates as other men; perhaps because their Learned esteeme not Idols, nor account these their Priests. Yet with *China* dissimulation they gaue the Fathers faire entertainment with much pretended joy, and officiously offered all at their Seruice, making them also a Solemne Feast, and then shewing them the chiefe places of their Monastery. They were full of great Idols of Brasse and other Metals, and of wood gilded. In one Station were told fiue hundred. There were also many Steeples and Bels of Metall cast, one such as they had neuer seene in *Europe* to their remembrance.

Bodily exercise profiteth little, 1. *Tim.* 4. 8.

Pilgrimage.

China hypocrisie.

Monstrous Idolatry. Bels.

Lusus Shrine. The bodie also of their Saint, *Lusu*, was shewed, all shining with that their *China* bituminous Vernish (so vulgarly thought, and preserued with incredible veneration, though many deny it to be his bodie:) In the midst of the Temple is an eminent place to which they ascend by neate steps, in which hang about fifty Lampes, but not all burning except on set dayes. The *Chinois* maruelled at the Fathers doing no worship, a thing vsually performed by those *Chinois*, which otherwise repose no confidence in those Idols. They both agreed; the *Chinois* Monkes to bee rid of their feare, and the Fathers to goe to the Citie.

Folly of Selfe-pleasing. At their departure, Father *Almeida* went by water, and F. *Matthew* by Land with the Gouernours Seruant, the Abbot bearing him companie. He there told the Magistrate that he liked not of the Temple, because the men had an ill report as vnsafe Neighbours, and hee worshipped one God, and not Idols. This amazed the Gouernour, perswaded before, that there was in the World no other Law nor Characters then theirs, till Father *Matthew* pulled forth his Prayer-booke. The Abbot also testified that hee had worshipped none of the Idols, no not *Lusus* selfe. At last, the Gouernour was perswaded by him, that that of Idol-worship was a later Sect amongst them; yea, the Abbot affirmed, that they deserued no worship, but that former Magistrates had obserued that without Idols the vulgar would not keepe Religion, and therefore set vp these to be worshipped. They visited all the Citie Magistrates which vsed them with more courtesie then those of *Sciauchin*. They went also to another Temple or Monasterie called *Quambiao*, on the other Westerne side of the Riuer, and carried their goods thither till they were prouided of a House.

Apply to Images. Originall of Idols. Confesse and be hanged.

Xauceum described. *Nanhium.* The Citie *Xauceum* is seated betwixt two Nauigable Riuers which here met: the one which passeth by *Nanhium* on the East, the other running out of the Prouince of *Vquam* on the West. But the Citie wals and Houses are builded in the midst of the field, but they are forced by the straitnesse to build also on the other-side the Riuer, joyned with a Bridge on Barkes. It contayneth fiue thousand Housholds is fertile but vnwholsome, the third or fourth part of the Inhabitants being sicke of a Tertian from October to December, which takes away many, and leaues a pale Impression on the rest. Strangers also are no lesse arrested by it, when they come thither on businesse. And the Iesuites had almost lost themselues in this new purchase, where being recouered they had a Charter from the Vice-roy to build their House in ground belonging to the Monasterie. Thither the Visitor sent them *Sebastian Fernandus* and *Francis Martinez* which had beene trayned vp in the Schoole of *Amacao*, the first Probationers in *China*. They to auoid expense, built this House of one Storie after the *China* manner: and soone liked better of this then their former Residence.

Iesuits new Seat.

Chiutaiso Scholer of *Ricius.* *Chiutaiso* (the sonne of one of the second ranke of Magistrates called *Sciansciu*, a man famous, as being the first named of the three hundred Doctors made euery third yeare, and Author of Learned Workes) had spent his Patrimony after his Fathers death with Prodigalitie and experiments of Alchymie: and now was forced to shift, with his Wife and Seruants wandering thorow the Kingdome to his Fathers Friends, and becomming a Sollicitor for other men to the Magistrates of his acquaintance. Hee hauing obtayned of the Vice-roy a Roome in that Monasterie became Neighbour to the Fathers; and one day with set Pompe (after the *China* custome) and precious Gifts came to Father *Matthew*, and chose him for his Master. It was not safe for the Father to refuse (though he requited his gifts, lest he should seeme to haue beene brought thither

ther by couetouſneſſe) and firſt taught him Arithmeticke. For that which the *Chinois* haue is with a Linnen Inſtrument whereon Beads are put by wires, and ſhifted hither and thither to reckon their numbers: certayne, but ſubiect to Error, and vnprofitable to high Sciences. He read to him alſo the *Sphere of Clauius*, and the firſt Booke of *Euclides* Elements, and taught him to make Sun-dials of many ſorts, and Geometricall Rules to meaſure Altitudes. He being of ſubtile wit, committed theſe things to writing in elegant ſtile, and ſhewed them to Magiſtrates of his Acquaintance, ſo procuring great opinion and admiration to the Ieſuits. His wit and exceeding induſtry brought him to great skill, that hee made Spheres, Aſtrolabes, Quadrants, Compaſſes, Dials and other like, very artificially, and ſome of ſiluer: withall ſo ſetting forth his Maſter and the *European* Learning, that it proued of no ſmall conſequence. By his meanes the Fathers had acquaintance with *Pinpitham* a Military Commander, with the Gouernours of the Citie and diuers other Magiſtrates. *Almeida* fell ſicke and was ſent to *Macao*, to ſee if Phyſicke might recouer him, and there dyed. *China* Arithmeticke.

Ricius ſet forth a goodly Image hitherto vnſeene, on the Altar adorned with Waxe Lights, which brought ſuch concourſe to ſee it, that their enuious Neighbours ſtoned the Houſe and Seruants by night: whereat *Chiutaiſo* offended acquainted the Gouernour, which had before ſet his Decree ouer their doore prohibiting all wrongs. He called the Street Gouernours (as Conſtables with vs) and was likely there to haue ſcourged them, pretending their ignorance, and putting chaines about their neckes after the faſhion, ſent them to ſeeke out the wrong doers, and bring them to his Tribunall. They fearing to anger their Parents, durſt not name them, till he commanded to whip the one and ſend the other to Priſon, whereupon they named two, whoſe puniſhment with much intreatie of the Father was pardoned. Father *Francis de Petris*, was ſent (by the Magiſtrates Licenſe obtayned) to ſucceed in *Almeida* place. The Vice-roy was then preferred by his Friends procurement and Bribes to a higher place, but the Prouinciall *Viſitor* had ſo complained of his wrongs, that by the way hee was acquainted that hee was depriued of all Office, and fined at forty thouſand pieces of Gold to the King. Beſides, a filthy Vlcer brake out of him, and ſoone after he miſerably dyed. Thus did God puniſh his pride, which to erect a Temple to himſelfe at *Sciauchin*, had depriued the Ieſuits of their Houſe. The ſame at *Sciauchin* was that the Ieſuits were expelled for refuſing to teach the Vice-roy the Arte of Alchymie. An Image ſent from New *Spaine*. Seuere Iuſtice. *Fran. de Petris*. Vice-roy depriued.

One *Coſunhoa* a Merchant of the Citie *Taicho* in *Chianſi*, abode in *Nanhium*, and had ſome fortie perſons in his Family, a very Superſtitious Idol-worſhipper, in whoſe ſeruice hee macerated his whole life in that *China* abſtinence from Fleſh, Fiſh, Egges, and Milke, liuing only of Pulſe, Rice, Herbs, and certaine Cakes, induſtrious for his ſaluation in another life, but not ſatisfied with any of the *China* Sects. He had learned by *Chiutaiſo* of the Ieſuits, and came to *Xauceum* and acquainting Father *Ricius* with his purpoſe, he was inſtructed and baptized *Ioſeph*. He ſtayed with them a moneth, and after *Ricius* went to *Nanhium* to him, and preached and baptized ten others. Theeues by night aſſailing their Houſe, the Gouernour was made acquainted, who would haue them indited by the Fathers (which they did very ſparingly, whereas the *China* manner is to adde exceſſiuely) and he put them to torture; and forced them to confeſſe: one whoſe Hat or head couering falling off had bewrayed him, he condemned in Capital ſentence; the other to be ſent to the Gallies, or amongſt the Kings Slaues: which ſentence was to paſſe to Superiour Gouernours, and ſo to *Sciauchin*, and Father *Ricius* muſt goe thither about it, which happened well for the new Conuerts which had for the moſt part growne wild. From thence he went to *Amacao* to ſpeake with the Viſitor, and returned to *Sciauchin*, where the Parents of the theeues procured him their Aduocate which ſhould haue beene the Plaintiffe. Amongſt the *China* Magiſtrates is one which hath his name of *Pardoning puniſhments*: Hee is ſent in the Name of the *Queene Mother*, into each Prouince one. Their Office is to viſit Priſons, to exempt the ſmaller offenders and to mitigate Sentences; for which the Magiſtrates hold them in great eſteem. But hee would not ſuccour theſe men, though the Father intreated. The *Prouinciall Viſitor* only remayned, who alone doth laſt of all reuiſe the Sentences, and they deſpaired that hee would reuoke the judgement of ſeuen or eight Magiſtrates. Hereupon they conſpired fiftie of them conioyning in an impious Sacrifice in a certayne Temple to expell ours from *Xauceum*. But none of the Magiſtrates of the Citie ſubſcribing (except one, who did it, to offend the Fathers greateſt friend) they better bethought themſelues, and intreated *Ricius* to be their Interceſſor; whereby the Viſitor was perſwaded to pronounce them Diers and not Theeues, and to exchange their ſentence into twentie ſtripes apiece. For the name of Theeues would haue beene an ignominious brand to them and to their Kindred for euer. Yet would they haue renewed their accuſation to the Viſitor, but he would not heare them. About that time the *Preſident of the Court of Rites* at *Pequin*, paſſed that way towards *Hamam* his Native Countrie, who hearing of Ours (which he did not to the Viſitors) viſited them with gifts, and ſpent a whole day with them, promiſing at his returne to carry Father *Matthew* to *Pequin* with him to correct their Kalendars. *Taicho*. *China* abſtinence. *Nanhium*. Theeues. Their ſentence Queenes pardoner. Rioters. Theft ignominious. *Pequin* Preſident.

In Nouember 1594. Father *Francis de Petris* dyed, and Father *Lazarus Catanens* ſucceeded, *Ricius* bethought him of another courſe: for howſoeuer they had ſhaken off the name of *Bonzi*, yet

Bonzi infamous. Popish and Ethnike priests like in shauing and habite.

yet because they shaued their beards like the *Portugall* Priests, and cut their hayre, and liued single, had their Temple and set prayers, they could not free themselues of that infamous title which made them vnfit for greater Designes. Hee aduised the Visitor, that by this meanes they were accounted as the Idoll Priests, and that it were fitter to let their hayre and beards grow, and to weare the habite of the Learned men, each of them hauing a garment of Silke to visit the Magistrates, without which they might on equall tearmes amongst the *Chinois*, conferre with them: also that it was fit to remoue their residence from this vnwholsome ayre of *Xauceum*, or to diuide it. To all these the Visitor yeelded, vndertaking to acquaint the Generall of the Order and the Pope. For howsoeuer for vertue and learning (wanting to their *Bonzi*) the Magistrates had alway shewed countenance to Ours, yet the vulgar held them in that vulgar respect; neither might the Magistrates breake their custome, to giue them equall entertaynment. Nor did they now beare themselues for Learned men of *China*, but for *European Learned*, imitating the habite of that Countrey.

Iesuites alter their habite.

Scilan.

The next yeere, 1595. the Chiefe Iudge of the *Councell of Warre*, by the *Chinois* celled *Scilan*, which is farre aboue the dignitie of Vice-roy, (who before had after diuers Dignities betaken himselfe to a priuate life) vpon occasion of the inuasion of *Corai*, was by the King of *China* (which sent in defence thereof an Armie of eightie thousand) called backe to the Royall Citie. Hee had a Sonne of twentie yeeres old, who for griefe that he had lost the first degree of their Students, lost his wits. Hee sent a Captayne for the Fathers, thinking they could recouer his Sonne which he had with him, and gaue them such entertaynment, that the Magistrates were amazed. He caused a Charter to bee giuen to *Ricius* for going to *Naugan*, chiefe Citie in *Chiansi*, where hee hoped to doe good on his Sonne. He passed Mount *Moilin*, which lyeth betwixt the two Prouinces and the two Riuers, a dayes iourney, and the most notable thorow-fare in the whole Kingdome. For at the foot thereof to the South, the Riuer of *Nanchium* becomes nauigable, which runneth into *Canton* and the South Sea. On the other side of the Hill at the Citie *Naugan*, ariseth another great Riuer, which visiteth the Prouinces of *Chiansi* and *Nanquin*, and many Cities before hee enters the Sea Eastward. Thus what comes from forraine Kingdomes to *Canton*, is this way conueyed to the in-land Kingdomes, as also from those hither: Horses and seates, or Chayres for carriage on mens shoulders, Beasts for carriage and Porters, being almost innumerable euery day, yet all in good order. The Mountayne is common to both Prouinces, which are distinguished by a Gate erected among the stonie precipices. All the way is set with Trees, paued with stones, frequent with Hostries, as secure by night as by day, both by the guards of Souldiers, and frequencie of Trauellers: neither are their ouer-flowings by raynes. On the Hill top is a neate Temple, and therein a Garrison, both Prouinces thence offered to the view. *Naughan* signifieth the *Southerne Inne*. Hee went in one of the Presidents Ships, till hee came to the Citie *Canceu*; by the way often entring into his owne Ship and discoursing with him of *European* affayres, Sciences, and Religion. But so many visitations for Magistrates hindred all dealing with his Sonne in this iourney, so that by his Father it was deferred.

Mount *Muilim* or *Moilin*: See *sup. Ex. Almeida.*

Naughan.

Canceu.

In this Citie *Canceu*, resideth a Vice-roy greater then the Vice-roy of that Prouince, they call him the Vice-roy of foure Prouinces, *Chiansi*, *Fuchien*, *Canton* and *Vquam*: not that all those Prouinces are subiect to him, but because hee gouerneth two adioyning Regions, or lesse Prouinces out of each of them. The cause of appointing this Vice-roy extraordinarie was, the multitude of Theeues in those parts, which bordering on so many Prouinces, could not easily by ordinarie course of Iustice bee apprehended; whence two Regions out of each were committed to one, who by Militarie forces represt those insolences. And because the militarie Magistrates are subiect to that Councell of Warre at *Pequin*, the President was heere receiued with greater State: aboue three thousand men were sent to meete him a league off, with their Captaynes, Colours and Armes, many with Hand-gunnes mixed, shooting off as he passed, making a faire show on both sides the Riuer, which there is not very large. When hee was come into the Citie, the Vice-roy with other Magistrates visited him with Gifts, Prouisions, Banquets; and some companies were set to guard the Ships: which was also done euery where, such is the *China* veneration of such Magistrates by their inferiours. Heere was a Bridge of Boates, opened but once a day for Ships passage which haue payd their customes.

Great Vice-roy and Greater President.

Stately entertaynment.

Boat-bridge.

Sciepathau, that is 18. streames. It seemes so many in that space flow into it.

After they were past this Citie, another Riuer addes it selfe to this, whence they come into a place called *Sciepathau*, about thirtie miles long, in which are many Rockes dispersed, on which the impetuous force of the water causeth many ship-wrackes, goods lost, and men drowned; and requireth expert Ship-men; a strange thing to see a Riuer full of shelues and sharpe rockes, in the midst of the continent. In the entrance of this dangerous passage is an Idoll Temple, wherein the passengers deuoutly commend the safetie of their fortunes to these vanities, which *Scilan* also heere did in vaine: for although with multitude and industrie of Saylers his Ship auoyded the Rockes, yet was that broken in which his Wife and Children were carryed, though they escaped drowning, by reason of her high building, euery one getting vp into the highest decke, which lifted vp it selfe aboue those shallower waters. They cryed pittifully, and Father *Mat-*

Lying vanities

thew

Digitized by Google

Ithew hauing then gotten a Boate for himselfe came first and receiued them, going himselfe into another lesse, which went before to conduct the way. *Scilan* sent for another Ship presently to *Cancen*. Father *Matthew* was taken into another Ship of burthen, which was in a gust ouerthrowne, *Iohn Barradas* his boy was drowned, and hee hardly recouered: the Commodities by dyuing were gotten againe, though much hurt by the water. They came to a noble and populous Citie called *Chiengan*, where the winde by night was so violent, that it dispersed all the Fleet, which hardly escaped wracke. *Chiengan.*

Scilan terrified with this disastrous passage by water, purposed to goe by land to *Pequin*, which is done at the Kings cost; in certayn places there being Horses, Lighters, Porters, prouisions ready prouided. Now thinking to send backe *Ricius* to *Xaucium*, least some might accuse him in a time of warre for bringing Strangers to the Court; hee shewed some the wonders of his triangle Glasse, which hee was willing to giue the President if hee knew he should hold on with him in the Iourney. They acquainted their Lord, and hee gaue him license to goe to *Nanquin*, and to enter those two Prouinces of *Cequion* or *Cechien*, and *Nanchin* or *Nanquin*. Hee was carryed thither with two of *Scilans* seruants, still hauing Souldiers from all places to guard him, they thinking that some of his Sonnes were there carryed. When hee came to that Mother Citie (for before hee seldome went foorth, to preuent all lets) which is in twenty nine degrees, to the Northermost part of the Prouince, hee made shew of himselfe as one of *Scilans* houshold seruants: and not knowing whither to goe to deliuer his Letters, hee first went into a Temple of note, which beares name of the *Iron Pillar*. For they fable that one *Huiunsin*, had some hundreds of yeeres agoe, brought perfect Siluer out of Quick-siluer, and had deliuered this Citie from a huge Dragon, whom hee ouer-whelmed in the ground, and tyed to that Iron Pillar, and then flew with his whole house, Mice and all, into Heauen. The building of this Temple is worthy the view, against which are perpetuall Faires, in which nothing is lacking to bee sold. The Priests are those which they call *Thausu*, which let their hayre and beards grow. When hee entred that Temple, much concourse of people came about him to see a Stranger, a strange sight there, yea, reputed holy, for they had thought that the fame of that Idoll, had brought him thither from farre Countries. But when hee did no worship thereto, hee was admonished to doe that which the greatest Magistrates refused not; then threatned, after they would force him, till one of the Ship sayd, hee worshipped no Idols. But seeing the multitude still flocking about him, he returned to the Ship, and signified that hee came with the President, whom euery man knew. The seruants visited their Masters friends, and receiued gifts of some, especially of the Vice-royes Physician. Kings Posts. The Glasse seemed a great Iewell, giuen to *Scilan*. *Nancian* Metropolis of *Chiansi*. This seemes to agree with *Pintos Muchiparom. sup. pag.* 274.

Scarcely had they sayled out of the chiefe Citie, when they meete with a Lake admirable for the greatnesse and other things: on all the bankes as farre as a man can see, are innumerable Townes, Castles, Villages, great Houses; thence they may passe into *Fuchien*, and thence to the Sea Eastward. Amongst other Townes there is one Citie called *Nancan*, at the foot of a Hill called *Liu*, in which Hill are diuers Anchorites, each in his owne Cell, macerating himselfe with afflicting his bodie. Those Houses are sayd to bee as many, as are dayes in the yeere: and they tell as a miracle, that the Sunne shining cleere round about, that Hill is alway couered with Clouds and mysts; so that that Hill (so neere) cannot bee seene out of the Lake. The course of the Riuer is to *Nanquin*, but in that breadth the streame hath small force, and easily may with the winde bee sayled any way. After you are out of the Lake, a great Riuer out of *Vquam* Prouince, runneth thither and therein loseth his name and waters. For the greatnesse, it is thence-forward called *Tamsu*, which signifieth, the *Son of the Sea*, being in many places two or three myles broad, dangerous also for tempests like his Father, and they say the waters are so whirled therein, that swimming can little profit those which fall thereinto. The *Chinois* sayle it with great feare, and are there often wracked. Great Ships sayle therein, and happely our Ships (not the greatest of all) and our Galleyes might sayle hitherto from the Sea. Many other Riuers pay their tributes to it. They sayle it not by night, but betake themselues to some Port, which they may readily doe also in a storme. To this Lake the Spring-tydes at Change and Full come, at other times not obseruable: at *Nanquin* euery day, but it is fresh water. When hee was come to *Nanquin* the Presidents seruants left him. Admirable Lake: see the new Map. Mount *Liu*: this perhaps is that *Calemplui in Pinto* 262. or some like place Riuer *Tamsu* or *Seas Sonne*, beyond the Lake.

§. V.

Nanquin *described*; RICIVS *expelled thence, hee setleth at* Nancian, *thence goeth to* Nanquin *againe, and to* Pequin; *description of it, the way thither, the Kings Palace, and of* Suceu, *and* Hamceu.

Nanquin. (which *Polo* calls *Quinsay*) described. It was then greater, as being the Royall residence, which remoued and warres together haue diminished it: perhaps also that Lake decaying and drying vp; or not rebuilt after the *Tartars* expelled.

Nanquin or *Nanchin* by the *Portugals* is called *Lanchin*: for they heard of it by the Inhabitants of the Prouince *Fuchian* or *Fuquian*, which vse *L* for *N*. It is called also *Intienfu*, because the Gouernour of the Region there resideth. This is that Citie, which in the *Chinois* opinion excelleth all Cities of the world, both in greatnesse and goodlinesse: neither may many be compared to it. For it is full of very great Palaces, Temples, Towers, Bridges, which all yet are exceeded by those of the same kinde in *Europe*. It excelleth also in temperature of the ayre, fertilenesse of the soyle, goodnesse of wits, gentlenesse of manners, elegance of speech, multitude of inhabitants of euery ranke, of People, and Learned, and Magistrates: these also holding equall ranke with those of *Pequin*, in number and dignitie, howbeit by the absence of the King, that equalitie is made vn-equall. And so in all the Kiugdome of *China*, and the bordering Kingdomes, it is commonly (all things considered) iudged the first or chiefe Citie. It is compassed with three Walls; the first, that of the Kings Palace exceeding stately. That is also compassed with a three-fold wall, in manner of a Tower, with ditches filled with water. It hath foure or fiue *Italian* myles in circuit. And I dare boldly say, that no King any where hath a more excellent Palace (not if you weigh particulars together, but) comparing all things. The second wall encompasseth the Palace, and the principall part of the Citie, opened with twelue Gates, which are fortified with Iron plates, and Ordnance planted ouer against them within the Citie. This second Wall comprehendeth eighteene *Italian* myles compasse. The third Wall and vttermost is not euery where continued, but where need is, Art hath added supplyment to Natures fortification.

Second Wall twelue Gates. Third Wall.

Citie wall two dayes iourney on horsebacke.

The circuit thereof can hardly bee knowne. The Inhabitants say, that two Horse-men in a whole dayes riding, hauing gone out of the same Gate, met together at night: whence the prodigious quantitie may bee obserued, especially the forme of the Citie being Circular, and therefore most capable. Although within the walls are great spaces of Mountaynes, Lakes, Groues, Gardens, yet the greatest part is very frequently inhabited. The garrison Souldiers (which one would not beleeue, had not eye-witnesses confirmed it) which keepe the Citie alone, are fortie thousand. The Pole is eleuated 32. degrees, and so it is seated in manner in the midst of the Kingdome, from North to South. The Riuer runneth by it at the West, exceedingly both enriching and beautifying it. Nor doth it onely passe by, but is in many places brought into the Citie by Channels (whereby greater vessels may enter the Citie) being enlarged by Art. In times past it was called the chiefe Citie of the Kingdome, and may seeme to haue beene anciently more glorious.

Garrison 40000. In 32. or 32. degrees, 15. min.

Large Suburbs

Ricius went a-land in the Suburbe, which is without the three Walls, and is so large and frequently inhabited, that it may seeme another great Citie. There a Physician of the Vice-roy of *Schiauchin* knew him, and hee visited the Vice-royes sonne, and by his meanes grew acquainted with others. When he went into the Citie, hee vsed to bee carryed in a close Chayre, to preuent noueltie, and for more authoritie, and because the length of the way to friends houses often required it. There hee thinking to fixe a residence, learned of one *Sciutagin* a Magistrate of his former acquaintance, to whom hee had before giuen a Globe and an Houre-glasse, receiuing promises of much kindnesse. To him he went full of hope and not emptie handed: but hee being both miserably couetous, and ambitiously hunting after new places, was offended with his presence (hee pretending that he came to see him) sent for his Hoast, and threatned him terribly, causing him to ship away his new Ghest; hauing also agreed with the Notarie of his Court to giue euidence against him, as a troublesome and dangerous man formerly expelled from *Sciauchin*. Thus against the streame both of his affection and the Riuer, is *Ricius* forced (loath to displease Magistrates) to returne to *Chiansi* Prouince. In the way full of thoughts, hee had a vision (as the Storie sayth) in which God appeared to him, and promised to bee propitious in both the Cities Royall to him.

Miserable Churle.

Nancian.

In *Nancian* the chiefe Citie of *Chiansi* hee abode. This is as great in circuit, but not in Merchandise as *Canton*, and though none of those portentuous great Cities, yet is it famous for the number of Learned men, which thence are aduanced to diuers parts: the people are thriftie and contented with little, and many of them obserue that first aforesayd. Of the *Learned men* there is also a *Societie*, in which on set dayes the more learned doe Lecture or discourse touching vertues in very modest manner. The Physician aforesayd, famous for his Art and well respected by the

Fast from flesh, fish, egges, and milke.

Digitized by Google

the Vice-roy, was visited by him. Hee now vsed his Silken vest and Cap vsed by the Learned, somewhat like but higher, then that which Priests in *Spaine* weare, (for he had learned to keepe state and not to deiect himselfe too much) and carryed two seruants with him in long garments made of Callico, and his gestatorie Chayre: without which pompe a man cannot bee taken for a Learned man, the poorest Students vsing them, and otherwise contemned. The Physician entertayned him kindly, and after inuited him to a Feast, where were many Students, and some of the Royall bloud (of which that Citie hath very great store) which were glad of his acquaintance; and when he had once mentioned his staying there, the Physician was so eager in desire thereof, that he feyned that the President *Scilan* had written to him, to procure him residence there, because in the former abode he had not his health. The *Chinois* esteeme such lyes to bee wisedome. Hee soone got credit amongst them by Mathematicall lectures and instruments, and by his artificiall memorie especially. For the *Chinois* aboue all others commit whole bookes to memorie with vnwearyed paynes, and in the first yeeres of their studies doe nothing else. He repeated the most confused and independant Characters in order, yea, backwards as well as forward. Many desired to learne it, and some hee entertayned. Physicians being of no great authoritie, he sought to insinuate into fauour of the Magistrates; but a certayne Student had counselled him to neglect their license, and thereupon enquirie being made by the Vice-roy, this his friend and landlord very friend-like, would needs throw him suddenly out of doores, and hee was forced by force to defend himselfe. But the Vice-roy hauing receiued a Libell from him, testifying who he was, greatly reioyced (hauing heard of him) and when hee came to his Court, arose from the Tribunall to meete him, would not suffer him to kneele, and gaue him good vsage and magnificent Titles, inuiting him also to reside there. Whose affections were after kindled into a greater flame by his Physicians, magnifying his Mathematickes, Memoratiue, Bookes, three square Glasse and other nouelties. The Vice-roy would haue him make him a Dyall, and teach his Sonnes, but for that admirable Glasse, hee would by no kinde force accept the gift.

Many of the Royall bloud at Nanchan.

China lying is prudence.

Ricius his artificiall memorie

Fortune friend

And whereas time out of minde many of the Royall bloud are there, two of them hauing the tytle of Kings, *Chiengan*, and *Longan*, sent their principall Seruants or Courtiers, to inuite Father *Matthew* to the Palace, which is fitting to Royall Maiestie, both for Greatnesse, magnificence of Building, pleasure of Gardens, and other furniture of houshold and attendance. *Chiengan* first inuited and entertayned him, attyred with a Royall vesture and Diadem. Father *Matthew* gaue him a Dyall with the Signes of the Zodiacke, and a Globe with *China* characters, and other *European* commodities; which hee recompenced with Silkes, weight of Siluer, and diuers viands. Nothing gaue him such content as two Bookes of *Iapon* paper, smooth and hard bound in *European* manner: one containing Maps and other Mathematicall representations, with an explication in their Language; the other was a tractate of *Friendship*, wherein Dialogue-wise (as *Cicero* in his *Lelius*) hee bringeth in the King, questioning what the men of *Europe* thought of Friendship, and set downe the sentences of Philosophers, Doctors, and other Authors; a worke to this day read there with great applause and admiration, Printed in diuers Prouinces. *Chiengan* continued his friendship and left it as a legacie to his Sonne, who vsed when the Father visited him, to pay the Porters, and to giue money to his seruants, a token with them of great welcome. The Societie also of Learned men grew acquainted with him, and the chiefe of them, hearing him complayne of multitude of visitors, wished him to command his Seruants to say hee was not at home: which officious lye he affirming to bee by our Law vnlawfull, bred in him and the rest much wonder.

Chiengan and Longan, Kings titular.

Ricius his China Booke of friendship.

Token of welcome.

In the meane while at *Xauceo* they sustayned abuses, and *Sebastian Fernandus* was vsed ignominiously by the calumnies of their quarrelsome neighbours, and sentence of a partiall Iudge, which caused two Seruants to bee whipped vnheard, and *Fernandus* to stand as in a Pillorie, with his head in a board an ell and halfe square, therein a hole fitted for the necke, to bee opened and shut; so that a man cannot put his hand to his mouth: and this forsooth *for beating the Bachellors*. This was written as the cause of his punishment. Hee afterwards sought the *Iesuites* fauour, ashamed of his fact, inuited them, and set vp an Edict for their safetie. *Fernandus* was sent hereupon to *Ricius*, and *Catanerus* continued alone without any Father, till the yeere 1597. and fell sicke: then going to *Amacao* (Father *Iohn Aroccia* was sent in his place) hee returned with Father *Nicholas Longobard a Sicilian*. Father *Matthew* was appointed superiour of the *China* mission by the Visitor *Valignanus*, without subiection to the Rector of *Amacao*. To him precious watches were sent, and Images with other things, which might further their *China* proceedings, the *Portugals* of *Amacao* continuing their liberalitie herein.

Cauils.

Pillorie boord.

Aroccia and Longobardus.

Father *Matthew* minding to trie all meanes to peerce to the Court, assayed *Chiengan* in vaine, who feared to raise any suspicion of himselfe. Hearing therefore that *Guan* (which had as you heard) visited the house of *Xauceo*, in his way to *Hainan*, was thence called by the King to *Nanquin* to bee *President of the first Councell*, called *Li Pu*, that is, the *Councell of Magistrates*: in his way at *Nancian* they visited him with a present, (in which nothing so pleased him as the trigone Glasse) and tooke opportunitie to signifie to him, their desire of presenting the King with some *European* rarities. Hee approued thereof and sayd, they should not onely goe with him to

The Counsell Li Pu so called of creating Magistrates.

Digitized by Google

Nanquin, but to *Pequin* also; whither within one moneth of his comming hee was to goe. *Ricius* with *Cataneus* attend him (leauing two of the company at *Nancian*) with two brethren of the company, *Seb. Fernandus*, and *Emanuel Pererius*, of *China* parentage in *Amacao*: who of their God-fathers take vsually both Christian name and Sir-name, vsing also their *China* names in dealing with *Chinois*. They set foorth from *Nancian* on Midsummer day, 1598. and when they were come to *Nanquin* they found all full of feare, by reason of the *Iaponian* warre in *Corai*, so that none durst giue vs entertaynment, grieuous Proclamations hauing lately forbidden to receiue men any way suspicious, by occasion of *Iaponian* Spyes taken. Euen the President himselfe, feared to bee author in so troublesome time of bringing Strangers: and *Ricius* when he visited him, vsed his Gestatorie seate. They gaue eight pieces of Gold to a cunning Clerke to write their Petition (so deare doe Learned men there prize their labour) which when they gaue the Chancellour (which sends Petitions from *Nanquin* to the King) hee would not meddle with it, but put it off to the President, that hee should carrie them with him to *Pequin*. He being to bee there to gratulate the King at his Birth day, in name of the sixe Tribunals or Counsels; sent his goods by water and the *Iesuites* with them, but went himselfe by land.

Custome of Conuerts names in Baptisme. *Anno* 1598.

Writing well in *China* brings credit and gaine.

When this President came to *Nanquin*, other Magistrates visited him with presents after the manner, and one the Vice-roy of that Prouince with a Map of *Ricius* his inuention, concealing the name of the Author in a new impression; which hee shewed to *Ricius*, who soone knew and challenged his owne. This the President intimated, that the Author was going with him to *Pequin*. Hee presently sends the Captayne of the Souldiers, to desire the President that he might haue sight of a man whom hee so much admired; sending withall a Chayre, and Porters with Horses also. For the Vice-roy of *Nanquin* resideth not in *Nanquin*, because in that High Court are higher Magistrates, which would seeme to eclipse his Greatnesse. So *Cataneus* went with the Ship, *Ricius* to the Vice-roy, whom hee saluted with *Europaan* gifts. He stayed with him ten dayes, so great desire he had to conferre with him. And when hee shewed him the Image of *Christ*, he would not take view of it there, but would first ascend to a neate Chappell which he had on the top of his House, therein after the rites of their Learned, to worship *Heauen*; with three doores to it, from the South, East, and West: about it round was a Gallerie distinguished and cancelled. There he caused an Altar to bee erected, and thereon Wax-lights and Incense to be fired; and then the Image being set thereon, hee came in his most sumptuous attire and did worship foure times, after their accustomed rites: after which hee would not stand before it but besides it, to take view, which hee did a good space. After him, his familie did likewise: and euery day they reiterated the same, one also being appointed to keepe perpetuall Odours burning before it. Hee brought other Magistrates also to see the same: and when he might not detayne the Father longer, he sent him away with great weight of Siluer, which came fitting to their necessitie. Hee gaue aduise also touching their designe, and told them of that frustrate successe which followed. He went with him to the Riuer, and sent one with him till he had ouertaken his companion. The *Chinois* call that Riuer *Iansu-chian*, *Chian* signifying the greatest Riuer; other Riuers they call *Cho*.

Vice-roy of *Nanquin*, a louer of Geographie.

Honour to an Image.

Chappell.

Chian or *Quian* See *Polo sup.* 90

That Riuer of *Nanquin* which I called (*Yamsu* or) *Iansu*, the *sonne of the Sea*, goeth Northward to *Nanquin*, and then returning somewhat Southward, runneth into the Sea with great force; fortie myles from which it passeth by *Nanquin*. And that from hence to *Pequin* there might bee passage by Riuers, the Kings of *China* haue deriued a large Channell from this to another Riuer, called the *Yellow Riuer*, such being the colour of that troubled water. This is the other famous Riuer of that Kingdome, in greatnesse and note, which ariseth without the Kingdome to the West, out of the Hill *Cunlun*, conjectured * to bee the same whence *Ganges* ariseth, or one neere to it. Where it first breakes foorth, it maketh a Lake which they call *of the Constellations*: thence it pierceth into the borders of *China* in *Scensi*, the most Westerly Prouince, and goeth out againe out of the Northerne walls into the *Tartars* Countries: after which it returneth to the South, and that Prouince whence it had come, and washeth another Prouince named *Scianfi*, and another named *Honan*: then turneth into the East and entreth the Easterne Ocean, not farre from the *Sonne of the Sea*. This Riuer against their lawes for Strangers, entreth *China* from Barbarous Regions, and as in reuenge of their malice to Strangers, often ouer-floweth great part of the Kingdome, and shifteth his Channell being full of Sands which it mooueth. Certayne Officers or Magistrates designed doe sacrifice thereto, or to the Spirit of it (for they set Spirits ouer diuers things) with many rites: and they fayne that it cleeres the troubled waters, but once in one thousand yeeres, whence it is prouerbiall of a sild-seene thing, *When the yellow Riuer shall bee cleered*. They that sayle therein, must therefore keepe the water many dayes till it setleth, the third part prouing myre and sand. Before the ingresse and egresse of this Riuer, are Channels which giue passage to Ships that carry prouision to *Pequin*. Those Ships are sayd to bee ten thousand, sent onely out of fiue Prouinces, *Chianfi*, *Cechian*, *Nanchin*, *Uquam*, and *Sciantum*. For these Prouinces pay their yeerly tribute in Rice and Corne, the other ten in Siluer. Besides these, there passe innumerable Ships of Magistrates and of priuate Merchants: but priuate men are forbidden to goe out of the *Hiansu* into those lesse Riuers (those onely passe which dwell

Riuer of *Nanquin*: one cut from it for *Pequin*.

Yellow Riuer see the Map.

*Such coniectures as this and those in *Pinto* of this Lake seeme ill grounded.

Lake of *Constellations*.

Magistrates sacrifice to the Riuer.

10000. Ships of the Kings for fiue Prouinces

dwell within ſuch Riuers to the North) leſt the multitude of Ships ſhould hinder the paſſage, or bee able to doe harme to *Pequin*. Yet is there ſuch ſtore of Ships notwithſtanding, that they are forced to ſtay ſometimes diuers dayes, one hindring another, eſpecially at ſome ſeaſons when water is ſcarce, for remedie whereof, they haue lockes and flood-gates, which opened make way from one to another of them, with great labour and tedious lingring. The croſſeneſſe of windes and labours of drawing with ropes, I need not mention. Some ſhips are ouerwhelmed at the opening of thoſe lockes. They haue woodden Engines on the bankes to draw the ſhips of Magiſtrates, at the Kings coſt, againſt the ſtreame all the way. And in fitting this Riuer to Nauigation, a million is ſpent yeerely; the feare of the Sea and Pyrats, haue made them take this courſe rather then that by Sea.

Cranes to draw ſhips. Tempeſtuous ſeas and Pyrats on that coaſt. See *Pinto*.

In all this way, many Cities moſt worthy note appeare, of the Prouinces *Nanquin*, *Sciantum*, *Pequin*, and beſides the Cities there are ſo many Townes, Villages, Houſes on the bankes, that all the way may be ſayd to bee inhabited; ſo that the Saylers no where want to furniſh themſelues with Corne, Rice, Fiſh, Fleſh, Fruits, Hearbs, Wine and the like, at a very cheape rate. By the ſame Riuer, Wood, Timber, Boards, Pillars (for the *Chinois* make reckoning onely of thoſe of wood) are carryed for the Kings workes: eſpecially, then when the Kings Palace had beene on fire, which conſumed two parts of three thereof. In all the Iourney, ours found great rankes of Timber-trees tyed together, and of other wood, which many thouſands of men drew with huge toyle, and ſcarcely could get forwards fiue or ſixe myles in a day, and from the Prouince *Suſcuen*, which is furtheſt from the Court, ſuch Timber-trees were in going vp, two or ſometimes three yeers ſpace: whence euery pillar made of them prodigiouſly aroſe each to three thouſand pieces of Gold: and of thoſe Timber-rankes they encountred one, ſeeming longer then the reſt, which was eſteemed to reach two myles in length. The Bricks alſo (which the *Chinois* preferre before Stone) for the Kings Palace, were carryed this way fifteen hundred myles, and many Ships had no other vſe, ſo many as might ſeeme ſufficient, not for a Palace but a great Citie. Out of the Southerne Prouinces, are yearely ſent thoſe things which in the more barren Prouinces of *Pequin* are wanting; as Fruits, Fiſh, Rice, Silkes, Cloathes and other things: and a day is ſet them, at which if they bee not there, they incurre grieuous penalties. Of the Ships called *Horſes*, the Kings Eunuches haue command. By this Riuer they ſayle almoſt onely when the Riuers ſwell ouer their bankes, peraduenture by the melting of the Snowes from the Hills whence they ſpring. By the heate in that Iourney of a moneth, and ſometimes two moneths, the viands which they carrie, are often corrupted before they come to *Pequin*, for which cauſe they coole them with Ice, and in all thoſe wayes much Ice is preſerued for that purpoſe, and diſtributed to the paſſengers, and ſo all things are carryed freſh to the Court.

Timbers for the Kings buildings. Two thirds of the Kings houſe burnt by Lightning.

Bricks preferred to ſtone.

Swifter ſhips called *Horſes*.

Heat and cold.

The Eunuches of thoſe Ships, ſell emptie roomes to the Paſſengers for their gayne: for the *Chinois* thinke it a glory to ſend that which goeth to the King in many ſhips, & not to giue them their full lading, which is alſo profitable for that ſterilitie of *Pequin*, Merchants by theſe conuenient fraights making nothing to want there where nothing growes. Ours hyred a roome in like manner for their eaſe. By reaſon of the great heat they all fell ſicke, yet by Gods helpe recouered. When they were to paſſe out of the Riuer, in the Prouince of *Sciantum*, they met with a hand-made Riuer, which runnes out neere *Pequin*, to the Tower *Tienſin*. Another Riuer from *Pequin* or rather from *Tartaria*, meetes it, and runnes together with it into the Sea, or into that Bay, betwixt *Corai* and *China*, after they haue runne together one day. In this Tower there was a new Vice-roy extraordinary, by reaſon of that inuaſion of *Corai* from *Iapon*. Hee prouided a huge Fleet for defence of *Corai*, by which meanes that whole Riuer was full of Ships of warre and militarie tumult. Ours went thorow the thickeſt of them without let, and at length came to the Port or Banke rather of *Pequin*, which banke is a dayes iourney from the walls of *Pequin*. And although by Art they haue made a huge Channell to the walls, yet leſt it ſhould bee filled with multitude of Ships, they ſuffer none but the Kings buſtliens to goe that way, the others being carryed by Carts, Beaſts, and Porters. They came to *Pequin* on a feſtiuall day, the Eeuen of the Virgins Natiuitie.

Hand-made Riuer. *Tienſin*.

They come to *Pequin*.

The chiefe Mart Townes in this way were *Iaincheu* in *Nanquin* Prouince, in thirtie two degrees thirtie minutes. *Hoaingan* in thirtie foure not all ſo much; *Sieuen* in thirtie foure degrees thirtie minutes. In *Sciantum* Prouince *Zinim* in thirtie fiue degrees fortie minutes. *Lincin* in thirtie ſeuen degrees fortie minutes. In *Pequin* Prouince *Tiencin* in thirtie nine degrees thirtie minutes. *Pequin* in fortie large. They are deceiued which eleuate it to fiftie. Now from *Canion* (which is two dayes from *Amacao*) are of *China* furlongs (fiue of which make a mile, and fifteene a league) by Riuer to *Nanhium*, one thouſand one hundred and ſeuentie. Thence to *Nancian* eleuen hundred and twentie. From that to *Nanquin*, one thouſand foure hundred and fortie. And thence to *Pequin* three thouſand three hundred thirtie fiue, in all ſeuen thouſand ſixtie fiue: which makes of miles, one thouſand foure hundred and thirteene.

Iaincheu. Hoaingan. Sieuen. Zinim. Licin.

Length of the way.

Pequin described, compared with *Nanquin.*

Pequin is situated in the Northerne border about one hundred miles from the wall against the *Tartars*. *Nanquin* exceeds it in greatnesse, composition of the Streets, hugenesse of Buildings, and Munitions: but *Pequin* exceedeth it in multitude of Inhabitants, and of Magistrates. To the South it is compassed with two walls high and strong, so broad that twelue Horses may easily runne abrest oin the breadth without hindering one the other. They are made of Brickes,

The walls.

saue that on the foot it stands all on huge stones, the midle of the wall is filled with Earth: the height farre exceeds those in *Europe*. To the North is but one wall. On these walls by night

Watch and Ward.

is kept as vigilant watch as if it were time of warre: in the day Eunuches guard the gates, or rather exact Tributes, which is not done in other Cities.

Palace.

The Kings Palace riseth within the inner Southerne wall, neere the City gates and extends to the Northerne walls, seeming to take vp the whole Citie: the rest of the Citie running forth on both sides: It is some-what narrower then the Palace of *Nanquin*, but more goodly and glorious;

Streets.

that seeming by the Kings absence, as a carkasse without soule. Few of the Streets are paued with Bricke or Stone, so that in Winter dirt, and dust in Summer, are very offensiue: and because it raineth there seldome, the ground is all crumbled into dust, and if any wind blow, it enters euery Roome. To preuent which they haue brought in a custome, that no man of whatsoeuer ranke goeth on foot or rideth without a Veile or Bonnet hanging to his brest, of that subtiltie that he may see, and yet the dust not annoy him: which also hath another commoditie that he may goe any whither vnseene, so freed from innumerable tedious salutations, and also he spares attendance and cost. For to ride is not magnificent enough with the *Chinois*, and to bee carried in their Seats is costly, with Attendants especially; and in that time of Warre it fitted with ours to passe vnknowne, being Strangers.

All goe and ride veiled.

Commoditie of Mules and Mulletters.

Muletters stood at the Palace, and City gates, and in euery Street to let Mules, themselues also attending the Hirers whether they would in the City; which leading the beasts by the bridle, in that frequencie made way, being also skilfull of the wayes, knowing most of the great mens Houses: all at a reasonable rate. There is a Booke also which truly relateth all the Streets,

Booke of *Pequin*.

Lanes, Regions of the City: Porters also with Seats to carrie Men, and Horses are euery-where found, but dearer then at *Nanquin*, or other places.

See *Polo sup.* 88.

All things are to bee had in abundaace, but brought thither and therefore dearer. Wood is scarce, but supplied with Mine-coles (we call them *Sea-cole*) necessary to that Region, cold beyond what the Climate vsually exacteth: their Beds are so made with Brick-workes, that they by a new kind of Stoues admit the heate of those Coles: a thing vsuall in all those Northerne Regions. These Northerne *Chinois* are some-what more dull, but better Souldiers then the other. Here they learned that this Kingdome is *Cataio*, and the King of *China* the great *Can*, and *Pequin Cambalu*.

China, Cathay. See *Pantoia.*

For the nine Kingdomes (of *Mangi*) are those Southerly Prouinces which are vnder the great Riuer *Ianszchian*, and sixe vpon it make vp the fifteene, so great that some one of them is as great as all *Italy*. *Anno* 1608. whiles we write, it is fortie yeares since two *Turkes* or *Moores* out of *Arabia* brought to *China* a Lion (a beast seldome here seene) by Land, which had an Office giuen by the King to them and theirs, to keepe the Lion, and that they should carry no Tales thence. They in conference called this Kingdome great *Catay*, and this City *Cambalu* the like we heard of others which had come from *Persia*. The *Chinois* also haue heard of that name, and still call the *Tartars Lu*, and the North parts *Pa* and *Pe*: to which *Can* the *Tartarian* Title added easily makes *Canpalu* or *Cambalu* with others; for the *Chinois* seldome vse B. and *Marco Polo* comming in with the *Tartars* called it by their name. And at this time without the walls of *China* is found no *Catay*. The *Portugals* called it *China*, borrowing the name as may be supposed from the *Siamites*, and hence Cosmographers made them two Kingdomes. But *Goez* his Iourney by Land to *Catay* hath taken away all scruple.

Cambalu the great *Tartar* of the North.

Goez sup. cap. 4.

To returne to ours now come to *Pequin*, the President gaue them entertainment, and procured an Eunuch to vndertake the businesse for the Presents, which were a Clocke, two Pictures, two Trigone-glasses and a Bell: all pleased the Eunuch, but his minde ranne more on making Siluer of Quick-siluer, which he had heard they could doe, and which would bee more gratefull to the King. And when he saw that would not be vndertaken, neither would he vndertake to acquaint the King, in this time of *Corayan* Warres; and ours also were taken for *Iaponians*, or neere vnto them, they not knowing how by true names to distinguish Nations. The President also began to be fearefull and purposed to carry them backe with him to *Nanquin*. Yet they staid a moneth after him (he being at a certaine day by Law to depart) and, when they had tryed all wayes in vaine, none daring to acknowledge Strangers, they returned to *Nanquin*. They had a Bill of Exchange from *Amacao* to take vp money at *Pequin*, but the Merchant had plaid the Merchant and *Chinese* too, none such there to be found. They hired a ship at an easie rate for their returne (because they goe empty) but not easie in this respect that the Owners pouertie made the Iourney tedious for what of helpes. This benefit they made of this Iourney to learne the Language better, making a Dictionary, obseruing their Accents with Points deuised; (that speech consisting wholly of Monosyllables, the want of skill in those Accents had caused that they neither

Alchymie and base conetise.

Coozening Merchant.

China Language and Accents.

did

did, nor were vnderstood) *Cataneus* skill in Musicke helping to distinguish those sounds. What course *Ricius* and he instituted, that the Company still obserue in their Writing.

All the Riuers in *China* vse to be frozen in the beginning of Winter, that ships cannot passe by water, and Carts by Land are safer. They agreed that Father *Matthew* should goe by Land with two Seruants, to try if he could settle at *Nanquin*, the rest and the burthens to stay till the Riuer were thawed. He purposed also to goe to *Sucen* whither *Chiutaisu* had often inuited him, being his Countrey. Passing thorow *Sciantum*, he visited *Siuceu* and *Tamceu* famous Marts, and passing the Riuer *Tamceu*, at *Chinchiamfu*, the chiefe City of that Prouince hee entred into a hand made Riuer, by which is sailed to *Sucen* and to the chiefe Citie of *Cechian Hamceu*. This Riuer being Southerly and neere frozen ouer, is so narrow that multitudes of shippes cloy it so sometimes that they cannot passe forward or backward. He was forced therefore to go by another way, which is a Coach or Wagon of one wheele, so builded that one sitting in the midst, and two on the sides, the Coach-man behind with woodden Leauers or Barres driues it forwards both surely and swiftly; that in short time he came to *Suceu*.

Riuers frozen. *Ric.* goeth by Land.

Siuceu and *Tamceu*.

Coach of one wheele.

This Noble Mart is one of them whereof is the Prouerbe, *That which is in Heauen the Seat of the Blessed, that in Earth is named* Suceu, *and* Hamceu.: in splendour, wealth, frequencie remarkable. It is built in a calme fresh-water Riuer, and quite thorow one may goe, as in *Venice*, by Land or Water, but herein it excelleth *Venice* that the water is fresh. The streets and buildings stand vpon piles of Timber, the Wares from *Amacao* and other parts are most sold here. It hath one gate to the Land, the other are water-wayes. The Bridges are innumerable, & Magnificent, Ancient, but of one Arch in those narrow Chanels. Butter and White-meates are plentie, Rice, and the best Wine, which thence is carryed to *Pequin* and other parts. It is scarsly two dayes from the Sea. It is well fortified, the chiefe City of the Region, which hath eight Cities. One of the Princes held this, when the *Tartars* were expelled, against this Royall Race; whereupon it still payeth a great Tribute, to wit, the halfe of all things growing, (so that some two whole Prouinces pay lesse then this one Region to the King, against whom it had stood out) it is still also awed with a frequent Garrison. *Chiutaiso* was then absent at *Tanian* a Neighbour City, who receiued him with great humanitie. He abode in a Monasterie, and resigned his bed to his Master, who tired by trauell fell sicke, and was likely there to haue dyed. Recouered by his care, he gaue him a Triangle Glasse, which he put in a Siluer case with Gold Chaines at the ends, and adorned it further with a Writing that it was a *fragment of that matter whereof the Heauens consist*. One was said to offer him fiue hundred pieces of Gold soone after for it, which till Father *Matthew* had presented his to the King hee would not sell: after that hee set a higher price and sold it.

Suceu described. Another *Venice*.

Huge Tribute.

Tanian.

Glasse glazed.

At the beginning of the *China* yeare, all are busied in sending Presents to their friends, feasts and salutations. They went to *Cinchian* to the publike Solemnitie where *Chiutaiso* was well knowne, and by his speech Father *Matthew* and from thence they went to *Nanquin*, in February, 1599. Before wee come thither wee will looke backe to our *Canton* Iesuits.

New yeares day.

§. VI.

Letters from Father LONGOBARD *and* TAISO. RICIVS *his entertaynment at* Nanquin *and Residence there. The* Chinois *vnlearned Learning.*

FAther *Nicolas Longobard* wrote vnto *Claudius Aquaviva* the Iesuiticall Generall, the eighteenth of October, 1598. that in the Kingdome of *China* there were then seuen Iesuits distributed into two Residences and one Mission: at *Nancian*, Father *Iohn Soerius* and *Iohannes à Roccia*; himselfe and *Francis Martines* a *Chinese* at *Sciaucum* in *Canton* Prouince, *Ricci* and *Cataneus*, and *Sebastian Fernandez* a *Chinese*, were then gone to *Pequin*: that *China* condition and conditions agreed so well with him, that hee seemed to bee in the midst of *Italy*: that much respect had accrewed to them in conceit of the *Chinois* together, with that Habit of their Learned, which they had taken, the *Bonzi* and their Habit esteemed base alike. He also much commends *Thaiso* or *Taiso*, (*Chiutaiso* before mentioned) who much euery-where commended the Iesuits and their Learning, as much exceeding what euer had beene taught in *China*. And truly, saith he, the *Chinois* Learning exceedeth not the Science of the *Romanes* in the time of *Cicero*.

Letter of F. *Nic. Lombard*.

China Learning.

This comparison with that time of the *Romanes* seemeth perhaps not the best, that being the best of Heathen *Rome*; *Varro*, and *Cicero*, and *Virgil*, as the *Romane Trium-viri* for Learning; besides, *Salust. Cæsar*, &c.

They are much exercised in a kind of writing and speaking briefe and pithie Sentences: their Bookes expresse well *Ethickes* and *Politickes*, but are rude in Naturall Philosophie. When I had

lately

litely runne thorow two of their Bookes, which they eſteeme as their Metaphyſikes, or firſt Philoſophie, one of their learned men gratulated my proficience; when as I found therein no more difficulty then in *Tully*, or *Titus Liuius*. They ſay, none but the *Chinois* can vnderſtand them, Father *Ricci* vſeth to adde none better then the *Europeans*. A Letter of *Taiſo* to *Ricci* hee addeth thus inſcribed. Thaiſo * *younger Brother which ſtand at the * ſide to learne, doe ſubmit my head to the ground, and exhibite honour and reuerence to the elder Brother, Maſter and Father* Matthew Ricci, *a famous Peere, and Maſter of the moſt choiſe flowers of the great Law, and caſt downe my ſelfe at the feet of his Seat and Chaire.* The Letter followeth.

* *Thaiſos* Letter. To their ſuperiours and equals they write not in the firſt perſon, but the name for the pronoune (I).

* This (*as to ſit at the feet*, with the *Iewes*) ſignifieth to be a mans ſcholer: taken from their ſitting at the ſide in Lectures.

After our departing (it being foure yeeres ſince ſight of each other) there hath not beene a day in which I haue not ſet before mine eyes the excellent vertue of your Worſhip. I gaue two yeeres ſince to Sciancliin, *my Countreyman, a Merchant, Letters to your Worſhip, thereby to learne where and what it did. I know not whether they haue attayned that, to come to your magnificent hands, &c. When I went from your Worſhip I ſaid it muſt goe into the North parts, if it would behold the ſplendour and magnificence of this Kingdome, that my Countrey had nothing ſingular, that* Nanquin *Court was troubleſome, and mixed of all ſorts: that* Chianſi *Province was fit onely for dwelling, becauſe there were learned men in it of excellent vertue, and of a true and ſolid ſpirit to receiue the Law* ——— *This yeere gathering together thoſe things which your Worſhip taught mee, I made a Booke, and exhibited it to the Society of learned men, of which there was none which did not admire and ſubſcribe, ſaying, your Worſhip was* Scingan, *that is, a Saint of theſe times. Thoſe things which I haue added haply may be erroneous, and I feare leſt they contradict its founder and higher learning: and therefore haue ſent my ſeruant to bring it to your Worſhip to reade, which I moſt humbly entreat, and to correct, to approue the trueth, to blot out the falſe, to illuſtrate the obſcure, writing all in another Booke, and ſending it by the ſame ſeruant in few dayes, becauſe I would preſently commit it to the Preſſe, that your Worſhips learning might be knowne thorow the World. In theſe places are of greateſt reckoning the Bookes of* Hothu, Coſcui, Pequa, Queuſcieu, Thaiquitu, *and other like, which haue written of a Point, Line, Extremitie, and Thickneſſe. All theſe learned make of a Line a Circle: but according to your Worſhips teaching, of a Line is made the termination of a Circle, and a Circle conſiſts therein. From which principles the concluſions brought of* Thaiquu, *that is, of God, doe farre exceed the Commentaries of all our learned men. And they are enough to illuſtrate a thouſand obſcurities of antiquitie, which hitherto haue not beene pierced. This one thing afflicts mee, that my writing and ſtile is meane and abiect, and moſt vnfit to illuſtrate and enlarge the moſt excellent conceits of its mind. Meane while I much long, and as it were on tiptoes looke about euery where, if haply I may ſee your face. From* Succo *the two and twentieth of the fourth Moone, and the foure and twentieth of the Raigne of* Vanlia. Subſcribed; Thaiſo *younger Brother againe bends his head to the ground, &c.*

Succo. North of *China* the beſt.

Scingan is the greateſt title of honour amongſt the *Chinois*, intimating a holy birth, greateſt learning that he may be Maſter of all, as was their *Confucius*: ſuch an one they think comes euery 500. yeere, and now *Ricius*.

Lombard proceedeth in his Letter, and ſheweth the commodiouſneſſe of one King which ruleth all, of one *Mandarine* Tongue, of the common induſtrie and cheapneſſe of prouiſions (not as in the pouertie of *Iapon*, where the worke-mens maintenance muſt come from other parts) all fitting to bring in the Goſpell. There are, ſayth he, almoſt infinite houſes of *Bonzi* maintayned by the King, beſides gifts which they receiue of others which yet repoſe no great confidence in Idols: what would theſe doe if they beleeued to receiue a hundred for one, and eternall life? Their compoſition of bodie, complexion, condition, rites; no vſe of weapons, not ſo much as a Knife carried (but by Souldiers in Garriſon, not in the way or at home) their habite long, and anciently vſed, with their hands alway hidden in their long ſleeues, except in vſe of their fanne, which all, euen the meaneſt carrie with them; their quarrels, if any happen in the vulgar, ended in a few boxes or brawles; their ſeemely behauiour equall to the *European*; yea, in ſome things to the Religious there; their ſtudiouſneſſe of learning the onely foundation of dignitie and greatneſſe, as many *Athens* there as great Cities, each hauing a Schoole or Vniuerſitie without mixture of other Regions) their politike and morall Rules and Lawes; all theſe might be furtherances to the Goſpell. Their tenacitie alſo of their owne cuſtomes and jelouſie of Strangers, might better ſecure them from Hereſies. Hee commends alſo their workes of Piety, and Charity, Almes, Hoſpitals for poore, voluntary chaſtiſements of the bodie to ſubdue the affections, as faſtings (in which they abſtaine from Fleſh, Fiſh, Milke, and Egges, but eate other things as oft and as much as they will) liberties and gifts by Magiſtrates to Widowes which containe themſelues from ſecond marriages; triall of a mans ſelfe in all his actions commended in their Bookes, eſpecially of thoſe things which other men cannot know; and hereupon the liking of a ſolitary and contemplatiue life in the Countrey, and reſtoring themſelues to the firſt ſtate, as they ſay, wherein the Heauen created them; for which purpoſe are congregations of learned men, together in Villages addicted to contemplation, and fleeing publike Offices (as the ancient Fathers had their conferences in woody and mountainous places) in which alſo their women are as forward as the men, many of them liuing in Nunneries, gouerned by an Abbeſſe; and all *China* women liue ſo encloſed, as if their owne houſes were Cloiſters: Theſe he commends in them, as alſo that of all vertues they giue the firſt place to Obedience to Parents as in which conſiſts a mans perfection. And that no man may be ignorant of his duty, if they cannot reade (of which there are but few) they haue a ſhort Summe (or Catechiſme) for

China Monaſteries.

Vniuerſities in our ſence with Profeſſors and publik Schools are not in *China*: but for taking degrees as in our Vniuerſities, a mans priuate ſtudies, and the Cities publike examinations haue ſome reſemblance. Many things in which the *Ieſuites* and *Chinois* concurre.

Digitized by Google

for publishing whereof there is a man appointed at publike charge, euery full and change, to publish the same in euery street of the City, so that on the same day & houre, a little before Sunrising the same doctrine is propounded in all the Cities of *China*, and thorow all their streets. This is fixe Articles or Principles, which are, *First, Obey Father and Mother: Secondly, reuerence Betters and Elders: Thirdly, make peace among Neighbors: Fourthly, teach Children and Nephewes: Fifthly, let euery man well discharge his office: Sixthly, commmit no offence*, that is, not to kill, steale, fornication, &c. which in manner comprehend the second Table of the Decalogue. As for the first Table, the *Chinois*, especially the learned are Atheists, little regarding Idols, whereof their Houses and Temples are full; little minding the rewards or punishments of the life to come, or the soules immortalitie, which yet are easily found in their bookes touching the punishments at least of *Holy Pao* (so they call God) in Hell. Of rewards of blessednesse there is not such euidence, as *Thaiso* affirmed. And although many difficulties happened to ours in the *Bonzian* habite, yet is it now farre otherwise. As for *Canton* Prouince, the *Mandarines* which come this way, aske vs why we stay amongst these *Mangines*, that is, Rusticks and Barbarians: We must, say they, leaue the Barke and pierce to the pith and marrow of the Kingdome, if we would see the *China* splendor and politie. He writes for Labourers, Bookes, Images, and Pictures, for consolation of new Conuerts: the Ethnicks worship that of the Virgin, and call her *Scin mu nian nian*, that is, holy Mother, and Queene of Queenes: and ends with imploring the patronage and intercession of all the heauenly Quire, specially of the blessed Virgin, the Apostles, the Angels guardians of *China*; to obtaine of the holy Trinitie happy successe to their endeuours, &c. But wee will returne to our best acquainted in *China*, *Ricius*, whom we left newly arriued at *Nanquin*.

A fornight Sabbath.

Sixe precepts of *China*.

Cantonians Mangines.

Blessed Virgin honoured.

The case was now altered at *Nanquin*, they went on foot without impediment to their lodging, which was in a huge Monastery, called *Cinghensu*, in which is great resort of guests which there hire lodgings, being built in the centre of the Citie. The *Iaponians* were now beaten from *Corai* and *Quabacondono* was dead, which had so terrified that vnwarlike Nation. He heard that they had heard of his going to *Pequin*, and that the *Corai* warre was the frustrating of his designes in that vnseasonable time. The President was verie glad of his comming, and exhorted him to buy a house there, and sends two of his followers to looke out for one. Scarsly had he and *Chintaiso* gotten home to their lodging, when the President followeth to visit them, which hee did with the solemnest Rites. And when they were set in the Hall, the Abbot came to offer them the wonted potion, kneeling to all three (to the President hee was bound as supreme gouernour of Temples) and the President inuited the Father to spend two or three daies in his house, to see the Fire-workes, which that full Moone, the first of the yeere would bee to bee seene, which strange deuices of lights that and the following nights; which he did and beheld that which without wonder cannot be beholden, the *Nanquiners* herein exceeding as may be thought the whole world.

Nanquin. Cingensu a great Abbie.

The President supreme gouernour of Temples.

Full Moone fire-workes.

When it was reported that the President had visited him, all the Maiestie of Magistrates did the like, yea some whom he had not visited. The President of the Court of *Criminall Causes*, and the President of the *Treasury* (which is the second Tribunall) came with rites & gifts, as also did others; yea hee which a little after was the *High Colao* at *Pequin*, which all vrged him to buy a house; and he now went thorow all Streets and Palaces without gainesaying (which he knew from a vision hee before had had thereof) and procured a house which the President helped to furnish. So much admiration and respect had the opinion of *European* science acquired to him, these being to the *China* wits baits for the Gospels fishing. Now first did they heare that the Earth was round (for they conceited the Heauen round and the Earth square) that the Centre drew all heauie things to it, that the Vniuerse was inhabited round, that there were *Antipodes*, that the Earths interposition caused the Moones eclipse (some saying that the Moon opposite to the Sunne was dazled or amazed; others that there was a hole in the Sunne, against which the Moone opposed lost her light) that the Sunne was greater then the Earth; and that the Starres also, this was out of measure paradoxicall: the like was the soliditie of the Orbes, and their number; the fixed posture of the Starres, the Planets wandrings, the eleuation and depression of the Pole according to the various Climates; and likewise the inequalitie of the daies, without the Tropikes Geographicall Maps *in plano*, and Globes, Meridians, Parallels, Degrees, the Line, Tropikes, Poles, Zones, Spheres, Sun-dialls, they had not at all vnderstood, with other points of *European* learning. A Doctor of theirs confessed himselfe ashamed; *For*, said hee, *you may thinke of me as wee doe of the* Tartars *and barbarous out-lawes; for you begin where wee end* (which hee spake of the studie of eloquence, which takes vp our childhood, their whole life.) They numbred fiue Elements, *Metall, Wood, Fire, Water, Earth*, one of which they said was procreated of the other: the Aire they did not acknowledge for one, because they see it not, placing a *vacuum* or emptinesse where wee place the aire: as incredible it was that the fierie Element was the highest, and that Comets and Exhalations were there with fired. Father *Matthew* writ a booke of the Elements in their language much applauded, and often by them reprinted. Diuers became his Schollars; one sent from his Master in *Hanlin* Colledge in *Pequin*

Mathematikes baits to the Gospell.

China learning how vnlearned

Hanlin Colledge in *Pequin*

Pequin

Pequin (the chiefe place for *China* learning, to be admitted into, which is a great dignitie.) Hee
Wit of a *Chinese*. was very wittie, and without any Master attained the first booke of *Euclide*, and exacted of
Father *Matthew* Geometricall demonstrations. And when hee added some things of Christianitie, you need not, saith he, confute that Idolatrous Sect, it is enough to teach the Mathema-
Bonzis dotages. tikes. For these *Bonzi* would also be Philosophers and Mathematicians. They said the Sunne
hid himselfe by night behinde a Hill called *Siumi*, rooted in the Sea foure and twentie miles
Eclipses. deepe. And for the eclipses, they said that the God *Holochan* caused that of the Sun couering
it with his right hand, and that of the Moone with his left.

Not at *Pequin* alone, but at *Nanquin* also is a Colledge of *China* Mathematicians of better
Colledge of Astrologers. building then Astrologicall Science. They do nothing but bring their Almanacks to the rules of the ancients, when they mis-reckoned, they ascribed it to irregularitie of nature, not theirs, deuising some prodigious euent to follow. These at first were afraide that Father *Matthew* would haue deprined them of their dignitie; and freed of that feare, they visited him friendly, and he them, where hee saw a strange sight. There is an high Mountaine, on the top whereof is an open Plaine or Floore fit to contemplate the Starres. In this open space one euery night is appointed to watch, and obserue if any Comets or other alterations be in the skie, thereof to
Mathematicall huge Instruments. giue the King notice, and what it portends. In this place, of cast mettall are Mathematicall Instruments, admirable for their greatnesse and neatnesse, the like whereof wee haue not seene in *Europe*. They haue continued there in all chance and change of weather neere two hundred and
A Globe. fiftie yeeres without damage. Of them were foure greater, the one a huge Globe distinguished by degrees with Meridians and Parallels, as great as three men can fadome: it stood on a huge Cube of brasse likewise, vpon his Axel-tree: in the Cube was a little doore, sufficient for it to passe when need was. On the vtter superficies was nothing grauen, neither Stars, nor Regions, whereby it appeares that it was either vnfinished, or purposely so left that it might serue both
A Sphere. for a Celestiall and a Terrestriall Globe. The second was a huge Sphere, the Diameter whereof was a fadome; with Horizon and Poles, and in stead of Circles, certaine double chaines, the space betwixt them representing the Circles in our Spheres: all these were diuided into three hundred and sixtie degrees, and a few minutes. In the middest was a Globe of the Earth, but a certaine pipe hollowed like the barrell of a Peece, which might bee turned any way, and set in
A Diall. any degree and eleuation for triall of the Starres very artificially. The third was a Diall two fadoms high in a huge & long Marble set to the North, with a channell about the table to hold water, whereby to trie if it stood plaine or no: the stile placed perpendicular, both it and the stone distributed into degrees: it seemes, for exact triall of the shadowes of Solstices and Equi-
Astrolabes. noctialls. The fourth and greatest was an engine or instrument of three or foure huge Astrolabes set one by another, each containing a Geometricall pace in a Diameter, with their Fiduciall line, or *Halhilada*, and *Dioptra*: one of them represented the *æquator* inclined to the South, another (which made a crosse with the former) to the North; another stood erected to the South, perhaps for knowledge of the Verticall Circle, but turned about to shew any Verticall: all had the degrees marked with iron knots standing forth, that they might bee knowne by feeling in
The *Chinois* number 24. constellations of the Zodiake. the night. This Worke of *Astrolabes* was set in a plaine floore of Marble also, with channels about. In euery of these Instruments was expressed in *China* Characters what euery thing signified; the foure and twentie Constellations of the Zodiake, answering in the number doubled to our twelue Signes. There was in them this one errour, that they were set in the fixe and thirtieth degree of the Pole eleuated, whereas *Nanquin* stands without all doubt in two and thirtie
The like Instruments at *Pequin*. and a quarter of a degree. They seeme to haue beene made to be placed somewhere else, and placed here by some vnskilfull Mathematician. Afterwards Father *Matthew* saw the like, or the same Instruments rather at *Pequin*, cast with the same hand, at that time when the * *Tartars* ruled ouer the *Chinois*, by some expert of our sciences.

* This time agreeth with the time of *Tamerlane*; which giueth authority to *Albacens* story of him: besides the *Chinois* call the last *Tartar* which ruled them *Temor*.

The greatest Magistrate desired Father *Matthew* to reuise the Vniuersall Map, which he had made in *Canton* Prouince, and make larger Commentaries, and hee would print it at publike cost, which he did, and with an elegant Proeme commended the Author of the worke. This was published and carried into all parts, and in other places reprinted. The Vice-Roy of *Cuicen* Prouince printed it with another methode, making to euery Kingdome a proper Commentarie in a booke, adorning the Author also with his praises. Besides, the Presidents of the fixe Tribunalls (equall except for the Kings presence, in the gouernement of their Prouince, to these of *Pequin*) hee had three other friends, yet vnmentioned. There is a certaine hereditarie dignitie derlued to the eldest sonnes, from those Captaines which expelled the *Tartars*: they are called *Quocum*; their posteritie are honoured by the King, most of all the eldest, which in processe of time haue growne into a numerous Family; and although they beare no publike office, except some militarie commands, yet haue they great dignitie and wealth: and these onely doe truely resemble the Nobilitie of *Europe*. One head of this Family is at *Nanquin*, liuing in great pompe, with Palace, Furniture, Gardens, all like a King. He one day inuited Fa-
Cuicen. *Quocum*, the Nobilitie of *China*.
Artificial rock. ther *Matthew*, and entertained him in the best Garden in the Citie: in which, besides other pleasing rarities, he saw an artificiall Mount or Rocke of diuers vnpolished Marbles, hollowed into

into Caues; it contained Chambers, Halls, Staires, Fiſh-ponds, Trees, and other things, Art wantoniſing with Nature to engender pleaſure; eſpecially in time of heate to coole themſelues in their ſtudies or feaſts with this Caue-retiring; which although it comprehended no great ſpace of ground, yet would it aske the ſpace of two or three houres time to viſit all the parts, the egreſſe being by another gate. This Nobleman was yong, and deſired to ſee ſome things of *Europe*.

Another which became familiar with Father *Matthew*, was the Commander of all the *Nanquin* Souldiers, which had alſo another great Office, called *Heu*, who often viſited him, and became his great friend, whoſe friendſhip gaue vs ſecurity, to whom the watch and ward, and ſecurity of the Citie belongeth. Beſides, I will name the chiefe Eunuch, which hath great authority ouer the *Nanquin* Eunuchs, whereof are numbred ſome thouſands, who is Ruler ouer the Kings Palace, and hath command of all the Citie gates, and ouer the military Muſters together with the former Captaine, with other parts of authority, and expreſſeth the ſame with great pompe. He was almoſt decrepit, and after the Eunuchs faſhion there, not ſo gentle; and when *Ricius* came to him, his Courtiers commanded him to giue him a title which anſwereth to *Highneſſe* with vs. I explane it thus; when they ſpeake to the King, they wiſh to him *ten thouſand thouſand yeeres of life* in theſe three ſyllables, *Van van ſiu*, which is all one with the title of *Maieſtie*: to others in the Palace, the Queenes, or Children of the King, they with inferiour title pray, *ten thouſand yeeres*. Now the Eunuchs are ſo arrogant that they expect this *thouſand yeeres wiſh*, and to bee ſaluted on the knee. Father *Matthew* could not doe this ſafely, leſt hee ſhould doe more to him then to the chiefe Magiſtrates; but hee had learned not to neglect in *China* their rites; and he being deafe, one that hollowed in his eare made vp what the Father wanted. Hee gaue him a great gift, which he refuſed, and denyed him the trigone Glaſſe: yet this cauſed the other Eunuchs to honour him.

Captaine of the Citie Garriſon.

Chiefe Eunuch.

Thouſands of Eunuchs at *Nanquin*.

Van, van, ſiu, as to the *Babylonian* Monarchs, *liue for euer. Dan. 5. 10.*

At that time liued in *Nanquin* one which had obtayned the firſt place in the declaration of Doctors (which *is a very* great dignity) who liued herein this Countrey priuate, but in great eſteeme of all. Hee had degenerated to become a Preacher of the three *China* Sects, and profeſſed great knowledge of them. Hee had at his houſe a famous Votarie, or *Bonzi*-Monke, who renouncing the publike Offices which he had borne, had ſhaued his head, and (which is not vſuall in *China*) of a *Learned Man*, had become a Miniſter of the Idols. And becauſe hee was both learned in the *China* Sciences, and growne ſeuenty yeeres old, he had acquired much fame and many Diſciples, profeſſors of that new Sect which he deuiſed. Theſe viſited Father *Matthew*, to the wonder of all; that Literate-apoſtata confeſſed the truth of our Law, and preſented the Father with a Fanne with two elegant Epigrams therein. Two other viſited him, one of which counterfeited himſelfe to haue liued three hundred yeeres, whom the *China* Grandes much followed, as doting on the ſtudie of long life, the precepts whereof he read to his Scholers. Hee alſo boaſted of Geomancy. The other was a Phyſician, and companion to the other, each blazing the others Science: and whiles both preferred the Father, ſome ſuſpected that hee had liued ſome Ages (which they vſe to affirme of Strangers differing in countenance from them) and would not let it be knowne.

A principall Doctor, a Preacher.

A *Mandarine* becomes a *Bonzi*.

Epigrams.

The *Chinois* haue one day ſolemne to *Confutius* the Prince of the *Learned*, in which they make a kind of Sacrifice to him, not as to their God, but their Maſter. They call it a Sacrifice, but in larger extent of the word. Muſike was prepared againſt that day, at the triall whereof Father *Ricius* was preſent. The Prieſts of the *Learned*, called *Tanſu*, ordered the Muſike; and in the Kings Hall (or Temple rather) dedicated to the *Lord of Heauen*, this triall was made. The Prieſts came forth in precious veſtures, as if they would ſacrifice, who after their wonted rites to the Preſident, fell to their Muſike: in which were ſmall braſſe Bells, Baſons, other as it were Tabors, others of ſtone, ſtringed Inſtruments, Pipes, Organs blowed with the mouth, not with Bellowes; others reſembled Beaſts out of the hollow bellie yeelding a ſound: all theſe ſounded together with ſuch diſcording diſcord as you may imagine; the *Chinois* themſelues confeſſing the concord and harmoniacall conſent to bee loſt, onely the Inſtruments remayning from their Anceſtors.

Confutius his holiday.

Muſike of *China*.

That Temple was great and magnificent, built neere the Citie in a Pine-groue, compaſſed with walls twelue miles about. The wall of the Temple was of bricke, the other parts of timber: it is diuided into fiue Iles; the Pillars were round of huge timbers as great as two men could fathome, the heigth proportionable to that thickneſſe; the roofe is excellently carued, and all gilded: and although it be two hundred yeeres ſince it was built, and the King reſides not at *Nanquin*, nor ſacrificeth there, yet is it little decayed from the firſt ſplendour. In the midſt of the Temple is a more eminent place of moſt precious marble, in which is a double Throne, both of marble; the one for the King when he ſitteth to ſacrifice, the other is left for him to ſit by, to whom the ſacrifice is made. The Cloiſters without are beautified with moſt elegant windings, and leſt the Birds ſhould defile all, the windowes are all netted with Iron wyers (which is vſuall thorow all the Palace:) all the gates of the Temple are couered with Braſſe plates gilded, and wrought with neat Viſages of the ſame metall. Without the Temple were many Altars of red marble, which repreſented the Sunne, Moone, Starres, and Hills of *China*, Lakes

Temple royall, and magnificence thereof.

Lakes and Seas, intimating that that God which is there worshipped made the rest, which are placed without, lest they might be worshipped for Deities. It is prohibited by grieuous penalties, to cut the trees of that Groue, or any bough thereof, whence they are great and old. In the circuit of the Temple are many Cells, which are said to haue beene Baths for the Kings to wash in when they were to sacrifice.

Iesuits habit.

The Father vsed the Habit of the *Learned* (as is said) of those especially which professe themselues Preachers of the Law; the Habit modest, and the Cap not vnlike ours in Crosse fashion also. He confuted both the Sects of Idolaters, and commended that of the *Learned*, praysing *Confutius*, which was rather silent, then would deuise any thing touching the next life, and taught good Rules for the Life, Family, and Republike. A great man flourished at *Nanquin* then (which had some thousands of Disciples) in opinion of Vertue and Learning, and had set dayes in which to heare and to be heard euery moneth. *Chiutaiso* brought the Father, and this Father together, and in some reasoning *Ricius* wrung from him that some corruptions were in the Idoll Sects, which he followed not, holding that only (he sayd) which was good. It being a fashion that *Learned* men met in their Societies to conferre of Morall Vertues, in one of those meetings this man learnedly confuted *Confutius*, which another Magistrate tooke haynously, and cryed out, it was intolerable that the Sect of Idols brought out of other Countreyes should bee preferred before *Confutius*, whom the Learned *Ricius* also admireth, refelling the Idol-follies. He answered, he had spoken with the man, but he was not yet well acquainted with *China* businesse, and he would instruct him better. Soone after he inuited him to a Feast (for the *Chinois* vsually in such meetings determine Controuersies) and there hee met *Sanhoi* a famous Idol-Priest, a Learned Philosopher, Orator, Poet, and well skilled in others Sects also. When they were set, this Priest and the Father together, the Priest began shewing his desire to conferre of Religion. *Ricius* first asked what he thought of the first beginning of Heauen and Earth, and the Creatour of things whom we call the *Lord of Heauen*. I deny not, sayd he, that there is such an one, but he hath no Majesty nor Deity, but I am equall to him, and so are all others. Canst thou (saith *Ricius*) make those things which he hath done? he granted. Make then such a Chafing-dish (one stood before him) this, sayd the other, was an vnworthy demand. Thou (sayth he) art an Astronomer, and makest new Sunnes in thy minde when thou reasonest thereof. That, sayth *Ricius*, is but an Image or likenesse which the minde from things seene conceiueth, as in reflexion of a Glasse whereon the Sunne shineth, yet doth not the Glasse create a Sunne. The Hoast for feare of further quarrell parted them. At Dinner the *Chinois* disputed of a Question of *humane nature*, how it came bad (they want Logicke and cannot well distinguish betwixt morall and naturall good, and neuer heard of originall sinne) they discoursed thereof a whole houre: after which *Ricius* repeating what had beene sayd, entred into dispute with *Sanhoi*, who laughed at his and their Reasons and answered all with a Tale of I know not what *Flood*, according to his Sect; but he straitned him with Arguments, so that he and this Disputation grew famous. They conceiue that God and the Creatures are all of one substance, and that God is as a great Soule of the Vniuerse; which opinion from the Idol-sects hath infected the *Learned*. *Ricius* writ a summary of that point, which gaue men good satisfaction, and his Law seemed not so barbarous as they imagined.

Societies of *Learned*.

Conference or disputation twixt an Idol-Priest and *Ricius*.

Oppression. Mines of Gold and Siluer stopped by ancient Kings & forbidden to be opened to preuent robberies.

The Kings Treasure was exhaust by the *Corayan* Warre, whereupon contrary to the Lawes he caused the ancient Mines which were sayd to be stopped, to bee sought, and opened, and imposed new Tributes, that in all Prouinces, Merchandizes should pay two of a hundreth: which had beene tolerable if gathered by Magistrates; but his Eunuches, sent to euery Prouince, without shame or mercie exacted on the people, and raysed a worse combustion then that of *Coray*. So many Impostors, Counterfeits, Theeues were euery-where: if a man dwelt in a good House, they would digge it vp to search for a Myne, to force composition from the owner. Some whole Cities and Prouinces compounded with these Caterpillers to free themselues from their vexations; the money so gotten they gaue the King as taken out of their Mynes. This caused Dearth, and in some, Commotion. The Magistrates petitioned the King against these abuses, but sweetnesse of gaine had not only stopped that eare, but procured grieuous penalties to those which withstood his Catch-poll-Eunuches, which by those punishments grew more insolent. Ours which wintered at *Lincin*, happily escaped these Harpy-clutches, who with their Presents arriuing at *Nanquin* rejoyced to see a Residence so prepared there. These Presents intended for the King, bred such an amazement in the beholders that others were ready to offer force to see them. They still minding to present the King, (the weather now more cleare and peaceable) *Cataneus* went to *Amacao*; where was much rejoycing for these hopes, but soone quenched with sorrow for losse of their ship which tradeth to *Iapon*, men and goods lost, on which ship all their Commerce dependeth. They found themselues therefore vnable to maintayne three Residences: the Iesuites Rector scraped all hee could for that purpose, and added a Watch and Image of the blessed Virgin, and Trigone Glasses, Houre-glasses and other Rarities to their Presents.

Didacus or *Iacobus Pantoia*.

Father *Diego Pantoia* a *Spanish* Priest also accompanyed *Cataneus* to *Nanquin*, and thence went

went with *Ricius* to *Pequin*, with *Sebaſtian* and *Emanuell*. Father *Iohn* was called from *Nancian* to reſide with *Cataneus* at *Nanquin*. They went with an Eunuch then going to *Pequin* with ſix ſhips, who ſhewed them much kindneſſe. In *Zinin* a City of the Prouince of *Sciantum* is a Vice-roy which is as High Admirall ouer all the ſhips, whether they carry prouiſion or other things, which gaue kind entertaynment to *Ricius*, telling him at parting, *Sithai* (that was *Ricius* his *China* name) I alſo deſire to goe to Paradiſe, intimating that all his Heauen was not in earthly honours, but that he minded alſo what the other preached. Preſently with great pompe and ſtate hee followed him to his ſhip and there viſited him with vſuall Rites of Vrbanity and a Preſent, and wondred much at the ſight of thoſe Preſents they carryed for the King. He ſent an Officer alſo to make him a readier way. One *Licius* had made way to this Vice-royes friendſhip, who ſoone after killed himſelfe, hearing that vpon ſome complaint of his Books, the King had commanded him to bee impriſoned and his Books to bee burned; preuenting ſo the ſtudy of his Aduerſaries to put him to ſome ſhamefull death.

Zinin.

High Admirall.

Licius killeth himſelfe.

Amongſt thoſe Eunuches which the King had ſent to oppreſſe the people, was one *Mathan*, which dwelt at *Lincin*, whoſe exactions had rayſed the people and Souldiers into mutiny, which burnt his Palace and killed his Seruants, himſelfe eſcaping diſguiſed, but the Captiue and Slaue of Couetouſneſſe no leſſe then before. Our Eunuch addreſſed himſelfe to him, but could not till the third time be admitted, becauſe his Gifts were not anſwerable to the others appetite. Hee to make way for himſelfe betrayed Ours to this Harpy, they not knowing it, ſaying, that in one of his ſhips were ſtrangers with precious Gifts for the King, which he ſhewed cloſely to his Officers: with theſe he might get the Kings fauour. The Gouernour which in that and the Neighbour Cities had great command was his great friend, of whom *Ricius* asked counſell: he told him that now the Eunuches reigned, and they almoſt only were the Kings Counſellors, nor could the greateſt Magiſtrates withſtand their iniuries. Yet the countenance of this Magiſtrate was a great helpe to him, this being the man whom of all the Gouernours he moſt feared; a man ſo well deſeruing that his Citizens erected to him a Temple, Image, and Inſcription; who now alſo both countenanced *Ricius* what he might, and gaue him the beſt aduice how to carry himſelfe to this Eunuch, and perhaps but for him they had loſt all and themſelues to. This Capon had erected Palaces and Temples, and had built a huge ſhip in which the King himſelfe might haue ſayled; ſo many were the Cels, Chambers, Hals, and other commodious Buildings thereof; the Windowes, Galleries of vndecaying wood carryed with many Meanders, * all ſhining with Verniſh and glittering with Gold. In this ſhip was hee carryed to ours, where *Ricius* met him. He viewed and liked all, and downe on his knees to the Virgins Picture, promiſed to procure her a place in the Palace. *Ricius* modeſtly refuſing his ſeruice for them to the King, ſaying, many Magiſtrates of beſt ranke had vndertaken that kindneſſe: he ſmiled, ſaying, none of them could doe ſo much as he with the King: the King anſweres my Petitions the ſame day, to them or late, or nothing. The Eunuch which brought ours was ſent away, and all the Preſents put a-board his ſhip. Hee carryed the Ieſuites with him to the Towre of *Thienſin*, whither hee went to ſend thence the ſix moneths Tribute to the King: he feaſted them, Comedies, Rope-runners, Tumblers, Vaulters, and Mimicke Ape-men attending the cheare with ſuch diſports as they had neuer ſeene in *Europe*. One caſt three great Kniues into the Ayre one after another, and catched them againe in their ſheathes: another lay on the ground, rayſing his feete ouer his ſhoulders, with which hee toſſed vp and tumbled too and fro an Earthen Pitcher in ſuch ſort, as hardly could bee done with the hands; the like hee did with a Drumme on a Table. A Comedie was acted only with geſtures, of diſguiſed Gyants in glorious habits; one from the Theatre pronouncing all their parts. A Boy danced admirably, and then as it were falling, layd his hands on the ground, and another Boy of Clay came forth, which vſing his hands for feete, imitated all the prankes of the other, and fell to wreſtle with the liuing Boy, as if both had beene aliue.

Mathan a great and baſe Eunuch.

Treacherie.

Great and glorious ſhip.

CHAP. VI.

* This Booke I haue both in *Spanish* printed 1606. in *Valencia*: and in *Latine* at *Ment* 1607.

A Letter of Father DIEGO DE PANTOIA, * *one of the Company of* IESVS, *to Father* LVYS DE GVZMAN, *Prouinciall in the Prouince of* Toledo; *written in* Paquin, *which is the Court of the King of* China, *the ninth of March, the yeere* 1602.

§. IIII.

Difficulties of entring China, *their dwelling at* Nanquin, *going from thence to* Paquin, *with Presents for the King, troubles in the way by an Eunuch.*

RIght Reuerend Father in Christ, the peace of Christ bee with you. I thinke I doe not satisfie the dutie which I owe vnto your Worship, for the loue which you haue alway shewed vnto mee, and the Obligation wherein I am bound to so many most dearely beloued Fathers and Brethren of this Prouince, if being as I am in this great Kingdome of *China*, procuring the good of these Pagans, (whereunto it pleased our Lord to choose mee) I should not giue you some briefe Relation of the things that concerne this our new Mission, and of some things also concerning the greatnesse of this Kindome, the Customes, Gouernment and Policy thereof.

Colledge of Iesuits.

Being come, as heretofore I wrote to your Worship, to *Macao* a City of the *Portugals*, adioyning to the firme Land of *China*, where there is a Colledge of our Company: and there attending till the Persecution, Tumults, and Warres of *Iapon*, would permit ten or twelue Fathers of vs to passe thither, which stayed expecting fit oportunitie: when we were readie to depart, within few monethes, it pleased our God to change my Lot, and Enterprize which I had before myne eyes, and to send mee to enter into *China*, whereinto I entred in the end of the yeare of our Lord 1599. There were in this Mission at this time, only fiue Fathers diuided into three Houses. For though it be twentie yeeres since they first began to enter, yet the entrance of Strangers is so hard and so straitly forbidden, and their state and perseuerance is so difficult, that in all this time there neuer passed aboue fiue or sixe Fathers, and those which succeeded since, though by little and little, did discouer the Countrey; But their entrance was by stealth and secretly. Considering that all passages were shut vp, and that in all *China* there was no man that could or durst presume to giue licence to preach the Gospell; we alwayes sought to get some accesse vnto the King, either by way of Embassage, or by way of Present, and Gifts, and to seeke to obtayne this in part, or in the whole, to this end and purpose.

Entrance into *China* difficult.

Meanes sought to enter *China*.

Embassage. Present.

The Fathers alwayes sought to obtayne some Ambassage of the Pope, or of the Catholike King. But perceiuing they could not obtayne this, they procured it by way of giuing a Present, not so much of precious things, for they had none of that kind, as of strange things neuer seene before in *China*. And hauing procured this for many yeares space, without hauing any meanes to obtayne it; the Diuine Prouidence ordayned one in the yeare of our Lord 1590. which was this: The Fathers being in *Xaucheo*, (a Residencie of the Prouince of *Canton*) there passed that way a great *Mandarin*, called by the King, to giue him an Office in the Court, which among vs is like vnto a President of one of the chiefest Councels, which had known the Fathers long time; and now seeing themselues with him, and signifying vnto him the desire which they had to goe to *Paquin*, to giue a Present to the King, and that if hee would doe them the courtesie to carrie them along with him vnder his shadow and protection, they would alwayes remayne thankefull, and exceedingly bound to serue him. After this and other motiues which they presented vnto him, did that follow which wrought most effect, which was a good Present, with hope of other things afterward, whereupon he shewed himselfe very tractable to grant their request, and to take them with him to *Paquin*.

Being glad of this resolution, they prepared themselues for the Voyage, and tooke the things which they desired to giue the King, which hereafter I will mention. It pleased God to bring them to *Paquin*, in the company of so great a *Mandarin*, without the hinderance of any bodie. Being come to *Paquin* they began secretly to negotiate their businesse: becausse they durst not, neither was the *Mandarin* that brought them willing that they should shew themselues abroad. But though they attempted all possible meanes, neither with gifts, nor any thing else, there was not any man that would meddle with this businesse, becausse it was a matter that concerned Strangers, considering what might hereof happen vnto them. After they had spent certayne

moneths,

Digitized by Google

moneths, and saw they profited nothing, and fearing some innouation, they determined to returne to their Residencies from whence they came.

Hauing returned three hundred leagues, they came to the great Citie of *Nanquin*, which was the ancient Seat and Court of the Kings of *China*: and now (though the King reside not there) yet is it the most noble, great, strong, and beautifull of all this whole Kingdome, and retayneth her being the Royall Court, with all the same Offices which the Citie hath where the King resideth. They desired greatly to get an entrance into this City, because, as I haue said, it is a famous place, and hath such store of graue persons in it, thereby to make themselues knowne, and here to procure with more facilitie an entrance or accesse vnto the King. But it seemed a thing impossible, because it is a City straitly guarded, especially for Strangers, for whose guard and Watch it hath ordinarily aboue one hundred thousand Souldiers. And if they went about to get licence, it seemed impossible to obtayne the same of so many great *Mandarins*, as gouerned the same. But our Lord (to whom euery thing is alike possible) vouchsafed to comfort the Fathers for their trauell and small fruit which they had reaped of their journey to *Paquin*: and by the counsell of some friends which they had there, and with the protection of the *Mandarin* had carryed them to *Paquin*, which at that season came vnto this City, they dwelt in *Nanquin*, without the contradiction of any *Mandarin*, although all of them knew thereof: howbeit, as a very great man said, which afterward became our great friend, hee was readie to send to apprehend the Fathers, vntill hee vnderstood that they were peaceable people, which had long time abode in *China*.

100000. Garrison Souldiers in *Nanquin*. *Ricius* saith 40000. perhaps the other 60000. are for the Countrey adioyning, or for the Nauie and Sea-guard: or *Ricius* might speake of the ordinary at other peaceable times, *Pantoja* of this troublesome time while the *Iaponian* warre continued.

After they were purposed to remayne there, there was another difficulty to get leaue to dwell and haue an House within the wals. But the Diuine Prouidence gaue them a very sweet and easie meane for all this, as here I will declare. The *Mandarins* liue in this City in houses which are not their owne, but belonging to the Offices which they beare: and when one hath ended his Office, hee that succeedeth him, succeedeth him in his Houses, which are all builded at the Kings cost. At this time a great *Mandarin* had builded one of these, wherein by his Office hee was to dwell: But when he had finished it, it pleased God, that he enjoyed it not: and hee sent many Deuils to enter into it, as they did in deed, which with fearefull shapes did terrifie those which dwelt in it, especially by night: and this continued so long a time, that all men left it, and none would dwell in it. As Father *Matthew Riccio* (who was the party which negotiated this businesse, as the Procurator of all this Mission) went about to seeke to buy an House, by way of iest they asked him, whether he would buy an house full of Deuils? The Father answered, that hee tooke it not for a iest, but that if the house liked him, hee would not vary for that; for he serued a God whom the Deuils feared and dreaded, and that trusting in his helpe he was nothing at all afraid of them, but that they did rather much feare him, because he was the Seruant of such a Lord. They went to see the House, which presently liked him: and as they sold it good cheape because of the bad report that it had, in two words they agreed together; and the *Mandarin* that sold it was so glad, that he gaue vs Patents to possesse it perpetually in *China*; a thing which in no place could be obtayned of any other *Mandarin*. Forth-with they went to it, and at their comming in they blessed it according to the Rite of the Holy Mother Church; and by the grace of God there was neuer dreame of any euill thing that troubled the same. All men looked what would become of this, and what successe they should haue with the Deuils. And when they saw the great quietnesse, without any shew of Spirits, they were greatly astonied, saying, that without doubt this was a great God, and that hee sought to dwell in that House, and that therefore he had commanded the Deuils to dwell there, and not to suffer others to enter therein; and that when he came they went their way.

Mandarins houses are publike. House possessed.

Iesuits Patent for *China* habitation.

Fame of Iesuits sanctitie.

To this so good beginning the progresse from thence forward was answerable: for the graue *Mandarins* vnderstanding, together with the fame that they were Learned men, that they had many Bookes, that they were men of a good life, and that they had some things of their Countrey, which were neuer seene in *China* (as certayne Clocks with Wheeles, and Images in Oyle, and other pretie things) all of them setting feare apart, and other respects, came to visit the Fathers in great estate, because they were the greatest *Mandarines* of all *China*, but with much humanitie, respect and courtesie, with Presents of things to eate, and Banquets as they vse with their equals. They were so well pleased with all that they saw and heard, that all of them became their great Friends and Patrones: and gaue so good report of them, that all men sought to doe the like: and for continuance of their amity they came oftentimes to visit them, and oftentimes inuited them to their Palaces: and with this fame and honour of the graueſt sort of people, all the rest of the inferiour and baser sort vsed them with much reuerence, no man daring to doe, or say vnto them any discourteous thing.

Fame of their Learning.

Watches admired.

Their credit & good vsage.

This was the state of things when it pleased God to choose me for this Mission, and when I entred into it we had three Residences, one in the Prouince of *Canton*, another in the Prouince of *Quianci*, which is somewhat more within the Land, another in the Citie of *Nanquin*, which is in the midst of the Kingdome, and three hundred leagues from *Macao*. I entred secretly, as all the rest did (I say without particular Licence of any *Mandarin*.) But my secrecie continued

Digitized by Google

Three Iesuits.

but a while, as hereafter I will declare. I came at the first, without staying in any other House, to *Nanquin*, where three Fathers of vs were foure moneths; Father *Matthew Riccio* our Superiour, Father *Lazarus Catanio*, and my selfe, and a Brother a *Chinois*, one of the two which are receiued into this Mission, and euery thing goeth well. But as in matter of strangers the *Chinois* are exceeding scrupulous, more then your Worship can beleeue, so there were many which spake of our abiding in *Nanquin*, considering that now wee had three Houses in *China*. Wee beganne with much more earnestnesse to procure another better foundation, and to returne to *Paquin* more openly, and seeke accesse vnto the King. And because in *Nanquin* there bee *Mandarines* to whom this belongeth, and some of them were our Friends, wee beganne to speake of this point.

Leaue for *Paquin* granted.

But it was not needfull to spend many words; for straight way we met with a *Mandarin*, to whom by right this matter appertayned, who frankly and freely offered vs Patents, Dispatches, and whatsoeuer was needfull to accomplish this businesse.

The Riuer of *Nanquin* ouerfrozen all the Winter.

The promises of this *Mandarin* were not vaine: for when the time came that the Riuer was vnfrozen, (which all the Winter is frozen ouer) and Barkes began to goe for *Paquin*, he performed his word faithfully, giuing vs Patents and Passe-ports needfull for the money; and besides, hee sent vs a Barke of the Kings to carry our Present and our owne things. Beeing glad of these good newes and dispatch, we consulted how we should deale in certayne things which offered themselues in this businesse, and who should goe: There was no question but Father *Matthew Riccio* should be one, but who should be his companion: for whom they choose me, and the Brother. We set our things in order, particularly those which were of the Kings Present; *Which were two Clockes with Wheeles, one great one of Iron, in a very great Case made faire with a thousand ingraued workes, full of gilded Dragons, which are the Armes and Ensignes of this King, as the Eagle is the Emperours: another little Clocke very faire, aboue an handfull high, all of golden Metall, of the best Worke which is made in our Countrey, which our Father Generall had sent vs for this purpose; which was set in a gilded Case, as the other was: and in both of them in stead of our Letters were grauen the Letters of* China, *and an hand that came forth did point at them. Besides these there were three Images in Oyle, two great ones of an Ell high, and one little one. The greatest was the figures and portrature of* Our Lady of the Poplar, *of Saint* Lucar: *The second was of our* Lady *with the Babe* Iesus, *and Saint* Iohn: *the third, was a Picture of* Christ, *which was the least; all of them were of excellent Worke. Besides this, there were certayne Looking-glasses; two Triangle-glasses (which though among vs they be of no account, yet are they esteemed here among them) adorned with Chaines of Siluer, and set in an excellent Case of* Iapon, *which was of twentie times more value then the Glasses, to them that know what Glasses are. A Booke of* The Theatre of the World, *and a Breuiarie exceeding fairely bound, with an inscription, That that was the* Doctrine of the True God, *whose Images they did present him withall. A very faire* Monocord, because it is an Instrument whereat the *Chinois* doe wonder much, and other pretie things of lesse importance.

The particulars of the Kings Present.

Gilded Dragons or Serpents (so *Cruz* calls them) the Kings Armes. *Pinto* saith a Lion, perhaps his coniecture for the frequencie mentioned also by *Polo, sup. p. 89. &c.* or perhaps this might then be, and Serpents since, the Royall Ensigne. Besides a Lion is the Armes of *Canton* Prouince, and perhaps of some others which might be mistaken for the Kings Armes.

All which things beeing set in order, and imbarqued, we tooke our leaue of the Christians of *Nanquin*, (which at our departure came to our House with a Banquet with great joy) and of the *Mandarins* our friends, which with great sorrow, and shewes of loue tooke their leaues of vs, and sent vs Presents for our Iourney, and many Letters of fauour to the great *Mandarins* of *Paquin*.

They began their iourney from *Nanquin* 1600. the 20. of May, *stilo nouo.*

We departed with this good dispatch from *Nanquin* in the yeare 1600. the twentieth day of May. And knowing not how the King, and the *Mandarins* of *Paquin*, and those of the Kings Court, would take this our Iourney, because wee were Strangers, wee sought to prepare our selues for that which might fall out: in great hope that we should find ayde eyther in all or in part to obtayne our desire, which we had for the establishment of our Company in this Kingdome, and to procure the opening of an entrance thereunto for the preaching of the holy Gospell.

300. leagues as it were one pathway of shipping.

We began to sayle vp a very great Riuer, whereof hereafter I will speake somewhat; and when we had sayled certayne leagues, wee entred into another small Riuer made by hand aboue two hundred leagues, only to carry in Barges the Tribute which the Prouinces of the parts of *Nanquin* pay vnto the King, and other things which these Countries yeeld (which are the best, and most plentifull of all things which are in *China*) because it seemeth impossible to carry it by Land with Millions of people, being in Rice, Wheate, Siluer, and a thousand other things very great: And the Vessels which are employed about this businesse are so many, that without doubt it is no *Hyperbole* to say that from *Nanquin* to *Paquin*, which is three hundred leagues, all the Summer time it seemeth to be a path way of the Kings Barges. We were all aswell *Mandarins* as particular men very well intreated all the way, whither many *Mandarins* came out of the Villages and Cities, desiring to see the Present which wee carried, and our selues; bringing vs many Presents for our Iourney. Hauing trauelled two hundred and thirty leagues in forty dayes, wee came to a very famous place and Mart Towne in *China*, which is in the Prouince of *Xantun*, which is next vnto the Territories of *Paquin*, called *Lincin*. Where, because of the great Trafficke of Vessels and Merchants, which goe and come from the Court, who

Lincin.

pay

Digitized by Google

pay to the King a very great tribute, he hath placed one of his chiefeſt Eunuchs, which ſerueth to gather vp his Cuſtomes: which liued there in great eſtate, and much attendaneé. Whenſoeuer he goeth abroad he is alwaies carried in a Chaire, vpon eight mens ſhoulders, which is a very great honour in *China*, with great ſtore of Horſemen before and behind, with certaine Baſons of Copper, which make a great ſound when they bee playd vpon, to ſignifie to the people that he commeth that way, that all may goe out of the way; as the cuſtome is with all the great *Mandarines* in the Cities of their iuriſdiction. Which Eunuch vnderſtanding of vs, and of the things which wee brought for the King, and of many other things which they put in his head that wee brought, to wit, precious ſtones, and others of that kind: hee ſent vs word, that hee knew what we had brought for the King, and that he deſired much to ſee it, and that the ſame day or the next he would come, praying vs that we would make it ready.

Mathan the Kings Eunuch, his pompe.

He came at the appointed time, and hauing ſeene the things which wee brought for the King, and making account of them to be precious, and that the King would greatly delight in them, he ſought meanes to cauſe them to be preſented to the King by all meanes, as things that he had dealt with vs to bring, to pleaſe him, and thereby to obtayne ſome ſute for himſelfe: and beſides this, with deſire and hope that wee would giue him ſome precious ſtones (whereof the *Chinois* are very greedy) he determined wholly to meddle in this buſineſſe. Hee ſent vs a Preſent of things to eate, and a very courteous meſſage, that wee ſhould paſſe in one of his Barges, that ſhortly he would ſend vs to *Paquin*, with Souldiers of his houſe, a Petition made with his owne hand to the king; that we ſhould conſult together, and bethinke our ſelues what we deſired to obtayne of the King, whether it were to bee *Mandarines*, or to haue lands or houſes, or all together, becauſe there ſhould be no difficulty in any thing. The meſſage came with all this courteſie. And we made anſwer with the like, returning him a Preſent for his anſwer with generall words. For though hee came with ſo great offers, yet wee knew that theſe Eunuchs, for the moſt part, are baſe and couetous people.

Eunuchs baſe minded.

It happened at this time that the chiefeſt *Mandarine* of this Citie, which was our great friend was come from *Nanquin*, from whence they had fetched him for that Office. Wee determined that Father *Matthew Riccio* ſhould viſite him with a ſmall Preſent, according to the vſe of the Countrey, to relate vnto him this buſineſſe, and to aske his counſell what wee were beſt to doe. Hee receiued the Father with much courteſie and loue, and kept him two dayes in his houſe: which, after he had heard the whole matter, anſwered, that he was very ſorrie that we had met with this Eunuch, becauſe we could looke for no goodneſſe of his baſeneſſe, couetouſneſſe, and bad meanes of proceeding; and that he could performe nothing that he had promiſed, and that his intent was nothing but couetouſneſſe; that hee would aduiſe vs to take as little as we could of him: but for all this, that wee ſhould not refuſe that which hee offered, but rather to make a vertue of neceſſitie, and to thanke him with a very good continuance for that which hee promiſed, becauſe we were in his power, and he might and would hinder our paſſage, if wee did not ſo, and take away our Preſent from vs, and giue it himſelfe with his owne hand to the King, without making any account of vs, without controlment of any man, becauſe he was not ſubiect to any *Mandarine*.

Not ſubiect to ordinary Magiſtrates.

This ſeemed vnto vs to be very ſound counſell, and a forcible enducement to follow it. So we followed the ſame, and applied our ſelues vnto him in euery thing, anſwering the Eunuch according to his deſire, and paſſed in a Barke of his. He deſired much forthwith to carrie the Kings Preſent to his houſe, ſaying, that he would trimme them to giue them to the King, and this we courteouſly denyed him, ſaying, that we durſt not depart with them till we had deliuered them to the King, neither that it ſeemed reaſonable, that when wee did giue them, another ſhould trimme them; eſpecially, that theſe pieces were not ſuch as had need of more trimming, ſince in themſelues they were ſo precious: with which anſwer hee ſeemed to remayne ſatisfied. At the firſt he made vs great banquets, ſport, and cheere: but as in very deed his purpoſe was nothing but to doe himſelfe good, and to looke for his owne profit, and not for ours, hee beganne quickly to diſcouer himſelfe: for hee ſtayed certaine dayes, looking that wee ſhould giue him ſome precious ſtones, which ſome body had told him that we had brought with vs to pleaſe him, for ſome things that they looked for at his hands: and when he ſaw the dayes were paſſed, within which he thought we would haue giuen him them, he began to be out of hope, and to grow cold in our entertaynment: yet for all this, he came to viſite vs with great pompe at our embarking: and after fifteene dayes he diſpatched vs for our iourney to *Paquin* with men of his owne houſe, and with a Petition to the King, ſignifying vnto him how hee had met vs on, the way, and what our intent was, and what things we brought.

Conceit of gemmes.

He diſmiſſeth them.

Wee were very honourably entertayned in his iourney, and in all the Townes and Cities of his Iuriſdiction whereby we paſſed, he commanded them to giue vs without delay refreſhing of Fleſh-meate, Fiſh, much Fruit, and Wine. Wee trauelled eight dayes, and came to the laſt place of his Iuriſdiction: which is three dayes iourney from the Court of the King. We ſtayed there with company that did waite vpon vs, watching day and night about the Barke with their Centinels and Bells, as they are wont to doe with the great *Mandarines*, and eſpecially becauſe

Digitized by Google

there were there things belonging to the King, and the reſt of the ſeruants of the Eunuch went to *Paquin*, to deliuer the Petition to the King, and to know his pleaſure. They deliuered the Petition, and we looked for an anſwer thereof within three or foure dayes, as he had told vs. But God had diſpoſed otherwiſe for the exerciſe of our patience and hope in him: and that was, that the King made no anſwer as we looked for: whereupon he was ſomewhat aſhamed of the great brags that he had made to vs without performance of any thing: and hee and wee were all in ſuſpenſe, when we ſaw the King returned no anſwer, which is wont to bee a token that he liketh not the Petition that is made vnto him.

Silence of deniall.

Fifteene dayes after wee arriued in this place, the Eunuch came thither; to ſend from thence to the King a third part of the tribute which he had gathered. He came accompanied with great ſtore of Veſſels, and that wherein he was, was ſuch, as aſſuredly your Worſhip hath not ſeene the like in all your life. The forme is very much different from ours: for it is like vnto an high Houſe, wholly diuided into chambers and halls very high, full of carued workes round about, with hangings of Silke, of many figures, and round about full of galleries to walke vp and downe without being driuen to enter in. And on the outſide it was all couered ouer with a kind of Oyle like Varniſh, which runneth out of certaine trees, which they make with tempering of all ſorts of colours, (whereof in *Iapon* and here there is great abundance) and the *Portugals* call it *Charan*; it is a very faire, ſhining, and durable thing: and the things that are coloured with it, doe ſhine like Glaſſes, if it be of the fineſt: and beſides, though it be not coſtly, yet it is as faire and fairer, becauſe it is more naturall, and very neate and fine, wherewith they paint diuers figures, trees, and flowers; and if it be of the right, it doth not decay, and loſeth no whit of his luſtre. Herewith was the Barge trimmed without, with diuers figures painted on the hull of the Barge: from the hull vpward the windowes and the walls of the Halls and Chambers was full of carued workes, knots, and carued flowers, ſome gilded, others of diuers colours, agreeable to their natures, which made a very pleaſant ſhew: within it was of the ſame worke with more excellency, and the moſt part was gilded, and the floore of boords was painted with very ſhining Charan or Oyle. It was as long as a good Gallie, little more or leſſe, and ſomewhat broader, but farre higher, and in ſuch ſort, that when wind fayleth they vſe very great Oares after the manner of *China*, which ſerue, and are managed as Fiſhes vſe their tayle to ſwimme. And becauſe they bee of this faſhion they vſe them with much facilitie in euery Veſſell how high ſoeuer it be. This was the faſhion of the Veſſell wherein the Eunuch came with much Muſike of Trumpets, Drummes, and Fifes, and other Inſtruments which I omit for breuities ſake.

Eunuchs pompous Barge.

Glorious Varniſh.

Abundance of all colours in *Iapon* and *China*.

Painted Figures.

Very great Oares and the excellent vſe of them.

Muſike.

When he was come to this place, ſeeing the King ſent no anſwere to his firſt petition, he ſent another to put him in remembrance, and to ſolicite an anſwere to the firſt: wherein hee anſwered nothing to this point, although he anſwered to other things. And though it bee true, that ſometimes the King maketh no anſwer, through forgetfulneſſe and confuſion, becauſe the petitions be infinite which are daily giuen him from all the Kingdome: yet moſt ordinarily when he giueth no anſwer it ſerueth for an anſwer, either that hee will not doe, or liketh not of that ſuit that is made vnto him. And therefore becauſe there came no anſwer, the Eunuch was much grieued that he had meddled in this matter, out of which he could not withdraw his hand becauſe he had giuen a Petition to the King, vntill he had ſeene ſome anſwer of his, fearing ſome damage, or diſpleaſure of the King, that hereof might enſue: and hereupon hee beganne to eſtrange himſelfe from vs, and ſought not to ſee vs, nor to haue to doe with vs, and ſent ſixe men alwaies to ſtay in our Barge, vnder colour to ſerue vs, but in very truth to watch vs day and night.

Manner of petitioning the King.

Eunuch eſtranged.

In this ſuſpence wee continued three moneths in the extreme heate in a Barge, not knowing what would become of vs. At the end thereof newes was brought vs, that the King had ſent to the Eunuch, that he ſhould ſee what things they were (for vntill then he had not written to him but in generall) and ſignifie it vnto him, and if he thought them worthie, he ſhould ſend him a Petition touching that matter. Wee were ſomwhat more ioyfull with this meſſage, which was ſo indeed. And Father *Matthew Riccio* went to the Eunuchs lodging to receiue the Kings anſwer, with ſuch ceremonies and reuerences as they are wont to receiue the meſſages that come from the King. And to put this commandement in execution, he came to our Barge accompanied with many inferiour *Mandarines*, as witneſſes, and in the Kings name hee tooke all theſe things into his hands: which he ſent vnto his houſe. There he fell to reaſon with vs, perſwading vs that wee ſhonld conceale none of the precious things that wee had brought (whereof his minde did ſo greatly runne) becauſe the King would be greatly diſpleaſed, if hee knew that wee had any good things and would not giue them him. Wee told him plainely the truth, putting him in plaine words out of that imagination which we knew he had conceiued. And after many compliments on both parts he returned to his lodging.

They ſtayed three months.

He wrote to the King what things they were which we had brought, looking that he would ſtraight haue ſent for them. But it fell out as it did at the firſt, that he returned no anſwer, and the cauſe thereof ſeemed to be, that they were things that he made none account of. Wee were now the ſecond time in like caſe as wee were at the firſt, not being able to goe backe nor forward:

Digitized by Google

ward: for they would not suffer vs to goe to *Paquin*, nor to returne backe. The Eunuch being readie to returne to the Citie of *Lincin*, where we first met him, hauing need of the Barge wherein wee were, commanded vs to bee remoued vnto an house in the Citie, there to stay vntill some message came from the King, either good or bad. We remoued with great pleasure, for the desire that we had to say Masse, whereof wee were depriued many moneths. After we were come on shoare, we set vp our Altar whereon we said Masse euery day, preparing our selues for that which might betide vs. *Lincin.* This was the thirteenth of October.

This Eunuch could not bee diſswaded from that which couetousnesse had perswaded him, to wit, that we had brought some precious thing with vs. And seeing it seemed vnto him that he could not get vs by another way, to giue that which hee desired, and wee had not; hee became shamelesse, and two dayes before his departure, he came with a great companie to our house, as though it had beene to visite vs in friendship, we thinking nothing of any such thing: and when he was come in he began to speake vnto vs, and put vs in great feare, asking vs, how wee durst come so farre into the Kingdome without leaue of the King? and that other Eunuchs had aduertised him from the Court, that wee had many other things, and that wee would not shew them, nor giue them to the King. While he was thus talking and dealing, hee commanded his men to seize vpon all our stuffe, which we had in foure or fiue Hampers, and to lay them all out vpon a banke, which with great celeritie aboue an hundred Officers which came with him performed, and in two words, they vndid and opened all, and with his owne hands he opened as many papers as he found, to seeke that which he desired: and seeing he could finde nothing that hee looked for, he tooke that which hee found, which was an Image of our Ladie, being one of the two small ones which wee had reserued, that which hee left was better without comparison, and very excellent, on which also hee had cast his eye: hee tooke also certaine Glasses, and other small things, of small importance, because there were no better: but that which grieued vs much was, that he tooke from vs a Crosse of very good and great Reliques, and a Case of Reliques likewise, and the Chalice wherein we said Masse, which because it was of Siluer and gilt (which that yeere they had sent vs of Almes from *Maaco*) did please him; and when we prayed him not to touch it, because it was a thing consecrated to God, which the Kings of our Countrey durst not presume to touch, hee made a iest of it; and the more it was told him that hee should not touch it, hee handled it the more with scorne, saying, that though wee told him he might not touch it, yet we saw he held it in his hands without any difficulty or danger. Couetousnesse iniurious. Images. A Crosse and Reliques. A Chalice.

By the intercession of a *Mandarine* that fauoured vs, he gaue vs the Chalice againe; but wee could neuer get the Reliques againe out of his fingers, as wee desired, for of all things else hee would depart with none.

As he and those that ayded him so willingly were searching with much curiositie, and euery one catched what he could, because all things lay tumbled on the ground: at last they met with a Case wherein was a carued Crucifixe, which was mine. He began to looke vpon our Lord *Iesus Christ* being bloudy and wounded, being a very faire and pleasant sight to our eyes and heart, but very strange, foule and offensiue to his sight. He vsed certaine gestures not saying any word, vntill he was astonished, and turned his head, and asked what it was? Wee told him, that that was the true God which made Heauen and Earth, whom all the World ought to worship, who died for our sinnes, and to giue vs life, and afterward rose againe by his owne power, and ascended into Heauen. He would not heare many reasons; for it seemed vnto him that we were deceiued in worshipping a God that in his eyes was dead: againe, he looked wistly vpon it; and the finall conclusion that hee made was, that that which hee suspected was true, that wee were very lewde fellowes, because wee had the shape of a man misused with so great inhumanitie, nayled on a Crosse, and all besprinkled with blood, as that was, and that it was nothing else but some witchcraft to kill the King; And though in this second point hee was deceiued; yet in the first he had great reason, though hee knew not wherefore, since our sinnes and euill deeds made *Christ* to be vsed on that sort. A Crucifixe. Suspicion.

That which the Eunuch said in our house, he vttered also abroad: in so much that certaine graue *Mandarines* which fauoured vs, retired themselues from vs, and sent vs word, that from henceforth wee should leaue that crucifixed man, and that seeing now wee remayned in *China*, we should wholly conforme our selues vnto them, for as long as we kept it they durst not speake in fauour of vs, because the report went that it was a deuice to kill the King. But our *China* Boy which was a *Christian* before he brought vs the message, answered before the *Mandarine*, saying, That this was the true God: wherefore not onely wee, but himselfe that was a *Chinois* would rather die then denye him one jot: whereat the *Mandarine* was amazed, seeing him speake resolutely of dying; a thing so much abhorred of the *Chinois*, euen to speake of it: and so he sent vs a moderate message, bidding vs to hide that Figure, that no bodie should see it, for the report that went of it. The Eunuch gaue out many threatnings against vs, saying, that whether the King receiued the Present, or not, the least displeasure that hee would doe vs was, to thrust vs out of the Kingdome, as wicked fellowes, writing a Petition to the King against vs. Besides this we remayned thrust into an exceeding bad and naughty house in the greatest force Dying dreadfull.

of

Digitized by Google

The force of Winter.

This was till the beginning of Ianuarie, 1601.

of the Winter, alwaies with many Souldiers within and without doores, the gates being shut with hanging Lockes, without suffering our Boy to goe forth to buy any thing, without two Souldiers to goe with him. In which kinde of liuing (though still with some remission of the rigour that we were kept in at the first) wee continued aboue two moneths and an halfe without any kinde of comfort or rest at any time of the day to say Masse.

At the end of which time, the Eunuch returned to the same place. Wee verily thought that our comming out of that place should not be such as it was, at the least we thought we should be thrust into a perpetuall Trunke or Prison, or in some worse place, as the fame went, and the good will which the Eunuch shewed vs.

§. II.

The King sends for them, is delighted with their Clockes and Pictures; they are shut vp, after take a house, are admired for learning; Christianitie of China.

The King sends for them

AS the cause of our trouble was the Kings not dispatching of our businesse, and our conceiuing that hee misliked of our comming, so all was ended by his remembring by chance to aske where the strangers were, which certaine moneths past they had told him had brought him certaine Images, and certaine small Bells which strike of themselues (for so they call Clocks) and wherefore they brought him not those things, and that they should fetch them quickly; and he gaue the charge of dispatching our businesse to a great *Mandarin* of *Paquin*, to whom it belongeth to deale with Strangers.

Their iourney

They came to *Paqnin*, in 4. dayes trauell.

These newes were brought to the Eunuch and vs, who for the executing of the Kings commandement (whose Letter they obey without reply) sent vs word that wee must goe to *Paquin*, because the King sent for vs, and sent vs eft-soones all the Pieces which hee had in his possession, and the most part of those things which he had taken from vs, that wee our selues should put them in order, that they should receiue no hurt by the way, and gaue vs many men to carrie all our stuffe on their shoulders, and Horses for all our companie, and a *Mandarin* to accompanie vs. Wee were lodged all the way in the Palaces of the *Mandarins* very honourably. Hauing trauelled foure dayes, we came to the walls of *Paquin*, and they lodged vs in an house without the walls. And because the King had referred the businesse to the *Mandarin*, which I spoke of, the Eunuch feared that hee should lose the thankes, which he thought to receiue of the King for that present, if another *Mandarin* should meddle with it. That day hee caused all things to be made readie of the Petition and remembrance, which therewithall he was to giue vnto the King, and earely in the morning with other things and much Siluer of the reuenues which he presented, being all guarded with many Horse-men and Foot-men, hee carryed it to the Kings Palaces.

The present is deliuered to the King.

Clockes and Pictures admired.

Who hauing the memoriall deliuered vnto him, commanded his men to receiue all things. They receiued the same: and when hee had seene all those strange things, the like whereof, or of so great excellencie, he had neuer seene before; they say that he rejoyced greatly, considering and viewing all things a very long while, with great shew of admiration, especially of the Pictures and Clockes. Hee commanded them to bring vs to his Palaces, and to enquire of vs what kinde of thing those Clockes were, and what thing was needfull, for to haue them to goe well. Wee answered to the point. And from the place where we were on horseback, by poste on two Horses which we mounted, and with the like speed we came to the Court. At the same of our comming, and for to see vs an infinite multitude of people assembled, (because Strangers are no ordinarie thing in *China*:) and when wee came to the Court, those which had the charge of vs, were enforced to make roome with staues. When we were come to a certayne place, a great Eunuch accompanied with aboue two hundred small ones, came downe to demand of vs what the King commanded him, and to see how wee did handle those Clockes: They saw how we vsed them; but wee answered to the question, that it was needfull to appoint some bodie of good capacitie to learne, which in two or three dayes would learne how to vse them.

They are sent for to the Court.

Eunuches are taught to vse the Clockes.

When they had returned the answer, the King appointed foure Eunuches of his principall Mathematicians, to learne it, and command them to receiue vs in the meane while in his house within his owne Palace. They receiued vs with much respect and good entertaynment. A great multitude of Eunuches came to see vs, and euery one to enquire what came in his minde. But the King, which all those dayes was occupied in rejoycing for those new things, commanded the Images to bee placed in a principall Hall, whether, as the Eunuches told vs, the chiefe Queene went to doe them reuerence: and they told vs of the King, that hee durst not keepe them neere him, being afrayd, because they seemed vnto him to bee aliue. Often times he sent Eunuches vnto vs, to enquire diuers things concerning our Countrey, whether it had any King, what manner of Apparell he wore, and what kinde of Hat? (for in *China* they make great difference of

The King of *China* his questions.

the

Digitized by Google

the apparell of the King, from the foot to the head, and of other men) and if wee had any Picture of him that we ſhould ſhew it. We had a picture wherein was the Pope with his triple Crowne, and the Emperour, and the King with their Enſignes, kneeling before the name of God, and we gaue them it for a ſhow, declaring that thoſe were three kinde of Kings, and that all of them did worſhip the true God, which made Heauen and Earth, whoſe Image we had giuen him. They carryed it vnto him, and becauſe it ſeemed to bee ſmall, he commanded them to draw another greater, in colours by it. Three kindes of Kings.

Afterward hee ſent another to demand queſtions of the things of our Countrey, particularly of the Kings Houſes. Wee had a Map of the *Eſcuriall*, newly cut in Copper, and a picture of the Place of Saint *Marke* in *Venice*, both which wee gaue them. Though we ſuſpect that they deliuered but the ſecond, ſaying, that they durſt not giue the other, becauſe ſtraight in haſte hee would command them to paint them great, and there was none that durſt take it vpon him, though wee know not whither they deliuered it afterward. Hee willed them further to enquire; after what manner wee buryed our Kings: becauſe in the matter of Burials and Sepulchers, the *Chinois* are great South-ſayers, and put a great part of their felicitie in a good manner and place of their Burials. At that time wee receiued a Map of the Death of his Majeſtie, (who liueth with God in glorie) and of the manner of his Funerall, and ſo we anſwered him, as it was in the Map, to wit, that they made him a Coffin within of Lead (which continueth long) and without of excellent Wood, and put theſe coffins in a Sepulcher of ſtone, and for this purpoſe, there was a Church builded of purpoſe. They enquired many things of vs of this kinde theſe few dayes, where vnto wee anſwered, aduancing the things that belonged to the ſeruice of our Lord God, as much as we might, and concerned our *Europe*, as farre as the truth would permit vs, becauſe that we deemed it to bee conuenient for the ſeruice of our Lord. They told the King ſo many things, that it ſeemed hee greatly deſired to ſee vs: But on the other part, he thought it would bee too great a courteſie, and much beyond his cuſtome, who neuer ſuffereth himſelfe to be ſeene of his owne people, but of his Eunuchs, and Wiues that ſerue him, and ſomtime very ſeldome of ſome one of the greateſt *Mandarins*: yet, though he would not ſuffer himſelfe altogether to bee ouercome of this temptation, yet he ſuffered himſelfe in part, and hee ſent to take our Pictures: which two Painters did, each of them by themſelues as well as they could. Yet in truth I neither knew my ſelfe nor my companion in that picture, but as it was they carryed it away. It was not after ſuch figure and manner, as your Worſhip hath knowne mee, but with a Beard an handfull long, and a garment of a Learned honourable *Chinois*, though downe to the foote, and very modeſt: but from the head to the foot farre differing from our faſhion. The E*ſcuriall* Saint *Markes*. Sepulchers. Death of King *Philip* the 2. The King neuer ſuffereth himſelfe to be ſeene of the common people. Bad Picture-drawers.

After the Eunuches had beene inſtructed three dayes, the King in haſte ſent for the Clockes, which they carryed, and ſet in order before him; whereat hee tooke ſuch pleaſure, that he increaſed their Dignitie, aduancing thoſe foure which had learned this skill, to a greater place of their Order. The King asked them many queſtions of vs, what wee did eate, and how much, and many other trifles. Whereunto the Eunuches anſwered (as they told vs afterward) as wee could deſire. Eunuches preferred.

They gaue vs all the welcomes of humanitie which the King did ſhew vs, appointing vs all to bee *Mandarins* (which is the reward and felicitie of the *Chinois*) which wee alwayes refuſed, ſaying, that we came not for that purpoſe, but onely to dilate the Law of God, neither could wee take that office vpon vs: But we were ſo neere to bee made *Mandarins*, that they told vs the King would beſtow Dignitie vpon vs, that wee were enforced to beſeech the Eunuches, that when occaſion was offered, that his Majeſtie did aske them any thing, they would tell him plainely that we ſought no kinde of Dignitie, nor could become *Mandarins*: who told him ſo much; whereby our Lord God deliuered vs out of much trouble, which wee ſhould haue endured in refuſing the ſame, if the King had beſtowed it vpon vs. Wee continued in theſe demands, queſtions and anſwers, goings and commings to the Kings Court: for now we had liued a whole moneth abroad: in which time euery day I at leaſt was there, when wee could not goe both, becauſe Father *Matthew Riccio* was occupied with other Gheſts and viſitations. They enquired and asked vs, what we would demand of the King? Wee told them, that we ſought no profit at all; but if the King would giue vs vnder his hand, ſome certayne place and a Houſe to dwell in, we would bee very glad; becauſe wee had none other intent, but to ſtay in ſome certayne place, and to ſeeke to dilate the Law of God. For though it bee true, that our purpoſe did ſtretch it ſelfe further (as I haue ſayd in the beginnning) yet wee found things in ſo different a diſpoſition from that which we imagined, that it ſeemed an exceeding great errour, to make any motion to giue an entrance for more companie and Fathers: for it was certayne that we ſhould doe no good, nor ſhould finde any, which by any meanes durſt preſume to mooue it to the King, and aſſuredly ſhould loſe all that we had done, and at laſt ſhould caſt our ſelues wholly out of the Kingdome: and therefore it was not conuenient that we ſhould bee knowne, that we had any companions. And many of our friends gaue vs counſell, that wee ſhould not ſeeme to ſeeke to dwell heere; for in that very point, they would haue vs in ſuſpition. Yet neuertheleſſe, we went as farre as we could, and as we thought might bee brought to paſſe, which *Ieſuites* offered to be *Mandarins*. A Moneth.

was,

Digitized by Google

was, that we might haue the Kings licenſe, that no *Mandarin* might (if hee would) caſt vs out.

Mandarin offended.

The *Mandarin*, to whom the King at the firſt had referred our buſineſſe, ſeeing the Eunuch had wholly medled in the ſame without him, being much offended therewith, did frowne altogether vpon vs, and made a warrant out, to take vs whereſoeuer they found vs, vttering certayne grieuous words againſt vs, becauſe that being Strangers, and remayning in the Court, wee preſented not our ſelues vnto him, to whom of right belonged all the buſineſſe of Strangers. They were at the lodging where wee lay, and they ſhut vp our Boyes; for they neuer durſt offer any diſcourteſie to Father *Matthew Riccio*, (which at that time was there.) At that time I was at the Kings Court, whither they ſought to ſend me word to ſpeake with the Eunuches, and that they, if they could, ſhould aduertiſe the King thereof, that they had apprehended vs. But they hindred with exceeding great care and diligence the going foorth of any bodie, and they ſtayed for me till I came home, (which came home thinking no harme at all) and when I was come in, they ſhut the doore without.

They are ſhut vp ſome three moneths.

Wee rode the next day very honourably on Horſebacke to the audience of the *Mandarin*, and ſignified vnto him, that in that we did not preſent our ſelues, was not our fault; hee vſed vs well, and honourably; but they put vs in an houſe with a Guard, where wee continued ſome three moneths, yet ſo that certayne *Mandarins* came to ſee vs. This *Mandarin* gaue the King a remembrance that hee held vs there: *But that as our purpoſe was good to ſerue him with that preſent, it was reaſon to giue vs ſome reward, ſetting downe that it would doe well to giue vs the Enſignes of the* Mandarins, *and to pay vs for that which wee had giuen him Royally; but that it was fit to ſend vs away ſpeedily into our Countrey, or to* Canton *(where vntill then wee had dwelt:) for it ſeemed not well, that Strangers ſhould dwell and that in the Kings Court, entring into the Palace of the King euerie day, being a thing ſo vnuſuall.* And in very deed hee had reaſon: for to ſuffer vs to enter into the Palace, or to ſtay and lye there, they did vs ſuch a fauour, that of long time the King of *China* hath neuer done to any Stranger. Wee feared ſome trouble by this Petition. But our Lord which had giuen vs this bitter morſell, afterwards made it ſweet to vs againe, becauſe the King made none account of it. And albeit diuers times afterward, the ſaid *Mandarin* deliuered foure Petitions concerning this point, hee made as ſmall account of the laſt as of the firſt. And diuers times the Eunuches told vs, that the Kings meaning was of all likelihood, that wee ſhould ſtay heere, *For feare leſt wee ſhould returne into our Countrey, to giue newes and knowledge of his Kingdome*; as they delt with a *Turke*, which hath beene heere aboue fortie yeeres. True it is, that hee anſwered a little, in performing nothing that was in the Petition: But wee tooke it for good ſatisfaction, that hee did not yeeld to that, that we might not loſe the other thing, which was the principall.

Mandarins Petition.

A *Turke* kept there.

When three moneths almoſt were ſpent, ſeeing the buſineſſe would bee prolonged if wee attended the Kings anſwer, and being ſhut vp we could doe nothing, nor negotiate any thing that we intended, nor deale in Gods matters, as we deſired; wee ſought to get out of this place, and to get a licenſe to take a Houſe, and there to ſtay wayting till the King would giue ſome order; and wee handled the matter ſo well, by meanes of certaine *Mandarins* which fauoured vs, and principally by the grace of our Lord, that wee obtained our whole deſire: And we tooke an houſe in the chiefe ſituation of this Citie: all that which they gaue vs at the Kings coſt in that place, which was ſufficient for our ſuſtentation, after wee were gotten out they gaue vs the ſame allowance in like manner.

They hyer an Houſe.

Many *Mandarins* of this Court, heard great fame of vs and of our things: and vnderſtanding that we were come out of that place, began to come in great numbers and concourſe with much honour and reſpect, courteſie and preſents to viſite vs, and to enquire diuers things which they deſired to know. For the fame that went of vs, that wee knew all Countries, and the things and cuſtomes of the World, and the materiall and ſpirituall things of Heauen, was great: and therefore euery one came to enquire that which hee deſired. And though our knowledge be but little, in compariſon of the knowledge which is in our Countrey: yet being compared with theirs of *China*, which knoweth nothing of the world, ſaue their owne Kingdome, which by a common name thy call, *The World*: of God, and of the things of Heauen nothing, and of other things little, it was ſomewhat, and was ſufficient to ſend them home amazed, and alwayes with a deſire to returne.

Viſited by *Mandarins*.

China ignorance of the world.

Vſe of Maps.

They ſaw a very faire and great Map of the world which wee brought with vs, and we ſhewed them how bigge the world was, which they thought to bee ſo little, that they imagined that there was not ſo much more in all the ſame, as their Kingdome: And they looked one vpon another, and ſayd, wee are not ſo great as we imagined, ſeeing heere they ſhew vs, that our Kingdome, compared with the world, is like a grayne of Rice, in compariſon of a great heape. They alſo thought, that there was no other Writing, nor no other Bookes in the world but theirs: and when they ſaw ours, which at the leaſt they ſaw in outward appearance, to bee much better then their owne, they were aſtonied, and put out of their errour, doing vs alwayes more and more honour: and chiefly they were aſtonied, when wee ſhewed vnto them certayne things in the Mathematickes which they knew not, giuing Clockes to certayne perſons, which for this

Ignorance mother of arrogance.

Mathematicks

end

Digitized by Google

end we made of purpose: and by these and other meanes, and principally by discoursing with them of Morall vertues, (whereof they write, speake, and haue many Bookes) and of Gods matters, there ranne so great a fame, that the greatest *Mandarins* of all this Kingdome (which are the greatest persons next the King) sought to conuerse with vs, and to seeke our friendship: and so many sent vs presents, and others came to visite vs, with great numbers of people: others with much courtesie inuited vs to their houses: so that in foure moneths space, wee had gotten the greatest *Mandarins* of *Pequin* to be our friends, and readie to fauour vs in all things: And he which at this time particularly doth fauour and honour vs, is the *President of that Audience*, which hath the charge of vs, and at the first approoued vs: so that wee remayne Inhabitors of this Citie, with all libertie that wee can desire, to deale with all such as are willing to heare the things that belong to our holy Law, and their saluation. And by this good successe, our Lord hath made vs forget all that is past. And though it bee true, that hitherto wee haue gotten no dispatch, nor resolution of the King, yet wee content our selues in that hee letteth vs stay heere, although he neuer grant vs more. For albeit by this our Iourney, we haue not obtayned all that wee desired, yet we hope that this our firme abode heere, shall tend greatly to the seruice of our Lord, and the good of this Mission.

Ethikes.

Foure months

They bee commonly of good vnderstandings, so that easily they fall into reason, and are capable: they haue not in the gouernment of this Kingdome, any thing that forbiddeth them to follow what Law they list, nor any Law nor Obligation, which is contrarie to our holy Law. They haue none which effectually and with authoritie doth exhort them vnto other Lawes, and with-draw them from the truth. For the *Bonzi* (which are dedicated for this purpose to Idols) are in the common conceit of all men, the most base, contemptible, and worst people in all *China*, whose least care is, to exhort them to any thing more then to giue them somewhat: and thus they doe not onely not exhort them to follow Idols, but also with their bad manner of liuing, perswade them (as wee haue often heard of men of good iudgement) that it is not good to serue them, since their Ministers bee such. And so in this matter of worshipping of Idols, though there be many that worship them, and haue many of them, and vse their Ministers for their Funerals, and other things, yet with very small affection, and deuotion thereunto, we easily make them say that they are naught, and that it is not fit to worship them.

Hopes of Christianitie.

The baseneſſe of the *Bonzi*.

Yet, though these things and others which I omit, doe helpe them with ease to follow the Law of God, the counterpois is great, and commonly it weigheth downe the ballance on that side. For first because the matter of *Strangers* is so odious in *China*, and the dealing with them so suspicious, one sort because they disdayne it, as the Princes, who albeit they now conceiue better of vs, yet to learne of Strangers, and to receiue a Law which is not of their owne meanes, they hardly perswade themselues: others for feare, as the base people.

The second difficultie, and perhaps the greatest, is a naturall obliuion, that all this Nation hath of another life, and of immortalitie, and of saluation or condemnation of the Soule: and not onely an obliuion, but also an auersion from all these things, wherein wee haue likewise found them to differ from all other Nations. And it is a thing to be noted, that since it is a thing so naturall to Man to reuerence some God, either false or true, and to feare or loue him, and to conceiue or imagine what shall follow after this life: Those *Chinois*, (which on the other side are of so good capacities in humane things, and so wittie therein) bee as though they were depriued thereof; for they are almost all *Atheists*, not knowing nor worshipping neither false nor true God, nor neuer thinking what shall follow after this life: And those which a man would thinke are most bound hereunto, which are the Learned men, are they, which haue least knowledge hereof: yea, rather one of the chiefest things that they commend, is, not to beleeue any thing that concerneth another life, Hell, nor Paradise, which they wholly place in this life. The Bookes which they studie from their Child-hood, doe them much hurt, which are of certayne Philosophers aboue two thousand yeeres old, whom they esteeme little lesse, then if they were their God, to whom euery yeere they offer Sacrifices: of whom they hold so great an opinion, that they thinke not that any thing more may bee knowne, then They knew. And oftentimes they haue asked vs, whether wee had not these Bookes in our Countrey? What other Bookes might we haue, that might compare with them? And as these Philosophers, as Gentiles, spake nothing of the other life, but onely of good Gouernment, and Morall vertues, they thought they might attayne so farre, without beleeuing that there could bee another life. By reason hereof, and of the common vices which *Paganisme* draweth with it, which in this Countrey increase exceedingly, by reason of the fatnesse, abundance, and fruitfullnesse thereof, they feele great difficulties to vndergoe the yoke of *Christ*, (though it be so sweet) so contrarie to their appetite, which taketh from them the libertie which they haue, in keeping as many Wiues as they are able, and in a thousand other things.

Indeuotion.

Almost *Atheists*

Bookes of Philosophers, about 2000. yeeres old.

Sacrifices to Philosophers.

These later yeeres in the residencies of *Canton*, *Nanquin*, and heere in *Paquin*, were made some true *Christians*, which ouercame all these difficulties, and goe on forward with great integritie, constancie and feruour. In the Prouince of *Canton*, in a residencie which wee haue in *Xaucheo*, a principall Citie, haue beene Baptised within this two yeeres, about three hundred persons, which

Some *Christians* made there.

according

according to the Letters which euen now wee receiued, doe all continue with great example and zeale. And the *Mandarins* and grauer ſort of people, mooued by the good example which they giue, doe fauour them much : and eſpecially, our Lord hath ſhewed many tokens of his fauour, in hauing ſhewed great plagues vpon ſuch men, as perſecuted them for becomming *Chriſtians*.

Cloſenſſe of Women.

And aboue all, God hath ſhewed his ayde vpon the Women : who, beſides the men, are very hard to bee wonne to receiue our holy Law, which is, the great priuateneſſe which they vſe, becauſe it is not lawfull to ſee them, no not for their kinsfolkes. But as I ſay, herein the grace of our Lord God ſhewed it ſelfe very mightie, ſeeing it ouercame this difficultie, and ſo many of them were Baptiſed, after they had beene very well Catechiſed by the Fathers. On Sundayes and Holy-dayes, becauſe they cannot come to Maſſe with the Men, yet at leaſt in this beginning, they meete in places appointed for that purpoſe, and there they Pray, and reaſon, and intreat of Diuine matters. The men for the exhortations that they make vnto them, haue dayes appointed of themſelues, and with their owne conſent, to conferre and repeate that which they haue told them : which going home they repeate to their Wiues and Daughters.

Some relations of Conuerſions are heere for breuitie omitted.

Euery day ſome bee Conuerted in *Nanquin* : graue and learned men doe enter. Heere in *Paquin* while wee haue beene heere, we haue Baptiſed ſome, and ſome great *Mandarins* come to heare. If our Lord doe helpe them, and ſhed his bloud vpon theſe *Chinois*, (as hee hath done in *Iapon*, and in other places) there will bee ſetled one of the moſt famous and learned foundations of *Chriſtianitie*, that is in all the world. For the greatneſſe of this Kingdome, their Lawes and Gouernment conformable to reaſon, their being ſo ſtudious as they are, and giuen to Learning, and to know ſo much as they know of Morall vertues, and their good capacities gentle, docile, and ingenious, and the great peace and quietneſſe which they enioy, without hauing any bodie to trouble them with warre, promiſe much and giue great hope, that the vantage which they haue ouer other Nations lately diſcouered, in the gifts of Nature (being aſſiſted by the grace of God) will helpe them in Gods matters.

And I aſſure your Worſhip, that if the doore were opened to Preach freely and to Baptiſe, I ſay not that the Fathers and Brethren of our Companie which might bee ſpared, but without any amplification at all, halfe the Religious men of all *Europe*, were needfull to attend ſo many Cities, Townes and places ; and ſo infinite numbers of people as there are : albeit when *Chriſtianitie* is once begun indeed, there is ſuch abundance of graue people and of much eſtimation, that many of them might bee made Prieſts, Preachers, and Biſhops, without feeling any want of thoſe of *Europe* : ſince as now they bee *Gentiles*, and their hope goeth no further then to this life, there be many very great *Mandarins*, whoſe chiefe delight is to diſcourſe of things concerning Vertue, and oftentimes they meete together as it were in Fraternities to treate thereof; And the grauer ſort doe make Orations, and Conferences together, perſwading one another, and deliuering the meanes to gouerne well, and to follow vertue. And without doubt, the more wee ſee of this, and the more zeale in theſe *Chriſtians*, ſo much the more our heart is readie to burſt to ſee them ſo deſtitute, and to haue ſo few meanes to obtayne neceſſarie remedie and helpe.

Multitude of people.

Deſire of Learning and Morall vertue.

Marke this zeale.

§. III.

The deſcription of the Kingdome of China : *of* Catay *and* Musk ; *the diuiſion into Prouinces ; Cities and Townes deſcribed, Riuers, Shipping, Commodities, Diet, and feeding.*

NOw by the helpe of our Lord I will ſay ſomewhat that I remember, touching the Cuſtomes, Policie, and Gouernment of this Kingdome, but not in ſuch order as were requiſite, becauſe I haue no leaſure, and therefore I will onely write as things come vnto my minde, though things bee not lincked well together, becauſe I cannot firſt write one Copie, and afterward diſpoſe it in order, with ſuch diſtinction as were needfull ; reſeruing that (as I ſayd in the beginning) vntill our Lord grant me a better opportunitie.

China foure ſquare. The Deſcription.

This great Kingdome of *China*, is almoſt foure ſquare, as the *Chinois* themſelues deſcribe the ſame : it runneth North and South from the Prouince of *Canton*, which is the moſt Southerly part of it, beginning ſeuenteene or eighteene degrees vnder the burnt Zone, vnto fotrie two degrees, which is the moſt Northerly part of it : it contayneth from *Canton* by water, aboue ſixe hundred leagues : but in a right line it is foure hundred and fiftie, on the Eaſt it confineth with *Corea*, which ioyneth with the ſame, and with *Iapon*, and with the Ocean Sea, by which they come from *Peru*, and *Nueua Eſpana*, to *Manilla* : On the Weſt with certayne ſmall Kingdomes, which lye betweene *Bengala*, the Lands of *Mogor* and *Perſian* ; On the South, with the Iles called *Philippinas*, and the *Malucas*, and others, and more South-weſterly, it hath *Sion*, *Pegu*, and other Kingdomes. On the North part, it hath thoſe people which in our Countries wee commonly

Digitized by Google

commonly call *Tartars*, with whom they haue alwayes had Warre, and once they wanne all the Kingdome from the *Chinois*.

For the Readers better satisfaction I haue here presented him Hondius *his Map of* China, *not to shew it, but the erroneous conceits which all* European *Geographers haue had of it: A more complete Map of* China *I shall present after, as by comparison will appeare.*

HONDIVS *his Map of* China.

This Kingdome ſtandeth in an excellent climate and ſituation; for beſides the things which it hath in it ſelfe, it ſtandeth very neere vnto *India*, and other Kingdomes, from whence commeth with great facilitie that which it deſireth and wanteth. And before I paſſe any further, becauſe I haue ſpoken of the ſituation and heigth of *China*, I will note for their ſakes which would bee glad to learne, and alſo it may ſerue to mend two notable errours, which our newest Maps haue. The one is, That they make *China* a third part bigger then it is, placing this Citie of *Paquin* in fifty degrees, being in very deed but in forty onely, as we ſaw, which twice tooke the heigth thereof with a very good Aſtrolabe: And the limits and end of this Kingdome, which are three dayes iourney or leſſe diſtant from this City of *Paquin*, are at the moſt but two degrees more: And ſo thoſe great walls ſo famous in our *Europe* are in two and fotty degrees; and this is the greateſt heigth of the Kingdome of *China*.

Two notable errours of our newest Maps. *Paquin* in 40. degrees.

The Kingdom of *China* goeth not paſt 42. degrees Northward.

The ſecond errour is, that our Maps make a Kingdome aboue *China*, which they call *Catayo*, whereas indeed it is none other but this ſelfe ſame Kingdome of *China*: and the Citie of *Cambalu*, which they put for the head thereof, is this Citie of *Paquin* wherein wee are. Wee finde this here to be true very plainely by occaſion of certaine newes which lately were ſpred ouer diuers parts by the way of *Mogor*, which gaue out many things, and great matters of *Catayo*, which ſeemed to be ſo peculiar and proper to this Kingdome of *China*, that they made vs doubt

China and *Catayo* are all one.

Cambalu and *Paquin* are all one.

Digitized by Google

that it was not a seuerall Kingdome. After wee were come to this Citie of *Paquin* wee met with two Cafilas or Carauans, one of *Moores* of certaine small Kingdomes bordering vpon *China*, another of *Turkes* with their Turbants of the Countries of *Mogor*, and of the great *Ismael Sophi*, (for with this very name they call him) and of other parts, which had knowledge by fame of *Spaine, Italie, Venice, India*, and *Portugall*.

Very Merchants.

These *Turkes* and *Moores* are wont to come hither euery fiue yeeres by Land, in the name of their King, to acknowledge and pay Tribute to the King of *China*: for which purpose they counterfeit certaine Letters, wherewith they easily deceiue the *Chinois*, which thinke and hold that all the Kings of the World doe acknowledge obedience vnto theirs. But the trueth is, that they come to vse their trafficke and merchandise, and therefore the *Chinois* admit them willingly: howbeit many now doe know, that their paying of Tribute is a fayned thing: In which their trafficke they speed very well. For the King doth maintayne them very plentifully from the time that they come into his Kingdome, vntill their departure; and they tooke all their Chists of them, whereof this yeere they brought a thousand. The King tooke of them at an easie price a great part of the merchandise which they brought; and afterward hee gaue them rewards. The thing of greatest bulke of merchandise are a kinde of stones, which themselues call Iasper stones; which is white, yet somewhat duskish, so that it enclineth to grey (which seemeth to bee that Iasper which so often times in the holy Scriptures is called Precious stone.) It commeth in pieces vnhewen, but whole like peeble stones; which stone for many ornaments the *Chinois* esteeme much; especially the King: and they buy euery pound of the best at eightie Duckets: and of that which is worse, at fiftie or sixtie Duckets, whereby they gaine greatly. I haue seene these stones of other colours in our Countrey, but not of this which the *Chinois* esteeme.

It is so in *Moscouie.*

Iasper stone a great merchandise.

When these men come to this Citie of *Paquin*, they put them into a great house, which there is for this purpose; (wherein wee were two moneths) and suffer them not to come forth. Wee asked these men certaine questions: and one was this of *Catayo*, enquiring of them, How they called this Kingdome of *China* in their Countrey? They answered, *Catayo*, and that in all the Countries of *Mogor, Persia*, and other parts, it had none other name, and that they knew none other Kingdome that was called so. Wee asked them how they called this Citie of *Paquin*? They said *Cambalu*, which, as I haue said, is that which our men set downe for the head Citie of *Catayo*. Whereby it appeareth, that there can no doubt bee made, but that wee are heere resident in the Countrey which must bee *Catayo*, if there were no fault in the Maps; and wee know that there is no such Countrey, nor Cities, but a few contemptible *Moores* and *Gentiles*.

Wee vnderstood also of their x Ciuet or Muske, whereof they brought some, which is, as it y were the maw (or stomacke) of a Beast somewhat bigger then a Cat, which they kill to cut away this maw. They breed wilde in the field, and in a Countrey very neere to *China*, though not of this Kingdome. I had read when I departed out of *Spaine*, a Booke which is printed of the things of *China*, which writeth of this Ciuet, and of other things, which I haue seene with mine eyes: it reporteth many errours by halfe informations, which hee which wrote it should haue beene better informed in, although in many things hee tell the trueth. They brought also great store of very good Rhubarbe, which heere wee bought of them of the choice, at ten Marauedis the pound: it is a wilde root like vnto Nauewes, whereof, they say, the fields are full. These men say, That there is a Sea of sand (which our Maps doe place in *Arabia*) neere vnto *China*, which diuideth it from *Mogor*, and other Kingdomes. And this should seeme to bee the cause, why these Kings, which heare great fame of this Kingdome, of the greatnesse thereof, and of the weakenesse of the people, doe not seeke to inuade the same, being not very farre off; because it would bee very difficult to passe ouer the same sandie Sea, with a great Armie.

Rhubarb. See before in *Chag. Memet. p.* 164
A Sea of sand.

Diuision.

The *Chinois* diuide this Kingdome into thirteene Prouinces, and two Courts, which are, as it were, two Prouinces. Euery one of them haue their Metropolitane Citie; and euery Citie her diuision of so many Townes. It is knowne very particularly by *Chinish* Bookes which are written of this argument, how many Cities, Townes, and places there are in all the Kingdome, how many houses euery one hath, and commonly what numbers of people, what euery Countrey seuerally yeeldeth, and how much Tribute it payeth to the King, and many other things: but I doe not set it downe here: because I could not get those Bookes these few dayes past, to take a view thereof: At some other time, God granting mee life, I will doe it more at large. Onely I say in generall, that all the way which wee trauelled, wee met with so many Cities, Townes, and Villages, that to beleeue their greatnesse, it was necessarie to see them. For your Worship will hardly beleeue, that wee spent two or three houres in sayling still by the walls of one Citie. After which there still followed many Townes and Villages, one within sight of another. And after this manner all this way continueth, euen to *Paquin*. Yea, the Villages are very great, and full of people, and of much trafficke. For though wee giue them this name (which among vs signifieth some small matter) The *Chinois* doe not distinguish them

Chorographicall Bookes.

China populous

Digitized by Google

them by great or ſmall, and ſo their Villages are bigger then others which wee call Townes. Villages as great as Townes.

All the Cities and Townes are very well enclоſed with high walls. And becauſe, as I ſaid, I deferre this vntill another time, I will only ſpeake of *Nanquin*, whereof I had ſome ſight. Walls.

This Citie ſtandeth in two and thirtie degrees and an halfe, eight or ten leagues from the Sea, vnto which it hath a mouth, and a mightie Riuer. It hath three walls of Bricke very high and faire, with very great and beautifull gates, which they ſhut vp very timely before night. This Citie, of old time, two hundred yeeres paſt, was the habitation of the Kings of *China*; and ſo it continueth in very good condition: The ſtreets are very broad, and all paued with very great ſquare ſtones, or ſet with brickes. It hath exceeding long ſtreets of two leagues, and two leagues and an halfe, and in the middeſt of the Citie are the Kings Palaces, which are very great. *Nanquin* in 32. degrees and an halfe. Three walls. Streets long. Palaces.

The *Chinois* declare the circuit of this Citie, that two Horſemen going in the morning both out of the ſame gate, and one going on the one ſide, and the other on the other, going all the day they meet at night in the gate oppoſite to that which they went out at. The very truth is, that it is at leaſt eleuen or twelue leagues in circuit, and ſeemeth to haue aboue two hundred thouſand houſes of people. It ſeemed to all of vs that were there, that *Nanquin* and this Citie of *Paquin*, each of them haue as many people or more, then foure of the moſt famous and populous Cities of all our *Europe*, as *Rome*, *Liſbon*, and others of the greater ſort. For whereas theſe two whereof I ſpeake are in themſelues ſo great Cities, not one nor two ſtreets, but the greater part of the Citie euery day doth ſwarme with people. Circuit. 200000. houſes

There are about this Citie many others within one or two dayes iourney, and very famous for greatneſſe and trafficke; among which there are two, one named *Hancheo*, the other *Sucheo*; and this is very great and like to *Venice*, whoſe ſtreets are halfe water and halfe land. The *Chineis* call theſe Cities * *Paradiſe*, to expreſſe the goodneſſe, abundance, and cheapneſſe of all things that are in this Kingdome, and come from other places. And *Sucheo* is ſo full of people, merchandiſe, and trafficke, that a Booke which is printed (wherein all things are ſet downe which the Prouinces and Cities pay to the King) ſaith, that this only payeth one yeere with another in Siluer, Gold, Rice, and Silke, and other things, wherewith it doth greatly abound, twelue millions: ſo that there be whole Prouinces that amount not to ſo much by a great deale: which though it ſeeme an incredible thing, yet they write it for a certaintie: and hee which knoweth what theſe Cities are, will beleeue it. *Hancheo* and *Sucheo*. *Quinſay, Ciuitas cæli.* Reuenue.

Yet for all this, theſe Cities haue no notable things, neither ſumptuous Temples nor buildings, which are wont to be thoſe things which doe beautifie a Citie: for the houſes are not beautifull outwardly; nor they vſe no great Porches, as they doe in our Countrey. And he that hath ſeene the things of our Countrey, and is skilfull in architecture, ſhal find it here very little. For the houſes are low, and without galleries, lofts, windowes, or ſight into the ſtreet; yet they haue faire yards, and are very neate within, and painted with diuers colours, with that *Charan*, or liquid Gumme, whereof I made mention before. And that which I ſpeake of *Nanquin* touching the abundance of people, trafficke, and manner of houſes, is after the ſame manner in the other Cities which we ſaw. For the *Chinois* are ſo like, and ſo vniforme in all naturall and artificiall things, that he that hath ſeene one of the principall Cities, findeth no new thing to bee ſeene in the others. And albeit that other Cities are not comparable to theſe in bigneſſe, yet in multitude of people proportionally there is little difference. Building not beautifull, compared with *European*. Vniformitie in *China* Cities,

This Kingdome is commonly very fertile of all things that are neceſſarie for the vſe of man: and a great cauſe of the fertilitie and abundance thereof proceedeth of the great number of exceeding great Riuers which it hath; which beſides the profit that the Riuers yeeld by the fiſhing, and beſides the profit in watering of the grounds, wherein they ſtand the *Chinois* in great ſtead, they are occaſion of great trafficke and communication of one Prouince with another with great eaſe by water, which is an enriching to them that vſe it, and of great plentie in euery Citie of all things that are in the Kingdome. From our departure from *Macao*, till within a little of *Paquin*, which is, as I ſaid, ſixe hundred leagues, wee trauelled not paſt one day by Land (becauſe wee would not fetch too great a compaſſe about by water) wee trauelled a great part of this way vnto *Nanquin* by the greateſt Riuer that euer I ſaw in my life: which in ſome parts is aboue three leagues broad, and very deepe: which the *Chinois*, for the greatneſſe thereof doe call, *The little Sea*; and that with good reaſon. For though it were an hundred leagues from the Sea where I entred into it; yet there is great abundance of fiſh of thoſe kindes which breed in the Sea; as Porpoſies, fiſhes with ſharpe beakes, and others which I haue ſeene. Fertilitie. Commodious Riuers. In 600. leagues but one day by land. This is more exactly meaſured by *Ricius*, a more exact and mature obſeruer of all things. *ſup.* §. 5. *cap* 5. Mighty Riuer, perhaps *Quian* mentioned by *Polo*.

I ſaw in this Riuer neere the bankes thereof men fiſh with certaine Fowles as bigge as ſmall Geeſe, like vnto Rauens, with a long beake, and bending downeward like a crooked hooke, which the *Chinois* teach to fiſh: They haue a very long necke, which they binde in ſuch ſort that the fiſhes cannot goe downe into their ſtomacke, but they fill their throat with them, if they be ſmall fiſhes, and when they come out of the water, they make them caſt them out: and if the fiſh bee great, hee fighteth with him, and beateth him with pecking, aſſaulting him with Fiſhing with a kinde of Rauens or Cormorants.

Digitized by Google

with his bill, vntill hee driue him vp that the Fisher may see him; which commeth quickly with a small Net like a Wheele vpon a staffe, and hee taketh him vnder the water. And after this sort wee saw this Fowle take Fishes sometimes of a pound, and a pound and halfe weight; and they say they take bigger. And because this fishing is so gainfull and so certaine, they pay a certaine Tribute to the King for euery one of these Rauens (or Cormorants.)

Muddy Riuer. Wee met with another Riuer as great as this, which seemed to bee rather of mudde then water, because the water was alwaies mingled with earth, which whence it should come for so many yeeres, I wot not. They cannot drinke the water without they clarifie it, which they doe with Alume. Besides these two Riuers all the rest is made by hand for vessels to passe to *Paquin*.

Alume vsed in clarifying of water.

Shipping. The Vessels which we saw in all the Cities which we passed, is one of the greatest things that belong to this Kingdome. For in euery Citie there are two sorts of them, one sort of vessels for burden, and another sort for houses. Some of them are very faire, and as fit to dwell in as houses themselues: and many of them also serue for houses for poore people, wherein they haue their whole houshold, and bring vp Hens and Hogs, and gayne their liuing in them. I remember that the same morning that wee entred into *Nanquin* there went 500. Vessels or more before our Barke, to enter at the same houre, with their sayles vp most pleasantly to behold; many of them being laden with diuers things, all for the prouision of that great Citie: and on this manner they continued all day long in going and comming.

Ship-houses.

Multitude of ships.

The Barges of the *Mandarines* (which are all made at the Kings cost) are the most costly, and are most for the sight, and very great. They would much reioyce in our *Europe* to see them: because it seemeth that there is nothing comparable to these in beauty. Most commonly these haue Trumpets, and Drummes, which they play vpon when they passe by the Citie, and when they meet with others, that all may giue them place. They are commonly as long as Gallies, and as broad or more, but very high, so that to get vp into one of them is aboue a fathome high from the water, and therefore they carrie a great burthen.

The excellent beauty of the *Mandarines* Barges.

Tributes in money and in kinde. And because I spake before of those which carrie the Kings Tribute, I will here speake more particularly. Many Prouinces from whence they cannot carrie Rice and other like things with ease to *Paquin*, because they are farre off, pay their Tribute in Siluer: but those Prouinces from whence they may passe by water, pay a great part in Rice. For which occasion all the Cities haue great and strong Vessels made of purpose for this seruice. And when the time of their departure is come, euery Cafila or Companie departeth from their Citie with a *Mandarine* that hath the charge of them.

10000. Vessels at *Nanquin* for Tribute of Victuals, and 1000. for other Tributes: and others many for workes.

And they say that those Vessels which goe from this part of *Nanquin*, in all amount to ten thousand, though they goe not all euery yeere: yet they haue alwaies more for yeeres of greater plenty; and because many cannot returne in time, to goe backe againe the next yeere. I know not certainly how many they be; but this onely I know, that all this way from *Nanquin* to *Paquin*, seemed to be a path-way of these Vessels, whereby wee passed: for they went all along, and because they went so deeply loden, oftentimes they wanted water. To helpe this want of water (for because it is no naturall Riuer it neuer ouerfloweth) it hath floud-gates like Sluces, wherewith it keepeth in all the current three or foure or sixe houres: then opening the same, many doe passe with great ease, and they may goe very well vntill they come to such another place.

Path-way of ships.

Sluces or locks.

Besides these Vessels of victuals, they carrie to the King euery yeere many others, which bring him particular things, and dainties, whereof this Countrey of *Nanquin* yeeldeth great store, and also for the seruice of the Kings house. Some Cafilas or Carauans of these are of pieces of Silke for the Kings house, which may be some dozen of Vessels; others carrie many things to eate: and with one of these Cafilas we passed. They were nine great and faire Vessels, which carried pieces of Silke, and other things which they are wont to burne in the Sacrifices which they make vnto the dead, and before their Idols. They say, that these Vessels for particular things are a thousand: and as soone as they come within the Kings house, the Eunuches take the charge of them. From *Nanquin* vnto the middest of the Kings Palaces, Vessels may passe by this Riuer: to come to the place which they goe vnto, they passe thorow the middest of the Palaces. In all these Riuers, when they want winde, the Mariners draw the Barkes with great facilitie, and sixe or seuen are sufficient easily and merrily to draw one of these Vessels laden.

Silkes and perfumes.

Vessels for workes. Wee met likewise vpon this way a very great number of Vessels which came from farre, laden with Brickes for the Kings workes, and greater store this yeere to build a great piece of an house which fire from Heauen had burned: for this purpose they carried great store of timber for beames, and boords, and other lesser timber which are carried from the parts of *Nanquin* vnto *Paquin*, some an hundred and two hundred paces long, and one log fastened vpon another, so that these rafts grow high and great: they carrie vpon them frames of dwelling houses ready made, wherewith there goeth an inferiour *Mandarine*, which hath the care of it, and sometimes the Mariners goe with all their houshold, and breed of Hogs, Hens and Duckes: for sometimes they

they stay aboue a Summer in going to *Paquin*. These seuen or eight yeeres this prouision of timber, Brickes, and lime, and other things hath continued.

The fertilitie of this Kingdome is great, of all things that seeme to be needfull for the vse of mans life. And if there bee any other Nation which liueth commodiously without needing trafficke with forraine Kingdomes, they are the *Chinois*. And though it bee true that some things come vnto them from forraine Countries, yet are they not the necessary things for the life, and which all men vse. The most that commeth out of forraine parts, and they desire, is Siluer: And that which all men carrie from thence is very much, and very good merchandise: as Silke, Gold, Muske, Porcelanes, pieces of wrought Silke, raw Silke, cloth of Cotton wooll, all kinde of worke in Copper, Iron, and Latten, Quicksiluer, Sugar, Honey, Waxe, Cinnamon, workes made of fine wood, and gilded, as Bedsteads, Ink-horns, Cabinets, and an infinite number of other things, whereof there is so great abundance, that although they send out many ships laden for *Iapon*, *India*, *Manila*, and other parts: yet without doubt they might prouide ten times more: and if more would come to buy, they would alwaies haue the more to sell. All things are very cheape, without all comparison cheaper then in our Countrey. A pound of Sugar is worth eight or ten Marauedis, and sometimes sixe: and if they buy any quantitie at once, an hundred pounds weight are worth nine or ten Rials of Plate: And here at the Court (where all things are dearest) a pound is worth twenty, or foure and twenty Marauedis. There is great store of Waxe and that very good, which wee buy heere in *Paquin* for the seruice of our Altar, a pound for a Riall and a Quartill: and the pounds here are greater then ours; for euery one of them weigh sixteene Duckets of Siluer weight. Honey likewise is very good cheape. Of Copper and Latten there is exceeding great abundance: and Latten made and wrought into any worke that a man would haue, with the fashion and all is worth a Riall and a Quartill the pound. Needles an hundred a quarto, and if they buy many together, better cheape. And I haue set downe for example these small things to know the particular price, and of other things (though they bee not so cheape) after the same proportion. Howbeit those which come from forraine Countries to trafficke with them, had need to be very heedfull: for the *Chinois* lose not opportunities to raise the price of them, when they may.

Siluer in greatest request in *China*.

The great store of merchandise in *China*.

Cheapnesse.

A caution for strange Merchants.

The abundance of things for food is likewise great, to wit, of Oxen, Weathers, Sheepe, Goats, and more then of all others of Hogs, because they are the common food that they liue of, Deere, Hares, which they catch with Hawkes, whereof here and in other parts there are many. And when they are dearest here, one of them is worth foure or sixe Quartos: they be as great as they bee in our Countrey, and they are found at all times. Hens, Geese, Duckes, and sundry sorts of wilde Fowles, and all other flesh is exceeding good cheape. Wee came to a very great Citie, where Beefe, Mutton, Hennes, all was of one price a pound, which was foure Marauedis. And in *Nanquin* (though the Court be there) a pound of Hens flesh was sold for three halfpence, Fishes after the same manner, or better cheape, because it stands vpon the Riuer. And I saw a Fish of ten pound weight sold for a Riall of Plate, and we bought great Trouts at three Marauedis a pound weight. Egges ten, twelue, sixteene, eighteene for one Conduren, which in our Countrey is a penie halfpenie farthing. Fruits are of the like cheapnesse. In our iourney, which was when Abricockes beganne to bee ripe, which are here very good, they gaue vs two hundred for ten Marauedis. They are very much giuen to eate fresh Herbs and Salads, and Pulse. At euery banquet and good feast, there is alwaies Flesh or Fish. There are many Nuts, Chestnuts, Filberds, and Pine-nuts though but few, Figs, though not of our kinde, and yet as good or better, and many. And although they haue all these things, yet euery Prouince and Countrey doth not yeeld them all: but that which one wanteth another supplyeth.

Victuall store and cheape.

Sixe pence.

One halfpeny.

Herbs.

Their common food in stead of Bread is Rice sodden only in water, whereof wee all did feed, although at the first wee had much adoe with it. Commonly they haue euery yeere two Haruests, and in some places three. And the Land hath great Plaines with Riuers to water the grounds: for the fields of Rice doe much desire to be couered with water.

Two and three Haruests in one yeere.

From our entrance into *Canton* vnto this Citie of *Paquin*, wee met with few Hills, and especially from *Nanquin* hither very few. Wee passed by a Plaine aboue an hundred leagues, farther then wee could kenne. I saw likewise much Wheat, whereof they make rolls without leauen, sodden in the reeke or vapour of seething water, and so without crust, good for old folkes that want their teeth. Although that it bee true that the fruitfulnesse of this Countrey is very great, yet without doubt other things, saue Rice would not be sufficient, if the *Chinois* were as great feeders as our people, and did not feed so sparingly as they doe. They all eate commonly thrice a day; once, betimes in the morning; the second time, at two in the afternoone; the third time, very moderatly at night. And besides, the rich *Mandarines*, few others which are of good abilitie, doe commonly eate either Flesh or Fish, but Pulse, Salads, and Herbs which cost almost nothing, and their chiefest food is Rice, or Millet, and hereof they fill their bellies.

Plaine Countrey.

Plaine of 100. leagues.

Spare feeding.

Herb-eaters.

They haue many Horses, Mares, and Mules, whose flesh they eate, though I haue not heard report that the greater sort doe feed vpon them. They haue much Wine of diuers sorts; all

Horses eaten.

Wines diuers.

Digitized by Google

made of Rice: but herein they may not compare with the Wine of our Countrey: Whatſoeuer they drinke, be it Wine or Water they drinke it alwaies hot. They are neate in feeding, for they touch none of their meate with their hands, therefore they vſe neither Table Napkins, nor Table-clothes. All their meat is ſerued to the Table finely minced. They vſe to feed with two ſmall ſtickes of Iuorie, Ebonie Wood, or ſuch like, wherewith they take vp all their meate verie hanſomely. And herein, I confeſſe, they haue a great aduantage of vs; becauſe this manner of feeding is very commodious, and ſuch as euerie man that hath triall thereof will much delight in it: and therefore our *Fathers* and *Brethren* in *Iapon* and *Macao* vſe it. Their alwaies drinking their drinke hot, and eating little fruit (for they are not ſo greedie of it as our men are) doth keepe them from many infirmities and ſickneſſes, and therefore they liue healthfully. They haue no Oliues, yet haue they abundance of Oile. The beſt is of a kind of Herbe, which they call in *Spaine, Alegria*, which ſignifieth Ioy or Mirth. I ſay not that it is as good as ours, but I ſay, I find no fault in it, nor I doe not deſire it, nor much leſſe the *Chinois*, which can eate nor ſmell no kind of Oile, becauſe the ſmell thereof pleaſeth them not, as ſometimes wee prooued by a little of ours which we had: and they call their ſtinking Oile odoriferous, ſo great a force there is in cuſtome. As the *Chinois* are diuerſe in diuers Prouinces, ſo are their Fruits: and thoſe which grow in the Prouince of *Canton*, are not in all theſe colder Prouinces. There are the beſt ſweete Oranges which hitherto we haue knowne, which are eaten with the skinne.

Neatneſſe.

Ieſuites.

Benefit of hot drinke.

Oile made of an herbe.

Cold Prouinces.

§. IIII.

Their Moneyes, Apparell, Perſons, Trades, Wealth, Learning, Marriages, Superſtitions, Rites, and Opinions.

Timber plenty

THere is in this Kingdome great ſtore of Timber; for proofe whereof wee need no more but to ſee the multitude of Barges laden therewith ſo good cheape as it is. And therefore I thinke a man may build a ſhip with all things neceſſary thereunto, three parts of foure better cheape then in our Countrey. They vſe not Gold, though there be much to be bought, but all is Siluer, which they doe not coyne in Money, but caſt it in Barres, and when they would buy any thing, they cut it and weigh it in certayne fine Weights like the *Romane* Weights in our Countrey: and therefore euery body that will buy or ſell, carryeth one of thoſe Weights with them. Great ſtore of Siluer commeth out of forreine Countreyes. But the chiefe Maſſe of it is out of the Mynes of the Kingdome it ſelfe, as alſo the Gold. When they buy or ſell, they try the Siluer of how many *Kilates* it is: and one is worth more, another leſſe, according to the goodneſſe thereof. It was very neceſſary for the *Chinois* to weigh and try their Siluer, and not to coyne it into money: for otherwiſe there would haue beene a thouſand deceits, wherein the *Chinois* are very cunning. They vſe Braſſe Money, wherein alſo they try that which is true or falſe: for in all ſorts there is deceit and mixture. They haue the beſt Porcelane that hitherto hath beene found, which is exceeding good cheape, and in ſuch plentie, that beſides all the Kingdome of *China* doth furniſh it ſelfe thereof, they ſend forth as many ſhips ladings as they will.

Much Gold to be bought in *China*.

Braſſe money vſed in *China*.

For their Apparell, though they haue great abundance and cheapneſſe, yet in goodneſſe they may not compare with our Countrey. There is much Silke and that very good, but they know not how to dreſſe it. They make good Damaskes, razed Veluets, Taffataes, and other ſorts: but the colours, though at the firſt ſight they ſeeme reaſonable, are quickly loſt and fade away. The ordinary apparell of the common people is of blacke cloth made of Cotton, or of certayne ſhags of Silke, which are very great, farre greater then a flocke, which only ſerue for this purpoſe, and are very warme. Perſons of Honour weare commonly an outward Garment of Silke which they vſe in Viſitations, and other like Actions: And there are many which alwayes goe abroad apparelled in Silke, but not in ſuch great number as that Booke ſetteth downe, whereof I made mention before. All men, euen to the very Souldiers, weare their apparell long downe to the inſtep of the foot, with very broad ſleeues, open before, and faſtened to the ſides beneath the arme. They be ſo well contented and pleaſed with their manner of apparell, that they think there is none in the World comparable to theirs. And in very truth they bee graue and modeſt, and eſpecially thoſe of the *Mandarins*, which differeth from all others, ſauing the *Bonzi*, which ſhaue their Beards and Heads. All the men and women let their Hayre grow long, and the men truſſe it vp, and wind it on a knot on the top of their crowne. They weare certayne Nets on their heads like Coyfes, made very cunningly of Horſe-hayre: and in the Summer time many weare Caps and Hats of the ſame. There are many ſorts of Caps or Hats (for I know not what their ſeuerall names are) according to the ſtate of euery one. The baſeſt ſort which the common people vſe ordinarily is round. Their ſhooes, are of the ſame ſtuffe that their Garments are of,

of, very commonly of Silke made with many faire borders and knots. It is a discourtesie for a man to be seene (especially before any man of Worship) without a Cap on his head. They greatly esteeme for the most part things of our Countrey; and they are very deare. And some pieces of Silke which the *Portugall* Merchants brings, especially Veluets of three Piles, are far more dearer then their owne. All woollen cloth is much esteemed and very deare, likewise Chamblets, and fine Linnen-cloth, which they bring from *India* are very deare. Looking-glasses, and all things made of Glasse, and many other things, which in our Countrey are very good cheape, are here deare, and in great estimation.

The *Chineses* haue commonly little Beards, small Eyes, and Noses, and all of them haue black Eyes, so that they much maruelled at the colour of mine, which are * of Gray or Iron colour (which they neuer saw) and they find many secrets in them, and very commonly they say, that these eyes of mine know where stones and precious things are, with a thousand other Mysteries, so that they thinke they haue Letters in them. To paint an euil-fauoured man, they paint him in short apparell, with a great Beard, Eyes, and Nose. They are commonly all white, yet not so white as those of *Europe*: and therefore to them we seeme very white. The Learned men are very graue, of very good capacitie, and appeare outwardly very modest and graue.

* *Sacos lat. ferruginei.*

There are Arificers of all Arts that are in our Countrey, and very many with the selfe-same manner forme of Instruments. Euery man is free to follow what Trade he will, without being bound to follow his Fathers Trades, as diuers times I haue heard it spoken when I was in *Europe*: and those which will may study, forsake, or change that course of life. They worke very good cheape: but in cunning and excellencie ours most commonly excell them much; though in some things they be very skilfull. Trades.

The seruice of young men and maydes is easie and good cheape, because there is great store of people, so that a yeares wages is not aboue two Duckets, and meate and drinke, without apparell. As there are many poore people that haue many Sonnes and Daughters, it is a very ordinary thing to sell them, and this the cheapest thing in *China*. For a youth of twelue or fifteene yeares without any naturall blemish will cost not past twelue or fifteene Rials of Plate, and in time of Dearth much lesse, and it is a common thing to buy them for seruice; though they vse them well, and marry them at their time. Seruants cheape. Sale of children vile.

Although the abundance and riches of this Kingdome be very great, as the people also is: yet there is no body that is very rich, neyther in any state of people may they compare in this point with our Countrey. You shall not find in *China*, which is able to spend twenty thousand Duckets of Rent, how neere of Kinne soeuer he be to the King, and very few, and those easie to bee numbred that can spend ten thousand Duckets, and the ordinary is no more which they possesse then that which their Lands and Offices yeeld them, which is not great. But though it bee true that those of our Countrey possesse much more Siluer, considering the cheapnesse of things in their Countrey, all commeth to one account. None very rich. Yet as rich as ours very rich.

There are very few of the poore people idle, because all of them commonly take paines, and earne their liuing. Though the multitude of the Nation be so many, and the Kingdome so great, yet the surnames of all the Kingdome are not aboue three hundred, and all of one syllable. Few idle. Surnames.

There are some, though very few, which may be called Knights, which for seruice to the Kings in some necessities haue giuen them Offices in succession: but the common vse is not to haue any Nobilitie by Descent in *China*; neyther can any man say, I am of a better House then you. But the honour and Nobilitie dependeth wholly vpon Learning, and to obtayne degrees and Offices of *Mandarins*. And therefore an House which now is in Office, and his Father bee one, if he haue a Sonne a Doctor, which is made a *Mandarin*, he is honourable, and the honour continueth as long as the Learned men and *Mandarins* doe liue. There is no man, neyther Kinsman nor not Kinsman of the King which hath euer a Village of his owne that payeth him Tribute: but all men pay it to the King; and hee giueth stipends and wages to the *Mandarins*, so that they receiue nothing of particular men by right, though they extort much continually by oppression. Knights. Nobilitie only in Learning. No Lord but the King. Extortion.

Commonly the *Chinois* doe marry from fifteene to eighteene and twentie yeares, and all of them doe marrie one Wife that is chiefe; and this is their lawfull Marriage. On the day of their Marriage, when the Bride doth passe to the House of her Husband, shee carrieth openly before her through the streets all the things which she bringeth with her, and all her house-hold stuffe: But besides her they may marrie (I say they may keepe and doe keepe as many as they are able) as many Wiues as they will, which for the most part they buy: and afterward when they will, sell them away againe. They may not only not marrie with any Kinswomen of their Wiues, but with none of that surname, though they haue no shew of Alliance. The sonnes of the Concubines doe likewise inherit, and there is little or no difference in their state and honour, to be the Sonne of the lawfull Wife or of the other, neyther make they any question of it. Marriage. Polygamie. Inheritance.

The thing wherein the *Chinois* are most obseruant, Ceremonious and Superstitious, is in their Burials, Funerals, and Mournings: for herein they shew their obedience and loue to their Parents, whereof their bookes are full. It is a very ordinary thing to haue great respect to their Father Funerals and mournings.

Digitized by Google

ther and Mother, and the diſobedient are grieuouſly puniſhed. Many graue men and *Mandarins* begge leaue of the King to leaue their Offices which they haue, and to goe home to keepe their Father and Mother company, yeelding for a reaſon that they be old, and that they would goe to ſerue them. And it is a Petition in the ſight of all men ſo iuſt, that they grant it very vſually. When the Father or the Mother dieth, all the Sonnes and Daughters (from the King to the meaneſt Peaſant) doe mourne for three yeares. The mourning colour, which among vs is blacke Bayes, among them is white Linnen, whereof they make all their apparell euen to the Cap. The firſt monethes they weare a very rough Sack-cloth, girded with a Coard, like the bare-footed Friers. And though he be neuer ſo great a *Mandarin*, without any exception (ſaue only the *Mandarins* of the Warre) aſſoone as hee heareth newes of the death of any of his Parents, he is to leaue his Office and Dignitie, and all other Employment whatſoeuer of Gouernment and Examinations of obtayning his degree, and is to goe home for three yeares to burie his Father or Mother (and to mourne and bewaile them. The graue men which haue an houſe for this purpoſe, doe not ſtraitway burie their dead, but keepe them two or three yeares in the houſe, in a Chamber which they keepe for this Office, and it is not the worſt in the houſe: and very vſually or euery day they go thither to make them a thouſand Ceremonies and Reuerences, and to burne Incenſe, and other ſweet ſauours, and to ſet ouer the place where they be laid, meate to eate; and at ſeuerall times, many of thoſe *Bonzi* doe meet, and with great Ceremonies begin their Seruice and Prayers, and their Sonnes, Kinſefolkes and Wiues make lamentation. The *Mandarins* do not only leaue their Offices, and change their Weeds, but alſo all the things which they did vſe. Many ſit not in Chaires, but vpon low Stooles: they viſit, or ſuffer themſelues to be ſeene very ſeldome: they change euen the very Paper wherein they write, wherein they haue a piece of another colour, in token of mourning: when they name themſelues in their Letters, they vſe not the name which they did at other times, but others proper to the partie, as when he nameth himſelfe, hee calleth himſelfe *diſobedient*, ſignifying, that by his diſobedience to his Parents he did not preſerue them aliue.

Three yeares mourning in white Linnen.

Keeping the dead at home.

Other Funerall Rites.

They vſe no kind of Muſikce, and many change their ordinarie Diet into courſer food. Vpon the Funerall day they prouide great company: many Kinſfolkes and Friends meete together, all clad in white, with many *Bonzi*, (according to euery mans abilitie) which ſing with dolefull Inſtruments. And by their apparell which they weare, and their time in ſinging, hee that knew them not, would take them for Clerkes reueſted, ſinging plaine Song; for they much reſemble them. They make many Beeres with men of Paper or of white Silke, many Banners and other Enſignes. The place whither the Corps goeth is adorned with many figures: the Corps is put into a very great Coffin. This Nation holdeth a great part of their felicitie, for them and their Succeſſours to conſiſt in theſe things of their Funerals, eſpecially in two, the Coffin or Chiſt wherein the Corps is to be layed, and the place of their buriall. The ſtuffe to make the Coffin of, wherein themſelues are to bee buried, and the making of the Coffin, they leaue not to others to doe after their deathes, neither then may the body looke for much coſt to make one of theſe Coffins, neither in this (as a thing of great importance) will they truſt, no not their owne Sons: but they themſelues at leiſure ſeeke ſome kind of Wood that is leaſt corruptible, and Plankes which are commonly foure, ſixe, or eight fingers thicke: which becauſe they bee ſo thicke, and the Chiſts or Coffins very cloſely ſhut they can keepe their Corps in their Houſes without any euill ſmell. Some ſpend in making their Coffin ſeuenty, eighty, and an hundred Duckets. They hold it for a felicity to be able to get one of theſe that is good; on the contrary for a great diſgrace, not to haue a Coffin to burie himſelfe in, and they are very few which faile in that one point.

Funerall day.

Funerall Figures.

Coffin.

The Sepulchre and *place thereof* is the thing for chooſing whereof they vſe great Sorcerie or caſting of Lots, and doe it with great heedfulneſſe, and with the helpe of ſome that are skilfull in this Art. For they hold opinion, that in making a good choice of the place dependeth a great part of their owne good fortune and of their Poſteritie. And oftentimes they are a yeare in reſoluing whether it ſhall looke toward the North, or to any other part. And therefore the greateſt and moſt contentious Sutes which are in *China*, are about places of Burials. Theſe places of Burials are alwayes without the wals in the fields, or Mountaynes wherein they build Vaults very well made and ſtrong of Bricke, ſtone, or other matter, wherein they lay the Coffin, and then cloſe it vp very ſurely: And afterward now and then they come thither to performe certain Ceremonies, & to bring things to eat. They hold it very vnluckie to burie a dead man in the Citie: and if they know it, though he were the greateſt man that is in *China*, they will not ſuffer him to bewaile his dead Friends much, eſpecially thoſe which are women. There are many which beleeue the paſſing of the ſoules from one bodie into another: and therefore after the death of their Father and Mother, they will neuer kill any liuing beaſt, yeelding for a reaſon why they will not doe ſo, leſt ſome of them ſhould bee their Mother or Father, or ſome other perſon. And likewiſe many of them faſt, becauſe, that whereas ſome of them bee poore; they deſire afterward to be borne againe in a rich and honourable Family.

Buriall place.

Vnluckie to burie in the Citie.

Tranſition of ſoules.

Metempſuchicall Superſtition.

Although it bee true that the moſt part of them beleeue not in Idols, and it offendeth them not

not to speake euill of them, yet commonly all of them at a certaine time of the yeare doe them some reuerence, because it is the custome, though in no sort they worship them as Gods: and those which put most confidence in them, burne Paper, Incense, and sweet smels vnto them, and kill beasts before them. Their Bookes of these Idols speake of Hell, and in many places, or in a manner in all the Cities there is set vp a portraiture of Hell made with bodily shapes, and many Deuils, as vglie as wee paint them. It is very well set foorth, but badly beleeued: for it serueth only there for a bugbeare. And if any beleeue that which the Idols say of Hell, that it is a place of torments, they say, that after so many yeeres be passed, all men come out againe, and are transformed into some beast. Those which beleeue in the Idols, come before them to cast lots to know what things shall come to passe: howbeit I haue not heard in all *China*, that there was any answer of a Diuell in an Idoll, as is in other parts, in regard of the small beliefe that they haue in them, and the lewdnesse of the *Bonzi* that serue them. Their houses wherein they set them, whereof as yet I neuer saw any good one, are commonly verie filthy and stinking.

Idolatrie.

Of Hell. See in *Pinto.*

Lots.

Wicked *Bonzi.*

And besides this consulting of Idols, the *Chinois* are much giuen to Diuinations to know things to come, and whether they shall haue good or bad fortune; whether they shall haue that which they desire or no: and there bee an infinite number of these South-sayers, and all of them prattlers, mumblers, and cooseners, whereby they deceiue many. And though the *Chinois* be of good vnderstanding, and know that these fellowes know nothing, and euery foot doe take them in lyes: yet for all this, there are verie few that when any occasion is offered, doe not consult with them. And though they seeme to bee but few, yet some of them are in league with the Deuill, as oftentimes wee gather by certaine things.

Diuiners and diuinations.

Many of these graue men of *China*, haue commonly two follies, wherein they doe erre more then in other things. The first is, that they perswade themselues that they can much *prolong their Liues*; and for this purpose they vse a thousand inuentions, and take many medicines, which indeed rather doe shorten their dayes. There are many Masters and Bookes of this follie, which vsuallie are graue and rich men. There are many that make themselues very old folks, whom the people follow like Saints to learne some rule of life of them, wherein they put all their felicitie. Many doe not beleeue that we are so old, as we say we be, and that we doe dissemble: but that in deed we bee an hundred yeeres old, and that we know this rule to liue for euer, and that we doe not Marrie because wee would liue long. The other follie is, that they perswade themselues that they are able, and goe about to make Siluer, whereof likewise there are many Bookes. They vse for this purpose many Hearbs, and Quick-siluer, wherein they spend that little Siluer which they haue, and remaine beggers, but not perswaded but that it is fecible, but that it was not their good lucke, and good fortune: and to obtaine this, many of them fast many yeeres.

Studies to prolong life.

Bookes of Alchimie.

§. V.

Their bad Souldierie and Artillerie; Degrees, Priuiledges, Honours and promotions of Learning. Their Authors and Bookes, and Printing. The Mandarins *commended.*

THere are many Souldiers in many Prouinces of this Kingdome: and though they haue had Peace these many yeeres, yet they still entertaine them: but because they bee louers of peace and quietnesse, the most contemptible state, except the state of the *Bonzi*, is the Souldier. And indeed it is a most base people, which hath no valour nor worthinesse, much lesse any fortitude in them. Many of them are Porters, which beare on their shoulders, the Chaires wherein the *Mandarins* and honourable persons are carried. And at the time of Musters, which are made from time to time, they repaire thither, to obtaine wages, and thus they haue no worth, nor jot of honour in them. The punishment wherewith their Captaines punish them, is the same wherewith they punish all other people: they whip them as wee doe Children in Schooles. According to the worthinesse and valour of the Souldiers, the beautie of their Armour, offensiue and defensiue is answerable, which is fitter to bee laughed at, then to be reported. They haue no Harquebusses that are worth any thing: and all those which I saw (and I saw many Souldiers with them) had their barrels but a spanne long: so that it seemeth that they beare it and the rest of their Armour for fashions sake. And I maruell not: for by reason of the exceeding great Peace which they haue so long enioyed, they haue none occasion to become valiant: but they are able men when occasion serueth, and it seemeth they will easilie become valiant.

Souldiers many and few.

Baseneſſe. Armour and Armes.

The barrels of their Pieces but a span long

The causes of bad Souldiers, dis-respect, disuse, and their choise from the tongue.

The *Mandarins* of Souldiers, is also a thing of small estimation, and they are nothing comparable with those which they call the *Mandarins* of Learning, which are those, which take Degrees. The *Mandarins* or Captaines of Souldiers, obtaine not the same for Heroicall arts or prowesse, but they make a Discourse or an Oration, vpon some matter concerning warre, and they make

Exerciſes Militarie.

No Ordnance

make choiſe of certaine of thoſe which had done it beſt. Likewiſe they ſhoote two or three Arrowes, to ſee if they bee skilfull in ſhooting. They haue no vſe of great Ordnance. Albeit I ſaw in the Gates of ſome Cities, certaine ſmall ſhort Pieces, as broad at the mouth as at the nether end, which I know not whether they ſhot off ſometimes or no: I ſaw about ſixe or eight of them vpon the Walls. The defence of their Walls is their height, without any other Artillerie. The greateſt force and number of Souldiers, reſideth in the confines of the *Tartars*.

Tartarian conqueſt.

It is foure hundred yeeres ſince a King of the *Tartars* wonne all *China*, (whereof *Paulus Venetus* writeth, which was in that Countrey) and they did alſo poſſeſſe it two hundred yeeres: at the end whereof, a *Bonzo* a very prudent and valiant man rebelled, and caſt the *Tartar* out, and remayned King, whoſe iſſue continueth vntill this day. They alwayes keepe great Watch and ward vpon this frontier. Many youthes of theſe *Tartars* remayned in *China*, and namely in theſe parts of *Paquin*, there are many which keepe and maintayne their Law of *Mahomet*, and haue *Mezquitas* or *Turkiſh* Temples, and are much different in ſhapes and countenances from the *Chinois*. Except the Souldiers, there is none that keepe Weapons in their houſes: not becauſe it is forbidden, but becauſe there is no need of them: but rather the Learned and graue people, count it a diſhoneſt thing to keepe Armour: there is no vſe of them but in the time of warre. For you ſhall neuer ſee them fight with weapons one with another as wee doe. But their fighting is to buffet one another, to pull them by the hayre of the head, and to draw them by the coller, and in two words to become friends againe. Our men make no great matter of giuing buffets and ſuch like, for they kill one another.

Feare of *Tartars*.

Mahometans.

No weapons in houſes.

Many Characters.

Monoſyllable language.

Penſil-writing.

Rhetorike ſole Art.

Here followed of their Degrees which is more exact in *Trigantius*, and therefore here omitted.

Glory of Doctors.

The *Chinois* are greatly giuen to Learning and ſtudie; for all their honour and riches dependeth thereupon. They haue aboue fortie thouſand ſundry Letters: though many of them bee made one of another. They haue no A, B, C, nor any thing like thereunto, as among vs. But to ſignifie euerie thing they haue one Letter, and all diuerſe. Their words are of one ſyllable, and no more, though their Letters bee ſo many. Thoſe which are commonly vſed euery day, are eight or ten thouſand. They begin to learne to write and reade commonly, when they be ſeuen yeeres old: they write with Penſils. They haue many little Bookes which encourage Children to ſtudie, exhorting them to take paines, with the reward that they ſhall grow to bee *Mandarines*. They know not, nor ſtudie any Science, neither Mathematickes, nor Philoſophie, nor any ſuch thing, but onely Rhetoricke: for all the ſubſtance of their knowledge and fame of Learned men, conſiſteth in nothing elſe, but to know how to make a very elegant Diſcourſe and Oration vpon a theame, like as in our *Europe* the Oratours vſed anciently. And as the *Chinois* haue good wits, and by hope of reward are verie appliable hereunto, they doe it with great excellencie, and occupie themſelues with nothing elſe, and haue no other knowledge to diſtract them from it.

Euery Doctor (after hee hath obtained his degree) ſetteth vp in his Countrey before the doores of his Houſe a Title of verie great letters, which ſaith: *This is the Houſe of a Doctor*: which all men haue in regard. And before the doore, they ſet vp many high Poles like maſts, which euerie *Mandarin* of that Citie where hee dwelleth ſendeth him, with a Banner hanged vp, and alwaies they remaine there. They make a verie excellent Arch triumphall, to him that hath the firſt degree, at the gate of his Houſe.

They Print yeerely great ſtore of bookes in *China*.

Eaſie Printing.

Printing white

The *Chinois* eſteeme more then we doe, the skill to bee able to write well, and Print euerie yeere a great number of Bookes, whereof there is no examination nor choiſe, and euerie man Printeth what hee liſt, good or bad, and ſo they make a booke of nothing. The beſt which come foorth are of no Science: for as I haue ſaid, they know none: but they are onely of Morall ſentences, to the aduancement of good Cuſtomes and Gouernment. Their manner of Printing is not like ours: for they joyne not their Letters, but for euerie leafe they make a table which hath letters on both ſides, it would ſeeme to bee very hard, but with the cuſtome which they haue gotten, they doe it with great eaſe, ſpeed and cheapeneſſe. I will ſend you ſome Booke well printed, that your Worſhip may ſee it. They alſo print Letters in white, I ſay white letters, and the ground blacke. And though in the former they come not neare vs, yet in this they goe far beyond vs. They vſually print theſe letters in Stones, and the letters ſtand not in the Stone vpward to touch the Paper directly, but in the paper and the ſtone they ſtand all one way: and this is the order whereby they doe this: They wet the Paper, and laying it vpon the toppe of the Stone, they gently beate it with ſome verie gentle thing, wherby the Paper which lyeth vpon the Stone ſinketh into the hollowneſſe of the Letter, and reſteth lower then the other, then with a kind of Inke which they haue for this purpoſe, they finely lay it ouer, whereby the Letters remaine white, becauſe they bee deeper, and the reſt remaineth blacke. I ſend you with this Letter certaine papers thereof, that your Worſhip may reioyce in beholding the excellencie wherewith it is done. One of our Bookes of equall volume with one of theirs, containeth much more: for our letter is leſſer then theirs. Though in *China* it be harder to learne to reade and write, then in our Country, yet there be few but know ordinarie Letters to deale betweene man and man.

Moſt can write and reade.

Poetrie.

Likewiſe they make great account of Poetrie, and alſo the grauer ſort giue themſelues much vnto it. It is verie ordinarie with them to ſend vs ſome Poeſie in praiſe of vs, when wee enter into

Digitized by Google

into friendſhip with any. Alſo they make much account of Paintings, and playing vpon Inſtruments. And albeit they know but little in the firſt, becauſe they haue no Art, nor paint the things with ſhadowes, and know not how to paint in Oile: yet in the ſecond they are verie readie on their Inſtruments, and play grauely and leaſurely. I heard certaine ſorts of Muſicke, eſpecially in the Palace of the King: to welcome me, the Eunuches his Muſicians played vnto me awhile, and they pleaſed me: although in this, little it ſeemeth vnto me they may compare with our Countrey, yet it is certaine, that they thinke they doe farre excell vs. They haue not aboue one kinde of Inſtrument, which the grauer ſort vſe and make much account of, which is like vnto our Harpe, although the faſhion and manner of playing vpon it, differeth from ours, and from all our other Inſtruments. Painting and Muſicke.

As in *China* there is no ſort of people more honourable then the Learned men, and Doctors: ſo there is no people of better condition, and of more Honourable and more Noble manner of proceeding. And albeit before they were Doctors and *Mandarins*, they were verie poore and baſe people, and many of their Fathers officers of vile Offices, (as it is verie ordinarie) neuertheleſſe, after they haue obtayned the Degrees, they put vpon themſelues a more honourable ſpirit. And therefore albeit in *China*, wee indured much trouble at the baſe peoples hand, yet the *Mandarins* did alwaies vſe vs honourably and with much reſpect: eſpecially now, for which cauſe now no man dare trouble vs. And if there bee any, which in title are like our Lords, Knights, and Courtiers, they are theſe. There are among them, men of much excellencie and ſinceritie in their Office, which doe ſeeke the common good: And without doubt they make vs wonder, that ſeeing they bee but *Gentiles*, which doe nothing for the zeale of Gods honour, nor for his ſake, they be of ſuch ſinceritie, which they ſhewed of late more then at other times, in hauing to doe with this wicked, vicious, and couetous King, which they now haue: who though hee be ſo abſolute a Lord, that with the ſame libertie, and in a manner with the ſame facilitie, hee doth what he liſt with the greateſt *Mandarins* of his Kingdome, as well as with the baſeſt people thereof. Yet for all this, of late yeeres there were many, who with great libertie and courage reprehended his faults by writing (which is the manner of ſpeakiug moſt publikely with him) that all men might read it. And though they might feare ſome grieuous puniſhment (beſides the loſing of their Offices, for that was certayn) neuertheleſſe, there were many men of courage which wrote vnto him: among whom there was one very renowned: The letter which he wrote to the King, began thus. *That although hee were aſſured, that he were to be hanged, and that the Fire were kindled to burne him, yet hee would reprehend his vices and lewdneſſes, and the euill example that hee gaue to all his Kingdome:* And ſo hee did, and ſpake verie freely, and put him in great feare. And it ſeemeth that for his ſinceritie and courage, the King had ſome regard of him, and though hee puniſhed him, yet it was verie moderately. Noble Spirit of the *Mandarins*. Sinceritie of ſome. The preſent Kings diſpoſition. Heroike zeale.

There fell out another accident in this kinde within theſe few yeeres, which becauſe it is notable I will heere ſet it downe. This King hath many women beſides his lawfull wife, which among themſelues keepe the order of firſt and ſecond. Hee hath no Sonnes by his lawfull Wife, but he hath one which is the eldeſt of the third or fourth, and others youger of the ſecond. The Eldeſt by the cuſtome or lawes of the Kingdome, is the lawfull inſteritour, although he bee of the fourth wife: but hee bare more affection to the other and to her Sonne, and deſired, by her perſwaſion, to aduance him to bee Prince, and would not haue aduanced the lawfull Heire. The time being paſſed to performe the ſame, many *Mandarins* loſt their Offices, for reprehending him of this diſorder, and for ſeeking to make him aduance the Eldeſt. But the principall *Mandarins* of the Court perceiuing that hee proceeded on, and would not doe that which they requeſted, and which was reaſon, conſulted together, and publiſhed a Proclamation, which commanded all the *Mandarins* which are in the Court (which are aboue ſome thouſands) that vnder paine of loſing their Office, they ſhould all meete at ſuch a day, and ſuch an houre, in ſuch a place of the Kings Palaces. When they were all aſſembled at the day appointed, with their Enſignes of *Mandarins*, they put vp a Petition vnto the King, ſaying, That *ſince ſo often they had adviſed him of a thing ſo Iuſt, and that hee made none account of them, not ſeeking to aduance the true Prince, that hee ſhould ſeeke thoſe that would ſerue him, that all of them would there giue ouer their Enſignes of* Mandarins, *and would no longer ſerue.* It ſeemeth the King was afraid of ſo great a reſolution of the chiefeſt men of his Kingdome: And ſo hee commanded an Eunuch to goe foorth vnto them, and anſwer them, that they ſhould reſume their Offices in Gods name, and that hee would fulfill their requeſt. Finally, they did effect ſo much, that they cauſed him to doe that which was reaſon; and ſo this yeere 1602. hee aduanced the true Prince, of whom hereafter I will ſpeake ſomewhat. Kings Wiues and Children. Queſtion of the Succeſſor. Thouſands of Court *Mandarins*. The Prince Proclaimed.

§. VI.

Of the Gouernment of China: *Of the* Mandarins; *the* China *Complements and manifold nicities.*

NOw I haue touched the state of the *Mandarins*, it offereth it selfe to speake of the manner of Gouernment in particular; But I confesse vnto your Worship, that the multitude of Offices which they haue is so great a frame, that I was not able to vnderstand it, to reduce it into order. Onely I will say in generall, that they haue many good things belonging vnto Gouernment, but not the execution: finally, it is a Gouernment of *Gentiles*, with a thousand faults. There are no great store of Lawes, but commonly they decide Controuersies of their owne heads, and make Lawes in their Iurisdiction after their pleasure, euery one diuerse. And heere your Worship may imagine, that the Gouernment in the practise cannot bee very iust, since euery one that can tell how to make a good theame or exercise, are not sufficient to bee Law-makers: And it is very ordinarie among them to direct all things to their owne profit, whereby of necessitie, they commit many absurdities and wrongs, and take all that they can get: Bribes are vsuall, and men vse these more then any thing else: And though one of them know this fault in another, they all dissemble as being in the same fault, that others may winke at them. And though they seeke to hide it one from another, yet it is like the secret of *Anchuelus*.

Gouernment good if well executed.

Lawes lawlesse

Bribes.

Dance in a Net naked.

The *Mandarins* are many in all Cities, but very extraordinarie in the Courts of *Nanquin*, and *Paquin*. For in this Citie of *Paquin*, besides the *Mandarins* of Armes, whereof no great account is made, and are more in number then the rest; and besides those which alwayes repaire thither, vpon the businesses of all the Prouinces: Those that properly belong to this Citie and Court, are aboue two thousand and fiue hundred: who all, or the most part heare Causes ordinarily twice a day; so that wee cannot imagine what businesses occupie so many *Mandarins*, nor what is the Iurisdiction of euerie one. The most principall which are in all the Kingdome and heere, are sixe, Prefidents of sixe Councels, being the chiefest of the Kingdome. There is one, which is the greatest, to whom belongeth the gouernment of all the *Mandarins* of the Kingdome, to aduance them to higher Offices that doe deserue it, and as much as they deserue, to chastise and to degrade those which badly performe their Office: which because it is a place so great and honourable, the *Chinois* call him, *The Mandarin of Heauen*: who proposeth all these things to the King, as to promote, to aduance, to disgrade the *Mandarins*, and the King confirmeth them: So that all the *Mandarins* how small soeuer they bee, that are in all the Kingdome, are appointed by the King. The second hath the charge of all things belonging vnto Ceremonies, as well humane of Courtesies, and ceremonies in all royall Acts, as in making the King, the Prince, and in marrying of them, &c. And all that which belongeth to the worship of the Sacrifices of the Dead, and others which the Kings offer to Heauen and Earth. There is another chiefe of the Councell of Warre: another of the Kings Treasure, which taketh the account of the Kings rents: another Councell is of the Workes, as of the Kings houses, prouision for all things necessarie, for the Walls of the Cities, &c. There is another of Chastisement, whereunto causes criminall and sentences of Death doe belong. Aboue these (sixe) there is onely one Degree, which are absolutely the greatest, before whom whatsouer the King doth in any thing is consulted of. Although it bee true, that these be rich and opulent in the conceit of the *Chinois*, yet none of them in any thing may compare with any of the meanest Lord of title, of our Countrey. The wages which they haue of the King is small: the attendance which they haue, is of base people, and of small countenance, yet they are much respected and obeyed: And the common people kneeleth vnto them, as to the *Mandarins*. The common chastisement which all the *Mandarins* doe giue, is to whip them with peeces of Canes, of foure or sixe fingers broad and thicke, wherewith oftentimes they dye, when it is layd on soundly. Whipping is as common as it is to whip Children in the Schoole: And sometimes for nothing they giue a dozen stripes, as well to the Plaintiffe as to the Defendant, and therewith they end the Suites, and they stay to giue none other sentence, but say: *Giue him twentie stripes.*

Court *Mandarins.*

Chiefe *Mandarin*, or of Heauen. See of these after in the discourse of *Riccius* and *Trigantius*.

The second.

The third, &c.

Counsell of State, or the *Colai.*

Their wealth and wages meane.

Whipping.

Vsually when the *Mandarins* of any State goe through the streets, men goe before them crying, or making a noise with Instruments, for the people to giue place. And in particular Cities, when a great *Mandarin* passeth through the streets, all men hide themselues and goe into houses, and the Handicrafts-men cease from their worke, and that in such sort, that I saw once in a Citie in a street of great trafficke, a *Mandarin* appeare, and in a moment euery bodie got away, euen the very Dogges, with exceeding great silence: so greatly they bee reuerenced of all men. And many carrie Chaines trayling them before them, and other Instruments. But in the Courts (though the *Mandarins* bee greater) the people runne not away, they doe no more but giue way that thy may passe. In the Courts many *Mandarins*, though they be great, ride on Horsebacke, and others in Chaires: but besides them, all goe in Chaires carried on mens shoulders, which according to their Offices are two, or foure, or eight.

State and pompe.

Euery

Digitized by Google

Euery Prouince hath a Visitor, which publikely visiteth the same euery yeere, and taketh information of the *Mandarines*. There are secret and priuie Visitors. Sometime one is sent: But it is no vsuall thing, and as I haue heard, it is long since it was left off. I speake this, because I alwaies heard when I was in *Spaine*, that the *Chinois* vsed this manner of Visitation. Visitors.

The Visitor onely may giue sentence of death. They be not cruell in punishments by death. Onely the King vseth some cruell execution: and namely this King that now raigneth, which is a very wicked man. One of them is that which lately hee caused here to bee executed vpon eight men, by the great frosts of Winter, for no great offence for so cruell a punishment, and as they say, falsely imputed; And this it was: Hee caused their neckes to be put through a thicke plancke, which taketh a great part of the head, and they set the plankes to stand vpon Formes, so that the man standeth vpon his feet day and night in the middest of the street, with men to watch him. Hee condemned them to this punishment for three moneths: but they died before fifteene dayes, with their legs all rotted, and burst with standing alwaies on foot: I my selfe saw them stand on this fashion, which pitied me extremely. I neuer saw nor heard of any other cruell punishments; though, as I haue said, often times the *Mandarines* kill them with whipping, which is a very cruell thing. Punishment by death rare. The great frosts of Winter in *Paquin*.

The *Chinois* are very curious in writing of newes, which vsually they set out in Print, and in a very short space disperse them through all the Prouinces. There are alwaies Bookes wherein all the *Mandarines* of the Kingdome are written, as well their names as their Countries: And because they be changed euery foot from one place to another, they blot out and put in the names as soone as they know them, with great facilitie. Bookes of newes.

One thing among the rest is (wherein they bee very dutifull and prolixe) in their manifold courtesies, which are of many sorts, according to the estate of him with whom they haue to doe. The vsuall fashion is when they visite one another, the stranger is set on the most honourable hand (which in some places is the right hand, and in *the Northerne Prouinces* the left) and putting one hand in the sleeue of the contrarie arme, which is very long and wide, they lift vp their hands so fastned together, *then* bending their *(head and)* body downe to the ground, *saying*, Zin zin, *which is of no signification but an interiection of vrbanitie, their bowing veneration they call*, Zo ye: *they change places to repay courtesies.* After this the Guest sitteth downe in * the Chaire of the Master of the house, and the Master of the house another besides that which the Guest hath, and each of them setteth them in their due place, which is the strangers Chaire in the highest place, distant from the wall, and the Chaire of the Master of the house is set in the midst of the lowest place, one ouer against another. After this (when they haue ended their salutations) they straightway cause a drinke to be brought, which they call *Cha*, which is water boyled with a certaine herbe, which they much esteeme, for this is a want of ciuilitie and courtesie: and at the least they must drinke of it twice or thrice. He bringeth forth some Fruit or Sweet-meat, and a Spoone to take it vp. If the Guest stay any time, straight without faile they will bring out some thing to eate, but with some preparation, answerable to the occasion and person: whereon they eate very little, vnlesse it be at the ordinary houres of feeding, and then they eate somwhat more. Complements of courtesie and entertainment. That which is in a little letter is added out of *Trigautius*. * When they salute in the street, they turne to the North, side to side: at home to the head of the house, which is against the doore, Northward also their Temples and Halls for entertaynment being made with the doore to the South. *Cha* or *Chia* a drinke made with a certaine herbe.

When they visite one another (vnlesse they be very great friends and familiars) a Boy goeth alway before, which carrieth a Libell or Booke of visitation, which they call *Paytre*, which is as much as, *A Paper of visitation:* And this name neuer faileth, for alwaies they vse it: wherein *his name with modest epithets (as many perhaps as Visitors)* are written, according as the quality is of them that visite, and those that are visited; so is the manner most different whereafter they write the same: to wit, with more humility, either as our better, or as an equall, or as an inferiour, as a scholer, or as a master: for as the relations are many and particular, so the fashions and manners which they vse are diuers. Of these things, and of all that hereafter I shall say touching this point, I will send you the examples in their owne papers of visitations, which great *Mandarins*, and ordinary men brought vnto vs, setting down in our tongue vpon euery letter the declaration thereof. And I doubt not but your Worship, our most deare Fathers, and Brethren, and as many others as shall see the same will reioyce thereat. And when that Paper is brought, they carrie newes into the house to him that is visited, which prepareth himselfe to receiue his Guest, which commeth within a while after. When they be not people which they see euery day, they vse not ordinary apparell in their visitations, but they haue garments proper for this purpose, of a farre different fashion. And if by chance one come so apparelled, and another be not, he sayth, that he durst not salute him, nor receiue him before he had put on his apparell, so he getteth him away in great haste to put on his apparell, and then they begin to performe their complements. Paytre or visiting paper. These Libels consist of 12. pages of white paper a palme and halfe long, &c. see *Kic. pag.66.* Salutation or visitation-garments.

When the Guest departeth, hee alwaies goeth before, and at their going out of the doores they vse salutations, and offers of courtesie; according to the qualitie of the Guest, and the Master of the house, so he bringeth him more or lesse way, or vnto the street: or if he goe so farre, he stayeth till he take his Chaire, or his Horse, and then lifting vp their armes and sleeues vnto their heads they take their leaues and depart one from the other. When they are departed, the Visitor and hee that is visited, each of them send a Boy to giue one another thankes, one for his visitation, the other for his good entertaynment and friendly vsage. If hee that is visited be not Taking leaue.

Digitized by Google

at home, they leaue the *Paytre* at his house, which is a token that hee came to visite him. Hee that is visited is bound to requite his visitation presently, or the next day, if he bee a man of Worship, or if they bee equals, within three or foure dayes: which payment is performed after the selfe same manner: and if hee finde him not at home, it sufficeth to leaue the *Paytre* there. If hee that requiteth the visitation bee a farre greater person then the first which visited him, (as if he be some great *Mandarin*) hee which first visited him, returneth the next day in person with a paper, wherein hee giueth him thankes that he came to his house: and if they see one another, he giueth him thankes by word of mouth. When the man which visiteth is of great Worship hee sendeth word a good space before with a *Paytre*: and the Master of the house commeth forth to receiue him, and to bring him into the house. All their Houses and Lodgings, haue alwayes an head and more honourable place (which is the highest part) where alwayes they place the Guest. Likewise in their writing they vse a great difference, according to the estates, Dignitie and Age: and in their Letter, the greater the *Mandarin* is, they vse the greater Letter: those that are equall, or inferiour vse a very small letter: likewise they obserue the same order in speaking to euery one according to his qualitie. When they meet in the streets, the ordinary courtesie, is, to put their hands into their sleeues, & closing them together to hold them vp, & to vse a common speech, which they haue for this purpose. When a couple enter into new acquaintance, they doe yet more, and that is, they kneele downe, and touch the ground with their head so often, and with so great ceremonies, that I dare not speake of them, lest I should neuer make an end.

Head place of the house.

Great Letters for great persons.

First acquaintance.

When they send Presents, they write downe all things which they send in a paper, as they doe their speeches, with words of Honour: whereof I send likewise examples to see, of very graue persons which sent vs Presents. And whether the partie receiue the Present or not, or only a part, he alwayes sendeth backe another paper with certaine red lines (as herewith is to bee seene) with a Letter which sayth: *I thanke you much*: And when he receiueth the Present, hee alwayes giueth some money to the youths that bring it: and hereby he remayneth bound to answer him, with another Present as great at the least: And herein they be very precise, especially persons that are not of the greatest account. A thing which I finde very strange, and which doth put vs to much trouble, to be driuen equally to answer those Presents which the greater *Mandarins* doe send vs, for they alwayes desire some thing of our Countrey, and here we are very poore.

Sending Presents.

They send vs somtimes from *Macao* some Clockes of sand, or Houre-glasses, some Kniues, some cases of tooles for Surgeans, and other things: for they much esteeme all things that come from our parts: and with these things, which in our Countries are little or nothing worth, heere wee procure friends, which stand vs in exceeding great stead to conferre with them of our holy Faith, and of the saluation of our Soules.

Banquetting.

Besides their Presents and visitations, they haue Gossippings and Banquets, whereunto very vsually they inuite one another. When these be very solemne, they set euery Guest two tables for himselfe, one of Flesh and Fish, &c. another of Fruits and sweet Meats. When they be not so solemne, one table for euery man, or two at euery Table: they prouide for these Guests great diuersitie of meates well dressed and seasoned, which they bring soft and fayre one after another, that they may be hot. When they inuite one to a Banquet, they send sixe or seuen dayes before a paper, wherein they inuite him against such a day. If hee cannot come, he sendeth another paper, wherein he saith, *I excuse my selfe*: If he excuse not himselfe, he is resolued to come. This paper is sent with many words of courtesie, & with much honour. On the day appointed in the morning, hee sendeth another to inuite him againe for the selfe same day: and at the appointed houre, hee sendeth another to pray him to come: and then hee goeth: If any of these messages should fayle hee would not goe. When he is gone to the Banquet, they vse many other ceremonies: But the most adoe is, about their places, so that it is long before you can place them, and allot out the roomes how they shall sit, because they euer seeke, or at least make shew that they seeke to giue the chiefest roome to others. They feed not as men vse to doe in our Countrey: neither seemeth it that the Feast is made to feed, but onely they taste of some small thing for fashion sake; and they drinke very sippingly in small Cups of Porcelane, each of which will contayne fiue or sixe Thimbels-full of Wine; and heerein and in deuising, they spend fiue or sixe houres at a Banquet, and goe home an hungred. And thus it happeneth vnto vs; although wee seeke to excuse our selues from them as much as we can, because wee lose much time, vnlesse it bee some great *Mandarin*, who we feare would take it euill, if wee should deny his request. When the Banquet is ended, the next day euery one of the Guests sends his Boy with a paper, wherein hee thanketh his Hoast for his good cheare.

Inuitations.

Feasts to taste and bride it.

Heere your Worship may see, wherein the *Chinois* spend the one halfe of their life. For the greatest businesse they haue, and that wasteth most of their time, is in Visitations, Banquets, and sending of Presents. And the time wherein they most of all vse the same, is their New-yeere, which lasteth fifteene dayes: their Birth day, which all of them keepe with great solemnitie: or when they goe foorth, or come home on a Iourney. And to end the whole yeere, I send you some Papers of visitation of all these things (whereof they haue sent many vnto vs) that your Worship may see (though you vnderstand not the outward Letter) the manner and fashion of this

Chinois Complemental and almost all complement. New-yeere.

Digitized by Google

this people, how farre different Salutations, manners and faſhions, we ſend you from the plaineneſſe of our *Europe*, and eſpecially of our Companie, But for the preſent, wee all thinke it neceſſarie to eate after this faſhion, and to vſe their cuſtomes, to obtayne more free acceſſe vnto them, and to winne them to *Chriſt*.

There is a *Turke* heere, a dweller in this Citie, which aboue fortie yeeres agoe, brought one or two Lions to the Father of this King: who, partly becauſe hee knoweth no Learning nor Sciences, and partly becauſe hee ſought not to apply himſelfe to the habite, cuſtomes, and manner of *China*, there is none that will deale with him, nor come neere his houſe: And through the grace which God hath giuen vs, and becauſe they ſee vs apply our ſelues to their Apparell, Faſhion, and Courteſies, all the graueſt *Mandarins* come home to our houſe to viſite vs, and doe vs the fauour, to hold vs publikely for their Friends: which they vſe not to doe, to their owne Countrey-men, of our qualitie and condition: prayſed bee our Lord alwayes, *Amen*. A *Turke* diſreſpected.

I will not omit to declare the great pleaſure, wherewith theſe learned *Chineis* heare the great conſent of the things and ceremonies, of our holy Faith in *Europe*, and that wee haue Biſhops, and, as we call them heere, *Mandarins*, and ſuperiours in Spirituall things: and aboue all, they reioyce exceedingly to heare of our Pope, that being ſo great a perſonage they preferre a Learned and Holy man by way of Election, and not by Succeſſion; and likewiſe the obedience and ſubjection which other Kings doe yeeld vnto him; and that there haue beene many (as wee told them) who being choſen Popes, refuſe it in good earneſt, and by no meanes will accept the ſame: and that we haue all things which concerne the Law of God and good manners, ſet downe in writing, with all other Bookes concerning him, or his Miniſters. The Hierarchy applauded by *Chineis*.

And although that which I haue ſpoken hitherto of our high Prieſt, is a thing very apparent and true, and wee deliuered it for ſuch, and they ſo vnderſtand it: yet oftentimes they haue giuen vs occaſions of laughter. The firſt was, That when wee told them, that ſome refuſed ſo great an Office: ſtraight-way they aske, where you ſay that they refuſe it, is it not euident that their excuſe will not bee accepted? As who ſhould ſay, if they would accept of it, who is there that would make an excuſe? And thus they ſay, becauſe they doe ſo themſelues: for when great Offices are beſtowed vpon them, eftſoone they offer vp a Petition, making a thouſand excuſes to the King not to receiue them: and they deſire nothing leſſe, neither can any thing happen ſo grieuous vnto them, as to accept their excuſe. But vſually they be not admitted: though ſometimes they bee, to their great griefe of heart, as I my ſelfe haue ſeene: But to excuſe themſelues, or to refuſe with ſome danger, is the vſe ſo common, that they will not fayle to doe ſo: for if they ſhould not doe ſo, it were more certayne that they ſhould goe without the Office. The ſecond thing that made vs more to laugh, is, that many of them tell vs, that if wee would returne into our Conntrey, without doubt they would make vs Popes: The reaſon (though not openly) which they yeeld, is, that wee haue a great aduantage aboue other men of our Countrey, to wit, that wee haue ſeene, and ſtudied, and vnderſtand their Bookes; becauſe that they onely, in their opinion, can make a man perfect, and generally ſeene in all things. Such is the high conceit and reputation which they hold of their Bookes. Ridiculous nicetie.

§. VII.

Of their Women: Of the Tartars *Conqueſt, Acts and Expulſion. The greatneſſe of the King, and neighbouring States. Of the Queenes Eunuches.*

I Will conclude this Letter with two points: the one concerning the Women, whereof I haue little to ſay: and the laſt is of the King, and of his Palaces and Seruices. Palace.

Euery man (as I ſaid before) may keepe as many Wiues as hee will, and ſo they doe: which is the cauſe of many tumults, quarrels, and diſorders in their houſes among their wiues, and among the Sonnes of diuers Mothers: and therefore when wee tell them, that in our Countrey no man marryeth but one Wife, they neuer are ſatisfied in praiſing it in words, though neuertheleſſe they doe not follow it, nor put it in practiſe. And the diſcontentment which the Women haue among themſelues, and with their Husbands for this occaſion, is like to prooue a great encouragement vnto them, to make them deſirous to receiue our holy Faith, and to perſwade their Husbands to embrace the ſame, ſeeing that it doth not permit any more but one lawfull Wife onely. Polygamie ſitigious.

Of their other Conuerſation, Cuſtomes, and other things, wee know nothing, neither is any thing to bee learned: for they keepe houſe all their life time, and goe out of doores exceeding ſeldome to viſite either their Mother or Siſters, or neareſt kinſwomen, for they goe not to any elſe, no not in thought: And therefore as they haue no conuerſation, (but alwayes to keepe home) I can ſpeake nothing of their behauiour. Their Apparell ſeemeth vnto mee honeſt and comely: (for ſometimes I haue ſeene the Wiues of Officers, and of the poore people, for many of them doe goe abroad,) In ſome parts of the Countrey wee haue met many women vpon the high way, in ſhort garments, like to the men of our Countrey, without any difference, ſaue on Cloſeneſſe of Women. Apparell.

Digitized by Google

their heads, and their feete : for all the reſt is all one kinde of Apparell ; but theſe are the common people onely : One of the greateſt ornaments that the Women haue, is, to haue verie little feete, and they are ſo little, that they goe verie badly, and alway they ſeeme to goe as though they would fall. I could not know the cauſe, nor the *Chinois* themſelues know not the originall occaſion, why this is counted for a beautie : albeit ſome ſay, it began not for a comelineſſe, but onely with a purpoſe to cut off all occaſion from them of going abroad.

Small feet.

Hiſtories of their Kings.

Knowledge of the Flood.

The *Chinois* haue beene very carefull in their Hiſtories, and therefore they haue hiſtories of their Kings of aboue foure thouſand yeeres. And if credit bee to be giuen to that which their Bookes report, touching thoſe times, and is gathered by diuers of their Hiſtories ; There are many more yeeres from the Flood to our dayes (whereof they alſo haue ſome knowledge in their Bookes) then the moſt followed and allowed Calculation among vs, which treate of that matter, doe allow of : for they ſay, it is ſixe thouſand yeeres at the leaſt. They ſay that they haue continued Hiſtories. But I leaue this, becauſe I haue not well conferred the truth and foundation of the *Chiniſh* hiſtories. At the leaſt it is certaine, that they haue knowledge of their matters, and certaine Kings within a little after the Flood, whenſoeuer it was. They had many ancient Kings, which were verie good men, which it may bee were ſaued in the law of Nature, becauſe the heroicall workes of Vertue, which they report of them were great, and there is no record that they worſhipped Idols, but ſome, that they worſhipped the Lord of Heauen and Earth. There were ſome that ſought not to leaue their lawfull Sonnes to bee their Heires, becauſe they thought them not fit for Gouernment, but chooſe the wiſeſt and beſt man, that they could finde, and left the Kingdome vnto him.

Moralitie made a King, and Nature made a *Mandarine* contrary to innumerable Scripture, &c.

This Kingdome in old time was diuided into many ſmall Kingdomes, vntill by little and little it was vnited. It is ſome foure hundred yeeres (as I ſaid before) ſince a *Tartar* King poſſeſſed it wholly, and two hundred, ſince a *Bonzo* or Religious man of *China* recouered it. This *Mahumetan Tartar* King, left ſome tokens of himſelfe in things that he did. Hee left in *Nanquin*, certaine Mathematicall inſtruments of Copper, the like whereof for goodneſſe peraduenture are not in all *Europe*, at leaſt not better.

Mathematicall Inſtruments.

The *China* vindex.

The *Chineſe Bonzo* which expelled him out of the Kingdome, was a very valiant and wiſe man, and there bee many Hiſtories of his wiſedome, and ſentencious ſayings, and iudgement in hard matters : and the manner and forme of Gouernment, which hee ordayned in this Kingdome, which continueth inuiolable, doth greatly declare the ſame. Hee made new Offices and gaue new Names to all of them : An vſuall thing when one houſe beginneth to Raigne, to change all, euen the name of the King, as alſo of all Offices, and alſo of many Cities. I omit the diuiſion of the Gouernment into ſo many heads, and ſo good diſtribution, that it ſeemeth (and ſo the *Chinois* ſay) it is like to continue thouſands of yeeres, ſo that no man of the ſame Kingdome is able, nor hath any power to make any Rebellion of importance. For thoſe which in former time reuolted, were the Vice-royes of the Prouinces, and other great *Mandarins*, in whoſe power were the Gouernment, the Souldiers, and the treaſure. But hee diuided it in ſuch ſort, that thoſe which had power ouer the Souldiers, ſhould haue no money at all, neither ſhould the pay of the Souldiers depend vpon them : and thoſe which keepe the Treaſure muſt haue no ſuperintendencie and dominion ouer the Souldiers. Others which were mightie and rich, hee impoueriſhed and diuided their Authoritie and Reuenues among many ; and ſo there is no man that can call himſelfe Great. I remember that I had read in a Booke, ſet out in the *Spaniſh* tongue, of the great power of certayne Captaynes, and becauſe the King did not truſt them, hee ſent one of his houſe to will them to come vnto him.

New Lords, new Lawes.

Rebellion preuented by the policie.

All which relation, with many other things which hee reporteth of the prouidence of the King, how hee diuideth his Authoritie among diuers Princes, is not ſo in truth, neither in truth, neither is there any apparence thereof, neither haue the Captaynes much authoritie, neither are they very rich : for though they haue many people, yet the gouernment of them is diuided into diuers heads, ſo that they can hardly aſſemble to raiſe any Rebellion, eſpecially, becauſe they remaine alwayes in the Kingdome, and neere about the King.

Reuenue.

The Reuenue of this King, without doubt, is exceeding great, and vntill wee haue gotten it out of their Bookes (wherein euery thing is ſet downe very particularly) I will not preſume to publiſh the ſame, not as though I knew not that it is ſo, ſince *whileſt a man knoweth more of this Kingdome, he doubteth leſſe :* Yet becauſe I feare for all this that it will bee hard to make one beleeue the ſame, which knoweth it not of a certainty; making the Accounts not very large, his Reuenues are one yeare with another an hundred Millions in Siluer, Gold, Rice, and an infinite number of other things : although the greateſt part is Siluer. And he that conſidereth the greatneſſe of the Kingdome, and that euery man payeth Tribute to the King of their Perſons, Lands, Trees, and other things (without carrying any Tribute out of the ſame) that which I ſpeake wil not ſeeme exceſſiue. But as his Reuenue is very great, ſo his Expenſes are many. For thoſe which in this Kingdome doe liue at the Kings charge are many, to wit, all the *Mandarins* to whom the King giueth Wages, all the Souldiers, all the Kinſfolkes of the King, his Eunuches, and an infinite number of people, whereby his charges are exceeding great; although alwayes there remayneth

100. Millions. others ſay, 150.

Expences.

Digitized by Google

mayneth a good deale for him to lay vp: and there is no doubt but hee hath it in store in exceeding great quantitie.

Many small Kingdomes round about acknowledge the King of *China*, and pay him Tribute, as *Corea*, and others, whose names I know not, on this Northerne part: and on the side of *Malaca* and *Macao*, many others. And sometimes on these Northerne parts they trouble him somewhat, in robbing and killing of people. It may be that your Worship, or some bodie else may demand, why the King of *China* being so great, subdueth not these small Kingdomes that lye about him to deliuer himselfe of trouble? I answere, that he wanteth no abilitie: but I will say one sure thing, a Paradoxe to the people of our *Europe*, which is, That neither the *Chinois*, nor their King doe seeke, nor dreame of dilating their Empire more then it is. And this their resolution is such, that although they would giue them all these Kingdomes, they would not take them, & much lesse if they were farther off. For they hold it for one of the greatest miseries (especially the *Mandarins* & graue sort of people) to go out of their Kingdome to any other part.

Neighbour Kingdomes. *Corea* or *Corai.*

A Paradoxe.

Contentednes.

There is one of the best Examples hereof that may be giuen: which fell out of late, and that was, that as by the danger which might grow to his Kingdome, if the people of *Iapon* should winne the Kingdome of *Corea*, which is joyned to *China* by the mayne Land, as they began to doe; the *Chinois* ayded the *Coreans* with many men: and the people of *Iapon* by the death of their King called *Quabacondono*, did wholly abandon it. The Kingdome remayned in the power of the *Chinois*, and so continued two or three yeares. After which they wholly gaue it ouer, without any other greater respect, then that there were none that were willing to goe thither to gouerne it, nor that the King had any need to annexe it vnto his Estate. And without doubt, it seemeth that he would doe the like with any other, although they would put it into his hands. And touching those Kingdomes which pay him Tribute, there is no great account made, whether they come or no: and their continuall comming, is more for the profit of those which come, then that the King doth desire it. And therefore the *Philippine* Ilands which in former times paid Tribute to the Kings of *China*, were made none account of when they ceased to pay it.

Corea ioyned to the Continent of *China.*

This King hath one lawfull Wife (as other men haue) in choice whereof they haue regard to nothing else but to her good qualities and externall beautie, for there is no Nobilitie to be sought for. Besides her hee hath a great number of Concubines chosen after the same manner, whose Sonnes (if the lawfull Wiues Children faile) inherit the Kingdome, which commonly falleth out, and such is he which now is King, and he which is to succeed him. When any of these women be once entred into the Kings Palace to bee his Wife, there is no name which may bee compared vnto her in being kept close; for they may not only not goe abroad, no nor bee seene of their Father, Mother, or Brethren. They haue little or none authoritie, but such as they obtaine of the King. Also the seruice of the King, of the Queene, and of his Concubines, is all by Eunuches, a seruice doubtlesse vnworthy of a King. All these Eunuches (without any exception) are of the most base people which are in all the Kingdome, whose Fathers (because they cannot keepe them when they were young) doe make them Eunuches, in hope that one day they shall get into the Court to serue the King: the manner is farre different from some which are in *Europe*: for these bee like those which the *Turkes* vse. Because their Fathers doe this for pouertie, it followeth that they haue no excellencie, for they haue no meanes to learne it, and they are little or nothing Learned.

Queenes closeneſſe.

Eunuches.

The yard and all cut away.

They elect and choose these Eunuches from time to time to supply such as die, and this first yeare that I was here, they chose aboue three thousand, for which purpose there assembled aboue twentie thousand (as they say) out of which number they made their choice. The Electors were a verie great *Mandarin* (to whom, as I said before, the Kings priuate businesse belongs) and another Eunuch of the eldest and most priuate. The Examination and Election consisteth in two things, which are a good Countenance and a good Tongue: for proofe whereof, they make them pronounce two words, wherein those that haue not a readie Tongue doe stumble. When they are chosen, and gone to the Court, they diuide them in diuers Offices: yet at their first comming, they are appointed to waite vpon the old Eunuches as Boyes, which make good triall of their patience, and obedience: and he that after certaine yeares sheweth himselfe towardly, they begin to employ in greater matters.

Their numbers and choice.

Seruice.

Of these Eunuches, the King hath his Musicians and Mathematicians, who, to bee briefe, I say, haue no sound vnderstanding in these things at all, but only for complement or superficially; yet some of them are bound to watch all night, and to looke whether any Comet doe appeare, or any such like thing in the Skie, to enforme the King thereof: and to performe other like Offices. They are vsually verie couetous, and as they are base, if they rise to bee priuate with the King, some of them be proud and vncourteous. They serue the King as slaues, obeying his will which way soeuer he inclineth. The King chastiseth them verie sharply for euery light offence: especially the King that now is, which is a very wicked man. He hath caused many to be whipped to death, for some small matter wherein they haue offended him. Yet there are some of them good and discreet, which the King vseth for dispatching of his businesse, and other matters

Ignorance.

Couetousnesse

Digitized by Google

of weight. Though the ordinarie wages which they haue of the King bee ſmall, yet it ſerueth them well to liue of, and therefore they goe verie well apparelled in many Robes of Silke verie finely wrought of diuers colours, and the manner of their Cap and Apparell differeth from all other peoples. There are of them in number, as they ſay, aboue ſixteene thouſand of them in the Kings palaces. Hereby your Worſhip may ſee what Examples and Education the King of *China* obſerueth, which ſpendeth all his time with theſe and with women.

The common people neuer ſee nor ſpeake with the King.

Although it be the cuſtome of theſe Kings, to ſhew themſelues from time to time to certaine of the greateſt *Mandarins*: yet they neuer ſuffer the reſt of the people to ſee them, nor to ſpeake with them; and when he ſpeaketh with any bodie, they enter not into the place where hee is; but the King commeth forth to a certaine place. If there be any Nation among whom the Law of Nations hath no place in many things it is this: for as they haue no commerce with other Nations, ſo they haue not the Law which is common to all men. And therefore they admit no Ambaſſadour in *China*, vnleſſe it be by the way of giuing ſome Preſent, the King not acknowledging any; neither doe they thinke that there is any in the World, which is able to deale with their King by way of an Embaſſadour. And if they bring any Meſſage (as the *Iapons* brought within theſe few yeares, who came to intreate of certaine agreements, by no meanes they are admitted to the ſight of the King; neither doth he giue them audience: but ſome *Mandarin* doth accompany them: and the entertaynment which they giue them, and honour which they ſhew to all ſtrangers which come vnto them is verie ſmall. But as for the moſt part they haue no great conceit of ſtrangers, ſo their entertaynment is like to their conceit. Whoſoeuer he be that commeth into their Countrey, they ſhut him vp in a verie homely houſe, not ſuffering him to goe abroad.

Law of Nations contemned.

Emb-aſſages.

Royall Palace.

The Kings Palaces are verie great; and albeit in the excellencie of Architecture they bee not comparable to thoſe of our *Europe*, yet they much exceed in the hugeneſſe of Building. They haue three wals foure ſquare, the circuit of the firſt may be as bigge as the wall of a good Citie. Betweene the firſt and the ſecond wall, there is a wall which enuironeth the greateſt part of the Houſe, and here are many Houſes of the Eunuches of the loweſt ſort, which exerciſe Mechanicall Arts, or the like, as Porters, &c.

Betweene the ſecond and the third wall there are many pieces of the Kings Houſe, which is not joyned altogether, but in diuers parts there be diuers Roomes, built for diuers purpoſes, one anſwering to another. Theſe parcels of Buildings which are here (which are euerie one as long as the Careere of an Horſe, and very high) haue no vnder Roome, but a great Building raiſed vp with foundations of great Brickes, as broad and long as all the Building, wherein there are Gates of Marble ſtone very wel wrought to paſſe from one place to another. This houſe or Foundation is about eight fathomes high little more or leſſe. Aboue theſe are guilded Galleries, Tarraſſes, Hals, and Chambers, which on the out-ſide ſhew verie gallant (which is as much as can be ſeene; for no man can get in to ſee them.) The greateſt part of them is of Timber, with many gilded Embоſſements, and many other pleaſant Pictures. The Roofes are verie well made. The Tiles are of a farre better faſhion, in mine opinion, then ours, and ſo euen ioyned together that that they ſeeme to be all one piece: they are all anneled with yellow, which is the Kings Colour. To conclude, I ſay, that it ſeemed vnto me in multitude of Houſes and greatneſſe a ſtately thing. Alſo betweene theſe wals the Riuer runneth which I ſpake of: and to paſſe from one to another there are many faire Bridges of Marble made of very great ſtones: betweene theſe wals was one of the two fourth parts of the Houſe, on which the fire from Heauen fell downe within theſe few yeares, and conſumed it: and with the blowes of the ſtones which fell downe many verie great Houſes were broken downe to the ground (as ſometimes I beheld my ſelfe) and they remayned with many ſignes of fire on them. They ſay, that when this fire fell from Heauen, the King commanded his Sonne to kneele downe, and beſeech *The Heauen to be mercifull vnto him, for he himſelfe was too wicked, and that the Heauen would not heare him.* Within theſe wals are many Lodgings of the graueſt Eunuches, who like Fellowes of Colledges liue many in one Houſe, euerie one hauing his priuate Chamber. Heere betweene theſe wals are Mounts and Groues and other recreations whither the King repaireth to recreate himſelfe. And the ſpace of theſe wals is very great, for when I went to the Palace to teach the Eunuches which were in that place to trimme the Clocke, I paſſed before I came to their Lodging eight great Palaces, and on the other ſide there were many more. The Lodgings of the Eunuches vſually are low and bad, for the Kings Seruants, yet very neceſſarie.

Yellow is the Kings Colour.

Riuer and Bridges.

Fire from Heauen.

No peace to the wicked.

Mounts and Groues.

Third partition.

Next after this followeth the third wal, where the King dwelleth, with his Wiues and Children, and thoſe which where his neereſt ſeruants, whereinto no man entreth but they. And therfore albeit I haue heard that it is a very beautiful thing & very muchworth the ſeeing, as in very deed it ſheweth to be: yet I cannot giue any Relation of any thing concerning the ſame in particular. Only this I ſay, that when I was in the Houſe of the Eunuches that were the Mathematicians, I went ſometimes vp into a Towre, from whence I might ſee the tops of the Houſes, the Groues, and Orchards, and me thought that I neuer in my life ſaw ſo great a frame of Building, although I haue ſeene many in mine owne Countrie. And therefore there are alwaies a great

Digitized by Google

a great number of Officers of all Offices, some making new Buildings, and others repayring the old. The King neuer goeth abroad, especially this King, and his Ancestors some one time and no more, vnto a Temple which they haue builded to *The Heauen, and the Earth*, where euerie yeare they offer Sacrifice. And therefore I know not with what pompe hee goeth abroad: But like as in his seruice he hath no men of qualitie, it cannot bee such as our Kings vse in their going to Church:

King a home Prisoner.

Temple of Heauen and Earth.

There is a barbarous custome among the Kings, that when the Prince is aduanced to the Kingdome, within a short time after, all the rest of the old Kings Sonnes are to depart out of the House to certaine places appointed for them, which vnto the third Generation are serued like Kings, but they neuer come more in the presence of their Father, Mother, nor elder Brother: and therefore there is great lamentations of their Mothers at their departure. The Posteritie of these doe alwaies remayne as Kinsmen, and with the name of the Kings Kinsmen. To all these (which are very many) the King giueth sufficient mayntenance, which is no great matter. They neuer beare Office; and deale with other people, and marrie with them, without doing themselues much good or none at all in being the Kings Kinsmen, nor purchase any speciall authoritie thereby. Other Kinsfolkes of the King, married with the Sisters, Daughters, or Cousins of the King, or Queene, although they haue sufficient to liue vpon, yet haue they exceeding small authoritie, and haughtinesse. And herein, nor in any thing may they compare with the *Mandarins*.

Barbarous vsage of the Kings Children.

Here came to visit vs one married with the Sister of this King that is now, in a Chaire with three or foure Boyes to wait on him. Another came oftentimes married with the Sister of the Wife of the Prince that is to inherit, on Horse-backe with one Boy only attending on him; and hee entreth into the Examinations that hee may proceed Doctor and become a *Mandarin*: So litle is the benefit that groweth vnto them by the Consanguinity or Affinity of the King which are joyned vnto him thereby.

Here the time faileth me, though neither matter, nor desire to giue contentment to your Worship, and the rest of my most deare Fathers and Brethren, neither doth nor shall euer faile me. And therefore if I shall vnderstand, that they take this in good worth, I will giue Relation of that which shall fall out here by the helpe and grace of our Lord, to whom I humbly beseech all of them to commend mee.

Kings Affinitie and Consanguinitie, litle worth.

I send here withall two Maps of this Kingdome of *China*, which came to my hand after I had written this Letter, and Relation. I sought to translate all that which is contayned in the *China* Letters; which is all the Rent which euery one of these Prouinces payeth to the King of *China*; and to make a description of all the Houses which euerie Prouince hath, and how many *people*, and many things else: But your Worship may beleeue that by no meanes I had leysure: and therefore I send you only the figure, and another yeare (if it please our Lord God) I will send you the same with the declaration thereof.

Maps of *China*.

All the rundles and squares which are therein are Cities, or Fortresses of many Inhabitants, both of them walled about. There is no Towne here set downe that it is not walled: the others are many more.

The Riuers are well distinguished. The great lines are the limits of the Prouinces: the other small lines, and of little circuit are the Iuridictions of some one principall Citie.

We print here another Map of all the World of our manner with *Chinish* Letters, which because wee want time to declare the Letters, I send not till the next yeare, which then we will send if our Lord grant vs life.

I send you many other Papers, that your Worships may see the fashion of the Letters of these people of *China*, and what Characters wee committed to memorie. From *Paquin*, beeing the Court and Royall Citie of the King of *China*, the ninth of March, 1602.

CHAP. VII.

A Diſcourſe of the Kingdome of China, *taken out of* RICIVS *and* TRIGAVTIVS, *contayning the Countrey, People, Gouernment, Religion, Rites, Sects, Characters, Studies, Arts, Acts; and a Map of* China *added, drawne out of one there made with Annotations for the vnderſtanding thereof.*

§. I.

Of the Name, Scite, and Greatneſſe; the Tributaries, Commoditie, Arts, Printing, Seales, Inke, Pencill-pennes and Fannes.

Here in the author begins l. 1 cap. 2. the firſt being a place: The diuers names of this Kingdome.

THis vtmoſt Empire in the Eaſt, hath beene made knowne to *Europe* by diuers appellations, as that of *Ptolemey*, *Sina*; that later of *Marcus Paulus* the *Venetian*, *Cathay*; and that moſt vſuall receiued from the *Portugals*, which call it *China*. I doubt not alſo that this is the Region of the *Hippophagi*, or *Horſ-eaters*, a meat there as common as Beefe here: as alſo that this is the Region *Serica* or *Silken*; foraſmuch as there is no Kingdome of the Eaſt where Silke is found in that quantitie: and the *Portugals* ſhip it thence for *Iapon*, and all *India*; the *Spaniards* alſo of the *Philippina* Ilands, fraight their ſhips therewith for all the *American* World. Moreouer, I find in the *China* Chronicles that this Silke-worke was there two thouſand ſix hundred thirtie ſix yeares before the Birth of Chriſt: whence it paſſed to the reſt of *Aſia*, to our *Europe* and to *Africa*. But in this varietie nothing ſeemes ſo ſtrange to me, as that all theſe names are ſo ſtrange to them, not knowne or once heard of, although the change of names be not ſtrange to that Countrey. For as often as the Empire paſſeth from one Family to another, according to the viciſſitude of humane Affaires: He which attayneth the Throne, impoſeth a name at his pleaſure. So hath it beene ſometimes called *Than* (which ſignifieth *exceedingly large*) another while *Yu*, that is, *Reſt*; after that ſucceſſiuely *Hia*, or *Great*; *Sciam*, *Adorned*; *Cheu*, *Perfect*; *Han*, *The Milkie way in Heauen*, *&c.* And ſince this Family, called *Ciu*, which now holdeth the Souereigntie, hath reigned, it is called *Min*, which intimateth *Splendour*, and by vſuall addition of one ſyllable *Ta-min*, that is, the Kingdome of *Great Splendour*, Brightneſſe or Glory. Yet doe few of their Neighbour Nations obſerue theſe changes of Names, whereby each of them almoſt, ſtile it by ſeuerall appellations. Thoſe of *Cocin*, *Cauchin-china*, and the *Siamites* call it *Cin*; the *Iapanders*, *Than*; the *Tartars*, *Han*; the Weſterne *Saracens*, *Catay*. Alſo amongſt the *Chinois* themſelues, beſides that arbitrary name ſo impoſed by their Kings, it hath ſome common to all Ages. Such are *Cumquo*, that is, the Kingdome; and *Chiumhoa*, which ſignifieth a Garden, a name ariſing from their Geography, beleeuing indeed the roundneſſe of the Heauen, but a ſquareneſſe of the Earth, and their Kingdome in the midſt thereof, a conceit growne out of conceit now, by better inſtruction of the Ieſuits.

The *China* cuſtome of changing names & yet this name *China*, *Sina*, or *Cathay*, vnknowne to them.

Conceit of the Earths forme.

Their King is called *Lord of the World*, and they ſuppoſed accordingly that their Kingdome contayned the principall part thereof; not deeming the Neighbour Kingdomes worthy to bee called *Kingdomes*, which yet before their Commerce with *Europeans* were all they knew. And not vnworthily is the name *Great* prefixed to their Kingdomes appellation, beeing the greateſt Kingdome in the World, which at this day carrieth One Name, or hath done in former times. For Southward it beginneth in the nineteenth degree, at the Ile which they call *Hainam*, that is, the *South-Sea*, and runneth into the North to the two & fortieth, euen to thoſe wals which diuide the *Chinois* from the *Tartars*. The longitude beginneth from the one hundred and twelfth (reckoning from the *Canaries*) in the Prouince *Yunan*, and extends Eaſt-ward to the Sea in one hundred thirtie two. Theſe Dimenſions wee haue obſerued in diuers places of the Kingdome where we haue paſſed, by Aſtrolabes and other Mathematicall Inſtruments; adding alſo the obſeruation of Eclipſes in their Almanacks, where the Moones Change and Full are iuſtly deſcribed, and ſpecially by authoritie of Coſmographicall Plaines. Yet if others which ſhall come after vs ſhall more exactly obſerue the longitude (which I dare ſay will be no great matter) I ſhall not vnwillingly yeeld. Hence may be obſerued that this ample Kingdome is for the moſt part within the temperate Zone; neither doth it extend ſo farre North-ward as ſome Maps haue deſcribed by many degrees. And leſt any ſhould thinke that ſome great parts of ſo large a Dominion

The Kings Title.

Largeneſſe of the Kingdome of *China*.

The temperate Climate.

Digitized by Google

nion be desert, I will here translate out of a *China* booke entituled, *The Description of that Kingdome*, there printed, 1579. that which followeth.

In the Kingdome (of China*) there are two Prouinces Royall,* Nanquin *the Southerne Court, and* Pequin *the Northerne, and thirteene others. In these fifteene Prouinces (you might call them Kingdomes) by another diuision are numbred one hundred fiftie eight Regions or lesse Prouinces, called by them* Fu; *the most of which haue twelue or fifteene Cities of reasonable quantitie, besides Villages, Hamlets, Castles and Townes. In these Prouinces are two hundred fortie seuen greater Cities, called* Cheu *(howbeit sometimes distinguished from other Cities rather in dignitie then largenesse) of vulgar Cities, which they call* Hien, 1152. *Of men growne to ripe age, which pay tribute or poll money to the King, were then fiftie and eight millions, fiue hundred fiftie thousand,* 801. *In all which the female sexe is not reckoned: and of the Masculine are omitted, Boyes, Youths, Eunuchs, Souldiers, the Royall kindred, Magistrates, Students, and very many others. And of the Souldiers, although there be a Supine peace (except some* Tartarian *assault sometimes) there are maintained in the Kings pay, and in perpetuall Armes, aboue ten* * *hundred thousand. For the three Northern Prouinces are almost halfe in pay. In that booke are numbred Kingdomes adioyning to that of* China *and tributarie; to the East three, to the West fiftie three, to the South fiftie fiue, to the North three. Yet I obserue that nothing so many doe in these dayes pay tribute, and those which doe, carry more from* China, *then they bring thither: and therefore the* Chinois *care not much whether they continue loyall or no.*

*Some say many more see the Map and notes.

To the worth of this Kingdome, may bee added, the fortification by Nature or Art round about it. To the South and East, the Sea washeth it, and so many Ilands guard it, that hardly can a Fleet of Ships approach the Continent. To the North, steepe *præcipices* are ioyned together, with a continued Tract of 405. leagues, and exclude the *Tartars* assaults. To the North-west is a sandy desart of many dayes iourney, which prohibite passage of an Armie, or minace their burialls. The South-west hath great Mountaines and little Kingdomes to preuent feare on that side.

Chap. 3.

From this largenesse of Territories proceeds such diuersified varietie of things growing in that Kingdome, some in the torrid, others in the colder or in the temperate *Zones:* whatsoeuer is required to the necessitie or delicacie of food or raiment being there naturall; nothing being here in *Europe* but either is there, or a better supply: Wheat, Barley, Panike, and other Corne; Rice, Pulse (in some Prouinces two or three haruests yeerely) fruits and Apples of the best (Nuts and Almonds excepted) Figs and others vnknowne in our world, as the *Licyas* and the *Longanas* in *Canton* Prouince onely; the *Sucusina* or *China* Figge, or Apple so called, because they may dry it as they do Figs, & liker to a Peach red, without hoarinesse or stone: in Oranges, Citrons, Limons they exceed all places. So doe they in goodnesse and varietie of Gardens, Herbs, as being there much vsed, some for religion, others for pouertie eating nothing else. Flowers haue there taken vp their bowers, admirably varied, more respected for sight then sent; the Art of distilling sweet-waters being there vnheard of. In the foure Southerne Prouinces grow *Betre* or *Betele* leafe, and the tree *Arequa* or *Arequeira*, so much vsed in *India*, and chewed all day long for their stomacke and teeth. *Sesame* Oile is both odoriferous and plentifull. Wine is not there so good as in *Europe* (the Grape being neither pleasant nor frequent) made of Rice and other things.

The commodities of *China*.

Fruits of all sorts.

Hogs-flesh is common food: they haue Buffalls, Muttons, Goats-flesh; Hennes, Duckes, Geese, innumerable: Horses also, Asses, Mules, and Dogs-flesh are food, and shamble commodities. In some places superstition abstaineth from Beefe and Buffalls, Venison, especially red Deere, Hare, and diuers domestick creatures are common; all cheape. Their Horses and Beasts of labour are not so goodly as in *Europe*, but more in number, and therefore in cheapnesse. The whole Kingdome is very commodious for passage by Riuers both naturall and hand-made: whence the number and kindes of shipping is incredible; insomuch that a moderne Writer hath auerred, that there are as many which keepe on the waters as on the land; an Hyperbole, yet not so exceeding the truth to such as saile these Riuers, as may bee seene to others. I am of opinion, that there are as many Ships in this Kingdome, as are in all the world beside in fresh-waters: for their Sea-shipping is fewer and not comparable with ours. But to returne to their Horses, the *Chinois* know not how to manage and breake them but by gelding; so that their Horses for seruice are innumerable, but so vnseruiceable, that they will not indure the neighing of the *Tartarian* Horse without flight. They shooe them not with Iron, so that in rockie and hard wayes they faile.

Fleſh for food.

Passages by water.

Store of shipping and water dwellers.

Horses.

Besides the Seas plentie of Fish and Riuers, they are stored also in Lakes, seeming for their depths and largenesse petie Seas. They haue more store of Fish-ponds also, then in these parts, whence the Market is daily furnished. Their Woods haue no Lions, but store of Tigers, Beares, Woolues, Foxes. Elephants there are not, but for pompe some kept at the Court in *Pequin*, brought from other places. Flaxe they haue not, but are supplied with abundance of Cotton, the seed whereof was brought thither foure hundred yeeres since, and hath so liked the soyle, that the whole world, as may seeme thence might haue sufficient. Of Silke-workes wee say no more. Of Hempe, and of some other Herbs, they make many clothes, especially for Summer

Fiſh.

Wilde beaſts.

Cotton.

Sale of cloth.

vſe

vſe. They milke not their Sheepe; they ſheare them, yet make no cloth of the Wooll (notwithſtanding, woollen-clothes brought thither by Merchants is well ſold) but light Summer clothes for blankets and other ſleight vſes. The North parts, though neerer the Sunne then ſome Regions in *Europe*, are colder, the great riuers and lakes frozen ouer, of which we can giue no reaſon, but the neighbouring Mountaines of *Tartaria*: againſt which they are furniſhed with choice Furres.

Metalls. All ſorts of metalls are there found. They make beſides Braſſe and Copper, another ſhining like Siluer, as cheape as the yellow Braſſe. Of molten Iron they make Kettles, Caldrons, Bells, Mortars, Ordnance, and other things. Their Gold is cheaper then with vs. Siluer they vſe for money, diſtinguiſhed not by ſtampe but weight, in all bargaining vſing the ballance, which is made the more incommodious for the differing goodneſſe of the Siluer, and frequent allay and fraud. In ſome places are Braſſe farthings. Plate and Gold veſſells are vſed by the greater, but nothing ſo much as in theſe parts. The women ſpend much Gold and Siluer in their head-tires.

Porcellane. The vulgar vſe earthen diſhes, called, I now not why, *porcellane*; the beſt whereof is made in the *Kiamſin* Prouince of a yellow earth. It endureth without riuing hot meates, yea as woodden

Glaſſe. diſhes here with a wyre, they ſowe the rifts and make them hold liquor. They make Glaſſe, but therein are ſhort of the *Europeans*.

Buildings. Their houſes are of Timber commonly, euen the Kings Palaces, the walls which ſerue for partitions of roomes being ſometimes of Bricke, but the roofe ſuſtained by Timbers: which together with their ſhipping argues their plentie of trees. Oakes are rare, but ſupplied with a hard

Hard Timber and Reeds. and euerlaſting wood with them vſed for coffins, in which their curioſitie will ſometimes ſpend a thouſand Duckets. There is alſo ſtore of a kinde of reed, which the *Portugalls* call *Bambu*, of almoſt Iron hardneſſe, the roundneſſe ſcarcely compaſſed with both hands, and ſerues for ſmaller poſts; the leſſer of them for Launces and other vſes. For fire they vſe Wood, Coles, Reeds,

Sea-cole. Straw, and a bituminous ſubſtance called *Mui* (a kinde of Mine-cole or Sea-cole) which is moſt and beſt in the North, digged out of the earth.

Rhubarb, *China*, Muske. Of medicinable herbs they haue diuers, ſpecially Rhubarbe, ſold for tenne halfe pence the pound: *China* Wood, or holy Wood growing in deſarts naturally, and thence taken for no other price but the labour: Muske; Salt both made of Sea-waters, and of others eaſily in the Continent; Sugar more common there then Hony, though both plentifull: Waxe both of Bees, and

Salt, Sugar, Home-waxe. another white and burning better made by certaine wormes, which therefore are nouriſhed in

Paper. trees; another alſo made of a certaine fruit: Their paper is not ſo during as ours, nor can endure the preſſe on both ſides.

I omit their parti-coloured Marbles, their gems, colours for paintings, odoriferous Woods,

Their drinke *Cha*, *Chia*, or *Cia*. &c. I cannot paſſe by ſome rarities; as their ſhrub whence they make their drinke *Cia*. They gather the leaues in the Spring, and dry them in the ſhadow, and keepe it for daily decoction, vſing it at meates, and as often as any gueſt comes to their houſe, yea twice or thrice, if hee make any tarrying. They ſup it hot, bitteriſh to the palate, but wholeſome: not of ancient vſe, for they haue no ancient Character in their bookes for it. The *Iapanders* pay deare for it, ten or twelue Duckets a pound for the beſt, and vſe it otherwiſe, putting the pouider of the leafe to hot water, as much as two or three ſpoonefulls: the *Chinois* put the leaues themſelues into the hot water, which they drinke, leauing the leaues behinde. They haue alſo a bituminous ſub-

Sandaracha, a rich Varniſh. ſtance like milke, ſtrained out of the barke of a tree, of pitchy cleauing, whence they make *Sandaracha*, a varniſh for their houſes and houſhold, ſhips, and other things: yeelding a ſmooth touch to the hand and glaſſie ſplendour to the eye with long continuance. Thus can they more then counterfeit the colours of any wood, and hereby are prouided againſt prouiſions of Napery, this ſeruing for Table linnen; they recouering any greaſie contagion with a little rinſing of water. They haue an Oyle alſo preſſed from an apple not vnlike it in vſe, but not ſo reſplendent.

Spices. They haue Cinamon and Ginger growing, Pepper and other Spices are brought from other parts. They haue ſtore of Gun-powder, not ſo much for Artillerie (which they can vſe but meanely) as for Fire-works in pompous ſpectacles, thereby repreſenting, Trees, Fruits, Battels, and other things with great Art and coſt. We ſaw at *Nanquin*, in the firſt moneth of the yeere, as much this way ſpent as would haue ſerued a continued fight two yeeres.

Chap. 4. Of their Arts in *China*. This is not to be vnderſtood of Temples, &c. as may appeare by *Nanquin* Temple, &c. For Mechanicall Arts, they are not comparable to our mens Architecture, whether yee regard the beautie or continuance of their buildings, they not ſo much as conceiuing or crediting the ſtately magnificence or long durance of ſome in theſe parts. They either make no foundation, or verie ſleight, and thinke a mans age to be age enough for a houſe, and that ſcarcely without reparations: their houſes being alſo of Timber, and where the walls are Stone, they haue Timbers to beare vp the roofe, that the wall may eaſily be repaired or renewed without meddling with the ſupporters.

Printing. Antiquitie and manner of it. Printing is ancienter there then here; ſome thinke before the Incarnation, and moſt certaine aboue fiue hundred yeeres old: much differing from ours becauſe of the multitude of their Characters. They graue or cut theſe Characters in a table of Peare-tree, Apple-tree or *Zizyphus*. In this

Digitized by Google

this Table they lightly glue on a whole leafe written, and then cunningly shaue the drie paper, that they make very little transparence; after which they cut the wood, that onely the prints or lineaments of the Characters are eminent: which done, with great facilitie and celeritie they print off leaues at pleasure, one Printer often 1500. in one day; so ready also in cutting, that to mee Ours seeme to spend as much time in *composing and correcting*. This course is more accommodated to their great Characters then to ours, whose little letters are not easily cut in woodden Tables. They haue this commoditie also, that keeping these Tables by them, they may with little labour adde or take away words or sentences: and need not at once print off any more Copies then present vse or sale requireth. Wee doe this with Bookes of our Religion or *European* Sciences, printing them at home by our *China* seruants. They haue another way of printing Characters or Pictures printed before in Marble or Wood, laying on a leafe of Paper moist, and on that a woollen Cloth, whereon they beate with a Hammer till the Paper insinuates it selfe into the voide spaces and lineaments of the Characters or Picture: after which they lightly colour that leafe with Inke or other colour, those delineations onely remayning white, and retayning the Prototype-figure. But this is for grosser Pourtraitures. Another way.

They are much addicted to pictures, but nothing so cunning in painting, founding, grauing, as *Europeans*. They make magnificent Arches with figures of men and beasts, and adorne their Temples with Idols and Bells, but their Genius otherwise generous and ingenious enough, for want of commerce with other Nations, is herein rudely artificiall. Shadowes and Oyle in picturing are to them vnknowne, and their Pictures therefore haue no more life of Art then Nature. In Statues, themselues seeme Statues for all rules of Symmetry any further then by the eye, and yet will be doing in huge (indeed) Monsters of this kinde, in Earth, Brasse, and Marble. Painting, grauing, founding.

Their Bells haue all woodden Hammers, which yeeld a woodden sound, not comparable to ours, nor seeming capable of those of Iron. Bells.

They haue variety and plenty of Musicall Instruments, yet want Organs and all that haue Keyes. Their Strings are made of raw Silke, and know not that any can be made of Guts. Musicall Instruments.

The Symmetrie of their Instruments is answerable to ours. All their Musike is simple and single-toned, vtterly ignorant of consort in discord-concord: yet much applaud they themselues in their owne Harmonie, howsoeuer dissonant to our eares. But this pride seemes to grow (as vsually it doth) from ignorance, and it is likely they would preferre ours if they knew it.

They haue scarcely any Instruments for measuring of (that which measures all things) Time; such as they haue, measure by water or fire, but very imperfectly, as is also their Sun-diall, which they know not to fit to differing places. Want of Hour-glasses, Glocks, and Dials.

They are much addicted to Comedies, and therein exceed ours; some practising the same in principall Townes, others trauelling thorow the Kingdome (or roguing, if you will) being the dregs of the Kingdome, buying Boyes whom they frame to this faigning facultie. Their Commedies are commonly antient, whether Histories or deuices, and few new written. Comedies.

They are vsed in publike and in priuate Solemnities; as also in Feasts, whereto being called, they offer to the Inuiter a Booke, in which to take his choise, the Guests looking, eating, drinking together; and sometimes after ten houres feasting, they will spend as much succeeding time in a succession of Interludes one after another. Their pronunciation is with singing accent, and not with the vulgar tone. Seales.

Seales are of great vse with them, not onely for Letters, but for their Poems also, Pictures, Bookes, and many other things. These contayne the name, sur-name, dignitie, and degree: neither content they themselues with one, but haue many, inscribing sometimes the beginning and end of their workes; not imprinting them in Waxe, or such like substance, but onely colour them red. The chiefe men haue on the Table a Boxe full of Seales, which containe their diuers names (for euery *Chinese* hath many names) and those of Wood, Marble, Iuorie, Brasse, Crystall, Corall, and better stones. There are many workemen of that *Seale-occupation*, their Characters differing from the vulgar, and sauouring of Antiquitie and Learning. Various substance esteemed liberall.

There is another Art not vnlike, of making Inke for all writing, made into little Cakes or Balls of the smoke of Oyle. For their estimation of exact writing makes the making of Inke also to be holden an Art not illiberall. Inke-making.

They vse it on a Marble smooth stone; with a few drops of water rubbing those Balls, and colouring the stone, thence taking it with a Pensill of Hares haires wherewith they write. Pensils in stead of Pens.

Fannes also are in much vse by both Sexes for the causing of winde to coole them in Summer. No man may goe abroad without a Fanne, although the weather be cold, and the winde already bee importunate: the vse being rather for ornament then necessitie. Fannes.

They are made of Reeds, Wood, Iuorie, Ebonie, together with Paper or Silke, and a certaine odoriferous Straw, in round, ouall, or square forme. The chiefe men vse them of Paper gilded with plaits to be let in or out, and therein inscribe some pithie sentence or Poeme. These are the most common gifts or presents (as Gloues in *Europe*) and we haue a Chist full of them sent vs by our friends. In other things the *Chinois* are liker ours, vsing Tables, Stooles, and Beds (which the adioyning Nations doe not, but sit on Carpets on the floore) to eate or sleepe.

Of their Characters and writing downward: their ſtudies, Ethikes, Aſtrologie, Phyſike, Authentike Authors, Degrees how taken both Philoſophicall and Militarie.

Cap.5. Monoſyllable Language, as alſo our proper *Engliſh* is almoſt wholly.

NOw, for their more liberall Arts, and Literate-degrees, this Kingdome differs from all others: in which their Learned beare principall ſway. The *China* words are Monoſyllables, not one otherwiſe, howſoeuer two or three *Vowels* ſometimes are conioyned into one *Diphthong*, to ſpeake after our manner; for they haue not *Conſonants* nor *Vowels*, but diuers Characters for ſo many things, and as many of them, as there are Words, ſo that a Word, Syllable, Letter, are the ſame; and when we ioyne diuers Syllables to make one Word, it is after our faſhion, becauſe they ſignifie the ſame thing; with them each Syllable is a ſeuerall word. And although the number of things and Characters ſeeme the ſame, yet doe they ſo compound them together, that they exceed not ſeuenty or eighty thouſand: and hee which knoweth ten thouſand of them, hath the moſt neceſſary: to know all is in manner for any one man impoſſible. Of theſe Characters the ſound is often the ſame, the figure and ſignification differing: ſo that no Language is ſo equiuocall; nor can any Speech bee written from the Speakers mouth by the Hearer, nor can a Booke bee read to the Hearers vnderſtanding, except they haue the Booke before them, by their eyes to diſtinguiſh the equiuocations which their eares cannot. Yea, in ſpeaking accuratly, the Hearer often vnderſtands not without repetition and writing either with Inke, or water on the Table, or forming the Characters in the aire; and this moſt happens in the moſt elegant and polite diſcourſes (the ſtile of Bookes and Inkhorne-dialect of their learned, wholly differing from the vulgar Idiome.) This equiuocation and paucity of ſounds is in ſome ſort eaſed by *Accents*, which are fiue, and not eaſie to diſtinguiſh; by which of one Syllable (as wee account it) they make it with differing tones fiue fold in differing ſignification: and there is no Word which is not pronounced with one of theſe Accents. Hence is the Language ſo difficult as none elſe in the World for Strangers to learne to ſpeake and vnderſtand; which importunate labour of ours hath yet attayned. The reaſon I conceiue to be that they alway haue laboured to adorne their writing more then their ſpeech, their eloquence ſtill conſiſting in writing and not in pronunciation, as *Iſocrates* is commended amongſt the *Greekes*.

70000. Characters.

Equiuocations

Fiue Accents.

Hardneſſe of *China* Speech.

Eloquentia ſine eloquio.

This multitude of Characters, as it is burthenſome to the memory, ſo it hath this commodity, the commerce with diuers Nations of different Linguages by community of writing; *Iapon, Corai, Cauchinchina*, the *Leuhiees*, vnderſtanding and reading the Characters, each into his owne Language, which the other vnderſtand nothing at all. Each Prouince alſo hath its owne, and all haue one common Tongue beſides, which they call *Quonhoa*, or the Court Language (the Magiſtrates being all forrainers, and none bearing Office in his Countrey Prouince) vſed in their Courts, and by the Learned: this onely did ours learne, nor is the other vſed by the ciuiller or learneder in conference, except priuatly by Countrey-men: yea, children and women learne this Court-ſpeech. I heare that the *Iaponians* haue an Alphabet alſo of Letters after our faſhion, beſides theſe Characters; but in *China* they haue none, ſo that from their Cradle to the extremeſt age they are learning their Characters, as many as profeſſe Learning: which howſoeuer it takes vp time from better Sciences, it doth it alſo from idle youthfull vanities. Hence alſo riſeth a kinde of writing with them, in few Characters expreſſing that which would coſt vs long diſcourſes. Their courſe of writing is from the right hand, the line downward, ours contrary from the left and ſide-wayes.

Many Nations and Languages haue the ſame Characters.

Court Language.

Their writing.

Of all the nobleſt Sciences they are beſt skilled in morall Philoſophie (naturall, they haue rather obſcured) and being ignorant of Logicke, they deliuer thoſe Ethicke precepts in confuſed ſentences and diſcourſes without order by meere naturall wit. Their greateſt Philoſopher is called *Confutius*, whom I finde to haue beene borne 551. yeeres before the comming of *Chriſt*, and to haue liued aboue 70. yeeres, by example as well as precept exciting to vertue, accounted a very holy man. And if wee marke his ſayings and doings, wee muſt confeſſe few of our Ethnike Philoſophers before him, and many behinde. But with the *Chinois*, his word is authoritie, and no ſpeech of his is called in queſtion; the *Learned*, yea the Kings alſo, euer ſince worſhipping him, not as a God, but as a Man; and his poſteritie are much eſteemed, the head of that familie inheriting by grant of Kings a title of great honour, with immunities and reuenues anſwerable.

Morall Philoſophie.

Confutius. His heroike honours.

They haue ſome knowledge alſo of Aſtrologie, and the Mathematikes: In Arithmetike and Geometry antiently more excellent, but in learning and teaching confuſed. They reckon foure hundred Starres more then our Aſtrologers haue mentioned, numbring certaine ſmaller which doe not alway appeare. Of the heauenly *Apparances* they haue no rules: they are much buſied about foretelling Eclipſes, and the courſes of Planets, but therein very erroneous; and all their

Mathematikes.

Phœnomena.

skill

skill of Starres is in manner that which wee call Iudiciall Astrology, imagining these things below to depend on the Starres. Somewhat they haue receiued of the Westerne *Saracens*, but they confirme nothing by Demonstration, only haue left to them *Tables*, by which they reckon the Eclipses and Motions: Colledges.

The first of this Royall Family forbad any to learne this Iudiciall Astrologie, but those which by Hereditary right are thereto designed, to preuent Innouations. But he which now reigneth mayntayneth diuers Mathematicians, both Eunuches within the Palace, and Magistrates without, of which there are in *Pequin* two Tribunals, one of *Chinois*, which follow their owne Authors, another of *Saracens* which reforme the same by their Rules, and by conference together. Both haue in a small Hill a Plaine for Contemplation where are the huge Mathematicall Instruments of Brasse before mentioned: One of the Colledge nightly watcheth thereon as is before obserued. That of *Nanquin* exceeds this of *Pequin*, as being then the Seat Royall. When the *Pequin* Astrologers foretell Eclipses, the Magistrates and Idoll Ministers are commanded to assemble in their Officiary Habits to helpe the labouring Planets, which they think they do with beating brazen Bels, and often kneelings, all the time that they thinke the Eclipse lasteth, lest they should then bee deuoured (as I haue heard) by I know not what *Serpent*. Eclipses.

Their Physicke Rules differ much from ours; they examine the Pulse alike. They succeed well in their Prescriptions, which vsually are Simples, Herbs, Rootes, and the like. They haue for it no publike Schoole, but each learnes it of his owne Master, yet in the two Royall Cities Degrees of this Art are giuen after Examination, but cursorily and without any respect acquired by his Degree, because all may practise which will. Neyther doth any study Mathematickes or Physicke, which is in any hope of the Ethike glory, but such as want of wit or meanes hath deterred from studies more sublime. Contrariwise, that Ethike Science is the Ladder of *China* felicity. *Confutius* brought into order the Bookes of foure former Philosophers, and wrote a fift himselfe, which fiue Bookes hee called *Doctrines:* in which are contayned Morall and Politike Rules, Examples of the Ancients, Rites and Sacrifices, diuers Poems also and the like. Besides these fiue Volumes, out of *Confutius* and his Disciples are brought into one Volume, diuers Precepts without order, Similes, Sentences Ethike, Oeconomike, Politike: this Booke for the foure parts is called the *Foure Bookes*. These nine are the ancientest *China* Bookes, whence the others most what are taken, and contayne most of their Characters. And the ancient Kings enacted that they which professe Learning, should take the foundations of their Learning from those Bookes, not only to learne the proper sense of the Text, but to bee able on the sudden to write fitly of any sentence, for which cause that *Tetrabiblion* is learned without Booke. Neyther is there any *Vniuersitie* or publike Schoole (as some of ours haue affirmed, the Masters or Professors whereof haue vndertaken to read and expound those Bookes; but euery one gets a Master at home at his owne choice and cost (of which there is a huge multitude.) In this Science are three Degrees bestowed on them which offer themselues to be examined and are iudged meete. That Examination is almost wholly in Writing. The first Degree is conferred in euery City in that place which is called the Schoole, by some learned man designed to that Office by the King, who is by that place called *Tihio*; the Degree is termed *Sieucai*. A threefold Examination is premised. First, at his comming to any City of his Prouince, all that stand for that degree in that City, and the confining limits thereof resort thither and are examined by those Masters which are set ouer the Bachelours till they haue attayned further Degree, mayntayned by the Kings stipend. In this Examination euery one is admitted, perhaps foure or 5000. assembled to that purpose. The second is by the foure Gouernours of the City (for none are admitted to Gouernment but the *Learned*) which present out of all that number 200. of the better Writers to the *Tihio*, and he in a third Examination chuseth 20. or 30. of the best, which he entituleth *Bachelors:* their Ensignes are a *long Gowne, a Cap, and Boots*, which none else may weare, & in all places they are much respected as in a ranke aboue the vulgar Citizens, and enjoy also diuers Priuiledges, being in manner subject only to the Masters aforesaid and the *Tihio*, other Magistrates scarsly medling with them. This *Tihio* not only hath authority ouer these new created Bachelors, but euer those which were made before to re-examine them: and these according to their writing hee diuideth into fiue rankes; the first he rewardeth with some publike Office in the City, the second with some inferiour honour, the third he neyther rewards nor punisheth, the fourth he causeth to be publikely whipped, the last he degradeth and maketh againe Plebeians. The second Degree is called *Kiugin*, and may be compared with our *Licentiates*, and is conferred but once in three yeares, and that in the Metropolitane City about the eight Moone with greater Majesty. And the degree is not conferred to all, but to a certayne number of the worthiest, according to the dignity of each Prouince: *Pequin* and *Nanquin* haue each 150. *Cequian*, *Quamsi*, and *Fuquian* 95. others fewer. Only Bachelors, but not all, are admitted to this Examination, the *Tihio* sending out of each City or Schoole 30. or at most 40. of the best, which number yet ariseth in some Prouince to 4000. of those Examinates or Probationers for this second degree. A little before the eighth Moon (which often fals in September, the *Pequin* Magistrates present to the King 200. of the most esteemed Philosophers in the Kingdome, who thence pricketh or nameth thirty, for each Prouince two, to take

take charge of the Examination of theſe Candidates. One of theſe two muſt bee of the *Hanlin Colledge*, the Collegians whereof are moſt famous thorow the Kingdome. The King doth not name them till that nicke of time when they muſt preſently packe to their Prouince, diligently guarded alſo that they ſpeake with none of that Prouince till the *Act* or *Commencement* be paſt. In the ſame Prouince alſo are choſen the beſt Philoſophers to aſſiſt theſe two Examiners. In euery *Mother City* is a huge Palace built for this purpoſe, compaſſed with high wals, with many ſtations for the Examiners ſeparate from noyſe; and foure thouſand Cels or Studies beſides in the midſt of the Palace, wherein is a ſtoole and table for one man, that none may ſee or confer with any other.

Palace of examination.

When the Examiners ſent by the King, and thoſe of the Prouince are come thither, they are preſently ſhut vp in their ſtations before they can ſpeake with other men, or with each other, during all the Examination time. Night and day, meane-whiles the Magiſtrates and Souldiers guard the Palace from Colloquies. Three dayes (the ſame thorow the Kingdome) the ninth, twelfth and fifteenth of the eighth Moone, from morning to night are appointed for their writing, the doores being ſhut. A light refection prouided the day before is giuen to the Writers at publike coſt. When the Bachelors come to the Palace, they are thorowly ſearched whether they haue any Booke or Writing with them, and are admitted only with the Penſils which they vſe in writing, their Plate, Paper and Inke; theſe alſo and their Garments ſearched to preuent all fraud, which found cauſeth the twofold puniſhment both of loſſe and ſence. When they are admitted, the doores ſhut and ſealed, the two Royall Examiners out of the *Tetrabiblium* propound three Sentences for ſo many Theames to euery of them; and foure out of the fiue Bookes of *Doctrines* for ſo many other Theames. Theſe ſeuen Writings muſt bee made for elegance of words and weight of Sentences according to the Precepts of *China* Rhetoricke; neyther muſt any Writing contayne aboue 500. Characters. Two dayes being paſſed for the Examinationn of theſe; the next day out of the Chronicles, or other three Caſes of Politie are propounded, wherein each which three Theames or Writing expreſſe their minde, or Libel-wiſe admoniſh the King what were fitteſt to be done. The third day three Law Caſes, ſuch as happen in the Magiſtrates, Offices are propounded, for each thereof to expreſſe his Sentence. Theſe in great ſilence, each in his appointed Cell, hauing written their Theames, ſubſcribed with their owne, their Fathers, Grand-fathers and great Grand-fathers names, and ſealed ſo that none but men appointed may reade them, offer them to certayne Officers, which before the Examiners ſee them; cauſe them to bee tranſcribed by certayne thereto appointed: which Copies to be diſtinguiſhed from the Originals are written in Red Inke, without the Authors names (the Originals laid vp ſafely) that none might by the hand or name know the Authour. In this Examination the Aſſiſtants firſt reiect the worſt & preſent vnto the two Examiners twice ſo many as are to be choſen Licentiates; as if one hundred and fifty are to bee choſen, three hundred are tendered to paſſe their laſt ſcrutinie: who firſt lay by the beſt, ſo many as are to bee elected (and thence take the firſt, ſecond, and third, and ſet them accurately in order, and then conferre them with the Originals, thence taking the names which they cauſe to bee written in great Cubitall Letters, in a huge Table, which they expoſe about the end of the eighth Moone in great concourſe of Magiſtrates, and applauſe of the new Elects Friends and Kindred. The Priuiledges and Ornaments of this Degree are more then of the former, and if they intend to proceed no further, they are hereby capable of very good Magiſtracies. After the Act, the Kings Examiners publiſh a Booke of their proceedings, the names of the Graduates and their principall Writings, eſpecially his which is as the *Elder Brother* (they call him *Quiayuen*) and whoſe Theames were beſt liked. The Bachelors of other Prouinces may not here be admitted; ſome only except of the Kings Schoole in *Pequin* and *Nanquin*.

Dayes of Examination.

Theames giuen.

Seuen writings

Care to auoid corruption.

Creation and Priuiledges.

The third Degree is like our Doctorſhip, called *Cin-ſu*, which is conferred euery third yeare alſo, but onely at *Pequin*, and alway is the next yeare after that Commencement of Licentiates. Only three hundred choſen ou of the whole Kingdome obtayne it, although the Licentiates of euery Prouince are admitted to the Examination.

Third degree as of Doctors called *Cinſu*.

This Act is in the ſecond Moone on the ſame dayes that the former and in like forme, ſauing that the diligence is greater, as for a greater degree, and the *Colai*, the chiefe Magiſtrates of the Kingdome are Examiners. The Doctors being pronounced in the ſame Palace, where the Licentiates vſe to bee; all of them in the Kings Palace, before the chiefe Magiſtrates of the Court (yea anciently the King was wont to bee preſent) make a Theame, according to the iudgement whereof, the order of the Magiſtracies which they are to beare, is declared, being diſtributed in three Rankes.

Colai.

Hee that in Examination of Doctors had the firſt place, hath in this ſecond Examination the third place without queſtion: but hee which hath the firſt or ſecond enioyeth a great dignitie during his life, beſides the greateſt Offices in the Common-wealth; and might (compared with ours) bee as a Duke or Marqueſſe, if it were Hereditary. Theſe Doctours preſently haue their peculiar *Veſt*, *Cap*, *Bootes*, and other Enſignes of Magiſtrates, and are preferred to the beſt Offices, ſuch as the Licentiates may not attayne, and are as the prime men of the Kingdome.

First and ſecond place glorious.

Thoſe

Digitized by Google

Thoſe Licentiates which are rejected from the Doctorſhip, if they meane to proceed no further, are preferred to Magiſtracie; but if they liſt ſtill to ſtand for that degree they betake themſelues home to their Bookes afreſh, till the third-yeare-examination returnes, ſo that ſome ſtand ten times, continuing ſo long priuate to become more publike. A Booke is alſo publiſhed of them and of their ſucceſſe. Another is yearely ſet forth contayning the Names, Countrey, Parents, Offices of all the Doctors; and where they gouerne; whereby a man may know how any hath riſen or deſcended all his life, as is there vſuall after their merits. It is remarkable alſo how the Licentiates and Doctors of the ſame yeare reſpect one the other as Brethren euer after, and loue the Friends alſo of their Colleagues, and honour their Examiners as Fathers. Ambition will be higheſt or nothing.

They vſe to grant at the ſame times and places the ſame Titles (in the Moone following) to Military Profeſſors, but with leſſe pompe, becauſe Souldierie is of no ſuch reckoning with them, and few ſtand for them. This Military tryall is three-fold, in the firſt they ſhoot nine Arrowes on Horſe-backe running; in the ſecond they ſhoot as many at the ſame marke ſtanding: and hee which hath hit the Marke with foure on Horke-backe and two Arrowes on foot, is admitted to the third tryall wherein they haue ſome Theame of Military matters propounded, and the Iudges examining this Triple tryall out of the whole number pronounce about fifty Licentiates in euery Prouince. And when the Doctorall Act is at *Pequin*, one hundred of the choice of theſe after a Triple Examination are made Military Doctors. Theſe Doctors are more eaſily admitted to Military Prefectures (but ſcarcely without Bribes) then the Licentiates. Both the Philoſophicall and Military, ouer their doores, ſet vp in great Letters this their new attayned dignity. All the Examiners, whether of Mathematicall, or Military, or Philoſophicall degrees, are of thoſe Philoſophers, without aſſiſtance of any Captaine, Mathematician, or Phyſician, as if thereby they were inabled to all things. Military degrees. Threefold tryall.

§. III.

Of the Tartarian *Conqueſt*; *Of* HVMVV *the Eſtabliſher of the preſent Gouernment. The Reuenues. Magiſtrates in the Courts Royall, Prouinces, Cities, Orders, Exaltations, Viſitations, Depriuations.*

THe Gouernment of *China* is Monarchicall. In times paſt, there haue beene *Lords of Title*, as are Dukes, Marqueſſes, and Earles in *Europe*, but taken away eighteene hundred yeares ſince. It was neuer ſubdued by any Forreiners before the *Tartarian* Conqueſt. The Ieſuites thinke that that Conquerour was *Tamberlane*: for the *Chinois* call him *Tiemor*, and ſay that he had before ſubdued *Perſia* and *Tartaria*. Hee (whoſoeuer hee was) conquered all the *Chinois* and left them to his Poſterity till the yeare 1368. At that time the *Tartarians* growing weaker, diuers Captaynes aroſe in diuers parts of the Kingdome which ſhooke off that yoke. Amongſt them all the moſt famous was of the Family *Ciu*, whom afterwards the *Chinois* called *Humvu*, a famous Captayne, or rather *a Floud of Armes*. He of a common Souldier grew to ſuch greatneſſe, that hee firſt expelled the *Tartars*, and then repelled the Rebels thorow all the Kingdome, and poſſeſſed that Souereigntie which ſtill continueth in his Line. For the Crowne there goeth by Inheritance: only two or three of the Ancient Kings haue commended it to others, their owne Sonnes ſeeming vnworthy; and the people haue by Rebellion ſometimes rayſed a new Family, diuers yet loſing their liues rather then acknowledging that Faction, this being Prouerbiall in their Philoſophie, *An honeſt Woman hath but one Huſband, and a faithfull Seruant but one Lord.*

There are no ancient Lawes, but the firſt Founder of any Royall family makes new Lawes, which his Poſteritie are not eaſily permitted to tranſgreſſe. So the preſent Lawes of *China* are no ancienter then *Humvu*, who either made new, or confirmed the old. Out of ignorance of other parts of the world, they thinke their King *Lord of the World*, and call him *Thiencu, the Sonne of Heauen*, or (which is all one in their Theologie) *of God*. His vſuall title yet is *Hoamſi*, that is, *ſupreame Monarch*: whereas they ſtile other Kings *Guam*, an inferiour title. To preuent Rebellions and Factions. *Humvu* ordayned that none of the Royall bloud ſhould intermeddle with Gouernment. Thoſe Captaynes which had ayded him in expulſion of the *Tartars*, hee gaue militarie Commands with reuenues and titles, to deſcend to their Heires. The Royall race hee gaue the titles of *Guam*, as pettie Kings, with large reuenues to bee yeerely payed out of the Exchequer, and commanded all Magiſtrates to reuerence them. Their Poſteritie hee honoured with inferiour Honours and reuenues, ſo much leſſe as further from the originall, and after certaine generations to haue no more then might well maintayne them without labour. The like in Marriages and Titles were prouided for the Royall Daughters. Thoſe aſſiſting Captaynes he honoured with a plate of Iron like a Charger, in which are engrauen thoſe their exploits for deliue-

Chap. 5. *Polo* hath related the Conqueſt of *Mangi* by *Cublai Can*, whoſe ſucceſſor (and perfecter haply of that Conqueſt) was *Temur* or *Tamor*, *ſup.* 83. & 126. about 100. yeares before *Tamerlane*, yet it ſeemes they were not fully ſubiect (for *Mandeuile* ſeruid in the warr of *Ecbiant Can* againſt *Mangi*. *ſup.* 135.) till *Tamerlane*; of whom, ſee *ſup.* 154. But to aſcribe it to *Tamerlane*, and to end the *Tartars* Reigne at 1368. argues ſmall skill in Hiſtory of the *Tartars*, *Tamerlane* then being but young, if ſo ſoone borne. The time (how euer) is here miſ-reckoned.

Digitized by Google

liuerance of the Kingdome; which being shewne to the King, is priuiledged with pardon of any penaltie, though mortall, three times, except for Treason which forfeiteth presently all Priuiledges. Euery time it obtaynes any pardon, it is engrauen in the Plate. The Sonnes in Law, and Fathers in Law of the King, and some which haue extraordinarily merited of the State, enjoy like Honours and Reuenues with the same diminution of time, as before.

Magistrates.

He also ordained that all Magistracie and Gouernment should belong to those Licentiates and Doctors, whereto neyther the fauour of the King or other Magistrates are necessary, but their owne merits, except where corruption frustrates Law. All Magistrates are called *Quonfu*, and for honours sake they are stiled *Lau ye* or *Lau sie*, that is, *Lord*, or *Father*. The *Portugals* call them *Mandarins*. These haue some representation of *Aristocratie*, in that Gouernment: for though they doe nothing but first petitioning the King, hee also determines nothing without their sollicitation. And if a priuate man petitions (which is seldome, because Officers are appointed to examine Petitions before the King sees them) the King, if hee will grant it, sends it to the Tribunall proper for that businesse, to aduise him what is fit to bee done. I haue found for certaine, that the King cannot giue Money or Magistracie to any, except hee bee solicited by some Magistrate: I meane this of publike Reuenues; which doubtlesse doe exceed one hundred and fiftie Millions yearely, & are not brought into the Palace Treasurie, nor may the King spend them at his pleasure: but all whether Money or Rice and other things in kinde, are layed vp in the publike Treasuries and Store-houses, in all the Kingdome. Thence the expenses of the King his Wiues, Children, Eunuches, Family, and of all his Kindred are in Royall sort disbursed, but according to the ancient Lawes, neither more nor lesse. Thence the Stipends of Magistrates and Souldiers and all Officers thorow the Kingdome are paid: the publike Buildings, the Kings Palace, Cities, Walls, Towres, Fortresses and all prouision of War are thence sustayned, which cause new Tributes sometimes to be imposed, this huge Reuenue notwithstanding.

Quonfu and *Lau Ye* or *Lau Sie*.

Mandarin a *Portugal* name.

Kings Reuenues 150. Millions.

How dispensed

Of Magistrates are two sorts, one of the Court which rule there, and thence rule the Kingdome; and other Prouinciall, which gouerne particular Cities or Prouinces. Of both sorts are fiue or six Bookes to be sold euery where, printed twice each moneth at *Pequin*, as by their course of printing (you haue seene) is easie; contayning nothing else but the name, Countrey, and degree of the Magistrates; and therefore printed so often because of the exaltings, shiftings, setting lower, death of Parents (which suspends three yeares to mourning in priuate) their owne deaths or depriuations.

Bookes of Officers.

Of the Court Tribunals are reckoned sixe; the first, *Li pu* (*Pu* is asmuch as *Tribunall* or *Court*, and *Li*, as *Magistrates*) to which it belongeth to name the chiefe Magistrates of the Kingdome, bringing vp from the lower to the higher according to the Lawes prescribed, or if they deserue it, abasing or quite depriuing them. For those Licentiates and Doctors continually ascend, except their owne faults deject them, wherein a depriuation makes for euer vncapable. The second is called *Ho-pu*, that is, the Exchequer Court, or that of the Treasury; which exacts and disburseth the Kings Reuenues. The third is the *Li-pu*, or Court of Rites, which ordereth the publike Sacrifices, Temples, Priests, Kings, Marriages, Schooles, Examinations, Festiuall Dayes, common Gratulations to the King, Titles giuen to the wel-deseruing, Physicians, Colledges of Mathematicians, entertayning and sending Embassages, with their Rites, Presents, Letters; the King holding it abasing to his Majesty to write to any. The fourth, is the *Pimpu*, or Military Court, which rewards the meriting, and takes from the sluggish Souldier; ordereth their Musters and giues Military degrees. The fifth is *Cumpu*, which hath care of the publike Buildings, Palaces for the King or his Kindred, and the Magistrates; Shippes for publike burthens or Armadas, Bridges, Walls of Cities and all like prouisions. The sixth Court is *Himpu*, which inquireth into Criminall Causes and sentenceth them; also all the publike Prisons are subject hereto.

1. *Li pu*, or Court of Magistrates.

2. *Ho-pu*.

3. *Li-pu*.

4. *Pimpu*.

5. *Cumpu*.

6. *Himpu*.

All the affaires of the Kingdom depend on these Courts, which therefore haue Magistrates and Notaries in euery City and Prouince, to admonish them faithfully of all things, the multitude and order facilitating this so weighty a Designe. For first, in euery Court is a Lord Chiefe Iustice or *President* called *Ciam Cuu*, who hath two Assistants, one sitting at his right hand, the other at his left, called *Cilam*: their dignity in the Royall Cities is accounted principall. After these euery Tribunall hath diuers Offices, each of which hath diuers Colleagues, besides Notaries, Courtiers, Apparitors, and other Seruants. Besides these Tribunals there is another the greatest in the Court and Kingdome; they call them *Colaos*, which are three or foure, sometimes sixe which haue no peculiar businesses, but take care of the whole Re-publike, and are the Kings Priuy-Counsell in all Affaires. These are daily admitted into the Kings Palace, and there abide whole dayes, and answere as they see cause to the Petitions which are put vp to the King (who was wont to define matters with these *Colai* in publike) and shewing their answere to the King, hee alters or approoueth the same, and sets his hand thereto for the execution.

The President or *Ciam Ciu*. *Cilam*.

Colai, or Counsell of State.

Besides these Orders of Magistrates and others not mentioned (as like to our owne) there are two sorts not vsuall with vs; the one *Choli*, the other called *Zauli*. In each of these Orders are aboue sixty choice Philosophers, men approued for their wisdome and courage before experienced.

Choli and *Zauli* Magistrates extraordinary.

Digitized by Google

ced. These two Ranks are vsed by the King in *Court* or *Prouince businesses* of greater weight, with great and Royall power, which causeth to them great respect and veneration. These by Libell admonish the King if any thing be done contrary to the Lawes in any parts of the Kingdome, not sparing any of the Magistrates, nor the Kings Houle, nor the King himselfe; to the wonder of other Nations. And although the King sometimes bee touched to the quicke, and toucheth them to the quicke againe, yet cease they not still to rip the sore till it be cured. Other Magistrates may doe it, yea any priuate man, but these mens Libels or Petitions are of most worth, as proceeding from their peculiar Office. The Copies of them and of the Kings answers are printed by many, so that the Court and State Affaires flye thorow the Kingdome, and are by some written in Bookes, and those of most moment transcribed into the Annals of the Kingdome. Of late when the King would for loue of a second Sonne haue excluded the eldest, so many by Libels reprehended the King, that he in anger deprined or abaled one hundred of the Magistrates. They yet ceased not but one day went together into the Kings Palace, and offered vp their Magistracies if he persisted to breake the Law. Lately also when the chiefe of the *Colao* did not obserue the Law, in two moneths space about one hundred Libels were put vp, notwithstanding they knew him a great Fauourite; and hee dyed within a while after, as was thought, of griefe. See *Fanxid.*

There are also besides Magistrates, not a few Colledges instituted for diuers purposes, but the most eminent is that called *Han lin Yuen*, into which none are chosen but choice Doctors after due Examinations. They which liue in that Royall Colledge, meddle not with Gouernment, yet are of higher dignitie then the Gouernours. Their Office is to order the Kings Writing, to make Annals of the Kingdome, to write Lawes and Statutes. Of these are chosen the Masters of the Kings and Princes. They wholly addict themselues to their studies, and in the Colledge haue their degrees of honours, which they attayne by writing. Thence they are preferred to great dignities but not out of the Court. Neither is any chosen to bee a *Colao*, but out of this Colledge. They gaine much also by Writings for their Friends, Epitaphs, Inscriptions and the like; which all seeke to haue of them, their name giuing credit and reputation of Elegance. These are the chiefe for Examinations of Licentiates and Doctors, who hold them for Masters and send them Presents. Colledges. *Han lin Yuen.*

All these *Pequin* Magistrates are found also at *Nanquin*, but obscured by the Kings absence. *Hum vu* had fixed his Seat at *Nanquin*, but after his death *Yun lo* one of his Nephewes, who in the Northerne Prouinces defended with an Armie those Borders against the *Tartars*, perceiuing *Hum-vus* Sonne but weake, thought to depriue him of the Kingdome, which hee effected by helpe of the Northerne Prouinces, and with force, fraud and largesse obtayned his Vncles Throne. And because he was strongest in the North parts, and most feard was from the *Tartars* there, he there fixed his Residence, where the *Tartar* Kings had wonted to abide and called that Citie *Pequin*, that is, *the Northerne Court*, as *Nanquin* signifieth *the Southerne*, leauing to this the former Offices and Immunities. Cause of the remouing the Seat Royall from *Nanquin* to *Pequin*.

The Gouernment of the other thirteene Prouinces depends on two Magistrates, the one *Pucinsu*, the other *Naganzasu*: the former judging Ciuill Causes, the later Criminall; both residing with great Pompe in the Mother Citie of the Prouince. In both Courts are diuers Colleagues and they also chiefe Magistrates called *Tauli*, which gouerning other Cities often reside in them. The Prouinces are all distributed into diuers *Regions*, which they call *Fu*, each of which hath a peculiar Gouernour called *Cifu*. These Regions are subdiuided into *Ceu*, and *Hien*, that is the greater or more eminent Townes, and those which are more vulgar, which are not lesse then our Cities, if you except our greatest. These haue their speciall Gouernours called *Ciceu* and *Cihien*. The Gouernours of Cities and Regions haue their foure Assistants and Colleagues as Auditors, and Iudges to helpe them. As for the opinion of some that thinke those only to bee Cities, which are called *Fu*, and *Ceu*, and *Hien* to bee Townes, it is an errour: for the City wherein the Gouernour of the *Region* resides, is also called *Hien*, and hath its peculiar Gouernour called *Cihien*, and *Assistants*; and the *Cifu* hath no more power there then in other places of his Iurisdiction; which is the first Appeale to him as Superiour from the *Cihien* or *Ciceu*. The second Appeale is to the *Pucunfu* and *Naganzosu* and their Colleagues in the Metropolitane Cities, which Cities likewise haue their *Cihien* and *Cifu*, aswell as the Subordinate; all in incredible Symmetrie. Prouinciall Gouernment. *Pucin-su. Naganzasu. Tauli.* Diuision of Prouinces. Regions or Shires. *Ceu* and *Hien*. Title *fu* mistaken. *Cifu*, *Cihien* and *Ciceu*. Appeales.

And because the whole Prouinciall Gouernment hath reference to *Pequin*, therefore in euery Prouince besides these, are other two superiour to them sent from the Royall Citie, the one fixing his Residence in the Prouince, called *Tutum*, which may bee compared to our *Vice-roy*, hauing command ouer other Magistrates, and in Martiall affaires: the other is yeerely sent from the Court, and is called *Cia-yuen*, as a Commissioner or *Visitor*, which reuiewes all the Causes of the Prouince, the Cities also and Castles, inquireth of the Magistrates, and punisheth some of the meaner sort, acquainting the King touching the rest, how euery one demeaneth himselfe; and he onely executeth Capitall puuishments. Besides these, are many others in Cities, Townes and Villages: and beside them, many which haue command of Souldiers, especially in the Con- *Tutam.* *Cia-yuen* or *Chaen.*

Militarie commands.

Magistrates fees.

Robes and Ornaments.

fines and on the Coasts in supinest Peace, watching and warding in Ports, Walls, Bridges, Castles, as in the hottest Warres, with Musters and Martiall exercises. All the Magistrates of the Kingdome, are reduced to nine Orders, whether you respect the Philosophicall or Militarie Senate: to all which out of the Treasury is proportionably distributed monethly pay, Money or Rice; yet little answerable to that their Magnificence (the highest Order not hauing one thousand Duckets yeerely) and equall to all of the same ranke, the supreame in matters of Warre hauing as much as the supreame in the literate Order, if you looke to that which the Law alloweth. But much more accrueth extraordinarie then this fee or stipend, besides what any mans industrie, couetise, fortune, bribing addeth, by which they oft attayne to great wealth.

All the Magistrates vse the same Caps, both Mercuriall and Martiall, of blacke Cloath with two Eares or wings, of Quall figure, which may easily fall off, which being a disgrace, causeth the more modestie and steadinesse in carriage of their heads. They all weare like *Vest*, and like blacke leather *Bootes* of peculiar fashion; also a *Girdle* wider then the body, about foure fingers broad, adorned with circular and square figures: On the breast and backe, they weare two *square Cloathes* Embroidered: in which and the Girdles is great varietie, according to their diuers Degrees; by which the skilfull know their ranke and place. The cloathes intimate it by the figures of Flowers, Fowles, Beasts; the girdles by the matter, of Wood, Horne, Sweet wood, Gold or Siluer; and the best of all of that *Iasper* before mentioned, called *Tsee*, brought from *Cascar*. Their shadowes or *Sumbreros*, by their Colours and numbers intimate like difference. They haue other *Ornaments*, *Banners*, *Chaynes*, *Censors*, *Guards* with Cryes to make way, that in most frequent streetes no man appeareth, more or lesse, according to the Magistrates Dignitie.

Contentednes

Philosophers Empire.

Beautie of Order.

No Office aboue 3. yeeres. Appearing at *Pequin*.

Seuere Iustice 4000. Iudges iudged.

The *Chinois* hauing plentie of all things, care not for subduing the neighbour-Nations, better keeping their owne, lesse caring for others Countries, then our *Europeans*: their Chronicles of foure thousand yeeres not mentioning any care of enlarging their Empire. And if any *China* impressions or foot-prints bee, it is from men voluntarily going to other Countries, not from the Kings ambition sending them. It is also remarkeable that Philosopers beare all the sway, the Souldiers and Captaynes being subject to them, and sometimes beaten of them as Schoole-boyes by their Master: euen in Militarie matters, the King more vsing the aduise of Philosophers then Captaynes; whereupon euery haughtie spirit rather affects meane places in the *Literate* Order, then great in the *Martiall*. Yea these Literate are more magnanimous, and more contemne their liues in zeale of the publike then the Souldierie. No lesse admirable is the Symmetrie and Order of Magistrates in their subordinate Orders, in Obedience, Reuerence, Visitations and Presents; the Inferiour giuing honourable Titles to the Superiour and kneeling to them. None beares any Office aboue three yeeres, except the King confirme it. And the chiefe Magistrates of Prouinces, Cities and Regions, euery third yeere must appeare at *Pequin*, and doe their Rites to the King, at which time seuere inquirie is made of the Magistrates, and they thereupon rewarded or punished. I haue also obserued, that the King dares not alter any of those things, which in this publike Disquisition are ordered by the Iudges. *Anno* 1607. we reade foure thousand Magistrates condemned, that being the Search-yeere, and a Booke published thereof.

1. Couetous.

2. Cruell.

3. Remisse.

4. Rash.

5. Vngouerned

These Condemned are of fiue sorts; First, Couetous which haue taken Bribes to peruert Iustice, or haue vsurped the publike or priuate mens fortunes: these are wholly depriued of all Offices for euer. The second are the Cruell, which haue too seuerely punished, which are also depriued of their Places and Enfignes: The third are the Old and sickly, and the Remisse and negligent; these are depriued, but permitted the Immunities and Enfignes. The fourth sort, are the rash, headdie, and vnaduised, which are put in lower Offices, or sent to more easie places of Gouernment. The last are such, as haue not gouerned themselues or theirs, worthy of that place of Gouernment; these are wholly depriued. The like Inquisition is made euery fifth yeere of the Court Magistrates, and the same time also, of Militarie Commanders.

Care to preuent rebellions, factions, and bribes.

None may beare Office in his natiue Prouince, except Militarie. The Sonnes also or Domestike seruants of Magistrates, may not goe out of the house lest they should bee Factors for bribes: but all seruices without doores is done by Officers, designed to his place: and when hee goeth out of his House hee sealeth the doores, whether priuate or publike, that none of his Seruants may goe out vnwitting to him.

Strangers.

They permit no Stranger to liue with them that mindes to returne to his Countrey, or is knowne to haue Commerce with forraigne Nations: and no Stranger although of a friendly Nation and Tributarie, may haue accesse to the inward parts of the Kingdome; a thing whereof I haue seene no Law, but Custome: neither haue I euer seene any of *Coraas* in *China*, except some Slaues which a Captayne brought thence, although a tributarie Nation which vseth in manner the *China* Lawes. And if a Stranger steale into the Countrey, they punish him not with Death nor Slauerie, but permit him not to returne. They most seuerely punish those, which without the Kings leaue haue commerce with Strangers: and hardly can any bee perswaded to be sent abroad with Mandates; and such are rewarded with some Dignitie at their returne, None beare Weapon in Cities, not the Souldiers or Captaynes, but in their Traynings; nor haue any men

weapons

Digitized by Google

weapons in their Houſes, except ſome ruſtie blade which they vſe when they trauell for feare of Theeues. Their greateſt Brawles goe no further, then ſcratching or pulling by the hayre; hee which flees or abſtaines from wrong is eſteemed both Wiſe and Valiant. When the King dyeth, none of his Sonnes are permitted to remayne in the Royall Citie, but the Heyre; and it is Capitall for them, being diſperſed in diuers Cities to ſtirre thence. Some principall amongſt them, compounds their ſtrifes and rules them; in Caſes with others, they are ſubject to the Magiſtrates.

Succeſſion and royall kindred.

§. IIII.

Their manifold rites in Salutations, Entertaynments, and other Ciuilitie: to the King and Magiſtates: Of Buryals and Marriages, Birthdayes; their Men, Women, Names and Games, Habites.

Cap.7.

COurteſie or Ciuilitie, is reckoned one of their fiue *Cardinall vertues*, much commeded in their Bookes. (*Their common Rites yee haue had largely in Pantoia.*) When greater reſpect is vſed, as after long abſence, or on a Solemne day, after the common bowing, both fall on their knees with the forehead to the ground, and then riſe and downe againe in like ſort three or foure times. When they doe this reuerence to a Superiour, hee ſtands at the head of the Hall, or ſits, and at all thoſe proſtations ioyning his hands, bowes a little and ſometime for greater modeſtie hee goeth to the ſide of the Hall, whoſe head is Northwards as the doore is Southwards. The ſame rites they performe to their Idols; and ſometimes as the Seruants to their Maſter, or the meaneſt of the people to honourable perſons, which is preſently to kneele and knock the ground thrice with their forehead: they ſtand at his ſide when their Maſter ſpeakes, and kneele at euery anſwer. When one ſpeakes to another, they vſe not the ſecond perſon, nor the firſt perſon when they mention themſelues, except to their inferiour, and haue as many formes of depreſſing themſelues, as of exalting others, the lowlieſt of which is to call a mans ſelfe by his proper name, in ſtead of (I.) When they ſpeake any thing of another mans, they vſe a more honourable forme; Of their owne, or theirs, a more modeſt: which a man muſt learne both for manners ſake, and to vnderſtand their meaning.

Courteſie in mutuall veneration and circumſpect behauiour to others.

Side-reuerence.

Reſpect of perſons.

See *Thaoſos* Epiſtle. *ſup.*344

The Viſitors ſend their Libels or papers of viſitation, ſo many that the Porter is faine to keepe a note of their names, and where they dwell, leſt wee ſhould forget; and if the partie to bee viſited be not at home or at leaſure, that libell is left with the Porter for a teſtimonie. The more honourable the Viſitor, the larger hee writes his name. In ſending Preſents they vſe like libelling; ſetting downe alſo each gift in a line by it ſelfe, part of which may bee ſent backe without offence, which is done with a like libell of thankes. They often ſend money or pieces of Gold for preſents. They haue Garments proper for viſitations. The chiefe place in both Royall Courts, is giuen to Strangers, moſt remote eſpecially, which made vs commonly to bee preferred. The ſeruant, when they are ſet, brings as many little Cups of *Cia* as are Gueſts. When they part, neere the Hall doore, they reiterate their bowings, then at the Doore, and at the paſſing out, and after they are in their Chayre or on Horſebacke, againe without doores; and laſtly, a Seruant is ſent after in his Maſters name, to ſalute them, and they ſend their ſeruants likewiſe to reſalute.

Viſiting one another.

Tedious courteſie.

Their Banquets are not ſo much commeſſations as *Compotations*; for although their Cups be as little as Nut-ſhels, yet they drinke often. Their Ciuill and Religious affayres are therein handled, beſides the demonſtration of kindneſſe. In eating they haue neither Forkes, nor Spoones, nor Kniues; but vſe ſmall ſmooth ſtickes, a palme and a halfe long, wherewith they put all meats to their mouthes, without touching them with their fingers. They bring all things to the Table cut in little pieces, except it bee of ſofter condition, as Egges, Fiſh, and ſuch things as their ſtickes will diuide. They vſe to drinke hot, euen in hotteſt weather, whether their *Cia*-decoction, or Wine, or Water: which it ſeemeth is profitable to the Stomacke; for they liue long, and are ſtrong at ſeuentie or eightie yeeres: Neither is any of them troubled with the Stone, which I ſuppoſe is occaſioned by our cold drinke. When any is Inuited, a Libell is ſent a day or more dayes (if it bee to a ſolemne Banquet) before, ſignifying, that the Inuiter *hath prepared a Banquet of Hearbs, and hath waſhed his Cups, that at ſuch a day and houre (which commonly is neare night) hee may heare and learne ſomewhat of him*: At the day they ſend another like Libell (on the out-ſide of theſe Libels, there is a red paper added with the more honourable Name of the inuited, which the *Chinois* vſe beſides their proper name) in the morning to each Gueſt, and a

China banqueting.

Feeding.

Hot drinke.

The Stone vnknowne in *China*, which ſo tormenteth *Europeans*, both in the Kidney, Vreters, Bladder: this laſt depriued me of

my honorable Patron and beſt friend, B. *King*, *Anno* 1621. and *Anno* 1622. Maſter *Bifield* my neighbour, the painefull Miniſter at *Thiſtleworth* dyed of a Stone, which I weighed, and found (a miracle in Nature) much aboue 32 Ounces, whiles theſe our *China* relations are in the Preſſe; therefore here mentioned. My ſelfe alſo hauing ſtone paſſions, am therefore not ſtonie in compaſſion.

third

third at the houre. Their furniture is not Hangings (whereof they haue no vſe) but Pictures, Flowers, Veſſels; to each Gueſt his Table, and ſometimes two to one, the one before the other. Theſe Tables are ſome Cubits long and broad, but more in length, and couered with a cloath as our Altars. The Seats ſhine with their Varniſh, adorned alſo with Pictures and Gold. The firſt entertainment is with *Cia* in the Hall: and thence they goe to the Feaſting-roome. Before they ſit downe, the Inuiter ſalutes the principall Gueſt with a low courteſie, and holding a cup of Wine: then goeth to the doore or porch, and firſt making a low courteſie, turning his face to the South, powres out that cup on the ground, offering it to the *Lord of Heauen*, and bowing downe againe, returneth, and filling another cup goeth to that principall Gueſt, and bowing ſalutes him in the place in which the rites of ſalutation are vſed: and then they goe together to the Table where the chiefe Gueſt muſt ſit. The midſt of it is the chiefe place; there with both his hands he ſets a diſh with great veneration, and taking the two ſtickes (which vſually are of Ebonie, or Iuorie tipped with Gold or Siluer, where they touch the meate) layes them by, and taking a ſeat, bruſheth it with his ſleeues lightly, and ſets it in the middeſt; after which both goe backe and bow themſelues in the middeſt of the Roome. Thus hee doth to euery one, placing the ſecond on the left hand, the third on the right. Laſtly, hee which ſhall haue the chiefe roome receiueth of his ſeruant the Inuiters Diſh and Cup, and bids Wine to be filled, and together with the other Gueſts and the Inuiter, boweth downe and placeth the Diſh on his Table (which is placed in the lower part of the Hall, with his backe to the South, and face to the chiefe Table) with the ſtickes and ſeat, as he had done before to him; and then all goe againe to their place, with great ceremonie, to ſit them better with both hands, he to whome the rite is done, ſtanding by the ſide of the doer with his hands in his ſleeues, and modeſtly bowing with thanks. They waſh neither before nor after. After all this, they performe the laſt rite of inclination to the Inuiter together, and then each to other, and then ſit downe. When they drinke, the Inuiter with both hands takes the Cup in the Diſh, and lightly lifting it vp, and then letting it down inuites them to drinke, all turning to him at the ſame time, and beginning to drinke, or to ſip rather, foure or fiue times ſetting it to his mouth, not as we vſe with one continued draught. After the firſt Cup the Diſhes are brought in, of which the Inuiter beginning, all with their ſtickes apply a bit or two to their mouthes, diligently obſeruing, not to lay downe their ſtickes before the principall Gueſt hath layd downe his: and then the ſeruants fill his, and after euery mans Cup, with hot Wine: and the ſame rite is againe and againe repeated, but more ſipping then eating. Mean-while ſome diſcourſe, or Comedie, or Muſike continue. The grace of their Feaſt is variety, a little of each, Fleſh alſo and Fiſh mixed, taking off nothing, but ſetting one Diſh on another like Caſtles and Towers. Bread, and Rice (which there ſupplyes our Bread) comes not in ſolemne Banquets. They haue games alſo, in which the loſer is fined to drinke, with others diſport. None is compelled to drinke aboue his ſtrength. Their drinke is tipſie, boyled like our Beere. Their ſolemne Banquets laſt all night, the remainders giuen to the Gueſts ſeruants. Neere the end of the Feaſt they change Cups. In eating they are more moderate.

The Gueſts courteſie to the Hoſt.

Sipping oft, not drinking one draught.

King obſerued.

Petitions.

New yeere.

New Moone.

Birth-day.

The King is obſerued with more Rites then any other in the World. None ſpeakes to him but his Eunuches, and thoſe which liue in his Palace, Sonnes and daughters. None of the Magiſtrates without the Palace (the Eunuches alſo haue their degrees) ſpeake to the King but by Petition, and thoſe with ſo many formes of veneration that none can make them, which is not well exerciſed, though he be learned. Euery new yeere which beginnes with that New Moone which next precedeth or followeth the Nones of February, out of euery Prouince a Legate is ſent to viſite the King, which is done more ſolemnely euery third yeere. Alſo in euery Citie on euery Change day, all the Magiſtrates aſſemble to one place in their Citie, where the Kings Throne and Dragon-enſignes are carued and gilded, often bowing and kneeling before it with peculiar compoſition of the body to veneration, and wiſh ten thouſand yeers of life to the King. The like is done on his Birth-day yeerely, the *Pequin* Magiſtrates and Prouinciall Legates, and the Kings kindred make their appearance there and preſents. All alſo which are named to any Office by the King goe to giue thankes to the Throne (for the King is not there) with rites preſcribed with habite peculiar to that purpoſe, with an Iuorie Table couering their mouth as oft as they ſpeake before the King: the King was wont to come forth to a window, with ſuch a Table in his hand, and another on his head, ouer his Crowne hanged, about with threads of gemmes, his face hidden in preſence from the beholders.

Kings colour yellow, Sun-like.

Dragons.

The Kings colour is yellow (forbidden to others) of which his garment is wrought with many golden Dragons, which are carued or painted in all the Palace, and Veſſell, and furniture; in the roofe alſo; whence ſome haue thought the Tiles to be of Gold or Braſſe, being of a yellow Earth, each nayled to the Timber: with Nayles gilded on the heads, that all may appeare yellow. It were treaſon for another to arrogate that colour or Armes, except he bee of the Royall linage.

The Palace and gates.

The Palace gates are foure, to the foure corners of the World. They which paſſe by, deſcend from their Horſes or Seats, and goe on foot till they be paſt, the greateſt ſooneſt alight, and that at *Nanquin* alſo, where no King hath of long time reſided. The gates to the South both inner

and

Digitized by Google

and outward are three, the King only going in and out at the middle (which otherwise is shut) others at the other gates on the right and left hand. Their computation of time is onely by the Kings Raigne. Sometimes the King bestoweth a Title on the Parents of the principall Magistrates by a certaine writing, made by the Kings Philosophers in the Kings name; esteemed wonderfully, acquired with any cost, and kept in the familie as a thing sacred. The like opinion is of other Titles giuen to Widowes, expressed in two or three Characters, giuen to Widowes which to their old age haue refused second marriages; or to old Men which haue liued an hundred yeeres, and in like cases. They set these Titles ouer their doores. Magistrates also doe the like to their friends. To good Magistrates Arches are erected at publike cost, of Marble: by Citizens also to some of their Citizens which haue attayned any notable dignitie. The most precious Artifices thorow all the Kingdome are yeerely sent to the King to *Pequin* with great costs. The Magistrates of the Kings Citie goe abroad with lesse pompe, on horsebacke; and few of the principall in Seats, and those carried but by foure Porters: all in reuerence of the King. Foure times in the yeere, once a quarter, all the Court Magistrates assemble at the Sepulchres of the antient Kings and Queenes, and make there their offerings: giuing the principall honour to *Hamou*. They prepare to this solemnitie certaine dayes fasting at home and surceasing of suits.

Kings gate. Time. Title. Widowes. Old men. Arches. *Pequin*. Funerals of Kings:

Next to the King they honour their Magistrates, both in formes of words and visitations, to which none aspire but Magistrates; and they which haue beene depriued lose not all honour in this kind, but sometimes come forth in their habits, and are respected by their Citie Magistrates. If one bee preferred to another dignity, which hath well executed his Office, they honour him with publike gifts, and reserue his Boots in a publike Chist, with Verses in his praise. To some they erect Temples also, and Altars with Images, and some are deputed to keepe lights there burning, and odours, at publike Rent charge perpetually, with huge Censers of Bell-metall, as they doe to their Idols. Yet doe they distinguish betwixt this and Diuine worship, of their Gods asking many things, whereas these Rites are onely memorials, though many of the vulgar * confound them together. Cities are full of such Temples, by friends often erected to vnworthie men, to which at certaine times they goe and performe kneeling and bowing Rites, and offer Meats. Their Bookes are full of precepts for obseruing Parents with due honour, and in outward shew no Nation performes so much. They will not sit ouer against them but on the side, speake to them with great reuerence, they sustaine their poorer Parents with their labour in best manner they are able, and in nothing are more curious then their funerals.

Honour of Magistrates. * As in the *dulia* and *latria* of Saints worship and that of God. Honour of parents.

The mourning colour is white, and all their habite from the Shooes to the Cap of a strange and miserable fashion. The cause of three yeeres mourning for Parents, is because so long they carried them in armes with so much labour of education: for others as they please, a yeere, or three moneths, as they are in neereneese: For the King they mourne three yeeres thorow all the Kingdome, and for the *Lawfull Queene*. Their funerall Rites are written in a Booke which they consult on that occasion, all the parcels of the habite there pictured. When a man of ranke is dead, the Sonne or next Kinsman sends Libels to the friends within three or foure dayes: all the Roome is white, with an Altar in the midst, on which they place the Coffin and Image of the dead. Thither all the friends come in mourning one after another, & offer Odors and two Wax-candles on the Altar; whiles they burne, making foure bendings and kneelings, hauing first censed against the Image. The Sonnes stand at the side, and the women behinde, couered with a Curtaine, mourning the while: the Priests also burne Papers and Silkes, with certaine rites to minister Clothes to the deceassed. They abstayne from wonted Beds (sleeping on Straw-beds on the ground neere the Corps) from flesh and other daintier food, Wine, Bathes, companie with their Wiues, Bankets; not going out for certaine moneths, remitting by degrees as the three yeeres expire. On the funerall day the friends are by another Libell inuited, to which they goe in Procession forme, in mourning; many Statues of Men, Women, Elephants, Tigres, Lions, of Paper all going before, diuersified in colour and gilding, which are all burnt before the Graue: a long ranke of Idoll Priests, Prayers, and Players on diuers Instruments obseruing diuers rites in the way; huge Bell-censers also carried on mens shoulders; after which followes the Herse vnder a huge carued Canopie adorned with Silkes, carried with forty or fifty men. Next the children on foot with staues, and then the women enclosed within a white gestatory Curtaine, that they may not be seene: followed by women of the kindred in mourning Seats. The Graues are all in the Suburbs. If the Sonnes bee absent, the Funerall pompe is deferred till their comming. They bring (if it may bee) the deceassed in another Countrey to lie by his friends. The Graues are adorned with Epitaphs in Marble magnificently. Thither on certaine dayes yeerely the kindred resort to cense and offer, and make a funerall banquet.

See in *Pantoia* of Funeralls and mournings. Mourning by booke. Buriall.

Their Marriages and Spousals are with many rites, done in their youth; the Contracts compounded by the Parents without their consent; they obserue equalitie in yeeres and degree in the lawfull Wife. In their Concubines, lust, beauty, price beare sway. The poorer also buy their Wiues, and when they list sell them. The King and his kindred respect onely beauty, Magistrates appointed to make the choise. One is his lawfull Wife; the King and his Heire hauing

Marriages.

nine

nine other Wiues a little inferiour, and after them sixe and thirty, which are also called Wiues: his Concubines are more. Those which bring forth Sonnes are more gracious, especially the Mother of the eldest. This is also familiar to other families thorow the Kingdome. Their first Wife sits at Table; others (except in the Royall families) are as Hand-maids, and may not sit, but stand in presence of either of them: their Children also calling that lawfull Wife their Mother, and for her (though not the true Parent) obserue trienniall mourning. In Marriages they are curious not to take any of the same sur-name, of which sur-names there are not a thousand in all that vast Kingdome. Nor may any man frame a new sur-name, but must haue one antient of the Fathers side, except he be adopted into another familie. They respect no affinity or consanguinity in a differing sur-name, and so marrie with the Mothers kindred almost in any degree. The Wife brings no portion, and although when shee first goeth to her Husbands house the street-full of household attends her, yet is all prouided by his costs which sends money some moneths before as a gift to her for that purpose.

Sur-names few. In *England* antiently were few or none. See *Cam. Remaines.*

Affinitie and consanguinity.

Portion.

Birth-day.

Euery mans Birth-day is festiually celebrated with Presents, Banquets and iollity: especially after the fiftieth yeere explete (at which time they are reckoned amongst old men) and then euery tenth yeere. The Children then procure Emblemes of their friends, and Epigrams, and some write Bookes. That day is also festiuall in which they are of age to take the *Mans cap*, which is about twenty yeeres, till that time wearing their haire loose. But the first New and Full Moone of the yeere is most generally festiuall; each man then hauing ingeniously deuised Lights or Lamps made of Paper, Glasse, or other matter, the house seeming by the diuersified Lights to bee on a light fire. They runne vp and downe also with great stirres in the night with Dragon-fashioned Lights, and make great shewes of Powder-fire-workes.

Virilis pileus.

Candlemas.

Fire-workes.

Cap 8.

The *Chinois* are white (but neerer the South more browne) with thinne beards (some hauing none) with staring haires, and late growing; their haire wholly blacke; eyes narrow, of Egge forme, blacke and standing out: the nose very little, and scarcely standing forth; eares meane: in some Prouinces they are square faced. Many of *Canton* and *Quamsi* Prouinces on their little toes haue two nailes, as they haue generally in *Cochin-china*. Their women are all low, and account great beauty in little feet, for which cause from their infancy they bind them straight with clothes, that one would iudge them stump-footed: this, as is thought, deuised to make them house-wiues. The men and women both alike let their haire grow without cutting: but Boyes and Girles till they are fifteene yeere old, are cut round, leauing a locke onely on the crowne: after which they let it grow loose ouer their shoulders till twenty. The most of the Priests shaue head and beard euery eighth day. When they are men they binde vp their haire in a Cap or Coife made of horse or mans haire, or in a silken Cawle; and in Winter of woollen: on the top it hath a hole, where the haire comes forth, and is tyed in a neate knot. The women weare not this Cap, but binde vp their haire in a knot, and make it vp with a dresse of Gold, Siluer, Stones, and Flowers. They weare Rings on their eares, but not on their fingers.

Chinois persons described.

Women.

Haire.

Rings.

Apparell.

The men and women weare long garments. The men double them on their breast, and fasten them vnder both the arme-holes; the women on the midst of the breast. They weare wide long sleeues; but the womens wider, the mans straighter, at the wrists. Their Caps are artificially wrought. Their Shooes are much differing from ours; the men weare them of Silke with diuers workes and flowers, exceeding the elegance of our Matrons. Shooes of Leather none but the meaner sort weare; and scarcely admit they Leather soles, but of Cloth. The Caps of their Learned are square, of others, round. Euery one spends halfe an houre at least in combing and trimming his haire. They winde also long clouts about their feet and legs, and therefore weare their Breeches loose. They weare no Shirts, but a white Coat next the skinne, and wash often. They haue a seruant to carrie a Shadow or great *Sumbrero* ouer their heads against the raine and Sunne; the poore carrie one for themselues.

Name-ceremonies.

Women haue none.

Fathers name.

For *Names*, besides the sur-name of which is spoken, the Father giues one to the Sonne (for females haue no name but the Fathers sur-name, and called as they are borne, *first, second, third,* in order of the Sisters:) by this name they are called by the Father and Elders; others call them likewise from that order amongst the Brethren, as is said of Sisters. They in their writings call themselues by that which their Father gaue them; but if others either equall or superiour should so call them, it were both vnciuill and iniurious. When a Boy goeth to Schoole his Master giueth him another name, which is called his *Schoole-name*, whereby onely his Master and Schoole-fellowes may stile him. When he hath his *Mans cap* put on, and marrieth a Wife, some more honourable person giueth him a more honourable name, which they call, *the Letter*: by this any man may call him, but those which are subiect to him. And when he is now at the full growth, he receiueth of some graue person his most honourable name, which they call *Great*, whereby any may call him present or absent: but his Parents and Elders still vse the *Letter-name*. If any professe a new Sect, his Instructer calls him by a new name, which they call, *of Religion*. And when one visites another, he will aske what is his *Honourable name*, to stile him thereby: and we were therefore fayne to take a *Greater name* then that which we receiued in Baptisme, for them to call vs by.

Schoole-name.

They

Digitized by Google

They are studious of Antiquities: much value old Triuets of Bell metall, Pictures in blacke and white Characters and writings, sealed with the Authors seale (for there are many Counterfeiters.) The Officers haue all a Seale proper to their place giuen by *Humvu*, which they vse only sealing with red colour: and if they lose the Seale they lose the Office, and are besides seuerely punished; and therefore they carry it with them, in a sealed and locked Boxe, and neuer leaue it out of sight, at night keeping it vnder their Pillow. Seales of Magistrates.

Graue men goe not on foote thorow the streets, but are carryed in a seate closed, except they list to open the fore-part, whereas Magistrates seates are euery way open. Matrons seates are altogether closed, but easily knowne from mens by the fashion. Seats in which they are carryed on mens shoulders.

The Law forbids Coaches and Litters. Some Cities are in the midst of Riuers and Lakes, in which they haue very neate Boates to passe the streets. And becausе they goe more by water then ours, therefore there Shipping is more conuenient and elegant. Boates & ships

But the Magistrates, built by publike cost are as commodious as Houses, with diuers Lodgings, a Hall, Kitchin, Cells, so neate as seeming Great mens houses, rather then Ships; and therefore they make their solemne Banquets a Ship-board, passing along the Riuers and Lakes for further pleasure.

All within shines with *Ciuram* or shining Vernish in diuers colours, and the Carued workes gilded in places, with combined sweetes to the Eyes and Nose.

They honour their Masters more then with vs, so that if a man haue beene anothers Scholler but one day in any Art, hee calls him Master euer after, and neuer sits in any meeting but at his side, and doth him all honour. Masters respect.

Dice-play and Cards are common with them: Chesse also with the grauer persons, not altogether vnlike ours: but their King neuer remoues but to the foure next roomes, and the Bishops haue their Queenes. They haue also which they call *Poulder paunes*, which goe before the Knights and follow the Paunes. Games. Chesse.

They haue a graue Game in a table of three hundred roomes with two hundred men white and blacke, in which Magistrates spend much time, and the cunning skill whereof gets much credit to a man, although hee can doe nothing else: and some chuse such their Masters with wonted rites.

Theft is not punished with Death: the second fault therein, is branded with an hot Iron and Inke in the Arme, with two Characters, the third time in the Face, after with their terrible Whipping or condemning to the Gallies, for a time limitted: so that there are abundance of Theeues. Theft punishment.

Euery night in Cities, many Watchmen at certayne times beate Basons as they walke the streets, the streets also enclosed and shut, yet many thefts are committed, the Foxe being the Goosehерd, and the Watch partners with the Theefe. The Cities in greatest Peace in the midst of the Kingdome, are shut euery Night, and the Keyes carryed to the Gouernour.

§. V.

Of their Superstitions, Cruelties, feares of Magistrates, of the Kings kindred, of Strangers and Souldiers. Their Deities and three Sects: Priests, Nunnes, Monasteries, Legends, Lyes.

NO superstition is so generall in the Kingdome, as the obseruation of luckie and vnluckie *Dayes and Houres*, for which purpose yeerely is Printed a two-fold Table of dayes by the Kings Astrologers, in such plentie that euery house is full of them. *Chap. 9.* Obseruation of times. Two fold Almanacke.

In them is written on euery day, what may bee done or not, or to what houre yee must forbeare businesse, which may in that yeere happen.

There are others more dangerous Masters, which make a liuing by this Wizardly profession of selling lyes, or prescribing fit houres: wherby many differre the beginning of Building, or Iourneying till their appointed day or houre come: & then how vnfitting soeuer that prooueth with crosse weather, they set on neuertheless, though it be but a little little onset, that the worke might thence appeare to take beginning. Impostors.

The like superstitious obseruation they haue of the moment of the Natiuitie, which they precisely set downe, diuers professing by Astrologie, or by superstitious numbers, or by Physiognomie, or Palmestrie, or Dreames, or words in Speech, or posture of the body & by innumerable other wayes to foretell future Fortunes; many *Gipsie*-juglings vsed to such impostures, as by a stalking Knaue which shall professe his Fortunes exactly told him by the professor, or by learning out of printed Bookes which describe euery Citie, Street and Familie, what hath hapned as an argument of the truth of that which they say shall happen. Diuinations and telling of Fortunes.

Yea, their credulitie breeds such strong imagination, that some being foretold of a Sickneſſe such a day, will then fall sicke of conceit. Strength of imaginations.

Many also consult with Deuils and familiar Spirits, and receiue Oracles from the mouth of Infants, or of Beasts, not without fraud. Deuils consulted.

They are superstitious in chusing a plot of ground, to erect a dwelling House, or Sepulcher, conferring it with the head, tayle and feete of *diuers Dragons*, which liue (forsooth) vnder our earth, whence depends all good or bad Fortune. Dreames of Dragons.

Diuers Learned

Digitized by Google

Geologers. Learned men busie their wits in this abstruse Science, and are consulted when any publike Buildings are rayſed. And as Astrologers by the Starres, so these *Geologers* by inspection of Riuers, Fields, Mountaines and scite of Regions, foretell Destinies; dreaming by setting a Doore or Window this or that way, conueying the rayne to the right or left hand, by a higher or lower roofe, honour and wealth shall accrue to the House. Of these Impostors the Streets, Cities, Courts, Shops, Markets are full, which sell that which themselues want, good Fortune to all Foole-fortunate buyers: yea, Women and blinde folkes professe it, and some find such Chapmen of the Learned, Noble, King and all, that they grow to great riches by others little wits. All disasters publike or priuate are attributed to *Fate*, and ill scite of some Citie, House or Palace. The

Augurie. *noise of Birds*, the first meeting in the Morning, Shadowes caused by the Sunne in the house, are their Fortune-guides.

Cruell vices and vnnaturall *Chinois*. For other vices, some will make themselues Seruants to rich men, to haue one of the handmaydes become his Wife, so multiplying issue to bondage. Others buy a Wife, but finding their family becomne too numerous sell their Sonnes and Daughters as Beasts, for two or three pieces of Gold (although no dearth prouoke him) to euerlasting separation and bondage, some to the *Portugals*. Hence is the Kingdome full of Slaues, not captiued in warre, but of their owne free-

Child-selling. borne. Yet is seruice there more tollerable then else-where; for euery man may redeeme himselfe at the price payd for him, when hee is able; and there are many poore which with hard

Child-killing. labour sustayne themselues. A worse euill in some Prouinces is theirs, which finding themselues poore, smother their new-borne Babes, specially Females, by an impious pietie and pittilesse pitie

Pittilesse pitie. Transmigration of soules. preuenting that sale to Slauerie, by taking away that life which euen now they had giuen. They pretend hereunto also their *Metempsychosis*, dreaming that the Soule of that Infant shall the sooner passe into some more fortunate body: and are not therefore ashamed to doe this in others

Selfe-slayers. presence, yea not the meanest of the communaltie. Many more inhumanely kill themselues, either wearie of a miserable life, or willing after death to bee reuenged of some enemy, whiles to the Enemy of mankind many thousands yeerely Sacrifice themselues, by Halter, Drowning, and

Eunuches. Poyson. Another immanitie in the Northerne Prouinces is vsed vpon Male Infants, whom for hope of Palace preferments their Parents make Eunuches; of which in the Kings house are ten

Whip-killing. thousand, a dull and blockish kinde of vnkind vnmanly men. Their Whippings also take away more liues, then the executions of sentences to Death; their Reedes slit two ells long, a finger thicke and foure broad, at the first blow breaking the skinne and flesh on the hinder part of the thighes: to preuent which many bribe the Magistrates, of whose domineering fulnesse of power they liue in perpetuall feare, where calumnies and lyes are so rife: which *China*

Slauish feare. perfidiousnesse made the Kings come so guarded abroad and vnknowne, and now not to come foorth at all.

Kings kindred. *China* suspicions. The Kings kindred are now growne to sixtie thousand, and daily increasing become a burthen to the publike, and daily increase in idlenesse, impotence, numbers, the King being very jea-

Strangers contemned. lous of them, and setting Guards, besides their perpetuall exile from *Pequin* and *Nanquin*. No maruell if Strangers be no better trusted in *China*, where the Natiues and Bloud are suspected: out of whose Bookes they scorne to learne, and repute them little better then Beasts: and the Characters whereby they expresse them are taken from Beasts. How Legats are held as prisoners in publike houses is else-where deliuered. Commanders of Souldiers, which guard places are

Souldiers base. guarded and watched, and not trusted with the pay of their Companies: neither is there any more base then the Souldiery, most Slaues or condemned persons, for their owne or their Ancestors euils: and when they are free from exercises of warre, they become Muletters, Porters, and of other base Offices. The Captaynes onely haue some authoritie. Their armes are worth-

Studies of Alchimie and long life. lesse for offence or defence, and onely make a shew, the Captaynes being also subiect to the Magistrates whippings. Their Alchimisticall vanitie, and study of long Life, with precepts and huge bookes of both, I omit. The founders forsooth of these Sciences haue gone body and soule to Heauen. The making of Siluer hath made many spend their siluer, wits and credit, cheated by professing Artists; and the great Magistrates (few in *Pequin* free) are taken vp with the other Study; some shortning their life to make it longer. They write of one of their Kings which had procured such a potion of immortalitie, whom a friend of his was not able to dissuade from that conceit, enraged, by his sudden snatching & drinking his prepared potion: which he seeking by death to reuenge, the other answered, how can I be killed, if this draught cause immortalitie? and if I may, then haue I freed thee of this errour.

Chap. 10. Touching the *China* Sects, I read in their Bookes, that the *Chinois* from the beginning worshipped one God, which they call the *King of Heauen*, or by another Name *Heauen and Earth*.

China Gods. Beneath this Deitie, they worshipped diuers *tutelare Spirits* of Mountaynes, Riuers, and of the foure parts of the world. In all actions they held *Reason* to bee obeyed, which light of Reason

What pitie is it that *Lutherans* and *Caluenists*, may not aswell be saued without the Pope, as these Idolaters without God and Christ, they confessed they had from Heauen. Of that supreame Deitie and his administring Spirits, they neuer had such monstrous conceits as the *Romans*, *Greekes*, *Ægyptians*, whence the *Iesuites* hope that many of them in the law of Nature were saued. Their Sects are reckoned three: The first of the *Learned*, the second of *Sciequia*, the third *Laucu*. One of these is professed by all

which

Digitized by Google

which vſe their Characters. That of the *Learned*, is moſt proper to *China* and moſt ancient, and all their Learned learne it in the courſe of their ſtudies. *Confutius* is the Prince therof. This Sect hath no Idols, worſhips one God, beleeuing all things to bee conſerued by his prouidence. They worſhip in inferiour ſort the Spirits. The beſt of them teach nothing of the Creation: rewards and puniſhments, they confine in this life to a mans ſelfe or his poſteritie. Of the immortalitie of the Soule they ſeeme to make no doubt, for they ſpeake of the deceaſed liuing in Heauen; but of Hell they make no mention. The later *Learned* deny both, with the ſoules immortalitie: yet ſome ſay, that the ſoules of good men are corroborated with vertue and made able to hold out, others dying with the body.

The principall opinion ſeemeth borrowed of the Idoll Sect, fiue hundred yeeres agoe; which holds that this whole Vniuerſe conſiſts of one matter, and that the Creatures are as ſo many members of this huge body, ſo that euery one may attayne to the ſimilitude of God being one with him; which we confute out of their owne ancient Authors. Though the *Literate* acknowledge one ſupreame Deitie, yet they erect no Temple to him, nor any other place proper to his Worſhip, nor any Prieſts, perſons or rites peculiar, nor haue precepts thereof, nor any which preſcribeth, or puniſheth defect of Holies; nor any which priuately or publikely recite or ſing ought to him. Yea they affirme, that the Office of Sacrificing to the King of Heauen and his worſhip belongs to the King: and if any ſhould take on him that Office, hee ſhould vſurpe the Kings, and be thereby a Traytor. For this purpoſe, the King hath two ſtately Temples in both Royall Cities, one dedicated to the *Heauen*, the other to the *Earth*: in which ſometime hee vſed to Sacrifice, but now in his place certayne Magiſtrates haue ſucceeded, which there ſacrifice many Oxen and Sheepe, with many Rites. To the *Spirits* of Mountaynes, Riuers, and of the foure Regions of the world, onely the chiefe Magiſtrates Sacrifice, nor are the people admitted thereto. The precpts of this Law are contayned in the *Tetrabiblion* and fiue Bookes of *Doctrines*; nor are any other Bookes allowed, but onely ſome Commentaries thereon. Nothing in this Sect is more of note then their yeerely *Obits*, or parentations to their deceaſed Parents, common to all from the King to the meaneſt, obſeruing their dead Anceſtrie as if they were liuing. Neither yet doe they ſuppoſe that they eate of the meate which is ſet them, or need it, but they haue no better meane to expreſſe their loue.

God ſuppoſed the ſoule of the world.

Perſians had no Temples.

Two Temples Royall.

King high Prieſt: Magiſtrates inferiour.

Obite.

The *Literate* haue a coſtly Temple to *Confutius* in euery Citie, by Law appointed, in that place where the *Schoole* is, and adjoyning to the Magiſtrates Palace, which is ſet ouer the Bachelors or Graduates of the firſt degree. In a principall place of that Temple his Image is erected, or elſe his Name in golden Cubitall letters, written in a curious Table. Hither the Magiſtrates aſſemble euery New-moone, and Full, alſo the Bachelors, with wonted kneelings, Odours and Wax-lights, to acknowledge their Maſter. On his Birth-day and on other ſet times, they offer feſtiuall Diſhes, thankefully confeſſing his learned workes, whence they haue attayned their Degrees and Offices, but pray not to him nor looke for ought from him; but as is obſerued of their dead Parents. Other Temples alſo are ſeene of the ſame Sect to the *Tutelare Spirits* of each Citie, and to the Magiſtracie of each Tribunall, wherein they ſolemnly binde themſelues by ſolemne Oathes, to obſerue Law and Iuſtice, when they firſt enter into their Office. In theſe they offer Diſhes and Odours, but in differing Worſhip: for in theſe they acknowledge, there is a Diuine power to puniſh the perjurious, and reward the good. The ſcope of this *Literate Sect*, is the peace and good of the Common-wealth, and of Families, and of each perſons; their precepts agreeing with Nature and Chriſtianitie. Fiue Relations or Societies are obſerued by them, comprehending all duties of humanitie; of Father and Child, of Husband and Wife, of Maſter and Seruant, of elder and younger Brethren, of Fellowes and Equals. They condemne Single life, permit Polygamie, and in their Bookes largely explaine that precept of *Charitie, to doe to another as a man would be done to.* They deny this to bee a Sect, but a certayne Acadamie inſtituted for the gouernment of the Common-wealth; and becauſe it preſcribes not, nor prohibiteth any thing touching the Life to come, many adjoyne the other two Sects to this.

Confutius Temple and Rites.

Temple of tutelar Sprrits.

Tribunall Temple.

Oath of Magiſtrates.

Fiue combinations.

The ſecond Sect is called *Siequia* or *Omitoſe*, and by the *Iaponians*, *Sciacca* and *Amidabu*. Both haue the ſame Characters, and the ſame *Totoqui* or Law. It came to the *Chinois* from the Weſt, brought from the Kingdome of *Thienſcio* or *Scinto*, now called *Indoſtan*, betwixt *Indus* and *Ganges*, about the yeere of Chriſt 65. It is written that the King of *China*, warned in a Dreame, ſent Legats thither, which brought Bookes and Interpreters from thence, the Authors of them being dead. And therefore I ſee not how truely the *Iaponians* affirme that *Sciacca* and *Amidaba* pierced thither, and were Natiue of *Siam*. The Authors of this Sect, haue taken ſome things out of our Philoſophers. For they hold foure Elements, and manifold Worlds and tranſmigration of Soules, and other things. Somewhat it ſeemes to acknowledge the *Trinitie* fabling of three Gods becomming one; it acknowledgeth iuſt rewards to the good in Heauen, to the bad in Hell. It extols Single life, ſo as it may ſeeme to reject Marriage. They leaue houſe and friends and trauell into diuers places Begging. The Rites of this prophane Sect, haue great affinitie with our (*Romiſh*) Eccleſiaſticall: the Singings of men ſaying their ſeruice may ſeeme nothing to differ from our *Gregorian*; they haue Images alſo in their Churches; their Prieſts Garments are altogether

Second Sect began A.D. 65.

Democritians Sythagorians.

Likeneſſe of Popiſh rites and thoſe of China, in opinion of Ieſuites.

Digitized by Google

gether like ours, which with an Eccleſiaſticall terme wee call, *Pluuialia*. In their Seruice they often recite the name *Tolome*, which themſelues confeſſe to be ignorant of. But they denie eternitie in their Heauen and Hell, aſcribing a new birth after I know not what reuolutions of time, in ſome other of their conceited Worlds, then and there to be penitentially purged; with other fooleries. They prohibite to eate of liuing creatures, but few impoſe on themſelues this abſtinence, and they finde eaſie abſolution from this and other ſinnes, if they giue to the Prieſts, who profeſſe to deliuer from Hell by their Prayers or Recitations, whom they will.

This Sect came in at firſt with great applauſe, as clearely profeſſing the Soules immortalitie: but nothing more diſgraced it, then that that King and theſe Princes which firſt embraced it (which the *Literate* often obiect) died miſerably with violent death, and publike loſſe and miſfortune followed. By writing of many Bookes they haue entangled it in inextricable Labyrinths. The notes of Antiquity appeare in the multitude of their Temples, and moſt of them ſumptuous: in which huge Monſters of Idols of Braſſe, Marble, Wood, and Earth are ſeene; with Steeples adioyned of Stone or Bricke, and in them huge Bells, and other ornaments of great price.

Many and coſtly Temples, Steeples, Bells, Images.

The Prieſts of this Sect are called *Oſciami*, they ſhaue their head and beard, againſt the faſhion of the Countrey: ſome trauell, as is ſaid, ſome leade a very auſtere life in Mountaines and Caues, but the greateſt part which amount to two or three millions, liue in Monaſteries, ſuſtayned with their antiently-giuen Reuenues, and Almes, and alſo by their owne induſtry. Theſe Prieſts are accounted, and iuſtly, the moſt vile and vicious in the whole Kingdome, ſprung of the baſeſt plebeians, ſold in their childhood to the elder *Oſciami*, and of Slaues made Diſciples, ſucceed their Maſters in Office and Benefice, a courſe which they haue found for their propagation. For, few are found which voluntarily by deſire of ſanctitie doe adioyne themſelues to thoſe Monkes. Ignorance alſo and illiberall education makes them liker their Maſters, few of them learning Letters or ciuill rites; and daily growing worſe. And although they haue no wiues, they are much addicted to women, and cannot but by grieuous penalties be kept from them.

Their Prieſts many and miſerable.

The Colledges of the *Oſciami* are diuided into diuers Stations, in euery of which is one perpetuall Adminiſtrator, to whom his ſeruants or as many as he brings vp, ſucceed. They acknowledge no Superior in thoſe Cells, but euery one in his owne Station builds as many Lodgings as he can (moſt of all places, in the Court) which after they let to ſtrangers, ſo that they are rather Innes then Monaſteries, as full of tumults as empty of deuotion. Although they bee of baſe eſteeme, yet are they employed to Funerals and other Rites, by which wilde beaſts, and fowles, and fiſhes are ſet at liberty, by the profeſſors of this Sect with opinion of great merit. In this our age this Sect hath much reuiued, and many Temples are built and repaired, by Eunuches, Women, and the rude vulgar, and eſpecially by the *Ciaicum*, or *Faſters*, which all their liues abſtayne from Fleſh, Fiſh, (Egges, and Milke) and worſhip a multitude of Idols with ſet prayers at home, and are by hire to be called to any other mans. Nunnes alſo obſerue the ſame Monaſticall rules, being ſingle and ſhaued; they call them Nunnes, nothing ſo many as the Monkes.

Monaſteries, Innes. Redemption of wilde creatures. See Pintes Riuer faire. *Faſters.*

Nicu, or Nuns.

The third Sect is called, *Lauzu*, deriued from a Philoſopher which liued at the ſame time with *Confutius*, whom they fable to haue beene carried 80. yeeres in his parents wombe before he was borne, and therefore called, *Lauzu*, that is, the *Old Philoſopher*. He left no Bookes of his Opinion, nor ſeemes to haue intended any new Sect, but certaine Sectaries, called *Tauſa*, made him the head of their Sect after his death, and wrote diuers elegant Bookes gathered out of diuers Sects. Theſe alſo liue ſingle in their Monaſteries, and buy diſciples, baſe and wicked as the former. They weare their haire as the Lay-men, differing herein, that where they weare their haire tyed on a knot, theſe haue a Cap on the crowne of Wood. Some alſo are married, and ſay ouer their Holies in their owne houſes. They ſay, that with other Idols they worſhip alſo the *Lord of Heauen*, whom yet they imagine Corporeall, and to haue ſuffered many things. They tell, that the King of Heauen which now raigneth, is called *Ciam*, and he which before ruled was named *Leu*. This *Leu* came one day to the Earth riding on a white Dragon, and *Ciam* a Wizard entertayned him with a Feaſt, where whiles *Leu* was eating, *Ciam* gat vp on the white Dragon, and was carried to Heauen, and excluded *Leu* from that ſoueraignty; only he obtayned of this new King, that he might rule ouer a certaine Mountaine in his Kingdome, where they ſay he ſtill liueth: thus confeſſing (as the *Greekes* of *Iome*) themſelues to worſhip an Vſurper and Traitor. Beſides this Deity of *Heauen*, they acknowledge three others, one of which they ſay, *Lauzu* is, hauing ſome dreame alſo, as the former of the Trinitie.

Third Sect. Lye of Lauzu.

Leu Legend.

See before of Leus Hill, n ere the great Lake.

They alſo ſpeake of places of rewards and puniſhments, but differing from the former: for they promiſe a Paradiſe for ſoule and body together, and haue Images of ſome in their Temples which haue ſo gone thither. To obtayne this, they preſcribe certaine exerciſes of ſitting in diuers poſtures, ſet Prayers, Medicines by which the life is lengthned, if not made immortall. Their Prieſts exorciſe Deuils, and driue them out of houſes, by painting horrible ſhapes of them in yellow Paper on the walls, and making horrible cryes as if themſelues were become Deuils. They arrogate alſo to bring downe or to ſtay Raines, and other publike and priuate fortunes, moſt impudent impoſtors, either Lyars or Magicians. They aſſiſt the Kings ſacrifices in thoſe Temples of *Heauen and Earth* (thereby acquiring much authority) being Maſters of the Muſike therein: and

Way to fooles Paradiſe.

Digitized by Google

and are called to Funerals, to which they goe in precious veſtments with diuers muſicall Inſtruments, making a pompous proceſſion ſhowe thorow the ſtreets. The like pompes they vſe at the ſtreets ends on certaine times, hired by the dwellers.

They haue a Prelate called *Ciam*; which dignity he tranſmitted to his poſterity 1000. yeeres ſince by hereditary ſucceſſions, and ſeemeth to haue taken beginning from a Magician which liued in a Caue of *Quiamſi* Prouince, where his poſterity ſtill continueth. Their Prelate liueth moſt commonly at *Pequin*, obſerued by the King, and admitted into the inmoſt Palace to conſecrate and hallow the Roomes ſuſpected to bee hanted by ill ſpirits. Hee is carried in an open Chaire, and with other pompe competent to the chiefe Magiſtrates, and is allowed by the King a great Reuenue. But I haue learned of a Conuert that theſe Prelates now are ſo ignorant that they know not their owne Charmes and Rites. Hee hath no power ouer the people, but the *Tanſius* (Prieſts) and their Monaſteries, many of which are alſo Alchimiſts. Theſe three Sects haue diuerſified themſelues into 300. in ſeeming, daily encreaſing and growing worſe and worſe. *Humvn* ordayned that theſe three Lawes ſhould be kept for the good of the Kingdome, onely the *Literate* to rule; whence it comes that they ſeeke not to ruine each other. The Kings make vſe of them all for their purpoſes, often repairing the old, and building new Temples. The Kings wiues are more prone to the Idoll Sect, and maintayne whole Monaſteries without the Palace, and buy their Prayers with Almes. The Idols are not onely in Temples in this Kingdome, but in priuate houſes in peculiar places, in ſtreets, ſhips, Palaces, they are the firſt things you ſee, and yet put they little confidence in them. Their wiſeſt men ſeeke to mixe all three Sects together, and ſo whiles they embrace all, are of none, and proue *Atheiſts*.

Ciam Prelate.

Multiplication of Sects.

§. VI.

Of Strangers, and forraine Religions in China.

HOw inhoſpitall the *Chinois* are to Strangers, we haue in part heard, neither permitting egreſſe to the Natiues, nor ingreſſe to Aliens except in three reſpects. The firſt, ſuch as come to pay their annuall Tributes. The ſecond, ſuch as pretending honour and tribute, come (as wee haue heard) from the Weſt with ſeeming tribute, a colour to their gaine by merchandiſe. The third, ſuch as in admiration of the *Chinian* vertues and learning, come thither (as the Queene of *Sheba* to *Salomon*) to learne the ſame, which is the *Ieſuites* pretence: but theſe muſt here fixe their habitation, nor may be ſuffered to returne; ſuch is their iealouſie, of diſcouering their myſteries to others. And this made the *Ieſuites*, after ſo long ſtay, free from feare of expulſion, which yet ſince complaine of perſecution. But it may not be known, that they haue any intelligence or commerce with ſtrangers: & therfore the *Ieſuites*, which haue obtayned two ſo great priuiledges, the Eunuches Palace for their reſidence, and the imployment in correcting the *China* Kalender, both by Royall approbation; yet could not obtayne leaue to goe into the Prouince of *Canton*, though with Mathematicall pretexts for that Kalender-buſines, to obſerue longitudes and latitudes of places, becauſe they were ſaid to be Countrymen to thoſe of *Macao*. Yea, a *Colao*, or Counſellor of State, was deprined, for ſending a meſſage to a bordering King; a tempeſt of libelling complaints thundring and ſhowring againſt him therefore. In the bordering Prouiuces they ſet narrow watch at Cuſtom-houſes, Bridges, and in the very Riuers, by ſhips of warre thereto appointed. But if they be once gotten into the inner parts of the Kingdome, there are no ſuch Officers, nor ſearches. Neither may any ſtranger paſſe out of the Kingdome, after once entring, without the Kings licence. The *Ieſuites* ſteale their ingreſſe and egreſſe by meanes of the *Portugals*, which had the Towne of *Macao* aſſigned them by the *Chinois*, for trafficke. Theſe come vſually twice a yeere to the chiefe Citie of the Prouince of *Canton*, which is not called *Quantum*, or *Canton*, (the name of the Prouince) but *Quamceu*. All the day time they haue free entrance in the Citie about their merchandiſe, but muſt lie on ſhipboord at night. In the midſt of the Riuer there is a little Iland, and therein a Temple, in which they are allowed their Catholike deuotions. There by Boat did they prouide to ſteale in or out of the Countrey. The *Mahumetans* that come in by land, if they ſtay nine yeeres (as is obſerued) may neuer return home againe. Of theſe there are now many thouſand Families in *China*, diſperſed into the moſt of the Prouinces and chiefe Cities. They haue there their Temples very ſumptuous, and their Circumciſion. But as farre as I could euer learne, they neither teach, nor care to teach, others their deuotions, but are vnskilfull of the *Saracens* Tenents, and are contemned of the *Chinois*. It ſeems, that their comming in was in the time that the *Tartars* reigned here, which ſince haue increaſed, and after ſo long continuance, are not held in ſuſpicion, as other ſtrangers. Some ſay, after the fourth generation they are reputed as Natiues: yea, they are admitted to the ſtudies of Learning, Degrees, and Magiſtracy, as well as the *Chinois*. But moſt of theſe, thus dignified, relinquiſh their former ſuperſtition, retayning nothing thereof, but abſtinence from Swines fleſh, which rather by Nature, then for Religion, they abhorre.

This is alſo teſtified by *Monſ. de Monfart*.

Many *Mahumetans* in *China*.

Christians.

Touching *Christians* in *China*, there is not so great certainty. Certaine *Mogores* told *Riccius* of some in the *Xensian* Prouince, in the North parts of *China*, at a place called *Xucheo*, which were white, bearded, vsed Bells, worshipped *Isa*, that is, *Iesus*, and *Marie*, and honoured the Crucifixe; their Priests married, which cured diseases without medicines. A *Iew* at *Pequin* gaue more full intelligence, that at *Caifumfu*, and at *Lincin*, in the Prouince of *Sciantum*, and in the Prouince of *Sciansi*, there liued certaine Strangers, whose Ancestours had come out of forraine parts, which worshipped the Crosse which the *Chinois* expresse by the Character of Ten) and made the signe thereof with the finger on their meate and drinke. They also made the same signe with Inke on the foreheads of their children, to preserue them from misfortunes. A *Iesuite* also saw, in the hands of an Antiquarie, a Bell, with a Church and Crosse thereon grauen, circumscribed with *Greeke* letters. The *Iew* also reported that those Crosse-worshippers had the same doctrine in their prayers which the *Iewes* held: this the *Iesuites* interpreted of the Psalter common to them both. Hee affirmed that there were many of them in the Northerne Prouinces, which so flourished in Letters and Armes, that they grew suspicious to the *Chinois*, which hee thought was caused by the *Saracens* some sixty yeeres before. The Magistrates were so incensed hereby, that they for feare were dispersed, some turning *Iewes*; some *Saracens*; others *Idolaters*: and their Temples were also conuerted into Idolatrous Temples, one of which he mentioned in his Countrey. Euer since they hide their profession, and when the *Iesuites* sent one of their Conuerts to make enquirie, he could learne of none: which they thought proceeded from their feare, taking him for a Spie sent from the Magistrates.

See *sup.* in *Pinto.* 269.

All these Sects the *Chinois* call, *Hoei*, the *Iewes* distinguished by their refusing to eate the sinew or leg; the *Saracens*, Swines flesh; the *Christians*, by refusing to feed on round-hoofed beasts, Asses, Horses, Mules which all both *Chinois*, *Saracens*, and *Iewes* doe there feed on. The *Saracens* called the *Christians* also *Isai*, as before; and *Terzai*, which is a name giuen in *Persia* to the *Armenian Christians* (as an *Armenian* affirmed to *Riccius*) whence hee coniectured, that these *Christians* came out of *Armenia*. And by the report of *Haiton* the *Armenian*, which sayth, their King came to the Great *Can* of *Cathay* (which wee haue before obserued, at least the best parts thereof, to be the North parts of *China*) to perswade him and his to become *Christians*; which in great part also hee affected, besides other *Christians* there reported to bee, by *Paulus*; and those of *Sarnau*, subiect to the Great *Can*, mentioned by *Vertomannus*, which seeme to be neere these in *China*. The *Malabar Christians* haue *Chaldee* memorials of *China*, conuerted by Saint *Thomas*; and their Metropolitan hath his style of all *India* and *China*.

See *sup. pag.* 115

Sian.

Chaisamfu.

Iew at *Pequin* his report.

A certaine *Iew* at *Pequin* hearing of the *Iesuites* there, came to them to see and conferre with them, imagining them to be *Iewes*. This *Iew* was borne at *Chaisamfu*, the Mother-citie of the Prouince *Honan*, his name was *Ngai*, his countenance not resembling the *Chinois*; hee neglecting *Iudaisme*, had addicted himselfe to the *China* studies, and now came to *Pequin* to the examination, in hope of proceeding Doctor. There did hee enter the *Iesuites* House, professing that he was of their Law and Religion. *Ricci* leads him into the Chappell, where on the Altar stood the Image of the Virgin, *Iesus*, and *Iohn Baptist*, kneeling; which he taking to be the Images of *Rebecca* and her Twins, did worship vnto them, contrary (he said) to their custome. The Images of the Euangelists he supposed to be so many of *Iacobs* sonnes. But vpon further questioning, the *Iesuite* perceiued that he was a professor of the Law of *Moses*: he confessed himselfe an *Israelite*, and knew not the name of *Iew*; so that it seemed, the dispersion of the ten Tribes had pierced thus farre. Seeing the *Hebrew* Bible, hee knew the Letters, but could not reade them. He told them that in *Chaifamfu* were ten or twelue Families of *Israelites*, and a faire Synagogue, which had lately cost them ten thousand Crownes; therein the *Pentateuch* in Rolls, which had bin with great veneration preserued fiue or six hundred yeers. In *Hamcheu* the chiefe Citie of *Chequian*, hee affirmed, were many more Families with their Synagogue; many also in other places but without Synagogues, and by degrees wearing out: his pronunciation of *Hebrew* names differed from ours, as *Heruſoloim*, *Moſeia*; for *Meſſia*, *Ieruſalem*. His Brother, hee said, was skilfull in the *Hebrew*; which he in affection to the *China* preferment had neglected; and therefore was hardly censured by the Ruler of the Synagogue.

Israelites dispersion.

Iewes at *Hamcheu.*

To this Citie did *Ricci* send one of his to enquire, who found those reports true, which also copied the beginnings and endings of their Bookes, which they compared, and found to agree with their owne *Pentateuch*, sauing that they wanted prickes or points. He wrote also in *China* Characters to the Ruler of their Synagogue, that hee had the rest of the Bookes of the Old Testament, and other Bookes of the New, which contayned the acts of the *Messias*, being already come. The Ruler doubted, saying, that he would not come till ten thousand yeeres were expired. Hee also promised, that because hee had heard much good of him, if hee would come thither, and abstaine from Swines flesh, they would make him Ruler of their Synagogue. After this, three *Iewes* came from thence to *Pequin*, and were almost perswaded to become *Christians*. These complayned, that through ignorance of the *Hebrew*, their Religion decayed, and that they were likely all of them in a short time to become *Saracens* or *Ethnikes*. The old Archisynagogue, was now dead, his sonne a young man succeeded in place, but ignorant of their

Law. And that their *Iewish* Religion was indeed languishing, appeared by this, that they both worshipped the Popish Images, and complayned that in their Synagogue and priuate houses they had none. They were offended that they were forbidden the eating of any creature, which themselues had not killed, which had they obserued in this Iourney had cost them their liues. Their wiues and neighbours esteemed Circumcision of their Infants on the eighth day a cruell thing, which they could be willing to alter, with acceptation of the *Christian* Law, nor would much stand about Swines flesh.

As for the *Christian* Religion thither carried by the *Iesuites*, you haue heard the whole substance of their owne large Histories; I meane not of Miracles, and other like stuffe and stuffings, but the meanes of conuaying the Gospel to the *Chinois*, which are merchandise, money, & gifts, Mathematiks, Memoratiue-art, Morality, which to *China* Couetousnes and Curiosity with their conforming to *Confutius* Ethikes, and *China* Literature, Habite, Names and officious Rites, were good Orators, and made way with much adoe to that little which is done; a mutuall exchange in many things, of *Romish* for *Chinois* Beades, Shauing, Vests, Songs, Mumsimus, Tapers, Censers, Images, Legends, Monkes, Nunnes, Processions, Pilgrimages, Monasteries, Altars, hee and shee Saints, and other things innumerable pertayning rather to *bodily exercise which profiteth little*, then to *Godlinesse*, or God-likenesse, who *being a Spirit, requireth men to worship him in spirit and truth; and by foolishnesse of preaching saueth them that beleeue*, not *by wisedome of words*, in elegant writings, and those more of Arts then *Christianity*. The great Doctor of the *Gentiles* tooke another course, not with *excellency of words*, sayth he, or *wisedome*; yea, *hee esteemed to know nothing among the* learned Corinthians *but* Iesus Christ *and him crucified: neither stood his word in the entising speech of mans wisedome, but in playne euidence of the Spirit; not the wisedome of the World, but the wisedome of God in a mysterie*, &c. Which I speake not as denying the seruice of Arts to Diuinity, but of Diuinity in manner to Arts, where the profession is not as of a Tent-maker to liue that he may preach, but as of an *European* Philosopher, where *Hagar* domineereth, and *Sara* at some times whispers a little, and except in Images and Shewes scarcely shewes her selfe, as more fully appeareth in the fore-going History. But would God any Arts or any Preachers may occasion the opening of their eyes, which were wont to bragge of two eyes, and say *Europeans* had but one, when as they haue but this one naturall eye, and in spirituall things are blinde: and would God the *Chinois* might as generally acknowledge themselues thankfull to *Iesuiticall* labours in professing the Gospell, as I doe here my selfe for this Historicall light of *China*.

§. VII.

The Map of China, *taken out of a* China *Map, printed with* China *Characters; illustrated with Notes, for the vnderstanding thereof.*

THe originall Map, whence this present was taken and contracted, was by Captaine *Saris* (whose industrie and acts haue both heere and elsewhere enriched this worke) gotten at *Bantam* of a *Chinese*, in taking a distresse for debts owing to the *English* Merchants; who seeing him carefull to conuay away a Boxe, was the more carefull to apprehend it, and therein found this Map, which another *Chinese* lodged at his house, lately come from *China*, had brought with him. The greatnesse of the danger at home (if knowne) made him earnestly begge for that which was on the other side as earnestly desired and kept. Master *Hakluyt* procured it of the Captaine, professing his intent to giue it to Prince *Henry* of glorious memory, who being suddenly aduanced to a higher view in Heauen, and Master *Hakluyt* following, this Map came to my hand, who sought to expresse my loue to the publike in communicating what I could thereof. For it being in *China* Characters (which I thinke none in *England*, if any in *Europe*, vnderstands) I could not wholly giue it, when I giue it; no man being able to receiue, what he can no way conceiue.

*Tom.*1. *l.*4. *c.*1. *&* 2. *&* 3.
The *Chinois* iealous of Strangers.

And as in greatest things our little vnderstandings easier apprehend negations then affirmations, and can better tell what they are not, then what they are; so this Map easily tells at first, euen without Commentaries, the comments and conceits of our Geographers, *Ortelius*, *Mercator*, *Hondius*, and whatsoeuer other our Authors of Maps, and Globes, who all haue heerein fayled, giuing nothing lesse then *China* in their *China*; whether wee regard the generall figure and shape thereof, or the particular Riuers, Hills, Prouinces, Wall, Latitude, and if wee beleeue the *Iesuites*) Longitude also. They present it in forme somewhat like a Harpe, whereas it is almost foure square; they make Hills, Riuers, Lakes, Ilands, (*Coray* also for one, which is part of the Continent) Cities, Prouinces, euery thing out of due place. Whose industry I commend; but industry guided by fansie, and without light, is but *the blind leading the blind*, or like a seeled vnmanaged Horse, the more spurred, the more ready to carrie his Rider into precipices, or out of the way at least. Our Geographers haue indeed payd the *Chinois* in their owne Coine:

Benefit of this Map in confuting others.
Coray no Iland.

Digitized by Google

for they, as before yee haue read, knew nothing in manner of the other parts of the World, and expreſſed them as fanſifully in their Maps; and wee likewiſe knowing nothing of them, haue entertayned, and beene entertayned with *Fanſi-maps*, in ſtead of thoſe of *China*. As therefore by Sir *Thomas Roes* honourable induſtry wee haue giuen you *Indus* and *India* before, which no Geographer before had done (they all bringing *Indus* thorow *Cambaia*, and ſome ſeeking for *Ganges* at *Canton* in *China*) ſo here we giue you a true *China*, the *Chinois* themſelues being our Guides, and the *Ieſuites* their both Examiners and Interpreters.

The Originall is aboue foure foot one way, and almoſt fiue foot the other, whereof a yard and ſome foure inches ſquare is the Map it ſelfe; the reſt are *China* Diſcourſes touching the ſayd Map in their Characters and Lines (running downward, and beginning at the right hand to bee read, after their manner) which are heere omitted, as not vnderſtood. Yet haue wee ſome vnderſtanding (as where wee ſee a man farre off, whom we know to bee a man, and can obſerue his habit, geſture, motion, though wee ſee not the proper complexion of his face) by that which *Pantoia* hath told vs before; namely, that thoſe *China* Characters contayne all the Tributes of each Prouince, yea the number of Houſes and perſons in the ſame. And in the Map (of which wee haue giuen an extract) hee ſayth the *Rounds* and *Squares* are Cities and Townes of principall note all walled; adding that the Riuers are diſtinctly delineated; and the great Lines are boundaries of Prouinces, (wee haue heere expreſſed them after our manner in little prickes,) the leſſer expreſſe the chiefe Cities Iuriſdiction. Ours hath no ſuch leſſe Lines, but thoſe mentioned Rounds and Squares, which perhaps hee meaneth; for therein are many others in Characters, without ſuch lines round or ſquare, and therefore as I ſuppoſe without Iuriſdiction; and in this extract wee haue left them out, becauſe we exactly knew not their meaning, and perhaps ſometimes are Cities, ſometimes Caſtles or Townes, or Hills, or ſome other thing: and ſilence ſeemed better, then labour to expreſſe an vnknowne Character, or boldneſſe to expreſſe our owne folly or to occaſion others, deceiuing and being deceiued. Theſe Rounds and Squares alſo haue their Characters in them, and thoſe greater Squares with Croſſes, haue, ſome three others foure Characters.

Beſides *Pantogia*, another hath helped further to the particular vnderſtanding, namely our famous Countryman Maſter *Candiſh*, who in his voyage about the Globe, brought home certayne references taken out of the Map of *China*, neere whiah hee ſayled, and it ſeemes by ſome ſkilfull of the Languages both of *China* and *Portugall*, had the ſame interpreted to him. That the Prouinces beare other names then in our Map or diſcourſe is no wonder; for both the *Chinois* themſelues in diuers Prouinces ſpeake diuers languages, and in all haue the Court language beſides the peculiar: and the *China* Characters are the ſame to many Nations, each of which reades them into his owne language, dialect and appellation. Thus what one Prouince calleth *Lanquin* (wanting the *N.*) by diuerſitie of Dialect, is elſe-where called *Nanquin*; *Pequin*, *Paquin*, and *Puckin*; yea, by other language *Taybin*, and *Cambalu*, and *Suntien*, or *Citie of Heauen*. I durſt not interpret all, chuſing rather to giue an vncertayne truth, then to hazard a certayne errour. Maſter *Candiſhes* Notes are theſe.

1 THe Prouince of *Canſas* * hath 4. great Cities, and 20. ſmall Cities, and 77. Townes and Caſtles: it contayeth in length 55. leagues n it hath 362000. Houſes of great men that pay Tribute and 13900. men of Warre, and hath 47000. Horſes which are the Kings, kept for his dfeence.

2 The great City of *Paquin* where the King doth lye, hath belonging to it 8. great Cities, and 18. ſmall Cities, with 118. Townes and Caſtles, it hath 418789. Houſes of great men which pay Tribute: it hath Horſemen for the War, 258100. this City is in the latitude of o 50. degrees to the North-wards, being there as cold as it is vſually in *Flanders*.

3 The Prouince of *Soyebin* hath 7. great Cities, and 16. ſmall, with 12. Townes and Caſtles, and one great Citie, to which many repayre to fight againſt the *Tartars*: it hath ( ) leagues in length, and hath 164118. great Houſes which pay Tribute, and 96000. men of War.

4 The Prouince of *Santo* p hath 6. great Cities, and 14. ſmall, with 90. Townes and Caſtles; it is 82. leagues long, and hath 77555. great Houſes which pay Tribute: 63808. horſemen, and 31000. footmen of War.

5 The Prouince of *Oyuan* q hath 7. great Cities, and 14. ſmall, with 90. Townes and Caſtles; being 470. leagues long, and 132958. great Houſes that pay Tribute, 82800. men of Warre. Out of this Prouince commeth Copper, Quick-ſiluer, and Black-lead.

6 The Prouince of r *Cutchew* hath 8. great Cities, and 12. ſmall; and 83. Townes which make Armour to fight with the *Iewes* which do inhabit beyond *Cauchin-china*: it is 100. leagues broad, and hath 32920. Horſemen and Footmen with 405670. great Houſes which pay Tribute whereof the men of War are payed.

7 The Prouince of *Languyn* hath 14. great Cities, and 17. ſmall, and 95. Townes and Caſtles: it is 120. leagues ouer, and hath 962818. great Houſes which pay Tribute: it hath in it 208900. men of Warre. Whereof there are 52500. *Tartar* Horſemen that take wages.

8 The

* Perhaps this is *Seianſi*.

n Theſe leagues ſeeme doubtfull.

Pequin.

o This note of degrees is falſe, if the Ieſuits be true: and I thinke rather the gueſſe of the *Portugall* Interpreter, then that there was any ſuch note in the Map. For the *Chinois* were ſcarſly ſo good Coſmographers to obſerue degrees.

p *Sciantum*.

q *Henan*.

8 The Prouince of *Vquam* hath 14. great Cities and 19. ſmall, 150. Townes and Caſtles, and is 210. leagues broad; and 53161. Houſes that pay Tribute: and 71600. men of Warre.

9 The Prouince of *Som* hath 7. great Cities, and 11. ſmall, and 105. Townes and Caſtles; and is 200. leagues broad: and hath Houſes that pay Tribute 139567. and men of Warre 345632.

10 The Prouince of *Eſſiram* hath 11. great Cities, and 75. ſmall, and 80. Townes and Caſtles, and is 440. leagues broad, and hath great Houſes that doe pay Tribute 1242135. and 339000. men of Warre.

11 This Lake lyeth behind *Siam*, and before *Champa*, and doth joyne with the *Lappians*, and from thence commeth all the water that ſerueth the Kingdome of *China*: and the *Indians* and the *Chinians* doe report this Lake to be the whole World, and ſo they paint the Sea, the Moone and the Stars within it. *Lacus Conſtellationum.*

12 The Prouince of *Lanſay*, hath 13. Cities and a chiefe Citie, and 73. Townes and Caſtles, and is 260. leagues broad, and hath great Houſes that pay Tribute 1393629. and 12700. men of Warre.

13 The Prouince *Cuanſa* hath 12. great Cities, 45. ſmall, and 51. Townes and Caſtles, it is 260. leagues broad, and hath great Houſes that pay Tribute 1306390. and men of Warre, both Horſemen and Footmen 100100.

14 The Prouince of *Vanam* hath 14. great Cities, and 36. ſmall, and 34. Townes and Caſtles, and is 88. leagues broad, and hath great Houſes that pay Tribute, 589296. and 15100. men of Warre.

15 The Prouince of *Fuquien* hath eight great Cities, and one principall Citie, and 54. Towns and Caſtles, and two great Cities of Garriſon to keepe watch vpon the *Iapons*, and is 200. leagues broad, and hath 5009532. great Houſes that pay Tribute, and 4003225. men of the Kings Guard.

16 The Prouince of *Canton* hath 40. great Cities, and ſeuen ſmall, and 77. Townes and Caſtles; and a Citie that putteth forth hundreds of ſhips for the keeping of *Cauchin-china*, and is 380. leagues in breadth, and hath 483383. great Houſes which pay Tribute, and 39400. men of Warre.

17 The Prouince of *Enam* hath ſeuen great Cities and 13. ſmall, and 90. Townes and Caſtles: and is 88. leagues broad, and hath 589296. great Houſes that pay Tribute, and 15100. Souldiers.

The *Spaniſh* Friers of the *Philippinas*, as *Mendoza* recordeth, thus out of the *China* Bookes relate the names of the Prouinces, *Paquia, Foquiens, Olam, Sinſay, Siſuan, Tolanchia, Canſay, Oquiam, Anchoo, Honan, Xanton, Quicheu, Chequean, Suſuam* and *Saxij*; tenne of which are ſeated on the Sea-coaſt. He alſo addes that *Paquia* or *Pequin* hath forty ſeuen Cities (ſtiled *Fu*) and one hundred and fiftie others termed *Cheu*. *Canton* hath thirtie ſeuen of the one, and one hundred and ninetie of the other, and ſo proceedeth with ſomewhat differing account, reckoning in all fiue hundred ninety one Cities entituled *Fu*, and 1593. of the *Cheu* Cities, which he makes Townes: whereas the Ieſuits haue taught vs that *Fu* is the Title of a *Region* or *Shire*, in each Prouince, which are ſub-diuided into *Cen* and *Hien*, thoſe the more, theſe the leſſe principall, but yet equall to our Cities, as before is obſerued.

Againe, in a Dialogue printed at *Macao*, in the Confines of *China*, 1590. by the *Portugals*, theſe Prouinces are thus reckoned, Sixe vpon the Sea, *Coantum, Foquien, Chequiam, Nanquin, Xantum, Paquin*; the other nine In-land Prouinces, *Quianſi, Huquam, Honam, Xienſi, Xanſi, Suchuon, Queichen, Iunan, Coanſi. Perera* reckons them thus, *Fuquien* in which *Cinceo* is the beſt knowne City; *Cantan, Chequeam, Xutiamfu, Chelim, Quianci, Quicin, Quanci, Confu, Vrnan, Sichina, &c.* all which diuerſity proceedeth partly from ignorance, partly from different Language and Dialect in the expounding theſe Characters. And it muſt needs be ſo, the *Chinois* wanting vſe of, and Characters to expreſſe *b. d. r.* and all their Characters being of things not Letters; in proper names is very great difficulty to expreſſe ours in their Characters, or theirs in our Letters; inſomuch that one Ieſuite doth not perfectly agree with another, nay, often diſſents from himſelfe, as in *Ianſeu, Yamceu, Hianceu*, for their great Riuer which *Polo* cals *Quian*; and *Chi*, and *Ci*, and *Qui* I find often confounded in their ſyllables, as alſo *x* and *ſci*, as *Xanchin, Scianchin*, and the like. Yea, ſuch is the difficulty, that the Ieſuits can ſcarſly deuiſe to expreſſe in *China* Characters, the forme of Baptime, to put the *Latine* words thereof, into *China* Characters, that Baptiſme might vniformely bee adminiſtred after the *Romiſh* Rite, as themſelues confeſſe. *Trig. Epiſt.*

Touching their Souldiers, I thought good, to adde this note for their Peeces whoſe Barels *Pantoia* ſayth, are but a ſpan long, that Captayne *Saris* beeing asked told mee, hee ſaw many of them, and they were as long as Piſtols, but the Cocke ſuch as makes them of little ſeruice. Note of Souldiers Peeces. *Pantoia* miſtaken, perhaps the Printers fault.

I haue added theſe Pictures of a Man and Woman of *China*, not by gheſſe, but out of certayne in *China* Pictures made alſo in *China* in very good Colours, but with Arte meane enough, fine cloth inſerted in ſtrong *Indian* Paper; of which Captayne *Saris* communicated many to me. Pictures.

Their

Their little Eyes and Noſes, long Hayre bound vp in knots, womens feete wrapped vp, long wide-ſleeued Garments, Fannes, &c. I haue (taking diuers parts out of diuers) preſented to thee. A taſte of the *China* Characters thou haſt in the Title. That of *Ricius* I haue added from the Ieſuits, in thankes for his great paines, and to ſhew the habit of the head, &c.

Prouinces and their names.

The names of the Prouinces I haue hunted out of the Ieſuites Iourneyes and other Relations. In the moſt I am ſure I am right, in the other * you haue my coniecture; for neyther know we their Characters, nor haue any giuen vs a particular Geography or Chorography, but only the names of the Prouinces. I haue added names alſo to ſome Cities and Riuers of principall note. As for the truth of the Map I finde well to agree with the Ieſuites Iourneyes; but it hath not *European* Art, it being neyther graduated, nor Hils, nor Woods, or other differing places preſented to the view; only hauing Characters, Lines, Lakes, and Riuers. I haue aduentured to adde Degrees to helpe ſuch Readers as cannot doe it better themſelues, following the Ieſuits preſcripts in generall, although I cannot but maruell at that longitude, ſo farre differing from the generall opinion, and could almoſt doubt, that herein theſe *Portugals* are minding that diuiſion agreed on betwixt the *Spaniards* and them, which hath anciently cauſed ſuch contentions, and wherein you haue read ſome Offices of the Ieſuits in theſe *China* Diſcourſes. But I will not contend, where themſelues ſpeake faintly.

* Three or 4. to the South-weſt.

Degrees.

Quian.

Now for *Quian* which *Polo* hath mentioned, as the greateſt Riuer in the world (it is here called *Ianſu*, or *Hianſu*, or *Yamſu*, that is, the *Sonne of the Sea*, and *Ianſuchian*) and another called *Caramoran* (*Cara* ſignifieth blacke, and this great Northerne Riuer is alway thicke and troubled) and their Marriage by Art, is here viewed; and more then two hundred Cities (one of *Polos* Wonders) communicating their Merchandizes by that *Quian*, or *Chian*, as they now terme it *Ianſuchian*, *chian* ſignifying *the chiefe Riuer*. For the name *Cathay* to bee giuen by the *Tartars* to *China*, *Goez* his Iourney hath made it out of doubt; alſo that *Pequin* is *Cambalu*, that is, *the Citie of the King*. I doe conceiue that *Polos Mangi* was the nine Southerne Prouinces of *China*; the Northerly before conquered was knowne by the name of *Cathay*; a name by the *Tartars* giuen to diuers Countreyes, as *Cara Catay* and *Catay Calay* and Great *Catay*. This Great *Catay* is *China*.

* *Mandeuile* & others ſpeake of the irregularitie of *Caramoran*.

Polo and other Authors ſpeake of *Cathay* and *Mangi* as two; perhaps the *Tartars* ſo accounting them; the one, to wit, the North parts being formerly ſubiect to them, and called by their ancient name, the other called *Mangi* in contempt; as the *Romanes* called the ſubiect *Britaines* of this Iland by their former name, and the others *Picts* and *Barbarians*; and as our Anceſtors called thoſe *Britons* which withſtood them *Walſh* or *Welch* in a kind of diſgrace. Nay ſtill the Northerne *Chinois* call the Southerne *Mangines*; that is, *rude* or *barbarous*, as the Ieſuites haue taught vs. But neither *Cathay*, nor *Mangi*, was then the name which they aſſumed, but was giuen them by the *Tartars*, as *China* is a name vnknowne to them now. If any will find no other *Cambalu*, nor *Cathay* but *Pequin* and *China*, I will not contend, though my Reaſons elſewhere giuen out of *Polo*, and *Chaggi Memet*, and others, with the former Relations of *Pinto* and *Albacen*, make me ſcrupulous, and ſtill to beleeue ſome greater Prince or *Can* with his *Cambalu* or Court in the more Northerly parts of *Aſia*, then the Ieſuits could learne of; which the *China* iealouſie, admitting no entercourſe of Strangers, and the many quarrelling *Tartar* Princes in the way haue concealed from vs hitherto.

P. Pil. l. 4. c. 12. §. 2.

The great blacke ſpace on the North-weſt hath in the Originall certayne Characters in it which expreſſe it: whether it intendeth Mountayns which their Art could no better expreſſe, and the Riuers thence running may import; or that ſandy Deſert on the North-weſt, I cannot ſo well determine. The Ieſuits ſay, that *ab occaſu qui Aquiloni vicinior eſt, conterminus viſitur arenæ ſitientis ager, qui multorum dierum penuria aduenarm exercitus ab* Sinarum *Regno aut deterret, aut ſepelit.* I rather thinke that it is *Cara Catay* or *Blacke Catay*, before often mentioned, both Mountaynous, and Deſert, and perhaps coloured blackiſh, as the name intimates, by black ſands, or as health grounds with vs: it was the firſt *Tartarian* Conqueſt, and beginning of the greateſt greatneſſe which this World hath yeelded; the Countrey before of *Preſbyter Ioannes Aſiaticus*.

The wall is in this forme in the original, not in the Picture made vp of Mountaynes, wherein I thinke they had not art to imitate Nature; the Art in the whole Map much reſembling our old Maps, of wooden prints, ſaue that I ſee not one Mountaine preſented in ſwelling faſhion to the Eye. The Ilands are very many with their Characters, but poorely delineated, their names here omitted for their vncertaynties: ſo little (and yet how much more then any other!) doe wee giue you of *China*, till Time giue vs more. The degrees are not ſo perfectly accommodated to the Map, by reaſon that we muſt at once follow the *Chinian* Map which had no degrees (nor could their Art without degrees giue euery place his iuſt longitude or latitude) and the Ieſuits Rules: yet we haue come ſomewhat neere, as may be ſeene. Other things appeare in the Hiſtory.

CHAP. VIII.

A continuation of the Iesuits Acts and Obseruations in China *till* RICIVS *his death and some yeares after. Of* Hanceu *or* Quinsay. *An Extract of* MONFARTS *trauell.*

THus hauing with *Pantogius* eyes taken some view of the Kings Palace, and with *Ricius* of their whole Gouernment, I hold it fit not to leaue this *China* Apostle (so *Ricius* is called) till wee haue seene some fruits of his labours vntill and after his death. He tels vs that three dayes after they had beene shut vp in the Palace of Strangers as yee haue read, they were brought forth into the Kings Palace to performe the wonted Rites to the Kings Throne. This is done in a large and glorious Court or Porch, where 30000. men might be contayned; at the end whereof is a high Chamber, vnder which by fiue great doores is a passage to the Kings Lodgings; in that Chamber is the Kings Throne, where anciently he sate to heare and dispatch businesses and Embassages, and to receiue the Rites of Magistrates, rendring thankes for their Preferments. But in the present solitarinesse of the King, those Rites are done to the Empty Throne, many there gratulating the King euery day. In this Court, enuironed with stately Workes, 3000. Souldiers watch euery night, besides others watching in Towres without, a stones cast from one another. In each of the fiue Gates is an Elephant, which with the Souldiers goe forth when it is day: and those are admitted which come to gratulate the King. These come in a peculiar Habit of Red, with an Iuory Table in their hand to couer * their mouth, and exhibit their kneelings and bowings to the Throne, as they are taught by Officers of Rites or Masters of Ceremonies: one crying out to that purpose at the performance of each gesture. The Gouernour of Strangers hauing shut them vp, first petitioned the King sharply against *Mathan* the Eunuch and them, but seeing no answere, he petitioned more gently but would haue them sent from *Pequin*; which the King liked not, yet without Petition from the Magistrates would not detayne them. The Eunuches also laboured their stay for feare the Clockes should miscarry beyond their skill. The Kings Mother hearing of a selfe-striking bell sent for it, and the King sent it, but to preuent her asking it, caused the Wheeles to be loosed, so that not seeing the vse, she sent it againe.

When the Rituall Magistrates could get no answere to their Petitions, for not touching their stay at *Pequin*; the *Prefect* sent to *Ricius* that he would make a Petition to giue him leaue to stay there in pretence of Sickneſse and Phylicke, which hee did, and the other presently answered, giuing him libertie to hyre a House; continuing also his former allowance, with foure seruants to bring it euery fifth day, (Flesh, Salt, Rice, Wine, Hearbs, Wood,) and another seruant in continuall attendance: so that now they recouered libertie and credit. The Eunuches also told them of the Kings approbation of their stay; and they had out of the Treasurie eight Crownes a moneth, which their goeth much further then heere: and the Captayne of Strangers by open Sentence gaue them full libertie. One of the *Colai*, and then the onely, became their great friend, with his Sonne, after some *European* Presents, which hee bountifully rewarded: likewise the supreame President of the Court of Magistrates, and other of the Grands, besides the Eunuches of the Palace, and some of the Queenes and Royall family. Amongst others was *Fumochan* a great man, who for withstanding the Eunuches capacitie in *Vquam* Prouince, was depriued, whipped, and three yeeres Imprisoned; but by others honored with Temples, Odours, Images, and Bookes in prayse of him, as a Saint, and the King wearyed by multitude of Petitions for him, granted him againe his libertie. Also *Lingoson* a great Magistrate and Mathematician as they accounted, became *Ricius* his Scholler, and was baptised *Leo*, borne at *Hancen*, the chiefe Citie of *Cechuan*, of which afterward.

Yet had *Ricius* a great enemy of a great Learned man of *Hanlin* Colledge, who in zeale of the Idol-sect had put away his Wife, and professed himselfe one of their Votaries or Shauelings, drew many Disciples after him, and writ many Bookes against the *Literate Sect*; and writ also against *Ricius* his bookes. One of the Kings *Admonishers* accused him to the King by Petition, and the King rescribing seuerely, hee slue himselfe: yea, the King ordayned, that if the Magistrates would become Apostata shauelings, they should leaue their Robes and get them to the Deserts; many accordingly chusing rather to leaue their Offices, then their Idols. One *Thacon* was so famous, that the chiefe Queene daily worshipped his habit, (hauing no other meane of entercourse) and so proud that hee sent to *Ricius* to come and visite him, with the rites of kneeling. But on occasion of search for a Libell against the King, hee was found guiltie of writing ill of the King, for not professing Idols, and of ill vsage to the Kings Mother, for which he was Whipped so, that before they could adde bonds, hee dyed. One which by torments confessed himselfe author of the Libell, had 1600. gobbets plucked from his flesh and then beheaded, a Death most (for the diuision of the body) abominable to the *Chinois*.

Scianbai in *Nanquin* Prouince deſcribed.

In the *Xaucean* Reſidence ſome ſtirre happened, whiles they brought to the *Ieſuits* houſe their Idoll *Hoaquan*, made with three Eyes, one in his forehead (for though the *Chinois* haue no Idols repreſenting any formes but humane, yet they admit Monſters) as their God of Eye-ſight, for whom they intended to build him a Temple, and carryed him from houſe to houſe a begging to that purpoſe; the *Ieſuites* refuſing to giue them. Rumours alſo of *Mathans* detayning the Preſents were ſoone apprehended; as likewiſe certayne Stage-players which comming from *Amacao*, ſet forth in Pictures thoſe things which the *Chinois* hated in the *Portugals*, as their ſhort Garments (ſeeming to them ridiculous) praying on Beads by men in Temples, with Swords girded to them, kneeling on one knee; their quarrels one with another and combats, Women going with Men in company, and the like; a Magiſtrate alſo accuſed the *Ieſuites* to the *Tauli*, who ſpake for them and viſited them. It happened alſo that by occaſion of a great Drought, Proceſſions and Faſts were commanded, and the Shambles ſhut vp, the Gouernour and people in diuers places appointed thereto, begging rayne with their bowings; and when this preuayled not, they brought an Idoll out of the Suburbes, called *Locu*, which was carryed about, adored, offered too, with no better ſucceſſe. Hereupon they conſulted a Witch, which ſayd the *Quoqyn* or Goddeſſe was angry, that her backe was daily ſcorched (ſpoken of the Conuerts burning their Idols) which cauſed ſome conſpiracie, quenched with the *Taulis* fauour and the rayne following. At *Nanquin* one borne at *Scianbai*, and firſt pronounced Licentiat in the examination 1597. was Baptiſed by the name of *Paulus*, who conuerted his whole Family. *Anno* 1604. hee was made Doctor, amongſt three hundred and eight, of which number foure and twentie were choſen of *Hanlin* Colledge, after the *China* courſe of beſt Writing, of which hee was the fourth: this Choiſe of foure and twentie is but for probationers, for at the moſt after long tryals by the *Colai*, but twelue or fifteene are ſet in poſſeſſion, in which examinations hee was ſtill a principall.

I thought to adde this by the way, that *Ligoiſun* a learned friend of the *Ieſuites*, had beene put from his great place into I know not what pettie Office, for too light demeanour and too frequent Cheſſe-play, which continued three yeeres. The *Hollanders* much impoueriſhed the *Portugals* by taking the *Iapan* Ship of *Amacao*, the iewell of the *Ieſuites* beneficence. At *Nancian* they Conuerted three of the Blood royall, Baptiſed by the names of *Melchior*, *Gaſpar*, *Balthaſar*, and their Mother a woman much addicted to Idols, and obſeruing the *China* Faſt; who ſent them a Charter, called the Directorie of Hell, which the Shaueling Impoſtors had ſold her, written to the Infernall King, to giue her good entertaynment, and remit her puniſhment. The *Ieſuites* exchanged their Images for her Idols, and their *Eccleſiaſticall* Faſt for that *Pegan*.

At *Nanquin*, *Chiutaiſo* was baptiſed by the name of *Ignatius*, ſtriking the ground foure times firſt with his forehead, and reciting the profeſſion of his Faith, which hee deliuered in writing to the Fathers; the contents of which and of *Paulus*, are expreſſed in our Author. The *Hollanders* ſought entrance into *China*, to bee admitted Trade in *Fuquien* Prouince, but were denyed notwithſtanding both promiſes and threats. Feare of them made the *Portugals* at *Amacao* begin to build a Tower and to fortifie. But a quarrell falling betwixt a Regular, and a Secular Prieſt, one fleeing to the *Ieſuite* Rector for refuge, there grew ſuch a combuſtion that the *Chinois* fled to their Countrey, perſwaded that *Cataneus* then there intended to get the Kingdome, whereof hee had ſuch expenſe; at *Canton* was ſuch terrour, that aboue one thouſand Houſes without the walls were pulled downe, the Gates toward *Amacao* filled vp with Lime and Stones, all commerce with *Amacaons* prohibited, great Watch kept; *Francis Martinez* betrayed by a falſe brother a Conuert, as a Spie, was twice ſo Whipped that hee dyed ſoone after the ſtripes, as hee was entring the Priſon. At *Nanquin* three thouſand were found, *Anno* 1606. to haue conſpired the Death of the Magiſtrates, and to inuade the ancient Treaſuries. Thoſe which were taken were put in thoſe Pillorie boards, which force them to ſtand till their Legges rot, ſome of them holding out a Fortnight, as was thought by bribing the Executioners: the ſuſpition hereof was by ſome caſt on the *Ieſuites*. Two Guides or Fraternities were erected of *China* Conuerts.

Ziu Paulus the learned Conuert, being to leaue his place for three yeeres, to mourne for his Father at *Scianbai* his natiue Towne, he obtayned *Cataneus* to bee ſent thither with him, where hee ſtayed two yeeres. This is one of the meaneſt ſorts of Cities which they call *Hien*, one hundred fortie and foure *Italian* myles from *Nanquin*, and in that Prouince, in twentie nine Degrees, ouer againſt *Corai* and the *Iaponian* Ilands, within a little of the Eaſterne Sea. The name *Scianhia*, ſignifieth *on the Sea*; and it is fortified with Garriſons and a Fleet againſt the *Iaponians*, being a paſſage with a good winde of foure and twentie houres ſayle. The walls are two myles compaſſe, the Suburbes contayne as many Houſes as the Citie; ſo that there are numbred fortie thouſand Houſholds *(by this yon may meaſure the frequencie of great Cities,)* the Territorie is an euen Playne, and ſo cultiuated that they ſeeme a Citie of Gardens, full alſo of Villages, Hamlets, Towers, contayning twentie thouſand Families in this Townes iuriſdiction, there being in that Circuit 300000. men. This Iuriſdiction alone, payeth to the King the yeerely value of 150000. Golden Crownes, in the weight of Siluer, and aſmuch in Rice, in all 300000. *(whence the incredible reuennes of this Crowne appeare alſo credible)* the Ground being fertile of

ued with Cloathes. There are many good wits and Students, a good Ayre, and they liue long,
eightie, ninetie, and a hundred yeeres.

Wee are now come to the Death of Father *Ricius* (the Author of our Iesuiticall Discourse of *China* hitherto; occasioned by multitude of businesse that yeere, fiue thousand Magistrates comming to visite the King, and fiue thousand others standing for their Doctorship, of which about three hundred onely are chosen. Wearyed with his Ecclesiasticall Fasts also and labour of building a Church, hee fell sicke and dyed, May 11. 1610. hauing much propagated the Gospell by his writings, and furthered it by his Mathematickes. For all Sects haue beene there more encreased by Writing then Preaching. Hee dyed leauing much sorrow to his friends and care also in that *China* scrupulositie, how and where to interre him. It was the counsell of their friends, to put vp a Petition to the King, whereupon they resolued, and *Pantogia* by Doctor *Leos* helpe, thus Petitioned in behalfe of *Ricius* his Corps. *I* Iames Pantogia, *subiect of the Kingdomes of the great West, Offer a Supplication in behalfe of another Forrainer now deceased. I humbly beseech your great Clemencie for a place of Buriall, that your Royall beneficence may extend to all, euen Strangers of remotest Regions. I* Iames Pantogia *am a Stranger of a most remote Kingdome, but mooued with the vertue and fame of your most Noble Kingdome, haue in three yeeres sayle, with much trouble, passed hither aboue sixe thousand leagues. In the eight and twentieth yeere of* Vanlie, (for so, as wee, they account their yeeres by the Kings raigne) *in the twelfth Moone, I, with* Matthew Ricius, *came into your Court; where wee presented some gifts, and haue since beene sustayned at the Kings charge. The nine and twentieth yeere of* Vanlie, *in the first Moone, we Petitioned your Maiestie for a place of residence, and haue many yeeres enioyed the Royall bountie. In the eight and thirtieth yeere of* Vanlie, *the eighteenth day of the third Moone,* Ricius *dyed. I, a Client of the Kingdome of the great West, remaine a fit subiect of pitie. The returne into our Countrey is long, &c. And I now, after so many yeares stay, suppose that wee may bee numbred to the people which followeth your Royall Chariot, that your Clemencie, like that of* Yao, *may not containe it selfe in the Kingdome of* China *alone, &c.* So proceeds he to set foorth the good parts of *Ricius*, and with a long supplication to begge a place of Buryall, *some Field, or part of a Temple; and hee, with his fellowes, should obserue their wonted Prayers to the Lord of Heauen, for thousands of yeeres to him and his Mother.* This Libell was written with peculiar forme, Characters, Seales; many Rites herein necessarily obserued. Before any bee offered to the King, it must bee viewed of some Magistrate; and they got this to bee allowed by one which is Master of Requests, which sent it presently to the King. They must also haue many Copies thereof, to shew to those Magistrates, to whom it appertaines; which they did: one of them affirming, That *Ricius* deserued a Temple also, with his Image to bee there set vp. This message hee sent them by another: for when they fauour a cause, they shew great strangenesse. The King commonly answers the third day (except hee mislike, for then he suppresseth) and sends it to the Magistrate that had presented it, who shewes which of the sixe is the peculiar Court, which iudgeth of these things: This being sent to the *Rituall Tribunall.* Their answer is sent to the King within a Moneth (which there is a short space) and repeating the Petition *verbatim*, and the Kings command to the peculiar Office, answers what the Law sayth in that case, and concludes the Petition to bee agreeing to Iustice, and earnestly pleades and sues for confirmation. The King sends this answers to the *Colao*, which subscribed his approbation; which being sent againe to the King, hee subscribed with his owne hand *Xi*, that is *Fiat*, or *bee it done*, which the third day after was deliuered them.

He was a King of old, accounted a Saint.

The *Iesuites* hauing so speedie and prosperous successe, bethought of gratifying their friends, which had furthered this designe with Dyals, especially to the *Colao*, which vsed *Pantogia* very kindly and writ to the Gouernour of *Pequin* to looke out a place fitting. Three or foure were offered to their choyse, one of which much pleased them.

It was aboue a quarter of a myle from one of the Citie gates, built by an Eunuch, who now was condemned for some crime; and left his Palace which hee had heere builded, with the expence of aboue foureteene thousand Duckats (which in *China* is a great summe, in that cheapnesse of all things, farre beyond *European* computation) should fall into the hands of spoylers (the goods of Eunuches in this Kingdome, vsually becomming his which first can catch them) hee consecrated his Palace, and made it a Temple, maintayning therein one Prieft. Such Palaces many of the Magistrates haue neere to the Cities, as retyring places and *Tusculanes* for their Muses. The portraiture of this whole House, with the Garden, and other appurtenances, *Trigautius* hath set foorth in Picture; being after the *China* building, with the doore Southwards, and so running a great length into the North, with foure great Halls one beyond another; in the middle parts, and on each side, Chambers and other Roomes; beyond all the Garden, the pillars of Timber bearing vp the roofe; the walls and pauement of Bricke. The outmost of these Halls was conuerted into a Temple or Idoll-Chappell, in which was a great Altar of Stone and Bricke cunningly fretted, paynted red (a colour forbidden to priuate Houses) and vpon the middest thereof sate a huge Monster of Earth, gilded from top to toe, of massie quantitie. The *Chinois* call it *Ti cam*, the God (as they fable) of the Earth & Treasures, as *Pluto* in the Poets.

Place assigned to the *Iesuites.*

His Image or Idoll.

In his hand was a Scepter, on his head a Crowne, not vnlike those vsed by our Kings. On each side stood foure ministers of the same matter: on both sides of the Roome two great Tables, and on each of them fiue Kings, or great Officers of Hell. On both the wals were painted the same Officers, or Iudges, sitting on their seuerall Tribunals, giuing sentence on wicked men, euery one according to the condition of his Court. Before them stood many Deuils, more terribly formed then with vs. The paines of Hell also were so deciphered, that could not but strike terrour to the beholders; some rosted in yron Beds, some fryed in scalding Oyle, some cut in pieces, or diuided in the middle or torne of Dogges, or otherwise tortured. The first of those Iudges examined the faults, which they said hee saw in a certayne Glasse. Those which hee found guiltie, were sent to the other Iudges, according to the qualitie of the crimes. One of these was Iudge in Cases of *Transmigration*, which sent the soules of cruell men into Tygres; of vncleane persons, into Swine, and the like: or if their crimes were smaller, into the poorer sort. There was a great Ballance; in one of the Scales, a man laden with sinnes; in the other, one of their Hypocriticall Prayer-bookes, which counterpoysed the other Scale, and freed the Sinner. There ranne through the midst of Hell a discoloured Riuer, which carried away many. For ouer it were two Bridges, one of Gold, the other of Siluer; by which, those passed ouer, which had beene deuout Idolaters, carrying in their hands Ensignes of the same: these were guided by the Priests, which led them through the midst of Hell to faire and pleasant Groues and Gardens. In another part were painted the Dungeons of Hell, with horrible Serpents, Flames, Deuils. To the Brazen Gates thereof there comes an Idolatrous Priest, which in despight of all the Deuils deliuers his Mother from those flames. There was no infernall punishment painted, but had such an Inscription: *He which shall pray to such an Idoll a thousand times, shall bee free from this punishment.* The Iesuites beat the Earthen Idols to dust, and burnt those of wood, wherein the *Chinese* Conuerts were the forwarder, because the Countrey custome is to fill the hollow bellies of these Images with deuoted Money or Iewels. They demolished the Altar and playstred ouer the Pictures, and in place thereof erected the Image of Christ. No priuate man may erect a Temple by Law, which yet the mighty Eunuchs transgresse.

* The Iesuites say, that the *Chinois* maintayne their Idolatries, saying they worship not the Idoll, but God thereby represented, &c.

Trigaut.

A little before this exchange of Idols into Images (after their distinction, and a * silly one it is) some tooke their last leaue of *Ticam:* one kneeling and bidding it fare-well; another chafing, said; *Thou masse of Dung and Earth, if thou hast no power to maintayne thy Temple and thy selfe, what helpe may I looke for at thy hand? Neither art thou worthy of any honour at mine.* Others said, that this had sometime borne the name of some other Idoll, and therefore was auenged for that change.

Ricius, hauing thus taken possession of *China* by his dead bodie, and liuing name, wee shall briefly out of the Iesuits Epistles adde some later accidents, and so leaue our *China* Discourses, which if they haue seemed tedious and troublesome, remember that *China* is both excessiuely ritual, and also inhospitall to Strangers; and I haue but imitated my subject, in long and wearisome entertaynment. These tell vs of the Kings vnkindnesse to his Heire, proclaymed, as yee haue seene against his will, scarsly allowing him necessary sustenance, nor permitting his Mother at her death to be mourned for with wonted Rites. He is indeuout, his Mother egregiously Superstitious, mayntayning many Priests, erecting or repayring Temples, that it is a Prouerbe, *In the Court the Priests, in the Prouinces are Magistrates obserued.* In that their studie of long life One had beene so mad, that he being a Licentiate, bought children whom secretly he killed, of their bloud making compositions for that purpose; which comming to light by one of his Concubines, he was put to a deserued death, three thousand pieces of flesh first cut from him.

Prince and his Mother disrespected.

Long life-study cruel shortner of life.

Dry winters.

In their Winter is greatest scarsity of water in the Riuers, and many shelues then cause many shipwrackes. As they want *b. d. r.* so they end no word in any other Consonant but *m.* and *n.* The *China* Conuerts are very zealous in selfe-whipping penance, and fasting, altered from their forme to the Ecclesiasticall, which is hard to them accustomed to eate thrice a day: Their Priests vse Beads, mumbling thereby their Deuotions and many things alike. They built a Church at *Nanquin, Anno* 1611.

Chequian sometimes the Imperiall Prouince.

The Prouince of *Chequian* yeelds only to the two Royall, *Nanquin* and *Pequin*, beeing more excellent then any of the rest. Neither hath it lost other Prouinciall Ornaments howsoeuer it hath lost the seat of the *China* Empire, but is still the best of thirteene. On the East it is washed with the Sea, which the winds fauouring admit passage to *Iapan* in foure and twentie houres: on the West it confineth with the Prouinces of *Nanquin* and *Kiamsi* (or *Chiansi*) on the South with *Fuquian:* to the North is *Xanto* (or *Sciantum.*) It hath twelue Cities of principall note, which are the heads of sixtie three lesse; besides innumerable Townes, Castles, Villages. The soile is the most fertile of the Kingdome pleasantly interlaced with Riuers, many of them produced by Art in imitation of Nature, in commodiousnesse no whit inferiour, yeelding a spectacle of amazement to the amused Posteritie, how humane force could effect such wonders. These Riuers for further commoditie are towred with innumerable Bridges of huge massie stones arising into diuers Arches, like to the *European* workmanship. You haue alreadie *Almeidas* Epistle of his and *Rogers* going into this Prouince, to *Xao Him*, whence soone after they returned. The *Chinois* haue

a Pro-

Digitized by Google

a Prouerbe of *Hamcen* the Metropolis, and of *Sucen, thien xam, thien tham, ti xam Suhuto*, that which *in Heauen is the Hall of Heauen (lactea via*, as he elſe-where interprets it) *that on Earth Sucen and Hamcen.* The Countrey ſo aboundeth with Mulbery-trees and Silke-wormes, that *China, Iapon* and *India* are thence furniſhed. Ten Veſts of Sillke are there cheaper, then in our Countrey one of cloth. *Hamcen* ſtands from *Nanquin* South-eaſtward nine dayes Iourney, almoſt in thirtie degrees eleuation: about three dayes Iourney from *Scianhai*, where *Catayeus* was, who with *Trigautius* our Author were ſent thither by *Leos* procurement. They went from *Nanquin* by the Riuer *Ianſu* firſt, and then into hand-made Riuers, Cities, Townes, Villages, ſo frequent in the way, that nothing ſeemes in the whole Kingdome more populous. Mid-way, where *Nanquin* and *Chequian* Prouinces joyne is that famous *Sucen*, ſeated in the Continent, and ſeeming yet the Daughter of the Sea, like another *Venice*, but more happie with her freſh waters: the Ports ſo frequent, and ſhips ſo many, as if the whole ſhipping of the Kingdome were thither comne to ſome Faires, which yet are in ſucceſſion perpetuall. When the Fathers were comne hither, the *Chinois* by I know not what rumour were conceited that their *Fos* or Gods were comne thither in Viſitation. And a Magiſtrate ſent to *Leo* about it, to know it, and how, hee might viſit them. See *ſup. p.* 343.

But to leaue their Fooleries, let vs take view of their Citie. *Hamcen* is the chiefe Citie of this Prouince: yea, in all this Kingdome; leſſe perhaps ſomewhat in compaſſe of walles then *Nanquin*, but better peopled: no place in the Citie emptie, nor occupied with Gardens, but all builded, and all the Buildings almoſt with diuers Stories, which in other Cities of *China* is not vſuall. The Inhabitants are ſo many, and the Tribute ſo much, that the Ieſuites durſt not relate that which hereof they had heard by graue teſtimonie, for the incredibilitie: the deſcription would aske a whole Volume. The chiefe ſtreet is almoſt halfe a dayes Iourney in length, and cannot be leſſe then admirable. For whereas the *Chinois* vſe to erect triumphall Arches, as Monuments, to wel-deſeruing Magiſtrates, and Ornaments to their Cities; this one ſtreet hath at leaſt three hundred ſuch (beſides very many others in other parts of the Citie) of maſſie ſtones and exceeding curious Workmanſhip, that if the Houſes on both ſides yeelded the like ſplendor, the World could not ſhew ſuch a ſpectacle. But they occupie it all with ſhops, and build the moſt magnificence of their Houſes inwards, and yet thoſe not like the *European* Palaces. *Hamceu, Hamcheu*, or *Hancen.*

There is alſo a Lake cloſe to the Citie, which the eye can ſcarſly meaſure, which ſliding into a Valley encompaſſing, emboſſed with diuers Hillocks, hath giuen occaſion to Art to ſhew her vtmoſt in the adorning the ſame, beautifyng all thoſe ſpacious bankes with Houſes; Gardens, Groues; a very Labyrinth to the bewitched eyes, not knowing whereat moſt in this Maze to bee moſt amazed, wherein moſt to delight. And in delights doe they ſpend their dayes, filling the Lake with Veſſels, furniſhed with Feaſts, Spectacles and Playes on the water. There is a pleaſant Hill in the middle of the Citie, whereon is a faire Towre or Steeple, where they meaſure their houres by a ſtrange deuice. Out of huge Veſſels water droppeth from one to another, the loweſt being very large, in the middle whereof is perpendicularly rayſed a Rule, diſtinguiſhed with houre-ſpaces, which by the aſcent or deſcent of the water, diuide the riſing and declining day, and declare the houres: euery halfe houre ſome men appointed by Tables with Cubitall Letters, to giue notice of the time to all men. From this Hill is a proſpect ouer all the Citie. All the ſtreets being ſet with Trees, make ſhew of pleaſant Gardens. It is ſo full of Riuers, Lakes, Rils, Ponds, both in the Citie and Suburbs, as if a man would frame a *Platonicall Idea* of elegancie to his minde. The Idoll Temples are many and ſtately, which Idolatry where it is wanting in *China*, hath a worſe Succeſſor, Atheiſme. The Lake. See the Map.

Let vs ſtay awhile and gaze (for where haue you ſuch an Obiect?) Is not *Quinſay* (whilome the Royall Seat of the Kings of *Mangi*, as *Venetus* recordeth, ſuppoſed by our Moderne Geographers to be ſwallowed vp with ſome Earth-quake, or in *Bellona's* all-conſuming belly) here rayſed vp from the Graue? The Lake ſituate on the one [b] ſide, (ſo *Paulus* reports of *Quinſay*) the *Name Quinſay* ſignifying the Citie of Heauen, and this called a Heauenly Paradiſe by the *Chinois*; and *Han* ſignifies *Lactea via*, in Heauen; and *Cen, perfect*: yea, *Quinſay*, or as *Odoricus* calls it *Canaſia*, and *Han* or *Chanceu*, not ſo diſagreeing in ſound, as different Dialects are wont: the *excellencie* being chiefe Citie in the Kingdom, and this Prouince ſometimes Royal, as *Pequin* now and *Nanquin* are: the *ſituation*, South-eaſt from *Cinczianfu*, [c] fiue and twentie miles from the Sea: the *high Houſes*, and *Shops* vnderneath: the exceeding Trade, Reuenue, Paſtimes by water, multitudes, faireneſſe, and length of the ſtreets; all ſo conſpiring to prooue this *Han* or *Hamcen* to be that *Quinſay*, of *Paulus*. True it is, that *Quinſay* was then greater, beeing as *Venetus* ſaith, one hundred miles about: But the euerting of that *Farfur* and his Family, then reigning, the diuerting of the Court to *Cambalu* by the *Tartars*, and after to *Nanquin* by *Hamvu*, and neuer returning hither, might leſſen the fame. And might not warres, in that long ſiege by the *Tartars*, in the recouery thereof by the *Chinois*, eaſily circumciſe her ſuperfluities? Beſides, who knoweth whether all this huge Lake might bee contayned in that account of *Paulus*, ſtill compaſſed about with Buildings? Or before thoſe Warres, the Lake it ſelfe might (as *Sucen* now is) be builded on; which Time and Warre hath conſumed; nor ſince the remooue of the Court *Quinſay, ciuitas cæli.* See it deſcribed, *ſup.* 98. [b] *Hada vna bandaun lago, &c.* [c] That which is before ſaid almoſt 2. daies iourney, is to be vnderſtood of the *Chinois* iourneyes, which make ſlow paſſage, ſometime but 6. myles a day.

Digitized by Google

were so necessarie. *Mandeuill* mentions Warres at *Quinsay* in his time; *Nicolo di Conti* (which was heere about the yeere 1440.) sayth, *Quinsay* was in his time new built, of thirtie miles compasse.

Thiensui sup. 314. Thien signifieth *Heauen.* * See *pag.* 338.

But that *Quinsay* of *Conti* and *Ahacen*, is perhaps *Thiensin*, being (as they lay it) neerer *Cambalu*. I confesse, much may bee sayd for *Nanquin* to finde *Quinsay* there, and I haue giuen such a note * vpon it, to incite industrious search, because it was the Ancient royall Chamber: Neither could I finde any other Royall Citie but *Pequin*, in *Ricius* or other Writers, till *Trigautius* later Epistles intimated, that the *Chequian* Prouince hath beene sometimes Imperiall; which I conceiue to bee that time of *Farfur* mentioned by *Polo*, and *Hanceu* his *Quinsay*.

Anno 1618. *Trigautius* writes of Persecution in *China*, raised by an Idolotrous Magistrate in *Nanquin*, and effected by bribes, which hath caused the *Iesuites* to bee sent thence: but because our intelligence is little, wee will leaue them heere (as much as lyeth in our power) and visite some of the other Northerne people; hauing first giuen you a briefe view of a *French*-mans trauell, *Monsieur de Monfart*, who hauing trauelled thorow the *Indies*, saluted *Canton* in *China*, and *Cauchinchina*; whose knowledge therefore could not bee so solid, as the *Iesuites*, nor yet is so contemptible that it should vtterly bee forgotten. Wee will therefore present his Seruice as a *French* Page, and one attending the *Iesuites* Grauitie, and thus as it were bearing their trayne.

Macao.

FRom *Malaca* I went to *Macao*, (neere a moneths trauell) which is a Citie scituate on the Sea coast, at the foote of a great Mountayne, where in times past the *Portugals* had a great Fort, and to this day, there bee yet many that dwell there. This is the entrance into *China*, but the place is of no great importance; they are *Gentiles*, and there the Inhabitants begin to bee faire complexioned.

Cauchinchina.

Thence I trauelled two moneths to the *Cochinchines*, finding nothing by the way worthy of note; no not so much as necessaries, so that wee were fayne to carrie our Victuals with vs, the greatest part of the way. They are Subiects to the King of *China*, but sometimes they rebell and make Warre against him; And there is great number of *Christians* among them.

Christians.

Their Kings treasure consisteth in a certayne kinde of Wood, called *Calamba*: for which the *Portugals* pay one hundred Crownes a pound, to make *Pater-nosters* with. It is of a mixt colour, with blacke and yellow veynes; the better sort of it is moyst, so that being cut it expelleth a kinde of fat oylie liquour. It groweth out of a certayne Tree, which they fell and let it lye a while a putrifying; then they bruise it, and within the same, they finde this kinde of Wood, like many hard knots. They are a very white people, because there it begins to bee cold, low of Stature, flat Nosed, and little Eyed, with a very few hayres on their Chins, and Mustachoes: none at all on their Cheekes, the hayre of the Head they weare long like Women, tyed vp with a blacke silke hayre-lace, and weare a flat Cap vpon them. They weare Cloath breeches made very leuell, and a short Robe aboue them, like a Master of the chamber of Accounts.

Calamba for Beades.

Huge Serpents

There are found a kinde of Serpents that will swallow vp a whole Stagge; two Friers assured me that trauelling in that Countrey, together with sixteene other men, through a Fennie-marsh, about the dawning of the day, they met to their seeming, a great Tree lying along the ground, the boughes being lopped off, vpon which they all began to sit downe and rest themselues: but no sooner were they sate, but that which they tooke for a Tree, fiercely rowsed it selfe from vnder them, and left them all to picke strawes on the ground, for indeed this was one of those Serpents.

Their custome is (as they say) to put themselues in ambush among the boughes of a Tree, and when they espie their prey to draw neere, bee it Man or Beast, they fall vpon him with open mouth and deuoure it. There are also store of *Lions*, *Leopards*, and *Tigers*: and there the Fruits begin to resemble those of these parts: but the Fruit, which aboue all others aboundeth there, is the *Mirabolan*.

Wild Beasts: this of Lions is doubtfull.

Canton in *China*. This is not the principall Citie, except of that Prouince, and for trauelling further, he speakes true of ordinarie courses, but other accidents and the Art *Liberall* of the Fathers haue of Ours

Thence I sent forwards to *Canton*, the principall Citie of all *China*, (some three Moneths trauell distant) beyond which there is no passage, say any body what hee will to the contrary; for neuer any man proceeded further, except (as they say) sixe *Iesuites*, who dwelled twentie yeeres at *Canton*, as well to learne the Language perfectly, as to let their hayre to grow long, after the Countrey manner, of whom there was neuer since heard any newes, nor is their hope euer to see their returne. That people is very white, and apparelled as is aboue sayd; they are likewise *Gentiles*, and worship the same Image with three heads. Their Women of the better sort, and qualitie which are able to liue of their owne without working, neuer goe out of their houses but as they are carryed in a Chayre. And to that effect, from their Infancie, they put their feete into certayne woodden Slippers, to make them stump-footed and impotent, in so

found admittance, as in the former Relations is seene. This testimonie touching *Iesuites* is worth the noting: For which vpon great offers could not finde meanes to enter *China*, haue held that none haue beene there.

much

Digitized by Google

much as they are not able to goe: the reaſon they alleadge for it, is, that Women were made to no other end, then to keepe at home.

The *Chriſtians* are not permitted to lye within the Citie, but as ſoone as Night approaches they muſt retire themſelues to their Ships, being lawfull for them to Traffique whereſoeuer they pleaſe by Day-light. And for their traffique, what rarities ſoeuer there bee throughout all *China*, are to bee had in this Citie, which are diligently brought thither, to wit, great ſtore of cloath of Gold and Silke, Cabinets, wrought Veſſels, Venus ſhells, Maſſiue gold, and many other things. They will exchange or barter Gold for twice as much waight in Siluer, for they haue no coyned money, for when they would buy any thing, they carrie with them a piece of Gold, and will cut off as much as they intend to beſtow on what they take. They make carued Images of Siluer, which they erect heere and there through the Streets, and no body dares touch them.

The Citie is gouerned by foure Rulers, and each one hath his Gouernment, or Circuit apart, ſecluded from each other: thoſe of one quarter dare not goe and labour in another, and thoſe which cauſe themſelues to bee carryed, from one part to another, muſt change their Bearers when they come to the Gate of the next circuit: thoſe Gates are opened eury morning, and ſhut euery night, vnleſſe there bee any complaint made of ſome miſdemeanour, committed within the Circuit: for then they ſhut them ſuddenly, or if they bee ſhut, they open them not, till the offender be found. The King beſtowes theſe commands on thoſe who are beſt Learned. This is a moſt faire Citie, and well built, very neare as bigge as *Paris*, but there the Houſes are arched, and nothing neare ſo high. There is ſo much Sugar in that Countrey, that it is by them very little ſet by, yet is Silke in farre more great abundance, but withall more courſe then ours, by reaſon of their ſtore, being ſo great as they are conſtrayned to make it abroad in the Fields, on the very Trees, in this wiſe; when the Wormes are hatched, (whereof the Egges are farre greater then ours.) They obſerue what quantitie of Wormes each Tree will bee able to feede, then they lay ſo many on it, leauing them there without any more adoe, except it bee to gather the cods, when they are ready to bee ſpunne, which is done as they gather Apricocks: for indeed a farre off they appeare to bee ſo, and is a very fine ſight to behold: they vſe a ſtrange kinde of Fiſhing with Cormorants. They tie their neckes a little aboue their ſtomackes, leſt they ſhould deuour the Fiſh they take: then comming to their Maſter, hee pulleth it aliue, out of their throates: Likewiſe for water Fowle, they make vſe of great Bottles with two holes, which they leaue floating vp and downe the water a good while, to acquaint the Fowles therewith: then ſome fellowes will wade vp to the necke in the water, thruſting their heads into thoſe Bottles, and hauing a bagge vnderneath, come as neere the Fowle as they will, taking them with their hands, without the reſt being afraid of it.

Silkes and Silke-wormes.

See Polo, Pereira, &c. of this Fiſhing.

VOYAGES AND DISCOVERIES OF THE NORTH PARTS OF THE WORLD, BY LAND AND SEA, IN *ASIA*, *EVROPE*, THE POLARE REGIONS, AND IN THE NORTH-WEST OF AMERICA.

THE THIRD BOOKE.

CHAP. I.

A Treatise of Rusia *and the adioyning Regions, written by Doctor* GILES FLETCHER * *Lord Ambassadour from the late Queene, Euerglorious* ELIZABETH, *to* THEODORE *then Emperour of* Rusia *A. D.* 1588.

* I haue in some places contracted, in others mollified the biting or more bitter stile, which the Author vseth of the *Russian* Gouernment; that I might doe good at home, without harme abroad.

Chap. 1. The description of the Country of *Russia*, with the bredth, length, and Names of the Shires.

THE Countrey of *Russia* was sometimes called *Sarmatia*. It changed the Name (as some doe suppose) for that it was parted into diuers small, and yet absolute Gouernments, not depending, nor being subiect the one to the other. For *Russe* in that tongue doth signifie, as much as to *Part*, or *Diuide*. The *Russe* reporteth that foure Brethren, *Trubor*, *Rurico*, *Sinees*, and *Varinus*, diuided among them the North parts of the Countrey: Likewise that the South parts were possessed by foure other, *Kio*, *Scieko*, *Choranus*, their and sister *Libeda*: each calling his Territorie after his owne Name. Of this partition it was called *Russia*, about the yeere from Christ 860. As for the conjecture which I finde in some Cosmographers, that the *Russe* Nation borrowed the name of the people called *Roxellani*, and were the very same Nation with them, it is without all good probabilitie, both in respect of the Etymologie of the word (which is very farre fetcht) and especially for the seate and dwelling of that people, which was betwixt the two Riuers of *Tanais* and *Boristhenes*, as *Strabo* reporteth, quite another way from the Countrey of *Russia*.

Strabo in his 7. booke of *Geogr.*

When it bare the name of *Sarmatia*, it was diuided into two chiefe parts: the *White*, and the *Blacke*. The *White Sarmatia*, was all that part that lyeth towards the North, and on the side of *Liefland*: as the Prouinces now called *Duyna*, *Vagha*, *Vstik*, *Vologda*, *Cargapolia*, *Nonogradia*, &c. whereof *Nonogrod velica* was the Metropolite, or chiefe Citie. *Blacke Sarmatia* was all that Country that lyeth Southward, towards the *Euxin* or *Blacke Sea*: as the Dukedome of *Volodemer*, of *Mosko*, *Rezan*, &c. Some haue thought that the name of *Sarmatia* was first taken from one *Sarmates*, whom *Moses* and *Iosephus* call *Asarmathes*, Sonne to *Iokan*, and nephew to *Heber*, of the posteritie of *Sem*. But this seemeth to bee nothing but a conjecture taken out of the likenesse

Gen. 10. *Ioseph. l.* 1. *c.* 24.

of the name *Aſarmathes*. For the dwelling of all *Ioktans* poſteritie is deſcribed by *Moſes*, to haue beene betwixt *Meſcha* or *Maſius*, (an Hill of the *Amonites*) and *Sephace*, neare to the Riuer *Euphrates*. Which maketh it very vnlikely, that *Aſarmathes* ſhould plant any Colonies ſo farre off, int the North and North-weſt Countries. It is bounded Northward by the *Lappes*, and the North *Ocean*. On the South-ſide by the *Tartars*, called *Chrims*. Eaſtward they haue the *Naigaian Tartar*, that poſſeſſeth all the Countrey on the Eaſt ſide of *Volgha*, towards the *Caſpian* Sea. On the Weſt and South-weſt border, lie *Lituania*, *Liuonia* and *Polonia*.

The borders of *Ruſsia*.

The whole Countrey being now reduced vnder the Gouernment of one, contayneth theſe chiefe Prouinces or Shires. *Volodemer* (which beareth the firſt place in the Emperours ſtile, becauſe their Houſe came of the Dukes of that Countrey,) *Moſko*, *Niſnonogrod*, *Pleſko*, *Smolenſko*, *Nonogrod velica* (or *Nonogrod* of the low Countrey) *Roſtone*, *Tarnſlaue*, *Bealozera*, *Bezan*, *Duyna*, *Corgapolia*, *Meſchora*, *Vagha*, *Vſtugha*, *Ghaletſa*. Theſe are the naturall Shires pertayning to *Ruſſia*, but farre greater and larger then the Shires of *England*, though not ſo well peopled.

The Shires of *Ruſſia*.

The other Countries or Prouinces, which the *Ruſſe* Emperours haue gotten perforce added of late to their other Dominion, are theſe which follow, *Twerra*, *Toughoria*, *Permia*, *Vadska*, *Boulghoria*, *Chernigo*, *Ondoria*, *Obdoria*, *Condora*, with a great part of *Siberia*: where the people though they bee not naturall *Ruſſes*, yet obey the Emperour of *Ruſſia*, and are ruled by the Lawes of his Countrey, paying cuſtomes and taxes, as his owne people doe. Beſides theſe hee hath vnder him the Kingdomes of *Cazan* and *Aſtracan*, gotten by Conqueſt not long ſince. As for all his poſſeſſions in *Lituania* (to the number of thirtie great Townes and more,) with *Narue* and *Dorp* in *Liuonia*, they are quite gone, being ſurpriſed of late yeeres by the Kings of *Poland* and *Sweden*. Theſe Shires and Prouinces are reduced all into foure *Iuriſdictions*, which they call *Chetfyrds* (that is) *Tetrarchies*, or *Fourth-parts*. Whereof wee are to ſpeake in the Title or Chapter, concerning the Prouinces, and their manner of Gouernment.

The Prouinces or Countries got by Conqueſt.

The whole Countrey is of great length and breadth. From the North to the South (if you meaſure from *Cola* to *Aſtracan* which bendeth ſomewhat Eaſtward) it reacheth in length about foure thouſand two hundred and ſixtie verſt, or myles. Notwithſtanding, the Emperour of *Ruſſia* hath more territorie Northward, farre beyond *Cola* vnto the Riuer of *Tromſchna*, that runneth a thouſand verſt, well nigh beyond *Pechinga*, neere to *Wardhouſe*, but not intire nor clearely limitted, by reaſon of the Kings of *Sweden* and *Denmarke*, that haue diuers Townes there, as well as the *Ruſſe*, plotted together the one with the other: euery one of them clayming the whole of thoſe North parts, as his owne right. The breadth (if you goe from that part of his Territorie that lyeth fartheſt Weſtward on the *Narue* ſide, to the parts of *Siberia* Eaſtward, where the Emperour hath his Garriſons) is foure thouſand and foure hundred verſt, or thereabouts. A Verſt (by their reckoning) is one thouſand paces, yet leſſe by one quarter then an *Engliſh* myle. If the whole dominion of the *Ruſſe* Emperour were all habitable, and peopled in all places, as it is in ſome, hee would either hardly hold it all within one Regiment, or bee ouer mightie for all his neighbour Princes,

The breadth and length of the Countrey.

chap. 2.

Of the Soyle and Climate.

THe Soyle of the Countrey for the moſt part is of a ſleight ſandie mold, yet very much different one place from another, for they yeeld of ſuch things as grow out of the earth. The Country Northwards, towards the parts of Saint *Nicholas* & *Cola*, and North-eaſt towards *Siberia*, is all very barren, and full of deſart Woods by reaſon of the Clymate, and extremitie of the cold in Winter time. So likewiſe along the Riuer *Volgha*, betwixt the Countries of *Cazan*, and *Aſtracan*; where (notwithſtanding the Soyle is very fruitfull) it is all vnhabited, ſauing that vpon the Riuer *Volgha* on the Weſt ſide, the Emperour hath ſome few Caſtles with Garriſons in them. This hapneth by meanes of the *Chrim Tartar*, that will neither himſelfe plant Townes to dwell there, (liuing a wilde and vagrant life) nor ſuffer the *Ruſſe* (that is farre off with the ſtrength of his Countrey) to people thoſe parts. From *Vologda* (which lyeth almoſt one thouſand ſeuen hundred verſt from the Port of Saint *Nicholas*) downe towards *Moſko*, and ſo towards the South part that bordereth vpon the *Chrim*, (which contayneth the like ſpace of one thouſand ſeuen hundred verſt, or thereabouts) is a very fruitfull and pleaſant Countrey, yeelding Paſture, and Corne, with Woods and water in very great plentie. The like is betwixt *Rezan* (that lyeth South-eaſt from *Moſko*) to *Nonograd* and *Vobſko*, that reach fartheſt towards the North-weſt. So betwixt *Moſko*, and *Smolenſko* (that lyeth South-weſt towards *Lituania*) is a very fruitfull and pleaſant ſoyle. The whole Countrey differeth very much from it ſelfe, by reaſon of the yeere: ſo that a man would marualle to ſee the great alteration and difference betwixt the Winter and the Summer in *Ruſſia*. The whole Countrey in the Winter lyeth vnder Snow, which falleth continually, and is ſometime of a yard or two thicke, but greater towards the North. The Riuers and other waters are all frozen vp, a yard or more thicke, how ſwift or broad ſoeuer they bee: and this continueth commonly fiue Moneths, *viz.* from the beginning of Nouember, till towards the end of March, what time the Snow beginneth to melt. So that it would breed a froſt in a man to looke abroad at that time, and ſee the winter face of that Countrey. The ſharpeneſſe of the ayre you may judge of by this: for that water dropped downe or caſt

Difference of *Ruſſia* in different ſeaſons.

The Cold of *Ruſſia*.

Digitized by Google

caſt vp into the ayre, congealeth into Ice before it come to the ground. In the extremitie of Winter, if you hold a Pewter diſh or pot in your hand, or any other metall (except in ſome chamber where their warme Stoues bee) your fingers will freeze faſt vnto it, and draw of the skinne at the parting. When you paſſe out of a warme roome into a cold, you ſhall ſenſibly feele your breath to waxe ſtarke, and euen ſtifeling with the cold, as you draw it in and out. Diuers not onely that trauell abroad, but in the very Markets, and ſtreets of their Townes, are mortally pinched and killed withall: ſo that you ſhall ſee many drop downe in the Streets, many Trauellers brought into the Townes ſitting dead and ſtiffe in their Sleds. Diuers loſe their Noſes, the tippes of their Eares, and the balls of their Cheekes, their Toes, Feete, &c. Many times when (the winter is very hard and extreame) the Beares and Wolues iſſue by troupes out of the woods driuen by hunger, and enter the Villages, tearing and rauening all they can finde: ſo that the Inhabitants are faine to flee for ſafegard of their liues. And yet in the Summer time you ſhall ſee ſuch a new hew and face of a Countrey, the Woods (for the moſt part which are all of Firre and Birch) ſo freſh and ſo ſweet, the Paſtures and Meadowes ſo greene and well growne, (and that vpon the ſudden) ſuch varietie of Flowers, ſuch noyſe of Birds, (ſpecially of Nightingales, that ſeeme to be more loud and of a more variable note then in other Countries) that a man ſhall not lightly trauell in a more pleaſant Countrey.

M. *Cole* Miniſter to Sir *Ierome Bowes* told me of a lickoriſh fellow, which taking a Pewter diſh of ſome ſweet ſawce from his Maſters Table in the next roome, licked it, and payd the skin of his tongue for that ſweet taſte: a ſower ſawce to ſweet ſawcineſſe. The caſe altered.

And this freſh and ſpeedy growth of the Spring there, ſeemeth to proceed from the benefit of the Snow: which all the Winter time being ſpred ouer the whole Countrey as a white robe, and keeping it warme from the rigour of the Froſt, in the Spring time (when the Sunne waxeth warme, and diſſolueth it into water) doth ſo throughly drench and ſoake the ground, that is ſomewhat of a fleight and ſandie mold, and then ſhineth ſo hotly vpon it againe, that it draweth the Hearbs and Plants forth in great plentie and varietie, in a very ſhort time. As the Winter exceedeth in cold, ſo the Summer inclineth to ouermuch heate, ſpecially in the moneths of Iune, Iuly, and Auguſt, being much warmer then the ſummer ayre in *England*.

Effect of ſnow.

The Countrey throughout, is very well watred with Springs, Riuers, and Ozeraes or Lakes. Wherein the prouidence of God is to bee noted, for that much of the Countrey being ſo farre inland, as that ſome part lyeth a thouſand myles and more euery way from any Sea, yet it is ſerued with faire Riuers, and that in very great number, that emptying themſelues one into another, runne all into the Sea. Their Lakes are many and large, ſome of ſixtie, eightie, a hundred, and two hundred myles long, with breadth proportionate.

Ruſſia well watered.

The chiefe Riuers are theſe, 1. *Volgha*, that hath his head or ſpring at the roote of an Alder-tree, about two hundred verſt aboue *Yaruſlaue*, and groweth ſo bigge by the increaſe of other Riuers by that time it commeth thither, that it is broad an *Engliſh* myle and more, and ſo runneth into the *Caſpian* Sea, about two thouſand and eight hundred verſt or myles of length.

The chiefe Riuers of *Ruſſia*.

The next is *Boriſthenes* (now called *Neper*) that diuideth the Countrey from *Lituania*, and falleth into the *Euxin* Sea.

The third *Tanais* or *Don*, (the ancient bounder betwixt *Europe* and *Aſia*) that taketh his head out of *Rezan Ozera*, and ſo running through the Countrey of the *Chrim Tartars*, falleth into the great Sea lake, or meare, (called *Mæotis*) by the Citie of *Azou*. By this Riuer (as the *Ruſſe* reporteth) you may paſſe from their Citie *Moſko* to *Conſtantinople*, and ſo into all thoſe parts of the world by water, drawing your Boate (as their manner is) ouer a little *Iſthmus* or narrow ſlippe of land, a few verſts ouerthwart. Which was prooued not long ſince by an Ambaſſadour ſent to *Conſtantinople*, who paſſed the Riuer of *Moſkua*, and ſo into another called *Ocka*, whence he drew his Boate ouer into *Tanais*, and thence paſſed the whole way by water.

The fourth is called *Duyna*, many hundred myles long, that falleth Northward into the Bay of Saint *Nicholas*, and hath great Alabaſter rockes on the bankes towards the Sea ſide.

The fifth *Duna*, that emptyeth into the *Baltick* Sea by the Towne *Riga*.

The ſixt *Onega*, that falleth into the Bay at *Solouetsko* ninety Verſt from the Port of S. *Nicholas*. This Riuer below the Towne *Cargapolia* meeteth with the Riuer *Volock*, that falleth into the *Finland* Sea by the Towne *Yama*. So that from the Port of S. *Nicholas* into the *Finland* Sea, and ſo into the Sound, you may paſſe all by water, as hath beene tryed by the *Ruſſes*.

The ſeuenth *Suchana*, that floweth into *Duyna*, and ſo into the North-ſea.

The eighth *Ocka*, that fetcheth his Head from the Borders of the *Chrim*, and ſtreameth into *Volgha*.

The ninth *Moſkua*, that runneth thorow the Citie *Moſko*, and giueth it the name.

There is *Wichida* alſo a very large and long Riuer that riſeth out of *Permia*, and falleth into *Volgha*. All theſe are Riuers of very large ſtreames, the leaſt to bee compared to the *Thames* in bigneſſe, and in length far more, beſides diuers other. The Pole at *Moſko*, is fiftie fiue degrees ten minutes. At the Port of Saint *Nicholas* towards the North ſixty three degrees and fifty minutes.

Chap. 3.

FOr kinds of fruits, they haue Apples, Peares, Plummes, Cheries, Red and Blacke, (but the Black wild) a Deene like a Muske Milian, but more ſweet & pleaſant, Cucumbers and Goords (which they call *Arbouſe*) Raſpes, Strawberries, and Hurtilberries, with many other Berries in great

The Natiue Commodities of the Countrey.

Digitized by Google

great quantitie in euery Wood and Hedge. Their kinds of Graine are Wheate, Rie, Barley, Oates, Peaſe, Buckway, Pſnytha, that in taſte is ſomewhat like to Rice. Of all theſe Graines the Countrey yeeldeth very ſufficient with an ouer-plus quantitie, ſo that Wheate is ſold ſometime for two Alteens or tenne pence ſterling the *Chetfird* which maketh almoſt three *Engliſh* Buſhels.

Rye. Their Rye is ſowed before the Winter, all their other Graine in the Spring-time, and for the moſt part in May. The *Permians* and ſome other that dwell farre North, and in Deſart places, are ſerued from the parts that lye more South-ward, and are forced to make Bread ſometimes of a kind of Roote called *Vaghnoy)* and of the middle rine of the Firre-tree. If there bee any Dearth (as they accounted this laſt yeere, *Anno* 1588. Wheat and Rye being at thirteene Alteens, or fiue ſhillings fiue pence ſterling the *Chetfird)* the fault is rather in the practice of their Nobilitie that vſe to engroſſe it, then in the Countrey it ſelfe. The Natiue Commodities of the Countrey (wherewith they ſerue both their owne turnes, and ſend much abroad to the great enriching of the Emperour, and his people) are many and ſubſtantiall. Firſt, Furres of all ſorts. Where in the prouidence of God is to bee noted, that prouideth a naturall remedy for them, to helpe the naturall inconuenience of their Countrey by the cold of the Climate. Their chiefe Furs are theſe, Blacke Fox, Sables, Luſernes, Dunne Fox, Martrones, Gurneſtalles or Armins, Laſets or Miniuer, Beuer, Wuluerins, the Skin of a great Water Rat that ſmelleth naturally like Muske, Calaber or Gray Squirrell, Red Squirrell, Red and White Foxe. Beſides the great quantitie ſpent within the Countrey (the people being clad all in Furs the whole Winter) there are tranſported out of the Countrey ſome yeares by the Merchants of *Turkie*, *Perſia*, *Bougharia*, *Georgia*, *Armenia*, and ſome other of Chriſtendome to the value of foure or fiue hundred thouſand Rubbels, as I haue heard of the Merchants. The beſt Sable Furre groweth in the Countrey of *Pechora*, *Momgoſorskoy* and *Obdorskoy*, the worſer ſort in *Siberia*, *Perm*, and other places. The Blacke Fox and Red come out of *Siberia*, White and Dunne from *Pechora*, whence alſo come the white Wolfe, and white Beare Skin. The beſt Wuluerin alſo thence and from *Perm*. The beſt Martrons are from *Siberia*, *Cadam*, *Morum*, *Perm*, and *Cazan*. Lyſerns, Mineuer, and Armins, the beſt are out of *Gallets*, and *Ouglites*, many from *Nouogrod*, and *Perm*. The Beauer of the beſt ſort breedeth in *Murmonskey* by *Cola*. Other common Furres, and moſt of theſe kinds grow in many, and ſome in all parts of the Countrey.

The chiefe commodities of the Countrey. 1. Furre.

2. Waxe. The ſecond Commoditie is of Waxe, whereof hath beene ſhipped in forraine Countreyes (as I haue heard it reported by thoſe that beſt know it) the ſumme of fiftie thouſand Pood yearely, euery Pood contayning fortie pound, but now about tenne thouſand Pood a yeare.

3. Honey. The third is their Honey, whereof beſides an exceeding great quantitie ſpent in their ordinary Drinkes (which is *Mead* of all ſorts) and their other vſes, ſome good quantitie is carried out of the Countrey. The chiefe increaſe of Honey is in *Mordua* and *Cadam* neere to the *Cheremiſſen Tartar*: much out of *Seuerskoy*, *Bezan*, *Morum*, *Cazan*, *Dorogoboſe*, and *Vaſma*.

4. Tallow. Fourthly, of Tallow they afoord a great weight for tranſportation: not only for that their Countrey hath very much good ground apt for Paſturage of cattell, but alſo by reaſon of their many Lents and other Faſts: and partly, becauſe their greater men vſe much Waxe for their Lights; the poorer and meaner ſort Birch dryed in their Stoues, and cut into long ſhiuers, which they call *Luchineos*. Of Tallow there hath beene ſhipped out of the Realme a few yeares ſince about one hundred thouſand Pood yeerely, now not paſt thirty thouſand or thereabouts. The beſt yeeld of Tallow is in the parts and Territories of *Smolenske*, *Yarnſlaue*, *Ouglas*, *Nouogrod*, and *Vologda*, *Oiſer*, and *Gorodetskey*.

5. Hide. Another principall Commoditie is their Loſh and Cow-hide. Their Loſh or Buffe-hide is very faire and large. Their Bull and Cow-hide (for Oxen they make none, neither yet Weather) is of a ſmall ſize. There hath beene tranſported by Merchants ſtrangers ſome yeeres, one hundred thouſand Hides. Now it is decreaſed to thirty thouſand or thereabouts. Beſides great ſtore of Goats Skins, whereof great numbers are ſhipped out of the Countrey. The largeſt kind of Loſh or Buffe breedeth about *Roſtoue*, *Wichida*, *Nouogrod*, *Morum*, and *Perm*. The leſſer ſort within the Kingdome of *Cazan*.

6. Trane Oyle. The manner of hunting the Seale-fiſh. Another very great and principall Commoditie is their Trane-oyle, drawne out of the Seal-fiſh. Where it will not be impertinent to ſhew the manner of their hunting the Seale, which they make this Oyle of: which is in this ſort. Towards the end of Summer (before the Froſt beginne) they goe downe with their Boats into the Bay of Saint *Nicholas*, to a Cape called *Cuſconeſſe* or *Foxnoſe*, where they leaue their Boats till the next Spring-tyde. When the Sunne waxeth warme toward the Spring, and yet the Ice not melted within the Bay, they returne thither againe. Then drawing their Boats ouer the Sea Ice, they vſe them for Houſes to reſt and lodge in. There are commonly about ſeuenteene or eighteene Fleete of them, of great large Boats, which diuide themſelues into diuers companies, fiue or ſixe Boats in a conſort.

They that firſt find the haunt, fire a Beacon, which they carrie with them for the nonce. Which being eſpied by the other companies, by ſuch among them as are appointed of purpoſe, they

they come all together and compasse the Seales round about in a Ring, that lye Sunning themselues together vpon the Ice, commonly foure or fiue thousand in a shoale, and so they inuade them euery man with his Club in his hand. If they hit them on the Nose, they are soone killed. If on the sides or backe they beare out the blow, and many times so catch and hold downe the Club with their Teeth by mayne force, that the partie is forced to call for helpe to his fellowes.

The manner of the Seales is, when they see themselues beset, to gather all close together in a throng or plumbe, to sway downe the Ice, and to breake it (if they can) which so bendeth the Ice, that many times it taketh the Sea-water vpon it, and maketh the Hunters to wade a foot or more deepe. After the slaughter, when they haue killed what they can they fall to sharing euery Boat his part in equall portions: and so they flay them, taking from the body the Skin, and the Lard or Fat with all that cleaueth to the Skin. This they take with them, leauing the bodies behind, and so goe to shoare. Where they digge Pits in the ground of a fathome and an halfe deepe, or there about, and so taking the Fat or Lard off from the Skin, they throw it into the Pit, and cast in among it hot burning stones to melt it withall. The vppermost and purest is sold and vsed to oyle Wooll for Cloth, the grosser (that is of a red colour) they sell to make Sope.

7. Ickary. Likewise Ickary or Cauery, a great quantity is made vpon the Riuer of *Volgha*, out of the fish called Bellougina, the Sturgeon, the Seueriga and the Sterledey. Whereof the most part is shipped by *French* and *Netherlandish* Merchants for *Italy* and *Spaine*, some by *English* Merchants.

8. Hempe and flaxe. The next is of Flaxe and Hempe, whereof there hath beene shipped (as I haue heard Merchants say) at the Port of *Narue* a great part of one hundred ships small and great yeerely. Now not past fiue. The reason of this abating and decrease of this and other Commodities, that were wont to bee transported in a greater quantitie, is the shutting vp of the Port of the *Narue* towards the *Finland* Sea, which now is in the hands and possession of the *Sweaden*. Likewise the stopping of the passage ouer-land by the way of *Smolenske*, and *Plotsko*, by reason of their Warres with the *Polonian*, which causeth the people to bee lesse prouident in mayntayning and gathering these and the like Commodities, for that they lacke Sales. Partly also for that the Merchants and Mousicks (for so they call the common sort of people) are very much discouraged by many heauy and intollerable exactions, that of late time haue beene imposed vpon them: no man accounting that which he hath to be sure his owne. And therefore regard not to lay vp any thing, or to haue it before hand, for that it causeth them many times to be fleeced and spoyled, not only of their goods, but also of their liues. For the growth of Flaxe the Prouince of *Vobske*, and the Countrey about is the chiefe and only place. For Hempe *Smolenksko*, *Dorogoboſe* and *Vasma*.

9. Salt. The Countrey besides maketh great store of Salt. Their best Salt is made at *Stararouſe* in very great quantitie, where they haue great store of Salt-wels, about two hundred and fiftie verst from the Sea. At *Astracan* Salt is made naturally by the Sea-water, that casteth it vp into great Hils, and so it is digged downe, and carryed away by the Merchants and other that will fetch it from thence. They pay to the Emperour for acknowledgement or custome three pence *Russe* vpon euery hundred weight. Besides these two, they make Salt in many other places of the Realme, as in *Perm*, *Wichida*, *Totma*, *Kenitsma*, *Solouetske*, *Ocona*, *Bombasey*, and *Nonocks* all out of Salt-pits, saue at *Solouetskey*, which lyeth neere to the Sea.

10. Tarre. Likewise of Tarre they make a great quantitie out of their Fiere-trees in the Countrey of *Duyna* and *Smolensko*, whereof much is sent abroad.

11. Ribazuba. Besides these (which are all good and substantiall Commodities) they haue diuers other of smaller account, that are naturall and proper to that Countrey: as the fish tooth (which they call *Ribazuba* which is vsed both among themselues and the *Persians* and *Boughariens*, that fetcht it from thence for Beads, Kniues, and Swordhafts of Noblemen, and Gentlemen, and for diuers other vses. Some vse the powder of it against poyson, as the Vnicornes Horne. The fish that weareth it is called a Morie, and is caught about *Pechora*. These fish teeth some of them, are almost two foot of length, and weigh eleuen or twelue pound a-piece.

12. Slude. In the Prouince of *Corelia*, and about the Riuer *Duyna* towards the North Sea, there groweth a soft Rocke which they call *Slude*. This they cut into pieces, and so teare it into thin flakes, which naturall it is apt for and so vse it for Glasse-lanthornes and such like. It giueth both inwards and outwards a cleerer light then Glasse, and for this respect is better then eyther Glasse or Horne: for that it neyther breaketh like Glasse, nor yet will burne like the Lanthorne.

13. Salt-peeter and Brimstone. Salt-peeter they make in many places, as at *Onglites*, *Yaruslaue* and *Vstug*, and some small store of Brimstone vpon the Riuer *Volgha*, but want skill to refine it.

14. Iron. Their Iron is somewhat brittle, but a great weight of it is made in *Corelia*, *Cargapolia*, and *Vstug Theleſna*. Other Myne they haue none growing within the Realme.

The strange beasts, fish, foule, &c. that breed in *Russia*. Their beasts of strange kinds are the Losh, the Ollen, the wilde Horse, the Beare, the Woluering or wood Dogge, the Lyserne, the Beauer, the Sable, the Matron, the blacke and dunne Foxe, the white Beare towards the Sea coast of *Pechora*, the Gurnstale, the Laset, or Mineuer.

They

They haue a kind of Squirrell that hath growing on the pinion of the shoulder bone, a long tuft of haire, much like vnto feathers, with a far broader tayle then haue any other Squirrels, which they moue and shake as they leape from tree to tree, much like vnto a wing. They skise a large space, and seeme for to flie withall, and therefore they call them *Letach Veckshe*, that is, the flying Squirrel. Their Hares and Squirrels in Summer are of the same colour with ours, in Winter the Hare changeth her coate into milke white, the Squirrell into gray, whereof commeth the *Calabar*.

Deare Horses.

They haue sallow Deere, the Roe Bucke, and Goats very great store. Their Horses are but small, but very swift and hard, they trauell them vnshod both Winter and Summer, without all regard of pace.

Sheepe. I haue seene some of them in *England* breed twice a yeere; the Ram hath foure hornes, &c.

Their Sheepe are but small, and beare course and harsh wooll. Of Fowle, they haue diuers of the principall kinds: First, great store of Hawkes; the Eagle, the Gerfaulcon, the Slightfaulcon, the Gos-hawke, the Tassell, the Sparhawke, &c. But the principall Hawke that breedeth in the Countrey, is counted the Gerfaulcon.

Of other Fowles their principall kinds are the Swanne tame and wilde, (whereof they haue great store) the Storke, the Crane, the Tedder, of the colour of a Feasant, but farre bigger and liueth in the Firre woods. Of Feasant and Partridge they haue very great plenty. An Owle there is of a very great bignesse, more vgly to behold then the Owles of this Countrey, with a broad face, and eares much like vnto a man.

Fresh-water fish.

For fresh water Fish, besides the common sorts (as Carpe, Pike, Pearch, Tench, Roach, &c.) they haue diuers kinds very good and delicate: as the Bellouga, or Bellougina of foure or fiue elnes long, the Ositrina or Sturgeon, the Seueriga, and Sterledy somewhat in fashion and taste like to the Sturgeon, but not so thicke or long. These foure kinds of fish breed in the *Volgha*, and are catched in great plenty, and serued thence into the whole Realme for a great food. Of the Roes of these foure kinds they make very great store of Icary or Caueary, as was said before. They haue besides these that breed in the *Volgha*, a fish called the *Ribabela*, or white Salmon, which they account more delicate then they doe the red Salmon, whereof also they haue exceeding great plenty in the Riuers Northward, as in *Duyna* the Riuer of *Cola*, &c. In the *Ozera* or Lake neere a Towne called *Periaslaue*, not farre from the *Mosko*, they haue a small fish which they call the fresh Herring, of the fashion, and somewhat of the taste of a Sea-herring. Their chiefe Townes for fish are, *Yaruslaue*, *Bealozera*, *Nouogrod*, *Astracan*, and *Cazan*: which all yeeld a large Custome to the Emperour euery yeere for their trades of fishing, which they practise in Summer, but send it frozen in the Winter time into all parts of the Realme.

Chap. 4. The chiefe Cities of *Russia*.

THe chiefe Cities of *Russia* are, *Mosko*, *Nouograd*, *Rostone*, *Volodomer*, *Plesco*, *Smolensko*, *Iaruslaue*, *Periaslaue*, *Nisnouograd*, *Vologda*, *Ustiuck*, *Golmigroe*, *Cazan*, *Astracan*, *Cargapolia*, *Columna*.

Mosko.

The Citie of *Mosko* is supposed to bee of great antiquitie, though the first Founder bee vnknowne to the *Russe*. It seemeth to haue taken the name from the Riuer that runneth on the one side of the Towne.

Berosus, a suspected author, or rather that which now beareth his name.

Berosus the *Chaldean* in his fifth Booke telleth that *Nimrod* (whom other profane Stories call *Saturne*) sent *Assyrius*, *Medus*, *Moscus*, and *Magog* into *Asia* to plant Colonies there, and that *Moscus* planted both in *Asia* and *Europe*. Which may make some probality, that the Citie, or rather the Riuer whereon it is built, tooke the denomination from this *Moscus*: the rather because of the climate or situation, which is in the very farthest part and list of *Europe*, bordering vpon *Asia*. The Citie was much enlarged by one *Euan* or *Iohn*, sonne to *Daniel*, that first changed his title of Duke into King: though that honour continued not to his posteritie: the rather because he was inuested into it by the Popes Legate, who at that time was *Innocentius* the fourth, about the yeere 1246. which was very much misliked by the *Russe* people, being then a part of the Eastern or *Greeke* Church. Since that time the name of this Citie hath growne more famous, and better knowne to the World: insomuch that not only the Prouince, but the whole Countrey of *Russia* is termed by some by the name of *Moscouia* the Metropolite Citie. The forme of this Citie is in a manner round, with three strong walls, circuling the one within the other, and streets lying betweene, whereof the inmost wall, and the buildings closed within it (lying safest as the heart within the bodie, fenced and watred with the Riuer *Moskua*, that runneth close by it) is all accounted the Emperours Castle. The number of houses (as I haue heard) through the whole Citie (being reckoned by the Emperour a little before it was fired by the *Chrim*) was 41500. in all. Since the *Tartar* besieged and fired the Towne (which was in the yeere 1571.) there lieth waste of it a great bredth of ground, which before was well set and planted with buildings, specially that part on the South side of *Moskua*, built not long before by *Basilius* the Emperour for his Garrison of Souldiers, to whom he gaue priuiledge to drinke Mede, and Beere at the drie or prohibited times, when other *Russes* may drinke nothing but water, and for that cause called this new Citie by the name of *Naloi*, that is, *Skinke* or *powre in*. So that now the Citie of *Mosko* is not much bigger then the Citie of *London*.

Mosko fired.

Nouograd.

The next in greatnesse, and in a manner as large, is the Citie *Nouograde*: where was committed (as the *Russe* sayth) the memorable warre so much spoken of in Stories of the *Scythian*

Digitized by Google

thian ſeruants, that tooke Armes againſt their maſters: which they report in this ſort: *vz.* That the *Boiarens* or Gentlemen of *Nouograde* and the Territorie about (which onely are Souldiers after the diſcipline of thoſe Countries) had warre with the *Tartars*. Which being well performed and ended by them, they returned homewards. Where they vnderſtood by the way, that their *Cholopey* or Bondſlaues whom they left at home, had in their abſence poſſeſſed their Townes, Lands, Houſes, Wiues, and all. At which newes being ſomewhat amazed, and yet diſdayning the villanie of their ſeruants, they made the more ſpeed home: and ſo not farre from *Nouograde* met them in warlike manner marching againſt them. Whereupon aduiſing what was beſt to be done, they agreed all to ſet vpon them with no other ſhew of weapon but with their Horſe whips (which as their manner is, euery man rideth withall) to put them in remembrance of their ſeruile condition, thereby to terrifie them, and abate their courage. And ſo marching on, and laſhing altogether with their whips in their hands they gaue the onſet. Which ſeemed ſo terrible in the eares of their villaines, and ſtroke ſuch a ſenſe into them of the ſmart of the whip which they had felt before, that they fled altogether like Sheepe before the Driuers. In memory of this victory the *Nouogradians* euer ſince haue ſtamped their Coine (which they call a *dingoe Nouogrodskoy*, currant thorow all *Ruſſia*) with the figure of a Horſe-man ſhaking a whip aloft in his hand. Theſe two Cities exceed the reſt in greatneſſe. For ſtrength their chiefe Townes are, *Vobsko*, *Smolensko*, *Cazan*, and *Aſtracan*, as lying vpon the borders. But for ſituation *Iaruſlaue* farre exceedeth the reſt. For beſides the commodities that the ſoyle yeeldeth of Paſture and Corne, it lieth vpon the famous Riuer *Volga*, and looketh ouer it from a high banke very faire and ſtately to behold: whereof the Towne taketh the name. For *Iaruſlaue* in that Tongue ſignifieth as much as a faire or famous Banke. In this Towne (as may be gheſſed by the name) dwelt the *Ruſſe* King *Vlademir*, ſurnamed *Iaruſlaue*, that married the daughter of *Harald* King of *England*, by mediation of *Sueno* the *Dane*, as is noted in the *Daniſh* Storie about the yeere 1067.

Pleaſant Hiſtorie.

Like lips, like lettice.

Iaruſlaue.

The other Townes haue nothing that is greatly memorable, ſaue many ruines within their walls. Which ſheweth the decreaſe of the *Ruſſe* People, vnder this gouernment. The ſtreets of their Cities and Townes in ſtead of pauing, are planked with Firre trees, plained and layd euen cloſe the one to the other. Their houſes are of wood without any lime or ſtone, built very cloſe and warme with Firre trees plained and piled one vpon another. They are faſtned together with dents or notches at euery corner, and ſo claſped faſt together. Betwixt the trees of timber they thruſt in moſſe (whereof they gather plenty in their Woods, to keepe out the aire. Euery houſe hath a paire of ſtaires that lead vp into the chambers out of the yard or ſtreet after the *Scottiſh* manner. This building ſeemeth farre better for their Countrey, then that of ſtone and bricke: as being colder and more dampiſh then their woodden houſes, ſpecially of Firre, that is a dry and warme wood. Whereof the prouidence of God hath giuen them ſuch ſtore, as that you may build a faire houſe for twentie or thirtie Rubbels, or little more, where wood is moſt ſcant. The greateſt inconuenience of their woodden building is the aptneſſe for firing, which happeneth very oft, and in very fearefull ſort, by reaſon of the drineſſe and fatneſſe of the Firre, that being once fired, burneth like a Torch, and is hardly quenched till all bee burnt vp.

The manner of *Ruſſe* building.

THe ſur-name of the Imperiall houſe of *Ruſſia*, is called *Beala*. It tooke the originall (as is ſuppoſed) from the Kings of *Hungarie*. Which may ſeeme the more probable, for that the *Hungarian* Kings many yeeres agoe haue borne that name: as appeareth by *Bonfinius* and other Stories written of that Countrey. For about the yeere 1059. mention is made of one *Beala* that ſucceeded his brother *Andreas*, who reduced the *Hungarians* to the *Chriſtian* Faith from whence they were fallen by *Atheiſme* and *Turkiſh* perſwaſion before. The ſecond of that name was called *Beala the blind*, after whom ſucceeded diuers of the ſame name.

Chap. 5. Of the houſe or ſtocke of the *Ruſſe* Emperour.

That their Anceſtry came not of the *Ruſſe* Nation, *Iuan vaſilowich* father to this Emperour, would many times boaſt, diſdayning (as ſhould ſeeme) to haue his progenie deriued from the *Ruſſe* bloud. As namely to an *Engliſhman* his Gold-ſmith, that had receiued Bullion of him to make certaine Plate: whom the Emperour commanded to looke well to his weight. For my *Ruſſes* (ſaid he) are theeues all. Whereat the Workeman looking vpon the Emperour, began to ſmile. The Emperour being of quicke conceit, charged him to tell him what hee ſmiled at. *If your Maieſtie will pardon mee* (quoth the Gold-ſmith) *I will tell you. Your Highneſſe ſaid, that the* Ruſſes *were all theeues, and forgat in the meane while that your ſelfe was a* Ruſſe. I thought ſo (quoth the Emperour) but thou art deceiued. For I am no *Ruſſe*, my Anceſtors were *Germanes* (for ſo they account of the *Hungarians* to bee part of the *Germane* Nation, though indeed they come of the *Hunnes*. That inuaded thoſe Countries, and reſted in thoſe parts of *Pannonia*, now called *Hungarie*.

The houſe *Beala* not naturall *Ruſſe*. See *ſup.* 56. where the *Tartars* deſtroyed theſe Countreyes then called *Bulgaria maior*, many fled into *Hungarie*: and after *Bathus* death, both *Hungarie* and this *Bulgaria* had better

meanes to recouer themſelues, and perhaps either by *Hungarian* affinitie with their Princes, or taking a Prince from *Hungarie* that aſſiſted with *Germans*, they began to recouer of that *Tartarian* diſeaſe, whereof ſtill ſome Symtomes remayne.

How

The aduancement of the house of *Beala.*

How they aspired to the Dukedome of *Volodemer* (which was their first degree, and ingrafting into *Russia*) and whether it were by Conquest, or by Marriage, or by what other meanes, I could not learne any certainty among them. That from these beginnings of a small Dukedome (that bare notwithstanding an absolute gouernment with it, as at that time did also the other Shires or Prouinces of *Russia*) this house of *Beala* spred it selfe forth, and aspired by degrees to the Monarchie of the whole Countrey, is a thing well knowne, and of very late memorie. The chiefe of that House that aduanced the Stocke, and enlarged their Dominions, were the three last that raigned before this Emperour, to wit, *Iuan Basileus*, and *Iuan* father to the other that raigneth at this time. Whereof the first that tooke vnto him the name and title of Emperour, was *Basileus* father to *Iuan*, and grandfather to this man. For before that time they were contented to be called great Dukes of *Mosko*. What hath beene done by either of these three, and how much they haue added to their first estate by Conquest or otherwise, may bee seene in the Chapter of their Colonies, or Purchases perforce. For the continuance of the race, this House of *Beala* at this present * is in like case as are many of the greatest Houses of *Christendome, vz.* the whole Stocke and Race concluded in one, two, or some few of the Bloud. For besides the Emperour that now is, who hath no child (neither is like euer to haue, for ought that may bee coniectured by the constitution of his body, and the barrennesse of his wife after so many yeeres marriage) there is but one more, *vz.* a child of sixe or seuen yeeres old, in whom resteth all the hope of the succession, and the posteritie of that House. As for the other brother that was eldest of the three, and of the best towardnesse, he died of a blow giuen him by his father vpon the head in his furie with his walking staffe, or (as some say) of a thrust with the prong of it driuen deepe into his head. That he meant him no such mortall harme when hee gaue him the blow, may appeare by his mourning and passion after his sonnes death, which neuer left him till it brought him to the graue. Wherein may be marked the iustice of God, that punished his delight in shedding of bloud with this murder of his sonne by his owne hand, and so ended his dayes and tyrannie together, with the murdring of himselfe by extreme griefe, for this his vnhappie and vnnaturall fact.

* *Viz. A. D.* 1588.

Since the Scepter hath been in diuers Families, with manifold combustions.

The Emperor vnfortunatly killed his son.

We haue since had two which haue assumed to be this *Demetrius*, and haue obtayned the State; thereof and of their liues dispossessed as Counterfeits.

The Emperours younger brother of sixe or seuen yeeres old (as was said before) is kept in a remote place from the *Mosko*, vnder the tuition of his mother and her kindred, of the House of the *Nagaies:* yet not safe (as I haue heard) from attempts of making away by practice of some that aspire to the succession, if this Emperour die without any issue. The Nurse that tasted before him of certaine meat (as I haue heard) died presently. That hee is naturall sonne to *Ioan Vasilowich*, the *Russe* People warrant it, by the fathers qualitie that beginneth to appeare already in his tender yeeres. Hee is delighted (they say) to see Sheepe and other cattell killed, and to looke on their throats while they are bleeding (which commonly children are afraid t behold) and to beate Geese and Hennes with a staffe till he see them lie dead. Besides these of the male kind, there is a Widow, that hath right in the succession, Sister to the old Emperour, and Aunt to this man, sometime Wife to *Magnus* Duke of *Holst*, Brother to the King of *Denmarke*, by whom she had one daughter. This woman since the death of her Husband hath beene allured againe into *Russia*, by some that loue the succession better then her selfe, which appeareth by the sequele. For her selfe with her daughter, so soone as they were returned into *Russia*, were thrust into a Nunnerie, where her daughter died this last yeere while I was in the Countrey, of no naturall disease as was supposed. The mother remayneth still in the Nunnerie, where (as I haue heard) she bewayleth her selfe, and curseth the time when she returned into *Russia*, enticed with the hope of marriage, and other faire promises in the Emperours name. Thus it standeth with the Imperiall Stocke of *Russia*, of the House of *Beala*, which is like to determine in those that now are, and to make a conuersion of the *Russe* estate. If it be into a gouernment of some better temper, and milder constitution, it will be happie for the poore people that are now oppressed with intolerable seruitude.

Chap. 6. Of the manner of crowning or inauguration of the *Russe* Emperours.

THe solemnities vsed at the *Russe* Emperours Coronation, are on this manner. In the great Church of *Precheste* (or our Ladie) within the Emperours Castle is erected a Stage, whereon standeth a Scrine that beareth vpon it the Imperiall Cap and Robe of very rich stuffe. When the day of the Inauguration is come, there resort thither, first the Patriarch with the Metropolitans, Arch-bishops, Bishops, Abbots, and Priors, all richly clad in their Pontificalibus. Then enter the Deacons with the Quier of Singers. Who so soone as the Emperour setteth foot into the Church, beginne to sing: *Many yeeres may liue noble Theodore Iuanowich*, &c. Whereunto the Patriarch and Metropolite with the rest of the Clergie, answere with a certaine Hymne, in forme of a Prayer, singing it all together with a great noise. The Hymne being ended, the Patriarch with the Emperour mount vp the Stage, where standeth a Seat ready for the Emperour. Whereupon the Patriarch willeth him to sit downe, and then placing himselfe by him vpon another Seate prouided for that purpose, boweth downe his head towards the ground, and sayeth this Prayer: *Oh Lord God King of Kings, Lord of Lords, which by thy Prophet* Samuel *didst choose thy seruant* Dauid, *and anoynt him for King ouer thy People* Israel, *heare now our Prayers, and looke from*

Digitized by Google

from thy Sanctuarie vpon this thy Seruant Theodore, *whom thou hast chosen and exalted for King ouer these thy holy Nations, anoint him with the oyle of gladnesse, protect him by thy power, but vpon his head a Crowne of Gold and precious Stones, giue him length of dayes, place him in the Seat of Iustice, strengthen his armes, make subiect vnto him all the barbarous Nations. Let thy feare bee in his whole heart, turne him from all errour, and shew him the saluation of thy holy and vniuersall Church, that hee may iudge thy people with Iustice, and protect the children of the poore, and finally attayne euerlasting life.* This Prayer he speaketh with a lowe voyce, and then pronounceth a lowd: *All prayse and power to God the Father, the Sonne, and the Holy Ghost.* The Prayer being ended, he commandeth certayne Abbots to reach the Imperiall Robe and Cap: which is done very decently, and with great Solemnitie, the Patriarch withall pronouncing alowde: *Peace be vnto all.* And so he beginneth another Prayer to this effect: *Bow your selues together with vs, and pray to him that reigneth ouer all. Preserue him (oh Lord) vnder thy holy protection, keepe him that hee may doe good and holy things, let Iustice shine forth in his dayes, that we may liue quietly without strife and malice.* This is pronounced somewhat softly by the Patriarch, whereto hee addeth againe alowd: *Thou art the King of the whole World, and the Sauiour of our soules, to thee the Father, Sonne, and Holy Ghost, bee all prayse for euer and euer.* Amen. *Then putting on the Robe and the Cap, hee blesseth the Emperour with the signe of the Crosse: saying withall, in the Name of the Father, the Sonne, and the Holy Ghost.*

The like is done by the Metropolites, Archbishops, and Bishops: who all in their order come to the Chaire, and one after another blesse the Emperor with their two fore-fingers. Then is said by the Patriarch another Praier, that beginneth: *Omost holy Virgin Mother of God, &c.* After which a Deacon pronounceth with an high lowd voyce: *Many yeeres to Noble* Theodore, *good, honourable, beloued of God, great Duke of* Volodemer *of* Mosko, *Emperour, and Monarch of all* Russia, *&c.* Whereto the other Priests and Deacons that stand somewhat farre of by the Altar or Table, answere singing, *Many yeeres, many yeeres, to the Noble* Theodore. The same Note is taken vp by the Priests and Deacons, that are placed at the right and left side of the Church, and then altogether, they chaunt and thunder out, singing: *Many yeeres to the Noble* Theodore, *good, honourable, beloued of God, great Duke of* Volodemer, Mosko, *Emperour of all* Russia, *&c.* These Solemnities being ended, first commeth the Patriarch with the Metropolites, Archbishoppes, and Bishops, then the Nobilitie, and the whole Companie in their order, to doe homage to the Emperour, bending downe their heads, and knocking them at his feet to the very ground.

The Stile wherewith hee is inuested at his Coronation, runneth after this manner. Theodore Iuanowich, *by the grace of God, great Lord and Emperour of all* Russia, *great Duke of* Volodemer, Mosko, *and* Nouograd, *King of* Cazan, *King of* Astracan, *Lord of* Plesko, *and great Duke of* Smolensko, *of* Twerria, Ioughoria, Permia, Vadska, Bulghoria, *and others, Lord and great Duke of* Nouograd, *of the Low Countrey, of* Chernigo, Rezan, Polotskoy, Rostoue, Yarusklaueley, Bealozera, Leifland, Oudoria, Obdoria, *and* Condensa, *Commander of all* Siberia, *and of the North parts, and Lord of many other Countreyes, &c.*

This stile contayneth in it the Emperours Prouinces, and setteth forth his greatnesse. And therefore they haue a great delight and pride in it, forcing not onely there owne people but also Strangers (that haue any matter to deliuer to the Emperour by Speech or writing) to repeat the whole forme from the beginning to the end. Which breedeth much cauill, and sometimes quarrell betwixt them and the *Tartar*, and *Poland* Ambassadours: who refuse to call him *Czar*, that is Emperour, and to repeat the other parts of his long Stile. My selfe, when I had audience of the Emperour, thought good to salute him onely with thus much, *viz. Emperour of all* Russia, *great Duke of* Volodemer, Mosko, *and* Nouograd, *King of* Cazan, *King of* Astracan. The rest I omitted of purpose, because I knew they gloried, to haue their stile appeare to be of a larger Volume then the Queenes of *England*. But this was taken in so ill part, that the Chancellor (who then attended the Emperour, with the rest of the Nobilitie) with a lowd chasing voyce called still vpon me to say out the rest. Whereto I answered, that the Emperours Stile was very long, and could not so well be remembred by Strangers, that I had repeated so much of it, as might shew that I gaue honour to the rest, &c. But all would not serue till I commanded my Interpreter to say it all out.

chap. 7. The State or forme of their Gouernment. The *Russe* Gouernment tyrannicall.

THE manner of their Gouernment is much after the *Turkish* fashion: which they seeme to imitate as neere as the Countrey, and reach of their capacities in Politike Affaires will giue them leaue to doe.

The State and forme of their Gouernment seemeth to apply all to the behoofe of the Prince, and that after a most open manner: as may appeare by the *Sophismata*, or secrets of their Gouernment afterwards set downe, aswell for the keeping of the Nobilitie and Commons in an vnder proportion, and farre vneuen ballance in their seuerall degrees, as also in their Impositions and Exactions, without any regard of Nobilitie or People: farther then it giueth the Nobilitie a kind of libertie, to exact vpon the Commons and baser sort of People in all parts

Digitized by Google

of the Realme whereſoeuer they come, ſpecially in the place where their Lands lye, or where they are appointed by the Emperour to gouerne vnder him: Alſo to the Commons ſome ſmall contentment, in that they paſſe ouer their Lands by diſcent of Inheritance to whether Sonne they will: which commonly they doe after our *Gauill kind*, and diſpoſe of their goods by gift or Teſtament without any controllment.

Gauill-kind giue-all-kind tenure.

Concerning the principall points and matters of State, wherein the Souereignetie conſiſteth (as the *making and annulling of publike Lawes, the making of Magiſtrates, power to make Warre or League with any Forreine State, to execute or to pardon life, with the right of Appeale in all matters, both Ciuill and Criminall*) they doe ſo wholy and abſolutely pertayne to the Emperour, and his Counſell vnder him, as that he may be ſaid to be both the Souereigne Commander, and the Executioner of all theſe. For as touching any Law or publike Order of the Realme, it is euer determined before any publike Aſſembly or Parliament be ſummoned. Where beſides his Councell, hee hath none other to conſult with him of ſuch matters as are concluded before hand, but onely a few Biſhops, Abbots, and Friers: to make aduantage of the peoples Superſtitions, euen againſt themſelues, which thinke all to be holy and juſt, that paſſeth with conſent of their Biſhops and Clergie men, whatſoeuer it be. For which purpoſe the Emperours are content to make much of the corrupt ſtate of the Church, as now it is among them, and to nouriſh the ſame by extraordinary fauours, and Immunities to the Biſhops Seas, Abbeyes and Frieries: as knowing Superſtition and falſe Religion beſt to agree with a Tyrannicall State, and to be a ſpeciall meanes to vphold and maintayne the ſame.

Abſolute Souereigntie.

Magiſtracies.

Secondly, as touching the publike Offices and Magiſtracies of the Realme, there is none hereditarie, neyther any ſo great nor ſo little in that Countrey, but the beſtowing of it is done immediately by the Emperour himſelfe. Inſomuch that the very *Diacks*, or Clerkes in euery head Towne, are for the moſt part aſſigned by himſelfe. Notwithſtanding, the Emperour that now is (the better to entend his Deuotions) referreth all ſuch matters pertayning to the State, wholly to the ordering of his Wiues Brother, the Lord *Borris Federowich Godonoe*.

He ſucceeded him.

Iuriſdiction.

Thirdly, the like is to be ſaid of the Iuriſdiction concerning matters Iudiciall, ſpecially ſuch as concerne life and death. Wherein there is none that hath any authoritie or publike Iuriſdiction that goeth by Diſcent, or is held by Charter, but all at the appointment and pleaſure of the Emperour, and the ſame practiſed by the Iudges with ſuch awe and reſtraint, as that they dare not determine vpon any ſpeciall matter, but muſt referre the ſame wholly, vp to the *Moſko* to the Emperours Councell. To ſhew his Souereigntie ouer the liues of his Subjects, the late Emperour *Iuan Vaſilowich* in his walkes or progreſſes, if he had miſliked the face or perſon of any man whom he met by the way, or that looked vpon him, would command his head to be ſtrooke off. Which was preſently done, and the head caſt before him.

Iuan Vaſilowich cruell.

Appeales and Pardons.

Fourthly, for the Souereigne Appeale, and giuing of Pardons in Criminall Matters to ſuch as are conuicted, it is wholly at the pleaſure and grace of the Emperour. Wherein alſo the Empreſſe that now is, being a woman of great Clemencie, and withall delighting to deale in publike Affaires of the Realme, (the rather to ſupply the defect of her Husband) doth behaue her ſelfe after an abſolute manner, giuing out pardon, (ſpecially on her birth day and other ſolemne times) in her owne name, by open Proclamation, without any mention at all of the Emperour. Some there haue beene of late of the ancient Nobilitie, that haue held diuers Prouinces by right of Inheritance, with an abſolute Authoritie and Iuriſdiction ouer them, to order and determine all matters within their owne Precinct without all Appeale, or controllment of the Emperour. But this was all annulled and wrung cleane from them by *Iuan Vaſilowich* Father to this Emperour.

Ancient Nobilitie.

Chap. 8.

THeir higheſt Court of publike conſultation for matter of State, is called the *Zabore*, that is, the *Publike Aſſembly*. The ſtates and degrees of perſons, that are preſent at their Parliaments, are theſe in order. 1. The Emperour himſelfe. 2. Some of his Nobilitie about the number of twenty being all of his Councell. 3. Certayne of the Clergie-men, &c. about the ſame number. As for Burghers or other to repreſent the Comminaltie, they haue no place there: the people beeing of no better account with them then as ſeruants or bond-ſlaues that are to obey, not to make Lawes, nor to know any thing of publike matters before they are concluded.

The manner of holding the Parliaments.

The States of Parliament.

The order of the ſummons or aſſembling.

The Court of Parliament (called *Zabore*) is held in this manner. The Emperour cauſeth to be ſummoned ſuch of his Nobilitie as himſelfe thinketh meete, being (as was ſaid) all of his Councell: together with the Patriarch, who calleth his Clergie, to wit, the two Metropolites, the two Archbiſhops, with ſuch Biſhops, Abbots, and Friers as are of beſt account and reputation among them. When they are all aſſembled at the Emperours Court, the day is intimated when the Seſſion ſhall beginne. Which commonly is vpon ſome Friday, for the Religion of that day.

Friday reſpect.

When the day is come, the Clergie-men aſſemble before at the time and place appointed, which is called the *Stollie*. And when the Emperour commeth attended by his Nobilitie, they ariſe all, and meete him in an out-roome, following their Patriarch, who bleſſeth the Emperour

with

Digitized by Google

with his two fore-fingers, laying them on his fore-head, and the sides of his face, and then kisseth him on the right side of his breast. So they passe on into their Parliament House, where they sit in this order. The Emperour is enthronized on the one side of the Chamber. In the next place not farre from him at a small square Table (that giueth roome to twelue persons or thereabouts) sitteth the Patriarch with the Metropolites and Bishops, and certayne of the principall Nobilitie of the Emperours Councell, together with two *Diacks* or Secretaries (called *Dumnoy dyakey*) that enact that which passeth. The rest place themselues on benches round about the Roome, euery man in his ranke after his degree. Then is there propounded by one of the Secretaries (who representeth the *Speaker*) the cause of their Assembly, and the principall matters that they are to consider of. For to propound Bils what euery man thinketh good for the publike benefit (as the manner is in *England*) the *Russe* Parliament alloweth no such custome, nor liberty to subiects.

Their discourse at Parliament.

The points being opened, the Patriarch with his Clergie-men haue the Prerogatiue to be first asked their vote, or opinion, what they thinke of the points propounded by the Secretarie. Whereto they answere in order, according to their degrees, but all in one forme, without any Discourse: as hauing learned their Lesson before, that serueth their turnes at all Parliaments alike, whatsoeuer is propounded. Commonly it is to this effect. *That the Emperour and his Councell are of great wisdome and experience, touching the Policies and publike Affaires of the Realme, and farre better able to iudge what is profitable for the Common-wealth, then they are, which attend vpon the seruice of God only, and matters of Religion. And therefore it may please them to proceed. That instead of their aduise, they will ayde them with their Prayers, as their duties and vocations doe require, &c.* To this or like effect hauing made their Answeres euery man in his course, vp standeth some Abbot or Frier more bold then the rest (yet appointed before-hand as a matter of forme) and desireth the Emperour it would please his Majestie to command to be deliuered vnto them what his Majesties own iudgement, and determinate pleasure is, as touching those matters propounded by his *Deiake*.

Whereto is replyed by the said Secretarie in the Emperours name. *That his Highnesse with those of his Noble Councell, vpon good and sound aduice haue found the matters proposed to be very good and necessary for the Common-wealth of his Realme. Notwithstanding, forasmuch as they are Religious men, and know what is right, his Maiestie requireth their godly Opinions, yea, and their Censures too, for the approuing or correcting of the said Propositions. And therfore desireth them again to speak their minds freely. And if they shall like to giue their consents, that then the matters may passe to a full conclusion.*

Hereunto when the Clergie-men haue giuen their consents (which they vse to doe without any great pausing) they take their leaues with blessing of the Emperour: who bringeth the Patriarch on his way so farre as the next Roome, and so returneth to his Seat, till all be made ready for his returne homeward. The Acts that thus are passed by the *Zubore* or Parliament, the *Deiakes* or Secretaries draw into a forme of Proclamation, which they send abroad into euery Prouince, and head Towne of the Realme, to be published there by the Dukes and *Diakeis*, or Secretaries of those places. The Session of Parliament being fully ended, the Emperour inuiteth the Clergiemen to a solemne Dinner. And so they depart euery man to his home.

Chap. 9.

Of the Nobilitie, and by what meanes it is kept in an vnder proportion agreeable to that State.

The *Vdelney Knazey* chiefe of the Nobilitie.

THe degrees of persons or Estates of *Russia* (besides the Soueraigne State or Emperour himselfe) are these in their order. 1. The Nobility which is of foure sorts. Whereof the chiefe for Birth, Authority, and Reuenue are called the *Vdelney Knazey*, that is, *The exempt or priuiledged Dukes*. These held sometime a seuerall Iurisdiction, and absolute Authoritie within their Precincts, much like vnto the States or Nobles of *Germany*. But afterwards (reseruing their Rights vpon composition) they yeelded themselues to this House of *Beula*, when it beganne to waxe mightie, and to enlarge it selfe by ouer-matching their Neighbours. Onely they were bound to serue the Emperour in his Warres with a certayne number of Horse. But the late Emperour *Iuan Vasilowich* Father to this Prince, being a man of high spirit, and subtill in his kind meaning to reduce his Gouernment into a more strict forme, began by degrees to clip off their greatnesse, and to bring it downe to a lesser proportion: till in the end he made them not onely his Vassals, but his *Kolophey*, that is, his very Villaines or Bond-slaues. For so they terme and write themselues in any publike Instrument or priuate Petition which they make to the Emperour. So that now they hold their Authorities, Lands, Liues, and all at the Emperours pleasure as the rest do.

The meanes and practice whereby hee wrought this to effect against those, and other of the Nobility (so well as I could note out of the report of his doings) were these, and such like. First, he cast priuate emulations among them about prerogatiue of their Titles and Dignities. Wherein hee vsed to set on the inferiours, to prefer or equall themselues to those that were accounted to be of the Nobler Houses. Where hee made his aduantage of their malice and contentions, the one against the other, by receiuing deuised matter, and accusations of secret practice and Conspiracies to bee intended against his Person and State. And so hauing singled out the greatest of them, and cut them off with the good liking of the rest, hee fell at last to open practice, by forcing of the other to yeeld their Rights vnto him.

Digitized by Google

The faction of *Oppreſſini* and *Zempskey* deuiſed by the Emperour.

2. Hee diuided his ſubiects into two parts or factions by a generall Schiſme. The one part he called the *Oppreſſini* or *Select men*. Theſe were ſuch of the Nobility and Gentry as he took to his owne part, to protect and maintayne them as his faithfull ſubiects. The other he called *Zemskey*, or the *Commons*. The *Zemskey* contayned the baſe and vulgar ſort, with ſuch Noblemen and Gentlemen as he meant to cut off, as ſuſpected to miſlike his Gouernment, and to haue a meaning to practiſe againſt him. Wherein he prouided that the *Oppreſſini* for number and qualitie of Valure, Money, Armour, &c. farre exceeded the other of the *Zempskey* ſide, whom he put (as it were from vnder his protection: ſo that if any of them were ſpoyled or killed by thoſe of the *Oppreſſini*, (which he accounted of his owne part) there was no amends to bee ſought for by way of publike Iuſtice, or by complaint to the Emperour.

The whole number of both parts was orderly regiſtred and kept in a Booke: ſo that euery man knew who was a *Zempskey* man, and who of the *Oppreſſini*. And this libertie of the one part to ſpoile and kill the other without any helpe of Magiſtrate, or Law (that continued ſeuen yeeres) enriched that ſide, and the Emperours Treaſury, and wrought that withall which hee intended by this practiſe, *viz.* to take out of the way ſuch of the Nobilitie, as himſelfe miſliked; whereof were ſlaine within one weeke to the number of three hundred within the Citie of *Moske*.

This miſchieuous practice of making a generall Schiſme, and publike diuiſion among the ſubiects of his whole Realme, proceedeed (as ſhould ſeeme) from an extreame doubt, and deſperate feare, which he had conceiued of moſt of his Nobilitie, and Gentlemen of his Realme, in his Wars with the *Polonian* and *Chrim Tartar*. What time he grew into a vehement ſuſpition (conceiued of the ill ſucceſſe of his Affaires) that they practiſed Treaſon with the *Polonian* and *Chrim*. Whereupon he executed ſome, and deuiſed this way to be rid of the reſt.

Pomeſtnoy tenure.

3. Hauing thus pulled them and ſeaſed all their Inheritance, Lands, Priuiledges, &c. ſaue ſome very ſmall part which hee left to their name, hee gaue them other Lands of the tenour of *Pomeſtnoy* (as they call it) that are held at the Emperours pleaſure, lying far of in another Countrey, and ſo remooued them into other of his Prouinces, where they might haue neyther fauour, nor authority, not being Natiue nor well knowne there. So that now theſe of the chiefe Nobility (called *Vdelney Knazey*) are equalled with the reſt: ſaue that in the opinion and fauour of the people they are of more account, and keepe ſtill the Prerogatiue of their place in all their publike meetings.

Their practice to keepe downe theſe Houſes from riſing againe and recouering their dignities are theſe, and ſuch like. Firſt, many of their Heires are kept vnmarried perforce, that the ſtocke may dye with them. Some are ſent into *Siberia*, *Cazan* and *Aſtracan*, vnder pretence of ſeruice, and there either made away, or elſe faſt clapped vp. Some are put into Abbeyes, and ſheare themſelues Friers by pretence of a Vow to be made voluntary, and of their owne accord, but indeed forced vnto it by feare, vpon ſome pretenced crime objected againſt them. Where they are ſo guarded by ſome of ſpeciall truſt, and the Couent it ſelfe (vpon whoſe head it ſtandeth that they make no eſcape) as that they haue no hope but to end their liues there. Of this kind there are many of very great Nobilitie. Theſe and ſuch like wayes begunne by the Emperour *Iuan Vaſilowich* are ſtill practiſed by the *Godonoes*, who being aduanced by the Marriage of the Empreſſe their Kinſwoman, rule both the Emperour, and his Realme (ſpecially *Borris Federowich Godonoe*, Brother to the Empreſſe) and endeauour by all meanes to cut off, or keepe downe all of the beſt and ancienteſt Nobilitie. Whereof diuers already they haue taken away, whom they thought likelieſt to make head againſt them and to hinder their purpoſe, as *Knez Andreas Gutaken Bulgaskoue*, a man of great birth and authoritie in the Countrey. The like they haue done with *Peter Gollanni* (whom they put into a Dungeon where hee ended his life) with *Knez Vaſilie Vrywich Golloshen*, with *Andrieu Iuanowich Suskey* accounted among them for a man of a great wiſedome. So this laſt yeere was killed in a Monaſtery (whither they had thruſt him) one *Knez Iuan Petrowich Suskey* a man of great valour, and ſeruice in that Countrey: who about fiue or ſixe yeeres ſince, bare out the ſiege of the Citie *Vobske*, made by *Stephan Batore* King of *Polonia*, with one hundred thouſand men, and repulſed him very valiantly, with great honour to himſelfe, and his Countrey, and diſgrace to the *Polonian*. Alſo *Micheta Romanowich* Vncle to the Emperour by the Mothers ſide, was ſuppoſed to haue dyed of Poyſon, or ſome like practice.

Names of the greateſt Houſes of the *Ruſſe* Nobilitie.

The Names of theſe families of greateſt Nobilitie are theſe in their order. The firſt is of *Knez Volodemer*, which reſteth at this time in one Daughter a widow, and without Children (mentioned before) ſometime wife to *Hartock Magnus* Brother to the King of *Denmarke*, now cloſed within a Nunnerie. The ſecond *Knez Metheloskey*, thruſt into a Frierie, and his onely Sonne kept from marriage, to decay the houſe. The third *Glimskey*. But one left of his houſe, and hee without children ſaue one Daughter. The fourth *Suskey*, whereof there are foure Brethren young men, and vnmarryed all. The fifth *Hubetskey*. Of this Houſe are foure liuing. The ſixth *Bulgakoy*, now called *Gulelchey* houſe, whereof are fiue liuing, but youths all. The ſeuenth *Voralinſkoy*. Two left of that ſtocke. The eighth *Odgoskey*, two. The ninth *Telletskoy*, one. The tenth *Taytoue*, three. Theſe are the Names of the chiefe Families, called *Vdelney Knazy*: that in effect haue

Digitized by Google

haue loſt all now, ſaue the very name it ſelfe, and fauour of the people, which is like one day to reſtore them againe, if any be left.

The ſecond degree of Nobilitie is of the *Boiarens*. Theſe are ſuch as the Emperour honoureth (beſides their Nobilitie) with the title of Counſellers. The reuenue of theſe two ſorts of their Nobles that riſeth out of their Land aſſigned them by the Emperour, and held at his pleaſure (for of their owne Inheritance there is little left them, as was ſayd before) is about a thouſand Marcks a yeere: beſides Penſion which they receiue of the Emperour for their ſeruice in his Warres, to the ſumme of ſeuen hundred Rubbels a yeere, and none aboue that ſumme. The ſecond degree of Nobilitie.

But in this number the Lord *Borris Federowich Godenoe* is not to bee reckoned, that is like a *Tranſcendent*, and in no ſuch predicament with the reſt, being the Emperours Brother in law, his Protector for direction, for Command and authoritie Emperour of *Ruſſia*. His yeerely reuenue in Land and Penſion, amounteth to the ſumme of 93700. Rubbels and more, as appeareth by the particulars. Hee hath of inheritance (which himſelfe hath augmented in *Vaſma Dorogoboſe*, ſixe thouſand Rubbels a yeere. For his office of *Connick*, or Maſter of the Horſe twelue thouſand Rubbels or Marcks, raiſed out of the *Conaſtue Sloboday*, or the liberties pertayning to that Office, which are certayne Lands and Townes neere about the *Moſco*. Beſides, all the meadow and paſture ground on both ſides the banke of the Riuer *Moſko*, thirtie verſt vp the ſtreame, and fortie verſt downwards. For his penſion of the Emperour (beſides the other for his Office) fifteene thouſand Rubbels. Out of the Prouince or Shire of *Vagha*, there is giuen him for a peculiar exempted out of the *Chetfird* of *Poſolskoy*, two and thirtie thouſand Rubbels, beſides a rent of Furres. Out of *Rezan* and *Seuer*, (another peculiar) thirtie thouſand Rubbels. Out of *Otſer* and *Turiock* another exempt place eight thouſand Rubbels. For rent of Bath-ſtoaues and Bathing-houſes without the walls of *Moſko*, fifteene hundred Rubbels. Beſides his *Pomeſt*, or Lands which hee holdeth at the Emperours pleaſure, which farre exceedeth the proportion of land allotted to the reſt of the Nobilitie. Lord *Borris* after this Emperour.

One other there is, of the houſe of *Glinskoy*, that diſpendeth in Land and Penſion about fortie thouſand Rubbels yeerely. Which hee is ſuffered to enioy, becauſe he hath marryed *Borris* his wiues Siſter, being himſelfe very ſimple and almoſt a naturall. The ordering of him and his Lands are committed to *Borris*.

In the third ranke are the *Voyauoday*, or ſuch Nobles as are, or haue beene Generals in the Emperours warres. Which deliuer the honour of their Title to their poſteritues alſo: who take their place aboue the other Dukes and Nobles, that are not of the two former ſorts, *viz.* of the *Vdelney knazey*, nor of the *Boiarens*. The third ſort of Nobilitie.

Theſe three degrees of their Nobilitie, (to wit) the *Vdelney knazey*, the *Boiarens*, and the *Voiauoday*, haue the addition of *Vich*, put vnto their ſirname, as *Borris Federowiſh*, &c. which is a note of Honour that the reſt may not vſurpe. And in caſe it bee not added in the naming of them, they may ſue the *Beſtcheſt* or penaltie of diſhonour vpon them, that otherwiſe ſhall tearme them. Title *Vich*.

The fourth and loweſt degree of Nobilitie with them, is of ſuch as beare the name of *Knazey* or Dukes, but come of the younger Brothers of thoſe chiefe Houſes, through many diſcents, and haue no inheritance of their owne, ſaue the bare name or title of Duke onely. For their order is to deliuer their names and titles of their Dignities ouer to all their Children alike, whatſoeuer elſe they leaue them. So that the Sonnes of a *Voiauoday* or Generall in the field, are called *Voiauoday*, though they neuer ſaw the field, and the Sonnes of a *Knez* or Duke, are called *Knazey*, though they haue not one groat of inheritance or liuelyhood to maintayne themſelues withall. Of this ſort there are ſo many, that the plentie maketh them cheape: ſo that you ſhall ſee Dukes glad to ſerue a meane man for fiue or ſixe Rubbels or Marcks a yeere, and yet they will ſtand highly vpon their *Beſtcheſt* or reputation of their Honours. And theſe are their ſeuerall degrees of Nobilitie.

The ſecond degree of perſons, is of their *Sina Boiarskey*, or the ſonnes of Gentlemen: which all are preferred, and hold that Name by their ſeruice in the Emperours warres, being Souldiers by their very ſtocke and birth. To which order are referred their *Dyacks* or Secretaries, that ſerue the Emperour in euery head Towne, being ioyned in Commiſſion with the Dukes of that place. The ſecond degree of perſons.

The laſt are their Commons, whom they call *Mouſicks*. In which number they reckon their Merchants, and their common Artificers. The very loweſt and baſeſt ſort of this kinde (which are held in no degree) are their Countrey people, whom they call *Chriſtianeis*. Of the *Sina Boiarskey* (which are all Souldiers) wee are to ſee in the deſcription of their Forces, and Militarie prouiſions. Concerning their *Mouſicks*, what their condition and behauiour is, in the Title or Chapter *Of the Common people*. The third degree.

Chap. 10. Of the Gouernment of their Prouinces and Shires.

THe whole Countrey of *Ruſſia* (as was ſayd before) is diuided into foure parts, which they call *Chetfirds*, or *Tetrarchies*. Euery *Chetfird* containeth diuers Shires, and is annexed to a ſeuerall Office, whereof it takes the name. The firſt *Chetfird* or *Tetrarchie*, beareth the name of

Digitized by Google

The foure, *Chetfirds.*

Posolskoy Chetfird, or the *Iurisdiction of the office of Ambassages*, and at this time is vnder the chiefe Secretarie and officer of the Ambassages, called *Andreas Schalcalone*. The standing fee or stipend that hee receiueth yeerely of the Emperour for this seruice, is one hundred Rubbels or Marcks.

The second is called the *Roseradney Chetfird*, becausse it is proper to the *Roserade* or high Constable. At this time it pertayneth by vertue of Office to *Basilie Shalcalone*, Brother to the Chancellour, but it is executed by one *Zapon Abramone*. His pension is an hundred Rubbels yeerely.

The third is the *Chetfird* of *Pomestnoy*, as pertayning to that Office. This keepeth a Register of all Lands giuen by the Emperour for seruice to his Noblemen, Gentlemen and others, giueth out and taketh in all Assurances for them. The officer at this time is called *Eleazar Wellusgine*. His stipend is fiue hundred Rubbels a yeere.

The fourth is called *Cassauskoy Dworets*, as being appropriate to the Office that hath the iurisdiction of the Kingdomes of *Cazan* and *Astracan*, with the other Townes lying vpon the *Volgha*, now ordered by one *Druzhine Penteleone*, a man of very speciall account among them, for his wisedome and promptnesse in matters of policie. His pension is one hundred and fiftie Rubbels a yeere.

From these *Chetfirds* or *Tetrarchies* is exempted the Emperours inheritance or *Vochin* (as they call it) for that it pertayned from ancient time to the House of *Beala*, which is the firname of the Imperiall bloud. This standeth of sixe and thirtie Townes with their bounds or Territories. Besides diuers peculiar Iurisdictions, which are likewise deducted out of those *Chetfirds*, as the Shire of *Vagha* (belonging to the Lord *Borrise Federowich Godonoe*) and such like.

These are the chiefe Gouernours or Officers of the Prouinces, not resident at their charge abroad, but attending the Emperour whither soeuer hee goeth, and carrying their Offices about with them, which for the most part they hold at *Mosko*, as the Emperours chiefe seate.

The parts and practice of these foure Offices, is to receiue all Complaints and Actions whatsoeuer, that are brought out of their seuerall *Chetfirds* and Quarters, and to informe them to the Emperours Councell. Likewise to send direction againe to those that are vnder them, in their sayd Prouinces, for all matters giuen in charge by the Emperour and his Councell, to bee done or put in execution within their Precincts.

For the ordering of euery particular Prouince of these foure *Chetfirds*, there is appointed one of these Dukes, which were reckoned before in the lowest degree of their Nobilitie, which are resident in the head Townes of the sayd Prouinces. Whereof euery one hath joyned with him in Commission a *Dyack* or Secretarie to assist him or rather to direct him. For in the executing of their Commission, the *Dyack* doth all.

The Commission of the Dukes or Presidents of Shires.

The parts of their Commission are these in effect. First, to heare and determine in all ciuill matters within their Precinct. To which purpose they haue vnder them certayne Officers, as *Gubnoy Starets* or Coroners, who besides the tryall of selfe Murders, are to attach Fellons: and the *Soudia* or vnder Iustices, who themselues also may heare and determine in all matters of the same nature, among the Countrey people of their owne Wards or Bayliwickes: but so that in case either partie dissent, they may appeale, and goe further to the Duke and *Dyack* that reside within the head Towne. From whom also they may remoue the matter to the higher Court at *Mosko*, of the Emperours Councell, where lye all appeales. They haue vnder them also *Sotskoy Starets*, that is Aldermen, or Bayliffes of the Hundreds.

Secondly, in all criminall matters, as Theft, Murder, Treason, &c. they haue authoritie to apprehend, to examine and to imprison the malefactor, and so hauing receiued perfect euidence and imformation of the cause, they are to send it ready drawne and orderly digested vp to the *Mosko*, to the Officer of the *Chetfird*, whereunto that Prouince is annexed: by whom it is referred and propounded to the Emperours Councell. But to determine in any matter criminall, or to doe execution vpon the partie offending, is more then their Commission will allow them to doe.

Thirdly, if there bee any publike seruice to be done within that Prouince, (as the publishing of any Law, or common order, by way of Proclamation, collecting of taxes and impositions for the Emperor, mustering of Souldiers, and sending them forth at the day, and to the place assigned by the Emperour or his Councell) all these and such like pertayne to their charge.

Dukes and *Dyacks*: many of them vniust oppressors, and Spunges pressed againe.

These Dukes and *Dyacks* are appointed to their place by the Emperour himselfe, and are changed ordinarily at euery yeeres end, except vpon some speciall liking or suite, the time bee prorogued for a yeere or two more. They are men of themselues of no credit, nor fauour with the people where they gouerne, being neither borne, nor brought vp among them, nor yet hauing inheritance of their owne there, or elsse where. Onely of the Emperour they haue for that seruice an hundred Marcks a yeere, hee that hath most, some fiftie, some but thirtie. Which maketh them more suspected and odious to the people, becausse being so bare, and comming fresh and hungry vpon them lightly euery yeere, they racke and spoyle them without due regard of Iustice or Conscience. Which is easily tollerated by the chiefe Officers of the *Chetfirds*, to the end they may spoyle them againe, and haue a better bootie when they call them to account: which

Digitized by Google

which commonly they doe at the end of their seruice, making an aduantage of their injustice and oppression ouer the poore people. There are few of them but they come to the *Pudkey* or Whip when their time is ended, which themselues for the most part doe make account of. And therefore they furnish themselues with all the spoyle they can for the time of their Gouernment, that they may haue for both turnes, as well for the Emperour and Lord of the *Chetfird*, as to reserue some good part for themselues.

They that are appointed to gouerne abroad, are men of this qualitie: saue that in the foure border Townes that are of greatest importance, are set men of more speciall valour and trust, two in euery Towne. Whereof one is euer of the Emperours priuie Counsell. These foure border Townes are, *Smolensko*, *Vobsko*, *Nouogrod*, and *Cazan*, whereof three lie towards the *Polonian* and *Sweden*, one bordereth farre off vpon the *Chrim Tartar*. These haue larger commission then the other Dukes of the Prouinces that I spake of before, and may doe execution in criminall matters. Which is thought behooffull for the Common-wealth: for incident occasions that may happen vpon the borders that are farre off, and may not stay for direction, about euery occurrent and particular matter from the Emperour and his Counsell. They are changed euery yeere (except as before) and haue for their stipend 700. Rubbels a yeere he that hath most: some haue but 400. Many of these places that are of greatest importance, and almost the whole Countrey is managed at this time, by the *Godonoes* and their Clients.

The Citie of *Mosko* (that is the Emperours Seat) is gouerned altogether by the Emperours Counsell. All matters there both ciuill and criminall, are heard and determined in the seuerall Courts, held by some of the said Counsell, that reside there all the yeere long.

Onely for their ordinary matters (as Buildings, Reparations, keeping of their Streets decent and cleane, Collections, leuying of Taxes, Impositions and such like) are appointed, two Gentlemen, and two *Dyacks* or Secretaries, who hold a Court together for the ordering of such matters. This is called the *Zempskey* house. If any Towne's-man suspect his seruant of theft or like matter, hither he may bring him to haue him examined vpon the *Pudkey*, or other torture. Besides these two Gentlemen, and Secretaries that order the whole Citie, there are *Starusts* or Aldermen for euery seuerall Companie. The Alderman hath his *Sotskey* or Constable, and the Constable hath certaine *Decetskeis* or Decurions vnder him, which haue the ouersight of ten housholds a piece, whereby euery disorder is sooner spyed, and the common seruice hath the quicker dispatch. The whole number of Citizens poore and rich are reduced into Companies. The chiefe Officers (as the *Dyacks* and Gentlemen) are appointed by the Emperour himselfe, the *Starust* by the Gentlemen and *Dyacks*, the *Sotskey* by the *Starust* or Alderman, and the *Decetskoyes* by the Constables. The gouernment of *Mosko*.

This manner of gouernment of their Prouinces and Townes, if it were as well set for the giuing of iustice indifferently to all sorts, as it is to preuent innouations, by keeping of the Nobility within order, and the Commons in subiection, it might seeme in that kind to be no bad nor vnpolitike way, for the contayning of so large a Common-wealth, of that breadth and length as is the Kingdome of *Russia*. But the oppression and slauery is so open, and so great, that a man would maruell, how the Nobilitie and People should suffer themselues to be brought vnder it, while they had any meanes to auoide and repulse it: or being so strengthned as it is at this present, how the Emperours themselues can be content to practise the same, with so open iniustice and oppression of their Subiects, being themselues of a *Christian* profession: By this it appeareth how hard a matter it were to alter the state of the *Russe* Gouernment, as now it standeth. An hard matter to alter the State of *Russia*.

chap. 11. Of the Emperours Counsel.

THe Emperours of *Russia* giue the name of Counsellour to diuers of their chiefe Nobilitie, rather for honours sake, then for any vse they make of them about their matters of State. These are called *Boiarens* without any addition, and may be called, *Counsellours at large*. For they are seldome or neuer called to any publike consultation. They which are of his speciall and priuie Counsell indeed (whom he vseth daily and ordinarily for all publike matters pertayning to the State) haue the addition of *Dumnoy*, and are named *Dumnoy boiaren*, or *Lords of the Counsell*, their Office or Sitting *Boarstua dumna*.

Their names at this present are these in their order. First, *Knez Feoder Ioanowich Methisloskey*. 2. *Knez Iuan Michailowich Glinskoy*. 3. *Knez Vasilie Iuanowich Suskoy Scopin*. (These three are accounted to be of greater birth then wisedome, taken in (as may seeme) for that end, rather to furnish the place with their honours and presence, then with their aduice or counsell.) 4. *Knez Vasilie Iuanowich Suskoy*, thought to be more wise then the other of his name. 5. *Knez Feoder Michailowich*. 6. *Knez Micheta Romanowich Trowbetskoy*. 7. *Knez Timophey Romanowich Trowbetskoy*. 8. *Knez Andriew Gregorowich Curakine*. 9. *Knez Demetrie Iuanowich Foresline*. 10. *Knez Feoder Iuanowich Foresline*. 11. *Bolan Iuanowich Sabarone*. 12. *Knez Iuan Vasilowich*. 13. *Knez Feoder Demetriwich Sheftinoue*. 14. *Knez Feoder Michailowich Troyconione*. 15. *Iuan Buterlyney*. 16. *Demetrie Iuanowich Godonoe*. 17. *Borrise Federowich Godonoe*, brother to the Empresse. 18. *Stephan Vasilowich Godonoe*. 19. *Gregorie Vasilowich Godonoe*. 20. *Iuan Vasilowich* The number and names of the Councellours of State.

Digitized by Google

Vasilowich Godonoe. 21. *Feoder Sheremitoue.* 22. *Andrew Petrowich Cleshenina.* 23. *Ignatie Petrowich Tatisloue.* 24. *Romain Michailowich Pena.* 25. *Demenshoy Iuanowich Cheremissen.* 26. *Romain Vasilowich Alferioue.* 27. *Andriew Shalcaloue.* 28. *Vasilie Shalcaloue.* 29. *Eleazar Wellusgin.* 30. *Drezheen Penteleoue.* 31. *Zapon Abramoue.*

Foure Secretaries.

The foure last of these are called *Dumnoy deiakey* or *Lord-Secretaries.* These are all of the Emperours priuie Counsell, though but few of them are called to any consultation, for that all matters are aduised and determined vpon by *Borris Federowich Godonoe* brother to the Empresse, with some fiue or sixe more whom it pleaseth him to call. If they come, they are rather to heare, then to giue counsell, and doe so demeane themselues. The matters occurrent which are of State done within the Realme, are informed them at their sittings by the Lords of the foure *Chetfirds*, or Tetrarchies. Whereof mention is made in the Chapter concerning the Gouernment of their Prouinces. Who bring in all such Letters as they receiue from the Dukes, *Dyacks*, Captaines, and other Officers of the Citie and Castles pertayning to their seuerall Quarter or *Chetfird*, with other aduertisements, and informe the Counsell of them.

The like is done by the chiefe Officer of euery seuerall Office of Record: who may come into the Counsell-chamber, and informe them, as occasion incident to his Office doth require. Besides matters of State, they consider of many priuate Causes, informed by way of supplication in very great numbers. Whereof some they entertayne and determine, as the Cause or meanes can procure fauour. Some they send to the Offices whereto they pertayne by common course of Law. Their ordinary dayes for their sitting are, Mondayes, Wednesdayes, and Fridayes. Their time of meeting is commonly seuen of the clocke in the morning. If there bee any extraordinary occasion that requireth consultation on some other day, they haue warning by the Clerke of the Counsell, called *Derofey Bushew*, who receiueth order from the *Roserad*, or High Constable of the Realme, to call them together at the time appointed.

Chap. 12. Of the Emperors Customs and other Reuenues.

The Offices of Receit.

The Steward Receiuer of the Crowne-land Rents.

FOr the receiuing of Customes, and other Rents belonging to the Crowne, there are appointed diuers Vnder-officers, which deliuer ouer the same into the head Treasurie. The first is, the Office of *Dworetsoua* or *Steward of the houshold.* The second is, the Office of the *Chetfirds*, which I comprehend vnder one, though it be diuided into foure seuerall parts, as was said before. The third is called, *Bulsha Prechode*, or the great Income.

As touching the first, which is the Office of the *Steward*, it receiueth all the Rents of the Emperours Inheritance, or *Crowne-land*, which they call, *Vochin.* The *Vochin* or Crown-land contayneth in it sixe and thirtie Townes with the Territories or Hundreds belonging vnto them. Whereof the chiefe that yeeld the greatest Rents are these: *Alexandrisca, Corelska, Otfer, Slobodey, Danielska, Moisalskoy, Chara, Sametska, Straraouse, Bransoue*, &c. The Inhabitants or Tenants of these and the other Townes, pay some Rent money, some other Rent duties (called *Obrokey*) as certaine *Chetfirds* or measures of Graine, Wheat, Rye, Barley, Oats, &c. or of other victuall, as Oxen, Sheepe, Swannes, Geese, Hares, Hennes, wilde Fowle, Fish, Hay, Wood, Honey, &c. Some are bound to sowe for the Emperours prouision certaine acres of ground, and to make the Corne ready for his vse: hauing for it an allowance of certaine acres of ground for their owne proper vse.

This prouision for the houshold, specially of Graine serued in by the Tenants, is a great deale more then is spent in his house, or in other allowance serued out in liuery, or for the Emperours honour, called *Schalonaney:* for which vse there is bestowed very much, both in Graine and other Victuall. This surplus of prouision is sold by the Steward to the best hand, and runneth into the Emperours Treasurie.

In the time of *Iuan Vasilowich*, father to this Emperour (who kept a more Princely and bountifull house then the Emperour now doth) this ouerplus of Graine, and other incomes into the Stewards Office, yeelded to his Treasurie not past 60000. Rubbels yeerely, but riseth now by good husbanding of the Steward *Gregory Vasilowich Godonoe*, to 230000. Rubbels a yeere. And this by the meanes of the Empresse, and her kindred, specially *(Borris Federowich Godonoe)* that account it all their owne that runneth into the Emperors Treasure. Much of this surplusage that riseth out of the Rent prouision, is employed to the payment of the wages of his houshold Officers, which are very many attending at home, and purueying abroad.

The Office of *Chetfird.*

Tagla and *Podat.*

The second Office of Receit, called the *Chetfirds*, (being diuided into foure seuerall parts, as before was said) hath foure head Officers: which besides the ordering and gouernment of the Shires contayned within their seuerall *Chetfirds*, haue this also as a part of their Office, to receiue the *Tagla* and *Podat* belonging to the Emperour, that riseth out of the foure *Chetfirds* or Quarters. The *Tagla* is a yeerly Rent or Imposition raised vpon euery *Wite* or measure of Graine, that groweth within the Land, gathered by sworne men, and brought into the Office. The *Wite* contayneth sixtie *Chetfirds.* Euery *Chetfird* is three Bushels *English*, or little lesse. The *Podat* is an ordinary Rent of money imposed vpon euery Soake, or Hundred within the whole Realme.

This *Tagla* and *Podat* bring in yeerely to the Offices of the *Chetfirds* a great summe of money:

as

Digitized by Google

as may appeare by the particulars heere set downe. The Towne and Province of *Vobsko* pay yeerely for *Tagla* and *Podat* about 18000. Rubbels. *Nouogrod* 35000. Rubbels. *Torshocke* and *Otser* 8000. Rubbels. *Razan* 30000. Rubbels. *Morum* 12000. Rubbels. *Colmigro* and *Duyna* 8000. Rubbels. *Vologda* 12000. Rubbels. *Cazan* 18000. Rubbels. *Vstiug* 30000 Rubbles. *Rostone* 50000. Rubbels. The Citie of *Mosko* 40000. Rubbels. *Sibierskoy* 20000. Rubbels. *Castrome* 12000. Rubbels. The totall amounteth to 400000. Rubbels, or Markes a yeere, which is brought in yeerely the first of September, that is reckoned by them the first day of the yeere. Yeere begins with September.

The third (that is called the *Bulsha Prechod*, or great Income) receiueth all the Customes that are gathered out of all the principall Townes and Cities within the whole Realme. Besides the fees and other duties which rise out of diuers smaller Offices, which are all brought into this Office of *Bulsha Prechod*. The Townes of most trade, that doe yeeld greatest Custome, are these here set downe. *Mosko, Smolensko, Vobsko, Nouogrod Veliea, Strararouse, Torshocke, Otser, Yarusla[illegible], Castrome, Nesna Nouogrod, Cazan, Vologda.* This Custome out of the great Townes is therefore more certaine, and easie to bee reckoned, because it is set and rated precisely what they shall pay for the Custome of the yeere. Which needs must bee payd into the said Office, though they receiue not so much. If it fall out to be more, it runneth all into the Emperours aduantage. The Office of *Bulsha Prechod* or great Income.

The Custome at *Mosko* for euery yeere, is 12000. Rubbels. The Custome of *Smolensko* 8000. *Vobsko* 12000. Rubbels. *Nouogrod velika* 6000. Rubbels. *Strararouse* by Salt and other commodities 18000. Rubbels. *Torshock* 800. Rubbels. *Otser* 700. Rubbels. *Yarusla[illegible]* 1200. Rubbels. *Castrome* 1800. Rubbels. *Nesna Nouogrod* 7000. Rubbels. *Cazan* 11000. Rubbels. *Vologda* 2000. Rubbels. The Custome of the rest that are Townes of trade, is sometimes more, sometimes lesse, as their trafficke and dealings with commodities to and fro, falleth out for the yeere. The Emperors Custome.

This may bee said for certaine, that the three Tables of Receits belonging to this Office of *Bulsha Prechod*, when they receiue least, account for thus much, *vz.* The first table, 160000. Rubbels. The second table, 90000. Rubbels. The third 90000. Rubbels. So that there commeth into the Office of *Bulsha Prechod*, at the least reckoning (as appeareth by their Bookes of Customes) out of these and other Townes, and maketh the summe of 340000. Rubbles a yeere. The whole receit of the *Bulsha Prechod* or great Income.

Besides this Custome out of the Townes of trade, there is receiued by this Office of *Bulsha Prechod*, the yeerely Rent of the common Bath-stoues, and Cabacks or drinking houses, which pertayne to the Emperour. Which (though it be vncertaine for the iust summe, yet because it is certaine, and an ordinary matter, that the *Russe* will bathe himselfe as well within as without) yeeldeth a large Rent to the Emperours Treasurie.

There is besides, a certaine Mulct or Penaltie that groweth to the Emperour out of euery Iudgement or Sentence, that passeth in any of his Courts of Record in all Ciuill matters. This Penaltie or Mulct is twentie *Dingoes* or Pence vpon euery Rubbel or Marke, and so ten in the hundred. Which is payd by the partie that is conuict by Law. He hath besides for euery name contayned in the Writs that passe out of these Courts, fiue *Altoens*. An *Altoene* is fiue pence sterling, or thereabouts. This is made good out of the Office, whence the Writ is taken forth. Thence it goeth to the Office that keepeth the lesser Seale, where it payeth as much more to the Emperours vse. This riseth commonly to three thousand Rubbels a yeere, or thereabouts. Farther also out of the Office of *Roisbonia*, where all felonies are tryed, is receiued for the Emperour the halfe part of Felons goods, the other halfe goeth the one part to the Informer, the other to the Officers. Rents out of the Iudiciall Offices. Mulcts or fines.

All this is brought into the Office of *Bulsha Prechod*, or *Great Income*. Besides the ouerplus or remainder that is saued out of the Land-rents allotted to diuers other Offices: as namely, to the Office called *Roserade*, which hath Lands and Rents assigned vnto it to pay the yeerely salaries of the Souldiers, or Horsemen, that are kept still in pay. Which in time of peace, when they rest at home not employed in any seruice, is commonly cut off and payd them by halfes, sometimes not the halfe: so that the remainder out of the *Roserade* Office that is layd into the Emperours treasurie, commeth for the most part euery yeere to 250000. Rubbels.

In like sort (though not so much) is brought in the surplus out of the *Strelletskoy* Offices which hath proper Lands for the payment of the *Strelsey* men or Gunners, as well those at *Mosko*, that are of the Emperors Guard (12000. in ordinary) as on the borders, and other garrison Townes and Castles. Likewise out of the Office of *Prechase*, *Shisnoy*, *Newshoy*, which hath set allowance of Lands to maintayne the forraine mercenary Souldiers, as *Poles*, *Sweedens*, *Dutches*, *Scots*, &c. So out of the Office of *Pussharskoy*, (which hath Lands and Rents allowed for the prouision of munition, great Ordnance, Powder, Shot, Saltpeter, Brimstone, Lead, and such like) there is left somewhat at the yeeres end, that runneth into the Treasurie. All these bring into the Office of *Bulsha Prechod* that which remayneth in their hand at the yeeres end. Whence it is deliuered into the Emperours Treasurie. So that the whole summe that groweth to this Office of *Bulsha Prechod*, or the great Income (as appeareth by the Bookes of the said Office) amounteth to 800000. Rubbels a yeere, or thereabouts.

All

The Emperors treasure house within his Castle of *Mosko.*

All these Offices, to wit, the Office of the Steward, the foure *Chetsirds*, and the *Bulsha Prechod* deliuer in their receipts to the head treasurie, that lyeth within the Emperours house or Castle at the *Mosko*. Where lye all his Moneys, Iewels, Crownes, Scepters, Plate, and such like, the Chests, Hutches, and Bags being signed by the Emperours themselues with their owne seale. Though at this time the L. *Borris Federowich Godonoe*, his seale and ouer-sight supplieth for the Emperour, as in all other things. The vnder Officer at this time is one *Stepan Vasilowich Godonoe*, Cousin germane to the said *Borris*, who hath two Clerkes allowed to serue vnder him in the Office.

The sum of the Emperors rent money.

The sum that groweth to the Emperors Treasury in money onely, for euery yeere.

1. *Out of the Stewards Office aboue the expence of his house* 23000. *Rubbels.*
2. *Out of the foure Chetsirds for Soake and Head-money*, 400000. *Rubbels.*
3. *Out of the* Bulsha Precod *Office, or great Income, for Custome and other Rents*, 800000. *Rubbels.*

} Sum 1430000. Rubbels cleere, besides all charges for his house and ordinary salleries of his Souldiers otherwise discharged.

But besides this reuenue that is paid all in money to the Emperors treasurie, he receiueth yeerely in Furres, and other duties to a great value out of *Siberia*, *Pechora*, *Permia*, and other places, which are sold or bartred away for other forraine commodities to the *Turkish*, *Persian*, *Armenian*, *Georgian* and *Bougharian* Merchants, that trade within his Countries, besides others of Christendome. What it maketh in the whole (though the value cannot bee set downe precisely, as being a thing casuall as the commoditie may be got) it may be ghessed by that which was gathered the last yeere out of *Siberia* for the Emperours Custome, *viz.* 466. Timber of Sables, fiue Timber of Martrones, 180. blacke Foxes, besides other commodities.

To these may be added their seazures, and confiscations vpon such as are in displeasure, which riseth to a great summe, besides other their extraordinary Impositions, and exactions done vpon their Officers, Monasteries, &c. not for any apparant necessitie, or vse of the Prince, or Commonwealth, but of will and custome: yet with some pretence of policie. To this purpose this by-word was vsed by the late Emperour *Iuan Vasilowich*: *That his people were like to his beard. The oftner shauen, the thicker it would grow. Or like sheepe, that must needs bee shorne once a yeere at the least: to keepe them from being ouer-laden with their woll.*

Vnderstand these politike courses of the times when the Author writ. Gods chastisement hath since beene heauy to sweep such ills from among them.

MEanes seruing to which purpose were to preuent no extortions, exactions, or briberies whatsoeuer, done vpon the Commons by their Dukes, *Diacks*, or other Officers in their Prouinces: but to suffer them to goe on till their time be expired, and to sucke themselues full. Then to call them to the *Praueush* (or whip) for their behauiour, and to beat out of them all, or the most part of the bootie, (as the Hony from the Bee) which they haue wrung from the Commons, and to turne it into the Emperours Treasurie, but neuer any thing backe againe to the right owners, how great or euident soeuer the iniurie be. To this end the needie Dukes, and *Diacks*, that are sent into their Prouinces, serue the turne very well, being changed so often (to wit) once a yeere: where in respect of their owne, and the qualitie of the people (as before was said) they might be continued for some longer time, without all feare of innouation. For coming still fresh vpon the Commons, they sucke more eagerly: like *Tiberius* the Emperours Flies, that came new still vpon an old sore. To whom he was wont to compare his *Prætors*, and other Prouinciall Officers.

2. Yet they did make of these Officers (that haue robbed their people) sometimes a publike example, if any be more notorious then the rest: the Emperour thus seeming to mislike the oppressions done to his people, and transferring the fault to his ill Officers. As among diuers other, was done by the late Emperor *Iuan Vasilowich* to a *Diacke* in one of his Prouinces: that (besides many other extortions and briberies) had taken a goose readie dreft full of mony. The man was brought to the Market-place in *Mosko*. The Emperour himselfe present made an Oration. *These, good people, are they that would eate you vp like bread, &c.* Then asked he his *Polachies* or Executioners, who could cut vp a Goose, and commanded one of them first to cut off his legs about the midst of the shin, then the armes aboue his elbowes (asking him still if *Goose-flesh were good meat*) in the end to chop off his head: that hee might haue the right fashion of a Goose readie dressed.

3. They make an open shew of want, when any great Taxe or Imposition is towards. As was done by this Emperour *Theodore Iuanowich*, by the aduice of some about him at the beginning of his raigne: when being left very rich (as was thought) by his father, he sold most of his Plate, and stamped some into Coyne: that he might seeme to want money. Whereupon presently out came a Taxation.

4. They suffer their subiects to giue freely to the Monasteries (which for their superstition very many doe, specially in their last Wills) and to lay vp their money and substance in them, to keepe it more safe. Which all is permitted them without any restraint or prouiso, as was and is in some Countries of Christendome. Whereby their Monasteries grow to exceeding great wealth. This they doe to haue the money of the Realme better stored together, and more readie

die for their hand, when they liſt to take it. Which many times is done without any noyſe: the Friers being content rather to part from ſomewhat (as the increaſe groweth) then to loſe all at once. Which they were made to doubt of in the other Emperours dayes.

To this end *Iuan Vaſilowich* late Emperor vſed a very ſtrange practiſe, that few Princes would haue done in their greateſt extremities. Hee reſigned his Kingdome to one *Velica Knez Simeon*, the Emperours ſonne of *Cazan*: as though hee meant to draw himſelfe from all publike doings to a quiet priuate life. Towards the end of the yeere, he cauſed this new King to call in all Charters granted to Biſhoprickes, and Monaſteries, which they had enioyed many hundred yeeres before. Which were all cancelled. This done (as in diſlike of the fact & of the miſ-gouernment of the new King) hee reſumed his Scepter, and ſo was content (as in fauour to the Church and Religious men) that they ſhould renew their Charters, and take them of himſelfe: reſeruing and annexing to the Crowne ſo much of their lands, as himſelfe thought good. A ſtrange practice to get money.

By this practice he wrung from the Biſhoprickes and Monaſteries (beſides the lands which he annexed to the Crowne) an huge maſſe of money. From ſome fortie, from ſome fiftie, from ſome an hundred thouſand Rubbels. And this as well for the increaſe of his Treaſury, as to abate the ill opinion of his hard gouernment, by a ſhew of worſe in another man. Wherein his ſtrange ſpirit is to be noted: that being hated of his ſubiects (as himſelfe knew well enough) yet ſhould venture ſuch a practice to ſet another in his ſaddle, that might haue rid away with his horſe, while himſelfe walked by on foot.

5. They ſend their Meſſengers into the Prouinces or Shires, where the ſpeciall commodities of their Countrey grow, as Furres, Wax, Hony, &c. There to foreſtall and ingroſſe ſometime one whole commoditie, ſometime two or more, taking them at ſmall prices what themſelues liſt, and ſelling them againe at an exceſſiue rate to their owne Merchants, and to Merchants ſtrangers. If they refuſe to buy them, then to force them vnto it. The like is done when any commoditie either natiue or forraine (as Cloth of Gold, Broad-cloth, &c.) thus engroſſed by the Emperour, and receiued into his treaſury happeneth to decay, or marre by long lying, or ſome other caſualtie. Which is forced vpon the Merchants to be bought by them at the Emperours price, whether they will or no. This laſt yeere of 1589. was engroſſed all the Wax of the Countrey: ſo that none might deale with that commoditie, but the Emperour onely.

6. To take vp and engroſſe in like ſort ſometime forraine commodities (as Silkes, Cloth, Lead, Pearle, &c. brought into his Realme by *Turkiſh* Merchants, *Armenians*, *Bougharians*, *Poles*, *Engliſh*, and other. And then to force his Merchants to buy them of his Officers at his owne price.

7. They make a Monopoly for the time of ſuch commodities as are paid him for Rent, or Cuſtome, and to inhance the price of them, as Furres, Corne, Wood, &c. What time none muſt ſell of the ſame kinde of commoditie, till the Emperours be all ſold. By this meanes he maketh of his Rent, Corne, and other prouiſion of victuall (as before was ſaid) about 200000. Rubbels or Markes a yeere. Of his Rent, Wood, Hay, &c. 30000. Rubbels, or thereabouts.

8. In euery great Towne of his Realme hee hath a *Caback* or other drinking houſe, where is ſold *Aqua-vita* (which they call *Ruſſe* Wine) Mead, Beere, &c. Out of theſe hee receiueth Rent that amounteth to a great ſumme of money. Some yeeld 800. ſome 900. ſome a 1000. ſome 2000. or 3000. Rubbels a yeere. Wherein beſides the baſe and diſhonourable meanes to encreaſe his treaſury, many foule faults are committed. The poore Labouring man, and Artificer, many times ſpendeth all from his wife and children. Some vſe to lay in twentie, thirtie, fortie Rubbels, or more into the *Caback*, and vow themſelues to the pot, till all that be ſpent. And this (as he will ſay) for the honour of *Hoſpodare*, or the Emperour. You ſhall haue many there that haue drunke all away to the very skin, and ſo walke naked (whom they call *Naga*.) While they are in the *Caback*, none may call them forth whatſoeuer cauſe there be, becauſe he hindereth the Emperours reuenue.

9. Some of his *Boiarens*, or *Nobles* of his Court, (whom he vſeth vpon truſt) that haue houſes in the *Mosko*, faine themſelues robbed: Then they ſend for the *Zemskey* men, or Aldermen of the Citie, and command them to finde out the robbery: In default of not finding it, *praue* or ceaſe the Citie for their miſgouernment in 8000. 9000. or 10000. Rubbels at a time. This is many times practiſed.

10. In theſe exactions to ſhew their Soueraignetie, ſometime they haue beene vſed very plaine, and yet ſtrange cauillations. As was that of *Iuan Vaſilowich*, father to this Emperour, after this ſort. He ſent into *Permia* for certaine loads of Cedar wood, wherof he knew that none grew in that Countrey. The inhabitants returned anſwer they could finde none there. Whereupon hee ſeazed their Countrey in 12000. Rubbels, as if they concealed the commoditie of purpoſe. Againe, he ſent to the Citie of *Mosko* to prouide for him a *Colpack*, or meaſure full of liue Fleas for a medicine. They returned anſwere that the thing was impoſſible. And if they could get them, yet they could not meaſure them, for leaping out. Whereupon hee *praued*, or beat out of their ſhins 7000. Rubbels for a Mulct. By like cauillation hee extorted for his Nobilitie 30000. Rubbels, becauſe he miſſed of his game, when hee went a hunting for the Hare:

as

Digitized by Google

as if their hunting and murthering of Hares had beene the cause of it. Which the Nobilitie (as the manner is) *Praised* presently againe vpon the *Mouſicks*, or common people of the Countrey.

Chap. 13. Of the state of the Commonnaltie, or vulgar sort of the people in the Countrey of *Russia*.

THe condition of the Commons and vulgar sort of people, may partly bee vnderstood by that which already hath beene sayd concerning the manner of their Gouernment, and the state of the Nobilitie, with the ordering of their Prouinces, and chiefe Townes of the Land. And first touching their libertie how it standeth with them, it may appeare by this: that they are reckoned in no degree at all, nor haue any suffrage nor place in their *Zabore*, or high Court of Parliament, where their Lawes and publike Orders are concluded vpon. Againe into what seruile condition their libertie is brought, not onely to the Prince, but to the Nobles, and Gentlemen of the Countrey (who themselues also are but seruile, specially of late yeeres) it may further appeare by their owne acknowledgments in their supplications, and other writings to any of the Nobles or chiefe Officers of the Emperours. Wherein they name and subscribe themselues *Kolophey*, that is, their Villaines, or Bond-slaues: as they of the Nobilitie doe vnto the Emperour. This may truely bee sayd of them, that there is no seruant nor bond-slaue more awed by his Master, nor kept downe in a more seruile subjection, then the poore people are, and that vniuersally, not onely by the Emperour, but by his Nobilitie chiefe Officers and Souldiers. So that when a poore *Mouſick* meeteth with any of them vpon the high way, hee must turne himselfe about, as not daring to looke him on the face, and fall downe with knocking of his head to the very ground, as he doth vnto his Idoll.

The seruile and miserable estate of the *Russe* people.

Misrie of those times, manners and men.

Secondly, concerning the Lands, goods, and other possessions of the Commons, they answer the Name and lye *Common* indeed, without any fence against the rapine and spoyle, not onely of the highest, but of his Nobilitie, Officers, and Souldiers. Besides the Taxes, Customes, Seazures, and other publike exactions done vpon them by the Emperour, they are so racked and pulled by the Nobles, Officers, and Messengers, sent abroad by the Emperour in his publike affayres, specially in the *Yammes* (as they call them) and thorow faire Townes, that you shall haue many Villages and Townes of halfe a mile, and a mile long, stand all vnhabited: the people being fled all into other places, by reason of the extreame vsage, and exactions done vpon them. So that in the way towards *Mosko*, betwixt *Vologda* and *Yariuſlaueley* (which is two nineties after their reckoning, little more then an hundred miles *English*,) there are in sight fiftie *Darieuues* or Villages at the least, some halfe a mile, some a mile long (that stand vacant) and desolate without any inhabitant. The like is in all other places of the Realme, as is sayd by those that haue better trauelled the Countrey then my selfe had time, or occasion to doe.

The great oppression ouer the poore Commons, made them to haue no courage in following their Trades: for the more they haue, the more danger they are in, not onely of their goods, but of their liues also. And if they haue any thing, they conceale it all they can, sometimes conueying it into Monasteries, sometimes hiding it vnder the ground, and in Woods, as men are wont to doe where they are in feare of forraigne inuasion. Insomuch that many times you shall see them afraid to bee knowne to any *Boiuren* or Gentleman, of such commodities as they haue to sell. I haue seene them sometimes when they haue layd open their Commodities for a liking (as their principall Furres and such like) to looke still behinde them, and towards euery doore: as men in some feare, that looked to bee set vpon, and surprised by some Enemie. Whereof asking the cause, I found it to bee this, that they haue doubted least some Nobleman or *Sinaboiarskey* of the Emperour had beene in company, and so layed a trayne for them to pray vpon their Commodities perforce.

This made the people (though otherwise hardened to beare any toyle) to giue themselues much to Idlenesse and Drinking: as passing for no more, then from hand to mouth. And hereof it commeth that the Commodities of *Russia* (as was sayd before) as Waxe, Tallow, Hides, Flax, Hempe, &c. grow and goe abroad, in farre lesse plentie then they were wont to doe: because the people being oppressed and spoyled of their gettings, are discouraged from their labours. Yet this one thing is much to bee noted, that in all this oppression there were three brethren Merchants, of late that traded together with one Stocke in common, that were found to bee worth 300000. Rubbels in money, besides Lands, Cattels, and other Commodities. Which may partly be imputed to their dwellings farre off from the eye of the Court, *viz.* in *Wichida*, one thousand miles from *Mosko* and more. The same are sayd by those that knew them, to haue set on worke all the yeere long ten thousand men in making of Salt, carriages by Cart, and Boat, hewing of Wood and such like: besides fiue thousand Bond-slaues at the least, to inhabite and till their Land. They had also their Physitians, Surgeons, Apothecaries, and all manner of Artificers of *Dutches* and others, belonging vnto them. They are sayd to haue payed to the Emperour for Custome to the summe of three and twentie thousand Rubbels a yeere, (for which cause they were suffered to enioy their Trade) besides the maintayning of certayne Garrisons on the borders of *Siberia*, which were neare vnto them. Wherein the Emperour was content to vse their purse, till such time as they had got ground in *Siberia*, and made it habitable, by burning and cutting downe Woods, from *Wichida* to *Perm*, aboue one thousand verst, and then tooke it all away from them

Rich *Russian* Merchants.

Digitized by Google

them perforce. But this in the end being enuyed and diſdayned, as a matter not ſtanding with their policie, to haue any ſo great, ſpecially a *Mouſick*, the Emperour began firſt to pull from them by pieces, ſometimes twentie thouſand Rubbels at a time, ſometime more: till in the end their Sonnes that now are, are well eaſed of their Stocke, and haue but ſmall part of their Fathers ſubſtance: the reſt being drawne all into the Emperours treaſurie. Their names were *Iacoue*, *Gregorie*, and *Simon*, the Sonnes of *Onyka*.

For the qualitie of their people otherwiſe, though there ſeemeth to bee in them ſome aptneſſe to receiue any Art (as appeareth by the naturall wits in the men, and very children) yet they excell in no kinde of common Art, much leſſe in any learning, or literall kinde of knowledge: which they are kept from of purpoſe, as they are alſo from all military practice: that they may bee fitter for the ſeruile condition, wherein now they are, and haue neither reaſon, nor valour to attempt innouation. For this purpoſe alſo they are kept from trauelling, that they may learne nothing, nor ſee the faſhions of other Countries abroad. You ſhall ſeldome ſee a *Ruſſe* a traueller, except hee bee with ſome Embaſſadour, or that hee make an eſcape out of his Countrey. Which hardly he can doe, by reaſon of the borders that are watched ſo narrowly, and the puniſhment for any ſuch attempt, which is death, if hee bee taken, and all his goods confiſcate. Onely they learne to write, and to read, and that very few of them. Neither doe they ſuffer any ſtranger willingly to come into their Realme out of any ciuill Countrie, for the ſame cauſe, farther then neceſſitie of vttering their commodities, and taking in of forreine doth enforce them to doe.

Ruſſes not permitted to trauell.

And therefore this yeere 1589. they conſulted about the remouing of all Merchants ſtrangers to the border Townes, to abide and haue their reſidencie there, and to bee more wary in admitting other ſtrangers heereafter into the Inland parts of the Realme. For the ſame purpoſe alſo they are kept within the bounds of their degree by the Lawes of their Countrey: ſo that the ſonne of a *Mouſick*, Artificer, or Husbandman, is euer a *Mouſick*, Artificer, &c. and hath no meanes to aſpire any higher: except, hauing learned to write and reade, hee attayne to the preferment of a Prieſt, or *Dyack*. Their Language is all one with the *Slauonian*, which is thought to haue beene deriued from the *Ruſſe* Tongue, rather then the *Ruſſe* from the *Slauonian*. For the People called *Sclaui*, are knowne to haue had their beginning out of *Sarmatia*, and to haue tearmed themſelues of their Conqueſt *Sclauos*, (that is) Famous or Glorious, of the word *Sclaua*, which in the *Ruſſe* and *Slauonian* Tongue ſignifieth as much as *Glorie*, or *Fame*. Though afterwards being ſubdued and trod vpon by diuers Nations, the *Italians*, their Neighbours, haue turned the word to a contrary ſignification, and terme euery Seruant or Peaſant by the name of *Sclaue*, as did the *Romanes* by the *Getes* and *Syrians*, for the ſame reaſon. The *Ruſſe* Character or Letter is no other then the *Greeke*, ſomewhat diſtorted.

The iealouſie of the Emperour concerning his ſtate.

Sclauonia and the Language.

Concerning their Trades, Diet, apparell, and ſuch like, it is to be noted in a ſeuerall Chapter of their priuate behauiour. This order that bindeth euery man to keepe his ranke, and ſeuerall degree, wherein his fore-fathers liued before him, is more meet to keepe the Subiects in a ſeruile ſubiection, and ſo apt for this and like Commonwealths, then to aduance any vertue, or to breed any rare or excellent qualitie in Nobilitie or Commons: as hauing no further reward nor preferment, whereunto they may bend their endeauours, and employ themſelues to aduance their eſtate, but rather procuring more danger to themſelues, the more they excell in any noble or principall qualitie.

Chap. 14.

THeir Courts of Ciuill Iuſtice for matters of Contract, and other of like ſort, are of three kinds, the one being ſubiect vnto the other by way of appeale. The loweſt Court (that ſeemeth to be appointed for ſome eaſe to the Subiects) is the Office of the *Gubnoy Staruſt*, that ſignifieth an Alderman, and of the *Sotskoy Staruſt*, or Bayliffe of the Soake or Hundred, whereof I ſpake before in the ordering of the Prouinces. Theſe may end matters among their neighbours within their Soake, or ſeuerall Hundred, where they are appointed vnder the Dukes and *Dyacks* of the Prouinces, to whom the parties may remoue their matter, if they cannot be agreed by the ſaid *Gubnoy*, or *Sotskoy Staruſt*.

Of their publike Iuſtice, and manner of proceeding in Ciuill, and Criminall matters.

Courts of Ciuill Iuſtice three.

The ſecond is kept in the head Townes of euery Prouince or Shire, by the ſaid Dukes and *Dyacks*, that are Deputies to the foure Lords of the *Chetſirds* (as before was ſaid.) From theſe Courts they may appeale, and remoue their Suits to the chiefe Court, that is kept at the *Mosko*, where are reſident the Officers of the foure *Chetſirds*. Theſe are the chiefe Iuſtices or Iudges, euery of them in all Ciuill matters that grow within their ſeuerall *Chetſird* or Quarter, and may be either commenced originally before them, or proſecuted out of the inferiour Courts of the Shires by way of appeale.

The Dukes and *Dyacks* Court.

The high Court of *Mosko*.

Their commencing, and proceeding in Ciuill actions is on this manner. Firſt, the Plaintife putteth vp his Supplication, wherein he declareth the effect of his Cauſe, or wrong done vnto him. Whereupon is granted vnto him a *Wepis*, or Warrant, which he deliuereth to the *Preſtaue*, or Sergeant, to doe the arreſt vpon the partie whom hee meaneth to implead. Who vpon the arreſt

Their manner of proceeding in Ciuill matters.

Digitized by Google

arreſt, is to put in Sureties to anſwere the day appointed, or elſe ſtandeth at the Sergeants deuotion, to be kept ſafe by ſuch meanes as he thinketh good.

The Segeants are many, and excell for their hard and cruell dealing towards their priſoners; commonly they clap Irons vpon them, as many as they can beare, to wring out of them ſome larger fees. Though it be but for ſixe pence, you ſhall ſee them goe with Chaines on their legs armes, and necke. When they come before the Iudge, the Plaintiffe beginneth to declare his matter after the contents of his Supplication. As for Attorneys, Counſellors, Procurators, and Aduocates, to plead their Cauſe for them, they haue no ſuch order, but euery man is to tell his owne tale, and plead for himſelfe as well as he can.

Ending of controuerſies by kiſſing the Croſſe.

If they haue any witneſſe or other euidence, they produce it before the Iudge. If they haue none, or if the trueth of the Cauſe cannot ſo well bee diſcerned by the plea, or euidence on both parts: then the Iudge asketh either partie (which hee thinketh good, Plaintiffe or Defendant) whether hee will *kiſſe the Croſſe*, vpon that which hee auoucheth, or denyeth. Hee that taketh the Croſſe (being ſo offered by the Iudge) is accounted cleare, and carrieth away the matter. This Ceremonie is not done within the Court, or Office, but the partie is carried to the Church by an Officer, and there the Ceremonie is done: the money in the meane while hanging vpon a naile, or elſe lying at the Idols feet, ready to be deliuered to the partie, as ſoone as he hath kiſſed the Croſſe before the ſaid Idoll.

Iudgement by lot.

This kiſſing of the Croſſe (called *Creuſtina chelouania*) is as their corporall Oath, and accounted with them a very holy thing, which no man will dare to violate, or prophane with a falſe allegation. If both parties offer to kiſſe the Croſſe in a contradictorie matter, then they draw Lots. The better Lot is ſuppoſed to haue the right, and beareth away the matter. So the partie conuicted is adiudged to pay the debt or penaltie whatſoeuer, and withall to pay the Emperours fees, which is twentie pence vpon euery Marke, as before hath beene noted.

When the matter is thus ended, the partie conuicted is deliuered to the Sergeant, who hath a Writ for his warrant out of the Office, to carrie him to the *Praueuſh* or *Righter of Iuſtice*, if preſently he pay not the money, or content not the partie. This *Praueuſh* or *Righter*, is a place neere to the Office: where ſuch as haue ſentence paſſed againſt them, and refuſe to pay that

Shin-beating.

which is adiudged, are beaten with great cudgels on the ſhinnes, and calues of their legs. Euery fore-noone from eight to eleuen, they are ſet on the *Praueuſh*, and beate in this ſort till the money bee payd. The after-noone and night time, they are kept in chaines by the Sergeant: except they put in ſufficient Sureties for their appearance at the *Praueuſh* at the houre appointed. You ſhall ſee fortie or fiftie ſtand together on the *Praueuſh* all on a rew, and their

Terrible terms

ſhinnes thus becudgelled, and beaſted euery morning with a piteous crye. If after a yeeres ſtanding on the *Praueuſh*, the partie will not, or lacke wherewithall to ſatisfie his creditor, it is lawfull for him to ſell his wife, and children, either outright, or for a certaine terme of yeeres. And if the price of them doe not amount to the full payment, the Creditor may take them to be his bond-ſlaues, for yeeres, or for euer, according as the value of the debt requireth.

Such kind of Suits as lacke direct euidence, or ſtand vpon coniectures and circumſtances to be weighed by the Iudge, draw of great length, and yeeld great aduantage to the Iudge, and Officers. If the Suit be vpon a Bond, or Bill, they haue for the moſt part good and ſpeedy iuſtice.

The forme of *Ruſſe* Bills or Bonds.

Their Bonds or Bills are drawne in a very plaine ſort, after this tenour. *I* Iuan Vaſileo *haue borrowed of* Alphonaſſe Dementio, *the ſumme of one hundrsd Rubbels of going money of* Moſko, *from the Kreſhenea* (or hallowing of the water) *vntill the Saburney Voſcreſhenea* (or Counſell Sunday) *without intereſt. And if this money reſt vnpayed after that day, then hee ſhall giue intereſt vpon the ſaid money, after the common rate, as it goeth among the people*, vz. *for euery fine the ſixt Rubbell.* Vpon this there are Witneſſes, *Micheta Sydroueskoy*, &c. Subſcribed. *This Bill haue I written* Gabriel Iacoueleſni, *in the yeere* 7096. The Witneſſes, and Debter (if hee can write) endorſe their names on the backeſide of the Bill. Other ſigning, or ſealing haue they none.

Proceeding in Criminall matters.

When any is taken for a matter of Crime (as Treaſon, Murder, Theft, and ſuch like) he is firſt brought to the Duke and *Diack*, that are for the Prouince where the partie is attached, by whom hee is examined. The manner of examination in ſuch caſes, is all by torture, as ſcourging with

Pudkey whipping.

whips made of ſinowes, or whitleather (called the *Pudkey*) as big as a mans finger, which giueth a ſore laſh, and entreth into the fleſh; or by tying to a Spit and roſting at the fire; ſometimes by breaking and wreſting one of their ribs with a paire of hot Tongs, or cutting their fleſh

Roſting.

vnder the nayles, and ſuch like.

The examination thus taken with all the proofes, and euidences that can bee alleaged againſt the partie, it is ſent vp to the *Mosko*, to the Lord of the *Chetſird* or Fourth part, vnder whom the Prouince is, and by him is preſented to the Counſell-table, to be read and ſentenced there, where onely Iudgement is giuen in matter of life and death, and that by euidence vpon information, though they neuer ſaw nor heard the partie who is kept ſtill in priſon where the fact was committed, and neuer ſent vp to the place where hee is tryed. If they finde the partie guilty,

Digitized by Google

guilty, they giue Sentence of death according to the qualitie of the fact: which is ſent downe by the Lord of the *Chetſird*, to the Duke and *Diack* to bee put in execution. The Priſoner is carried to the place of execution with his hands bound, and a Waxe candle burning held betwixt his fingers.

Executions. Their Capitall puniſhments are hanging, heading, knocking on the head, drowning, putting vnder the Ice, ſetting on a ſtake, and ſuch like. But for the moſt part, the Priſoners that are condemned in Summer, are kept for the Winter, to be knockt in the head, and put vnder the Ice. This is to bee vnderſtood of common perſons. For theft, and murder, If they bee committed vpon a poore *Mouſick* by one of Nobilitie are not lightly puniſhed, nor yet is hee called to any account for it. Their reaſon is, becauſe they are accounted their *Kolophey*, or Bond-ſlaues. If by ſome *Sinaboiarskey*, or Gentleman Souldier, a murder or theft bee committed, peraduenture hee ſhall bee impriſoned at the Emperours pleaſure. If the manner of the fact be very notorious, hee is whipped perchance, and this is commonly all the puniſhment that is inflicted vpon them.

If a man kill his owne ſeruant, little or nothing is ſaid vnto him, for the ſame reaſon: becauſe hee is accounted to be his *Kolophey*, or Bond-ſlaue, and ſo to haue right ouer his very head. The moſt is ſome ſmall mulct to the Emperour, if the partie bee rich: and ſo the quarrell is made rather againſt the purſe, then againſt the iniuſtice. They haue no written Law, ſaue onely a ſmall Booke that contayneth the time and manner of their ſitting, order in proceeding, and ſuch other Iudiciall formes and circumſtances, but nothing to direct them to giue Sentence vpon right or wrong. Their onely Law is their *Speaking Law*, that is, the pleaſure of the Prince, and of his Magiſtrates and Officers.

Rituall (not right-all) Booke.

Chap. 15.

THe Souldiers of *Ruſſia* are called *Sinaboiarskey*, or the Sonnes of Gentlemen: becauſe they are all of that degree, by vertue of their military profeſſion. For euery Souldier in *Ruſſia* is a Gentleman, and none are Gentlemen but onely the Souldiers, that take it by diſcent from their Anceſtors: ſo that the ſonne of a Gentleman (which is borne a Souldier) is euer a Gentleman, and a Souldier withall, and profeſſeth nothing elſe but military matters. When they are of yeeres able to beare Armes, they come to the Office of *Roſerade*, or *Great Conſtable*, and there preſent themſelues: who entreth their names, and alloteth them certaine Lands to maintaine their charges, for the moſt part of the ſame that their fathers enioyed. For the Lands aſſigned to maintayne the Armie, are euer certaine, annexed to this Office without improuing, or detracting one foot. But that if the Emperour haue ſufficient in wages, the roomes being full ſo farre as the Land doeth extend already, they are many times deferred, and haue nothing allowed them, except ſome one portion of the Land be diuided into two. Which is a cauſe of great diſorder within that Countrey: When a Souldier that hath many children, ſhall haue ſometimes but one entertayned in the Emperours pay. So that the reſt hauing nothing, are forced to liue by vniuſt and wicked ſhifts, that tend to the hurt and oppreſſion of the *Monſicke*, or common ſort of people. This inconuenience groweth by maintayning his forces in a continuall ſucceſſion. The whole number of his Souldiers in continuall pay, is this: Firſt, he hath of his *Dworaney*, that is, Penſioners, or Guard of his perſon, to the number of 15000. Horſemen, with their Captaines and other Officers, that are alwaies in a readineſſe.

Their forces for the warres, with the chiefe Officers and ſalaries.

The onely Gentlemen Souldiers by birth and inheritance.

Emperours Guard.

Of theſe fifteene thouſand Horſemen, there are three ſorts or degrees, which differ as well in eſtimation, as in wages, one degree from another. The firſt ſort of them is called, *Dworaney Bulſhey*, or the companie of head Penſioners, that haue, ſome 100. ſome 80. Rubbels a yeere, and none vnder 70. The ſecond ſort are called, *Seredney Dworaney*, or the middle ranke of Penſioners: theſe haue 60. or 50. Rubbels by the yeere, none vnder 40. The third and loweſt ſort are, the *Dyta Boiarskey*, that is, the lowe Penſioners: their ſalarie is 30. Rubbels a yeere, for him that hath moſt; ſome haue but 25. ſome 20. none vnder 12. Whereof the halfe part is payd them at the *Mosko*, the other halfe in the field by the General, when they haue any warres, and are employed in ſeruice. When they receiue their whole pay, it amounteth to 55000. Rubb. by the yeere.

Degrees of Horſemen. 1. *Pretoriani*, or ſuch as attend the Emperors perſon, 15000.

And this is their wages, beſides lands allotted to euery one of them, both to the greater and the leſſe, according to their degrees. Whereof he that hath leaſt, hath to yeeld him 20. Rubbels or Markes by the yeere. Beſides theſe 15000. Horſemen, that are of better choiſe (as being the Emperours owne Guard when himſelfe goeth to the warres, not vnlike the *Roman* Souldiers called *Pretoriani*) are 110. men of ſpeciall account for their Nobilitie, and truſt, which are choſen by the Emperour, and haue their names regiſtred, that find among them for the Emperours warres, to the number of 65000. Horſemen, with all neceſſaries meet for the warres of the *Ruſſe* manner.

Two other troupes to the number of 65000.

To this end they haue yeerely allowance made by the Emperour for themſelues, and their Companies, to the ſumme of 40000. Rubbels. And theſe 65000. are to repaire to the field euery yeere on the borders towards the *Chrim Tartar*, (except they bee appointed for ſome other ſeruice) whether there bee warres with the *Tartars*, or not. This might ſeeme peraduenture

Digitized by Google

ſomewhat dangerous for ſome State, to haue ſo great forces vnder the command of Noblemen, to aſſemble euery yeere to one certaine place. But the matter is ſo vſed, as that no danger can grow to the Emperour, or his State by this meanes. Firſt, Becauſe theſe Noblemen are many, to wit, 110. in all, and changed by the Emperour ſo oft as hee thinketh good. Secondly, Becauſe they haue their liuings of the Emperour, being otherwiſe but of very ſmall Reuenue, and receiue this yeerely pay of 40000. Rubbels, when it is preſently to be paid forth againe to the Souldiers that are vnder them. Thirdly, Becauſe for the moſt part they are about the Emperors perſon, being of his Counſell, either ſpeciall, or at large. Fourthly, They are rather as Pay-maſters, then Captaines to their Companies, themſelues not going forth ordinarily to the warres, ſaue when ſome of them are appointed by ſpeciall order from the Emperour himſelfe. So the whole number of Horſemen that are euer in a readineſſe, and in continuall pay, are 80000. a few more or leſſe.

Horſemen in continuall pay 80000.

If he haue need of a greater number (which ſeldome falleth out) then hee entertayneth of thoſe *Sinaboiarskey*, that are out of pay, ſo many as he needeth: and if yet he want of his number, hee giueth charge to his Noblemen, that hold Lands of him, to bring into the field euery man a proportionable number of his ſeruants (called *Kolophey*, ſuch as till his Lands) with their furniture, according to the iuſt number that hee intendeth to make. Which, the ſeruice being done, preſently lay in their weapons, and returne to their ſeruile occupations againe.

Footmen in continuall pay 12000.

Of Footmen that are in continuall pay, he hath to the number of 12000. all Gunners, called *Strelſey*. Whereof 5000. are to attend about the Citie of *Moske*, or any other place where the Emperour ſhall abide, and 2000. (which are called *Stremaney*, *Streſley*, or Gunners at the Stirrop) about his owne perſon at the very Court or houſe where himſelfe lodgeth. The reſt are placed in his garriſon Townes, till there be occaſion to haue them in the field, and receiue for their ſalarie or ſtipend euery man ſeuen Rubbels a yeere, beſides twelue meaſures, a piece of Rye, and Oats.

Strangers mercenaries in pay 4300.

Of mercenary Souldiers, that are ſtrangers (whom they call *Nimſcoy*) they haue at this time 4300. of *Polonians*: of *Chirchaſſes* (that are vnder the *Polonians*) about 4000. whereof 3500. are abroad in his Garriſons: of *Dutches* and *Scots*, about 150: of *Greekes*, *Turkes*, *Danes*, and *Sweadens*, all in one band, 100. or thereabouts. But theſe they vſe only vpon the *Tartar* ſide, and againſt the *Siberians*: as they doe the *Tartar* Souldiers (whom they hire ſometimes, but onely for the preſent) on the other ſide againſt the *Polonian* and *Sweaden*: thinking it beſt policy ſo to vſe their ſeruice vpon the contrary border.

The chiefe Captaines or Leaders.

The chiefe Captaines or Leaders of theſe forces, according to their names and degrees, are theſe which follow. Firſt, the *Voyauodey Bulſhaia*, that is, the *Great Captaine*, or *Lieutenant generall* vnder the Emperour. This commonly is one of the foure houſes of the chiefe Nobilitie of the Land: but ſo choſen otherwiſe, as that he is of ſmall valour or practice in Martiall matters, being thought to ſerue that turne ſo much the better, if he bring no other parts with him ſaue the countenance of his Nobilitie, to bee liked of by the Souldiers for that, and nothing elſe. For in this point they are very warie, that theſe two, to wit, Nobilitie and Power, meet not both in one, ſpecially if they ſee wiſedome withall, or aptneſſe for policie.

1. The *Voiauod* or Generall.

Their great *Voiauod* or Generall at this preſent in their warres, is commonly one of theſe foure, *Knez Feoder Iuanowich Methiſloskey*, *Knez Iuan Michailowich Glinskoy*, *Cherechaskoy*, and *Trowbetskoy*, all of great Nobilitie, but of very ſimple qualitie otherwiſe: though in *Glinskoy* (as they ſay) there is ſomewhat more then in the reſt. To make vp this defect in the *Voiauod* or Generall, there is ſome other ioyned with him as Lieutenant generall, of farre leſſe Nobilitie, but of more valour and experience in the warres then he, who ordereth all things that the other countenanceth. At this time their principall man, and moſt vſed in their warres, is one *Knez Demetrie Iuanowich Foreſtine*, an antient and expert Captaine, and one that hath done great ſeruice (as they ſay) againſt the *Tartar*, and *Polonian*.

2. Lieutenant generall.

3. Marſhals of the field, foure.

Next vnder the *Voiauod* and his Lieutenant generall, are foure other, that haue the marſhalling of the whole Armie diuided among them, and may be called the Marſhals of the field.

Euery man hath his quarter, or fourth part vnder him: whereof the firſt is called, the *Praua Polskoy*, or Right wing. The ſecond is, the *Leuoy Polskoy*, or Left wing. The third is, *Ruſnoy Polskoy*, or The broken band, becauſe out of this there are choſen to ſend abroad vpon any ſudden exploit, or to make a reſcue or ſupply, as occaſion doth require. The fourth, *Storeſhenoy Polskoy*, or The warding band. Euery one of theſe foure Marſhals haue two other vnder them (eight in all) that twice euery weeke at the leaſt muſt muſter and traine their ſeuerall wings or bands, and hold and giue iuſtice for all faults and diſorders committed in the Campe.

4. Marſhals Deputies 8.

And theſe eight are commonly choſen out of the hundred and ten (which I ſpake of before) that receiue and deliuer the pay to the Souldiers. Vnder theſe eight are diuers other Captaines, as the *Gul auoy*, Captaines of thouſands, fiue hundreds, and hundreds. The *Petyde Setskoy*, or Captaines of fifties; and the *Decetskies*, or Captaines of tennes:

5. Coronels Vnder-captaines.

6. Maſters of the Artillerie.

Beſides the *Voiauoda*, or *Generall of the Armie*, (ſpoken of before) they haue two other that beare the name of *Voiauoda*: whereof one is the Maſter of the great Ordnance (called *Naradna Voiauoda*) who hath diuers Vnder-officers, neceſſary for that ſeruice. The other is called, the

Voiauoda

Digitized by Google

Voiaoda Gulanoy, or the *Walking Captayne*, that hath allowed him 1000: good Horsemen of principall choice, to range and spye abroad, and hath the charge of the running Castle, which we are to speake of in the Chapter following. All these Captaynes, and men of charge must once euery day resort to the *Bulsha Voiaoda*, or *Generall of the Armie*, to know his pleasure, and to informe him if there be any requisite matter pertayning to their Office. The walking Captayne.

chap. 16. Of their mustering, and leuying of forces, manner of Armour, and prouision of victuall for the Warres.

WHen Wars are towards (which they faile not of lightly euery yeere with the *Tartar*, and many times with the *Polonian* and *Sweden*, (the foure Lords of the *Chetfirds* send forth their Summons in the Emperours name, to all the Dukes and *Dyacks* of the Prouinces, to be proclaymed in the head Townes of euery Shire: that all the *Sinaboiarskey*, or Sonnes of Gentlemen make their repayre to such a border where the Seruice is to be done, at such a place, and by such a day, and there present themselues to such and such Captaynes. When they come to the place assigned them in the Summons or Proclamation, their names are taken by certayne Officers that haue Commission for that purpose from the *Roserade*, or *High Constable*, as Clerkes of the Bands.

Their order for mustering.

If any make default and faile at the day, he is mulcted, and punished very seuerely. As for the Generall and other chiefe Captaines, they are sent thither from the Emperours owne hand, with such Commission and charge as he thinketh behoofefull for the present seruice. When the Souldiers are assembled, they are reduced into their Bands, and Companies, vnder their seuerall Captaynes of tens, fifties, hundreds, thousands, &c. and these Bands into foure *Polskeis* or *Legions* (but of farre greater numbers then the *Romane* Legions were) vnder their foure great Leaders, which also haue the authoritie of Marshals of the field (as was said before.)

The Horsemans Furniture.

Concerning their Armour they are but slightly appointed. The common Horse-man hath nothing else but his Bow in his Case vnder his right arme, and his Quiuer and Sword hanging on the left side: except some few that beare a Case of Dagges, or a Iaueling, or short Staffe along their Horse side. The vnder Captaynes will haue commonly some piece of Armour besides, as a shirt of Male, or such like. The Generall with the other chiefe Captaynes and men of Nobility, will haue their Horse very richly furnished, their Saddles of Cloth of Gold, their Bridles faire bossed and tasselled with Gold, and Silke frindge, bestudded with Pearle and Precious Stones, themselues in very faire Armour, which they call *Bullatnoy*, made of faire shining Steele, yet couered commonly with Cloth of Gold, and edged round about with Armine Furre, his Steele Helmet on his head of a very great price, his Sword, Bow, and Arrowes at his side, his Speare in his hand, with another Helmet, and his *Sheshapera*, or Horse-mans Scepter carried before him. Their Swords, Bowes, and Arrowes are of the *Turkish* fashion. They practise like the *Tartar* to shoot forwards and backwards, as they flye and retyre.

Shooting forward and backward.

The footmans Furniture.

The *Strelsey* or Footman hath nothing but his Peece in his hand, his striking Hatchet at his backe, and his Sword by his side. The stocke of his Peece is not made Caleeuer wise, but with a plaine and strait stocke (some-what like a Fowling-peece) the Barrell is rudely and vnartificially made, very heauie, yet shooteth but a very small Bullet.

Prouision of victuall.

As for their prouision of victuall, the Emperour alloweth none, either for Captayne, or Souldier, neyther prouideth any for them except peraduenture some Corne for their Money. Euery man is to bring sufficient for himselfe to serue his turne for foure moneths, and if need require to giue order for more to bee brought vnto him to the Campe from his Tenant that tilleth his Land, or some other place. One great helpe they haue, that for Lodging and Dyet euery *Russe* is prepared to bee a Souldier before-hand. Though the cheife Captaynes and others of account carry Tents with them after the fashion of ours with some better prouision of victuall then the rest. They bring with them commonly into the Campe for victuall a kind of dryed Bread (which they call *Sucharie*) with some store of Meale, which they temper with water, and so make it into a Ball, or small lumpe of dowe, called *Tollockno*. And this they eate raw in stead of Bread. Their Meate is Bacon, or some other flesh or fish dryed, after the *Dutch* manner. If the *Russe* Souldier were as hardie to execute an Enterprize, as he is hard to beare out toyle and trauell, or were otherwise as apt and well trayned for the Warres, as he is indifferent for his Lodging and Dyet, hee would farre exceed the Souldiers of our parts. Whereas now he is farre meaner of courage and execution in any Warlike seruice. Which commeth partly of his seruile condition, that will not suffer any great courage or valour to grow in him. Partly for lacke of due honour and reward, which hee hath no great hope of whatsoeuer seruice or execution he doe.

Prouisions.

Homas alit artes.

chap. 17. Of their marching, charging, and other Martiall Discipline.

THe *Russe* trusteth rather to his number, then to the valour of his Souldiers, or good ordering of his Forces. Their marching or leading is without all order, saue that the fore *Polsky* or Legions, (whereinto their Armie is diuided) keepe themselues seuerall vnder their Ensignes, and so thrust all on together in a hurrie, as they are directed by their Generall. Their Ensigne is the Image of Saint *George*. The *Bulsha Dworaney* or chiefe Horse-men, haue euery man a small Drumme of Brasse at his Saddle-bow, which hee striketh when hee giueth the charge, or onset.

George-ensigne.

Horse-mens Drummes.

Digitized by Google

The horſemans manner of charging.

They haue Drummes beſides of a huge bigneſſe, which they carrie with them vpon a board layd on foure Horſes, that are ſparred together with Chaines, euery Drumme hauing eight ſtrikers, or Drummers, beſides Trumpets and Shawmes, which they ſound after a wild manner, much different from ours. When they giue any charge or make any inuaſion, they make a great hallow or ſhoute altogether, as loude as they can, which with the ſound of their Trumpets, Shawmes, and Drummes, maketh a confuſed and horrible noyſe. So they ſet on firſt diſcharging their Arrowes, then dealing with their Swords, which they vſe in a brauery to ſhake, and brandiſh ouer their heads, before they come to ſtrokes.

The footmans charge.

Their Footmen (becauſe otheriſe they want order in leading) are commonly placed in ſome ambuſh or place of aduantage, where they may moſt annoy the enemy, with leaſt hurt to themſelues. If it be a ſet battell, or if any great inuaſion be made vpon the *Ruſſe* borders by the *Tartar*, they are ſet with in the *running* or *moning Caſtle* (called *Beza*, or *Gulay gorod*) which is carried about with them by the *Voianoda gulauoy* (or the *walking Generall*) whom I ſpake of before.

The walking Caſtle.

This walking or mouing Caſtle is ſo framed, that it may be ſet vp in length (as occaſion doth require) the ſpace of one, two, three, foure, fiue, ſixe, or ſeuen miles: for ſo long it will reach. It is nothing elſe but a double wall of wood to defend them on both ſides behind and before, with a ſpace of three yards or thereabouts betwixt the two ſides: ſo that they may ſtand within it, and haue roome enough to charge and diſcharge their pieces, and to vſe their other weapons. It is cloſed at both ends, and made with loope-holes on either ſide, to lay out the noſe of their Peece, or to puſh forth any other weapon. It is carryed with the Armie whereſoeuenit goeth, being taken into pieces, and ſo layed on Carts ſparred together, and drawne by Horſe that are not ſeene, by reaſon that they are couered with their carriage as with a ſhelfe or pent-houſe. When it is brought to the place where it is to bee vſed (which is deuiſed and choſen out before by the the *walking Voianod*) it is planted ſo much as the preſent vſe requireth, ſometime a mile long, ſometimes two, ſometimes three, or more: which is ſoone done without the helpe of any Carpenter, or Inſtrument: becauſe the Timber is ſo framed to claſpe together one piece within an other: as is eaſily vnderſtood by thoſe that know the manner of the *Ruſſe* building.

In this Caſtle ſtandeth their ſhot well fenced for aduantage, ſpecially againſt the *Tartar*, that bringeth no Ordnance, nor other weapon into the field with him, ſaue his Sword, and Bow and Arrowes. They haue alſo within it diuers field Peeces, which they vſe as occaſion doth require. Of Peeces for the field they carrie no great ſtore, when they warre againſt the *Tartar*: but when they deale with the *Polonian* (of whoſe forces they make more account) they goe better furniſhed with all kind of Munition, and other neceſſarie prouiſions. It is thought that no Prince of Chriſtendome hath better ſtore of Munition, then the *Ruſſe* Emperour. And it may partly appeare by the Artillerie Houſe at *Moſko*, where are of all ſorts of great Ordnance, all Braſſe Peeces, very faire, to an exceeding great number.

Store of Munition.

The *Ruſſe* Souldier is thought to be better at his defence within ſome Caſtle, or Towne, then he is abroad at a ſet pitched field. Which is euer noted in the practice of his Wars, and namely, at the ſiege of *Vobſko*, about eight yeares ſince: where he repulſed the *Polonian* King *Stepan Batore*, with his whole Armie of 100000. men, and forced him in the end to giue ouer his ſiege, with the loſſe of many of his beſt Captaynes and Souldiers. But in a ſet field the *Ruſſe* is noted to haue euer the worſe of the *Polonian*, and *Sweden*.

If any behaue himſelfe more valiantly then the reſt, or doe any ſpeciall piece of ſeruice, the Emperour ſendeth him a piece of Gold, ſtamped with the Image of Saint *George* on Horſeback. Which they hang on their ſleeues, and ſet in their Caps. And this is accounted the greateſt honour they can receiue, for any ſeruice they doe.

Reward for valour.

Chap. 18.

Of their Colonies, an maintayning of their conqueſts or purchaſes by force.

THe *Ruſſe* Emperours of late yeeres haue very much enlarged their Dominions and Territories. Their firſt Conqueſt after the Dukedome of *Moſko*, (for before that time they were but Dukes of *Volodomer*, as before was ſaid) was the Citie, and Dukedome of *Nouograd* on the Weſt, and North-weſt ſide: which was no ſmall enlargement of their Dominion, and ſtrengthning to them for the winning of the reſt. This was done by *Iuan* great Grand-father to *Theodore* now Emperour, about the yeere 1480. The ſame began likewiſe to encroach vpon the Countreyes of *Lituania*, and *Liuonia*, but the Conqueſt onely intended, and attempted by him vpon ſome part of thoſe Countreyes, was purſued and performed by his Sonne *Baſileus*, who firſt wan the Citie and Dukedome of *Plesko*, afterwards the Citie and Dukedome of *Smolenſko*, and many other faire Townes, with a large Territory belonging vnto them, about the yeere 1514. Theſe Victories againſt the *Lettoes* or *Lituanians* in the time of *Alexander* their Duke, hee atchieued rather by aduantage of ciuill Diſſentions and Treaſons among themſelues, then by any great policie, or force of his owne. But all this was loſt againe by his Sonne *Iuan Vaſiliwich*, about eight or nine yeeres paſt, vpon compoſition with the *Polonian* King *Stepan Batore*: whereunto he was forced by the aduantages which the *Pole* had then of him, by reaſon of the foyle hee had giuen him before, and the diſquietneſſe of his owne State at home. Onely the *Ruſſe* Emperour, at this time hath left him on that ſide his Countrey, the Cities of *Smolenſko*, *Vitobſko*, *Cheringo*, and *Beala gorod* in *Lituania*. In *Liuonia*, not a Towne, nor one foot of ground. When

Digitized by Google

When *Basileus* first conquered those Countreyes, he suffered the Natiues to keepe their Possessions, and to inhabit all their Townes, onely paying him a Tribute, vnder the Gouernment of his *Russe* Captaynes. But by their Conspiracies and Attempts not long after, hee was taught to deale more surely with them. And so comming vpon them the second time, hee killed and carryed away with him, three parts of foure, which hee gaue or sold to the *Tartars* that serued him in those Wars, and in stead of them placed there his *Russes*, so many as might ouer-match the rest, with certayne Garrisons of strength besides, wherein notwithstanding this ouer-sight was committed, for that (taking away with him the Vp-land, or Countrey people that should haue tilled the ground, and might easily haue beene kept in order without any danger, by other good policies) he was driuen afterwards many yeeres together to victual the Countrey (especially the great Towne) out of his owne Countrey of *Russia*, the soyle lying there in the meane-while waste, and vntilled. *Lituania.*

The like fell out at the Port of *Narue* in *Liefland*, where his Sonne *Iuan Vasilowich* deuised to build a Towne, and a Castle on the other side the Riuer (called *Iuangorod*) to keepe the Towne and Countrey in subjection. The Castle hee caused to bee so built, and fortified, that it was thought to be inuincible. And when it was finished, for reward to the Architect (that was a *Polonian*) he put out both his eyes, to make him vnable to build the like againe. But hauing left the Natiues all within their owne Countrey, without abating their number or strength, the Towne and Castle not long after was betrayed, and surrendred againe to the King of *Sweden*. *Narue.* The Deuill it was.

On the South-east side they haue got the Kingdomes of *Cazan* and *Astracan*. These were wonne from the *Tartar*, by the late Emperour *Iuan Vasilowich*, Father to the Emperour that now is: the one about thirty fiue, the other about thirty three yeeres agoe. North-ward out of the Countrey of *Siberia*, he hath layed vnto his Realme a great breadth and length of ground, from *Wichida* to the Riuer of *Obba*, about 1000. miles space: so that he is bold to write himselfe now, *The great Commander of Siberia.*

The Countreyes likewise of *Permia*, and *Pechora*, are a diuers People and Language from the *Russe*, ouercome not long since, and that rather by threatning, and shaking of the Sword, then by any actuall force: as being a weake and naked people, without meanes to resist. *Permia* and *Pechora.*

THeir Neighbours with whom they haue greatest dealings and intercourse, both in Peace and Warre, are first the *Tartar*: Secondly, the *Polonian* whom the *Russe* calleth *Laches*, noting the first Author or Founder of the Nation, who was called *Lasches* or *Leches*, whereunto is added *Po*, which signifieth *People*, and so is made *Polaches*, that is, the *People or Posteritie of Laches*: which the *Latines* after their manner of writing call *Polanos*. The third are the *Swedens*. The *Polonians* and *Swedens* are better knowne to these parts of *Europe*, then are the *Tartars* that are farther off from vs (as being of *Asia*) and diuided into many Tribes, different both in name, and gouernment one from another. The greatest and mightiest of them is the *Chrim Tartar*, (whom some call the *Great Cham*) that lyeth South, and South-east-ward from *Russia*, and doth most annoy the Countrey by often Inuasions, commonly once euery yeere, sometimes entring very farre within the In-land parts. *Chap. 19. Of the Tartars and other borderers to the countrey of Russia, with whom they haue most to doe in war and peace. The Polonians called Laches by the Russe. The Chrim Tartar.*

In the yeere 1571. he came as farre as the Citie of *Mosko*, with an Armie of 200000. men, without any battell, or resistance at all, for that the *Russe* Emperour (then *Iuan Vasilowich*) leading forth his Armie to encounter with him, marched a wrong way: but as it was thought of very purpose, as not daring to aduenture the field, by reason that he doubted his Nobilitie, and chiefe Captaynes, of a meaning to betray him to the *Tartar*. *The firing of Mosko by the Chrim Tartar, in the yeere 1571.*

The Citie he tooke not, but fired the Suburbs, which by reason of the buildings (which is all of Wood without any Stone, Bricke, or Lime, saue certayne out Roomes) kindled so quickly, and went on with such rage, as that it consumed the greatest part of the Citie almost within the space of foure houres, being of thirty miles or more of compasse. Then might you haue seene a lamentable Spectacle: besides the huge and mightie flame of the Citie all on light fire, the people burning in their houses and streets, but most of all of such as laboured to passe out of the Gates farthest from the Enemie, where meeting together in a mighty throng, and so pressing euerie man to preuent another, wedged themselues so fast within the Gate, and streets neere vnto it, as that three Rankes walked one vpon the others head, the vppermost treading downe those that were lower: so that there perished at that time (as was said) by the fire and the presse, the number of 80000. people, or more.

The *Chrim* thus hauing fired the Citie, and fed his eyes with the sight of it all of a light flame, returned with his Armie, and sent to the *Russe* Emperour a Knife (as was sayd) to sticke himselfe withall: obrayding this losse, and his desperate case, as not daring either to meete his Enemie in the field, nor to trust his Friends or Subjects at home. The principall cause of this continuall quarrell, betwixt the *Russe* and the *Chrim*, is for the right of certayne border parts claimed by the *Tartar*, but possessed by the *Russe*. The *Tartar* alleadgeth, that besides *Astracan* and *Cazan*, (that are the ancient possession of the East *Tartar*) the whole Countrey from his bounds North and Westward, so farre as the Citie of *Mosko*, and *Mosko* it selfe, pertayneth to his right.

Which

Digitized by Google

Homage done by the *Ruſſe* to the *Chrim Tartar.*

See the firſt booke of *Bathay* and of the *Tartars* Conqueſts.

Which ſeemeth to haue beene true by the report of the *Ruſſes* themſelues, that tell of a certayne homage that was done by the *Ruſſe* Emperour euery yeere, to the great *Chrim* or *Cham*, the *Ruſſe* Emperour ſtanding on foote and feeding the *Chrims* Horſe, (himſelfe ſitting on his backe) with Oates out of his owne Cap, in ſtead of a Boll or Manger, and that within the Caſtle of *Moſko*. And this homage (they ſay) was done till the time of *Baſileus* Grandfather to this man. Who ſurpriſing the *Chrim* Emperour by a ſtratagem, done by one of his Nobilitie (called *Iuan Demetrowich Belſchey*) was content with this Ranſome, *viz.* with the changing of this homage into a Tribute of Furres: which afterwards alſo was denyed to bee payed by this Emperours Father.

Hereupon they continue the quarrell, the *Ruſſe* defending his Countrey, and that which hee hath wonne, the *Chrim Tartar* inuading him once or twice euery yeere, ſometime about Whitſontide, but oftner in Harueſt What time if the Great *Cham* or *Chrim* come in his owne perſon, hee bringeth with him a great Armie of 100000. or 200000. men. Otherwiſe they make ſhort and ſudden roades into the Countrey with leſſer numbers, running about the liſt of the border as wilde Geeſe flie, inuading and retiring where they ſee aduantage.

The manner of the *Tartars* fight, and Armour.

Their common practice (being very populous) is to make diuers Armies, and ſo drawing the *Ruſſe* to one, or two places of the frontiers, to inuade at ſome other place, that is left without defence. Their manner of Fight, or ordering of their forces, is much after the *Ruſſe* manner, (ſpoken of before) ſaue that they are all Horſe-men, and carrie nothing elſe but a Bow, a ſheafe of Arrowes, & a falcon Sword after the *Turkiſh* faſhion. They are very expert horſe-men, and vſe to ſhoote as readily backward as forward. Some will haue a horſ-mans ſtaffe like to a bore Speare, beſides their other weapons.

Apparell.

The common Souldier, hath no other Armour then his ordinary Apparell, *viz.* a blacke Sheepes skinne with the wooll-ſide outward in the day time, and inward in the night time, with a Cap of the ſame.

Mirzahs or *Morſeis.*

But their *Morſeys* or Noblemen imitate the *Turke*, both in Apparell and Armour. When they are to paſſe ouer a Riuer with their Armie, they tye three or foure Horſes together, and taking long poles or pieces of wood, binde them faſt to the tayles of their Horſe: ſo ſitting on the Poles they driue their Horſe ouer. At handie ſtrokes (when they come to joyne battell) they are accounted farre better men then the *Ruſſe* people, fierce by nature, but more hardie and bloudie, by continuall practice of Warre: as men knowing no Arts of Peace, nor any ciuill practice.

The ſubtiltie of the *Tartar.*

Yet their ſubtiltie is more then may ſeeme to agree with their barbarous condition. By reaſon they are practiſed to inuade continually, and to rob their neighbours that border about them, they are very pregnant, and ready witted to deuiſe Stratagems vpon the ſudden, for their better aduantage. As in their warre againſt *Beala*, the fourth King of *Hungarie*, whom they inuaded with fiue hundred thouſand men, and obtayned againſt him a great victorie. Where among other, hauing ſlaine his Chancellor, called *Nicholas Schinich*, they found about him the Kings priuie Seale. Whereupon they deuiſed preſently to counterfeit Letters in the Kings name, to the Cities and Townes next about the place, where the Field was fought: with charge that in no caſe they ſhould conuay themſelues, and their goods out of their dwellings, where they might abide ſafely without all feare of danger, and not leaue the Countrey deſolate to the poſſeſſion of ſo vile and barbarous an Enemie, as was the *Tartar* Nation, tearming themſelues in all reproachfull manner. For notwithſtanding he had loſt his carriages, with ſome few ſtraglers that had marched diſorderly, yet he doubted not but to recouer that loſſe, with the acceſſe of a notable victory, if the ſauage *Tartar* durſt abide him in the field. To this purpoſe hauing written their Letters in the *Poliſh* Character, by certayne young men whom they tooke in the Field, and ſigned them with the Kings Seale, they diſpatched them foorth to all the Quarters of *Hungarie*, that lay neere about the place. Whereupon the *Ungarians*, that were now flying away with their goods, Wiues, and Children, vpon the rumour of the Kings ouerthrow, taking comfort of theſe counterfeit Letters, ſtayed at home. And ſo were made a prey, being ſurpriſed on the ſudden by this huge number of theſe *Tartars*, that had compaſſed them about before they were aware.

When they beſiege a Towne or Fort, they offer much Parley, and ſend many flattering meſſages to perſwade a ſurrendrie: promiſing all things that the Inhabitants will require: but being once poſſeſſed of the place, they vſe all manner of hoſtilitie and crueltie. This they doe vpon a rule they haue, *viz.* That Iuſtice is to bee practiſed but towards their owne. They encounter not lightly, but they haue ſome ambuſh, whereunto (hauing once ſhewed themſelues, and made ſome ſhort conflict) they retire, as repulſed for feare, and ſo draw the Enemie into it if they can. But the *Ruſſe* being well acquainted with their practiſe, is more warie of them. When they come a Rouing with ſome ſmall number, they ſet on Horſebacke counterfeit ſhapes of men, that their number may ſeeme greater.

Tartars reſolution.

When they make any onſet, their manner is to make a great ſhowte, crying all out together, *Olla Billa, Olla Billa, God helpe vs, God helpe vs.* They contemne death ſo much, as that they chooſe rather to dye, then to yeeld to their Enemie, and are ſeene when they are ſlaine to bite the very weapon, when they are paſt ſtriking, or helping of themſelues. Wherein appeareth how different the *Tartar* is in his deſperate courage from the *Ruſſe* and *Turke*. For the *Ruſſe* Souldier

Souldier if hee begin once to retire putteth all his safetie in his speedie flight. And if once he be taken by his enemie, hee neither defendeth himselfe, nor intreateth for his life, as reckoning straight to dye. The *Turke* commonly when hee is past hope of escaping, falleth to intreatie, and casteth away his weapon, offereth both his hands, and holdeth them vp, as it were to bee tyed: hoping to saue his life, by offering himselfe Bond-slaue.

The chiefe bootie the *Tartars* seeke for in all their warres, is to get store of Captiues, specially young Boyes and Girles, whom they sell to the *Turkes*, or other their neighbours. To this purpose they take with them great Baskets made like Bakers panniers, to carrie them tenderly, and if any of them happen to tyre, or to bee sicke on the way, they dash him against the ground, or some Tree, and so leaue him dead: The Souldiers are not troubled with keeping the Captiues and other bootie, for hindering the execution of their warres, but they haue certayne hands that intend nothing else, appointed of purpose to receiue and keepe the Captiues and the other prey. Captiues.

The *Russe* borders (being vsed to their inuasions, lightly euery yeere in the Summer) keepe few other Cattell on the borders parts, saue Swine onely, which the *Tartar* will not touch, nor driue away with him: for that he is of the *Turkish* Religion, & will eate no Swines-flesh. Of Christ our Sauiour they confesse as much as doth the *Turke* in his Alcaron, *viz.* That he came of the Angell *Gabriel*, and the Virgin *Marie*, that hee was a great Prophet, and shall bee the Iudge of the world at the last day. In other matters likewise, they are much ordered after the manner and direction of the *Turke*: hauing felt the *Turkish* forces when hee wonne from them *Azou* and *Cessa*, with some other Townes about the *Euxine*, or *Blacke Sea*, that were before tributaries to the *Chrim Tartar*. So that now the Emperour of the *Chrims* for the most part is chosen some one of the Nobilitie whom the *Turke* doth commend: whereby it is brought now to that passe, that the *Chrim Tartar* giueth to the *Turke* the tenth part of the spoyle, which hee getteth in his warres against the *Christians*. The *Tartars* Religion.

Herein they differ from the *Turkish* Religion, for that they haue certayne Idoll puppets made of Silke or like stuffe, of the fashion of a man, which they fasten to the doore of their walking houses, to bee as *Ianusses*, or keepers of their house. And these Idols are made not by all, but by certayne Religious women, which they haue among them for that and like vses. They haue besides, the Image of their King or great *Cham* of an huge bignesse, which they erect at euerie stage, when the Armie marcheth: and this euery one must bend or bow vnto as hee passeth by it, bee he *Tartar*, or Stranger. They are much giuen to Witchcraft and ominous conjectures, vpon euery accident which they heare or see. Idols. Sorcerie.

In making of Marriages, they haue no regard of alliance or consanguinitie. Only with his Mother, Sister, and Daughter, a man may not marrie, and though he take the woman into his house and accompanie with her, yet he accounteth her not for his Wife, till hee haue a Child by her. Then he beginneth to take a dowrie of her friends of Horse, Sheepe, Kine, &c. If shee be barren, after a certayne time hee turneth her home againe. Marriage.

Vnder the Emperour they haue certayne Dukes, whom they call *Morsei* or *Dynoymorseis*: that rule ouer a certayne number of 10000. 20000. or 40000. a piece, which they call *Hoords*. When the Emperour hath any vse of them to serue in his warres, they are bound to come, and to bring with them their Souldiers to a certayne number, euery man with his two Horse at the least, the one to ride on, the other to kill, when it commeth to his turne to haue his Horse eate. For their chiefe victuall is Horse-flesh, which they eate without Bread, or any other thing with it. So that if a *Tartar* bee taken by a *Russe*, hee shall be sure lightly to finde a Horse-legge, or some other part of him at his saddle bow. The *Tartar* Nobilitie. The *Tartar* dyet.

This last yeere when I was at the *Moske*, came in one *Kiriach Morsey*, nephew to the Emperour of the *Chrims* that now is (whose Father was Emperour before) accompanied with three hundred *Tartars*, and his two Wiues, whereof one was his Brothers widow. Where being entertayned in very good sort after the *Russe* manner, hee had sent vnto his lodging for his welcome, to bee made ready for his Supper and his companies, two very large and fat Horses, ready flayed in a Sled. They preferre it before other flesh, because the meare is stronger (as they say) then Beefe, Mutton, and such like. And yet (which is maruell) though they serue all as Horsemen in the warres, and eate all of Horse-flesh, there are brought yeerely to the *Moske* to bee exchanged for other Commodities, thirtie or fortie thousand *Tartar* Horse, which they call *Cones*. They keepe also great herds of Kine, and flockes of blacke Sheepe, rather for the Skinnes and Milke (which they carry with them in great bottles) then for the vse of the flesh, though sometimes they eate of it. Some vse they haue of Rice, Figges, and other fruits. They drinke Milke or warme Bloud, and for the most part card them both together. They vse sometimes as they trauell by the way, to let their Horse bloud in a veyne, and to drinke it warme, as it commeth from his body.

Townes they plant none, nor other standing buildings, but haue walking Houses which the *Latines* call *Veij*, built vpon wheeles like a Shepherds Cottage. These they draw with them whithersoeuer they goe, driuing their Cattell with them. And when they come to their Stage or The *Tartars* dwelling.

standing

Moueable Citie and Court.

ſtanding place, they plant their Cart-houſes very orderly in a ranke : and ſo make the forme of ſtreets, and of a large Towne. And this is the manner of the Emperour himſelfe, who hath no other ſeate of his Empire but an *Agora*, or Towne of wood, that mooueth with him whitherſoeuer hee goeth. As for the fixed and ſtanding building vſed in other Countries, they ſay they are vnwholſome and vnpleaſant.

They begin to moose their Houſes and Cattell in the Spring time, from the South part of their Countrey towards the North parts. And ſo driuing on till they haue graſed all vp to the furtheſt part Northward, they returne backe againe towards their South Countrey (where they continue all the Winter) by ten or twelue miles a ſtage : in the meane while the graſſe being ſprung vp againe, to ſerue for their Cattell as they returne. From the border of the *Shalcan* towards the *Caſpian* Sea, to the *Ruſſe* frontiers, they haue a goodly Countrey, ſpecially on the South and South-eaſt parts, but loſt for lacke of tillage.

Of money they haue no vſe at all, and therefore preferre Braſſe and Steele before other metals, ſpecially Bullate, which they vſe for Swords, Kniues, and other neceſſaries. As for Gold and Siluer they neglect it of very purpoſe, (as they doe all tillage of their ground) to be more free for their wandring kinde of life, and to keepe their Countrey leſſe ſubject to inuaſions. Which giueth them great aduantage againſt all their neighbours, euer inuading, and neuer being inuaded.

Tartars perſons deſcribed.

For Perſon and Complexion, they haue broad and flat viſages, of a tanned colour yellow and blacke, fierce and cruell lookes, thinne hayred vpon the vpper Lip, and a pit on the Chin, light and nimble Bodied, with ſhort Legges, as if they were made naturally for Horſe-men : whereto they practiſe themſelues from their Childhood, ſeldome going a foot about any buſineſſe. Their Speach is very ſudden and loude, ſpeaking as it were out of a deepe hollow throat. When they Sing you would thinke a Cow lowed, or ſome great Bandogge howled. Their greateſt exerciſe is Shooting, wherein they trayne vp their Children from their very infancie, not ſuffering them to eate, till they haue ſhot neere the marke within a certaine ſcantling.

Speach.
Song.
Shooting.

Diuers kindes of *Tartars*.

There are diuers other *Tartars* that border vpon *Ruſſia*, as the *Nagaies*, the *Cheremiſſens*, the *Mordwites*, the *Chircaſſes*, and the *Shalcans*, which all differ in Name more then in Regiment, or other condition, from the *Chrim Tartar*, except the *Chircaſſes*, that border South-weſt towards *Lituania*, and are farre more ciuill then the reſt of the *Tartars*, of a comely perſon, and of a ſtately behauiour, as applying themſelues to the faſhion of the *Polonian*. Some of them haue ſubjected themſelues to the Kings of *Poland*, and profeſſe *Chriſtianitie*. The *Nagay* lyeth Eaſtward, and is reckoned for the beſt man of warre among all the *Tartars*, but very ſauage and cruell aboue all the reſt. The *Cheremiſin Tartar*, that lyeth betwixt the *Ruſſe* and the *Nagay*, are of two ſorts, the *Lugauoy* (that is of the valley) and the *Nagornay*, or of the hilly Countrey. Theſe haue much troubled the Emperours of *Ruſſia*. And therefore they are content now to buy Peace of them, vnder pretence of giuing a yeerely penſion of *Ruſſe* Commodities, to their *Morſeis* or *Dyuoymorſeis*, that are chiefe of their Tribes. For which alſo they are bound to ſerue them in their warres, vnder certayne conditions. They are ſayd to bee juſt and true in their dealings : and for that cauſe they hate the *Ruſſe* people, whom they account to bee double, and falſe in all their dealing. And therefore the common ſort are very vnwilling to keepe agreement with them, but that they are kept in by their *Morſeis*, or Dukes for their penſions ſake.

The *Nagay Tartar* the cruelleſt.
The *Chircaſce* the ciuilleſt *Tartars*.
The *Cheremiſſen Tartar*.

The moſt rude and barbarous is counted the *Mordwite Tartar*, that hath many ſelfe faſhions, and ſtrange kindes of behauiour, differing from the reſt. For his Religion, though hee acknowledge one God, yet his manner is to worſhip for God, that liuing thing, that hee firſt meeteth in the morning, and to ſweare by it all that whole day, whether it bee Horſe, Dog, Cat, or whatſoeuer elſe it bee. When his friend dyeth, hee killeth his beſt Horſe, and hauing flayed off the skinne, he carryeth it on high vpon a long pole, before the Corps to the place of Buriall. This he doth (as the *Ruſſe* fayth) that his friend may haue a good horſe to carrie him to Heauen : but it is likelier to declare his loue towards his dead friend, in that hee will haue to dye with him the beſt thing that hee hath.

The *Mordwit Tartar* the moſt barbarous of the reſt.

Next to the Kingdome of *Aſtracan*, that is the furtheſt part South-eaſtward of the *Ruſſe* Dominion, lyeth the *Shalcan*, and the Countrey of *Media* : whither the *Ruſſe* Merchants trade for raw Silkes, Syndon, Saphyon, Skinnes, and other commodities. The chiefe Townes of *Media* where the *Ruſſe* tradeth, are *Derbent* (built by *Alexander* the great, as the Inhabitants ſay) and *Zamachie*, where the ſtaple is kept for raw Silkes. Their manner is, in the Spring time to reuiue the Silke-wormes (that lye dead all the Winter) by laying them in the warme Sunne, and (to haſten their quickning, that they may ſooner goe to worke) to put them into bagges, and ſo to hang them vnder their Childrens armes. As for the Worme called *Chriniſin* (as wee call it *Chrimſon*) that maketh coloured Silke, it is bred not in *Media*, but in *Aſſyria*. This trade to *Derbent* and *Samachie* for raw Silkes, and other commodities of that Countrey, as alſo in *Perſia*, and *Bougharia*, downe the Riuer *Volgha*, and through the *Caſpian* Sea, is permitted as well to the *Engliſh*, as to the *Ruſſe* Merchants, by the Emperours laſt Grant at my being there. Which hee accounteth for a very ſpeciall fauour, and might proue indeed very beneficiall to our *Engliſh* Merchants, if the Trade were well and orderly vſed.

Shalcan.

Derbent.

The

The whole Nation of the *Tartars* are vtterly voide of all Learning, and without written Law. Yet certayne rules they haue which they hold by tradition, common to all the *Hoords* for the practice of their life. Which are of this sort. *First, To obey their Emperour and other Magistrates, whatsoeuer they command about the publike Seruice. Secondly, Except for the publike behoofe, euery man to bee free and out of Controlement. Thirdly, No priuate man to possesse any Lands, but the whole Countrey to bee as a Common. Fourthly, To neglect all daintinesse and varietie of Meates, and to content themselues with that which commeth next to hand, for more hardnesse, and readinesse in the executing of their Affaires. Fifily, To weare any base Attire, and to patch their Cloathes, whether there bee any need or not: that when there is need, it bee no shame to weare a patcht Coate. Sixtly, To take or steale from any Stranger whatsoeuer they can get, as being Enemies to all men, saue to such as will subiect themselues to them. Seuenthly, Towards their owne Hoord and Nation, to bee true in word and deed. Eightly, To suffer no Stranger to come within the Realme, if any doe, the same to bee Bond-slaue to him that first taketh him, except such Merchants and other, as haue the* Tartar *Bull or Passport about them.* *Tartars* generall Rules.

THe *Permians* and *Samoits* that lye from *Russia*, North and North-east, are thought likewise to haue taken their beginning from the *Tartar* kinde. And it may partly be ghessed by the fashion of their Countenance, as hauing all broad and flat faces, as the *Tartars* haue, except the *Circasses*. The *Permians* are accounted for a very ancient people. They are now subiect to the *Russe*. They liue by Hunting and trading with their Furres, as doth also the *Samoyt*, that dwelleth more towards the North Sea. The *Samoyt* hath his name (as the *Russe* saith) of *Eating himselfe*: as if in times past, they liued as the *Cannibals*, eating one another. Which they make more probable, because at this time they eate all kinde of raw flesh, whatsoeuer it bee, euen the very Carrion that lyeth in the ditch. But as the *Samoits* themselues will say, they were called *Samoie*, that is, *of themselues*, as though they were *Indigina*, or people bred vpon that very soyle, that neuer changed their seate from one place to another, as most Nations haue done. They are subiect at this time to the Emperour of *Russia*. *Chap. 20.* Of the *Permians, Samoits,* and *Lappes.* The *Permians.* The *Samoits.*

I talked with certaine of them, and finde that they acknowledge one God: but represent him by such things as they haue most vse and good by. And therefore they worship the Sunne, the Ollen, the Losh, and such like. As for the Storie of *Slata Baba*, or the *Gelden hagge*, (which I haue read in some Maps, and descriptions of these Countries, to bee an Idoll after the forme of an old Woman) that being demanded by the Priest, giueth them certaine Oracles, concerning the successe and euent of things, I found it to bee but a very fable. Onely in the Prouince of *Obdoria* vpon the Sea side, neere to the mouth of the great Riuer *Obba*, there is a Rocke, which naturally (being somewhat helped by imagination) may seeme to beare the shape of a ragged Woman with a Child in her armes, (as the Rocke by the North cape the shape of a Frier) where the *Obdorian Samoits* vse much to resort, by reason of the commoditie of the place for Fishing: and there sometime (as their manner is) conceiue, and practice their Sorceries, and ominous conjecturings about the good, or bad speed of their Iourneyes, Fishings, Huntings, and such like. The *Samoits* Religion. *Slata Baba* of the Golden Hag.

They are clad in Seale-skinnes, with the hayrie side outwards downe as low as the knees, with their Breeches and Netherstocks of the same, both men and women. They are all Blacke hayred, naturally beardlesse. And therefore the Men are hardly discerned from the Women by their lookes: saue that the Women weare a locke of hayre downe along both their eares. They liue in a manner a wilde and a sauage life, rouing still from one place of the Countrey to another, without any propertie of House or Land more to one then to another. Their leader or director in euery Companie, is their *Papa* or Priest. The *Samoits* habite and behauiour.

On the North side of *Russia* next to *Corelia*, lyeth the Countrey of *Lappia*, which reacheth in length from the furthest point Northward, (towards the North cape) to the furthest part South-east (which the *Russe* calleth *Sweetnesse* or Holy nose, the *English* men *Cape-grace*) about three hundred and fortie fiue verst or miles. From *Sweetnesse* to *Candelox*, by the way of *Versega* (which measureth the breadth of that Countrey) is ninetie miles or thereabouts. The whole Countrey in a manner is either Lakes or Mountaines, which towards the Sea side are called *Tondro*, because they are all of hard and craggie Rocke, but the inland parts are well furnished with Woods, that grow on the hills sides, the lakes lying betweene. Their dyet is very bare and simple. Bread they haue none, but feed onely vpon Fish and Fowle. They are subiect to the Emperour of *Russia*, and the two Kings of *Sweden* and *Denmarke*: which all exact Tribute and Custome of them (as was sayd before) but the Emperour of *Russia* beareth the greatest hand ouer them, and exact of them farre more then the rest. The opinion is that they were first tearmed *Lappes*, of their briefe and short speach. The *Russe* diuideth the whole Nation of the *Lappes* into two sorts. The one they call *Nowremanskoy Lapary*, that is, the *Norwegian Lappes*: because they bee of the *Danish* Religion. For the *Danes* and *Norwegians*, they account for one people. The other that haue no Religion at all, but liue as bruite and Heathenish people, without God in the world, they call *Dikoy Lopary*, or the wilde *Lappes*. The *Lappes*. No Bread. Wilde *Lappes*.

The whole Nation is vtterly vnlearned, hauing not so much as the vse of any Alphabet, or Letter

Witches. Letter among them. For practice of Witch-craft and Sorcerie; they paſſe all Nations in the the World. Though for the inchanting of ſhips that ſayle along their Coaſt (as I haue heard it reported) and their giuing of winds good to their friends, and contrary to other, whom they meane to hurt by tying of certayne knots vpon a Rope (ſomewhat like to the Tale of *Æolus* his wind-bag) is a very Fable, deuiſed (as may ſeeme) by themſelues, to terrifie Saylers for comming neere their Coaſt. Their Weapons are the Long-bow, and Hand-gunne, wherein they excell, aſwell for quickneſſe to charge and diſcharge, as for neerneſſe at the Marke, by reaſon of their continuall practice (whereto they are forced) of ſhooting at wild-fowle. Their manner is *Wardhuyſe.* in Summer time to come downe in great companies to the Sea-ſide, to *Wardhuyſe*, *Cola*, *Kegor*, and the Bay of *Vedagoba*, and there to fiſh for Cod, Salmon, and But-fiſh, which they ſell to the *Ruſſes*, *Danes*, and *Norwegians*, and now of late to the *Engliſh*-men that trade thither with Cloth, which they exchange with the *Lappes* and *Coreliens*, for their Fiſh, Oyle, and Furres, *Cola.* whereof alſo they haue ſome ſtore. They hold their Mart at *Cola*, on Saint *Peters* day, what time the Captayne of *Wardhuyſe* (that is Reſiant there for the King of *Denmarke*) muſt be preſent, or at leaſt ſend his Deputie to ſet prices vpon their Stock-fiſh, Trane-oyle, Furres, and other Commodities: as alſo the *Ruſſe* Emperours Cuſtomer, or Tribute taker, to receiue his Cuſtome, which is euer payed before any thing can be bought, or ſold. When their fiſhing is done, their manner is to draw their Carbaſſes, or Boats on ſhoare, and there to leaue them with the Sleds drawne with Deere. Keele turned vpwards, till the next Spring-tyde. Their trauell too and fro is vpon Sleds, drawne by the *Olen* Deere: which they vſe to turne a grazing all the Summer time, in an Iland called *Kilden* (of a very good Soyle compared with other parts of that Countrey) and towards the Winter time, when the Snow beginneth to fall, they fetch them home againe, for the vſe of their Sled.

Chap. 21. Of their Eccleſiaſticall ſtate, with their Church Offices.

CONcerning the Gouernment of their Church, it is framed altogether after the manner of the *Greeke*: as being a part of that Church, and neuer acknowledging the Iuriſdicton of the *Latine* Church, vſurped by the Pope. That I may keepe a better meaſure in deſcribing their Ceremonies, then they in the vſing them (wherein they are infinite) I will note briefly: Firſt, what Eccleſiaſticall Degrees, or Offices they haue with the Iuriſdiction, and practice of them. Secondly, what Doctrine they hold in matter of Religion. Thirdly, what Lyturgie, or forme of Seruice they vſe in their Churches, with the manner of their adminiſtring the Sacraments. Fourthly, what other ſtrange Ceremonies, and Superſtitious Deuotions are vſed among them.

The Church Officers. Their Offices, or Degrees of Church-men, are as many in number, and the ſame in a manner both in name and degree, that were in the Weſterne Churches. Firſt, they haue their *Patriarch*, then their *Metropolites*, their *Archbiſhops*, their *Uladikey*, or *Biſhops*, their *Protopapes* or *Archprieſts*, their *Deacons*, *Friers*, *Monkes*, *Nunnes*, and *Eremites*.

The Patriarch. Their *Patriarch*, or chiefe Directer in matter of Religion vntill this laſt yeere, was of the Citie of *Conſtantinople* (whom they called the *Patriarch* of *Sio*) becauſe being driuen by the *Turke* Patriarch of *Sio*, or *Chio*. out of *Conſtantinople* (the Seate of his Empire) he remoued to the Ile *Sio*, ſometimes called *Chio*, and there placed his Patriarchiall Sea. So that the Emperours, and Clergie of *Ruſſia*, were wont yeerely to ſend Gifts thither, and to acknowledge a Spirituall kind of homage, and ſubjection due to him, and to that Church. Which cuſtome they haue held (as it ſeemeth) euer ſince they profeſſed the Chriſtian Religion. Which how long it hath bn I could not wel learne, for that they haue no Story or Monument of Antiquitie (that I could heare of) to ſhew what hath beene done in times paſt within their Countrey, concerning either Church, or Common-wealth matters. Onely I heare a report among them, that about three hundred yeers ſince, there was a Mariage betwixt the Emperour of *Conſtantinople*, and the Kings Daughter of that Countrey: who at the firſt denyed to joyne his Daughter in Mariage with the *Greeke* Emperour, becauſe he was of the Chriſtian Religion. Which agreeth well with that I find in the Story of *Laonicus Chalcocondylas* concerning *Turkiſh* Affaires in his fourth Booke: where hee ſpeaketh of ſuch a Mariage betwixt *Iohn* the *Greeke* Emperour, and the Kings Daughter of *Sarmatia*. And this argueth out of their owne report, that at that time they had not receiued the Chriſtian Religion: as alſo that they were conuerted to the Faith, and withall peruerted at the very ſame time, receiuing the Doctrine of the Goſpell, corrupted with Superſtitions euen at the firſt when they tooke it from the *Greeke* Church, which it ſelfe then was degenerate, and corrupted with many Superſtitions, and foule Errours, both in Doctrine and Diſcipline: as may appeare by the Story of *Nicephorus Gregoras*, in his eighth and ninth Bookes. But as touching the time of their Conuerſion to the Chriſtian Faith, I ſppoſe rather that it is miſtaken by the *Ruſſe*, for that which I find in the *Polonian* Story, the ſecond Booke the third Chapter: where is ſaid that about the yeere 990. *Vlodomirus* Duke of *Ruſſia*, married one *Anne* Siſter to *Baſilius*, and *Conſtantinus* Brothers, and Emperours of *Conſtantinople*. Whereupon the *Ruſſe* receiued the Faith and Profeſſion of Chriſt. Which though it be ſomewhat more ancient then the time noted before out of the *Ruſſe* Report, yet it falleth out all to one reckoning, touching this point, *viz.* in what truth and

ſin-

Digitized by Google

ſinceritie of Doctrine the *Ruſſe* receiued the firſt ſtampe of Religion: for aſmuch as the *Greeke* Church at that time alſo was many wayes infected with errour and ſuperſtition.

The tranſlation of the Patriarchicall ſea from *Conſtantinople* or *Sio*, to *Mosko*.

At my being there, the yeere 1588. came vnto the *Mosko* the Patriarch of *Conſtantinople*, or *Sio* (called *Hieronimo* being baniſhed as ſome ſayd) by the *Turke*, as ſome other reported by the *Greeke* Clergie depriued. The Emperour being giuen altogether to ſuperſtitious deuotions, gaue him great entertaynment. Before his comming to *Mosko*, hee had beene in *Italy* with the Pope, as was reported there by ſome of his company. His arrand was to conſult with the Emperour concerning theſe points. Firſt, about a League to paſſe betwixt him and the King of *Spaine*, as the meeteſt Prince to joyne with him in oppoſition againſt the *Turke*. To which purpoſe alſo Ambaſſages had paſſed betwixt the *Ruſſe* and the *Perſian*. Likewiſe from the *Georgians* to the Emperour of *Ruſſia*, to joyne league together, for the inuading of the *Turke* on all ſides of his Dominion: taking the aduantage of the ſimple qualitie of the *Turke* that now is. This treatie was helped forward by the Emperours Ambaſſadour of *Almayne*, ſent at the ſame time to ſolicite an inuaſion vpon the parts of *Polonia*, that lye towards *Ruſland*, and to borrow money of the *Ruſſe* Emperour, to purſue the warre for his Brother *Maximilian*, againſt the *Swedens* ſonne, now King of *Poland*. But this conſultation concerning a league betwixt the *Ruſſe* and the *Spaniard*, (which was in ſome forwardneſſe at my comming to *Mosko*, and already one appointed for Ambaſſage into *Spaine*) was marred by meanes of the ouerthrow giuen to the *Spaniſh* King by her Majeſtie, the Queene of *England*, this laſt yeere. Which made the *Ruſſe* Emperour and his Councell, to giue a ſadder countenance to the *Engliſh* Ambaſſadour at that time: for that they were diſappointed of ſo good a policie, as was this conjunction ſuppoſed to bee betwixt them and the *Spaniſh*.

His ſecond purpoſe (whereto the firſt ſerued as an introduction) was in reuenge of the *Turke* and the *Greeke* Clergie, that had thruſt him from his ſeate, to treate with them about the reducing of the *Ruſſe* Church vnder the Pope of *Rome*. Wherein it may ſeeme that comming lately from *Rome*, hee was ſet on by the Pope, who hath attempted the ſame many times before, though all in vaine; and namely the time of the late Emperour *Iuan Vaſilowich*, by one *Anthony* his Legate. But thought this belike a farre better meane to obtayne his purpoſe by treatie and mediation of their owne Patriarch. But this not ſucceeding, the Patriarch fell to a third point of treatie, concerning the reſignation of his Patriarchſhip, and tranſlation of the Sea from *Conſtantinople* or *Scio*, to the Citie of *Mosko*. Which was ſo well liked and entertayned by the Emperour (as a matter of high Religion and policie) that no other treatie (ſpecially of forraigne Ambaſſages) could bee heard or regarded, till that matter was concluded.

The reaſon wherewith the Patriarch perſwaded the tranſlating of his Sea to the Citie of *Mosko*, were theſe in effect. Firſt, for that the Sea of the Patriarch was vnder the *Turke*, that is enemie to the Faith. And therefore to bee remooued into ſome other Countrey of *Chriſtian* profeſſion. Secondly, becauſe the *Ruſſe* Church was the onely naturall daughter of the *Greeke* at this time, and holdeth the ſame Doctrine and Ceremonies with it: the reſt being all ſubject to the *Turke*, and fallen away from the right profeſſion. Wherein the ſubtill *Greeke* to make the better market of his broken ware, aduanced the honour that would grow to the Emperour, and his Countrey: to haue the Patriarchs Seat tranſlated into the chiefe Citie, and ſeate of his Empire. As for the right of tranſlating the Sea, and appointing his Succeſſour, hee made no doubt of it, but that it pertayned wholly to himſelfe.

The Patriarchſhip of *Conſtantinople* tranſlated to *Mosko*.

So the Emperour and his Councell, with the principall of his Clergie, being aſſembled at the *Mosko*, it was determined that the Metropolite of *Mosko*, ſhould become Patriarch of the whole *Greeke* Church, and haue the ſame full Authoritie and Iuriſdiction that pertayned before to the Patriarch of *Conſtantinople*, or *Sio*. And that it might bee done with more order and ſolemnitie, the fiue and twentieth of Ianuarie, 1588. the *Greeke* Patriarch accompanied with the *Ruſſe* Clergie, went to the great Church of *Prechebſte*, or our Ladie, within the Emperours Caſtle (hauing firſt wandred thorow the whole Citie in manner of a Proceſſion, and bleſſing the people with his two fingers) where hee made an Oration, and deliuered his reſignation in an Inſtrument of writing, and ſo layed downe his Patriarchicall ſtaffe. Which was preſently receiued by the Metropolite of *Mosko*, and diuers other ceremonies vſed about the Inauguration of this new Patriarch.

The day was holden very ſolemne by the people of the Citie, who were commanded to forbeare their workes, and to attend this ſolemnitie. The great Patriarch that day was honoured with rich Preſents ſent him from the Emperour and Empreſſe, of Plate, cloath of Gold, Furres, &c. carryed with great pompe thorow the ſtreets of *Mosko*, and at his departing receiued many gifts more, both from the Emperour, Nobilitie, and Clergie. Thus the Patriarchſhip of *Conſtantinople*, or *Sio*, (which hath continued ſince the Councell of *Nice*) is now tranſlated to *Mosko*, or they made beleeue that they haue a Patriarch with the ſame right and Authoritie that the other had. Wherein the ſubtill *Greeke* hath made good aduantage of their Superſtition, and is now gone away with a rich booty into *Poland*, whither their Patriarchſhip be currant or not.

The matter is not vnlike to make ſome Schiſme betwixt the *Greeke* and *Ruſſe* Church, if the

Digitized by Google

Ruſſe hold his Patriarchſhip that hee hath ſo well payed for, and the *Greekes* Elect another withall, as * likely they will, whether this man were baniſhed by the *Turke*, or depriued by order of his owne Clergie. Which might happen to giue aduantage to the Pope, and to bring ouer the *Ruſſe* Church to the Sea of *Rome*, (to which end peraduenture hee deuiſed this Stratagem, and caſt in this matter of Schiſme among them) but that the Emperours of *Ruſſia* know well enough, by the example of other *Chriſtian* Princes, what inconuenience would grow to their State and Countrey, by ſubjecting themſelues to the *Romiſh* Sea. To which end the late Emperour *Iuan Vaſilowich*, was very inquiſitiue of the Popes authoritie ouer the Princes of *Chriſtendome*, and ſent one of very purpoſe to *Rome*, to behold the order and behauiour of his Court.

*As they doe and euer ſince haue done.

With this Patriarch *Hieronymo*, was driuen out at the ſame time by the great *Turke*, one *Demetrio* Archbiſhop of *Lariſſa*: who is now in *England*, and pretendeth the ſame cauſe of their baniſhment by the *Turke*, (to wit) their not admitting of the Popes new Kalender, for the alteration of the yeere. Which how vnlikely it is, may appeare by theſe Circumſtances. Firſt, becauſe there is no ſuch affection, nor friendly reſpect betwixt the *Pope* and the *Turke*, as that hee ſhould baniſh a Subject for not obeying the *Popes* ordinance, ſpecially in a matter of ſome ſequel for the alteration of Times within his owne Countries. Secondly, for that hee maketh no ſuch ſcruple in deducting of times, and keeping of a juſt and preciſe account from the Incarnation of Chriſt: whom hee doth not acknowledge otherwiſe then I noted before. Thirdly, for that the ſayd Patriarch is now at *Naples* in *Italy*, where it may be gheſſed he would not haue gone within the Popes reach, and ſo neere to his noſe, if hee had beene baniſhed for oppoſing himſelfe againſt the Popes Decree.

Kalender pretence.

The Patriarchs Iuriſdiction.

This office of Patriarchſhip now tranſlated to *Moſko*, beareth a ſuperiour Authoritie ouer all the Churches, not onely of *Ruſſia*, and other the Emperours Dominions, but thorow out all the Churches of *Chriſtendome*, that were before vnder the Patriarch of *Conſtantinople*, or *Sio*: or at leaſt the *Ruſſe* Patriarch imagineth himſelfe to haue the ſame authoritie. Hee hath vnder him as his proper Dioceſſe the Prouince of *Moſko*, beſides other peculiars. His Court or Office is kept at the *Meſko*.

Two Metropolites.

Before the creation of this new Patriarch, they had but one *Metropolite*, that was called the *Metropolite* of *Moſko*. Now for more ſtate to their Church, and new Patriarch, they haue two Metropolites, the one of *Nouogrod velica*, the other of *Roſtone*. Their office is to receiue of the Patriarch ſuch Eccleſiaſticall orders, as hee thinketh good, and to deliuer the charge of them ouer to the Archbiſhops: beſides the ordering of their owne Dioceſſe.

Foure Archbiſhops.

Their Archbiſhops are foure: of *Smolenſo*, *Cazan*, *Vobſko*, and *Vologda*. The parts of their office is all one with the Metropolites: ſaue that they haue an vnder Iuriſdiction, as Suffraganes to the Metropolites, & Superiors to the Biſhops. The next are the *Vladikeis* or Biſhops, that are but ſixe in all: of *Crutitſka*, of *Rezan*, of *Otfer* and *Torſhock*, of *Collomenſka*, of *Volodemer*, of *Suſdalla*. Theſe haue euery one a very large Dioceſſe: as diuiding the reſt of the whole Countrey among them.

Sixe Biſhops.

Eccleſiaſticall Iuriſdiction.

The matters pertayning to the Eccleſiaſticall juriſdiction of the Metropolites, Archbiſhops, and Biſhops, are the ſame in a manner that are vſed by the Clergie in other parts of *Chriſtendome*. For beſides their authoritie ouer the Clergie, and ordering ſuch matters as are meere Eccleſiaſticall, their juriſdiction extendeth to all Teſtamentarie cauſes, matters of Marriage, and Diuorcements, ſome Pleas of iniuries, &c. To which purpoſe alſo they haue their Officials, or Commiſſaries (which they call *Boiaren Vladitskey*) that are Lay-men of the degree of Dukes, or Gentlemen, that keepe their Courts and execute their Iuriſdiction. Which beſides their other oppreſſions ouer the common people, raigne ouer the Prieſts: as the Dukes and *Djacks* doe ouer the poore people, within their Precincts. As for the Archbiſhop or Biſhop himſelfe, hee beareth no ſway in deciding thoſe cauſes, that are brought into his Court. But if hee would moderate any matter, he muſt doe it by intreatie with his Gentleman Officiall. The reaſon is, becauſe theſe *Boiarskey*, or Gentlemen officials, are not appointed by the Biſhops, but by the Emperour himſelfe, or his Councell, and are to giue account of their doings to none but to them. If the Biſhop can intreat at his admiſſion to haue the choice of his owne Officiall, it is accounted for a ſpeciall great fauour. But to ſpeake it as it is, the Clergie of *Ruſſia*, aſwell concerning their Lands and reuenues, as their Authoritie and Iuriſdiction, are altogether ordered and ouer-ruled by the Emperour and his Councell, and haue ſo much, and no more of both as their pleaſure doth permit them. They haue alſo there Aſſiſtants or ſeuerall Counſels (as they call them) of certayne Prieſts that are of that Dioceſſe, reſiding within their Cathedrall Cities, to the number of foure and twentie a piece. Theſe aduiſe with them, about the ſpeciall and neceſſarie matters belonging to their charge.

Their Gentlemen commiſſaries.

The Churches reuenues.

Concerning their Rents and Reuenues to maintayne their dignities, it is ſomewhat large. The Patriarchs yeerely rents out of his Lands (beſides other fees) is about 3000. Rubbels or Marcks. The Metropolites and Archbiſhops, about 2500. The Biſhops, ſome 1000. ſome 800. ſome 500. &c. They haue had ſome of them (as I haue heard ſay) ten or twelue thouſand Rubbels a yeere: as had the Metropolite of *Nouogrod*.

Their

Digitized by Google

Their Habit or Apparell (when they shew themselues in their Pontificalibus after their solemnest manner) is a Mytre on their heads after the Popish fashion, set with Pearle and Precious Stone, a Coape on their backes (commonly of Cloth of Gold, embroydered with Pearle) and a Crosiers Staffe in their hands, layed ouer all with Plate of Siluer double gilt, with a Crosse or Sheepherds Crooke at the vpper end of it. Their ordinary habit (otherwise when they ride or goe abroad) is a Hood on their heads of blacke colour, that hangeth downe their backes, and standeth out like a Bongrace before. Their vpper Garment (which they call *Rea*) is a Gowne or Mantell of blacke Damaske, with many Lists or Gards of white Sattin layed vpon it, euery Gard about two fingers broad, and their Crosiers staffe carried before them. Themselues follow after, blessing the people with their two fore-fingers, with a maruellous grace.

The Election of Bishops.

The Election, and appointing of the Bishops and the rest, pertayneth wholly to the Emperour himselfe. They are chosen euer out of the Monasteries; so that there is no Bishop, Archbishop, nor Metropolite, but hath beene a Monke, or Frier before. And by that reason they are, and must all bee vnmarried men, for their Vow of Chastitie when they were first shorne. When the Emperour hath appointed whom he thinketh good, hee is inuested in the Cathedrall Church of his Diocesse, with many Ceremonies, much after the manner of the Popish Inauguration. They haue also their Deanes, and their Arch-deacons.

The learning and exercise of the *Russe* Clergie.

As for preaching the Word of God, or any teaching, or exhorting such as are vnder them, they neither vse it, nor haue any skill of it: the whole Clergie being vtterly vnlearned both for other knowledge, and in the Word of God. Only their manner is twice euery yeere, *viz.* the first of September (which is the first day of their yeere) and on Saint *Iohn* Baptists day, to make an ordinary speech to the people, euery Metropolite, Arch-bishop, and Bishop, in his Catherall Church, to this or like effect: That if any bee in malice towards his Neighbour, hee shall leaue off his malice: if any haue thought of Treason or Rebellion against his Prince, hee beware of such practice: if hee haue not kept his *Fasts*, and Vowes, nor done his other Duties to the holy Church, hee shall amend that fault, &c. And this is a matter of forme with them, vttered in as many words, and no more, in a manner, then I haue heere set downe. Yet the matter is done with that Grace and Solemnitie, in a Pulpit of purpose set vp for this one Act, as it hee were to discourse at large of the whole substance of Diuinitie. At the *Mosko* the Emperour himselfe is euer present at this Solemne Exhortation.

As themselues are void of all manner of Learning, so are they wary to keepe out all meanes that might bring any in: as fearing to haue their ignorance and vngodlinesse discouered. To that purpose they haue perswaded the Emperors, that it would breed Innouation, and sow danger to their State, to haue any noueltie of Learning come within the Realme. Wherein they say but truth, for that a man of spirit and vnderstanding, helped by Learning and liberall Education, can hardly indure a tyrannicall Gouernment. Some yeeres past in the other Emperours time, there came a Presse and Letters out of *Polonia*, to the Citie of *Mosko*, where a Printing House was set vp, with great liking and allowance of the Emperour himselfe. But not long after, the house was set on fire in the night time, and the Presse and Letters quite burnt vp, as was thought by the procurement of the Clergie-men.

Their Priests (whom they call *Papaes*) are made by the Bishops, without any great tryall for worthinesse of gifts, before they admit them, or Ceremonies in their admission: saue that their heads are shorne (not shauen, for that they like not) about an hand breadth or more in the crowne, and that place anointed with Oyle by the Bishop: who in his admission putteth vpon the Priest, first his Surplesse, and then setteth a white Crosse on his brest of Silke, or some other matter, which he is to weare eight dayes, and no more; and so giueth him authoritie to say and sing in the Church, and to administer the Sacraments. Priests.

They are men vtterly vnlearned, which is no maruell, for as much as their Makers, the Bishops themselues (as before was said) are cleere of that qualitie, and make no farther vse at all of any kind of Learning, no not of the Scriptures themselues, saue to reade and to sing them. Their ordinary charge and function is to say the Lyturgie, to administer the Sacraments after their manner, to keepe and decke their Idols, and to doe the other Ceremonies vsuall in their Churches. Their number is great because their Townes are parted into many small Parishes, without any discretion for diuiding them into competent numbers of Housholds, and people for a just Congregation: as the manner in all places where the meanes is neglected, for increasing of knowledge, and instruction towards God. Which cannot well be had, where by meanes of an vnequall partition of the people, and Parishes, there followeth a want and vnequalitie of stipend for a sufficient Ministery.

The *Russe* Priests can marry but once.

For their Priests, it is lawfull to marry for the first time. But if the first Wife dye, a second he cannot take, but he must lose his Priest-hood, and his liuing withall. The reason they make out of that place of Saint *Paul* to *Timothy* 1.3.2. not well vnderstood, thinking that to bee spoken of diuers Wiues successiuely, that the Apostle speaketh of at one and the same time. If hee

will needs marrie againe after his first wife is dead, he is no longer called *Papa*, but *Rospapa*, or *Priest quondam*. This maketh the Priests to make much of their Wiues, who are accounted as the Matrones, and of best reputation among the women of the Parish.

For the stipend of the Priest, their manner is not to pay him any tenths of Corne, or ought else: but he must stand at the deuotion of the people of his Parish, and make vp the Incommes towards his maintenance, so well as hee can, by Offerings, Shrifts, Mariages, Burials, Dirges, and Prayers for the dead and the liuing (which they call *Molitua.*) For besides their publike Seruice within their Churches, their manner is for euery priuate man to haue a Prayer said for him by the Priest, vpon any occasion of businesse whatsoeuer, whether he ride, goe, saile, plough, or whatsoeuer else he doth. Which is not framed according to the occasion of his businesse, but at randome, being some of their ordinary and vsuall Church-prayers. And this is thought to bee more holy, and effectuall, if it be repeated by the Priests mouth, rather then by his owne. They haue a custome, besides to solemnize the Saints day, that is, Patrone to their Church once euery yeere. What time all their Neighbours of their Countrey and Parishes about, come in to haue Prayers said to that Saint for themselues, and their friends: and so make an Offering to the Priest for his paines. This Offering may yeeld them some ten pounds a yeere, more or lesse, as the Patrone or Saint of that Church is of credit and estimation among them: The manner is on this day (which they keepe Anniuersary for the Priest, to hire diuers of his Neighbour Priests to helpe him: as hauing more Dishes to dresse for the Saint, then he can well turne his hand vnto. They vse besides to visit their Parishioners houses, with Holy Water, and Perfume, commonly once a quarter: and so hauing sprinkled, and becensed the goodman and his Wife, with the rest of their household, and household-stuffe, they receiue some Deuotion or lesse, as the man is of abilitie. This and the rest layd altogether, may make vp for the Priest towards his maynteNance, about thirty or forty Rubbels a yeere: whereof he payeth the tenth part to the Bishop of the Diocesse.

The Priests maintenance.

Their Priests attyre.

The *Papa* or Priest is knowne by his long Tufts of Haire, hanging downe by his Eares, his Gowne with a broad Cape, and a walking staffe in his hand. For the rest of his Habit, hee is apparelled like the common sort. When he sayth the Lyturgie or Seruice, within the Church, hee hath on him his Surplesse, and sometimes his Coape, if the day bee more Solemne. They haue besides their *Papaes* or Priests, their *Churnapapaes* (as they call them) that is, *Black Priests*: that may keepe their Benefices, though they be admitted Friers withall within some Monasterie. They seeme to be the very same that were called Regular Priests in the Popish Church. Vnder the Priest, is a Deacon in euery Church, that doth nothing but the Office of a Parish Clerke. As for their *Protopapaes*, or Arch-priests, and their Arch-deacons (that are next in election to be their *Protopopas*) they serue onely in the Cathedrall Churches.

Friers.

Of Friers they haue an infinite rabble farre greater then in any other Countrey, where Popery is professed. Euery Citie, and good part of the Countrey, swarmeth full of them. For they haue wrought (as the Popish Friers did by their Superstition and Hypocrisie) that if any part of the Realme be better and sweeter then other, there standeth a Friery or a Monastery dedicated to some Saint.

The number of them is so much the greater, not onely for that it is augmented by the Superstition of the Countrey, but because the Friers life is the safest from the Oppressions, and Exactions, that fall vpon the Commons. Which causeth many to put on the Friers Weed, as the best Armour to beare off such blowes. Besides such as are voluntary, there are diuers that are forced to shire themselues Friers, vpon some displeasure. These are for the most part of the chiefe Nobility. Diuers take the Monasteries as a place of Sanctuary, and there become Friers, to auoyde some punishment, that they had deserued by the Lawes of the Realme. For if hee get a Monastery ouer his head, and there put on a Coole before hee bee attached, it is a protection to him for euer against any Law, for what crime soeuer: except it be for Treason. But this *Proviso* goeth withall, that no man commeth there, (except such as are commanded by the Emperour to be receiued) but he giueth them Lands, or bringeth his stocke with him, and putteth it into the common Treasury. Some bring 1000. Rubbels, and some more. None is admitted vnder three or foure hundred.

Their manner of shiring Friers.

The manner of their Admission is after this sort. First, the Abbot strippeth him of all his Secular or ordinary Apparell. Then he putteth vpon him next to his skinne, a white flannell shirt, with a long Garment ouer it downe to the ground, girded vnto him with a broad Leather Belt. His vpper-most Garment is a Weed of *Garras*, or *Say*, for colour and fashion, much like to the vpper Weed of a Chimney-sweeper. Then is his crowne shorne a hand breadth, or more close to the very skinne, and these, or like words pronounced by the Abbot, whiles hee clippeth his haire: *As these haires are clipped of, and taken from thy head; so now we take thee, and separate thee cleane from the World, and worldly things, &c.* This done, hee anointeth his crowne with Oyle, and putteth on his Coole: and so taketh him in among the Fraternitie. They vow perpetuall Chastitie, and Abstinence from flesh.

Besides, their Lands (that are very great) they are the greatest Merchants in the whole Coun-

Digitized by Google

Countrey, and deale for all manner of Commodities. Some of their Monaſteries diſpend in Lands, one thouſand, or two thouſand Rubbels a yeere. There is one Abbey called *Troits*, that hath in Lands and Fees, the ſumme of 100000. Rubbels, or Markes a yeere. It is built in manner of a Caſtle, walled round about, with great Ordnance planted on the wall, and contayneth within it a large breadth of ground, and great varietie of building. There are of Friers within it, (beſides their Officers, and other Seruants) about ſeuen hundred. The Empreſſe that now is, hath many Vowes to Saint *Sergius*, that is Patrone there: to intreate him to make her fruitfull, as hauing no children by the Emperour her Husband. Lightly euery yeere ſhee goeth on Pilgrimage to him from the *Mosko*, on foot, about eighty *Engliſh* miles, with fiue or ſixe thouſand women attending vpon her, all in blue Liueries, and foure thouſand Souldiers for her Guard. But Saint *Sergius* hath not yet heard her Prayers, though (they ſay) hee hath a ſpeciall gift and faculty that way.

What Learning there is among their Friers, may be knowne by their Biſhops, that are the choice men out of all their Monaſteries. I talked with one of them at the Citie of *Vologda*, where (to try his skill) I offered him a *Ruſſe* Teſtament, and turned him to the firſt Chapter of Saint *Matthews* Goſpell. Where hee beganne to reade in very good order. I asked him firſt what part of Scripture it was, that he had read? he anſwered, that he could not well tell. How many Euangeliſts there were in the New Teſtament? He ſaid he knew not. How many Apoſtles there were? He thought there were twelue. How he ſhould be ſaued? Whereunto he anſwered me with a piece of *Ruſſe* Doctrine, that he knew not whether he ſhould be ſaued, or no: but if God would *Poſhallouate* him, or gratifie him ſo much, as to ſaue him, ſo it was, he would bee glad of it: if not, what remedy. I asked him, why hee ſhoare himſelfe a Frier? Hee anſwered, becauſe he would eate his Bread with peace. This is the Learning of the Friers of *Ruſſia*, which though it be not to be meaſured by one, yet partly it may bee gheſſed by the ignorance of this man, what is in the reſt. The Friers Learning.

They haue alſo many Nunneries, whereof ſome may admit none but Noblemens Widowes, and Daughters, when the Emperour meaneth to keepe them vnmarryed, from continuing the bloud or ſtocke, which if he would haue extinguiſhed. To ſpeake of the life of their Friers, and Nunnes, it needs not, to thoſe that know the hypocriſie, and vncleanneſſe of that Cloyſter-brood. The *Ruſſe* himſelfe (though otherwiſe addicted to all Superſtition) ſpeaketh ſo foully of it, that it muſt needs gaine ſilence of any modeſt man. Nunneries.

Beſides theſe, they haue certayne *Eremites*, (whom they call *Holy men*) that are like to thoſe *Gymnoſophiſts*, for their life and behauiour: though farre vnlike for their Knowledge, and Learning. They vſe to goe ſtarke naked, ſaue a clout about their middle, with their haire hanging long, and wildly about their ſhoulders, and many of them with an Iron coller, or chaine about their neckes, or midſt, euen in the very extremitie of Winter. Theſe they take as Prophets, and men of great Holineſſe, giuing them a liberty to ſpeake what they liſt, without any controlment, though it bee of the very higheſt himſelfe. So that if hee reprooue any openly, in what ſort ſoeuer, they anſwere nothing, but that it is *Po gręcum*, that is, for their ſinnes. And if any of them take ſome piece of ſale ware from any mans ſhop, as he paſſeth by, to giue where he liſt, hee thinketh himſelfe much beloued of God, and much beholding to the holy Man, for taking it in that ſort. Eremites. Strange hardineſſe.

Of this kind there are not many, becauſe it is a very hard and cold Profeſſion, to goe naked in *Ruſſia*, ſpecially in Winter. Among other at this time, they haue one at *Mosko*, that walketh naked about the ſtreets, and inueigheth commonly againſt the State, and Gouernment, eſpecially againſt the *Godonoes*, that are thought at this time to be great Oppreſſors of that Commonwealth. Another there was, that dyed not many yeeres agoe (whom they called *Baſileo*) that would take vpon him to reproue the old Emperour, for all his crueltie, and oppreſſions, done towards his people. His body they haue tranſlated of late into a ſumptuous Church, neere the Emperours Houſe in *Mosko*, and haue canonized him for a Saint. Many Miracles he doth there (for ſo the Friers make the people to beleeue) and many Offerings are made vnto him; not only by the people, but by the chiefe Nobilitie, and the Emperour, and Empreſſe themſelues, which viſit that Church with great Deuotion. But this laſt yeere, at my being at *Mosko*, this Saint had ill lucke in working his Miracles. For a lame man that had his limmes reſtored (as it was pretended by him) was charged by a woman that was familiar with him (beeing then fallen out) that he halted but in the day time, and could leape merrily when hee came home at night. And that he had intended this matter ſixe yeeres before. Now hee is put into a Monaſtery, and there rayleth vpon the Friers, that hired him to haue this counterfeit Miracle practiſed vpon him. Beſides this diſgrace, a little before my comming from thence, there were eight ſlaine with in his Church by fire in a Thunder. Which cauſed his Bels (that were tingling before all day and night long as in triumph of the Miracles wrought by *Baſileo* their Saint) to ring ſomewhat ſoftlier, and hath wrought no little diſcredit to this Miracle-worker. There was another of great account at *Plesko*, (called *Nichola* of *Plesko*) that did much good, when this Emperours Father came to ſacke the Towne, vpon ſuſpition of their reuolting and Rebellion againſt him. The Emperour, *Baſileo* the Eremite. Lame Miracles. *Nichola* the Eremite.

perour, after he had ſaluted the Eremite, at his lodging, ſent him a reward. And the Holy man to requite the Emperour, ſent him a piece of raw Fleſh, being then their Lent time. Which the Emperour ſeeing, bid one to tell him, that he maruelled that the Holy man would offer him fleſh to eate in the Lent, when it was forbidden by order of holy Church. And doth *Euaske* (which is as much to ſay, as Iacke) thinke (quoth *Nicola*) that it is vnlawfull to eate a piece of beaſts fleſh in Lent and not to eate vp ſo much mans fleſh, as he hath done already. So threatning the Emperour with a prophecy of ſome hard aduenture to come vpon him, except he left murdring of his people, and departed the Towne: he ſaued a great many mens liues at that time.

This maketh the people to like very well of them, becauſe they are as Paſquils, to note their great mens faults, that no man elſe dare ſpeake of. Yet it falleth out ſometime, that for this rude libertie, which they take vpon them, after a counterfeit manner, by imitation of Prophets, they are made away in ſecret: as was one or two of them, in the laſt Emperours time, for being ouer-bold in ſpeaking againſt his gouernment.

Chap. 22. Of their Lyturgie, or form of Church-ſeruice, and their manner of adminiſtring the Sacraments.

Their morning Seruice.

THeir morning Seruice they call, *Zautrana*, that is, *Mattins*. It is done in this order. The Prieſt entreth into the Church with his Deacon following him. And when he is come to the middle of the Church, he beginneth to ſay with a loude voyce: *Blaſlauey Uladika* (that is) *Bleſſe vs heauenly Paſtor:* meaning of *Chriſt*. Then hee addeth, *In the name of the Father, and of the Sonne, and of the holy Ghoſt, one very God in Trinitie:* and *Aſpody pomelui*, or, *Lord haue mercy vpon vs, Lord haue mercy vpon vs, Lord haue mercy vpon vs:* repeated three times. This done, he marcheth on towards the Chancell, or *Sanctum Sanctorum*, (as they vſe to call it) and ſo entreth into the *Scharſuey Dwere*, or the *Heauenly Doore:* which no man may enter into, but the Prieſt onely. Where ſtanding at the Altar, or Table (ſet neere to the vpper wall of the Chancell) he ſayeth the Lords Prayer, and then againe *Aſpody pomelui*, or, *Lord haue mercy vpon vs, Lord haue mercy vpon vs*, &c. pronounced twelue times. Then praiſed be the *Trinitie, the Father, the Sonne, and holy Ghoſt, for euer and euer.* Whereto the Deacons, and People ſay, *Amen*. Next after, the Prieſt addeth the Pſalmes for that day, and beginneth with, *O come let vs worſhip, and fall downe before the Lord*, &c. and therewithall himſelfe, with the Deacons, and People, all turne themſelues towards their Idols, or Images, that hang on the wall, and *croſſing* themſelues, *bow downe* three times, *knocking* their heads to the very ground. After this, he readeth the *Ten Commandements*, and *Athanaſius* Creed, out of the *Seruice Booke*.

Legend.

This being done, the Deacon that ſtandeth without the *Heauenly Doore*, or Chancell, readeth a piece of a Legend, out of a written Booke, (for they haue it not in Print) of ſome Saints life, miracles, &c. This is diuided into many parts, for euery day in the yeere, and is read by them with a plaine ſinging note, not vnlike to the Popiſh tune, when they ſung their Goſpels. After all this (which reacheth to an houre and an halfe, or two houres of length) he addeth certaine ſet Collects, or Prayers vpon that which he hath read out of the Legend before: and ſo endeth his Seruice.

Candles.

All this while ſtand burning before their Idols, a great many of Waxe candles, (whereof ſome are of the bigneſſe of a mans waſte) vowed, or enioyned by penance, vpon the people of the Pariſh.

Compline.

About nine of the clocke in the morning, they haue another Seruice, called *Obeidna*, (or Compline) much after the order of the Popiſh Seruice, that bare that name. If it be ſome High or Feſtiuall day, they furniſh their Seruice beſide, with *Bleſſed bee the Lord God of Iſrael*, &c. and *Wee praiſe thee, O God*, &c. ſung with a more ſolemne and curious note.

Their euening Seruice.

Their euening Seruice, is called *Vecherna*, where the Prieſt beginneth with *Blaſlauey Uladika*, as he did in the morning, and with the Pſalmes appointed for the *Vecherna*. Which being read, he ſingeth, *My ſoule doeth magnifie the Lord, &c.* And then the Prieſt, Deacons, and People, all with one voice, ſing, *Aſpody pomelui*, or *Lord haue mercy vpon vs*, thirty times together. Whereunto the Boyes that are in the Church, anſwere all with one voice, rolling it vp ſo faſt, as their lips can goe: *Verij, Verij, Verij, Verij*, or, *Praiſe, Praiſe, Praiſe*, &c. thirty times together, with a very ſtrange noiſe. Then is read by the Prieſt, and vpon the Holidayes ſung, the firſt Pſalme: *Bleſſed is the man*, &c. And in the end of it, is added, *Alleluia*, repeated ten times. The next in order is ſome part of the Goſpell read by the Prieſt, which hee endeth with *Alleluia* repeated three times. And ſo hauing ſaid a Collect in remembrance of the Saint of that day, hee endeth his euening Seruice. All this while the Prieſt ſtandeth aboue at the Altar, or high Table, within the Chancell, or *Sanctum Sanctorum*, whence hee neuer moueth all the Seruice time. The Deacon, or Deacons (which are many in their Cathedrall Churches) ſtand without the Chancell by the *Scharſuey Dwere*, or *Heauenly Doore:* for within they may not be ſeene all the Seruice time, though otherwiſe their Office is to ſweepe and keepe it, and to ſet vp the Waxe candles before their Idols. The people ſtand together the whole Seruice time in the body of the Church, and ſome in the Church Porch, for Piew, or Seat they haue none within their Churches.

The manner of the *Ruſſe* Baptiſme.

The Sacrament of Baptiſme they adminiſter after this manner. The child is brought vnto the Church (and this is done within eight dayes after it is borne) if it bee the child of ſome Noble-

Digitized by Google

Nobleman, it is brought with great pompe in a rich Sled or Wagon, with Chaires and Cushions of cloth of Gold, and such like sumptuous shew of their best furniture. When they are come to the Church, the Priest standeth ready to receiue the child within the Church Porch, with his Tub of water by him. And then beginneth to declare vnto them, that they haue brought a little Infidell to be made a Christian, &c. This ended, he teacheth the Witnesses (that are two or three) in a certaine set forme out of his Booke, what their dutie is in bringing vp the child after he is baptised, *vz.* That he must be taught to know God, and Christ the Sauiour. And because God is of great maiestie, and wee must not presume to come vnto him without Mediators (as the manner is when we make any suit to an Emperour, or great Prince) therefore they must teach him what Saints are the best, and chiefe Mediators, &c. This done, he commandeth the Deuill in the name of God after a coniuring manner, to come out of the water: and so after certaine Prayers he plungeth the child thrise ouer head and eares. For this they hold to bee a point necessary, that no part of the child be vndipped in the water.

The words that beare with them the forme of Baptisme vttered by the Priest, when he dippeth in the child, are the very same that are prescribed in the Gospell, and vsed by vs, *vz. In the name of the Father, and of the Sonne, and of the holy Ghost.* For that they should alter the forme of the words, and say, *by the holy Ghost*, (as I haue heard that they did) following certaine Heretikes of the *Greeke* Church, I found to be vntrue, as well by report of them that haue beene often at their Baptismes, as by their Booke of *Lyturgie* it selfe, wherein the order of Baptisme is precisely set downe.

When the childe is baptised, the Priest layeth Oyle and Salt tempered together vpon the forehead, and both sides of his face, and then vpon his mouth, drawing it along with his finger ouer the childs lips (as did the Popish Priests) saying withall certaine Prayers to this effect: that God will make him a good Christian, &c. all this is done in the Church Porch. Then is the child (as being now made a Christian, and meet to be receiued within the Church Doore) carried into the Church, the Priest going before, and there he is presented to the chiefe Idoll of the Church, being layd on a Cushion before the feet of the Image, by it (as by the Mediator) to be commended vnto God. If the child be sicke, or weake (specially in the Winter) they vse to make the water luke warme. After Baptisme the manner is to cut off the haire from the childs head, and hauing wrapped it within a piece of Waxe to lay it vp as a Relique or Monument in a secret place of the Church. Oyle and Salt. Presented. Cutting off haire.

This is the manner of their Baptisme, which they account to be the best and perfectest forme. As they doe all other parts of their Religion, receiued (as they say) by tradition from the best Church, meaning the *Greeke*. And therefore they will take great paines to make a Proselyte, or Conuert, either of an Infidell, or of a forreine Christian, by rebaptising him after the *Russe* manner. When they take any *Tartar* prisoner, commonly they will offer him life, with condition to be baptised. And yet they perswade very few of them to redeeme their life so: because of the naturall hatred the *Tartar* beareth to the *Russe*, and the opinion he hath of his falshood, and iniustice. The yeere after *Mosko* was fired by the *Chrim Tartar*, there was taken a *Diuoymorsey*, one of the chiefe in that exploit with three hundred *Tartars* more: who had all their liues offered them if they would be baptised after the *Russe* manner. Which they refused all to doe, with many reproches against those that perswaded them. And so being carried to the Riuer *Mosko* (that runneth through the Citie) they were all baptised after a violent manner: being thrust downe with a knock on the head into the water, through an hole made in the Ice for that purpose. Of *Liefslanders* that are captiues, there are many that take on them this second *Russe* Baptisme to get more libertie, and somewhat besides towards their liuing, which the Emperour ordinarily vseth to giue them. Proselytepaines. *Tartars* choose to die rather then turne *Christians*. Rebaptising.

Of *Englishmen* since they frequented the Countrey there was neuer any found, that so much forgot God, his Faith, and Countrey, as that he would be content to be baptised *Russe*, for any respect of feare, preferment, or other meanes whatsoeuer: saue onely *Richard Relph*, that following before an vngodly trade, by keeping a *Caback* (against the order of the Countrey) and being put off from that trade, and spoiled by the Emperours Officers of that which he had, entred himselfe this last yeere into the *Russe* Profession: and so was rebaptised, liuing now asmuch an Idolater, as before he was a Rioter, and vnthrifty person.

Such as thus receiue the *Russe* Baptisme, are first carried into some Monasterie to bee instructed there in the doctrine and ceremonies of the Church. Where they vse these ceremonies. First, they put him into a new and fresh sute of apparell, made after the *Russe* fashion, and set a Coronet, or (in Summer) a Garland vpon his head. Then they anoint his head with Oyle, and put a Waxe candle light into his hand: and so pray ouer him foure times a day, the space of seuen dayes. All this while he is to abstaine from flesh, and white meats. The seuen dayes being ended, he is purified and washed in a Bath-stoue, and so the eight day hee is brought into the Church, where he is taught by the Friers how to behaue himselfe in presence of their Idols, by ducking downe, knocking of the head, crossing himselfe, and such like gestures, which are the greatest part of the *Russe* Religion.

The

The adminiſtring of the Lords Supper. Confeſſion.

The Sacrament of the Lords Supper they receiue but once a yeere, in their great Lent time, a little before Eaſter. Three at the moſt are admitted at one time, and neuer aboue. The manner of their communicating, is thus. Firſt, they confeſſe themſelues of all their ſinnes to the Prieſt (whom they call) their ghoſtly Father. Then they come to the Church, and are called vp to the Communion Table, that ſtandeth like an Altar, a little remoued from the vpper end of the Church, after the *Dutch* manner. Heere firſt they are asked of the Prieſt, *whether they bee cleane or no*, that is, whether they haue neuer a ſinne behind that they left vnconfeſſed. If they anſwer, *No*, they are taken to the Table. Where the Prieſt beginneth with certayne vſuall Prayers, the Communicants ſtanding in the meane while with their armes folded one within another, like *Penitentiaries* or Mourners. When theſe prayers are ended, the Prieſt taketh a Spoone and filleth it full of claret Wine. Then hee putteth into it a ſmall piece of Bread, and tempereth them both together: and ſo deliuereth them in the ſpoone to the Communicants, that ſtand in order, ſpeaking the vſuall words of the Sacrament. *Eate this, &c. Drinke this, &c.* both at one time without any pauſe.

Communion in both kinds.

After that hee deliuereth them againe Bread by it ſelfe, and then Wine carded together with a little warme water, to repreſent Bloud more rightly (as they thinke) and the water withall, that flowed out of the ſide of Chriſt. Whiles this is in doing the Communicants vnfold their armes. And then folding them againe, follow the Prieſt thrice round about the Communion table, and ſo returne to their places againe. Where hauing ſayd certayne other prayers, hee diſmiſſeth the Communicants, with charge to bee merrie, and to cheere vp themſelues for the ſeuen dayes next following. Which being ended, hee enioyneth them to faſt for it as long time after. Which they vſe to obſerue with very great deuotion, eating nothing elſe but Bread and Salt, except a little Cabbage, and ſome other Herbe or Root, with water and quaſſe Mead for their drinke.

This is their manner of adminiſtring the Sacraments. Wherein what they differ from the inſtitution of Chriſt, and what Ceremonies they haue added of their owne, or rather borrowed of the *Greekes*, may eaſily bee noted.

Chap. 23. Of the Doctrine of the *Ruſſe* Church, & what errors it holdeth.

THeir chiefeſt errours in matter of Faith I finde to bee theſe. Firſt, concerning the Word of God it ſelfe they will not read publikely certayne Bookes of the Canonicall Scripture, as the bookes of *Moſes*: ſpecially the foure laſt, *Exodus*, *Leuiticus*, *Numeri*, and *Deuteronomie*, which they ſay are all made diſauthentique, and put out of vſe by the comming of Chriſt: as not able to diſcerne the difference betwixt the *Morall* and the *Ceremoniall Law*. The bookes of the *Prophets* they allow of, but reade them not publikely in their Churches, for the ſame reaſon: becauſe they were but directers vnto Chriſt, and proper (as they ſay) to the Nation of the *Iewes*. Onely the Booke of *Pſalmes* they haue in great eſtimation, and ſing and ſay them daily in their Churches. Of the New Teſtament they allow and reade all, except the *Reuelation*: which therefore they reade not (though they allow it) becauſe they vnderſtand it not, neither haue the like occaſion, to know the fulfilling of the Prophecies contayned within it, concerning eſpecially the Apoſtacie of the *Antichriſtian* Church, as haue the Weſterne Churches. Notwithſtanding, they haue had their *Antichriſts* of the *Greeke* Church, and may finde their owne falling off, and the puniſhments for it by the *Turkiſh* inuaſion in the Prophecies of that Booke.

1. Their diſallowing of certaine parts of the Canonical Scriptures.

2. Traditions equall to the holy Scripture.

Secondly, (which is the fountayne of the reſt of all their corruptions both in Doctrine and Ceremonies) they hold with the Papiſts, that their Church *Traditions* are of equall authoritie with the written Word of God. Wherein they preferre themſelues before other Churches: affirming that they haue the true and right Traditions, deliuered by the Apoſtles to the *Greeke* Church, and ſo vnto them.

3. The Church to haue ſoueraigne authoritie in interpreting the Scriptures.

Thirdly, that the Church (meaning the *Greeke*, and ſpecially the Patriarch and his Synod, as the head of the reſt) hauing a ſoueraigne Authoritie to interpret the Scriptures, and that all are bound to hold that Interpretation, as ſound and authentique.

4. The holy Ghoſt to proceed from the Father onely.

Fourthly, concerning the Diuine nature and the three Perſons, in the one ſubſtance of God, that the holy Ghoſt proceedeth from the Father onely, and not from the Sonne.

5. Chriſt not ſole Mediator of interceſſion Saint *Nicolas* his 300. Angels

Fifthly, about the office of Chriſt, they hold many foule errours, and the ſame almoſt as doth the *Popiſh* Church: namely, that hee is the ſole Mediatour of redemption, but not of interceſſion. Their chiefe reaſon (if they bee talked withall) for defence of this errour, is that vnapt and fooliſh compariſon, betwixt God, and a Monarch or Prince of this world, that muſt bee ſued vnto by Mediatours about him: wherein they giue ſpeciall preferment to ſome aboue others, as to the bleſſed *Virgin* whom they call *Procheſte*, or vndefiled, and Saint *Nicolas*, whom they call *Scora pomoſnick*, or the *Speedy helper*, and ſay, that hee hath three hundred Angels of the chiefeſt appointed by God to attend vpon him. This hath brought them to an horrible exceſſe of Idolatrie, after the groſſeſt and prophaneſt manner, giuing vnto their Images all religious worſhip of Prayer, Thankeſgiuing, Offerings and Adoration, with proſtrating and knocking their heads to the ground before them, as to God himſelfe. Which becauſe they doe to the Picture, not to the portraiture of the Saint, they ſay they worſhip not an Idoll, but the Saint in his Image, and ſo offend

Images.

Digitized by Google

ſend not God: forgetting the Commandement of God, that forbiddeth to make the Image or likeneſſe of any thing, for any Religious worſhip, or vſe whatſoeuer. Their Church walls are verie full of them, richly hanged and ſet foorth with Pearle and Stone, vpon the ſmooth Table. Though ſome alſo they haue emboſſed, that ſticke from the board almoſt an inch outwards. They call them *Chudanedites*, or their Miracle workers: and when they prouide them to ſet vp in their Churches, in no caſe they may ſay, that they haue *bought* the Image, but *Exchanged money for it*.

Sixtly, for the meanes of Iuſtification, they agree with the *Papiſts*, that it is not by Faith onely apprehending Chriſt, but by their Workes alſo. And that *Opus operatum*, or the worke for the worke ſake, muſt needs pleaſe God. And therefore they are all in their *numbers* of Prayers, Faſts, Vowes, and Offerings to Saints, Almes deeds, Croſſings and ſuch like, and carrie their numbring Beads about with them continually, as well the Emperour and his Nobilitie, as the common people, not onely in the Church, but in all other publike places, ſpecially at any ſet or ſolemne meeting, as in their Faſts, law Courts, common Conſultations, entertaynment of Ambaſſadours, and ſuch like. 6. Iuſtification by workes.

Seuenthly, they ſay with the *Papiſts*, that no man can bee aſſured of his ſaluation, till the ſentence be paſſed at the day of Iudgement. 7. Saluation vncertaine.

Eightly, they vſe auricular Confeſſion, and thinke they are purged by the very action from ſo many ſinnes, as they confeſſe by name, and in particular to the Prieſt. 8. Auricular confeſſion.

Ninthly, they hold three Sacraments, of *Baptiſme*, the *Lords Supper*, and the *laſt Anoiling* or *Vnction*. Yet concerning their Sacrament of extreame Vnction, they hold it not ſo neceſſarie to ſaluation as they doe Baptiſme, but thinke it a great curſe and puniſhment of God, if any dye without it. 9. Three Sacraments.

Tenthly, they thinke there is a neceſſitie of Baptiſme, and that all are condemned that dye without it. 10. All damned that die without Baptiſme.

Eleuenth, they rebaptiſe as many *Chriſtians* (not being of the *Greeke* Church) as they conuert to their *Ruſſe* profeſſion: becauſe they are diuided from the true Church, which is the *Greeke*, as they ſay. 11. Anabaptiſme.

Twelfth, they make a difference of Meates and Drinkes, accounting the vſe of one to be more holy then of another. And therefore in their ſet Faſts they forbeare to eate fleſh, and white meates (as wee call them) after the manner of the Popiſh ſuperſtition: which they obſerue ſo ſtrictly, and with ſuch blinde deuotion, as that they will rather die, then eate one bit of Fleſh, Egges or ſuch like, for the health of their bodies in their extreame ſickneſſe. 12. Differente of meates.

Thirteenth, they hold Marriage to bee vnlawfull for all the Clergie men, except the Prieſts onely, and for them alſo after the firſt Wife, as was ſayd before. Neither doe they well allow of it in Lay-men after the ſecond marriage. Which is a pretence now vſed againſt the Emperours onely Brother, a childe of ſixe yeeres old: who therefore is not Prayed for in their Churches, (as their manner is otherwiſe for the Princes bloud) becauſe hee was borne of the ſixt marriage, and ſo not legitimate. This charge was giuen to the Prieſts by the Emperour himſelfe, by procurement of the *Godenes*: who make him beleeue, that it is a good policie to turne away the liking of the people from the next ſucceſſour. 13. Marriage for ſome perſons vnlawfull.

Many other falſe opinions they haue in matter of Religion. But theſe are the chiefe, which they hold, partly by meanes of their traditions (which they haue receiued from the *Greeke* Church) but ſpecially by ignorance of the holy Scriptures. Which notwithſtanding they haue in the *Peloneian* tongue, (that is all one with theirs ſome few words excepted) yet few of them reade them with that godly care which they ought to doe: neither haue they (if they would) Bookes ſufficient of the old and new Teſtament for the common people, but of their Lyturgie onely, or Booke of common ſeruice, whereof there are great numbers. Which notwithſtanding it is not to bee doubted, but that hauing the Word of God in ſome ſort (though without the ordinarie meanes to attaine to a true ſenſe and vnderſtanding of it) God hath alſo his number among them. As may partly appeare by that which a *Ruſſe* at *Moſko* ſayd in ſecret to one of my Seruants, ſpeaking againſt their Images and other ſuperſtitions: That God had giuen vnto *England* light to day, and might giue it to morrow (if hee pleaſed) to them.

As for any Inquiſition or proceeding againſt men for matter of Religion, I could heare of none: ſaue a few yeeres ſince againſt one man and his wife, who were kept in a cloſe Priſon the ſpace of eight and twentie yeeres, till they were ouer-growne into a deformed faſhion, for their hayre, nayles, colour of countenance, and ſuch like, and in the end were burned at *Moſko*, in a ſmall Houſe ſet on fire. The cauſe was kept ſecret, but like it was for ſome part of truth in matter of Religion: though the people were made to beleeue by the Prieſts and Friers, that they held ſome great and damnable Hereſie. Inquiſition.

Chap. 24.

Of the manner of ſolemnizing their Marriages.

THe manner of making and ſolemnizing their Marriages, is different from the manner of other Countries. The man (though hee neuer ſaw the woman before) is not permitted to haue any ſight of her all the time of his wooing: which hee doth not by himſelfe, but by his Mother

Digitized by Google

Mother or some other ancient woman of his kinne or acquaintance. When the liking is taken (as well by the Parents as by the parties themselues, for without the knowledge and consent of the Parents, the contract is not lawfull) the Fathers on both sides, or such as are to them in stead of Fathers, with their other chiefe friends, haue a meeting and conference about the dowrie, which is commonly very large after the abilitie of the parents: so that you shall haue a *Market man* (as they call them) giue a thousand Rubbels, or more with his Daughter.

The manner of indowment for Wiues.

As for the man it is neuer required of him, nor standeth with their custome to make any ioynter in recompence of the dowrie. But in case hee haue a Child by his Wife, shee enioyeth a third deale after his decease. If he haue two Children by her or more, she is to haue a courtesie more, at the discretion of the husband. If the husband depart without issue by his wife, shee is returned home to her friends without any thing at all, saue onely her dowrie: if the husband leaue so much behind him in goods. When the agreement is made concerning the dowrie, they signe Bonds one to the other, as well for the payment of the dowrie, as the performing of the Marriage by a certayne day. If the woman were neuer married before, her Father and friends are bound besides to assure her a Maiden. Which breedeth many brabbles and quarrels at Law, if the man take any conceit concerning the behauiour and honestie of his wife.

Thus the contract being made, the parties begin to send tokens the one to the other, the Woman first, then afterwards the Man, but yet see not one another till the Marriage bee solemnized. On the Eue before the marriage day, the Bride is carryed in a *Collimago*, or Coach, or in a Sled (if it bee winter) to the Bridegroomes house, with her marriage Apparell and Bed-stead with her, which they are to lye in. For this is euer prouided by the Bride, and is commonly verie faire, with much cost bestowed vpon it. Heere she is accompanied all that night by her Mother and other women: but not welcommed, nor once seene by the Bridegroome himselfe.

Ceremonies in Marriages.

When the time is come to haue the marriage solemnized, the Bride hath put vpon her a kinde of Hood, made of fine Knit-worke or Lawne, that couereth her head, and all her body downe to the middle. And so accompanied with her friends, and the Bridegroome with his, they goe to Church all on Horsebacke, though the Church be neare hand, and themselues but of very meane degree. The words of contract and other ceremonies in solemnizing the Marriage, are much after the order, and with the same words that are vsed with vs: with a Ring also giuen to the Bride. Which being put on, and the words of contract pronounced: the Brides hand is deliuered into the hand of the Bridegroome, which standeth all this while on the one side of the Altar or Table, and the Bride on the other. So the marriage knot being knit by the Priest, the Bride commeth to the Bridegroome (standing at the end of the altar or table) and falleth downe at his feet, knocking her Head vpon his Sliooe, in token of her subiection and obedience. And the Bridegroome againe, casteth the lappe of his Gowne or vpper garment ouer the Bride, in token of his dutie to protect and cherish her.

Ring.

Then the Bridegroome and Bride, standing both together at the Tables end, commeth first the Father and the other friends of the Bride, and bow themselues downe low to the Bridegroome: and so likewise his friends bow themselues to the Bride, in token of affinitie and loue euer after betwixt the two kindreds. And withall, the Father of the Bridegroome offereth to the Priest a loafe of Bread, who deliuereth it straight againe to the Father and other friends of the Bride, with attestation before God and their Idols, that hee deliuer the dowrie wholly and truely at the day appointed, and hold loue euer after, one kindred with another. Whereupon they breake the Loafe into pieces, and eate of it, to testifie their true and sincere meanings, for performing of that charge, and thenceforth to become as graines of one Loafe, or men of one Table.

Loafe.

These ceremonies being ended, the Bridegroome taketh the Bride by the hand, and so they goe on together with their friends after them towards the Church porch. Where meet them certaine with pots and cups in their hands, with Mead and *Russe* Wine. Whereof the Bridegroome taketh first a Charke, or little cup full in his hand, and drinketh to the Bride: who opening her Hood or Vale below, and putting the Cup to her mouth vnderneath it (for being seene of the Bridegroome) pledgeth him againe. Thus returning all together from the Church, the Bridegroome goeth not home to his owne, but to his Fathers house, and shee likewise to hers, where either entertayne their friends apart. At the entring into the House, they vse to fling Corne out of the windowes vpon the Bridegroome and Bride, in token of plentie and fruitfulnesse to bee with them euer after.

Mead.

Corne.

When the Eueuing is come, the Bride is brought to the Bridegroomes Fathers house, and there lodgeth that night, with her Vayle or couer still ouer her head. All that night she may not speake one word (for that charge shee receiueth by tradition from her Mother, and other Matrons her friends) that the Bridegroome must neither heare, nor see her, till the day after the marriage. Neither three dayes after, may she bee heard to speake, saue certaine few words at the Table in a set forme, with great manners and reuerence to the Bridegroome. If shee behaue herselfe otherwise, it is a great prejudice to her credit and life euer after: and will highly bee disliked of the Bridegroome himselfe.

Silence.

After

Digitized by Google

After the third day, they depart to their owne, and make a Feast to both their friends together. The marriage day, and the whole time of their festiuall, the Bridegroome hath the honour to be called *Moloday Knez*, or young Duke, and the Bride *Moloday Knezay*, or young Dutchesse.

In liuing with their wiues, they shew themselues to be but of a barbarous condition: vsing them as seruants, rather then wiues. Except the Noble-women, which are, or seeme to bee of more estimation with their hushands, then the rest of meaner sort. They haue this foule abuse, contrary to good order, and the Word of God it selfe, that vpon dislike of his wife, or other cause whatsoeuer, the man may goe into a Monasterie and shire himselfe a Frier, by pretence of deuotion: and so leaue his wife to shift for her selfe so well as shee can.

chap. 25. Of the other Ceremonies of the *Russe* Church.

THe other Ceremonies of their Church, are many in number: especially, the abuse about the signe of the Crosse, which they set vp in their high wayes, in the tops of their Churches, and in euery doore of their houses, signing themselues continually with it on their foreheads & breasts with great deuotion, as they will seeme by their outward gesture. Which were lesse offence, if they gaue not withall that religious reuerence and worship vnto it, which is due to God onely, and vsed the dumbe shew, and signing of it instead of thanksgiuing, and of all other duties which they owe vnto God. When they rise in the morning, they goe commonly in the sight of some steeple that hath a Crosse on the top; and so bowing themselues towards the Crosse, signe themselues withall on their foreheads and breasts. And this is their thanksgiuing to God for their nights rest, without any word speaking, except peraduenture they say, *Aspody Pomeluy*, or *Lord haue mercie vpon vs.* When they sit downe to meat, and rise againe from it, the thanksgiuing to God, is the crossing of their foreheads and brests. Except it be some few that adde peraduenture a word or two of some ordinary prayer, impertinent to that purpose. When they are to giue an oath for the deciding of any controuersie at Law, they doe it by swearing by the Crosse, and kissing the feet of it, making it as God, whose name onely is to bee vsed in such triall of Iustice. When they enter into any house (where euer there is an Idoll hanging on the wall) they signe themselues with the Crosse, and bow themselues to it. When they begin any worke, bee it little or much, they arme themselues first with the signe of the Crosse. And this commonly is all their prayer to God, for good speed of their businesse. And thus they serue God with crosses, after a crosse and vaine manner: notwithstanding what the Crosse of Christ is, nor the power of it. And yet they thinke all strangers Christians, to be no better then Turkes in comparison of themselues (and so they will say) because they bow not themselues when they meet with the Crosse, nor signe themselues with it, as the *Russe* manner is.

The signe of the Crosse how it crosseth out other deuotions.

Holy-water.

They haue Holy-water in like vse and estimation, as the Popish Church hath. But heerein they exceed them, in that they doe not onely hollow their Holy-water stockes, and tubs full of water, but all the Riuers of the Countrey once euery yeere. At *Mosko* it is done with great pompe and solemnitie: the Emperour himselfe being present at it with all his Nobilitie, marching through the streets towards the Riuer of *Moskua*, in manner of Procession, in this order as followeth. First goe two Deacons, with banners in their hands, the one of *Precheste* (or our Lady) the other of Saint *Michael* fighting with his Dragon. Then follow after the rest of the Deacons, and the Priests of *Mosko*, two and two in a ranke, with Coaps on their backes, and their Idols at their brests, carried with girdles or slings, made fast about their necks. Next the Priests come their Bishops in their Pontificalibus: then the Friers, Monkes, and Abbots: and after the Patriarches in very rich attire, with a Ball or Sphere on the top of his Myter, to signifie his vniuersalitie ouer that Church. Last commeth the Emperour with all his Nobilitie. The whole traine is of a mile long, or more. When they are come to the Riuer, a great hole is made in the Ice, where the Market is kept of a road and a halfe broad, with a stage round about it to keepe off the presse. Then beginneth the Patriarch to say certaine prayers, and coniureth the Deuill to come out of the water: and so casting in Salt, and censing it with Frankincense, maketh the whole Riuer to become Holy-water. The morning before, all the people of *Mosko* vse to make crosses of chaulke ouer euery doore and window of their houses; least the Deuill being coniured out of the water, should flye into their houses.

Hallowing of Riuers.

When the Ceremonies are ended you shal see the black Guard of the Emperors house, & then the rest of the Towne, with their pailes and buckets to take off the hallowed water for drinke, and other vses. You shall also see the women dip in their children ouer head and eares, and many men and women leape into it, some naked, some with their clothes on, when some man would thinke his finger would freeze off, if he should but dip it into the water. When the men haue done, they bring their horse to the Riuer to drinke of the sanctified water, and so make them as holy as a horse. Their set day for the solemne action of hallowing their Riuers, is that we call *Twelfth-day*. The like is done by other Bishops in all parts of the Realme.

Their manner is also to giue it to their sicke in their greatest extremitie: thinking that it will either recouer them, or sanctifie them to God. Whereby they kill many, through their vnreasonable superstition, as did the Lord *Berris* his onely sonne, at my being at the *Mosko*: whom he

Drinking of Holy-water.

Digitized by Google

Gruell blindnesse of superstition.

he killed (as was said by the Physitians) by powring into him cold Holy-water, and presenting him naked into the Church, to their Saint *Basileo*, in the cold of Winter in an extremitie of sickenesse.

They haue an Image of Christ, which they call *Neruchi*, (which signifieth as much as *Made without hands*) for so their Priests, and superstition withall perswadeth them it was. This in their Processions they carry about with them on high vpon a pole, enclosed within a Pixe, made like a Lanthorne, and doe reuerence to it as to a great mysterie.

Brewing with Holy-water.

At euery brewing their manner is likewise to bring a dish of their woort to the Priest within the Church: which being hollowed by him, is powred into the brewing, and so giueth it such a vertue, as when they drinke of it they are seldome sober. The like they doe with the first fruits of their Corne in Harueſt.

Palm-sunday.

They haue another Ceremony on Palm-sunday, of ancient tradition: what time the Patriarch rideth through the *Mosko*, the Emperour himselfe holding his horse bridle, and the people crying *Hosanna*, and spreading their vpper garments vnder his horse feet. The Emperour hath of the Patriarch for his good seruice of that day two hundred Rubbels of standing pension. Another pageant they haue much like to this, the weeke before the Natiuitie of Christ: when euery Bishop in his Cathedrall Church, setteth forth a shew of the three children in the Ouen. Where the Angell is made to come flying from the roofe of the Church, with great admiration of the lookers on, and many terrible flashes of fire are made with rosen, and gun-powder, by the *Chaldeans* (as they call them) that run about the Towne all the twelue dayes, disguised in their players coats, and make much good sport for the honor of the Bishops pageant. At the *Mosko*, the Emperour himselfe, and the Empresse neuer faile to be at it, though it be but the same matter plaid euery yeere, without any new inuention at all.

Fasts.

Besides their fasts on Wednesdayes, and Fridayes throughout the whole yeere, (the one because they say Christ was sold on the Wednesday, the other because he suffered on the Friday) they haue foure great Fasts or Lents euery yeere. The first, (which they call their great Lent) is at the same time with ours. The second, about Mid-summer. The third, in Harueſt time. The fourth, about Hallontide: which they keepe not of pollicie, but of meere superstition. In their great Lent, for the first weeke, they eat nothing but bread and salt, and drinke nothing but water, neither meddle with any matter of their vocation, but intend their shriuing and fasting only. They haue also three *Vigils*, or *Wakes* in their great Lent, which they call *Stoiania* and the

Vigils.

last Friday their great *Vigil*, as they call it. What time the whole Parish must be present in the Church, and watch from nine a clocke in the Euening, till sixe in the morning, all the while standing, saue when they fall downe and knocke their heads to their Idols, which must bee an hundred and seuentie times iust through the whole night.

Burialls.

About their burialls also, they haue many superstitious and prophane Ceremonies: as putting within the finger of the corps, a letter to Saint *Nicolas*: whom they make their chiefe mediatour, and as it were the porter of heauen gates, as the Papists doe their *Peter*.

In Winter time, when all is couered with snow, and the ground so hard frozen, as that no spade nor pick-axe can enter their manner is not to bury their dead, but to keepe the bodies (so many as die all the Winter time) in an house, in the suburbs, or out-parts of the Towne, which they call *Bohsedom*, that is, *Gods house*: where the dead bodies are pyled vp together, like billets on a woodstacke, as hard with the frost as a verie stone, till the Spring-tide come, and resolueth the frost: what time euerie man taketh his dead friend, and committeth him to the ground.

Moneths minds

They haue besides their yeeres and moneths mindes for their friends departed. What time they haue prayers said ouer the graue by the Priest: who hath a peny ordinary for his paines. When any dieth, they haue ordinary women mourners, that come to lament for the dead partie: and stand howling ouer the body after a prophane and heathenish manner (sometimes in the house, sometimes bringing the body into the back-side, asking him what he wanted, and what he meant to die. They bury their dead, as the party vsed to goe, with coat, hose, bootes, hat, and the rest of his apparell.

Many other vaine and superstitious Ceremonies they haue, which were long and tedious to report. By these it may appeare how farre they are fallen from the true knowledge, and practice of Christian Religion, hauing exchanged the Word of God for their vaine Traditions, and brought all to externall and ridiculous Ceremonies, without any regard of Spirit and Truth, which God requireth in his true worship.

Chap. 16. Of the Emperours domesticke, or priuate behauior.

THe Emperours priuate behauiour, so much as may be, or is meet to bee knowne, is after this manner. Hee riseth commonly about foure a clock in the morning. After his apparrelling and washing, in commeth his ghostly Father, or Priest of his chamber, which is named in their tongue, *Otetz Duhouna*, with his Crosse in his hand, wherewith he blesseth him, laying it first on his forehead, then vpon his cheekes, or sides of his face, and then offereth him the end of it to kisse. This done, the Clerke of the Crosse (called *Chresby Deyack Profery*) bringeth into

into his Chamber, a painted Image, representing the Saint for that day; for euery day with them hath his *seuerall Saint*, as it were the Patrone for that day. This hee placeth among the rest of his Image Gods, wherewithall his Chamber is decked, as thicke almost as the wall can beare, with Lampes and Waxe-candles burning before them. They are very costly and gorgeously decked with Pearle and Precious Stone. This Image being placed before him, the Emperour beginneth to crosse himselfe after the *Russe* manner; first, on the fore-head, then on both sides of his brest, with *Aspody Pomeluy, Pomeluy mena hospody, sacroy mena gresnick, Syhodestna:* which is as much to say, as, *Helpe me, O Lord my God, Lord comfort me, defend and keepe me a Sinner from doing euill, &c.* This he directeth towards the *Image*, or *Saint for that day*, whom hee nameth in his Prayer, together with our Lady (whom they call *Prochestie*) Saint *Nicholas*, or some other, to whom he beareth most deuotion, bowing himselfe prostrate vnto them, with knocking his head to the very ground. Thus he continueth the space of a quarter of an houre or thereabouts. His priuate Prayer.

Then commeth againe the Ghostly Father or Chamber Priest, with a Siluer Bowle full of *Holy-water*, which they call in *Russe*, *Sweta Voda*, and a sprinkle of Basill (as they call it) in his hand: and so all to besprinkleth first the Image Gods, and then the Emperour. This Holy-water is brought fresh euery day from the Monasteries, farre and neere sent to the Emperour from the Abbot or Prior, in the name of the Saint, that is Patrone of that Monastery, as a speciall token of good will from him.

These Deuotions being ended, he sendeth into the Empresse, to aske whether she hath rested in health, &c. And after a little pawses goeth himselfe to salute her in a middle Roome betwixt both their chambers. The Empresse lyeth a-part from him, and keepeth not one chamber, nor Table with the Emperour ordinarily, saue vpon the Eue of their Lents, or common Fasts: what time she is his ordinary Gheſt at Bed and Boord. After their meeting in the morning, they goe together to their priuate Church or Chappell, where is said or sung a morning Seruice (called *Zautrana*) of an houre long or thereabouts. From the Church hee returneth home, and sitteth him downe in a great chamber, to be seene and saluted by his Nobilitie, such as are in fauour about the Court. If he haue to say to any of them, or they to him, then is the time. And this is ordinary, except his health, or some other occasion alter the custome. The Emperour giueth presence euery morning.

About nine in the morning, he goeth to another Church within his Castle: where is sung by Priests, and Choristers, the high Seruice (called *Obeadna*, or *Complin*) which commonly lasteth two houres: the Emperour in the meane-time talking commonly with some of his Councell, Nobilitie, or Captaynes, which haue to say to him, or he to them. And the Councell likewise conferre together among themselues, as if they were in their Councel-house. This ended, he returneth home, and recreateth himselfe vntill it be Dinner time.

He is serued at his Table on this manner. First, euery Dish (as it is deliuered at the Dresser) is tasted by the Cooke, in the presence of the high Steward, or his Deputie. And so is receiued by the Gentlemen-wayters (called *Shilshey*) and by them carryed vp to the Emperours Table, the high Steward or his Deputie going before. There it is receiued by the Sewer (called *Erastnoy*) who giueth a taste of euery Dish to the Taster, and so placeth it before the Emperour. The number of his Dishes for his ordinary Seruice, is about seuenty: dressed somewhat grosly, with much Garlike, and Salt, much after the *Dutch* manner. When hee exceedeth vpon some occasion of the day, or entertainment of some Ambassadour, hee hath many more Dishes. The Seruice is sent vp by two Dishes at a time, or three at the most, that he may eate it warme, first the baked, then the Roast meats, and last the Broths. In his dining chamber is another Table: where sit the chiefe of his Nobility that are about his Court, and his Ghostly Father, or Chapleine. On the one side of the chamber standeth a Cubboord, or Table of Plate, very faire and rich, with a great Cisterne of Copper by it, full of Ice and Snow, wherein stand the Pots that serue for that meale. The Taster holdeth the cup that he drinketh in all Dinner time, and deliuereth it vnto him with a say, when he calleth for it. The manner is to make many Dishes out of the Seruice after it is set on the Table, and to send them to such Noblemen and Officers as the Emperour liketh best. And this is counted a great fauour and honour. The Emperors Seruice at his Table.

After dinner he layeth him down to rest, where commonly he taketh three houres sleep, except he employ one of the houres to bathing, or boxing: And this custome for sleeping after Dinner, is an ordinary matter with him, as withall the *Russes*. After his sleep, he goeth to Euen-song (called *Vecherna*) and thence returning, for the most part recreateth himselfe with the Empresse till Supper time, with Iesters and Dwarfes, men and women, that tumble before him, and sing many Songs after the *Russe* manner. This is his common recreation betwixt meales that he most delights in. One other speciall recreation, is the fight with wild Beares, which are caught in Pits or Nets, and are kept in barred Cages for that purpose, against the Emperour bee disposed to see the pastime. The fight with the Beare is on this sort. The man is turned into a Circle walled round about, where hee is to quite himselfe so well as hee can: for there is no way to flye out. When the Beare is turned loose, he commeth vpon him with open mouth; if at the first push he misse his ayme, so that the Beare come within him, hee is in great danger. But the wilde Beare Beare bayting.

Digitized by Google

being very scarce, hath this quality, that giueth aduantage to the Hunter. His manner is, when he assayleth a man, to rise vp right on his two hinder-legs, and so to come roaring with open-mouth vpon him. And if the Hunter then can push right into the very brest of him betwixt his fore-legs (as commonly he will not misse) resting the other end of their Boare-speare at the side of his foot, and so keeping the Pike still towards the face of the Beare, hee speedeth him commonly at one blow. But many times these Hunters come short, and are either slaine, or miserably torne with the Teeth and Talents of the fierce Beast. If the partie quite himselfe well in this fight with the Beare, he is carried to drinke at the Emperours Seller doore: where he drinketh himselfe drunke for the honour of *Hospodare*. And this is his Reward for aduenturing his life, for the Emperours pleasure. To maintayne this pastime, the Emperour hath certayne Huntsmen that are appointed for that purpose to take the wild Beare. This is his recreation commonly on the holy dayes. Sometimes hee spendeth his time in looking vpon his Gold-smithes and Iewellers, Taylors, Embroyderers, Painters, and such like, and so goeth to his Supper. When it draweth towards Bed-time, his Priest saith certayne Prayers: and then the Emperour blesseth and crosseth himselfe, as in the morning for a quarter of an houre or thereabouts, and so goeth to his Bed.

Emperour *Theodore* described.

The Emperour that now is (called *Theodore Iuanowich*) is for his person of a meane stature, some-what low and grosse, of a sallow complexion, and inclining to the Dropsie, Hawke-nosed, vnsteady in his pase, by reason of some weakenesse of his limmes, heauy and vnactiue, yet commonly smiling almost to a laughter. For qualitie otherwise, simple and slow witted, but very gentle, and of an easie nature, quiet, mercifull, of no martiall disposition, nor greatly apt for matter of Policie, very Superstitious, and infinite that way. Besides his priuate Deuotions at

Pilgrimage.

home, he goeth euery weeke commonly on Pilgrimage, to some Monasterie or other that is neerest hand. He is of thirtie foure yeeres old, or thereabouts, and hath reigned almost the space of six yeeres.

Chap. 27. Of the Emperors priuate, or houshold Officers.

THe chiefe Officers of the Emperours houshold, are these which follow. The first, is the Office of the *Boiaren Conesheua*, or Master of the Horse. Which contayneth no more then is expressed by the name, that is, to be Ouer-seer of the Horse, and not *Magister Equitum*, or Master of the Horsemen. For he appointeth other for that Seruice, as occasion doth require (as before was said.) He that beareth that Office at this time, is *Borris Federowich Godonoe*, Brother to the Empresse. Of Horse for Seruice in his Warres (besides other for his ordinary vses) he hath to the number of 10000. which are kept about *Mosko*.

Master of the Horse.

The Lord Steward.

The next is the Lord Steward of his houshold at this time, one *Gregorie Vasilowich Godonoe*.

The Lord Treasurer.

The third, is his Treasurer, that keepeth all his Moneyes, Iewels, Plate, &c. now called *Stepan Vasilowich Godonoe*.

Comptroller.

The fourth, his Comptroller, now *Andreas Petrowich Clesinine*.

Chamberlaine

The fift, his Chamberlaine. He that attendeth that Office at this time, is called *Esteoma Besabroza Pastelnischay*.

Tasters.

The sixt, his Tasters, now *Theodore Alexandrowich*, and *Iuan Vasilowich Godonoe*.

Harbengers.

The seuenth, his Harbengers, which are three Noblemen, and diuers other Gentlemen that do the Office vnder them. These are his ordinary Officers, and Offices of the chiefest account.

Gentlemen of the Chamber.

Of Gentlemen, beside that wait about his Chamber, and Person (called *Shilsey Strapsey*) there are two hundred, all Noblemens Sonnes.

The Guard.

His ordinary Guard is two thousand *Hagbutters*, ready with their Peeces charged, and their Match lighted, with other necessary Furniture, continually day and night: which come not within the house, but waite without in the Court or Yard where the Emperour is abiding. In night time there lodgeth next to his Bed-chamber, the chiefe Chamberlaine, with one or two more of best trust about him. A second chamber off, there lodge six other of like account, for their trust and faithfulnesse. In the third chamber lye certayne

Groomes.

young Gentlemen, of these two hundred, called *Shilsey Strapsey*, that take their turne by forties euery night. There are Groomes besides that watch in their course, and lye at euery gate and doore of the Court, called *Estopnick*.

The *Hag-butters* or Gunners, whereof there are two thousand (as was said before) watch about the Emperours Lodging, or Bed-chamber, by course two hundred and fiftie euery night, and two hundred and fiftie more in the Court-yard, and about the Treasure-house. His Court or house at the *Mosko*, is made Castle-wise, walled about with great store of faire Ordnance planted vpon the wall, and contayneth a great breadth of ground within it, with many dwelling houses. Which are appointed for such as are knowne to be sure, and trustie to the Emperour.

Chap. 28. Of the priuate behauiour, or qualitie of the *Russe* people.

THe priuate behauiour and qualitie of the *Russe* people, may partly be vnderstood by that which hath beene sayd, concerning the publike State and vsage of the Countrey. As touching the naturall habit of their bodies, they are for the most part of a large size, and of very fleshly bodies: accounting it a grace to be somewhat grosse and burley, and therefore they nourish and spread their Beards, to haue them long and broad. But for the most part they are very vnweldy, and vnactiue withall. Which may bee thought to come partly of the Climate, and the numbnesse which they get by the cold in Winter, and partly of their Dyet that standeth

Constitution of their bodies.

most

Digitized by Google

moſt of Roots, Onions, Garlike, Cabbage, and ſuch like things that breed groſſe humours, which they vſe to eate alone, and with their other meates.

Their Dyet is rather much, then curious. At their Meales they beginne commonly with a *Chark*, or ſmall cup of *Aqua-vitæ* (which they call *Ruſſe* Wine) and then drinke not till towards the end of their Meales, taking it in largely, and all together with kiſſing one another at euery pledge. And therefore after Dinner there is no talking with them, but euery man goeth to his bench to take his after-noones ſleepe, which is as ordinary with them as their nights reſt. When they exceed, and haue varietie of Diſhes, the firſt are their baked meates (for roaſt meats they vſe little) and then their Broaths or Pottage. To drinke drunke, is an ordinary matter with them euery day in the Weeke. Their common Drinke is *Mead*, the poorer ſort vſe water, and a thin Drinke called *Quaſſe*, which is nothing elſe (as wee ſay) but *water turned out of his wits*, with a little Bran meaſhed with it.

Their Dyet. Drinking and kiſſing. Sleeping.

This Dyet would breed in them many Diſeaſes, but that they vſe Bath-ſtoues, or Hot-houſes in ſtead of all Phyſicke, commonly twice or thrice euery Weeke. All the Winter time, and almoſt the whole Summer, they heate their *Peaches*; which are made like the *Germane* Bath-ſtoues, and their *Potlads* like Ouens, that ſo warme the Houſe, that a ſtranger at the firſt ſhall hardly like of it. Theſe two extremities, ſpecially in the Winter of heate within their Houſes, and of extreame cold without, together with their Dyet, maketh them of a darke and ſallow complexion, their ſkinnes being tanned and parched both with cold and with heat: ſpecially the women, that for the greater part are of farre worſe complexions then the men. Whereof the cauſe I take to be their keeping within the Hot-houſes, and buſying themſelues about the heating, and vſing of their Bath-ſtoues and *Peaches*.

Bath ſtoues.

The *Ruſſe* becauſe that he is vſed to both theſe extremities of heate and of cold, can beare them both a great deale more patiently then ſtrangers can doe. You ſhall ſee them ſometimes (to ſeaſon their bodies) come out of their Bath-ſtoues all on a froth, and fuming as hote almoſt as a Pigge at a Spit, and preſently to leape into the Riuer ſtarke naked, or to powre cold water all ouer their bodies, and that in the coldeſt of all the Winter time. The women to mend the bad hue of their ſkinnes, vſe to paint their faces with white and redde colours, ſo viſibly that euery man may perceiue it. Which is made no matter, becauſe it is common, and liked well by their Husbands: who make their Wiues and Daughters an ordinary allowance to buy them colours to paint their faces withall, and delight themſelues much to ſee them of foule women to become ſuch faire Images. This parcheth the ſkinne, and helpeth to deforme them when their painting is of.

Extremities. Women-dawbers.

They apparell themſelues after the *Greeke* manner. The Noblemans attyre is on this faſhion. Firſt, a *Taffia*, or little night cap on his head, that coureth little more then his crowne, commonly very rich, wrought of Silke and Gold Thread, and ſet with Pearle and Precious Stone. His head he keepeth thauen cloſe to the very ſkin, except he be in ſome diſpleaſure with the Emperour. Then he ſuffereth his haire to grow and hang downe vpon his ſhoulders, couering his face as vgly and deformedly as he can. Ouer the *Taffia* he weareth a wide Cap of blacke Foxe (which they account for the beſt Furre) with a *Tiara*, or long Bonnet put within it, ſtanding vp like a *Perſian* or *Babylonian* Hat. About his necke (which is ſeene all bare) is a Coller ſet with Pearle and Precious Stone, about three or foure-fingers broad. Next ouer his ſhirt (which is curiouſly wrought, becauſe hee ſtrippeth himſelfe into it in the Sommer-time, while hee is within the houſe) is a *Shepon*, or light Garment of Silke made downe to the knees, buttoned before; and then a *Caftan* or a cloſe Coat buttoned, and girt to him with a *Perſian* Girdle, whereat he hangs his Kniues and Spoone. This commonly is of Cloth of Gold, and hangeth downe as low as his ankles. Ouer that he weareth a looſe Garment of ſome rich Silke, furred and faced about with ſome Gold Lace, called a *Ferrii*. Another ouer that of Chamblet, or like Stuffe called an *Alkaben*, ſleeued and hanging low, and the Cape commonly brooched, and ſet all with Pearle. When he goeth abroad, he caſteth ouer all theſe (which are but ſleight, though they ſeeme to be many) another Garment called an *Honoratkey*, like to the *Alkaben*, ſaue that it is made without a Coller for the necke. And this is commonly of fine Cloth, or Camels haire. His Buskins (which hee weareth in ſtead of Hoſe, with Linnen Folles vnder them, in ſtead of Boot-hoſe) are made of a *Perſian* Leather called *Saphian*, Embroydered with Pearle. His vpper ſtocks commonly are of Cloth of Gold. When he goeth abroad, hee mounteth on Horſe-backe, though it bee but to the next doore: which is the manner alſo of the *Boiarskey*, or Gentlemen.

The Noblemans attyre.

The *Boiarskey*, or Gentlemans attyre is of the ſame faſhion, but differeth in Stuffe: and yet he will haue his *Caftan* or Vnder-coat ſometimes of Cloth of Gold, the reſt of Cloth of Silke.

The Gentlemans apparell.

The Noble woman (called *Chyna Boiarſhena*) weareth on her head, firſt a Caull of ſome ſoft Silke (which is commonly called Red) and ouer it a Fruntlet, called *Obroſa*, of white colour. Ouer that her Cap (made after the Coife-faſhion of Cloth of Gold) called *Shapka Zempska*, edged with ſome rich Furre, and ſet with Pearle and Stone. Though they haue of late begun to diſdaine Embroydering with Pearle about their Caps, becauſe the *Diacks*, and ſome Merchants Wiues haue taken vp the faſhion. In their eares they weare Earerings (which they call

The Noblewomans attire.

Digitized by Google

Sargee) of two Inches or more compaſſe, the matter of Gold ſet with Rubies, or Saphires, or ſome like Precious Stone. In Sommer they goe often with Kerchiefs of fine white Lawne, or Cambricke, faſtned vnder the chinne, with two long Taffels pendent. The Kerchiefe ſpotted and ſet thicke with rich Pearle. When they ride or goe abroad in raynie weather, they weare white Hats with coloured bands (called *Stapa Zempskoy.)* About their neckes they weare Collers of three or foure-fingers broad, ſet with rich Pearle and Precious Stone. Their vpper Garment is a looſe Gowne called *Opoſhen*, commonly of Scarlet, with wide looſe ſleeues, hanging downe to the ground buttened before with great Gold Buttons, or at leaſt Siluer and gilt, nigh as bigge as a Wal-nut. Which hath hanging ouer it faſtned vnder the Cap, a large broad Cape of ſome rich Furre, that hangeth downe almoſt to the midſt of their backes. Next vnder the *Opoſken* or vpper Garment, they weare another called a *Leitwick* that is made cloſe before with great wide ſleeues, the cuffe or halfe ſleeue vp to the elbowes, commonly of Cloth of Gold: and vnder that a *Ferris Zemskoy*, which hangeth looſe buttoned throughout to the very foot. On the hand wreſts they weare very faire Bracelets, about two fingers broad of Pearle and Precious Stone. They goe all in Buskins of White, Yellow, Blue, or ſome other coloured Leather, embroydered with Pearle. This is the attyre of the Noble-woman of *Ruſſia*, when ſhee maketh the beſt ſhew of herſelfe. The Gentlewomans apparell may differ in the Stuffe, but is all one for the making or faſhion.

The *Mouſicks* or common mans attire.

As for the poore *Mouſick* and his Wife they goe poorely clad. The man with his *Odnoratkey*, or looſe Gowne to the ſmall of the legge, tyed together with a Lace before, of courſe white or blue cloth, with ſome *Shube* or long Waſt-coat of Furre, or of Sheep-skinne vnder it, and his furred Cap, and Buskins. The poorer ſort of them haue their *Odnoratkey*, or vpper Garment, made of Cowes haire. This is their Winter Habit. In the Sommer time, commonly they weare nothing but their ſhirts on their backes, and Buskins on their legs. The woman goeth in a red or blue Gowne, when ſhe maketh the beſt ſhew, and with ſome warme *Shube* of Furre vnder it in the Winter time. But in the Sommer, nothing but two ſhirts (for ſo they call them) one ouer the other, whether they be within doores, or without. On their heads, they weare Caps of ſome coloured Stuffe, many of Veluet, or of Cloth of Gold: but for the moſt part Kerchiefes. Without Earings of Siluer or ſome other Metall, and her Croſſe about her neck, you ſhall ſee no *Ruſſe* woman, be ſhee Wife, or Maide.

Their wits and capacities.

As touching their behauiour, and qualitie, otherwiſe, they are of reaſonable capacities, if they had thoſe meanes that ſome other Nations haue to trayne vp their wits in good Nurture, and Learning. Which they might borrow of the *Polonians*, and other their Neighbours, but that they refuſe it of a very ſelfe-pride, as accounting their owne faſhions to be farre the beſt. Partly alſo (as I ſaid before) for that their manner of bringing vp (void of all good Learning, and Ciuill behauiour) is thought by their Gouernours moſt agreeable to that State, and their manner of Gouernment. This cauſeth the Emperours to bee very wary for excluding of all Peregrinitie, that might alter their faſhions. Which were leſſe to bee diſliked, if it ſet not a print into the very minds of his people. For as themſelues are very hardly and cruelly dealt with all by their chiefe Magiſtrates, and other Superiours, ſo are they as cruell one againſt another, ſpecially ouer their inferiours, and ſuch as are vnder them. So that the baſeſt and wretchedeſt *Chriſtianos* (as they call him) that ſtoopeth and croucheth like a Dogge to the Gentleman, and licketh vp the duſt that lyeth at his feet, is an intollerable Tyrant, where hee hath the aduantage. By this meanes the whole Countrey is filled with Rapine, and Murder. They make no account of the life of a man. You ſhall haue a man robbed ſometime in the very ſtreets of their Townes, if he goe late in the Euening; and yet no man to come forth out of his doores to reſcue him, though he heare him cry out. I will not ſpeake of the ſtrangeneſſe of the Murders, and other cruelties committed among them, that would ſcarſly be beleeued to be done among men, ſpecially ſuch as profeſſe themſelues *Chriſtians*.

Crueltie of the *Ruſſe* people.

The number of their vagrant and begging poore is almoſt infinite: that are ſo pinched with Famine and extreame need, as that they begge after a violent and deſperate manner, with *Giue me and cut me. Giue me and kill me*; and ſuch like Phraſes. And yet it may be doubted whether is the greater, the Crueltie or Intemperancie that is vſed in that Countrey. I will not ſpeake of it, becauſe it is ſo foule and not to be named. The whole Countrey ouerfloweth with all ſinne of that kind. And no maruell, as hauing no Law to reſtraine Whoredomes, Adulteries, and like vncleanneſſe of life.

Intemperancy.

As for the truth of his word, *as ſome ſay*, the *Ruſſe* neither beleeueth any thing that another man ſpeaketh, nor ſpeaketh any thing himſelfe worthy to bee beleeued. Theſe qualities make them very odious to all their Neighbours, ſpecially to the *Tartars*, that account themſelues to be honeſt and juſt, in compariſon of the *Ruſſe*. It is ſuppoſed by ſome that doe well conſider of the State of both Countries, that the offence they take at the *Ruſſe* Gouernment, and their manner of behauiour, hath beene a great cauſe to keepe the *Tartar* ſtill Heatheniſh, and to miſlike as he doth of the Chriſtian profeſſion.

To the Reader.

I *Thought good here to giue an account of my course. Hauing spent much time in that other* World, *so little known to* This (Tartaria *and* China) *that the parts least known might be made best known: I haue comne neerer home, to* Russia, *and her neighbours, the neerer; or* Chrim Tartars, *the* Samoyeds, *and others; whereof Doctor* Fletchers *Story being so elaborate (where, though the centre bee* Russia, *yet his circumference is more generall) and by men iudicious which haue in those parts enioyed most honourable employment, and exactest intelligence, commended; I haue giuen him the first place. And if some terme bee mollified, or some few things omitted, it is not to defraud Thee of the Historie (which for substance is whole, as by perusall is found) but not to defraud our industrious Countrymen in their merchandizing mysterie, wherein some perhaps would hence seeke occasion of undermining. For like cause I haue giuen the next place to Captaine* Edge, *(the one out gowned Generall by Land, the other in his generall Historie also by Sea) as deserued by his ten yeeres Voyages, and his other Merits. As for the question of* Willoughbies *Land, I list not to dispute it; but I thinke, neither* Hollander *(as is also confessed by the* French *Booke, called, The Historie of* Spitsberghe [a] *on the* Dutch *behalfe) nor any other haue found any such Lands as his Storie describes, but some part of those which now with a generall name wee call,* Greenland *(howsoeuer the makers of Maps and Globes may create Lands and Ilands at pleasure, especially in vnknowne places) and the first setled, ordinary, and orderly Voyages for the Whale-killing, and the most for discouerie in those parts haue beene made by the* English, *their gaynes awakening the* Hollander *to that enterprise, and that also (as elsewhere in the World) by* English *guides. That which I most greeue at in this contention, is the detention of further discouery to the Pole and beyond (where it is not likely to be colder then here, and at the Arctike circle: as in the Red Sea,* Ormus, *and the Countrey about* Balsara *on this side the Tropike, is found greater heat then vnder the Line it selfe) the desire of gayne euery where causing debate, and consequently losse of the best gaine both in Earth and Heauen. Merchants might get the World, and giue vs the World better, if* Charitie *were their* Needle; Grace, *their* Compas; Heauen *their* Hauen, *and if they would take their* height *by obseruing the* Sunne of Righteousnesse *in the* Scripture-astrolabe, *and sounding their depth by a* Leading Faith, *and not by a* Leadden bottomlesse Couetousnesse: *that is,* if they would seeke the Kingdome of Heauen first, all things should bee added; *they should finde World enough in the* Indian, *and Polare Worlds, and wee and they should arriue at better knowledge of the Creator and Creatures. And of all men (that I may a little further answere that Historie of* Spitsberghe) *I would be glad to see agreement betwixt the* English *and* Dutch, *both because I honour that Nation, as hath appeared in this whole worke of Voyages, in which and of which the* Dutch *are so great a part: and because in Region, Religion, Originall Nation, ingenious and ingennous disposition, and (that which here brings both on our Stage) the glory of Nauigation, they are so neere vs, and worthie to be honored. It is true that euery where the* English *hath beene the elder Brother, a Doctor, and Ductor, to the* Hollanders, *in their* Martiall *feats at home, and* Neptunian *exploits abroad, (that I mention not their permitted wealthie fishing on the* English *shoare) whom had they followed with as true and due respect, as with happie successe; quarrels had not so distracted and distorted both sides. I appeale to* Dutch *ingenuitie, if euer they did any thing wholly New (but giue* names) *in remotest Nauigations, without* English *lights.* Columbus *an* Italian *had the honour of finding* America, *and the* Spaniards *the happinesse. But for the North* America, *and the whole Northern New World,* Cabota [b] *borne or bred at least in* England, *was either Actor or Author. For the* Dutch, *I haue shewed, for the compassing of the World, and for the East* Indies *before, that our* Drake, Candish, Mellis, Dauis, Adams, *&c. were their Fore-runners, Pilots, and Guides: Yea, their* New-found Land *Voyages, and all the Northerne coast of* America *were discouered by* Sebastian Cabota, *and other* Englishmen. *I adde their* New Straights *Southwards from those of* Magelane *were discouered before by* Drake, *as in the Map of Sir* Francis Drakes *Voyage presented to Queene* Elizabeth, *still hanging in His Maiesties Gallerie at* White Hall, *neere the Priuie Chamber, and by that Map wherein is* Cabotas *Picture, the first and great* Columbus *for the Northerne World) may be seene. In which Map, the South of the* Magelane Straits *is not a Continent, but many Ilands, and the very same which they haue stiled in their* Straits. Barneuels *Ilands had long before beene named by the most auspicate of Earthly Names, (and let themselues be Iudges, with which the other is as little worthie to be mentioned, as a kind Mother, and an vnkind Traitor. The Name* Elizabeth [c] *is expressed in golden Letters, with a golden Crowne, Garter, and Armes affixed: The words ascribed thereunto are these,* Cum omnes ferè hanc partem Australem Continentem esse putent, pro certo sciant Insulas esse Nauigantibus peruias, earumq; australissimam ELIZABETHAM à D. *Francisco Draco* Inuentore dictam esse. *The same height of* 57. *degrees, and South-easterly situation from the* Magelan *Westerne Mouth giue further euidence. And my learned friend Master* Brigges *told me, that he hath seene this plot of* Drakes *Voyage cut in*

[a] *H. G. A.* in confutation of the *English* assertion for *Willoughby*, sayth, *Il est bien vray que nos Mariniers n'ont trouue au dit lieu de* 72. *degrees aulcun Pays.* 72. in Sir *Hugh Willoughbies* Booke perhaps was mistaken for 77. their figure of 7. and that of 2. in old writing, being very like each other, so that the last 7. with a little touch of the running Pen might appeare. 2. His hand, I am sure, is of the old fashion of that time, as appeares by a Will I haue with his hand, and perhaps all of his hand. Some *English* Maps haue made an Iland in that height where none is: and the *Dutch Willebord* Ilesd (which they say are eight in 73.) haue small likelihood: perhaps Sir *Hugh Willoughbie* might misreckon, by not knowing the variation of the Compas and Sea rules: which I take to be most likely,

and *H. G. A.* confesseth also. [b] *Sebastian Cabota* the *English Columbus*, sonne of *Iohn* a *Venetian*, bred heere, and Discouerer for *Henry* the Seuenth, of *America*; and first Gouernour of the *Moscouie* Companie. * Sir *F. Drake* first finder of the S. Sreights, called *Maires*. [c] In the said Map is Queene *Elizabeths* Picture, with *Neptune* yeelding his Trident, and *Triton* sounding her Fame, with these Verses, *Te Deus æquoreus donat Regina Tridente, Et Triton laudes effat vbique tuas.*

Siluer by a Dutchman (Michael Mercator, *Nephew to* Gerardus) *many yeeres before* Scouten *or* Maire *intended that Voyage. As for* Noua Zemla *by* Stephen Burrough, *and others, long before discouered, they also haue giuen new names, which I enuie not: onely I feare a* væ soli, *and hate ingratitude both ours and theirs. But too much of this. Next to this more generall Discourse shall follow the* Dutch *Northerne Voyages, and the* English *North-easterne: after which wee will take a more complementall leaue of that Continent, and from thence visite the Northerly and North-westerne Discoueries; at once hunting for a New World and a New passage to This.*

CHAP. II.

A briefe Discouerie of the Northerne Discoueries of Seas, Coasts, and Countries, deliuered in order as they were hopefully begunne, and haue euer since happily beene continued by the singular industrie and charge of the Worshipfull Society of Muscouia *Merchants of* London, *with the ten seuerall Voyages of Captaine* THOMAS EDGE *the Authour.*

§. I.

Greenland *first discouered by Sir* HVGH WILLOVGHBIE: *the Voyages of* FROBISHER, PET *and* IACKMAN, DAVIS, *the* Dutch; *First Morse and Whale-killing, with further Discoueries.*

W. Gemeticensis de Ducib. Normann.

THE Northerne parts of the World haue euer beene held to be *Officina Gentium & velut Vagina Nationum*, Natures Shop and Store-house of Men, better furnished then any other part of the Earth, and from whence those notable Inundations came first of the *Cymbrians* and *Teutons*, in the time of the antient *Romans*; and secondly of the *Gothes* and *Vandals* vnder *Attila*, to the confusion of things both Diuine and Humane in all the Southerne parts of *Europe*, as farre as Barbarisme could preuaile against Ciuilitie and Religion. For remedie whereof the Townes alongst the *Baltick* Sea entred into a confederacy vnder the names of the *Hans* Townes, and vndertooke the keeping of those Northerne people, and the securing of these Southerne Kingdomes from any the like ouerflowings, vpon such Priuiledges and Immunities as were granted and agreed vnto them by all the Southerne Princes, and according to such Lawes as were made and prouided for the maintenance and strength of the said *Hans* Townes, amongst which the supreme and fundamentall Lawe was that none of these Nations so secured should haue trade or commerce in any parts beyond the *Baltike* Seas, to the end the barbarous people might not bee enabled thereby to practise or moue against the *Hans* Townes: which was the cause together also with the extremitie of cold, that those Northerne Seas were neuer looked vnto vntill the yeere 1553. At which time the trade of this Kingdome waxing cold and in decay, and the Merchants incited with the fame of the great masse of riches which the *Portugals* and *Spaniards* brought home yeerely from both the *Indies*, entred into a resolution, notwithstanding the prohibition of the *Hans* Law to discouer the Northerne Seas, which so long had beene frozen and shut vp; and to see whether they could not affoord a passage to *Cathay* and the East *Indies*, and accordingly prouided three ships, and sent them forth vnder the command of Sir *Hugh Willoughbie*, Knight, who embarqued himselfe in a ship called, the *Bona Esperança*, Admirall of that Voyage, with *Richard Chancellor* Captaine of the *Edward Bonauenture*, together with a third ship, called the *Bona Confidentia*. These three ships falling downe from *Ratcliffe*, the tenth of May in the foresaid yeere went on their Voyage, and proceeding as farre as the Cape of *Norway*, they were seuered by a tempest. *Chancellor* after he had stayed at Ward-house seuen dayes, expecting the Admirall and the other ships, according to a former appointment vpon any such casualtie, and hearing nothing of them, went on, and discouered the Bay of Saint *Nicolas*, and setled a trade there, which hath continued to these times.

Hans Townes.

Cathay. See *l.* 2. *cap.* 1. of this whole Voyage. 212.

Sir *Hugh Willoughbie* was driuen to the height of 72. * where hee fell vpon an Iland, now knowne by the name of *Willoughbies Land*, and lieth from *Sinam* (vpon the Continent of *Norway* East and by North an hundred and sixtie leagues or thereabouts, from thence he went North and North-west, and within eight dayes after he fell vpon a Land which lay West South-west, and East North-east, betweene 74. and 75. degrees of latitude, and plying Westward along by the

* An errour in the latitude, the Land standeth in 77.

Digitized by Google

the Land, he was driuen by the wind to put to Sea againe, vntill the wind came about. Then they made towards the Land againe, and bare with it, but finding that place vnfit for landing, they haled out againe, running along the Land sixteene leagues North-west, where they found a faire Bay, went on Land and found the place inhabited. From thence they put to Sea againe, runne alongst the coast for fortie leagues together, till at length they came to an anchor within two leagues of the shoare, where they landed, and found two or three good Harbours.

Afterwards they entred into the Hauen which ranne vp into the Maine about two leagues, where they remained for the space of a weeke vpon the maine Land. They found Beares, great Deere, Foxes, and other beasts. They sent out three men three dayes iourney to the South-west, and three others also full West, all which returned after diuers dayes trauelling, and found no people nor any likelihood of habitation. And this is that Land which now is called *Greenland*, or King *Iames* his *New-land*, and is knowne to the *Hollanders* by the name of *Spitsbergen*. Sir *Hugh Willoughbie* returned into *Lapland*, where he and his companie were frozen to death, in the Hauen called *Arzina*, neere *Kegor*.

Greenland discouered by Sir *Hugh Willoughbie*. This Voyage was written by Sir *H. Will.* and found in his ship. In Ianuarie after he was aliue, as appeares by a Will of *Gab. Will.* his kinsman, subscribed by Sir *Hug. Willoughbie* which Will I now haue, and keepe as a Relike of that worthie discouerer and first finder of King *Iames* his *New-land*.

The *Muscouia* Merchants hauing thus setled a trade in *Russia*, and being incorporated by the name of, The Merchants of *England*, for the discouerie of new trades, pursued their first resolutions for finding a way to *Cathay* by the North-east, and in the yeere 1556. sent out *Stephen Burrough*, for discouerie of the Riuer *Obb*, who proceeding forwards in that Voyage discouered the Riuer *Pechora*, the Streights of *Vaigats* and *Nouazembla* *; went on shoare vpon the Iland of *Vaigats*, and vpon the North Continent of *Russia*; met with the *Samoeds*, obserued their manner of life, their Religion, their Sacrifices to their rude and ill shaped Idols; and the yeere being spent, returned into *Russia*.

* See *Hackl. V tom. 1. pag. 274.*

The Companie hauing sought for the North-east passage, and finding such difficulties as are mentioned in their particular Iournals, resolued to make triall, if the North-west part could not affoord a passage to the *Indies*, which was the first and maine scope of their Northerne Discoueries. And in the yeere 1576. they sent forth Sir *Martin Frobisher* with two Barkes, who comming into the height of 62. or thereabouts, found a great Inlet, now knowne by the name of *Frobishers Streights*, into which he put himselfe, and sayled sixtie leagues with a mayne Land on each side, and so for that yeere returned. 1576. Sir *M. Frobisher Hakl. tom. 3. 29. & seqq.*

The next yeere following he made a second Voyage to that place, purposely to lade himselfe with a kind of Oare, which the yeere before he had found there, and gaue hope by the colour to yeeld Gold, and being laden with some quantitie, returned.

The yeere following, being 1578. hauing made tryall here of that Oare, and finding it not to fall out according to his expectation, hee was furnished out to proceed in the further discouerie of those Streights, and entring into the same, made way so farre as hee thought fit, and then returned backe, hauing first taken possession thereof in the name of Queene *Elizabeth* of famous memorie, who called the place *Meta incognita*: he brought home some of the Natiues, and left some of his men there. 1578.

In the yeere 1580. the Companie sent out a second Voyage for the discouerie of the Riuer *Obb*, and thence to goe on to *Cathay*; furnishing forth two ships vnder the command of *Arthur Pet*, and *Charles Iackman*, who following their instructions, arriued at *Vaigats*, passed those Streights with a particular obseruation of those Ilands and places therein, plyed along the East part of *Nouazembla*, and the North of *Russia*, and the *Samoeds* Countrey, so farre as the Ice would giue them leaue, and finding no possibilitie of passage by reason of the Ice, returned backe in the latter end of the yeere. By this time the Voyage of Saint *Nicolas* was knowne, and become a beaten trade. And the Companie sent out yeerely thither ten or twelue ships, which returned fraighted with the commodities of that Countrey. 1580. *Pet* and *Iackman. Hak. to. 1. p. 445.*

In the yeere 1583. by the leaue and admittance of the *Moscouia* Companie, Sir *Humfrey Gilbert* went out for the discouerie of the North part of *Terra Florida*, came into the great Riuer called, Saint *Laurence* in *Canada*, tooke possession of the Countrey, setled the gouernment of the fishing there which is so well knowne in these times. 1583. Sir *H. Gilbert Hak. to. 3. p. 143.*

In the yeere 1585. Master *Iohn Danis* was furnished out at *Dartmouth* with two Barkes, for the discouerie of the North-west, came into the height of 66. plyed along the coast, obserued the probabilitie of a passage, and in the end of the yeere returned. 1585. Master *Danis Hak. to. 3. p. 98. & seq.*

In the yeere following, being 1586. hee went on againe in the further discouerie thereof, found a great Inlet betweene 55. and 56. of latitude, which gaue him great hope of a passage, traded with the people there, and so returned. 1586.

In the yeere 1587. hee made a third Voyage to those places, followed his course to the North and North-west, to the Latitude of 67. degrees, hauing the Continent (which hee called *America*) on the West side and *Groineland*, which hee named *Desolation* on the East, and going on the height of 86. degrees, the passage enlarged so that hee could not see the Westerne shoare. Thus he continued in the Latitude of 73. degrees in a great Sea free from Ice, of an vnmeasurable depth, but by the occasion of the departure of two Ships which were in company with him, which 1587.

Digitized by Google

which hee left Fiſhing at a place, he returned home. This paſſage continueth the Name and memorie of the firſt Diſcouerer, and is called *Fretum Dauis*. And thus the Diſcouerie of the Northern Seas proceeded on from time to time, by the endeauour and charge of the *Muſcouia* Companie, vntill they had particularly diſcouered the Lands, Coaſts, Ilands, Straights, Hauens, Bayes, Riuers and other places therein, and meaſured euery part thereof, by their often tracing to and fro: Together alſo with the obſeruation of the Commodities and Aduantages, ariſing from euery part of the ſame, continuing euen vnto theſe times to haunt and frequent the parts which they had formerly found out; As by their yeerely Reportaries and Iournals may appeare, and that either without emulation or competition of any other Nation, that euer came into thoſe parts or enterpriſed any Diſcouerie there vntill of late yeeres, as appeares by this that followeth.

Fretum Dauis.

When *Richard Chancelor* had ſetled a trade with *Iohn Vaſilowich* then Emperour of *Ruſſia*, and his Ambaſſadours had beene heere in *England*, to accompliſh matters requiſite for maintenance of the Amitie and Entercourſe made and agreed vpon betweene theſe two Crownes; King *Philip*, Queene *Marie*, Dukes alſo at that time of *Burgundie*, and Soueraignes of all the *Netherlands*, made a grant of Priuiledge vnto the *Muſcouia* Merchants for the ſole Trade of thoſe Seas, prohibiting all others to haunt and frequent the ſame, without ſpeciall Licence and conſent of the ſayd Companie: which grant of Priuiledge was accordingly enioyed without diſturbance or interloping of the *Hollanders*, who out of obedience either to the Prohibition made by their Soueraigne, or for that they durſt not aduenture into theſe Seas, did not any way attempt to bee ſeene or appeare there, either for Diſcouerie or trade of Merchandize, for the ſpace of fiue and twentie yeeres, after the Port of Saint *Nicholas* was firſt Diſcouered and found out by the *Engliſh*. For the Company hauing as is aboue mentioned, made their firſt Diſcouerie in the yeere 1553. there was neuer heard of any *Netherlander* that frequented thoſe Seas, vntill the yeere 1578. At which time they firſt began to come to *Cola*, and within a yeere or two after, one *Iohn de Whale* a *Netherlander*, came to the Bay of Saint *Nicholas*, being drawne thither by the perſwaſion of ſome *Engliſh* for their better meane of Interloping, which was the firſt man of that Nation that euer was ſeene there. And this as is formerly noted was fiue and twentie yeeres after it was Diſcouered by the *Muſcouia* Merchants.

Hak. Tom. 1. pag. 297.

25.

1553.

1578.

25.

Afterwards the *Hollanders* crept in more and more, and in the yeere 1594. they made out foure Ships for Diſcouerie of the North-eaſt paſſage to *China*, the Maſter Pylot whereof was *William Barrents*, theſe came vpon the Coaſt of *Nouazembla* to the Latitude of 77. degrees, drew backe againe towards the Straights of *Vaigats*, and then returned giuing Names vnto ſome places and Promontories vpon that Land.

1594. Theſe Voiages follow.

In the yeere 1595. They ſent out a ſecond Voyage, tracing the way through the Straights of *Vaigats* in the ſame ſteps, as *Pet* and *Iackman* had formerly paſſed, and ſo returned.

1595.

In the yeere 1596. They ſet out a third Voyage with two Ships, the one of which ſhaped her courſe from the Cape of *Norway*, to an Iland in the Latitude of 74. degrees, which wee call *Cherie Iland*, and they call *Beare Iland*, and from thence to *Greenland*, where Sir *Hugh Willoughbie* had beene two and fortie yeeres before, for ſo long time there is betweene the firſt Diſcouerie thereof and the yeere 1596. And from thence to the North-eaſt part of *Nouazembla*, in the Latitude of 76. degrees, where they Wintred and loſt their Ship, and came home with much difficultie.

1596. I haue by me a *French* Storie of *Spitsbergh*, publiſhed 1613 by a *Dutchman* which writeth againſt this *Engliſh* allegation, &c. but hotter arguments then I am willing to anſwer.

In the yeere 1603. *Stephen Bennet* was imployed by the Companie, in a Ship called the *Grace*, to thoſe parts Northwards of the Cape, and was at *Cherie Iland* and killed ſome Sea-horſes, and brought home Lead Oare from thence.

In the yeere 1608. the ſaid fellowſhip ſet foorth a Ship called the *Hope-well*, whereof *William Hudſon* was Maſter, to diſcouer to the Pole, where it appeareth by his Iournall, that hee came to the height of 81. degrees, where he gaue Names to certayne places, vpon the Continent of *Greenland* formerly diſcouered, which continue to this day, namely, *Whale Bay*, and *Hackluit Headland*, and being hindred with Ice, returned home without any further vſe made of the Countrey, and in ranging homewards, hee diſcouered an Iland lying in 71. degrees, which hee named *Hudſons Tutches*.

Hudſons Toutches.

Heere it is to bee vnderſtood, that the Companie hauing by often reſort and imployment to thoſe parts, obſerued the great number of Sea-horſes at *Cherie Iland*, and likewiſe the multitude of Whales, that ſhewed themſelues vpon the coaſt of *Greenland*; They firſt applyed themſelues to the killing of the Morces, which they continued from yeere to yeere with a Ship or two yeerely; in which Ships the Companie appointed *Thomas Welden* Commander, and in the yeere 1609. the Companie imployed one *Thomas Edge* their Apprentice, for their Northeren Voyage, and joyned him in Commiſſion with the foreſayd *Welden*. Now the often vſing of *Cherie Iland*, did make the Sea-horſe grow ſcarſe and decay, which made the Companie looke out for further Diſcoueries.

Thomas Welden.
1609.
Thomas Edge the Author.

In the yeere 1610. the Companie ſet out two Ships, *viz.* the *Lioneſſe* for *Cherie Iland*, *Thomas Edge* Commander; and the *Amitie*, for a Northerne Diſcouerie, the Maſter of which Ship was *Ionas Poole*: who in the moneth of May fell with a Land, and called it *Greenland*, this is the

Land

Land that was diſcouered by Sir *Hugh Willoughby* long before, which Ship *Amitie* continued vpon the coaſt of *Greenland*, diſcouering the Harbours and killing of Morces, vntill the moneth of Auguſt, and ſo returned for *England*, hauing gotten about ſome twelue Tunnes of goods, and an Vnicornes * horne.

* See *Baffins* North-weſt Diſcouerie. Vnicorne, a Sea fiſhes Horne.

In the yeere 1611. the Companie ſet foorth two Ships for *Greenland*, the *Marie Margaret* Admirall, burthen one hundred and ſixtie tunnes, *Thomas Edge* Commander; and the *Elizabeth*, burthen ſixtie tunnes, *Ionas Poole* Maſter, well manned and furniſhed with all neceſſarie Prouiſions, they departed from *Blackwall* the twentieth of Aprill, and arriued at the Foreland in *Greenland* in the Latitude of 79. degrees, the twentieth of May following, the Admirall had in her ſix Biskayners expert men for the killing of the Whale: this was the firſt yeere the Companie ſet out for the killing of Whales in *Greenland*, and about the twelfth of Iune the Biskayners killed a ſmall Whale, which yeelded twelue Tunnes of Oyle, being the firſt Oyle that euer was made in *Greenland*. The Companies two Shalops looking about the Harbour for Whales, about the fiue and twentieth of Iune rowing into Sir *Thomas Smith his Bay*, on the Eaſt ſide of the Sound ſaw on the ſhoare great ſtore of Sea-horſes: after they had found the Morſes they preſently rowed vnto the Ship, being in croſſe Road ſeuen leagues off, and acquainted the Captayne what they had found. The Captayne vnderſtanding of it, gaue order to the Maſter, *Stephen Bennet*, that he ſhould take into his Ship fiftie tunnes of emptie Caske, and ſet ſayle with the Ship to goe into *Foule Sound*. The Captayne went preſently away in one Shallop with ſixe men vnto the Sea-morſe, and tooke with him Lances, and comming to them they ſet on them and killed fiue hundred Morſes, and kept one thouſand Morſes liuing on ſhoare, becauſe it is not profitable to kill them all at one time. The next day the Ship being gone vnto the place & well mored where the Morſe were killed, all the men belonging to the Ship went on ſhoare, to worke and make Oyle of the Morſes; and when they had wrought two or three dayes, it fortuned that a ſmall quantitie of Ice came out of *Foule Sound*, and put the Ship from her Moring. The Maſter and ten men being a board of the Ship, let fall their Sheat anchor which brought the Ship vp to ride; the Ice comming vpon her againe, brought her Anchor home and ranne the Ship aſhoare, where ſhee by the Maſters weake Iudgement was caſt away, and all their Bread ſpoyled not fit to eate. The Ship being caſt away without hope of recouerie, the Commander *Thomas Edge* gaue order, that all the Morſe liuing on ſhoare ſhould be let goe into the Sea, and ſo gaue ouer making of Oyle, and preſently haled vp aſhoare all his Shallops and Boates, being fiue, ſetting the Carpenter to trim them, the Saylers to make Sayles and Waſtcloathes for the Boates, fit to ſerue them at Sea. Hauing fitted their Boates as well as they could with the ſmall prouiſion they had, being in number foure ſmall Shallops and the ſhips Boate, they diuided their men into them equally with what prouiſions of victuals they could well carrie, and after they had ſayd Prayers all together on Land; being fiftie men they departed from the place where they loſt their Ship, on the fifteenth of Iuly with the winde Southerly, and rowed thirtie or fortie leagues to the Southward, and then they loſt companie of one Shallop and their ſhips Boate of *Horne Sound*, which two Boates met with a *Hull* Ship, and acquainted him with the loſſe of the *London* Ship, and that ſhee had left on land goods woorth fifteene hundred pounds: So our men carryed the *Hull* Ship into *Foule Sound*, to take in the Companies goods and to kill ſome Sea-horſes for her ſelfe at that place. The Captayne and two other Shallops put from the Coaſt of *Greenland* in the height of 77. ½. Degrees, and ſet their courſe for *Cherie Iland*, which lyeth in 74. Degrees (—) ſometimes Sayling and ſometimes Rowing, and made *Cherie Iland* the nine and twentieth of Iuly, hauing beene in their Shallops at Sea fourteene dayes, and comming into the Iland with a great ſtorme at North-weſt, with much difficultie they landed on the South ſide of the Iland.

First Whales killing. Biſcayners Vſed.

500. Morſes killed.

Shipwracke by Ice.

Hull Ship.

Cherie Iland.

Being on ſhoare, the Captayne ſent three of his Saylers ouer land vnto the North roade, being three miles diſtant from that place, to ſee if the *Elizabeth* was there, and they ſaw a Ship riding in the North roade, and being ouer-joyed they returned backe vnto the Captayne to acquaint him, without ſtaying to ſpeake with any of the Ships companie, and by good hap the Maſter of the *Elizabeth* eſpyed men on the Shoare, being at that time weighing Anchor to ſet ſayle for *England*, vpon which hee ſtayed and ſent the Boate aſhoare to ſee what men they were, and when the men of the *Elizabeth* came aſhoare, they found them to bee men of the *Mary Margaret*, and ſo went aboard vnto the Maſter to acquaint him; whereupon the Maſter cauſed Anchor to bee weighed and went to the South ſide of the Iland, and there tooke in the Captayne, and hee being aboard vnderſtanding what a poore Voyage the *Elizabeth* had made, gaue order to the Maſter to goe for *Greenland*, there to take in ſuch Goods as the ſayd *Edge* had left in *Foule Sound*. They departed from *Cherie Iland* the firſt of Auguſt, and arriued at *Foule Sound* the Fourteenth *Dicto*: where they found two Boates which they had loſt companie of before, and all their men being come thither with a *Hull* Ship which they met with, and brought to that place; which Ship had ſpent all the yeere in *Horne Sound*, and got little goods. The *Elizabeth* being mored, the Captayne gaue order vnto the Maſter to deliuer out of his Ship, all the goods hee had got at *Cherie Iland*, which was Sea-horſe hydes and Blubber, being of little woorth; And to take in the Oyle and Whale-finnes, which were gotten by the *Marie Margarets* companie,

Digitized by Google

Ship ouer-set. panie, the Master in vnlading of his Ship brought her so light, that vnfortunatly hee ouer-set her, hauing goods in her worth seuen hundred pounds. This ill chance happening vnto the two *London* Ships, the Captayne of them agreed with *Thomas Marmaduke* Master of the *Hull* Ship, to take in the goods which was saued, at the rate of fiue pounds the Tunne, which was a great rate (notwithstanding they had beene a meanes to get him goods worth fiue hundred pounds for the *Hull* Ship) and vpon the one and twentieth of August, 1611. they departed from *Greenland* in the *Hope-well*, being ninetie nine men in all, and arriued at *Hull* the sixth of September, where the sayd *Edge* tooke out the Companies goods, and Shipped them for *London* by order from the Companie. This yeere, *Edge* in coasting in the Shallops, discouered all the Harbours on the West side of *Greenland*.

§. II.

Dutch, Spanish, Danish *disturbance*; *also by* Hull *men, and by a new Patent, with the succeeding Successe and further Discoueries till this present.*

1612. IN the yeere 1612. the Companie set forth two Ships, *viz.* The *Whale*, burthen one hundred and sixtie Tunnes, and the *Sea-horse*, burthen one hundred and eightie tunnes, vnder the Command of *Iohn Russell*, and *Thomas Edge*, for discouering and killing of the Whale. They discouered that yeere nothing worth writing of, by reason of some falling out betwixt *Russell* and *Edge*; yet they killed that yeere seuenteene Whales, and some Sea-horses, of which they made one hundred and eightie Tunnes of Oyle with much difficultie; as not being experimented in the businesse. This yeere the *Hollanders* (to keepe their wont in following of the *English* steps) came to *Greenland* with one Ship, being brought thither by an *English* man, and not out of any knowledge of their owne Discoueries, but by the direction of one *Allen Sallowes*, a man imployed by the *Muscouia* Companie in the Northerne Seas for the space of twentie yeeres before; who leauing his Country for Debt, was entertayned by the *Hollanders*, and imployed by them to bring them to *Greenland* for their Pylot. At which time being met withall by the Companies Ships, they were commanded to depart, and forbidden to haunt or frequent those parts any more by mee *Thomas Edge*. There was also a *Spanish* Ship brought thither, by one *Nicholas Woodcocke*, this yeere, a man formerly imployed by the sayd Companie; which *Spanish* Ship made a full Voyage in *Green-harbour*. But *Woodcocke* at his returne into *England*, being complained of by the Companie, was Imprisoned in the *Gatehouse* and *Tower*, sixteene Moneths, for carrying the *Spanish* Ship thither.

Hollanders. *Allen Sallowes.* *Spanish* Ship. *Woodcocke* Imprisoned.

1613. In the yeere 1613. the Companie set out for *Greenland* seuen sayle of Ships, vnder the Command of *Beniamin Ioseph*, and *Thomas Edge*, the Ships departed from *Grauesend* the six and twentieth of Aprill, and arriued in *Greenland* the fourteenth of May. This yeere the *English* had the Kings Patent vnder the broad Seale of *England*, to forbid all Strangers and others, but the *Muscouia* Companie to vse the Coast of *Greenland*. The *English* met with fifteene sayle of great Ships, two of them were *Dutch* Ships, the rest were *French*, *Spanish*, and of the Archdukes, besides foure *English* Interlopers. The Companies Ships forced them all from the Coast of *Greenland*, not suffering any of them to make a Voyage; they tooke from the two *Dutch* Ships certayne goods, but in going to take it, they neglected their owne voyage, which was damnified thereby to the value of three or foure thousand pounds. For their Ships came home dead Fraight two or three hundred Tunnes by that meanes. This yeere was *Hope Iland* and other Ilands discouered, to the Eastward by the Companie.

Beniamin Ioseph. Fifteene ships Interlopers. *Hope Iland.*

1614 In the yeere following, which was 1614. the Companie set out for *Greenland*, thirteene great Ships and two Pinnasses, vnder the Command of *Beniamin Ioseph*, and *Thomas Edge*, all which Ships were well appointed with all manner of Artillerie for defence, and other necessaries for the making of their Voyage and for Discouerie. This yeere the *Hollanders* set out for *Greenland* eighteene great Ships, whereof foure of them were of the States men of Warre, Ships with thirtie pieces of Ordnance a piece. This yeere the *Dutch* stayed and fished for the Whale perforce, they were farre stronger then the *English*, which was a cause that the *English* Ships came home halfe laden, and the *Dutch* with a poore Voyage. This yeere the Companie Discouered vnto the Northwards of *Greenland*, as farre as 80. Degrees odde Minuts, in the Ship *Thomas-en*, as by her daily Iournall doth appeare at large; in which Ship was imployed *Thomas Sherwin*, and *William Baffin*, being the second Voyage they were imployed into those parts. And some Ilands to the Eastwards of *Greenland*, were Discouered by foure Ships imployed in that seruice, as by their Iournall more at large appeareth.

Thirteen ships and two Pinnasses armed. Eighteene *Dutch* ships. 80. Degrees discouered. *Sherwin* and *Baffin.*

1615. In the yeere 1615. the Companie set out for *Greenland*, two sayle of great Ships and two Pinnasses, vnder the Command of *Beniamin Ioseph*, and *Thomas Edge*, who following their Instructions, arriued vpon the Coast of *Greenland* the sixth of Iune, which they found to bee much pestered

pestered with Ice, and being foggie weather, they runne into the Ice, so farre, that they were fast in it fourteene dayes before they could cleare themselues of it. This yeere also the *Hollanders* set out fourteene sayle of ships, whereof three of them were *States* Men of warre of great force; they killed Whales in *Horn-sound*, *Bel-sound*, and *Faire-hauen*, and stayed vpon the coast of *Greenland* perforce, as they did the former yeere; whereby the *English* came home halfe laden. This yeere also the King of *Denmarke* sent vnto *Greenland* three of his ships, Men of warre, to demand a toll of the *English*; but they had none payd them: for they fell with the Foreland in 79. degrees, where Captaine *Edge* was, and he denyed payment of any toll, alledging that the Countrey of *Greenland* belonged to the King of *England*. These were the first *Danish* ships that euer came to *Greenland*, who had for their Pilot one *Iames Vaden*, an *Englishman* to bring them thither.

Fast in Ice, in Iune fourteene dayes.

King of *Denmarke* demands Toll.

Vn. *English* *English* to serue *Dutch*, *Spanish*, *Dane*, against their owne.

In the yeere 1616. the Company set out for *Greenland* eight Sayle of great ships, and two Pinnasses vnder the command of *Thomas Edge*, who following his course, arriued in *Greenland* about the fourth of Iune, hauing formerly appointed all his ships for their seuerall Harbours, for their making of their Voyage vpon the Whale, and hauing in euery Harbour a sufficient number of expert men, and all prouisions fitting for such a Voyage. This yeere it pleased God to blesse them by their labours, that they full laded all their ships with Oyle, and left an ouer-plus in the Countrey, which their ships could not take in. They imployed this yeere a small Pinnasse vnto the East-ward, which discouered the East-ward part of *Greenland*, Namely, the Iland called now *Edges* Iland, and other Ilands lying to the North-wards as farre as seuentie eight degrees, this Pinnasse was some twentie tunnes, and had twelue men in her, who killed one thousand Sea-horses on *Edges* Iland, and brought all their Teeth home for *London*. This was the first yeere that euer the Company full laded all their ships sent to *Greenland*, and this yeere they made twelue or thirteene hundred tunnes of Oyle in *Greenland* by the fourteenth of August. All the ships arriued in safety in the Riuer of *Thames*, in the moneth of September. The *Hollanders* had this yeere in *Greenland* foure ships, and those kept together in odde places, not easily to bee found, and made a poore Voyage.

1616.

Edges Iland.

In the yeare 1617. the Company set out for *Greenland* fourteene Sayle of ships, and their two Pinnasses furnished and manned with a sufficient number of men and all other prouisions fitting for that Voyage, vnder the command of *Thomas Edge*. They departed from *Graues-end*, about the foure and twentieth of Aprill, and arriued vpon the Coast of *Greenland*, the eight and twentieth of May all in safety.

1617.

At our first comming vpon the Coast this yeere, I met with a *Dutch* shippe of two hundred tunnes, which I commanded aboard, the Captaynes name was *Cocke*, who told mee there were ten Sayle of *Dutch* vpon the Coast, and two men of Warre, and that he came to make a Voyage vpon the Whale. I shewed him the Kings Commission, and commanded him by vertue thereof to depart from the Coast, willing him to acquaint the rest of his Countrey-men with it. And further, I told him that if I met with him or any *Dutch* ships heereafter, I would take from them what they had gotten, and thus hauing entertayned him aboord with me courteously, I let him goe without taking any prouisions from him. At his departure from mee, hee promised hee would but stay to meet with two of his Consorts, which hee had lost company with the day before, and then hee would directly goe for *Flushing*, and acquaint his Merchants, that the *English* Captayne would not suffer him to stay vpon the Coast of *Greenland*; but it seemeth at his meeting with his Consorts, they agreed altogether to goe into *Horne-sound*, and there they killed some few Whales which they saued in Blubber. I vnderstanding of it, gaue order to my Vice-admirall when he was laden, that he should goe into *Horne-sound*, and put the *Flemmings* from thence, and take what they had gotten, which he did accordingly: but the goods he tooke from the *Dutch* ships, were not worth to the *English* twentie pounds, for it was but Blubber and Finnes, which they had no need of, in regard they had killed as many Whales as would lade their ships, and more then they could carry or saue. This yeere the *English* made nineteene hundred tunnes of Oyle in *Greenland*, and all their ships arriued at home in the moneths of August and September in safetie. They also employed a ship of sixtie tunnes, with twenty men in her, who discouered to the Eastward of *Greenland*, as farre to the North-wards as seuentie nine degrees, and an Iland which he named *Witches* Iland, and diuers other Ilands as by the Map appeareth, and killed store of Sea-horses there, and then came into *Bel-sound*: where hee found his lading of Oyle, left by the Captayne which he tooke in. This yeere the *Hull* men set a small ship or two to the East-wards of *Greenland*, for the *Hull* men still followed the steps of the *Londoners*, and in a yeere or two called it their Discouery, which is false and vntrue, as by Oath in the Admiraltie doth appeare. The *Dutch* likewise practise the same course.

Witches Iland.

Hull men.

In the yeere 1618. some difference hauing passed betweene the *English* and some *Zelanders*, the yeere before, in King *Iames* his *Newland*, alias *Greenland* (which *Zelanders* were neuer in those parts before, and vpon promise of the present departure) were permitted to passe else-where with their prouisions which they had, and comming to *Cherrie* Iland, and meeting with one *English* Interloper of *Hull*, namely *Marmaduke*, he animated the said *Zelanders* to returne back for

1618.

Zelanders.

Marmaduke.

for *Greenland*, alleaging vnto them, that the Companies ſhips were in each ſeuerall Harbour buſied about their Voyage, and that none would ſtirre from his Harbours to moleſt them, and that they being three ſhips of force, might returne to a Harbour in that Countrey, called *Hornſound*, and there make a Voyage perforce, which the ſaid *Zelanders* did attempt, and there manned out diuers Shallops, hauing many *Biskainers*, and killed ſtore of Whales, ſetting thoſe *Engliſh* at nought. Whereupon Captayne *Thomas Edge*, chiefe Commander of the *Engliſh* Fleet, hauing laden thoſe ſhips that were in Harbour with him, and preſently ſent for *William Hely*, his Vice-admirall, giuing him order (who was not then full laden, but in good forwardneſſe) to fit the ſhip he was in, and goe to *Horne-ſound* afore-ſaid, and put the ſaid *Zelanders* from thence: which the ſaid *Hely* preſently put in execution. But before his comming thither, the *Zelanders* had notice by an *Engliſh* Surgeon, that if they did not depart, the *Engliſh* Vice-admiral would come preſently and force them from thence. Whereupon the *Zelanders* laded all the goods they had in two ſhips, and ſent them away before the comming of the *Engliſh* Vice-admirall, leauing one ſhip behind, with certaine caske of Blubber, and two Whales and an halfe vncut vp, in a brauado to trye if the *Engliſh* would meddle with them or not, which ſaid ſhip and goods there left, were ſurprized by the ſaid *Engliſh* Vice-admirall; the goods detayned to the Companies vſe; and the ſhip reſtored there to the *Zelanders*; which ſhip hauing in her ten caſt Peeces, and ſixtie men, and hauing intelligence of one of the Companies ſhips, at that time laden in the Countrey with one hundred and eightie tunnes of Oyle, the *Zelander* gaue out he would lie in waite and take that ſhip of the Companies and her lading, and carrie her to *Zeland*. For preuention whereof, the ſaid Vice-admirall tooke ſixe Peeces of Ordnance, and ſome Powder from the ſhip of *Zeland*, which were in *England* reſtored to the owners.

In which ſaid yeere 1618. the *Zelanders* ſending ouer for reſtitution of the goods taken from them. A new Company commixt of *Engliſh*, *Scottiſh* and *Zelanders*, through the meanes of one Sir *Iohn Cunningham* Knight, procured a grant for ſetting forth of ſhipping to thoſe parts, which might vtterly haue ouerthrowne and ſpoiled the trade of the firſt diſcoueries thereof: and to that end diuers of the chiefe men were hired by the new Company that had been ſeruants to the firſt diſcouerie, and much ſhipping and prouiſions agreed for. Whereupon there was an agreement, that the Eaſt *India* Aduenturers ſhould ioyne ſtocke with the *Moſcouia* Aduenturers, and be one ioynt Companie for that trade of King *Iames* his *Newland*. The *Scottiſh* Companies Patent thereupon diſſolued, to the *Moſcouia* Companies great trouble and coſt, in taking of all the prouiſions they had beſpoken, and paying ready money for the ſame, hauing no vſe thereof, but great part ſpoyled, and came to little good, and in ioyning vnfortunately with the Eaſt *India* Companie, in which yeere, and the next yeere after, their Voyages proued very ill, and they were loſers, and much vexed and croſſed in their proceedings, to the great diſ-heartning and detriment of the *Moſcouia* Companie: yet that yeere 1618. they ſet forth thirteene ſhips and two Pinnaſſes, vnder the command of the ſaid Captaine *Thomas Edge*, who arriuing vpon the coaſt of King *Iames* his *Newland*, in the beginning of Iune ſeparated themſelues to ſeuerall Harbours for accompliſhing of their Voyages, the moſt part being ſhips of no force. Preſently after in all Harbours where the *Engliſh* were, arriued great ſtore of ſhips of *Zeland*, in warlike manner, being ſhips of great force, who continued in the ſame Harbours amongſt the *Engliſh*, ſetting two boats to the *Engliſh* one, with *Biskainers*, with a full purpoſe to driue the *Engliſh* from their Harbours, and to reuenge the iniurie (as they termed it) done them the yeere before: and for that the *Scottiſh* Patent was diſſolued; wherein many *Flemmings* were to be intereſted. And to that purpoſe towards the latter end of Iuly, ten Saile of the ſaid *Zelanders*, being at a Harbour called the *Foreland*, where the ſaid *William Heley*, Vice-admirall of the *Engliſh* Fleet that yeere, was in the ſhip *Pleaſure*, Maſter *Robert Salmon*, with one *Engliſh* ſhip and a Pinnaſſe there of no force, ſet vpon the ſaid *Engliſh* Vice-admirall, threatning, if hee would not yeeld preſently, to diſpoyle him of ſhip and goods, not permitting to take his men aboord. And with two of their chiefeſt ſhips layd the *Engliſh* Vice-admirall aboord, there being but ſeuen *Engliſh* aboord the ſhip, which they detayned for foure and twentie houres, the *Zelanders* not daring to enter, making many brauadoes and attempts, thinking to make the *Engliſh* to yeeld, and ſtand to their mercy, which was refuſed. And thereupon fiue of thoſe *Zelanders* ſhips; namely, the *Fortune* of *Camphire*, burthen foure hundred tunnes, with eighteene caſt Peeces, beſides braſſe Baſes and Murtherers, Captaine *Hubreght Corneliſſon*; the *Saint Peter* of *Fluſhing*, burthen three hundred tunnes, with eighteene caſt Peeces, Captaine *Cornelius Cooke*; the *Salamander* of *Fluſhing*, two hundred tunnes, fourteene caſt Peeces, Captaine *Adrian Peterſon*; the *Cat* of *Delph Hauen*, with ſixteene caſt Peeces, *Abraham Leuerſtick* being Captaine and Generall of the *Zelanders*, and *William Iohnſon* of *Milliwerth*, in a ſhip with fourteene caſt Peeces: all which, after much conference paſſed betwixt the ſaid *Zelanders* and *William Hely*: which ſaid *Zelanders* gaue out many vnciuill ſpeeches againſt the Kings Maieſtie, not eſteeming his Commiſſion; alledging that there was good law in *Flanders* for what they did. And on Sunday the nineteenth of Iuly, 1618. did forcibly ſet vpon the ſaid *Engliſh* Vice-admirall, fiue together plying their great Ordnance, ſmall Shot, and Murderers, ſeeking what in them lay to kill and ſpoile all the *Engliſh*

Sir *Iohn Cunningham.*

East *India* Aduenturers ioyne.

English that were aboord: who resisted their force, and in spite of all their opposers set sayle, saluting them with their Ordnance, and maintayning fight against them till their Sayles were shot downe, some of their chiefe men slaine, others hurt, and their ship forced either to anchor, or run ashoare. The *Zelanders* vsed the *English* very vnkindly, rifling their ship of all their goods, and taking away all their munition and artillery, not leauing any goods ashoare, but burning vp the Caske, not permitting the *English* to take in fresh water, but shot their Boat thorow in going ashoare, and minding, as they protested and swore vnto the said *William Hely*, that they would take and ransacke all the *English* ships in the Countrey, and carrie the *English* Captaine to *Zeland*: hauing as they said, that yeere in those parts 23. sayle of well appointed ships, onely to ouerthrow all the *English*, all which were to meet in *Scotland* outward bound. After the surprising of the said *English* Vice-admirall, all the rest of the *English* ships being dispersed farre asunder, could not ioyne together, being in all places hindred by the *Flemmings*: and by that meanes the *English* Voyage vtterly ouerthrowne, to the extraordinary great losse and charge of the Companie, the most part of their ships returning home without any goods.

The next yeere 1619. the said *Moscouia* and East *India* Companies set out nine ships, and two Pinnasses, vnder the command of the said Captaine *Edge*, in which yeere, diuers *Hollanders* being in the Northermost Harbour in the Countrey, employing great quantitie of Boats in chasing the Whale there, off into the Sea, put them by their vsuall course, so that the Companies ships, being fiue of the nine, in the two Northermost Harbours, were disappointed of their Voyage in those Harbours; and thinking to better it in the other Harbours; the foresaid *William Heley* sending a Shallop with ten men in her, with Letters to the said Captaine *Edge*, of their ill successe to the Northwards, the said Shallop was cast away, and all the men lost: and the said Captaine being laden, sent a Pinnasse to the said *Heley* in August, aduertising him of his departure, thinking all the ships to the Northward had been laden, wishing them to haste home. By meanes of which Shallops casting away, the Voyage was greatly hindred to the Companies exceeding great losse; in that the *Hollanders* did as then bring ouer great quantitie of Whale-oyle, and sold it at vnder rates, so that the Companie was forced to keepe theirs on their hands twelue moneths, and sell it afterwards at a very small price, and lost one ship in her returne homewards neere *Yarmouth*: which did so much dishearten the said Companie, that they dissolued againe, and thought verily to haue aduentured no more thither (their successe those two yeeres past, in which the East *India* Companie ioyned with them was so bad, that any that would buy their prouision might enioy the benefit of the Trade there.) At which time, the worthie and famous Merchants Aduenturers; namely, *Ralph Freeman*, *Beniamin Deicrowe*, *George Strowd*, with Captaine *Thomas Edge*, all brethren of the *Moscouia* Companie, pitying the down-fall of so worthie a Trafficke, in which yeerely so many poore Land-men receiued great comfort, and breeding of Mariners, at their owne charge compounded with the said Companies, and tooke that Trade into their hands. In which yeere 1620. they set out seuen sayle of ships, vnder the command of *William Goodlad*, and the said *William Heley*; in which said yeere, by reason of great store of *Flemmings* and *Danes* in the foresaid Northermost Harbours, their ships had ill successe to the Northwards, and were forced to passe from Harbour to Harbour to seeke to make a Voyage, but could not, and so returned home halfe laden, with seuen hundred tunnes of Oyle. 1619. 1620.

The next yeere 1621. the foresaid Aduenturers hired, and set forth eight ships, seuen for the Whale Voyage, and one to the South-eastwards vpon Discouerie, vnder the command aforesaid, which yeere in one of their chiefest Harbours their Voyage was ouerthrowne, by reason of the foresaid *Flemmings* and *Danes*, being to the Northward, as aforesaid, putting the Whale by her course, and in all places in the Countrey generally disheartned, and out of hope to haue made any Voyage that yeere, whereby to haue earned their bread. Yet it pleased God afterwards in some Harbours, Whales hitting in, a Voyage was performed, and 1100. tunnes of Oyle brought home, to the great encouragement of the said Aduenturers: otherwise that Trade had beene vtterly ouerthrowne. 1621.

The yeere following 1622. the said Aduenturers at their owne charge set forth nine ships, vnder the command aforesaid, and therein employed diuers Land-men; many of which afterwards proue good Sea-men, and are fit for any Sea seruice. Eight of which ships were appointed to make their Voyage vpon the Whale, and one to goe on discouerie to the South-eastwards. But ill successe happening, one of their greatest ships of burthen, whereof *Iohn Masson* was Master, hauing in her two hundred tuns of Caske, Coppers, and diuers prouisions, was vnfortunatly cast away against a piece of Ice, vpon the coast of King *Iames Newland*, foure leagues from the shoare, in which ship perished nine and twentie men, and the remainder being three and twenty, were by the prouidence of the Almightie miraculously saued in a Shallop, coasting thirtie leagues afterwards to meet with some other ships to find some succour, hauing neither bread nor drinke, nor any meanes whereby to get any food: and so remayned three dayes in extreme cold weather, being in a small Boat ready to bee swallowed vp of euery waue, but that God prouided better for them. Many of which people their hands and feet rotted off, being frozen, and they died 1622. Shipwracke.

Digitized by Google

died in the Countrey. The reſt of the ſhips returned home laden, bringing in them 1300. tuns of Oyle, yet the foreſaid chiefe Harbour could not performe their full lading there, by reaſon of the *Flemmings* and *Danes* being to the Northwards, as aforeſaid, which doth yeerely hinder the Companies ſhips from making a Voyage.

§. III.

The Deſcription of the ſeuerall ſorts of Whales, with the manner of killing them: Whereto is added the Deſcription of Greenland.

THe Whale is a Fiſh or Sea-beaſt of a huge bigneſſe, about ſixtie fiue * foot long, and thirtie fiue foot thicke, his head is a third part of all his bodies quantitie, his ſpacious mouth contayning a very great tongue, and all his finnes, which we call Whale finnes. Theſe finnes are faſtned or rooted in his vpper chap, and ſpread ouer his tongue on both ſides his mouth, being in number about two hundred and fiftie on one ſide, and as many on the other ſide. The longeſt finnes are placed in the midſt of his mouth, and the reſt doe ſhorten by their proportionable degrees, backward and forwards, from ten or eleuen foot long to foure inches in length, his eyes are not much bigger then an Oxes eyes, his body is in faſhion almoſt round forwards, growing on ſtill narrower towards his tayle from his bellie, his tayle is about twentie foot broad, and of a tough ſolid ſubſtance, which we vſe for blockes to chop the *Blubber* on (which yeelds Oyle) and of like nature are his two ſwimming finnes (and they grow forward on him.)

* The ordinarie growne Whale.

Finnes.

Small eyes. Some kinds haue greater. *Stow* mentions one taken on *Tenet* ſhoare, the eye of which was a Cart-loade, a man might ſtand in the hole vpright: The like wee may gheſſe of the throat, &c. Nature being herein luxuriant, and diuerſified.

This creature commeth oftentimes aboue water, ſpouting eight or nine times before he goeth downe againe, whereby he may be deſcried two or three leagues off. Then our Whale-killers preſently rowe forth from the place where they ſtand to watch for him, making what haſte they can to meet him: but commonly before they come neere him, he will be gone downe againe, and continue a good while before he riſeth; ſo that ſometimes they rowe paſt him. Yet are they very circumſpect, euer looking round where they may eſpie him riſen, or diſcerne his way vnder water, which they call his *Walke*. When he is vp and the Shallops neere him, they rowe towards him very reſolutely, as if they would force the Shallop vpon him, if hee went downe vnder water: but the Harponyre, who ſtandeth vp in the head of the Boat, darteth his Harping-iron at the Whale with both his hands, ſo ſoone as he commeth within his reach; wherwith the Whale being ſtrucken, preſently deſcendeth to the bottome, and therefore doe they reare out a rope of two hundred fathome, which is faſtned to the Harping-iron, and lieth coyled in the Boat: And they let him haue as much of the rope as reacheth to the bottome, and when they perceiue him riſing they hale in the rope to get neere him, and when the Whale commeth vp aboue water, then do the men lance him with their lances, either out of one Shallop or the other; for moſt commonly there bee two Shallops about the killing of one Whale. In lancing him they ſtrike neere to the finnes he ſwimmeth withall, and as lowe vnder water neere his bellie as conueniently they can: but when he is lanced, he friskes and ſtrikes with his tayle ſo forcibly, that many times when hee hitteth a Shallop hee ſplitteth her in pieces; ſo that the men are relieued and taken in by another Shallop: and ſometimes he ſtriketh ſo fully vpon them, that ſome of the men are either maymed, or killed with his ſtroke. Therefore they who vndertake this buſineſſe which is the principall thing in the Voyage, muſt not onely bee bold and reſolute, but alſo diſcreet and wary; otherwiſe their raſh forwardneſſe may preuent them of their expected conqueſt; conſidering they haue no ſhield to withſtand the offended beaſt their enemy, but onely by a heedfull warineſſe to auoide the receiuing of his dangerous ſtroke. Swimming is alſo requiſite for a Whale-killer to be expert in, for it may be a meanes to ſaue his life, when he hath loſt his Boat, and another is not neere preſently to helpe him.

You may ſee this Story of the Whale-killing preſented liuely in the Map, which Captaine *Edge* hath liberally added to this Relation.

The Whale hauing receiued his deadly wound, then he ſpouteth bloud (whereas formerly he caſt forth water) and his ſtrength beginneth to fayle him; but before he dieth, hee will ſometimes draw the Shallop three or foure miles from the place where he was firſt ſtricken: and as he is a dying, he turneth his bellie vpwards, which lieth vppermoſt being dead. Then they faſten a rope to his tayle, and with the Shallops, one made faſt to another, they towe him towards the ſhip with his tayle foremoſt. Then doe they lay him croſſe the ſterne of the ſhip, where he is cut vp in this manner; two or three men in a Boat or Shallop come cloſe to the ſide of the Whale, and hold the Boat faſt there with a Boat-hooke; and another ſtanding either in the Boat, or moſt commonly vpon the Whale, cutteth the fat (which we call Blubber) in ſquare pieces with a cutting Knife, three or foure foot long. Then to race it from the fleſh, there is a Crane or Capſten placed purpoſely vpon the poope of the ſhip, from whence there deſcendeth a rope with a hooke in it; this hooke is made to take hold on a piece of Blubber: and as the men winde the Capſten, ſo the cutter with his long knife looſeth the fat from the fleſh, euen as if the lard of a Swine

Swine were to be cut off from the leane. When a piece is in order cut off, then let they lower the Crane, and let downe the Blubber to flote vpon the water, and make a hole in some part of it, putting a rope thorow it; and so they proceed to cut off more, fastning ten or twentie pieces together to bee towed a shoare at one time, being made fast to the sterne of a Boat or Shallop. These pieces being thus brought vnto the shoare side, they are drawne by one and one vpon the shoare with an high Crane, or carried vp by two men on a Barrow vnto a Stage, there to be cut into small pieces about a foot long, but thin: then it is carried vnto the choppers by two boyes, with two little hand-hookes, taking in each hand a piece, and so they put it into half-tubs which stand behind the choppers, out of which the choppers take it vp; who stand at the side of a boat which is raised of an equall height fit for the furnace. And the boat being fitted with all things necessarie for the choppers, they place the chopping blockes, which they make of the Whales tayle, and the Blubber is layd ready for them, as they vse it, in small pieces vpon the boord whereon they stand. Then the choppers take it vp with hand-hookes, and lay it on their blockes, and chop it in thin pieces (the thinner he cuts it, the better it is) and when it is chopped, they put it off the blocke downe into the Shallop, with a short Paddle made like a Colerake: and thus doe sixe or eight men stand chopping on the one side of the boat, and on the other side of the boat about two or three yards distant are the Furnaces and Coppers placed and heated. Then betweene the chopping boat and the Coppers, is layd a broad thicke planke, on which standeth a hogshead, which contayneth as much as is put into the Copper, at one time for one boyling, and the tub being emptied, is made to slide vnto the chopping boat againe, being there filled with a copper ladle againe, and put into another Copper. When it is boyled enough, the small pieces of *Blubber*, which wee call *Fritters*, will looke browne as if they were fried. Then are they taken out with copper ladles, and some of the Oyle also with them, and put into a Barrow made close to dreyne the Oyle, which standeth ouer another Shallop, that is set on the back-side of the Furnace to receiue the Oyle in, and as soone as the Fritters are taken cleane out of the Copper, then presently is the tub of small Blubber emptied into the Copper againe to be also boyled.

The Boat into which the hot Oyle is put out of the Coppers, is euer kept halfe full of water, which doth not onely coole the Oyle before it runne into the Caske, but also is a cleanser of it from drosse, which descendeth to the bottome of the Boat. Out of the Oyle-boat doth the Oyle runne thirtie or fortie yards in Troughs or Gutters, and so into Buts or Hogsheads, which being filled, is rolled off to coole, and another Caske layd to fill, and when there is any quantitie of Oyle made, it is carried aboord the ship in rafts. In this manner is the Oyle saued and prepared.

Whale Finnes.

Now concerning the Whale Finnes, the Whales head being cut off from the body (as hee floteth at the sterne of the ship where hee is cut vp) is towed by a Boat as neere the shoare as it will come: but it is aground in twelue or thirteene foot water, then by crabes which are placed on land it is drawne on land, at seuerall times when the water is at highest, so neere the dry shoare, that men at a lowe water with their Boats on, cut off the Blubber and Finnes, which by the crabes are drawne on shoare, and the Finnes are with Axes, one seuered from another, and being made cleane, are packed vp by fiftie in a bundle, and so shipped.

Eight kinds of Whales known.

There are eight seuerall kinds of Whales, and differing the one from the other in goodnesse, quantitie and qualitie.

1. *Grand bay* Whale.

The first sort of Whale is called the *Grand-bay*, taking his name from *Grand-bay* in *Newfoundland*, as hauing there beene first killed: he is blacke of colour, with a smooth skinne, and white vnderneath the chaps. This Whale is the best for Oyle and Finnes of all the rest (and doth yeeld most the elder it growes.) This sort of Whale doth yeeld about an hundred hogsheads of Oyle, and some fiue hundred Finnes.

2. *Sarda.*

The second sort of Whale is called *Sarda*, of the same colour as the former, but somewhat lesser, and the Finnes likewise lesser, and yeelds in Oyle according to his bignesse, sometimes seuentie hogsheads, or eightie hogsheads. This Whale hath naturally growing vpon his backe, white things like vnto Barnacles.

3. *Trumpa.*

The third sort of Whale is called *Trumpa*, being as long as the first, but thicker forwards, of colour more gray then the former, hauing but one spoute in his head, and the rest haue all two; he hath in his mouth teeth about a span long, and as thicke as a mans wrist, but no finnes; his head is bigger then the two former, and in proportion farre bigger then his bodie. In the head of this Whale is the Permesitie, which lieth there in a hole like a Well. This is the Whale that is supposed to yeeld the Ambergreese; There taken about fortie hogsheads of Oyle besides the Permesitie.

Spermaceti.

4. *Otta Sotta.*

The fourth sort of Whale is called *Otta Sotta*, and is of the same colour of the *Trumpa*, hauing finnes in his mouth all white, but not aboue halfe a yard long, being thicker then the *Trumpa*, but not so long: he yeelds the best Oyle, but not aboue thirtie hogsheads.

5. *Gibarta.*

The fift sort of Whale is called *Gibarta*, of colour blacke like the two first, sauing that it hath standing vpon the top of his backe, a finne halfe a yard long. This Whale is as bigge

as the firſt; his fins little or nothing worth, being not aboue halfe a yard long: and hee yeeldeth about twelue hogſheads of Oyle, all which his backe yeelds; as for his bellie it yeelds nothing at all.

6. *Sedeua.* The ſixt ſort is called *Sedeua*, being of a whitly colour, and bigger then any of the former, the finnes not aboue one foot long, and he yeelds little or no Oyle.

7. *Sedeua Negro.* The ſeuenth is called *Sedeua Negro*, of colour blacke, with a bumpe on his backe; this Whale yeelds neither Oyle, finnes, nor teeth, and yet he is of a great bigneſſe.

8. *Sewria.* The eight ſort is called *Sewria*, of colour as white as ſnow, of the bigneſſe of a Wherrie, he yeelds not aboue one hogſhead or two of Oyle, nor any finnes, and is good meate to be eaten.

The deſcription of Greenland.

Antiphraſtical appellation. I haue found this deſcription of *Greenland*, with other notes, written by *Ro. Fotherby.*

Greenland is a place in Nature nothing like vnto the Name: for certainly there is no place in the World, yet knowne and diſcouered that is leſſe greene then it. It is couered with ſnow, both the Mountaines and the lower Lands, till about the beginning of Iune, being very Mountainous, and beareth neither graſſe nor tree, ſaue onely ſuch as grow vpon the Moores and heathie grounds, in the North parts of *England*, which we call *Heath*, or *Ling*. This groweth when the ſnow melteth, and when the ground beginneth to be vncouered. And on this doe the Deere feed in the Summer time, and become very fat therewithall in a moneths ſpace, but how they liue in the Winter time it is not eaſily to be imagined. For ſeeing at the end of May wee find the ground all couered with ſnow, it is very like, that in the time of Winter there is no part bare, where any thing can grow; eſpecially during the time that the Sunne is altogether depreſſed vnder the horizon, which in the latitude of 77. degrees, continueth from the eighteenth of October till the fourth of Februarie. This Countrey by all probabilities hath neuer been inhabited by any people; notwithſtanding, I thinke men might liue there, carrying thither good ſtore of prouiſion of victuals, and other things neceſſary againſt the cold, which perhaps will be vehement in the Winter time, by the former reaſons; namely, becauſe the Sunne remayneth ſo long vnder the Horizon.

Deere.

Neuertheleſſe, there will not be any continuance of darkneſſe, becauſe the Sunne in his greateſt declination will be but 10. degrees vnder the Horizon, at this time of his being in the South of the Meridian in the former latitude of 77. degrees, which is once in foure and twentie houres; and therefore the time of their Noone will bee much lighter then our Night here in *England*, when the dayes are at the longeſt; for then is the Sunne 15. degrees vnder the Horizon at midnight, and yet the greateſt darkneſſe is but like twi-light. And although it bee a generall ſaying, and a common receiued opinion, that the further North the greater cold, yet experience teacheth, that it is not alwaies true. For at *Moſco*, and thereabouts in the Winter time, there is extreme froſts and cold weather, inſomuch that oftentimes men are brought home dead, being ſtarued with cold; and many haue their noſes and eares cauſed to fall off, through the extremity of the piercing aire: yet at *Edenborrow*, which is more Northerly by one degree and an halfe, and in all places neere vnto it the aire is temperate, and the cold tolerable, the ſnow neuer lying any long time on the ground after it is fallen. Notwithſtanding, wee haue ſnow remayning all the yeere long in diuers places of *England*, but the reaſon of this is, becauſe the aire is euer warmeſt neere vnto the Sea ſhoare, (as *Edenborrow* ſtandeth) and contrariwiſe the cold is moſt vehement in places which are fartheſt remote from the Sea, as *Moſco* is ſituated.

Yet in *China* euen neere the Sea, and farre neerer the Sun, betwixt 30. and 40. the Winters are extreme. *R. Foth.*

All the Creatures that appeare vnto vs vpon the Land, are Deere, Beares, and Foxes, and ſundrie ſorts of wilde Fowle, as Cuthbert Duckes, Willockes, Stints, Sea-pigeons, Sea-parrets, Gulls, Noddies, &c. *The Author addes a diſcourſe of ſending condemned men to inhabite there, with diuers proiects for their ſeruice there, for the further diſcouerie how beſt to bee effected, for ſuch things as are moſt neceſſary for this employment of Whale-killing, &c. but becauſe experience hath giuen beſt inſtructions already, and deſtructions muſt otherwiſe be preuented, I haue forborne to detayne the Reader in thoſe (otherwiſe iudicious) ſpeculations.*

The Southermoſt part of *Greenland* ſtands in 76. degrees 30. minutes, which wee call, *Point Looke out*, and we haue diſcouered all the Weſt ſide of the Land as farre vnto the Northwards as 80. degrees odde minutes: in which compaſſe wee haue already experience of ſixe or eight good Harbours for the killing of the Whale; and on the Eaſt ſide we haue diſcouered as farre as 78. degrees, finding diuers Ilands, great and ſmall, yeelding good Harbours, and ſtore of Whales, and Sea-horſes; and for a further diſcouery on the Eaſt ſide, I am perſwaded it had beene farre greater, if the *Dutch* had not ſo diſturbed vs in our proceedings, as alſo the *Hull-men*, who euer practiſed to follow our ſteps, after the diſcouerie within one yeere or two: as by our Maſters Iournall more at large may appeare. The beſt actions haue their hindrances and croſſes, and ſo hath this had; for, the *Dutch* haue beene a bane to this Trade and Diſcouerie: The *Hull-men* haue done ſome bad ſeruice in this Action, for they were the firſt that carried the *Dutch* to the *Tutches*, as by *Winendens* Oath and Iournall appeares, they were alſo a cauſe of that bad Voyage,

to vs in 1618. in that they animated the *Flemmings* to come backe to *Greenland* againe, as appeareth in this Iournall, in the yeere 1617. they haue done some other ill seruices against vs as well as the *Dutch*, but in regard they are our Countrey-men, I will omit and wish their amendment, and pray to God to send a good and further Discouery to bee made in these Northerne parts. *Amen.*

READER, I present thee here three admirable Voyages of Discouery made by the Dutch, *no whit enuying their due prayse, but honouring their worthy Acts and Arts. They haue formerly beene published in* Dutch, *and translated by* W. Philip. *I haue heere abbreuiated them, as my vse is with others, to auoid prolixitie. The* Dutch *themselues* * *write that after the* English Russian *Trade, one* Oliuer Bunell *moued with hope of gaine, went from* Enckhuysen *to* Pechora, *where he lost all by shipwracke, hauing discouered* Coltinsarca *in* Noua Zemla. *These Nauigations of the* English, *and that of* Bunell, *and the hopes of* China *and* Cathay, *caused the States Generall to send forth two shippes vnder the command of* Hugo Linschoten, *to the Streights of* Wey-gates, *and two others vnder* William Bernards, *by the perswasion of* P. Plancius *to goe right Northwards from* Noua Zemla. Linschot *went fiftie miles beyond the Streights, the Northerly winds, and late season forcing him backe.* Bernards *Iournall here followeth, of that and his two later Voyages, the two later written by one employed therein.*

* *Prolegomena ad Hudsoni Detect. edit. Amstelodami per Hes. Gerard.* 1611.

CHAP. III.

The first Nauigation of WILLIAM BARENTS, alias BERNARDS *into the North Seas; Written by* GERAT de VEER.

IT is a most certayne and an assured Assertion, that nothing doth more benefit and further the Common-wealth (specially these Countryes) then the art and knowledge of Nauigation, in regard that such Countreyes and Nations as are strong and mightie at Sea, haue the meanes and ready way to draw, fetch, and bring vnto them for their mayntenance, all the principallest commodities and fruits of the Earth.

In these Nauigations we must not be dismayed if some mislike, or if we cannot perfect a Discouery in the first, second, or third Voyage. *Alexander Magnus* (after he had wonne all *Grecia*, and from thence entred into little and great *Asia*; and comming to the farthest parts of *India*, there found some difficultie to passe) said, If wee had not gone forward, and persisted in our intent, which other men esteemed and held to be impossible, we had stil remayned and stayed in the entry of *Cicilia*, where as now we haue ouer-runne and past through all those large and spacious Countreyes: for nothing is found and effected all at one time, neyther is any thing that is put in practice, presently brought to an end. To the which end, *Cicero* wisely saith; God hath giuen vs some things, and not all things, that our Successors also might haue some-what to doe. Therefore we must not leaue off, nor stay our pretence in the middle of our proceedings, as long as there is any commoditie to be hoped, and in time to bee obtayned: for that the greatest and richest Treasures are hardliest to be found. I thought good to set downe, in regard that I haue vndertaken to describe the three Voyages made into the North Seas, in three yeeres, one after the other; behind *Norway*, and along and about *Muscouia*, towards the Kingdome of *Cathaia*, and *China*: whereof, the two last, I my selfe holpe to effect; and yet brought them not to the desired end that we well hoped.

A thing not continued, cannot bee effected. All things are effected in conuenient time.

First, to shew our diligent, and most toylesome labour and paines taken, to find out the right course; which we could not bring to passe, as wee well hoped, wished, and desired, and possible might haue found it, by crossing the Seas, if we had taken the right course; if the Ice & the shortnesse of time, and bad crosses had not hindered vs. We haue assuredly found, that the onely and most hinderance to our Voyage, was the Ice that we found about *Noua Zembla*, vnder 73. 74. 75. and 76. degrees; and not so much vpon the Sea betweene both the Lands: whereby it appeareth, that not the neerenesse of the North-pole, but the Ice that commeth in and out from the *Tartarian* Sea, about *Noua Zembla*, caused vs to feele the greatest cold. Therefore in regard that the neerenesse of the Pole was not the cause of the great cold that wee felt, if wee had had the meanes to haue held our appointed and intended course into the North-east, we had peraduenture found some entrance: which course wee could not hold from *Noua Zembla*, because that there we entred amongst great store of Ice; and how it was about *Noua Zembla*, we could not tel, before we had sought it; and when we had sought it, we could not then alter our course, although also it is vncertayn, what we should haue done, if we had continued in our North-east course, because it is not yet found out. But it is true, that in the Countrey lying vnder 80. degrees, (which we esteeme to be *Greenland*) there is both Leaues and Grasse to be seene: Wherein, such Beasts

The first finding is hard, but the second attempt is easier.

Digitized by Google

as feed of Leaues and Graſſe (as Harts, Hinds, and ſuch like beaſts liue, whereas to the contrary in *Noua Zembla*, there groweth neyther Leaues nor Graſſe, and there are no beaſts therein but ſuch as eate fleſh, as Beares and Foxes, &c. Although *Noua Zembla* lyeth 4.5. and 6. degrees more Southerly from the Pole, then the other Land aforeſaid. It is alſo manifeſt, that vpon the South and North-ſide of the Line of the Sunne on both ſides, betweene both the Tropicks, vnder 23. degrees and an halfe, yet it is as hot, as it is right vnder the Line. What wonder then ſhould it be, that about the North-pole alſo, and as many degrees on both ſides, it ſhould not be colder then right vnder the Pole? It was not the Sea, nor the neereneſſe vnto the Pole, but the Ice about the Land, that let and hindered vs (as I ſaid before) for that aſſoone as we made from the Land, and put more into the Sea, although it was much further Northward, preſently we felt more warmth, and in that opinion our Pilot *William Barents* dyed, who notwithſtanding the fearefull and intolerable cold that he indured, yet he was not diſcouraged, but offered to lay wagers with diuers of vs, that by Gods helpe, hee would bring that pretended Voyage to an end, if he held his courſe North-eaſt from the North Cape. But I will leaue that, and ſhew you of the three Voyages aforeſaid, begunne and ſet forth by the permiſſion and furtherance of the Generall States of the vnited Prouinces, and of Prince *Maurice*, as Admirall of the Sea, and the rich Towne of *Amſterdam*.

A compariſon of the heate vnder the line, with the cold vnder the North Pole.

The reſolute intent and opinions of *William Barents*.

Firſt, you muſt vnderſtand, that in *Anno* 1594. there was foure ſhips ſet forth out of the vnited Prouinces, whereof two were of *Amſterdam*; one of *Zelandt*, and one of *Enckhuyſen*, that were appointed to ſayle into the North Seas, to diſcouer the Kingdomes of *Cathaia*, and *China*; Northward from *Norway*, *Muſcouia*, and about *Tartaria*, whereof *William Barents*, a notable skilfull and wiſe Pilot, was Commander ouer the ſhips of *Amſterdam*, and with them vpon Whit-ſunday, departed from *Amſterdam*, and went to the *Texell*.

Iune 5.

Vpon the fifth of Iune they ſayled out of the *Texel*, and hauing a good wind and faire weather, vpon the three and twentieth of Iune, they arriued at *Kilduin* in *Muſcouia*, which for that it is a place well knowne and a common Voyage, I will make no further deſcription thereof. The nine and twentieth of Iune, at foure of the clocke in the after-noone, they ſet ſayle out of *Kilduin*.

The particulars beeing knowne to many of our Mariners, I omit.

The fourth of Iuly they ſaw *Noua Zembla*, lying South-eaſt and by Eaſt ſix or ſeuen miles from them, where they had blacke durtie ground at one hundred and fiue fathome. *William Barents* tooke the height of the Sunne with his Croſſe-ſtaffe, when it was at the loweſt, that is betweene North North-eaſt, and Eaſt and by North, and found it to be eleuated aboue the Horizon ſix degrees and $\frac{1}{3}$. part, his declination being 22. degrees and 55. minutes, from whence ſubſtracting the aforeſaid height, there reſteth ſixteenth degrees and 35. minutes, which being ſubſtracted from 90. degrees, there reſteth 73. degrees and 25. minutes. Then they woond Eaſtward and ſayled fiue miles, Eaſt and by South, and Eaſt South-eaſt, and paſt by a long point of Land that lay out into the Sea, which they named *Langenes*, and hard by that point Eaſt-ward, there was a great Bay, where they went a Land with their Boat, but found no people. From *Langenes* to Cape *Bapo*, Eaſt North-eaſt it is foure miles. From Cape *Bapo* to the Weſt point of *Lombſbay* North-eaſt and by North are fiue miles, and betweene them both there are two Creeks. *Lombſbay* is a great wide Bay, on the Weſt-ſide thereof hauing a faire Hauen, ſix, ſeuen, or eight fathome deepe, blacke ſand, there they went on ſhoare with their Boat, and vpon the ſhoare placed a Beacon, made of an old Maſt which they found there; calling the Bay *Lombſbay*, becauſe of a certayne kind of Beares ſo called, which they found there in great abundance. The Eaſt point of *Lombſbay*, is a long narrow point, and by it there lyeth an Iland, and from that long point to Sea-ward in, there is a great Creeke. This *Lombſbay* lyeth vnder 74. degrees and $\frac{1}{3}$. part. From *Lombſbay* to the point of the *Admirals* Iland, they ſayled ſix or ſeuen miles, North-eaſt and by North. The *Admirals* Iland is not very faire on the Eaſt-ſide, but a farre off very flat, ſo that you muſt ſhunne it long before you come at it, it is alſo very vneuen, for at one caſting of the Lead they had ten fathome deepe, and preſently at another caſting of the Lead they had but ſix fathome, and preſently after that againe ten, eleuen, and twelue fathome, the ſtreame running hard againſt the Flats.

Langenes.

Lombsbay.

Admirals Iland

Cape *Negro*. *Black point*.

From the Eaſt-end of the *Admirals* Iland, to Cape *Negro*, that is the *Blacke point*, they ſayled about fiue or ſix miles, Eaſt North-eaſt, and a mile without the *Blacke point* it is ſeuenty fathome deepe, the ground ſlimy, as vpon *Pamphius*, right Eaſt-ward of the *Blacke point*, there are two ſharpe pointed Hils in the Creeke, that are eaſie to be knowne. The ſixt of Iuly, the Sunne being North, they come right before the *Blacke point* with faire weather, this *Blacke point* lyeth vnder 75. degrees and 20. minutes. From the *Blacke point* to *Williams* Iland, they ſayled ſeuen or eight miles, Eaſt North-eaſt, and betweene them both about halfe a mile, there lay a ſmall Iland.

Williams Iland.

The ſeuenth of Iuly they ſayled from *Williams* Iland, and then *William Barents* tooke the height of the Sunne, with his Croſſe-ſtaffe, and found it to be eleuated aboue the Horizon in the South-weſt and by South 53. degrees and 6. minutes, his declination being 22. degrees and 49. minutes, which being added to 53. degrees and 6. minutes, make 75. degrees and 55. minutes. This is the right height of the Pole of the ſaid Iland. In this Iland they found great ſtore of

Drift-

Digitized by Google

Driftwood, and many Sea-horſes being a kind of fiſh that keepeth in the Sea, hauing very great teeth, which at this day are vſed in ſtead of Iuory or Elephants Teeth, there alſo is a good Road for ſhips, at ewelue and thirteene fathome deepe againſt all winds, except it bee Weſt South-weſt, and Weſt-winds, and there they found a piece of a *Ruſſia* ſhip, and that day they had the wind East North-east, miſtie weather. Sea-horſes, or Morſes.

The ninth of Iuly they entred into *Beeren-fort*, vpon the Road vnder *Williams* Iland, and there they found a white Beare, which they perceiuing, preſently entred into their Boat, and ſhot her into the bodie with a Musket, but the Beare ſhewed moſt wonderfull ſtrength, which almoſt is not to be found in any beaſt, for no man euer heard the like to bee done by any Lion or cruell beaſt whatſoeuer: for notwithſtanding that ſhe was ſhot into the bodie, yet ſhe leapt vp, and ſwamme in the water, the men that were in the Boat rowing after her, caſt a Rope about her necke, and by that meanes drew her at the ſterne of the Boat, for that not hauing ſeene the like Beare before, they thought to haue carryed her aliue in the ſhip, and to haue ſhewed her for a ſtrange wonder in *Holland*; but ſhe vſed ſuch force, that they were glad that they were rid of her, and contented themſelues with her skinne only, for ſhee made ſuch a noyſe, and ſtroue in ſuch ſort, that it was admirable, wherewith they let her reſt and gaue her more ſcope, with the Rope that they held her by, and ſo drew her in that ſort after them, by that meanes to wearie her: meane-time, *William Barents* made neerer to her, but the Beare ſwamme to the Boat, and with her fore-feet got hold of the ſterne thereof, which *William Barents* perceiuing, ſaid, ſhe will there reſt her ſelfe, but ſhe had another meaning, for ſhe vſed ſuch force, that at laſt ſhe had gotten halfe her body into the Boat, wherewith the men were ſo abaſhed, that they ranne into the further end of the Boat, and thought verily to haue beene ſpoyled by her, but by a ſtrange meanes they were deliuered from her, for that the Rope that was about her necke, caught hold vpon the hooke of the Ruther, whereby the Beare could get no further, but ſo was held backe, and hanging in that manner, one of the men boldly ſtept forth from the end of the Scute, and thruſt her into the bodie with a halfe-pike; and therewith ſhee fell downe into the water, and ſo they rowed forward with her to the ſhippe, drawing her after them, till ſhee was in a manner dead, wherewith they killed her out-right, and hauing flayed her, brought the skin to *Amſterdam*. *Beeren-fort* white Beare, terrible.

The twentieth of Iuly, they ſayled out of *Beeren-fort* from *Williams* Iland, and the ſame day in the morning got to the Iland of *Croſſes*, and there went on Land with their Pinnaſſe, and found the Iland to be barren, and full of Cliffes and Rocks, in it there was a ſmall Hauen, whereinto they rowed with their Boat. This Iland is about halfe a mile long, and reacheth East and Weſt; on the Weſt end it hath a banke, about a third part of a mile long, and at the East end alſo another banke, vpon this Iland there ſtandeth two great Croſſes, the Iland lyeth about two long miles from the firme Land, and vnder the East-end thereof there is a good Road, at ſixe and twentie fathome ſoft ground; and ſomewhat cloſer to the Iland on the Strand, at nine fathome ſandie ground. Iland of *Croſſes*

From the Iland of *Croſſes* to the point of Cape *Naſſaw*, they ſayled East, and East and by North about eight miles: it is a long flat point which you muſt be carefull to ſhunne, for thereabouts at ſeuen fathome there were flats or ſhoales, very farre from the Land; it lyeth almoſt vnder 76. degrees and a halfe. From the Weſt end of *Williams* Iland, to the Iland with the *Croſſes* is three miles, the courſe North. From *Naſſaw* point they ſayled East and by South, and East South-east fiue miles, and then they thought that they ſaw Land in North-east, and by East, and ſayled towards it fiue miles North-east to deſcrie it, thinking it to bee another Land, that lay Northward from *Nona Zembla*, but it began to blow ſo hard out of the Weſt, that they were forced to take in their Marſaile, and yet the wind roſe in ſuch manner, that they were forced to take in all their Sayles, and the Sea went ſo hollow, that they were conſtrayned to driue ſixteene houres together, without ſayle, eight or nine miles East North-east. Cape *Naſſaw*.

The eleuenth of Iuly their Boat was by a great waue of the Sea ſunke to the ground, and by that meanes they loſt it, and after that they draue without ſayles fiue miles, East and by South; at laſt the Sunne being almoſt South-east, the wind came about to the North-weſt, and then the weather began ſomewhat to cleere vp, but yet it was very miſtie. Then they hoyſed vp their ſayles againe and ſayled foure miles till night, that the Sunne was North and by East, and there they had ſixtie fathome deepe, muddie ground, and then they ſaw certayne flakes of Ice, at which time vpon the twelfth of Iuly they woond Weſt, and held North-weſt, and ſayled about a mile with miſtie weather, and a North-weſt wind, and ſayled vp and downe Weſt South-weſt three or foure miles, to ſee if they could find their Boat againe: after that they woond againe with the wind, and ſayled foure miles South-east, till the Sunne was South-weſt, and then they were cloſe by the Land of *Nona Zembla*, that lay East and by North, and Weſt and by South; from thence they woond ouer againe till noone, and ſayled three miles, North and by Weſt, and then till the Sunne was North-weſt, they held North-weſt and by North three miles, then they woond East-ward and ſayled foure or fiue miles North-east and by East.

The thirteenth of Iuly at night, they found great ſtore of Ice, as much as they could deſcry out of the top, that lay as if it had beene a plaine field of Ice, then they woond Weſtward ouer from the Ice.

The

Digitized by Google

The seuenteenth of Iuly, *William Barents* tooke the height of the Sunne with his *Astrolabium*, and then they were vnder 77. degrees and a ¼. of the Pole, and sayled Southward six miles, and perceiued the firme Land, lying South from them. Then they sayled till the nineteenth of Iuly in the morning, West South-west sixe or seuen miles, with a North-west winde, and mistie weather, and after that South-west and South-west and by West seuen miles, the Sunne being 77. degrees 5. minutes lesse. Then they sayled two miles South-west, and were close by the land of *Noua Zembla*, about Cape *Nassaw*.

The fiue and twentieth of Iuly, they were so inclosed about with flakes of Ice, that out of the top they could not discerne any thing beyond it, and sought to get through the Ice, but they could not passe beyond it. At night, they tooke the height of the Sunne, when it was at the lowest betweene North and North-east, and North-east and by North, it being eleuated aboue the Horizon 6. degrees, and ¼. his Declination being 19. degrees 50. minutes, now take 6. degrees ¼. from 19. degrees and 50. minutes, and there resteth 13. degrees 5. minutes, which substracted from 90. there resteth 77. degrees lesse 5. minutes.

The sixe and twentieth of Iuly in the morning, they sayled sixe miles South South-east, till the Sunne was South-west, and then South-east sixe miles, and were within a mile of the land of *Noua Zembla*, and came againe to Cape *Trust*.

Cape *Trust*.

The eight and twentieth of Iuly, the height of the Sun being taken at noone with the *Astrolabium*, it was found to be eleuated aboue the Horizon 57. degrees and 6. minutes, her Declination being 19. degrees and 18. minutes, which in all is 76. degrees and 24. minutes, they being then about foure miles from the land of *Noua Zembla*, that lay all couered ouer with Snow, the weather being cleare, and the winde East.

The nine and twentieth of Iuly, the height of the Sun being taken with the Crosse-staffe, *Astrolabium* & Quadrant, they found it to be eleuated aboue the Horizon 32. degrees, her declination being 19. degrees, which substracted from 32. there resteth 13. degrees of the Equator, which being substracted from 90. there rested 77. degrees, and then the nearest North point of *Noua Zembla*, called the *Ice point*, lay right East from them. There they found certaine Stones that glistered like gold, which for that cause they named Gold-stones, and there also they had a faire Bay with sandie ground.

Ice point.
Gold Stones.

Vpon the same day they woond Southward againe, and sayled South-east two miles betweene the Land and the Ice, and after that from the *Ice point* East, and to the Southward sixe miles to the Ilands of *Orange*; and there they laboured forward betweene the Land and the Ice, with faire still weather, and vpon the one and thirtieth of Iuly got to the Ilands of *Orange*. And there went to one of those Ilands, where they found about two hundred Walrushen, or Sea-horses, lying vpon the shoare to bast themselues in the Sunne. This Sea-horse is a wonderfull strong Monster of the Sea, much bigger then an Oxe, which keepes continually in the Seas, hauing a skin like a Sea-calfe or Seale, with very short hayre, mouthed like a Lion, and many times they lye vpon the Ice; they are hardly killed vnlesse you strike them just vpon the forehead, it hath foure Feet, but no Eares, and commonly it hath one or two young ones at a time. And when the Fisher-men chance to finde them vpon a flake of Ice with their young ones, shee casteth her young ones before her into the water, and then takes them in her Armes, and so plungeth vp and downe with them, and when shee will reuenge her-selfe vpon the Boates, or make resistance against them, then she casts her youug ones from her againe, and with all her force goeth towards the Boate (whereby our men were once in no small danger, for that the Sea-horse had almost stricken her teeth into the sterne of their Boate) thinking to ouer-throw it, but by meanes of the great crie that the men made, she was afraid, and swomme away againe, and tooke her young ones againe in her armes. They haue two teeth sticking out of their mouthes, on each side one, each being about halfe an Ell long, and are esteemed to bee as good as any Iuorie or Elephants teeth, specially in *Muscouia*, *Tartaria*, and thereabouts where they are knowne, for they are as white, hard, and euen as Iuorie.

Orange Ilands.

Morses described.

The Sea-horses that lay bathing themselues vpon the Land, our men supposing that they could not defend themselues being out of the water, went on shoare to assaile them, and fought with them, to get their Teeth that are so rich, but they brake all their Hatchets, Cuttle-axes, and Pikes in pieces, and could not kill one of them, but strucke some of their Teeth out of their mouthes, which they tooke with them: and when they could get nothing against them by fighting, they agreed to goe aboord the Ship, to fetch some of their great Ordnance, to shoot at them therewith; but it began to blow so hard, that it rent the Ice into great pieces, so that they were forced not to doe it, and therewith they found a great white Beare that slept, which they shot into the bodie, but shee ranne away, and entred into the water; the men following her with their Boate, and killed her out-right, and then drew her vpon the Ice, and so sticking a halfe-pike vpright, bound her fast vnto it, thinking to fetch her when they came back againe, to shoot at the Sea-horses with their Ordnance, but for that it began more and more to blow, and the Ice therewith brake in peeces, they did nothing at all.

After that, *William Barents* finding that hee could hardly get through, to accomplish and end his

Digitized by Google

his pretended Voyage, his men alſo beginning to bee wearie, and would ſayle no further, they all together agreed to returne backe againe, to meet with the other Ships that had taken their courſe to the *Wey-gates*, or the Straights of *Naſſaw*, to know what Diſcoueries they had made there. The firſt of Auguſt they turned their courſe to ſayle backe againe from the Ilands of *Orange*; There *William Barents* tooke the height of the Sunne, it being vnder 71. degrees and $\frac{1}{2}$. and there they found a great Creeke, which *William Barents* judged to bee the place where *Oliuer Brunel* had beene before, called *Coſtincſarch*. From the *Blacke* Iland they ſayled South, and South and by East to another ſmall point three miles, on which point there ſtood a Croſſe, and therefore they called it the *Croſſe-point*, there alſo was a flat Bay and low water, fiue, ſix, or ſeuen fadome deepe ſoft ground. From *Croſſe-point* they ſayled along by the land South South-eaſt foure miles, and then came to another ſmall point, which behind it had a great Creeke, that reached Eaſtward: This point they called the fifth point, or Saint *Laurence* point. From the fifth point they ſayled to the *Sconce* point three miles, South South-eaſt, and there lay a long blacke Rocke cloſe by the land, whereon there ſtood a Croſſe; then they entred into the Ice againe, and put inward to the Sea becauſe of the Ice. Their intent was to ſayle along the coaſt of *Nona Zembla* to the *Wey-gates*, but by reaſon that the Ice met them, they woond Weſtward, and from the ninth of Auguſt in the Eeuening, till the tenth of Auguſt in the Morning, ſayled Weſt and by North eleuen miles, and after that foure miles Weſt North-weſt, and North-weſt and by Weſt, the winde being North; in the Morning they woond Eaſtward againe, and ſayled vntill Eeuening ten miles Eaſt, and Eaſt and by South; after that Eaſt, and Eaſt and by North foure miles, and there they ſaw land, and were againſt a great Creeke, where with their Boate they went on land, and there found a faire Hauen fiue fathome deepe, ſandie ground. This Creeke on the North ſide hath three blacke points, and about the three points lyeth the road, but you muſt keepe ſomewhat from the third point, for it is ſtonie, and betweene the ſecond and third point there is another faire Bay, for North-weſt, North, and North-eaſt windes, blacke ſandie ground. This Bay they called Saint *Laurence* Bay, and there they tooke the height of the Sunne, which was 70. degrees and $\frac{1}{4}$.

There returne backe againe.

Oliuer Brunell.

Blacke Iland.

Croſſe-point.

Saint *Laurence* Bay.

From Saint *Laurence* Bay, South South-eaſt two miles to *Sconce* point, there lay along blacke Rocke cloſe by the land, whereon there ſtood a Croſſe, there they went on Land with their Boat, and perceiued that ſome men had beene there, and that they were fled to ſaue themſelues, for there they found ſixe Sackes with Rye-meale buried in the ground, and a heape of ſtones by the Croſſe, and a Bullet for a great Piece, and thereabouts alſo there ſtood another Croſſe, with three Houſes made of wood, after the North Countrey manner: and in the houſes they found many barrels of Pike-ſtaues, whereby they conjectured, that there they vſed to take Salmons, and by them ſtood fiue or ſix Coffins, by Graues, with dead mens bones, the Coffins ſtanding vpon the ground all filled vp with ſtones; there alſo lay a broken *Ruſſia* ſhip, the Keele thereof being fortie foure foot long, but they could ſee no man on the Land: it is a faire Hauen for all windes, which they called the *Meale-hauen*, becauſe of the Meale that they found there. From the blacke Rocke or Cliffe with the Croſſe, two miles South South-eaſt, there lay a low Iland a little into the Sea; from whence they ſayled nine or ten miles South South-eaſt, there the height of the Sunne was 70. degrees and 50. minutes, when it was South South-weſt. From that Iland they ſayled along by the Land foure miles South-eaſt and by South, there they came to two Ilands, whereof the vttermoſt lay a mile from the Land: thoſe Ilands they called Saint *Clara*.

Sconce point.

Then they entred into the Ice againe, and woond inward to the Sea in the wind, and ſayled from the Iland vntill Eeuening, Weſt South-weſt foure miles, the wind being North-weſt; that Eeuening it was very miſtie, and then they had eightie fathome deepe.

Then againe they ſayled South-weſt and by Weſt, and Weſt South-weſt three miles, there they had ſeuentie fathome deepe, and ſo ſayled till the thirteenth of Auguſt in the morning, South-weſt and by Weſt foure miles, two houres before they had ground at fiftie ſixe fathome, and in the morning at fortie fiue fathome, ſoft muddie ground: Then they woond from the land and ſayled North, and North and by Eaſt foure miles, from thence they woond to land againe, and ſayled till the fourteene of Auguſt, fiue or ſixe miles South-weſt, ſayling cloſe by the land, which (as they gheſſe) was the Iland of *Colgoyen*.

Colgoyen.

Auguſt the fifteenth, the Sun being South-weſt, *William Barents* tooke the height thereof, and found it to bee eleuated aboue the Horizon 35. degrees, his Declination being 14. degrees and $\frac{1}{4}$. ſo that as there wanted 55. degrees of 90. which 55. and 14. degrees $\frac{1}{4}$. being both added together, made 69. Degrees 15. Minutes, which was the height of the Pole in that place, the wind being North-weſt, then they ſayled two miles more Eaſtward, and came to the Ilands called *Matſloe* and *Delgoy*, and there in the morning they met with the other Ships of their companie, being of *Zelandt* and *Enck-huyſen*, that came out of *Wey-gates* the ſame day, there they ſhewed each other where they had beene, and how farre each of them had ſayled and diſcouered.

Matſloe and *Delgoy*. They meet with their companie.

The Ship of *Enck-huyſen* had paſt the Straights of *Wey-gates*, and ſaid, that at the end of *Wey-gates* hee had found a large Sea, and that they had ſayled fiftie or ſixtie miles further Eaſtward, and were of opinion that they had beene about the Riuer *Obi*, that commeth out of *Tartaria*, and that the Land of *Tartaria* reacheth North-eaſtward againe from thence, whereby they thought

that

Digitized by Google

that they were not farre from Cape *Tabin*, which is the point of *Tartaria*, that reacheth towards the Kingdome of *Cathai*, North-east and then Southward, and so thinking that they had Discouered enough for that time, and that it was too late in the yeere to sayle any further, as also that their Commission was to discouer the scituation, and to come home againe before Winter, they turned againe towards the *Wey-gates*, and came to an Iland about fiue miles great, lying South-east from *Wey-gates* on the *Tartarian* side, and called it the *States* Iland, there they found many Stones that were of Christall Mountayne, being a kind of Diamond.

States Iland.

When they were met together, as I sayd before, they made signes of joy, discharging some of their Ordnance, and were merrie, the other Ships thinking that *William Barents* had sayled round about *Noua Zembla*, and had come backe againe through the *Wey-gates* : and after they had shewed each other what they had done, and made signes of joy for their meeting, they set their course to turne backe againe for *Holland*, and vpon the sixteenth of August they went vnder the Ilands of *Masloe* and *Delgoy*, and put into the road, because the wind was North-west, and lay till the eighteenth of August. Then they set sayle, and came to the *Texel* the sixteenth of September.

Chap. IIII.

A briefe Declaration of Barents *his second Nauigation, made in* Anno 1595. *behinde* Norway, Muscouia, *and* Tartaria, *written by* Gerat de Veer.

THe foure Ships aforesaid, being returned home about Harueſt-time, in *Anno* 1594. they were in good hope that the Voyage aforesaid would bee done, by passing along the Straights of *Wey-gates*, and specially by the report made by the two Ships of *Zelandt*, and *Enck-huysen*, wherein *Iohn Huygben* of *Linschoten* was Committee, who declared the manner of their trauell in such sort, that the Generall *States* and Prince *Maurice* resolued, in the beginning of the next yeere to prepare certayne Ships, not onely (as they went before) to discouer the passage, but to send certayn Wares and Merchandizes thither, wherein the Merchants might lade what Wares they would, with certaine Factors to sell the said Wares, in such places as they should arriue, neither paying Fraight nor Custome. *Peter Plantius* a learned Cosmographer, being a great furtherer and setter forward of this Voyage, and was their chiefe Instructer therein, setting downe the scituation of the Coasts of *Tartaria*, *Cathaia*, & *China* ; but how they lye it is not yet sufficiently Discouered, for that the courses and rules by him set downe, were not fully effected, by meanes of some inconueniences that fell out, which by reason of the shortnesse of time could not bee holpen.

In *Anno* 1595. the Generall *States* of the vnited Prouinces, and Prince *Maurice*, caused seuen Ships to bee prepared to sayle through the *Wey-gates*, or the Straights of *Nassaw*, to the Kingdome of *Cathaia* and *China* : two out of *Amsterdam*, two out of *Zelandt*, two out of *Enck-huysen*, and one out of *Rotterdam* : sixe of them laden with diuers kindes of Wares, Merchandizes, and with Money and Factors, to sell the said Wares ; the seuenth being a Pinnasse, that had Commission, when the other Ships were past about the Cape *de Tabin* (which is the furthest point of *Tartaria*) or so farre, that they might sayle forth Southward, without any let or hinderance of the Ice, to turne backe againe, and to bring newes thereof : and I being in *William Barents* Ship that was our chiefe Pilot, and *Iames Hemskerke* chiefe Factor, thought good to write downe the same in order, as it is hereafter declared, as I did the first Voyage, according to the course and stretching of the Land as it lyeth.

Iames Hemskerke famous for the *Gibralter* exploit.

First, after we had beene mustered at *Amsterdam*, and euery man taken an Oath, that was then purposely ministred vnto vs ; vpon the eighteene of Iune wee sayled to the *Texel*, from thence to put to Sea, with other Ships that were appointed to meet vs at a certayne day ; and so to begin our Voyage in the name of God. The second of Iuly wee set sayle out of the *Texel*. The fifth of August, the North Cape lay about two miles East from vs, and when the Sunne was North-west, the *Mother and her Daughters* lay Southward from vs foure miles.

The seuenteenth, wee saw great store of Ice, all along the Coast of *Noua Zembla*, and casting out the Lead, had 75. fathom soft ground. After that we held diuers courses because of the Ice, and sayled South-east and by East, & South South-east, for the space of eighteene miles, till the eighteenth of August, when the Sunne was East, and then we cast out the lead againe, and found 30. fathome soft ground, and within two houres after that, fathome, red sand, with small shelles : three Glasses after that we had ground at twentie fathome, red sand, with blacke shels, as before : then wee saw two Ilands, which they of *Enck-huysen* gaue the names of Prince *Maurice*, and his Brother, which lay from vs South-east three miles, being low Land, and then wee sayled eight miles, till the Sun was South. Then we sayled East, and oftentimes casting out the lead, we found twentie,

Digitized by Google

twentie, nineteene, eighteene, and ſeuenteene fathome deep, good ground mixed with black ſhels, and ſaw the *Wey-gates* (the Sunne being Weſt) which lay Eaſt North-eaſt from vs about fiue miles, and after that we ſayled about eight miles.

Then we ſayled vnder 70. degrees, vntill we came to the *Wey-gates*, moſt part through broken Ice, and when we got to *Wey-gates*, we caſt out our Lead, and for a long time found thirteene and fourteene fathome, ſoft ground, mixed with blacke ſhels, not long after that we caſt out the Lead and found ten fathome deepe, the wind being North, and we forced to hold ſtifly aloofe, in regard of the great quantitie of Ice, till about mid-night, then were forced to wind Northward, becauſe of certaine Rocks that lay on the Southſide of *Wey-gates*, right before vs, about a mile and a halfe, hauing ten fathome deepe: then we changed our courſe, and ſayled Weſt North-weſt for the ſpace of foure Glaſſes, after that we woond about againe Eaſt, and Eaſt and by South, and ſo entred into *VVey-gates*, and as wee went in, wee caſt out the Lead, and found ſeuen fathome deepe, little more or leſſe, till the nineteenth of Auguſt, and then the Sunne being South-eaſt, we entred into the *VVey-gates*, in the Road, the wind being North. The right Channell betweene the *Image* point and the *Samuters* Land was full of Ice, ſo that it was not well to bee paſt thorow, and ſo we went into the Road (which we called the *Traen* Bay, becauſe we found ſtore of Traen-oyle there; this is a good Bay for the courſe of the Ice, and good almoſt for all winds, and we may ſayle ſo farre into it as we will, at foure, fiue, and three fathome, good Anchor-ground, on the Eaſt ſide it is deepe water.

Image point. *Samoyeds* land. *Traen* Bay.

The twentieth of Auguſt, the height of the Sunne being taken with the Croſſe-ſtaffe, wee found that it was eleuated aboue the Horizon 69. degrees 21. minutes, when it was South-weſt and by South, being at the higheſt, or before it beganne to deſcend. The one and twentieth of Auguſt, we went on Land within the *VVey-gates* with foure and fiftie men, to ſee the ſituation of the Countrey, and being two miles within the Land we found many *Vel-werck*, Traen, and ſuch like Wares, and diuers foot-ſteps of men, and Deere; whereby wee perceiued that ſome men dwelt there abouts, or elſe vſed to come thither. And to aſſure vs the more thereof, wee might perceiue it by the great number of Images, which we found there vpon the Image or *Beelthooke*, (ſo called by vs) in great abundance, whereof ten dayes after wee were better informed by the *Samuters* and the *Ruſſians*, when wee ſpake with them. And when wee entred further into the Land, we vſed all the meanes we could, to ſee if we could find any houſes or men, by whom we might be informed of the ſituation of the Sea there abouts, whereof afterward we had better intelligence by the *Samuters*; that told vs, that there are certayne men dwelling on the *VVey-gates*, and vpon *Nona Zembla*, but we could neither find men, houſes, nor any other things, ſo that to haue better information, wee went with ſome of our men further South-eaſt into the Land; towards the Sea-ſide, and as we went, we found a path-way made with mens feet in the Moſſe or Marſh-ground, about halfe knee deepe, for that going ſo deepe we felt hard ground vnder our feet, which at the deepeſt was no higher then our ſhooes, and as we went forward to the Sea-coaſt, we were exceeding glad, thinking that we had ſeene a paſſage open, where we might get through, becauſe we ſaw ſo little Ice there: and in the Euening entring into our ſhip againe, we ſhewed them that newes. Meane-time, our Maſter had ſent out a Boat to ſee if the *Tartarian* Sea was open, but it could not get into the Sea becauſe of the Ice, yet they rowed to the *Croſſe*-point, and there let the Boat lye, and went ouer the Land to the Weſt point, and there perceiued that the Ice in the *Tartarian* Sea, lay full vpon the *Ruſſian* Coaſts, and in the mouth of *VVey-gates*.

They goe on Land. Images.

The three and twentieth of Auguſt we found a *Lodgie*, or Boat of *Pitzore*, which was ſewed together with Baſt or Ropes, that had beene Northward to ſeeke for ſome Sea-horſes Teeth, Traen, and Geeſe, which they fetcht with their Boat, to lade in certaine ſhippes that were to come out of *Ruſſia* through *VVey-gates*. Which ſhips they ſaid (when they ſpake with vs) were to ſayle into the *Tartarian* Sea, by the Riuer of *Oby*, to a place called *Vgolita* in *Tartaria*, there to ſtay all Winter, as they vſed to doe euery yeere: and told vs that it would yet bee nine or ten Weekes ere it began to freeze in that place, and that when it once beganne to freeze, it would freeze ſo hard, that as then men might go ouer the Sea into *Tartaria* (along vpon the Ice) which they called *Mermare*.

The foure and twentieth of Auguſt in the morning betimes, we went on board of the *Lodgie*, to haue further information and inſtruction of the Sea, on the Eaſtſide of *VVey-gates*, and they gaue vs good inſtruction, ſuch as you haue heard.

The fiue and twentieth of Auguſt we went againe to the *Lodgie*, and in friendly manner ſpake with them, we for our parts offering them friendſhip; and then they gaue vs eight fat Geeſe, that lay in the bottome of their Boat: we deſired that one or two of them would goe with vs aboard our ſhip, and they willingly went with vs to the number of ſeuen; and being in our ſhip, they wondred much at the greatneſſe and furniture of our ſhip: and after they had ſeene and looked into it in euery place, we ſet Fiſh, Butter and Cheeſe before them to eate, but they refuſed it; ſaying, that that day was a Faſting day with them, but at laſt when they ſaw ſome of our Pickled Herrings, they eate them both heads, tayles, skinnes, and guts, and hauing eaten thereof,

we

Digitized by Google

we gaue them a ſmall Firkin of Herrings, for the which they gaue vs great thankes, knowing not what friendſhip they ſhould doe vs to requite our courteſie, and wee brought them with our Pinnaſſe into the *Traen* Bay. About Noone we hoyſed vp our Anchors with a Weſt North-weſt wind; the courſe or ſtretching of *VVey-gates*, is Eaſt to *Cruis* point, and then North-eaſt to the *Twiſt* point, and ſomewhat more Eaſterly: From thence the Land of *Wey-gates*, reacheth North North-eaſt, and North and by Eaſt, and then North, and ſomewhat Weſterly; wee ſayled North-eaſt and Eaſtward two miles, by the *Twiſt* point, but then we were compelled to ſaile backe againe, becauſe of the great ſtore of Ice, and tooke our courſe to our Road aforeſaid: and ſayling backe againe we found a good place by the *Croſſe* point, to anchor in that night. The ſix and twentieth of Auguſt in the morning we hoyſed Anchor, and put out our fork-ſaile, and ſo ſailed to our old Road, and there to ſtay for a more conuenient time.

They ſpeake with *Samoyeds.*

The eight and twentie, nine and twentie, and thirtieth of Auguſt till the one and thirtieth, the wind for the moſt part was South-weſt, and *VVilliam Barents* our Captaine ſailed to the South-ſide of *VVey-gates*, and there went on Land, where we found certaine Wildmen (called *Samoyters*) and yet not altogether wilde, for they being twentie in number, ſtaid and ſpake with our men, being but nine together, about a mile within the Land, our men not thinking to find any men there (for that we had at other times beene on Land in the *VVey-gates*, and ſaw none) at laſt, it being miſtie weather, they perceiued men, fiue and fiue in a company, and wee were hard by them before we knew it: then our Interpretour went alone towards them to ſpeake with them; which they perceiuing, ſent one towards vs, who comming almoſt to our men, tooke an Arrow out of his Quiuer, offering to ſhoot at him; wherewith our Interpretor, being without Armes, was afraid, and cryed vnto him, ſaying (in *Ruſſian* ſpeech;) *Shoote not, we are friends:* which the other hearing, caſt his Bow and Arrowes to the ground, therewith giuing him to vnderſtand that he was well content to ſpeake with our man: which done, our man called to him once againe, and ſaid: *We are friends:* whereunto he made anſwere and ſaid; then you are welcome: and ſaluting one the other, bended both their heads downe towards the ground, after the *Ruſſian* manner: this done, our Interpretor queſtioned with him, about the ſituation and ſtretching of the Sea Eaſt-ward through the Streights of *Wey-gates*; whereof he gaue vs good inſtruction, ſaying: that when they ſhould haue paſt a point of land about fiue daies ſailing from thence, ſhewing North-eaſtward; that after that, there is a great Sea (ſhewing towards the South-eaſt vpward,) ſaying, that he knew it very well, for that one had beene there that was ſent thither by their King with certaine Souldiers, whereof he had beene Captaine.

Sea open.

Samoyeds apparell.

The manner of their Apparell is, like as we vſe to paint Wildmen, but they are not wilde; for they are of reaſonable judgement: they are apparelled in Harts skinnes from the head to the feet, vnleſſe it be the principalleſt of them, which are apparelled, whether they be men or women, like vnto the reſt, as aforeſaid, vnleſſe it be on their heads, which they couer with certaine coloured Cloth lined with Furre: the reſt weare Caps of Harts or Bucks skinnes, the rough ſide outwards, which ſtand cloſe to their heads, and are very fit. They weare long Haire, which they pleate and fold, and let it hang downe vpon their backes. They are (for the moſt part all) ſhort and low of ſtature, with broad flat faces, ſmall eyes, ſhort legs, their knees ſtanding outwards; and are very quicke to goe and leape. They truſt not Strangers; for although that wee ſhewed them all the courteſie and friendſhip that wee could, yet they truſted vs not much: which wee perceiued hereby, that as vpon the firſt of September wee went againe on Land to them, and that one of our men deſired to ſee one of their Bowes: they refuſed it, making a ſigne that they would not doe it. Hee that they called their King, had Centinels ſtanding abroad, to ſee what was done in the Countrey, and what was bought and ſold: At laſt, one of our men went neerer to one of the Centinels, to ſpeake with him, and offered him great friendſhip, according to their accuſtomed manner, withall giuing him a Bisket; which he with great thankes tooke, and preſently eate it; and while hee eate it, hee ſtill lookt diligently about him on all ſides what was done.

Haire, perſon, ſtature.

Their King.

Their Sleds.

Their Sleds ſtood alwayes readie with one or two Harts in them, that runne ſo ſwiftly with one or two men in them, that our Horſes are not able to follow them. One of our men ſhot a Musket towards the Sea, wherewith they were in ſo great feare, that they ranne and leapt like mad men: yet at laſt, they ſatisfied themſelues, when they perceiued that it was not maliciouſly done to hurt them: and we told them by our Interpretor, that we vſed our Peeces in ſtead of Bowes; whereat they wondered, becauſe of the great blow and noyſe that it gaue and made: and to ſhew them what wee could doe therewith, one of our men tooke a flat ſtone about halfe a handfull broad, and ſet it vpon a Hill a good way off from him: which they perceiuing, and thinking that we meant ſome-what thereby, fiftie or ſixtie of them gathered round about vs; and yet ſome-what farre off, wherewith hee that had the Peece, ſhot it off, and with the Bullet ſmote the ſtone in ſunder: whereat they wondred much more then before.

Departure.

After that, wee tooke our leaues one of the other, with great friendſhip on both ſides; and when we were in our Pinnaſſe, wee all put off our Hats, and bowed our heads vnto them, ſounding our Trumpet: They (in their manner) ſaluting vs alſo, and then went to their Sleds againe.

And

Digitized by Google

And after they were gone from vs, and were ſomewhat within the Land, one of them came riding to the ſhoare, to fetch a rough-hewed Image, that our men had taken off the ſhoare, and carryed into their Boate: and when hee was in our Boate, and perceiued the Image, he made vs a ſigne that wee had not done well to take away that Image: Which we beholding, gaue it to him againe: Which when hee had receiued, he placed it vpon a Hill right by the Sea ſide, and tooke it not with him, but ſent a Sled to fetch it from thence: and as farre as wee could perceiue, they eſteemed that Image to be their God; for that right ouer againſt that place in the *Wey-gates*, which wee called *Beelthooke*, we found certayne hundreds of ſuch carued Images, all rough about the Heads, being ſomewhat round, and in the middle, hauing a little hill in ſtead of a Noſe; and about the Noſe two cuts, in place of Eyes; and vnder the Noſe a cut, in place of a Mouth. Before the Images, wee found great ſtore of Aſhes, and bones of Harts: whereby it is to bee ſuppoſed, that there they offered vnto them.

Image.

Hundreds of ill ſhapen Images.

The ſecond of September, a little before Sunne riſing, wee put forth an Anchor to get out, for that the winde as then blew South South-weſt; it being good weather to get out, and ill weather to lye ſtill: for wee lay vnder a low Banke. The Admirall and Vice-admirall ſeeing vs making out, began alſo to hoyſe their Anchors, and to ſet ſayle. When wee put out our Focke-ſayle, the Sunne was Eaſt and by South: and then wee ſayled to the *Croſſe*-point, and there wee caſt Anchor to ſtay for the Vice-admirals Pinnaſſe; which with much labour and paines, in time got out of the Ice, by often caſting out of their Anchor: and in the Eeuening ſhee got to vs: in the Morning about two houres before Sunne riſing we ſet ſayle, and by Sunne riſing, wee got within a mile Eaſtward of the *Twiſt*-point, and ſayled Northward ſixe miles, till the Sunne was South. Then wee were forced to wind about, becauſe of the great quantitie of Ice, and the Myſt that then fell, at which time the winde blew ſo vncertayne, that we could hold no courſe, but were forced continually to winde and turne about, by reaſon of the Ice, and the vnconſtantneſſe of the winde, together with myſt, ſo that our courſe was vncertayne, and wee ſuppoſed that we had ſayled Southward vp towards the *Samuters* Countrey, and then held our courſe South-weſt, till the watchers were North-weſt from vs; then we came to the point of the *States* Iland, lying Eaſtward about a Muſket ſhot from the land, hauing 13. fathom deepe.

The fourth of September, wee hoyſed Anchor becauſe of the Ice, and ſayled betweene the firme Land and the *States* Iland, where we lay cloſe by the *States* Iland at foure and fiue fathom deepe, and made our Ship faſt with a Cable caſt on the ſhoare, and there wee were ſafe from the courſe of the Ice, and diuers times went on land to get Hares, whereof there were many in that Iland. The ſixth of September, ſome of our men went on ſhoare vpon the firme land to ſeeke for Stones, which are a kinde of Diamond, whereof there are many alſo in the *States* Iland: and while they were ſeeking the Stones, two of our men lying together in one place, a great leane white Beare came ſuddenly ſtealing out, and caught one of them faſt by the necke, who not knowing what it was that tooke him by the necke, cryed out and ſayd; *Who is that that pulls mee ſo by the necke*? wherewith the other that lay not farre from him; lifted vp his head to ſee who it was, and perceiuing it to bee a monſtrous Beare, cryed out and ſayd, Oh Mate! it is a Beare, and therewith preſently roſe vp and ranne away.

States-Iland.

A Beare kills two men.

The Beare at the firſt falling vpon the man, bit his head in ſunder, and ſuckt out his blood, wherewith the reſt of the men that were on the Land, being about twentie in number, ranne preſently thither, either to ſaue the man, or elſe to driue the Beare from the dead body: and hauing charged their Pieces and bent their Pikes, ſet vpon her, that ſtill was deuouring the man, but perceiuing them to come towards her, fiercely and cruelly ranne at them, and got another of them out from the Companie which ſhee tore in pieces, wherwith all the reſt ranne away.

Her ſtoutneſſe.

We perceiuing out of our Ship and Pinnaſſe, that our men ranne to the Sea-ſide to ſaue themſelues, with all ſpeed entred into our Boates, and rowed as faſt wee could to the ſhoare to relieue our men. Where being on Land, we beheld the cruell ſpectacles of our two dead men, that had beene ſo cruelly killed and torne in pieces by the Beare, wee ſeeing that, incouraged our men to goe backe againe with vs, and with Pieces, Curtelaxes, and Halfe-pikes, to ſet vpon the Beare, but they would not all agree thereunto: ſome of them ſaying, our men are already dead, and we ſhall get the Beare well enough, though we oppoſe not our ſelues into ſo open danger, if wee might ſaue our fellowes liues, then wee would make haſte, but now we need not make ſch ſpeed, but take her at an aduantage, with moſt ſecuritie for our ſelues, for we haue to doe with a cruell, fierce, and rauenous Beaſt. Whereupon three of our men went forward, the Beare ſtill deuouring her prey, not once fearing the number of our men, and yet they were thirtie at the leaſt: the three that went forward in that ſort, were *Corneſius Iacobſon*, Maſter of *William Barents* ſhip, *William Gyſen*, Pylot of the Pinnaſſe, and *Hans van Nuſſen*, *William Barents* Purſer: and after that the ſayd Maſter and Pylot had ſhot three times and miſt, the Purſer ſtepping ſomewhat further forward, and ſeeing the Beare to be within the length of a ſhot, preſently leuelled his Piece, and diſcharging it at the Beare, ſhot her into the head betweene both the eyes, and yet ſhe held the man ſtill faſt by the necke, and lifted vp her head with the man in her mouth, but ſhee began ſomwhat to ſtagger, wherewith the Purſer and a *Scottiſh*-man drew out their Curtelaxes,

They kill the Beare.

and ſtrooke at her ſo hard, that their Curtelaxes burſt, and yet ſhe would not leaue the man, at laſt *William Geyſen* went to them, and with all his might ſtrooke the Beare vpon the ſnout with his Piece, at which time the Beare fell to the ground, making a great noyſe, and *William Geyſen* leaping vpon her cut her throat. The ſeuenth of September, wee buried the dead bodies of our men in the *States* Iland, and hauing flayed the Beare, carryed her Skin to *Amſterdam*.

The ninth of September, we ſet ſayle from the *States* Iland, but the Ice came in ſo thicke and with ſuch force, that we could not get through, ſo that at Eeuening we came backe againe to the *States* Iland, the winde being Weſterly. There the Admirall and the Pinnaſſe of *Rotterdam*, fell on ground by certayne Rockes, but got off againe without any hurt.

The tenth of September, we ſayled againe from the *States* Iland towards the *Wey-gates*, and ſent two Boates into the Sea, to certifie vs what ſtore of Ice was abroad: and that Eeuening wee came all together into *Wey-gates*, and Anchored by the *Twiſt*-point. The eleuenth of September in the Morning, we ſayled againe into the *Tartarian* Sea, but we fell into great ſtore of Ice, ſo that we ſayled backe againe to the *Wey-gates*, and Anchored by the *Croſſe*-point, and about midnight we ſaw a *Ruſſian Lodgie*, that ſayled from the *Beelt*-point towards the *Samoiers* Land. The thirteenth of September, the Sunne being South, there began a great ſtorme to blow out of the South South-weſt, the weather being miſtie, melancholy, and ſnowie, and the ſtorme increaſing more and more, we draue through.

Twiſt-point.

The fourteenth of September, the weather began to bee ſomewhat clearer, the winde being North-weſt, and the ſtorme blowing ſtiffe out of the *Tartarian* Sea, but at Eeuening it was faire weather, and then the wind blew North-eaſt, the ſame day our men went on the other ſide of *Wey-gates*, on the firme land, to take the depth of the Channell, and entred into the Bough behind the Ilands, where there ſtood a little Houſe made of wood, and a great fall of water into the land. The ſame Morning we hoyſed vp our Anchor, thinking once againe to try what wee could doe to further our Voyage, but our Admirall being of another minde, lay ſtill till the fifteenth of September. The ſame day in the Morning, the winde draue in from the Eaſt-end of the *Wey-gates*, whereby we were forced preſently to hoyſe Anchors, and the ſame day ſayled out from the Weſt-end of the *Wey-gates*, with all our Fleet, and made homewards againe, and that day paſt by the Ilands called *Matfloe* and *Delgoy*, and that night we ſayled twelue miles, North-weſt and by Weſt, till Saturday in the morning, and then the winde fell North-eaſt, and it began to Snow. We ſaw the point of *Candynaes*, lying South-eaſt from vs, and then wee had ſeuen and twentie fathom deepe, red ſand with blacke ſhels.

* *Matfloe* and *Delgoy*.

The nine and twentieth of September, in the Eeuening entred into *Ward-houſe*, and there we ſtayed till the tenth of October. And that day we ſet ſayle out of *Ward-houſe*, and vpon the eighteenth of Nouember, we arriued in the *Maes*.

Chap. V.

The third Voyage Northward to the Kingdomes of Cathaia, *and* China, *in* Anno 1596. *Written by* Gerat de Veer.

§. I.

What happened to them at Sea, before they came to build their Houſe.

After that the ſeuen Ships (as I ſaid before) were returned backe againe from their North Voyage, with leſſe benefit then was expected, the Generall *States* of the Vnited Prouinces conſulted together, to ſend certayne Ships thither againe, a third time, to ſee if they might bring the ſaid Voyage to a good end, if it were poſſible to bee done: but after much Conſultation had, they could not agree thereon; yet they were content to cauſe a Proclamation to be made, that if any, either Townes, or Merchants, were diſpoſed to venture to make further ſearch that way, at their owne charges, if the Voyage were accompliſhed, and that thereby it might be made apparant, that the ſayd paſſage was to be ſayled, they were content to giue them a good reward, in the Countries behalfe, naming a certayne ſumme of money. Whereupon in the beginning of this yeere, there was two Ships rigged and ſet forth by the Towne of *Amſterdam*, to ſayle that Voyage, the men therein being taken vp vpon two Conditions: *viz.* What they ſhould haue if the Voyage were not accompliſhed, and what they ſhould haue if they got through, and brought the Voyage to an end, promiſing them a good reward if they could effect it, thereby to encourage the men, taking vp as many vnmarried men as they could, that they might not bee diſſwaded by meanes of their Wiues and Children to leaue off the Voyage. Vpon theſe Conditions, thoſe

two

Digitized by Google

two Ships were ready to set sayle in the beginning of May. In the one, *Iacob Heemskerke Hendrickson*, was Master and Factor for the Wares and Merchandizes; and *Williams Barents* chiefe Pylot. In the other, *Iohn Cornelison Ryp*, was both Master and Factor for the goods that the Merchants had laden in her.

The fifth of May, all the men in both the Ships were Mustered, and vpon the tenth of May, they sayled from *Amsterdam*, and the thirteenth of May got to the *Vlie*. The thirtieth of May we had a good winde, and sayled North-east, and wee tooke the height of the Sunne with our Crosse-staffe, and found that it was eleuated aboue the Horizon 47. degrees and 42. minutes, his Declination was 21. degrees and 42. minutes, so that the height of the Pole was 69. degrees and 24. minutes.

The first of Iune we had no night, and the second of Iune we had the winde contrarie, but vpon the fourth of Iune we had a good winde, out of the West North-west, and sayled North-east. And when the Sunne was about South South-east, wee saw a strange sight in the Element: for on each side of the Sunne there was another Sunne, and two Raine-bowes, that past cleane thorow the three Sunnes, and then two Raine-bowes more, the one compassing round about the Sunnes, and the other crosse thorow the great rundle; the great rundle standing with the vttermost point, eleuated aboue the Horizon 28. degrees: at noone the Sunne being at the highest, the height thereof was measured, and wee found by the *Astrolabium*, that it was eleuated aboue the Horizon 48. degrees and 43. minutes, his Declination was 22. degrees and 17. minutes, the which being added to 48. degrees 43. minutes, it was found that wee were vnder 71. degrees of the height of the Pole.

Iune. Three Sunnes and foure Rain-bowes. The like hath beene seene in *England* about the time this worke entred the Presse.

Iohn Cornelis ship held aloofe from vs, and would not keepe with vs, and would hold no course but North North-east, for they alledged, that if wee went any more Easterly, that then we should enter into the *Wey-gates*, but wee being not able to perswade them, altered our course one point of the Compasse, to meet them, and sayled North-east and by North, and should otherwise haue sayled North-east, and somewhat more East.

The fifth, wee saw the first Ice, which we wondered at, at the first, thinking that it had beene white Swannes, for one of our men walking in the Fore-decke, on a sudden began to cry out with a loud voyce, and said; that hee saw white Swannes: which wee that were vnder Hatches hearing, presently came vp, and perceiued that it was Ice that came driuing from the great heape, showing like Swannes, it being then about Eeuening, at midnight we sayled through it, and the Sunne was about a degree eleuated aboue the Horizon in the North.

Ice.

The sixth, about foure of the clocke in the after-noone, wee entred againe into the Ice, which was so strong that we could not passe through it, and sayled South-west and by West, till eight Glasses were runne out, after that we kept on our course North, North-east, and sayled along by the Ice.

The seuenth, we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 38. degrees and 38. minutes, his Declination being 22. degrees 38. minutes; which being taken from 38. degrees 38. minutes, wee found the Pole to bee 74. degrees; there we found so great store of Ice, that it was admirable: and we sayled along through it, as if we had past betweene two Lands. The water being as greene as Grasse, and we supposed that we were not farre from *Greenland*, and the longer we sayled, the more and thicker Ice we found. The eight of Iune, we came to so great a heape of Ice, that we could not sayle through it.

Greene water.

The ninth of Iune, we found the Iland that lay vnder 74. degrees and 30. minutes, and as we gheest, it was about fiue miles long. The tenth, we put out our Boate, and therewith eight of our men went on Land, and as we past by *Iohn Cornelisons* ship, eight of his men also came into our Boat, whereof one was the Pilot. Then *William Barents* asked him, whether we were not too much Westward, but hee would not acknowledge it: whereupon there passed many words betweene them, for *William Barents* sayd, he would proue it to bee so, as in truth it was. The eleuenth, going on Land, we found great store of Sea-Mewes Egges vpon the shoare, and in that Iland we were in great danger of our liues: for that going vp a great Hill of Snow, when wee should come downe againe, we thought we should all haue broken our neckes, it was so slipperie, but we sate vpon the Snow and slid downe, which was very dangerous for vs, to breake both our armes and legges, for that at the foot of the Hill there was many Rockes, which we were likely to haue fallen vpon, yet by Gods helpe we got safely downe againe. Meane time *William Barents* sate in the Boate, and saw vs slide downe, and was in greater feare then we, to behold vs in that danger. In the said Iland, we found the varying of our Compasse, which was 13. degrees, so that it differed a whole point at the least: after that wee rowed aboord *Iohn Cornelisons* ship, and there we eate our Egges.

Beares, or *Cherie*-Iland.

Egges.

Danger escaped.

Variation of the Compasse.

The twelfth in the morning, we saw a white Beare, which wee rowed after with our Boate, thinking to cast a Rope about her necke; but when we were neere her, she was so great, that we durst not doe it, but rowed backe againe to our Ship to fetch more men and our Armes, and so made to her againe with Muskets, Harquebusses, Halberts, and Hatchets. *Iohn Cornelisons* men comming also with their Boate to helpe vs; and so being well furnished of men and weapons,

Great white Beare.

Digitized by Google

Fight with her.

we rowed with both our Boates vnto the Beare, and fought with her while foure Glasses were runne out, for our Weapons could doe her little hurt: and amongst the rest of the blowes that we gaue her, one of our men strooke her into the backe with an Axe, which stucke fast in her backe, and yet shee swamme away with it; but we rowed after her, and at last we cut her head in sunder with an Axe, wherewith she dyed: and then wee brought her into *Iohn Cornelisons* ship, where we flayed her, and found her Skinne to bee twelue foot long: which done, we eate some of her flesh; but wee brookt it not well. This Iland we called the *Beare*-Iland.

Beares skin 12. foot long.

The thirteenth we left the Iland, and sayled North, and somewhat Easterly, the winde being West, and South-west, and made good way: so that when the Sunne was North, wee ghest that we had sayled sixteene miles Northward from that Iland.

The fourteenth, when the Sunne was North, we cast out our Lead one hundred and thirteene fathome deepe, but found no ground, and so sayled forward till the fifteenth of Iune, when the Sunne was South-east, with mistie and drisling weather, and sayled North, and North and by East: about Eeuening it cleared vp, and then we saw a great thing driuing in the Sea, which we thought had beene a Ship: but passing along by it, we perceiued it to bee a dead Whale, that stunke monstrously; and on it there sate a great number of Sea-mewes: At that time, wee had sayled twentie miles.

Dead Whale.

The sixteenth, with the like speed we sayled North and by East, with mistie weather; and as we sayled, we heard the Ice before we saw it: but after, when it cleared vp, we saw it, and then woond off from it, when as we ghest we had sayled thirtie miles. The seuenteenth and eighteenth, we saw great store of Ice, and sayled along by it, vntill we came to the point, which we could not reach, for that the wind was South-east, which was right against vs, & the point of Ice lay Southward from vs: yet wee lauered a great while to get beyond it, but we could not doe it. The nineteenth, we saw Land againe, then we tooke the height of the Sun, and found that it was eleuated aboue the Horizon 33. degrees and 37. minutes: her Declination being 23. degrees and 26. minutes: which taken from the sayd 33. degrees and 37. minutes, wee found that we were vnder 80. degrees and 11. minutes: which was the height of the Pole there. This Land was very great, and we sayled Westward along by it, till we were vnder 79. degrees and a halfe, where we found a good road, and could not get neare to the Land, because the winde blew North-east, which was right off from the Land: the Bay reacheth right North and South into the Sea.

80. Degrees and 11 minuts.

Another fight with a white Beare.

The twentie one, we cast out our Anchor, at eighteene fathome before the Land; and then we and *Iohn Cornelisons* men, rowed on the West-side of the Land, and there fetched Balast: and when we got on boord againe with our Balast, we saw a white Beare that swamme towards our ship; whereupon we left off our worke, and entering into the Boate with *Iohn Cornelisons* men, rowed after her, and crossing her in the way, droue her from the Land, wherewith she swamme further into the Sea, and we followed her; and for that our Boate could not make good way after her, we manned our Scute also, the better to follow her: but shee swam a mile into the Sea; yet we followed her with the most part of all our men of both Ships in three Boats, and strooke oftentimes at her, cutting and hewing her, so that all our Armes were most broken in pieces. During our fight with her, shee strooke her Clawes so hard in our Boate, that the signes thereof were seene in it; but as hap was, it was in the fore-head of our Boate: for if it had beene in the middle thereof, she had (peraduenture) ouer-throwne it, they haue such force in their Clawes: At last, after we had fought long with her, and made her wearie with our three Boates that kept about her, we ouercame her and killed her: which done, we brought her into our ship, and flayed her: her Skinne being thirteene foot long. After that, we rowed with our Scute, about a mile inward to the Land, where there was a good Hauen, and good Anchor ground, on the East-side being sandie, there wee cast out our Lead, and found sixteene fathom deepe, and after that, ten, and twelue fathome, and rowing further, we found that on the East-side there was two Ilands, that reached Eastward into the Sea: on the West-side also there was a great Creeke or Riuer, which shewed also like an Iland. Then we rowed to the Iland that lay in the middle, and there we found many Red Geese-egges, which we saw sitting vpon their Nests, and droue them from them, and they flying away, cryed, red, red, red: and as they sate we killed one Goose dead with a stone, which we dresst and eate, and at least sixtie Egges, that wee tooke with vs aboord the ship, and vpon the two and twentieth of Iune, we went aboord our ship againe.

Beares skin 13. foot long.

Red Geese Egges.

Red Geese breed their young Geese, vnder 80. Degrees in *Greenland*.

Those Geese were of a perfit Red colour, such as come into *Holland* about *Weiringen*, and euerie yeere are there taken in abundance, but till this time it was neuer knowne where they hatcht their Egges, so that some men haue taken vpon them to write, that they sit vpon Trees in *Scotland*, that hang ouer the Water, and such Egges as fall from them downe into the Water become young Geese, and swim there out of the water; but those that fall vpon the Land burst in sunder, and are lost: but this is now found to bee contrary, and it is not to be wondred at, that no man could tell where they breed their Egges, for that no man that euer wee knew, had euer beene vnder 80. Degrees: nor that Land vnder 80. degrees, was neuer set downe in any Card, much lesse the red Geese that breed therein.

Fable of Barnacles.

Note.

It is heere also to bee noted, that although that in this land which we esteeme to be *Greenland*,

Digitized by Google

land, lying vnder 80. Degrees, and more, there groweth Leaues and Graſſe, and that there are ſuch Beaſts therein as eate graſſe, as Harts, Buckes, and ſuch like beaſts as liue thereon, yet in *Noua Zembla* vnder 76. Degrees, there groweth neither Leaues nor Graſſe, nor any Beaſts that eate graſſe or leaues liue therein; but ſuch Beaſts as eate Fleſh, as Beares and Foxes: and yet this Land lyeth full 4. Degrees from the North Pole, further then *Greenland* aforeſayd doth.

The three and twentieth, wee hoyſted Anchor againe, and ſayled North-weſtward into the Sea; but could get no further, by reaſon of the Ice; and ſo we came to the ſame place againe where we had layne, and caſt Anchor at eighteene fathome: and at Eeuening being at Anchor, the Sunne being North-eaſt, and ſomewhat more Eaſtward, wee tooke the height thereof, and found it to be eleuated aboue the Horizon 13. degrees and 10. minutes, his Declination being 23. degrees and 28. minutes: which ſubſtracted from the height aforeſaid, reſteth 10. degrees and 18. minutes, which being ſubſtracted from 90. degrees, then the height of the Pole there was 79. degrees and 42. minutes.

After that, we hoyſted Anchor againe, and ſayled along by the Weſt ſide of the Land, and then our men went on Land, to ſee how much the Needle of the Compaſſe varyed: Meane time there came a great white Beare ſwimming towards the Ship, and would haue climbed vp into it, if we had not made a noyſe; and with that wee ſhot at her with a Piece, but ſhe left the ſhip, and ſwam to the Land, where our men were: which we perceiuing, ſayled with our ſhip towards the Land, and gaue a great ſhout; wherewith our men thought that wee had fallen on a Rocke with our Ship, which made them much abaſhed; and therewith the Beare alſo being afraid, ſwamme off againe from the Land, and left our men, which made vs glad: for our men had no Weapons about them. Touching the varying of the Compaſſe, for the which cauſe our men went on Land, to trie the certaintie thereof: it was found to differ 16. Degrees.

Beare aſſaulted them.

Variation of the Compaſſe 16. Degrees.

The fiue and twentieth of Iune, we hoyſted Anchor againe, and ſayled along by the Land, and went South, and South South-weſt, with a North North-eaſt winde, vnder 79. degrees. There we found a great Creeke or Riuer, whereinto we ſayled ten miles at the leaſt, holding our courſe Southward; but we perceiued that there we could not get through: there we caſt out our Lead, and for the moſt part found 10. fathom deepe, but we were conſtrained to lauere out again, for the winde was Northerly, and almoſt full North, and we perceiued that it reached to the firme land, which we ſuppoſed to bee *Low-land*, for that wee could not ſee it any thing farre, and therefore we ſayled ſo neere vnto it, till that we might ſee it, and then we were forced to lauere, and vpon the ſeuen and twentieth of Iune we got out againe.

The eight and twentieth, we got beyond the point that lay on the Weſt ſide, where there was ſo great a number of Birds, that they flew againſt our Sayles, and wee ſayled ten miles Southward, and after that Weſt, to ſhun the Ice. The nine and twentieth, wee ſayled South-eaſt and ſomewhat more Eaſterly, along by the Land, till we were vnder 76. degrees and 50. minutes, for we were forced to put off from the Land, becauſe of the Ice. The thirtieth of Iune, wee ſayled South, and ſomewhat Eaſt, and then we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 38. degrees and 20. minutes, his Declination was 23. degrees and 20. minuts, which being taken from the former height, it was found that we were vnder 75. degrees.

Store of Birds.

The firſt of Iuly wee ſaw the *Beare*-Iland againe, and then *Iohn Corneliſon* and his Officers came aboord our ſhip, to ſpeake with vs about altering our courſe, but wee being of a contrary opinion, it was agreed that we ſhould follow on our courſe, and hee his: which was, that he (according to his deſire) ſhould ſayle vnto 80. Degrees againe: for he was of opinion, that there he ſhould finde a paſſage through, on the Eaſt ſide of the Land that lay vnder 80. Degrees. And vpon that agreement we left each other, they ſayling Northward, and wee Southward, becauſe of the Ice, the winde being Eaſt South-eaſt.

Iuly. *Cherie*-Iland.

They part companie.

The ſecond, we ſayled Eaſtward, and were vnder 74. degrees, hauing the wind North North-weſt, and then wee woond ouer another Bough, with an Eaſt North-eaſt winde, and ſayled Northward. In the Eeuening the Sunne being about North-weſt and by North, we woond about againe (becauſe of the Ice) with an Eaſt winde, and ſayled South South-eaſt, and about Eaſt South-eaſt, and then we woond about againe (becauſe of the Ice) and the Sunne being South South-weſt, we woond about againe, and ſayled North-eaſt. The third, we were vnder 74. degrees, hauing a South-eaſt and by Eaſt winde, and ſayled North-eaſt and by North: after that wee woond about againe with a South winde, and ſayled Eaſt South-eaſt, till the Sunne was North-weſt, then the winde began to be ſomewhat larger.

The eight, wee had a good North-weſt winde, and ſayled Eaſt and by North, with an indifferent cold gale of wind, and got vnder 72. degrees and 15. minutes. The ninth of Iuly, we went Eaſt and by North, the wind being Weſt. The tenth of Iuly, the Sunne being South South-weſt, we caſt out our Lead, and had ground at one hundred and ſixtie fathome, the wind being North-eaſt and by North, and we ſayled Eaſt and by South, vnder 72. degrees. The eleuenth, we found 70. fathome deepe, and ſaw no Ice, then wee gheſt that we were right South and North from *Dandinaes*, that is the Eaſt-point of the White-ſea, that lay Southward from vs, and had ſandie ground, and the banke ſtretched Northward into the Sea, ſo that we were out of doubt that we

Digitized by Google

were vpon the banke of the White Sea, for wee had found no ſandie ground all the Coaſt along, but onely that banke. Then the wind being Eaſt and by South, we ſailed South, and South and by Eaſt, vnder 72. degrees, and after that, we had a South South-eaſt Wind, and ſayled North-eaſt to get ouer the Banke.

The thirteenth of Iuly, we ſayled Eaſt with a North North-eaſt wind: then wee tooke the height of the Sunne, and found it to be eleuated aboue the Horizon 54. degrees and 38. minutes, his declination was 21. degrees and 54. minutes, which taken from the height aforeſaid, the height of the Pole was found to bee 73. degrees, and then againe wee found Ice, but not very much, and we were of opinion, that we were by *Willoughbies* Land. The fourteenth, we ſayled North-eaſt, the wind being North North-weſt, and in that ſort ſayled about a dinner time, along through the Ice, and in the middle thereof we caſt out our Lead, and had ninety fathome deepe, in the next quarter wee caſt out our Lead againe, and had an hundred fathome deepe, and we ſayled ſo farre into the Ice, that wee could goe no further: for wee could ſee no place where it opened, but were forced (with great labour and paine) to lauere out of it againe, the wind blowing Weſt, and we were then vnder 74. degrees and 10. minutes:

Willoughbies Land conceited from ſome Maps.

The fifteenth, we draue through the middle of the Ice with a calme, and caſting out our Lead, had an hundred fathome deepe, at which time the wind being Eaſt, wee ſayled Weſt. The ſixteenth, we got out of the Ice, and ſaw a great Beare lying vpon it, that leaped into the water when ſhee ſaw vs: Wee made towards her with our ſhip, which ſhee perceiuing got vp vpon the Ice againe, wherewith wee ſhot once at her. Then wee ſayled Eaſt South-eaſt, and ſaw no Ice, gheſſing that we were not farre from *Noua Zembla*, becauſe we ſaw the Beare there vpon the Ice, at which time we caſt out our Lead, and found an hundred fathome deepe.

The ſeuenteenth, we tooke the height of the Sunne, and it was eleuated aboue the Horizon 37. degrees and 55. minutes, his declination was 21. degrees and 15. minutes, which taken from the height aforeſaid, the height of the Pole was 74. degrees and 40. minutes: and when the Sunne was in the South, we ſaw the Land of *Noua Zembla*, which was about *Lemſbay*: I was the firſt that eſpied it. Then we altered our courſe, and ſayled North-eaſt and by North, and hoyſed vp all our ſayles, except the Fore-ſayle and the Leſſen. The eighteenth, wee ſaw the Land againe, being vnder 75. degrees, and ſayled North-eaſt and by North, with a North-weſt wind, and we gate aboue the point of the *Admirals* Iland, and ſayled Eaſt North-eaſt, with a Weſt Wind, the Land reaching North-eaſt and by North. The nineteenth, wee came to the *Croſſe* Iland, and could get no further, by reaſon of the Ice, for there the Ice lay ſtill cloſe vpon the Land, at which time the wind was Weſt, and blew right vpon the Land, and it lay vnder 76. degrees and 20. minutes. There ſtood two Croſſes vpon the Land, whereof it had the Name.

Noua Zembla.

Admirals Iland.

Croſſe Iland in 76. degrees 20. minutes.

The twentieth, we anchored vnder the Iland, for we could get no further for the Ice. There we put out our Boat, and with eight men rowed on Land, and went to one of the Croſſes, where we reſted vs a while to goe to the next Croſſe, but being in the way wee ſaw two Beares by the other Croſſe, at which time we had no weapons at all about vs. The Beares roſe vp vpon their hinder feet to ſee vs (for they ſmell further then they ſee) and for that they ſmelt vs: therefore they roſe vpright, and came towards vs, wherewith we were not a little abaſhed, in ſuch ſort that we had little luſt to laugh, and in all haſte went to our Boat againe, ſtill looking behind vs, to ſee if they followed vs, thinking to get into the Boat, and ſo put off from the Land: but the Maſter ſtayed vs, ſaying, hee that firſt beginnes to runne away, I will thruſt this Hake-ſtaffe (which he then held in his hand) into his ribs; for it is better for vs (ſaid hee) to ſtay all together, and ſee if we can make them afraid with whooping and hollowing; and ſo we went ſoftly towards the Boat, and got away, glad that we had eſcaped their clawes, and that we had the leaſure to tell our fellowes thereof.

Two Beares. Their ſent.

The one and twentieth we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 35. degrees and 15. minutes, his declination was 21. degrees, which being taken from the height aforeſaid, there reſted 14. degrees, which ſubſtracted from 90. degrees, then the height of the Pole was found to be 76. degrees and 15. minutes, then we found the variation of the Compaſſe to bee 26. degrees. The ſame day two of our men went againe to the Croſſe, and found no Beares to trouble vs, and wee followed them with our Armes, fearing leaſt wee might meet any by chance, and when we came to the ſecond Croſſe, we found the foot-ſteps of two Beares, and ſaw how long they had followed vs, which was one hundred foot-ſteps at the leaſt, that way that we had beene the day before. The two and twentieth being Munday, wee ſet vp another Croſſe, and made our Marke thereon: and lay there before the Croſſe Iland, till the fourth of Auguſt, meane time we waſht and whited our Linnen on the ſhoare.

Variation 26. degrees, perhaps 16.

The thirtieth, the Sunne being North, there came a Beare ſo neere to our ſhip, that we might hit her with a ſtone, and we ſhot her into the foot with a Piece, wherewith ſhee ranne halting away. The one and thirtieth of Iuly, the Sunne being Eaſt North-eaſt, ſeuen of our men killed a Beare, and flayed her, and caſt her bodie into the Sea. The ſame day at noone (by our Inſtrument) we found the variation of the Needle of the Compaſſe to be 17. degrees.

The

The firſt of Auguſt we ſaw a white Beare, but ſhe ran away from vs. The fourth, we got out of the Ice, to the other ſide of the Iland, and anchored there: where, with great labour and much paine, we fetched a Boat full of ſtones from the Land. The fifth, wee ſet ſayle againe towards Ice-point, with an Eaſt Wind, and ſayled South South-eaſt, and then North North-eaſt, and ſaw no Ice by the Land, by the which we lauered. The ſixth, we gate about the point of *Naſſaw*, and ſayled forward Eaſt, and Eaſt and by South, along by the Land. Auguſt. Point *Naſſaw.*

The ſeuenth, we had a Weſt South-weſt Wind, and ſayled along by the Land, South-eaſt, and South-eaſt and by Eaſt, and ſaw but a little Ice, and then paſt by the *Truſt*-point, which we had much longed for: at Eeuening we had an Eaſt Wind, with miſtie Weather, ſo that we were forced to make our ſhip faſt to a piece of Ice, that was at leaſt thirtie ſixe fathome deepe vnder the water, and more then ſixteene fathome aboue the water: which in all was two and fifty fathome thick, for it lay faſt vpon ground, the which was thirtie ſixe fathome deepe. The eight in the morning we had an Eaſt Wind, with miſtie Weather. *Truſt*-point. Ice 52. fathom deepe.

The ninth, lying ſtill faſt to the great piece of Ice, it ſnowed hard, and it was miſtie weather, and when the Sunne was South, we went vpon the Hatches (for we alwayes held watch) where as the Maſter walked along the ſhip, he heard a beaſt ſnuffe with his noſe, and looking ouer-boord, he ſaw a great Beare hard by the ſhip, where hee cryed out, *a Beare, a Beare*; and with that all our men came vp from vnder Hatches, and ſaw a great Beare hard by our Boat, ſeeking to get into it, but we giuing a great ſhout, ſhe was afraid, and ſwamme away, but preſently came backe againe, and went behind a great piece of Ice, whereunto we had made our ſhip faſt, and climbed vpon it, and boldly came towards our ſhip to enter into it: but we had torne our Scute Sayle in the ſhip, and lay with foure Peeces before at the Boot-ſprit, and ſhot her in the bodie: and with that, ſhee ranne away; but it ſnowed ſo faſt that wee could not ſee whither ſhee went: but wee gheſt that ſhee lay behind a high Hoouell; whereof there were many vpon the piece of Ice. Snow. Beares aſſault.

The tenth, being Saturday, the Ice began mightily to breake, and then wee firſt perceiued that the great piece of Ice whereunto we had made our ſhip faſt, lay on the ground; for the reſt of the Ice draue along by it, wherewith wee were in great feare that wee ſhould bee compaſſed about with the Ice, and therefore we vſed all the diligence and meanes that we could to get from thence, for we were in great doubt: and being vnder ſayle, wee ſayled vpon the Ice, becauſe it was all broken vnder vs, and got to another piece of Ice; whereunto we made our ſhip faſt againe with our Sheate Anchor, which we made faſt vpon it; and there we lay till Eeuening: and when we had ſupped, in the firſt quarter, the ſaid piece of Ice began on a ſudden to burſt and rend in pieces, ſo fearefully that it was admirable; for with one great cracke it burſt into foure hundred pieces at the leaſt: we lying faſt to it, weighed our Cable, and got off from it, vnder the water it was ten fathome deepe, and lay vpon the ground, and two fathome aboue the Water; and it made a fearefull noyſe both vnder and aboue the Water when it burſt, and ſpread it ſelfe abroad on all ſides. And being with great feare, gotten from that piece of Ice, wee came to another piece, that was ſix fathome deepe vnder the Water: to which wee made a Rope faſt on both ſides. Then wee ſaw another great piece of Ice, not farre from vs, lying faſt in the Sea, that was as ſharpe aboue, as it had beene a Tower; whereunto wee rowed: and caſting out our Lead, we found that it lay twentie fathome deepe, faſt on the ground vnder the Water, and twelue fathome aboue the Water. Icie thunder.

The eleuenth being Sunday, we rowed to another piece of Ice, and caſt out our Lead, and found that it lay eighteene fathome deepe faſt to the ground vnder the Water, and ten fathome aboue the water. The twelfth, wee ſayled neere vnder the Land, the better to ſhunne the Ice, for the great flakes that draue in the Sea, were many fathome deepe vnder the Water, and we were better defended from them being at foure and fiue fathome Water, and there ranne a great current of water from the Hill. There we made our ſhip faſt againe to a piece of Ice, and called that point, *The ſmall Ice point.*

The thirteenth in the morning, there came a Beare from the Eaſt point of the Land, cloſe to our ſhip, and one of our men with a Peece ſhot at her, and brake one of her legs, but ſhe crept vp the Hill with her three feet, and we following her, killed her, and hauing flayed her, brought the skinne aboord the ſhip. From thence wee ſet ſayle, with a little gale of Winde, and were forced to lauere, but after, that it began to blow more out of the South, and South South-eaſt. Beare killed.

The fifteenth, we came to the Iland of *Orange*, where we were incloſed with the Ice, hard by a great piece of Ice where we were in great danger to loſe our ſhip, but with great labour and much paine, we got to the Iland, the Wind being South-eaſt, whereby we were conſtrayned to turne our ſhip, and while we were buſied thereabouts, and made ſuch noyſe, a Beare that lay there and ſlept, awaked, and came towards vs to the ſhip, ſo that wee were forced to leaue our Worke about turning of the ſhip, and to defend our ſelues againſt the Beare, and ſhot her into the bodie, wherewith ſhe ranne away to the other ſide of the Iland, and ſwamme into the water, and got vp vpon a piece of Ice, where ſhe lay ſtill, but we comming after her to the piece of Ice where ſhe lay, when ſhe ſaw vs, ſhe leapt into the water, and ſwamme to the Land: but we got betweene her and the Land, and ſtrooke her on the head with a Hatchet, but as often as wee *Orange* Iland.

ſtrooke

ſtrooke at her with the Hatchet, ſhe duckt vnder the water, whereby wee had much to doe before we could kill her: after ſhe was dead we flayed her on the Land, and tooke the skinne aboord with vs, and after that, turned our ſhippe to a great piece of Ice, and made it faſt thereunto.

The ſixteenth, ten of our men entring into one Boat, rowed to the firme Land of *Noua Zembla*, and drew the Boat vp vpon the Ice, which done, we went vp a high Hill, to ſee the ſituation of the Land, and found that it reached South-eaſt, and South South-eaſt, and then againe South, which wee diſliked, for that it lay ſo much Southward: but when wee ſaw open water South-eaſt, and Eaſt South-eaſt, we were much comforted againe, thinking that we had wonne our Voyage and knew not how we ſhould get ſoone enough aboord, to certifie *William Barents* thereof.

The eighteenth, we made preparation to ſet ſayle, but it was all in vaine: for wee had almoſt loſt our Sheat Anchor, and two new Ropes, and with much loſt labour got to the place againe from whence wee came: for the ſtreame ranne with a mightie current, and the Ice draue very ſtrongly vpon the Cables, along by the ſhip, ſo that we were in feare that wee ſhould loſe all the Cable that was without the ſhip, which was two hundred fathome at the leaſt, but God prouided well for vs, ſo that in the end, we got to the place againe from whence we put out.

Point *Deſire*. The nineteenth it was indifferent good weather, the Wind blowing South-weſt, the Ice ſtill driuing, and wee ſet ſayle with an indifferent gale of Wind, and paſt by the point of *Deſire*, whereby we were once againe in good hope, and when we had gotten aboue the point, we ſailed South-eaſt into the Sea-ward, foure miles, but then againe wee entred into more Ice, whereby wee were conſtrayned to turne backe againe, and ſayled North-weſt vntill we came to the Land againe, which reacheth from the point of *Deſire*, to the head point, South and by Weſt ſix miles: from the head point to *Fluſhingers* head, it reacheth South-weſt, which are three miles one from the other: from the *Fluſhingers* head, it reacheth into the Sea, Eaſt South-eaſt, and from *Fluſhingers* head to the point of the Iland, it reacheth South-weſt, and by South, and South-weſt three miles: and from the Iland point, to the point of the Ice Hauen, the Land reacheth Weſt South-weſt foure miles: from the Ice Hauens point to the fal of Water, or the ſtreame Bay, and the low Land, it reacheth Weſt and by South, and Eaſt and by North ſeuen miles: from thence the Land reacheth Eaſt and Weſt.

The one and twentieth, we ſayled a great way into the Ice Hauen, and that night anchored therein: next day the ſtreame going exreame hard Eaſtward, wee haled out againe from thence, and ſayled againe to the Iland point, but for that it was miſty Weather, comming to a piece of Ice, wee made the ſhip faſt thereunto, becauſe the Wind beganne to blow hard South-weſt and South South-weſt. There we went vp vpon the Ice, and wondred much thereat, it was ſuch manner of Ice: For on the top it was full of Earth, and there wee found aboue fortie Egges, and it was not like other Ice, for it was of a perfect Azure colour like to the Skies, whereby there grew great contention in words amongſt our men, ſome ſaying that it was Ice, others that it was frozen Land: for it lay vnreaſonable high aboue the Water, it was at leaſt eighteene fathom vnder the water cloſe to the ground, and ten fathome aboue the water: there wee ſtayed all that ſtorme, the Wind being South-weſt and by Weſt. The three and twentieth, wee ſayled againe from the Ice, South-eaſtward into the Sea, but entred preſently into it againe, and woond about to the Ice Hauen. The next day it blew hard North North-weſt, and the Ice came mightily driuing in, whereby we were in a manner compaſſed about therewith, and withall the Wind beganne more and more to riſe, and the Ice ſtill draue harder and harder, ſo that the pinne of the Rother, and the Rother were ſhorne in pieces, and our Boat was ſhorne in pieces betweene the ſhip and the Ice, we expecting nothing elſe, but that the ſhip alſo would be preſt and cruſht in pieces with the Ice.

Earth on the top of Azure Ice.

Boat broken with Ice.

The fiue and twentieth, the Weather began to be better, and we tooke great paines, and beſtowed much labour to get the Ice, wherewith we were ſo incloſed, to goe from vs, but what meanes ſoeuer we vſed it was all in vaine, but when the Sunne was South-weſt, the Ice began to driue out againe with the ſtreame, and we thought to ſaile Southward about *Noua Zembla*, to the Streights of *Mergates*, ſeeing we could there find no paſſage. Wee hauing paſt *Noua Zembla*, were of opinion that our labour was all in vaine, and that we could not get through, and ſo agreed to goe that way home againe; but comming to the *Streame Bay*, wee were forced to goe backe againe, becauſe of the Ice which lay ſo faſt thereabouts, and the ſame night alſo it froze, that wee could hardly get through there, with the little wind that we had, the Wind then being North.

The ſix and twentieth, there blew a reaſonable gale of Wind, at which time wee determined to ſayle backe to the *point of Deſire*, and ſo home againe, ſeeing that wee could not get through the *Wergats*, although we vſed all the meanes and induſtry wee could to get forward, but when we had paſt by the *Ice Hauen*, the Ice began to driue with ſuch force, that wee were incloſed round about therewith, and yet we ſought all the meanes we could to get out, but it was all in vaine: and at that time we had like to haue loſt three men that were vpon the Ice to make way for the ſhip, if the Ice had held the courſe it went, but as we draue backe againe, and that the

Incloſed with Ice.

Ice

Ice also whereon our men stood, in like sort draue, they being nimble, as the ship draue by them, one of them caught hold of the beak head, another vpon the shrouds, and the third vpon the great brase that hung out behind, and so by great aduenture by the hold that they tooke, they got safe into the ship againe, for which they thanked God with all their hearts: for it was much likelier that they should rather haue beene carried away with the Ice, but God, by the nimblenesse of their hands, deliuered them out of that danger which was a pitifull thing to behold, although it fell out for the best, for if they had not beene nimble, they had surely dyed for it. The same day in the euening, wee got to the West-side of the *Ice Hauen*, where wee were forced in great cold, pouertie, miserie, and griefe, to stay all that Winter, the winde then beeing East North-east. Escape of three men.

The seuen and twentieth, the Ice draue round about the ship, and yet it was good weather, at which time we went on Land, and being there it began to blow South-east, with a reasonable gale, and then the Ice came with great force before the bough, and draue the ship vp foure foot high before, and behind it seemed as if the keele lay on the ground, so that it seemed that the ship would be ouerthrowne in the place, whereupon they that were in the ship, put out the Boat, therewith to saue their liues, and withall put out a flagge to make a signe to vs, to come aboard: which we perceiuing, and beholding the ship to be lifted vp in that sort, made all the haste we could to get aboord, thinking that the ship was burst in pieces, but comming vnto it, we found it to be in better case then we thought it had beene. Ship lifted vp, and beset with Ice.

The eight and twentieth, we got some of the Ice from it, and the ship beganne to sit vpright againe, but before it was fully vpright, as *William Barents* and the other Pilot went forward to the bough to see how the ship lay, and how much it was risen; and while they were busie vpon their knees and elbowes to measure how much it was, the ship burst out of the Ice with such a noise, and so great a cracke, that they thought verily that they were all cast away, knowing not how to saue themselues. Another danger.

The nine and twentieth, the ship lying vpright againe, wee vsed all the meanes wee could, with Iron hookes and other instruments, to breake the flakes of Ice that lay one heaped vpon the other, but all in vaine; so that we determined to commit our selues to the mercy of God, and to attend aide from him, for that the Ice draue not away in any such sort that it could helpe vs. The thirtieth, the Ice began to driue together one vpon the other with greater force then before, and bare against the ship with a boystrous South-west winde, and a great snow, so that all the whole ship was borne vp and enclosed, whereby all that was both about it and in it, began to cracke, so that it seemed to burst in an hundred pieces, which was most fearefull both to see and heare, and made all the haire of our heads to rise vpright with feare: and after that, the ship (by the Ice on both sides that ioyned and got vnder the same) was driuen so vpright, in such sort, as if it had beene lifted vp with a Wrench or Vice.

The one and thirtieth of August, by force of the Ice, the ship was driuen vp foure or fiue foot high at the beake head, and the hinder part thereof lay in a clift of Ice, whereby wee thought that the Rother would bee freed from the force of the flakes of Ice, but notwithstanding, it brake in pieces staffe and all: and if that the hinder part of the ship had beene in the Ice that draue, as well as the fore part was, then all the ship would haue beene driuen wholly vpon the Ice, or possibly haue runne on ground, and for that cause wee were in great feare, and set our Scutes and our Boat out vpon the Ice, if need were, to saue our selues, but within foure houres after, the Ice draue away of it selfe, wherewith wee were exceeding glad, as if wee had saued our liues, for that the ship was then on flote againe, and vpon that we made a new Rother and a Staffe, and hung the Rother out vpon the hookes, that if we chanced to bee borne vpon the Ice againe, as we had beene, it might so be freed from it. Rother broken

The first of September being Sunday, while we were at prayer, the Ice began to gather together againe, so that the ship was lifted vp two foot at the least, but the Ice brake not. The same euening the Ice continued in that sort still driuing and gathering together, so that we made preparation to draw our Scute and the Boat ouer the Ice vpon the Land, the wind then blowing South-east. The second, it snowed hard with a North-east wind, and the ship began to rise vp higher vpon the Ice, at which time the Ice burst and crackt with great force, so that wee were of opinion to carrie our Scute on Land in that foule weather, with thirteene barrels of Bread, and two hogsheads of Wine, to sustaine our selues if need were. September.

The third, it blew hard but snowed not so much, the wind being North North-east, at which time we began to be loose from the Ice, whereunto wee lay fast, so that the Scheck broke from the Steuen, but the plankes wherewith the ship was lined, held the Scheck fast, and made it hang on, but the Boutloose and a new Cable (if we had fallen vpon the Ice) brake by forcible pressing of the Ice, but held fast againe in the Ice, and yet the ship was staunch; which was wonder, in regard that the Ice draue so hard, and in great heapes, as big as the Salt-hils that are in *Spaine*, and within a Harquebusse shot of the ship, betweene the which wee lay in great feare and anguish.

The fourth, the weather began to cleare vp, and we saw the Sunne, but it was very cold, the wind

Digitized by Google

wind being North-eaſt we being forced to lie ſtill. The fift, it was faire Sun-ſhine weather, and very calme, and at euening when we had ſupped, the Ice compaſſed about vs againe, and wee were hard encloſed therewith, the ſhip beginning to lie vpon the one ſide, and leaked ſore, but by Gods grace it became ſtaunch againe, wherewith we were wholly in feare to loſe the ſhip, it was in ſo great danger: at which time wee tooke counſell together, and carried our old ſocke Sayle, with Powder, Lead, Peeces, Muskets, and other furniture on Land, to make a Tent about our Scute that we had drawne vpon the Land, and at that time we carried ſome Bread, and Wine on Land alſo, with ſome Timber, therewith to mend our Boat, that it might ſerue vs in time of need.

The ſixt, it was indifferent faire Sea-weather, and Sun-ſhine, the wind being Weſt, whereby we were ſomewhat comforted, hoping that the Ice would driue away, and that wee might get from thence againe. The ſeuenth, it was indifferent weather againe, but we perceiued no opening of the water, but to the contrary, it lay hard encloſed with Ice, and no water at all about the ſhip, no not ſo much as a bucket full. The ſame day, fiue of our men went on Land, but two of them came backe againe, the other three went forward about two miles into the Land, and there found a Riuer of ſweet water, where alſo they found great ſtore of Wood that had beene driuen thither, and there they found the footſteps of Harts and Hinds, as they thought, for they were clouen footed, ſome greater footed then others, which made them iudge them to be ſo.

Riuer of freſh water, and Wood.

The eight, it blew hard Eaſt North-eaſt, which was a right contrary wind to doe vs any good, touching the carrying away of the Ice, ſo that we were ſtill faſter in the Ice, which put vs in no ſmall diſcomfort. The ninth, it blew North-eaſt, with a little ſnow, whereby our ſhip was wholly encloſed with Ice, for the wind draue the Ice hard againſt it, ſo that we lay three or foure foot deepe in the Ice, and our Sheck in the after Steuen, brake in pieces, and the ſhip began to be ſomewhat looſe before, but yet it was not much hurt. In the night time, two Beares came cloſe to our ſhip ſide, but we ſounded our Trumpet, and ſhot at them, but hit them not, becauſe it was darke, and they ranne away. The tenth, the weather was ſomewhat better, becauſe the wind blew not ſo hard, and yet all one wind.

The eleuenth, it was calme weather, and eight of vs went on Land, euery man armed, to ſee if that were true as our other three companions had ſaid, that there lay Wood about the Riuer, for that ſeeing we had ſo long woond and turned about, ſometime in the Ice, and then againe got out, and thereby were compelled to alter our courſe, and at laſt ſaw that we could not get out of the Ice, but rather became faſter, and could not looſe our ſhip, as at other times we had done, as alſo that it began to be Winter, we tooke counſell together what we were beſt to doe, according to the time, that we might winter there, and attend ſuch aduenture as God would ſend vs: and after we had debated vpon the matter (to keepe and defend our ſelues both from the cold, and wilde beaſts) we determined to build a houſe vpon the Land, to keepe vs therein as well as wee could, and ſo to commit our ſelues vnto the tuition of God, and to that end we went further into the Land, to find out the conuenienteſt place in our opinions, to raiſe our houſe vpon, and yet we had not much ſtuffe to make it withall, in regard that there grew no trees, nor any other thing in that Countrey conuenient to build it withall: but wee leauing no occaſion vnſought, as our men went abroad to view the Countrey, and to ſee what good fortune might happen vnto vs, at laſt we found an vnexpected comfort in our need, which was, that we found certaine trees roots and all, (as our three companions had ſaid before) which had beene driuen vpon the ſhoare, either from *Tartaria*, *Muſcouia*, or elſe where; for there was none growing vpon that Land, wherewith (as if God had purpoſely ſent them vnto vs) we were much comforted, being in good hope that God would ſhew vs ſome further fauour: for that Wood ſerued vs not onely to build our houſe, but alſo to burne, and ſerue vs all the Winter long, otherwiſe without all doubt, we had died there miſerably with extreme cold.

Ship faſtned in Ice.

They determine to winter there.

How God in our extremeſt need, when we were forced to lie all the Winter vpon the Land, ſent vs Wood to make vs a houſe, and to ſerue vs to burne in the cold Winter.

The twelfth, it was calme weather, and then our men went vnto the other ſide of the Land, to ſee if they could find any Wood neerer vnto vs, but there was none. The thirteenth, it was calme but very miſty weather, ſo that we could doe nothing, becauſe it was dangerous for vs to goe into the Land, in regard that we could not ſee the wilde Beares, and yet they could ſmell vs, for they ſmell better then they ſee. The fourteenth, it was cleare Sun-ſhine weather, but very cold, and then we went into the Land, and layed the Wood in heapes one vpon the other, that it might not bee couered ouer with the Snow, and from thence meant to carrie it to the place where we intended to build our houſe.

Three Beares.

The fifteenth in the morning, as one of our men held watch, we ſaw three Beares, whereof the one lay ſtill behind a piece of Ice, the other two came cloſe to the ſhip; which wee perceiuing, made our Peeces ready to ſhoot at them, at which time there ſtood a Tub full of Beefe vpon the Ice, which lay in the water to be ſeaſoned, for that cloſe by the ſhip there was no water: one of the Beares went vnto it, and put in his head to take out a piece of the Beefe, but ſhe fared therewith as the Dog did with the Pudding, for as ſhe was ſnatching at the Beefe, ſhee was ſhot into the head, wherewith ſhe fell downe dead, and neuer ſtirred: the other Beare ſtood ſtill, and looked vpon her fellow, and when ſhee had ſtood a good while, ſhee ſmelt her fellow,

and

Digitized by Google

and perceiuing that ſhe was dead, ſhee ran away, but wee tooke Halberts and other Armes with vs, and followed her, and at laſt ſhe came againe towards vs, and we prepared our ſelues to withſtand her, wherewith ſhe roſe vp vpon her hinder feet, thinking to rampe at vs, but while ſhee reared her ſelfe vp, one of our men ſhot her into the bellie, and with that ſhe fell vpon her fore-feet againe, and roaring as loud as ſhe could, ran away. Then we tooke the dead Beare, and ript her bellie open; and taking out her guts, we ſet her vpon her fore-feet, that ſo ſhe might freeze as ſhee ſtood, intending to carrie her with vs into *Holland*, if wee might get our ſhip looſe, and when we had ſet the Beare vpon her foure feet, we began to make a Sled, thereon to draw the Wood to the place where we went to build our houſe, at that time it froze two fingers thicke in the ſalt water, and it was exceeding cold, the wind blowing North-eaſt.

It freezeth in the ſalt water two fingers thicke in a night.

The ſixteenth, the Sunne ſhone, but towards the euening it was miſty, the wind being Eaſterly, at which time we went to fetch Wood with our Sleds, and then wee drew foure beames aboue a mile vpon the Ice and the Snow, that night againe it froze aboue two fingers thicke. The ſeuenteenth, thirteene of vs went where the Wood lay with our Sleds, and ſo drew fiue and fiue in a Sled, and the other three helped to lift the Wood behind, to make vs draw the better, and with more eaſe, and in that manner we drew Wood twice a day, and laid it on a heape by the place where we meant to build our houſe.

The three and twentieth, wee fetcht more Wood to build our houſe, which wee did twice a day, but it grew to be miſty and ſtill weather againe, the wind blowing Eaſt, and Eaſt North-eaſt, that day our Carpenter being of *Purmerlant* died, as wee came aboord about euening. The foure and twentieth, we buried him vnder the ſedges, in the clift of a hill, hard by the water, for we could not dig vp the earth, by reaſon of the great froſt and cold, and that day wee went twice with our Sleds to fetch Wood.

The fiue and twentieth, it was darke wether, the wind blowing Weſt, & Weſt South-weſt, and South-weſt, and the Ice began ſomwhat to open, and driue away; but it continued not long, for that hauing driuen about the length of the ſhot of a great Peece, it lay three fathoms deepe vpon the ground: and where we lay the Ice draue not, for we lay in the middle of the Ice; but if we had layne in the mayne Sea, we would haue hoyſed ſayle, although it was then late in the yeere. The ſame day we rayſed vp the principles of our houſe, and began to worke hard thereon, but if the ſhip had beene looſe, we would haue left our building, and haue made our after Steuen of our ſhip, that we might haue beene ready to ſayle away if it had beene poſſible.

Houſe builded.

The ſixe and twentieth, wee had a Weſt wind and an open Sea, but our ſhip lay faſt, wherewith we were not a little grieued, but it was Gods will, which we moſt patiently bare, and wee began to make vp our houſe, part of our men fetched Wood to burne, the reſt played the Carpenters: and were buſie about the houſe, as then we were ſixteene men in all, for our Carpenter was dead, and of our ſixteene men there was ſtill one or other ſicke. The ſeuen and twentieth, it blew hard North-eaſt, and it froze ſo hard, that as we put a nayle into our mouthes (as when men worke Carpenters worke they vſe to doe) there would Ice hang thereon when we tooke it out againe, and make the bloud follow: the ſame day there came an old Beare and a young one towards vs, as we were going to our houſe, being all together (for we durſt not goe alone) which we thought to ſhoot at, but ſhe ran away, at which time the Ice came forcibly driuing in, and it was faire Sun-ſhine weather, but ſo extreme cold, that we could hardly worke, but extremity forced vs thereunto.

Hard and violent froſt.

The eight and twentieth, it was faire weather, and the Sunne ſhone, the Wind being Weſt and very calme, the Sea as then being open, but our ſhip lay faſt in the Ice and ſtirred not; the ſame day there came a Beare to the ſhip, but when ſhe eſpyed vs, ſhe ranne away, and we made as much haſte as wee could to build our Houſe. The nine and twentieth in the morning, the Wind was Weſt, and after-noone it blew Northerly, and then wee ſaw three Beares betweene vs and the Houſe, an old one and two young; but we notwithſtanding drew our goods from the ſhip to the Houſe, and ſo got before the Beares, and yet they followed vs: neuertheleſſe, we would not ſhun the way for them, but hollowed out as loud as we could, thinking that they would haue gone away, but they would not once goe out of their foot-path, but got before vs, wherewith we and they that were at the houſe, made a great noyſe, which made the Beares run away, and we were not a little glad thereof. The thirtieth the Wind was Eaſt, and Eaſt South-eaſt, and all that night and the next day it ſnowed ſo faſt, that our men could fetch no Wood, it lay ſo cloſe and high one vpon the other: then wee made a great fire without the Houſe, therewith to thaw the ground, that ſo we might lay it about the Houſe, that it might bee the cloſer; but it was all loſt labour, for the Earth was ſo hard, and frozen ſo deepe into the ground, that wee could not thaw it, and it would haue coſt vs too much Wood, and therefore wee were forced to leaue off that labour.

Ground not to be thawed.

§. II.

§. II.

Their cold, comfortleſſe, darke and dreadfull Winter: the Sunnes abſence, Moones light, Sunnes vnexpected returne with miraculous ſpeed. Of Beares, Foxes, and many many Wonders.

THe firſt of October, the Wind blew ſtiffe North-eaſt, and after-noone it blew North, with a great ſtorme, and drift of Snow, whereby wee could hardly goe in the Wind, and a man could hardly draw his breath, the Snow draue ſo hard in our faces, at which time we could not ſee two ſhips length from vs. The ſecond before noone, the Sunne ſhone, and after noone it was cloudie againe, and it ſnew, but the vveather was ſtill, the Wind being North, and then South, and vvee ſet vp our Houſe, and vpon it wee placed a May-pole made of frozen Snow.

May-pole of Snow.

The third before noone, it was calme Sun-ſhine vveather, but ſo cold, that it was hard to bee indured, and after-noone it blew hard out of the Weſt, vvith ſo great extreme cold, that if it had continued, we ſhould haue beene forced to leaue our vvorke. The fourth, the Wind was Weſt, and after-noone North, with great ſtore of Snow, vvhereby vve could not vvorke: at that time vve brought our Anchor vpon the Ice to lye the faſter, vvhen vvee lay but an Arrovv ſhot from the Water, the Ice was ſo much driuen away.

The fifth it blevv hard North-weſt, and the Sea vvas very open and vvithout Ice, as farre as vve could diſcerne, but vve lay ſtill frozen as vve did before, and our ſhip lay two or three foot deepe in the Ice, and vvee could not perceiue otherwiſe, but that vvee lay faſt vpon the ground, and then it vvas three fathome and a halfe deepe. The ſame day vve brake vp the lower deck of the fore-part of our ſhip, and vvith thoſe Deales vve couered our Houſes, and made it ſlope ouer head, that the Water might runne off, at vvhich time it vvas very cold. The ſixth, it blew hard Weſt South-weſt, but towards Eeuening, Weſt North-weſt, with a great Snow, that wee could hardly thruſt our heads out of the doore, by reaſon of the great cold. The ſeuenth, it was indifferent good weather, but yet very cold, and wee calked our Houſe, and brake the ground about it at the foot thereof: that day the Wind went round about the Compaſſe.

Extreme Snow

The eight, all the night before it blew ſo hard, and the ſame day alſo, and ſnowed ſo faſt, that we ſhould haue ſmothered, if we had gone out into the Ayre; and to ſpeake truth, it had not beene poſſible for any man to haue gone one ſhips length, though his life had layen thereon: for it was not poſſible for vs to goe out of the Houſe or ſhip. The ninth, the Wind ſtill continued North, and blew and ſnowed hard, all that day the Wind as then blowing from the Land, ſo that all that day we were forced to ſtay in the ſhip, the weather was ſo foule.

Hence it may ſeeme, that the courſe of the Tides and Sea is from the North.

The tenth, the weather was ſomewhat fairer, and the Wind calmer, and blew South-weſt, and Weſt, and South-weſt, and that time the Water flowed two foote higher then ordinary, which we gheſt to proceed from the firſt North-wind, which as then had blowne. The ſame day the weather began to be ſomewhat better, ſo that we began to go out of our ſhip againe: and as one of our men went out, he chanced to meet a Beare, and was almoſt at him before hee knew it, but preſently he ranne backe againe towards the ſhip, and the Beare after him; but the Beare comming to the place where before we had killed another Beare, and ſet her vpright, and there let her freeze (which was couered ouer with Ice, and yet one of her pawes reached about it) ſhee ſtood ſtill, whereby our man got before her, and climbed vp into the ſhip, in great feare, crying, *A Beare, a Beare*; which we hearing, came aboue Hatches to looke on her, and to ſhoot at her, but we could not ſee her, by meanes of the exceeding great ſmoke, that had ſo ſore tormented vs (while we lay vnder Hatches) in the foule weather which we would not haue indured for any money, but by reaſon of the cold and ſnowie weather, wee were conſtrayned to doe it, if wee would ſaue our liues, for aloft in the ſhip we muſt vndoubtedly haue died: the Beare ſtayed not long there, but ranne away, the Wind then being North-eaſt. The ſame day about Eeuening, it was faire weather, and we went out of our ſhip to the Houſe, and carried the greateſt part of our Bread thither.

The eleuenth, it was calme waether, the Wind being South, and ſomewhat warme, and then we carried our Wine and other Victuals on Land: and as we were hoyſing the Wine ouer-boord, there came a Beare towards our ſhip, that had layen behind a piece of Ice, and it ſeemed that we had waked her with the noyſe we made: for wee had ſeene her lye there, but wee thought her to be a piece of Ice; but as ſhe came neere vs, we ſhot at her, and ſhe ranne away, ſo we proceeded in our worke. The twelfth, it blew North, and ſomewhat Weſterly, and then halfe of our men kept in the Houſe, and that was the firſt time that we lay in it, but wee indured great cold, becauſe our Cabins were not made; and beſides that wee had not Clothes enough, and we could keepe no fire becauſe our Chimney was not made, whereby it ſmoked exceedingly.

The thirteenth, the Wind was North and North-weſt, and it began againe to blow hard, and then

Digitized by Google

then three of vs went aboord the ship, and laded a Sled with Beere, but when wee had laden it, thinking to goe to our House with it, suddenly there rose such a Wind, and so great a storme and cold, that wee were forced to goe into the ship againe, because wee were not able to stay without, and wee could not get the Beere into the ship againe, but were forced to let it stand without vpon the Sled: being in the ship, wee indured extreame cold, because wee had but a few clothes in it.

The fourteenth, as wee came out of the ship, wee found the Barrell of Beere standing vpon the Sled, but it was fast frozen at the heads, yet by reason of the great cold, the Beere that purged out, froze as hard vpon the side of the Barrell as if it had bene glued thereon, and in that sort wee drew it to our House, and set the Barrell an end, and dranke it first vp, but wee were forced to melt the Beere, for there was scant any vnfrozen Beere in the Barrell, but in that thicke Yeast that was vnfrozen lay the strength of the Beere, so that it was too strong to drinke alone, and that which was frozen tasted like water, and being melted we mixt one with the other, and so dranke it, but it had neither strength nor taste. Beere melted.

The fifteenth, the Wind blew North and East, and East South-east, that day we made place to set vp our doore, and shoueled the Snow away. The eighteenth, the Wind blew hard East South-east, and then we fetched our Bread out of the Scute which wee had drawne vp vpon the Land, and the Wine also which as then was not much frozen, and yet it had layne sixe Weekes therein, and not withstanding that it had oftentimes frozen very hard. The same day wee saw another Beare, and then the Sea was so couered ouer with Ice, that wee could see no open water. Sea couered with Ice.

The nineteenth, the Wind blew North-east, and then there was but two men and a Boy in the ship, at which time there came a Beare that sought forcibly to get into the ship, although the two men shot at her with pieces of Wood, and yet she ventured vpon them, whereby they were in an extreame feare, each of them seeking to saue themselues, the two men leapt into the Ballast, and the Boy climbed into the foot Mast top, to saue their liues, meane time, some of our men shot at her with a Musket, and then shee ranne away. The twentieth, it was calme Sunne-shine weather, and then againe wee saw the Sea open, at which time wee went on boord to fetch the rest of our Beere out of the ship, where wee found some of the Barrels frozen in pieces, and the Iron hoopes that were vpon the Iosam Barrels were also frozen in pieces. Beare assaults the ship. Barrels and Iron hoopes broken with Ice.

The two and twentieth, the Winde blew coldly, and very stiffe North-east, with so great a Snow, that wee could not get out of our doores. The three and twentieth, it was calme weather, and the Winde blew North-east, then wee went aboord our ship, to see if the rest of our men would come home to the House; but wee feared that it would blow hard againe, and therefore durst not stirre with the sicke man, but let him lye still that day, for hee was very weake.

The foure and twentieth, the rest of our men beeing eight persons, came to the House, and drew the sicke man vpon a Sled, and then with great labour and paine, wee drew our Boat home to our House, and turned the bottome thereof vpwards, that when time serued vs (if God saued our liues in the Winter time) wee might vse it: and after that, perceiuing that the ship lay fast, and that there was nothing lesse to be expected then the opening of the water, wee put our Anchor into the ship againe, because it should not be couered ouer and lost in the Snow, that in the Spring time wee might vse it: for we alwayes trusted in God that hee would deliuer vs from thence towards Summer time, eyther one way or other. The Sunne, when we might see it best and highest, began to be very low, and we vsed all the speed we could to fetch all things with Sleds out of our ship into our House, not onely meate and drinke, but all other necessaries, at which time the Wind was North. All come to the House.

The fiue and twentieth, wee fetcht all things that were necessary for the furnishing of our Scute and our Boate: and when we had laden the last Sled, and stood readie to draw it to the House, our Master looked about him and saw three Beares behind the ship that were comming towards vs, whereupon hee cryed out aloud to feare them away, and wee presently leaped forth to defend our selues as well as we could: and, as good fortune was, there lay two Halberds vpon the Sled, whereof the Master tooke one, and I the other, and made resistance against them as well as we could; but the rest of our men ranne to saue themselues in the ship, and as they ranne, one of them fell into a Clift of Ice, which grieued vs much: for we thought verily that the Beares would haue ranne vnto him, to deuoure him, but God defended him: for the Beares still made towardes the ship after the men that ranne thither to saue themselues. Meane time, wee and the man that fell into the Clift of Ice, tooke our aduantage, and got into the ship on the other side, which the Beares perceiuing, they came fiercely towards vs, that had no other Armes to defend vs withall, but onely the two Halberds, which wee doubting would not bee sufficient, wee still gaue them worke to doe by throwing Billets and other things at them, and euery time we threw, they ranne after them as a Dogge vseth to doe at a Stone that is cast at him. Meane time, wee sent a man Fight with Beares.

Digitized by Google

downe vnder Hatches to ſtrike Fire, and another to fetch Pikes, but wee could get no Fire, and ſo wee had no meanes to ſhoote: at the laſt, as the Beares came fiercely vpon vs, wee ſtrooke one of them with a Halberd vpon the Snowt, wherewith ſhee gaue backe, when ſhee felt her ſelfe hurt, and went away, which the other two that were not ſo great as ſhee, perceiuing, ranne away: and wee thanked God that wee were ſo well deliuered from them, and ſo drew our Sled quietly to our Houſe, and there ſhewed our men what had happened vnto vs.

The ſixe and twentieth, the Wind was North, and North North-weſt, with indifferent faire weather: then wee ſaw open Water hard by the Land, but wee perceiued the Ice to driue in the Sea, ſtill towards the ſhip. The ſeuen and twentieth, the Wind blew North-eaſt, and it ſnowed ſo faſt, that wee could not worke without the doore. That day our men killed a White Foxe, which they flead: and after they had roſted it, ate thereof, which taſted like Conies fleſh: the ſame day we ſet vp our Dyall, and made the Clocke ſtrike, and wee hung vp a Lampe to burne in the night time, wherein we vſed the fat of the Beare which wee melt, and burnt in the Lampe.

White Foxe.

Beares fat for Lampe.

The nine and twentieth, the Wind ſtill blew North-eaſt, and then wee fetched Segges from the Sea-ſide, and layd them vpon the Sayle that was ſpread vpon our Houſe, that it might bee ſo much the cloſer and warmer: for the Deales were not driuen cloſe together, and the foule weather would not permit vs to doe it. The thirtieth, the Winde yet continued North-eaſt, and the Sunne was full aboue the Earth, a little aboue the Horizon. The one and thirtieth, the Winde ſtill blew North-eaſt, with great ſtore of Snow, whereby wee durſt not looke out of doores.

The firſt of Nouember, the Wind ſtill continued North-eaſt, and then wee ſaw the Moone riſe in the Eaſt when it beganne to bee darke, and the Sunne was no higher aboue the Horizon then we could well ſee it, and yet that day we ſaw it not, becauſe of the cloſe weather, and the great Snow that fell, and it was extreame cold, ſo that we could not goe out of the Houſe.

Nouember.

Sun & Moone.

The ſecond, the Wind blew Weſt, and ſomewhat South, but in the Euening it blew North, with calme weather, and that day we ſaw the Sunne riſe South South-eaſt, and it went downe South South-weſt, but it was not full aboue the Earth, but paſſed in the Horizon along by the Earth: and the ſame day one of our men killed a Fox with a Hatcher, which was flayed, roaſted and eaten. Before the Sunne began to decline, wee ſaw no Foxes, and then the Beares vſed to goe from vs.

Sun riſeth South South-eaſt, and goeth downe South South-weſt, not full aboue the Earth.

Foxes ſucceed Beares.

The third, the Wind blew North-weſt with calme weather, and the Sunne roſe South and by Eaſt, and ſomewhat more Southerly, and went downe South and by Weſt, and ſomewhat more Southerly; and then we could ſee nothing but the vpper part of the Sunne aboue the Horizon, and yet the Land where wee were, was as high as the Maſt of our ſhip, then wee tooke the height of the Sunne, it being in the eleuenth degree, and fortie eight minutes of *Scorpio*, his Declination being fifteene degrees and twentie foure minutes, on the South-ſide of the Equinoctiall Line.

The fourth, it was calme weather, but then wee ſaw the Sunne no more, for it was no longer aboue the Horizon, then our Chirurgion made a Bath (to bathe vs in) of a Wine-pipe, wherein wee entred one after the other, and it did vs much good; and was a great meanes of our health. The ſame day wee tooke a White Foxe, that oftentimes came abroad, not as they vſed at other times: for that when the Beares left vs at the ſetting of the Sunne, and came not againe before it roſe, the Foxe to the contrarie came abroad when they were gone.

They ſee the Sun no more after the third of Nouember, *Stilo nouo*, or our Octob. 24.

The fifth, the Winde was North, and ſomewhat Weſt, and then wee ſaw open water vpon the Sea, but our ſhippe lay ſtill faſt in the Ice, and when the Sunne had left vs, wee ſaw the Moone continuall both day and night, and neuer went downe when it was in the higheſt degree. The ſixt, the Winde was North-weſt, ſtill weather, and then our men fetcht a Sled full of Fire-wood, but by reaſon that the Sunne was not ſeene, it was very darke weather.

Moone continually ſeene in the Sunnes abſence.

The ſeuenth, it was darke weather, and very ſtill, the Winde Weſt, at which time wee could hardly diſcerne the Day from the Night, ſpecially becauſe at that time our Clocke ſtood ſtill, and by that meanes wee knew not when it was day, although it was day, and our men roſe not out of their Cabins all that day; but onely to make water, and therefore they knew not whether the light they ſaw, was the light of the day or of the Moone; whereupon, they were of ſeuerall opinions, ſome ſaying, it was the light of the day, the others of the night: but as wee tooke good regard thereunto, wee found it to bee the light of the day about twelue of the clocke at noone.

Darkneſſe.

The eight, it was ſtill weather, the Winde blowing South, and South-weſt. The ſame day our men fetcht another Sled of Fire-wood, and then alſo wee tooke a White Foxe, and ſaw open water in the Sea. The ſame day wee ſhared our Bread amongſt vs, each man hauing foure pound and tenne ounces, for his allowance in eight dayes, ſo that then we

Bread ſhared and Beere.

Digitized by Google

we were eight dayes eating a Barrell of Bread, whereas before wee ate it vp in fiue or ſix dayes: we had no need to ſhare our fleſh and fiſh, for we had more ſtore thereof; but drinke failed vs, and therefore we were forced to ſhare that alſo: but our beſt Beere was for the moſt part wholy without any ſtrength, ſo that it had no ſauour at all: and beſides all this, there was a great deale of it ſpilt. The ninth; the Wind blew North-eaſt, and ſomewhat more Northerly, and then we had not much day light, but it was altogether darke. The tenth, it was calme weather, the Wind North-weſt, and then our men went into the ſhip to ſee how it lay, and wee ſaw that there was a great deale of water in it, ſo that the ballaſt was couered ouer with water, but that it was frozen, and ſo might not bee pumpt out. The eleuenth, it was indifferent weather, the Wind North-weſt. The ſame day we made a round thing of Cable yarne, and like to a Net, to catch Foxes withall, that wee might get them into the Houſe, and it was made like a Trap, which fell vpon the Foxes as they came vnder it, and that day we caught one.

Beere ſtrength leſſe with ſtoſt.

Ship ballaſt couered with water.

Fox-trap.

The twelfth, the Wind blew Eaſt, with a little light: that day wee began to ſhare our Wine, euery man had two Glaſſes a day, but commonly our Drinke was water, which we melted out of Snow, which we gathered without the Houſe. The thirteenth, it was foule weather, with great Snow, the Wind Eaſt. The fourteenth, it was faire cleere weather, with a cleere Skie full of Starres, and an Eaſt-wind. The fifteenth, it was darke weather, the Wind North-eaſt, with a vading light. The ſixteenth, it was weather with a temperate Ayre, and an Eaſt-wind. The ſeuenteenth, it was darke weather, and a cloſe Ayre, the Wind Eaſt. The eighteenth, it was foule weather, the wind South-eaſt: then the Maſter cut vp a packe of courſe Clothes, and diuided it amongſt our men that needed it, therewith to defend vs better from the cold. The nineteenth, it was foule weather, with an Eaſt-wind, and then the Chiſt with Linnen was opened, and diuided amongſt the men for ſhift, for they had need of them, for then our onely care was to find all the meanes we could to defend our bodie from the cold. The twentieth, it was faire ſtill weather, the Wind Eaſterly, then wee waſht our ſheets, but it was ſo cold, that when wee had waſht and wrung them, they preſently froze ſo ſtiffe, that although wee layed them by a great fire, the ſide that lay next the fire thawed, but the other ſide was hard frozen, ſo that wee ſhould ſooner haue torne them in ſunder then haue opened them, whereby wee were forced to put them into the ſeething water againe to thaw them, it was ſo exceeding cold. The one and twentieth, it was indifferent weather with a North-eaſt wind, then we agreed that euery man ſhould take his turne to cleaue Wood, thereby to eaſe our Cooke, that had more then worke enough to doe twice a day to dreſſe meate, and to melt Snow for our Drinke, but our Maſter and the Pilot were exempted from that Worke.

Wine ſhared.

Drinke water.

Ill waſhing.

The two and twentieth, the Wind was South-eaſt, it was faire weather, then wee had but ſeuenteene Cheeſes, whereof one we ate amongſt vs, and the reſt were diuided to euery man one for his portion, which they might eate when he liſt. The three and twentieth, it was indifferent good weather, the Wind South-eaſt, and as we perceiued that the Fox vſed to come oftner, and more then they were wont, to take them the better, wee made certaine Trappes of thicke Planckes, whereon wee laid ſtones, and round about them placed pieces of ſhards faſt in the ground, that they might not digge vnder them, and ſo got ſome of the Foxes. The foure and twentieth, it was foule weather, and the Wind North-eaſt, and then wee prepared our ſelues to goe into the Bath, for ſome of vs were not very well at eaſe, and ſo foure of vs went into it, and when we came out, our Surgeon gaue vs a Purgation, which did vs much good, and that day we tooke foure Foxes. The fiue and twentieth, it was faire cleere weather, the Wind Weſt; and that day we tooke two Foxes with Springs that we had purpoſely ſet vp.

Bathing and purging.

The ſix and twentieth, it was foule weather, and a great ſtorme with a South-weſt Wind, and great ſtore of Snow, whereby wee were ſo cloſed vp in the Houſe, that wee could not goe out, but were forced to eaſe our ſelues within the Houſe. The ſeuen and twentieth, it was faire cleere weather, the Wind South-weſt, and then we made more Spinges to get Foxes, for it ſtood vs vpon to doe it, becauſe they ſerued vs for meate, as if God had ſent them purpoſely for vs, for we had not much meate. The eight and twentieth of Nouember, it was foule ſtormie weather, and the Winde blew hard out of the North, and it ſnew hard, whereby wee were ſhut vp againe in our Houſe, the Snow lay ſo cloſed before the doores.

The nine and twentieth, it was faire cleere weather, and a good Ayre: the Wind Northerly, and we found meanes to open our doore by ſhoueling away the Snow, whereby wee got one of our doores open, and going out, wee found all our Traps and Springes cleane couered ouer with Snow, which wee made cleane, and ſet them vp againe to take Foxes: and that day wee tooke one, which as then ſerued vs not onely for meate, but of the skinnes wee made Caps to weare vpon our heads, wherewith to keepe them warme from the extreame cold. The thirtieth, it was faire cleere weather, the Wind Weſt, and ſix of vs went to the ſhip, all well prouided of Armes to ſee how it lay: and when wee went vnder the fore Decke, wee tooke a Foxe aliue in the ſhip.

Store of Snow.

Fox-skin-caps.

The firſt of December, it was foule weather with a South-weſt Wind, and great ſtore of Snow, whereby we were once againe ſtopt vp in the Houſe, and by that meanes there was ſo

December.

Lye ſtill in Cabins.

great a ſmoake in the Houſe, that we could hardly make fire, and ſo were forced to lye all day in our Cabins, but the Cooke was forced to make fire to dreſſe our meate. The ſecond, it was ſtill foule weather, whereby wee were forced to keepe ſtill in the Houſe, and yet wee could hardly ſit by the fire, becauſe of the ſmoake, and therefore ſtayed ſtill in our Cabins, and then we heated ſtones, which we put in our Cabins to warme our feet, for that both the cold and the ſmoake were vnſupportable.

Stones heated to heat them. Cold and Smoake.

Ice cracking noyſe.

The third, we had the like weather, at which time as we lay in our Cabins, wee might heare the Ice cracke in the Sea, and yet it was at the leaſt halfe a mile from vs, which made a huge noyſe, and we were of opinion, that as then the great Hils of Ice which wee had ſeene in the Sea, in Summer time, brake one from the other, and for that during thoſe two or three dayes, because of the extreame ſmoake, we made not ſo much fire as we commonly vſed to doe, it froze ſo ſore within the Houſe, that the Wals and the Roofe thereof were frozen two fingers thick with Ice, and alſo in our Cabins where we lay all thoſe three dayes, while wee could not goe out: by reaſon of the foule weather, we ſet vp the Glaſſe of twelue houres, and when it was runne out, wee ſet it vp againe, ſtill watching it leſt wee ſhould miſſe our time. For the cold was ſo great, that our Clocke was frozen, and might not goe, although we hung more waight on it then before.

Ice in the Houſe.

Clock frozen.

Doore digged open.

The fourth, it was faire cleere weather, the Wind North-eaſt, and then we began euery man by turne to digge open our doores that were cloſed vp with Snow, for we ſaw that it would be often to doe, and therefore we agreed to worke by turnes, no man excepted but the Maſter and the Pilot. The fifth, it was faire weather with an Eaſt-wind, and then we made our Springes cleane againe to take Foxes. The ſixt, it was foule weather againe, with an Eaſterly Wind, and extreame cold, almoſt not to bee indured, whereupon wee lookt pittifully one vpon the other, being in great feare, that if the extreamitie of the cold grew to bee more and more, wee ſhould all dye there with cold, for that what fire ſoeuer we made, it would not warme vs, yea, and our Sacke which is ſo hot, was frozen very hard, ſo that when wee were euery man to haue his part, we were forced to melt it in the fire, which wee ſhared euery ſecond day about halfe a pint for a man, wherewith we were forced to ſuſtayne our ſelues, and at other times wee dranke water, which agreed not well with the cold, and we needed not to coole it with Snow or Ice, but we were forced to melt it out of the Snow.

Cold ſtronger then fire and Sacke.

The ſeuenth, it was ſtill foule weather, and we had a great ſtorme with a North-eaſt Wind, which brought an extreame cold with it, at which time wee knew not what to doe, and while we ſate conſulting together, what were beſt for vs to doe, one of our companions gaue vs counſell to burne ſome of the Sea-coales that we had brought out of the ſhip, which would caſt a great heate and continue long, and ſo at Eeuening we made a great fire thereof, which caſt a great heat: at which time wee were very carefull to keepe it in: for that the heate beeing ſo great a comfort vnto vs, we tooke care how to make it continue long: whereupon wee agreed to ſtop vp all the doores and the Chimney, thereby to keepe in the heate, and ſo went into our Cabins to ſleepe, well comforted with the heate, and ſo lay a great while talking together; but at laſt we were taken with a great ſwounding and dazeling in our heads, yet ſome more then other ſome, which we firſt perceiued by a ſicke man, and therefore the leſſe able to beare it, and found our ſelues to be very ill at eaſe, ſo that ſome of vs that were ſtrongeſt, ſtart out of their Cabins, and firſt opened the Chimney, and then the doores, but he that opened the doore fell downe in a ſwound vpon the Snow, which I hearing, as lying in my Cabin next to the doore, ſtart vp, and caſting Vinegar in his face, recouered him againe, and ſo he roſe vp: and when the doores were open, we all recouered our healths againe, by reaſon of the cold Ayre, and ſo the cold which before had beene ſo great an Enemy vnto vs, was then the onely reliefe that wee had, otherwiſe without doubt, we had dyed in a ſudden ſwound, after that the Maſter, when we were come to our ſelues againe, gaue euery one of vs a little Wine to comfort our hearts.

Sea-coale fire.

Swounding & ſtifling by the Cole-vapour and cloſeneſſe.

Benefit of cold

The eight, it was foule weather, the winde Northerly, very ſharpe and cold, but we durſt lay no more coales on, as wee did the day before, for that our misfortune had taught vs, that to ſhunne one danger we ſhould not runne into another. The ninth, it was faire cleare weather, the skie full of Starres, then we ſet our doore wide open, which before was faſt cloſed vp with Snow, and made our Springes ready to take Foxes. The tenth, it was ſtill faire Star-light weather, the winde North-eaſt: then wee tooke two Foxes, which were good meate for vs, for as then our victuals began to bee ſcant, and the cold ſtill increaſed, whereunto their Skinnes ſerued vs for a good defence. The eleuenth, it was faire weather, and a cleere ayre but very cold, which hee that felt not would not beleeue, for our Shooes froze as hard as hornes vpon our feete, and within they were white frozen, ſo that we could not weare our ſhooes, but were forced to make great Pattents, the vpper part being Sheepe-skinnes, which we put on ouer three or foure payre of Sockes, and ſo went in them to keepe our feet warme.

Shooes on feet frozen within. They weare no ſhooes.

The twelfth, it was faire cleere weather with a North-weſt winde, but extreame cold, ſo that our Houſe walls and Cabbins were frozen a finger thicke; yea, and the Cloathes vpon our backes were white ouer with Froſt, and although ſome of vs were of opinion, that wee ſhould lay

Clothes on their backes frozen.

lay more coles vpon the fire to warme vs, and that we should let the chimney stand open, yet we durst not doe it, fearing the like danger we had escaped. The thirteenth, it was faire cleere weather, with an East winde: then we tooke another Foxe, and tooke great paines about preparing and dressing of our Springes, with no small trouble, for that if wee stayed too long without the doores, there arose blisters vpon our Faces and our Eares. *Cold blisters.* The fourteenth, it was faire weather, the winde North-east, and the skie full of starres, then we tooke the height of the right shoulder of the *Rens*, when it was South South-west, and somewhat more Westerly (and then it was at the highest in our Compasse) and it was eleuated aboue the Horizon 20. degrees and 28. minutes, his Declination being 6. degrees and 18. minutes, on the North-side of the line, which Declination being taken out of the height aforesayd, there rested 14. degrees, which being taken out of 90. degrees, then the height of the Pole was 76. degrees.

The fifteenth, it was still faire weather, the winde East: that day wee tooke two Foxes, and saw the Moone rise East South-east, when it was sixe and twentie dayes old, in the signe of *Scorpio*. The sixteenth, it was faire cleere weather, the winde East: at that time wee had no more Wood in the house, but had burnt it all: but round about our house there lay some couered ouer with Snow, which with great paine and labour we were forced to digge out, and so shouell away the Snow, and so brought it into the house, which wee did by turnes, two and two together, wherein we were forced to vse great speed, for wee could not long endure without the House, because of the extreame cold, although we wore the Foxes skinnes about our heads, and double apparell vpon our backes. *Extreame and terrible freezing.*

The seuenteenth, the winde still held North-east, with faire weather and so great Frosts, that wee were of opinion, that if there stood a Barrell full of water without the doore, it would in one night freeze from the top to the bottome. The eighteenth, the winde still held North-east, with faire weather: then seuen of vs went out vnto the Ship to see how it lay, and being vnder the decke, thinking to finde a Foxe there, we sought all the holes but we found none; but when we entred into the Cabbin and had stricken fire to see in what case the ship was, and whether the water rose higher in it, there wee found a Foxe, which we tooke and carryed it home, and eate it, and then we found that in eighteene dayes absence (for it was so long since we had beene there) the water was risen about a finger high, but yet it was all Ice, for it froze as fast as it came in, and the vessels which wee had brought with vs full of fresh water out of *Holland*, were frozen to the ground.

The nineteenth, it was faire weather, the winde being South: then we put each other in good comfort, that the Sunne was then almost halfe ouer, and ready to come to vs againe, which wee sore longed for, it being a weary time for vs to bee without the Sunne, and to want the greatest comfort that God sendeth vnto man heere vpon the earth, and that which rejoyceth euery liuing thing. *Sunnes comfort.* The twentieth, before noone it was faire cleere weather, and then we had taken a Foxe, but towards Eeuening, there rose such a storme in the South-west, with so great a snow, that all the house was inclosed therewith. *House inclosed with snow.* The one and twentieth, it was faire cleere weather, with a North-east winde, then we made our doore cleane againe, and made a way to goe out, and clensed our Traps for the Foxes, which did vs great pleasure when we tooke them, for they seemed as daintie as Venison vnto vs. The two and twentieth, it was foule weather, with great store of snow, the winde South-west, which stopt vp our doore againe, and wee were forced to digge it open againe, which was almost euery day to doe. The three and twentieth, it was foule weather, the wind South-west, with great store of snow, but wee were in good comfort that the Sunne would come againe to vs, for as we ghest, that day hee was in *Tropicus Capricorni*, which is the furthest Signe that the Sunne passeth on the South-side of the line, and from thence it turneth Northward againe. *Sun in Tropicus Capricorni. 24. Decem. Stilo nouo.* The foure and twentieth, being Christmasse Eeuen, it was faire weather, then wee opened our doore againe, and saw much open water in the Sea: for we had heard the Ice cracke and driue: although it was not day, yet we could see so farre. Towards Eeuening it blew hard out of the North-east, with great store of Snow, so that all the passage that wee had made open before, was stopt vp againe. *Cold Christmasse.* The fiue and twentieth, being Christmasse day, it was foule weather, with a North-west winde, and yet though it was foule weather, we heard the Foxes runne ouer our House, wherewith some of our men sayd, it was an ill signe; and while we sate disputing why it should bee an ill signe, some of our men made answer, that it was an ill signe because wee could not take them, to put them into the Pot or roast them, for that had beene a very good signe for vs. *Ill signe indeed.*

The sixe and twentieth, it was foule weather, the winde North-west, and it was so cold that we could not warme vs, although wee vsed all the meanes we could with great fires, good store of cloathes, and with hot stones and billets, layd vpon our feete and vpon our bodies, as we lay in our Cabbins; but notwithstanding all this, in the morning our Cabbins were frozen, which made vs behold one the other with sad countenance, but yet wee comforted our selues againe as well as we could, that the Sunne was then as low as it could goe, and that it now began to come to vs againe, and we found it to bee true: for that *the Dayes beginning to lengthen, the Cold began to strengthen*, but hope put vs in good comfort, and eased our paine. *Cold inuincible.* The seuen and twentieth, it

Digitized by Google

was ſtill foule weather, with a North-weſt wind, ſo that as then wee had not beene out in three dayes together, nor durſt not thruſt our heads out of doores, and within the houſe it was ſo extreame cold, that as we ſate before a great Fire, and ſeemed to burne on the fore-ſide, we froze behind at our backes, and were all white as the Countrey-men vſe to bee, when they come in at the gates of the Towne in *Holland* with their Sleds, and haue gone all night.

Burne before, freeze behind.

The eight and twentieth, it was ſtill foule weather with a Weſt wind, but about Eeuening it began to cleere vp, at which time one of our men made a hole open at one of our doores, and went out to ſee what newes abroad, but found it ſo hard weather that hee ſtayed not long, and told vs that it had ſnowed ſo much, that the Snow lay higher then our houſe, and that if he had ſtayed out longer, his eares would vndoubtedly haue beene frozen off. The nine and twentieth, it was calme weather, and a pleaſant ayre, the wind being Southward: that day, he, whoſe turne it was, opened the doore, and digged a hole through the Snow, where we went out of the houſe vpon ſteps, as if it had beene out of a Celler, at leaſt ſeuen or eight ſteps high, each ſtep a foote from the other, and then we made cleane our Springes for the Foxes, whereof for certaine dayes we had not taken any: and as we made them cleane, one of our men found a dead Foxe in one of them, that was frozen as hard as a ſtone, which he brought into the houſe, and thawed it before the fire, and after flaying it, ſome of our men eate it. The thirtieth, it was foule weather againe, with a ſtorme out of the Weſt, and great ſtore of Snow, ſo that all the labour and paine that we had taken the day before to make ſteps to goe out of our houſe, and to cleanſe our Springes, was all in vaine, for it was all couered ouer with Snow againe, higher then it was before. The one and thirtieth, it was ſtill foule weather, with a ſtorme out of the North-weſt, whereby we were ſo faſt ſhut vp into the houſe, as if wee had beene priſoners, and it was ſo extreame cold, that the fire almoſt caſt no heate: for as we put our feet to the fire, we burnt our hoſe before we could feele the heate, ſo that we had worke enough to doe to patch our hoſe: and which is more, if we had not ſooner ſmelt, then felt them, we ſhould haue burnt them ere we had knowne it.

Snow higher then the houſe

Snow-ſteps.

Fire conquered, heat ſmelt before felt.

After that with great cold, danger, and diſeaſe, wee had brought this yeere vnto an end, we entred into the yeere of our Lord God 1597. the beginning whereof, was in the ſame manner as the end of *Anno* 1596. had beene, for the weather continued as cold, foule, and Snowie, as it was before, ſo that vpon the firſt of Ianuary wee were incloſed in the Houſe, the winde then being Weſt: at the ſame time wee agreed to ſhare our Wine euery man a ſmall meaſure full, and that but once in two dayes: and as we were in great care and feare that it would bee long before we ſhould get out from thence, (and we hauing but ſmall hope therein) ſome of vs ſpared to drinke wine as long as we could, that if we ſhould ſtay long there, we might drinke it at our need. The ſecond, it blew hard with a Weſt wind, and a great ſtorme with both Snow and Froſt, ſo that in foure or fiue dayes, we durſt not put our heads out of the doores, and as then by reaſon of the great cold, we had almoſt burnt all our Wood; notwithſtanding, we durſt not goe out to fetch more wood, becauſe it froze ſo hard, and there was no being without the doore, but ſeeking about we found ſome peeces of wood that lay ouer the doore, which we cloue, and withall cloue the blockes whereon we vſed to beate our Stock-fiſh, and ſo holpe our ſelues ſo well as we could. The third, it was all one weather, and we had little wood to burne. The fourth, it was ſtill foule ſtormie weather, with much Snow and great cold, the winde South-weſt, and we were forced to keepe in the houſe: and to know where the wind blew, we thruſt a halfe-pike out at the Chimney with a little cloath or feather vpon it, but as ſoone as wee thruſt it out, it was preſently frozen as hard as a peece of wood, and could not goe about nor ſtirre with the wind.

An. Dom. 1597.

Ianuary.

Vane.

The fifth, it was ſomewhat ſtill and calme weather: then wee digged our doore open againe, that we might goe out, and carrie out all the filth that had beene made, during the time of our being ſhut in the houſe; and made euery thing handſome, and fetched in Wood which we cleft, and it was all our dayes worke to further our ſelues as much as we could, fearing leaſt we ſhould be ſhut vp againe: and as there were three doores in our portall, and for that our houſe lay couered ouer in Snow, wee tooke the middle doore thereof away, and digged a great hole in the ſnow, that lay without the houſe, like to a ſide of a vault, wherein we might goe to eaſe our ſelues, and caſt other filth into it: and when we had taken paines all day, we remembred our ſelues that it was Twelfth Eeuen, and then we prayed our Maſter that we might be merrie that night, and ſayd, that we were content to ſpend ſome of the Wine that night which we had ſpared, and which was our ſhare euery ſecond day, and whereof for certayne dayes wee had not drunke, and ſo that night we made merrie, and drunke to the *three Kings*, and therewith we had two pound of Meale, whereof wee made pan-cakes with Oyle, and euery man a white Bisket, which we ſopt in Wine: and ſo ſuppoſing that we were in our owne Countrey, and amongſt our friends, it comforted vs as well as if we had made a great banquet in our owne houſe: and we alſo made tickets, and our Gunner was King of *Noua Zembla*, which is at leaſt two hundred miles long, and lyeth betweene two Seas.

Three Kings of *Cullen*.

King of *Noua Zembla*.

The ſixt, it was faire weather, the wind North-eaſt, then wee went out and cleanſed our Traps to take Foxes, which were our Veniſon, and we digged a hole in the Snow, where our fire-

wood

Digitized by Google

wood lay, and left it cloſe aboue like a vault; and from thence fetched out our Wood as we needed it. The ſeuenth, it was foule weather againe, with a North-weſt wind, and ſome Snow, and very cold, which put vs in great feare to be ſhut vp in the houſe againe. The eight, it was faire weather againe, the wind North: then wee made our Springes ready to get more Veniſon: which wee longed for, and then wee might ſee and marke day-light, which then began to encreaſe, that the Sunne as then began to come towards vs againe, which put vs in no little comfort. *Day-light eſpied.*

The ninth, it was foule weather, with a North-weſt wind, but not ſo hard weather as it had beene before, ſo that we might goe out of the doore to make cleane our Springes. The tenth, it was faire weather with a North wind: then ſeuen of vs went to our ſhip well armed, which we found in the ſame ſtate wee left it in, and in it wee ſaw many footſteps of Beares, both great and ſmall, whereby it ſeemed that there had beene more then one or two Beares therein; and as we went vnder hatches, we ſtrooke fire, and lighted a Candle, and found that the water was riſen a foot higher in the ſhip. The eleuenth, it was faire weather, the wind North-eaſt, and the cold began to be ſomewhat leſſe, ſo that as then we were bold to goe out of the doores, and went about a quarter of a mile to a Hill, from thence we fetched certaine ſtones, which we layd in the fire, therewith to warme vs in our Cabins. *Beares in the ſhip.*

The twelfth, it was cleare weather, the wind North-weſt: that euening it was very cleare, and the skie full of Starres, then wee tooke the height of *Oculus Tauri*, which is a bright and well knowne Starre, and we found it to be eleuated aboue the Horizon 29. degrees and 54. minutes, her declination being 15. degrees 54. minutes on the North ſide of the Line. This declination being ſubtracted from the height aforeſaid, then there reſted 14. degrees, which ſubtracted from 90. degrees, then the height of the Pole was 76. degrees, and ſo by meaſuring the height of that Starre, and ſome others, wee gheſſed that the Sunne was in the like height, and that we were there vnder 76. degrees, and rather higher then lower. *Oculus Tauri.*

The thirteenth, it was faire ſtill weather, the wind Weſterly, and then wee perceiued that day-light began more and more to encreaſe, and we went out and caſt Bullets at the bale of the Flag-ſtaffe, which before we could not ſee when it turned about. The fourteenth, it was faire weather and a cleare light, the wind Weſterly, and that day we tooke a Foxe. The fifteenth, it was faire cleere weather, with a Weſt wind, and ſixe of vs went aboord the ſhip, where wee found the Bolck-vanger (which the laſt time that we were in the ſhip, wee ſtucke in a hole in the fore decke, to take Foxes) pulled out of the hole, and lay in the middle of the ſhip, and all torne in pieces by the Beares, as we perceiued by their footſteps.

The ſixteenth, it was faire weather, the wind Northerly, and then we went now and then out of the houſe to ſtretch out our ioynts and our limbs with going and running, that we might not become lame, and about noone time we ſaw a *certaine redneſſe in the skie*, as a ſhew or meſſenger of the Sunne that began to come towards vs. The ſeuenteenth, it was cleare weather with a North wind, and then ſtill more and more wee perceiued that the Sunne began to come neerer vnto vs, for the day was ſomewhat warmer, ſo that when we had a good fire, there fell great pieces of Ice downe from the walls of our houſe, and the Ice melted in our Cabins, and the water dropped downe, which was not ſo before, how great ſoeuer our fire was; but that night it was cold againe. *Aurora* bluſheth to lie ſo long in bed. Cold relenteth

The eighteenth, it was faire cleare weather, with a South-eaſt wind, then our Wood began to conſume, and ſo we agreed to burne ſome of our Sea-coles, and not to ſtop vp the Chimney, and then we ſhould not need to feare any hurt, which we did, and found no diſeaſe thereby, but we thought it better for vs to keepe the Coles, and to burne our Wood more ſparingly, for that the Coles would ſerue vs better when we ſhould ſayle home in our open Scute.

The one and twentieth, it was faire weather, with a Weſt wind: at that time taking of Foxes began to fayle vs, which was a ſigne that the Beares would come againe, as not long after we found it to be true, for as long as the Beares ſtay away, the Foxes came abroad, and not much before the Beares come abroad, the Foxes were but little ſeene.

The two and twentieth, it was faire weather with a Weſt wind: then we went out againe to caſt the Bullet, and perceiued that day-light began to appeare, whereby ſome of vs ſaid, that the Sunne would ſoone appeare vnto vs, but *William Barents* to the contrary ſaid, that it was yet two weekes too ſoone. The three and twentieth, it was faire calme weather, with a South-weſt wind: then foure of vs went to the ſhip, and comforted each other, giuing God thankes that the hardeſt time of the Winter was paſt, being in good hope that we ſhould liue to talke of thoſe things at home in our owne Countrey: and when we were in the ſhip, we found that the water roſe higher and higher in it, and ſo each of vs taking a Biſket or two with vs, wee went home againe.

The foure and twentieth, it was faire cleare weather, with a Weſt wind: then I, and *Iacob Heemskerke*, and another with vs went to the Sea-ſide, on the South ſide of *Noua Zembla*, where contrary to our expectation, I firſt ſaw the edge of the Sunne, wherewith wee went ſpeedily home againe, to tell *William Barents*, and the reſt of our companions that ioyfull newes: but *William* *Sunne appeareth againe, Ian. 24.*

William Barents being a wise and well experienced Pilot, would not beleeue it, esteeming it to be about fourteene dayes too soone for the Sunne to shine in that part of the World; but we earnestly affirmed the contrarie, and said, that we had seene the Sunne.

The fiue and twentieth, and sixe and twentieth, it was misty, and close weather, so that wee could not see any thing: then they that layed the contrary wager with vs, thought that they had won: but vpon the seuen and twentieth day it was cleare weather, and then wee saw the Sunne in his full roundnesse aboue the Horizon, whereby it manifestly appeared that wee had seene it vpon the foure and twentieth day of Ianuary. And as we were of diuers opinions touching the same, and that wee said, it was cleane contrary to the opinions of all old and new Writers; yea, and contrary to the nature and roundnesse both of Heauen and Earth; some of vs said, that seeing in long time there had beene no day, that it might be that we had ouerslept our selues, whereof we were better assured: but concerning the thing in it selfe, seeing God is wonderfull in all his workes, we will referre that to his almightie power, and leaue it vnto others to dispute of, but for that no man shall thinke vs to be in doubt thereof, if wee should let this passe without discoursing vpon it, therefore we will make some declaration thereof, whereby we may assure our selues that we kept good reckoning.

Sun fully seen.

How the Sun which they had lost the 4. of Nouember did appeare to them againe vpon the 24. of Ianuary, which was very strange, and contrary to all learned mens opinions.

You must vnderstand, that when we first saw the Sun, it was in the fift degr. and 25. min. of *Aquarius*, and it should haue staid according to our first ghessing, till it had entred into the 16. deg. and 27. min. of *Aquarius*, before he should haue shewed there vnto vs, in the height of 76. deg. Which we striuing and contending about it amongst our selues, could not be satisfied, but wondred thereat, and some amongst vs were of opinion, that we had mistaken our selues, which neuertheless we could not be perswaded vnto, for that euery day without fayle, wee noted what had past, and also had vsed our Clocke continually, and when that was frozen, wee vsed our Houre-glasse of twelue houres long, whereupon wee argued with our selues, in diuers wise, to know how we should finde out that difference, and leaue the trueth of the time, which to trie, wee agreed to looke into the *Ephemerides* made by *Iosephus Schala*, Printed in *Venice*, for the yeeres of our Lord 1589. till *A.* 1600. and we found therein, that vpon the foure and twentieth day of Ianuary, (when the Sun first appeared vnto vs) that at *Venice* the Clocke being one in the night time, the Moone and *Iupiter* were in coniunction, whereupon we sought to know when the same coniunction should be ouer or about the house where wee then were, and at last wee found that the foure and twentieth day of Ianuary was the same day whereon the coniunction aforesaid happened in *Venice*, at one of the clocke in the night, and with vs in the morning, when the Sunne was in the East: for we saw manifestly that the two Planets aforesaid approached neere vnto each other, vntill such time as the Moone and *Iupiter* stood one iust ouer the other, both in the signe of *Taurus*, and that was at sixe of the clocke in the morning, at which time the Moone and *Iupiter* were found by our Compasse, to be in coniunction ouer our house, in the North and by East point, and the South part of the Compasse was South South-west, and there we had it right South, the Moone being eight dayes old, whereby it appeareth, that the Sunne and the Moone were eight points different, and this was about sixe of the clocke in the morning: this place differeth from *Venice* fiue houres in longitude, whereby we may ghesse how much we were neerer East then the Citie of *Venice*, which was fiue houres, each houre being 15. degrees, which is in all 75. degrees, that we were more Easterly then *Venice*, by all which it is manifestly to be seene, that wee had not fayled in our account, and that also wee had found our right longitude, by the two Planets aforesaid, for the Towne of *Venice* lieth vnder 37. degrees and 25. minutes in longitude, and her declination is 46. degrees and 5. minutes, whereby it followeth that our place of *Noua Zembla*, lieth vnder 112. degrees and 25. minutes in longitude, and the height of the Pole 76. degrees, and so you haue the right longitude and latitude, but from the vttermost point of *Noua Zembla* to the point of Cape *de Tabin*, the vttermost point of *Tartaria*, where it windeth Southward, the longitude differeth 60. degrees; but you must vnderstand, that the degrees are not so great as they are vnder the Equinctiall Line, for right vnder the Line a degree is fifteene miles, but when you leaue the Line, either Northward or Southward, then the degrees in longitude doe lessen, so that the neerer that a man is to the North or South Pole, so much the degrees are lesse: so that vnder the 75. degrees Northward, where we wintred, the degrees are but three miles and two third parts; whereby it is to be marked, that we had but 60. degrees to saile to the said Cape *de Tabin*, which is, 220. miles, so the said Cape lieth in 172. degrees in longitude as it is thought: and being aboue it, it seemeth that we should be in the Streight of *Anian*, where we may sayle boldly into the South, as the Land reacheth. Now what further instructions are to be had to know, where wee lost the Sunne vnder the said 76. degrees vpon the fourth of Nouember, and saw it againe vpon the foure and twentieth of Ianuary: I leaue that to be described, by such as make profession thereof, it sufficeth vs to haue shewed, that it failed vs not to appeare at the ordinary time.

Difference of longitude betwixt *Venice* and their wintring place.

Note for deg. of longitude.

The fiue and twentieth of Ianuary, it was darke cloudy weather, the wind Westerly, so that the seeing of the Sunne the day before, was againe doubted of, and then many wagers were layd, and we still looked out to see if the Sunne appeared, the same day we saw a Beare, (which

Beare returne with the Sun.

our

as long as the Sunne appeared not vnto vs we saw not) comming out of the South-west towards our house, but when we shouted at her she came no neerer, but went away again. The six & twentieth, it was faire cleare weather, but in the Horizon there hung a white or darke cloude, whereby we could not see the Sunne, vvhereupon the rest of our companions, thought that we had mistaken our selues vpon the foure and twentieth day, and that the Sunne appeared not vnto vs, and mocked vs, but vve were resolute in our former affirmation, that vve had seene the Sunne, but not in the full roundnesse: That Eeuening the Sicke man that was amongst vs, was very vveake, and felt himselfe to bee extreame sicke, for he had layne long time, and vve comforted him as well as vve might, and gaue him the best admonition that vve could, but hee dyed not long after midnight. Sicke man dieth.

The twentie seuen it was faire cleare weather, with a South-west wind, then in the morning we digged a hole in the snow hard by the house, but it was still so extreame cold, that we could not stay long at worke, and so wee digged by turnes, euery man a little while, and then went to the fire, and another went and supplied his place, till at last wee digged seuen foot depth where wee went to burie the dead man, after that when we had read certaine Chapters, and sung some Psalmes, wee all went out and buried the man, which done we went in and brake our fasts, and while we were at meate, and discoursed amongst our selues, touching the great quantitie of snow that continually fell in that place, wee said that if it fell out, that our house should bee closed vp againe with snow, wee would finde the meanes to climbe out at the chimney, whereupon our Master went to trie if hee could climbe vp through the chimney, and so get out, and while hee was climbing one of our men went forth of the doore, to see if the Master were out or not, who standing vpon the snow, saw the Sunne, and called vs all out, wherewith we all went forth, and saw the Sun in his full roundnesse, a little aboue the Horizon, and then it was without all doubt, that wee had seene the Sunne vpon the foure and twentieth of Ianuary, which made vs all glad, and we gaue God heartie thankes, for his grace shewed vnto vs, that that glorious light appeared vnto vs againe. The Sunne.

The eight and twentieth, it was faire weather, with a West wind, then we went out many times to exercise our selues, by going, running, casting of the ball, (for then we might see a good way from vs) and to refresh our ioynts, for wee had long time sitten dull, whereby many of vs were very loose. The nine and twentieth, it was foule weather, with great store of snow, the wind North-west, whereby the house was closed vp againe with snow. The thirtieth, it was darke weather, with an East wind; and we made a hole through the doore, but wee shoueled not the snow very farre from the portall, for that as soone as we saw what weather it was, wee had no desire to goe abroad. The one and thirtieth, it was faire calme weather, with an East wind, then we made the doore cleane, and shoueled away the snow, and threw it vpon the house, and went out, and wee saw the Sunne shine cleere, which comforted vs, meane time we saw a Beare, that came towards our house, but wee went softly in, and watched for her till shee came neerer, and as soone as she was hard by we shot at her, but she ran away againe. Beare.

The first of February, being Candlemasse Eeue, it was boisterous weather, with a great storme, and good store of snow, whereby the house was closed vp againe with snow, and we were constrained to stay within doors, the wind then being north-west. The second it was foule weather, and as then the Sunne had not rid vs of all the foule weather, whereby wee were somewhat discomforted, for that being in good hope of better weather wee had not made so great prouision of wood as we did before. The third, it was faire weather, with an East wind, but very mystie, whereby wee could not see the Sunne, which made vs somewhat melancholy, to see so great a myst, and rather more then we had had in the Winter time, and then we digged our doore open againe, and fetched the wood that lay without about the doore into the house, which we were forced with great paine and labour to dig out of the snow. The fourth, it was foule weather, with great store of snow, the wind being South-west, and then wee were close vp againe with snow, but then wee tooke not so much paines as we did before, to dig open the doore, but when we had occasion to goe out we climbed out at the chimney, and eased our selues, and went in againe the same way. February.

The fifth, it was still foule weather, the wind being East, with great store of snow, whereby wee were shut vp againe into the house, and had no other way to get out but by the chimney, and those that could not climbe out, were faine to helpe themselues within as wel as they could. The sixth, it was still foule stormy weather, with store of snow, and we still went out at the chimney, (and troubled not our selues with the doore,) for some of vs made it an easie matter to climbe out at the chimney. The seuenth, it was still foule weather, with much snow, and a South-west wind, and we thereby forced to keep the house, which grieued vs more then when the Sun shined not, for that hauing seene it, and felt the heate thereof, yet wee were forced not to inioy it. The eight, it began to be fairer weather, the wind being South-west, then wee saw the Sun rise South, South-east, and went downe South South-west, by the Compasse that we had made of Lead, and placed according to the Meridian of that place, but by our common Compasse it differed two points. The ninth, it was faire cleere weather, the wind South-west, but as then wee could not see They goe out at the chimney.

ſee the Sunne, becauſe it was cloſe weather in the South, where the Sunne ſhould goe downe.

Heat of the Sunne. The tenth, it was faire cleare weather, ſo that wee could not tell where the wind blew, and then we began to feele ſome heat of the Sun, but in the Eeuening it began to blow ſomewhat cold out of the weſt.

The eleuenth, it was faire weather, the wind South, that day about noone, there came a Beare towards our houſe, and wee watched her with our Muskets, but ſhee came not ſo neere as wee could reach her, the ſame night wee heard ſome Foxes ſtirring, which ſince the Beares began to come abroad againe we had not much ſeene. The twelfth, it was cleere weather and very calme, the winde South-weſt, then we made our Traps cleane againe, meane-time there came a great Beare towards our houſe, which made vs all goe in, and wee leuelled at her with our Muskets, and as ſhee came right before our doore, we ſhot her into the breſt, cleane through the heart, the bullet paſſing through her body, and went out againe at her tayle, and was as flatte as a Counter,

Beare ſlaine. the Beare feeling the blow, leapt backwards, and ranne twentie or thirtie foot from the houſe, and there lay downe, wherewith wee leapt all out of the houſe, and ranne to her, and found her ſtill aliue, and when ſhe ſaw vs, ſhee rear'd vp her head, as if ſhe would gladly haue done vs ſome miſchiefe, but we truſted her not, for that we had tryed their ſtrength ſufficiently before, and therefore wee ſhot her twice into the body againe, and therewith ſhee dyed: Then we ript vp her

100. Pound of fat taken out of a Beare, vſefull for Lamps. belly, and taking out her guttes, drew her home to the Houſe where we flayed her, and tooke at leaſt one hundred pound of fat out of her belly, which wee molt and burned in our Lampe. This Greaſe did vs great good ſeruice, for by that meanes we ſtill kept a Lampe burning all night long, which before wee could not doe, for want of Greaſe, and euery man had meanes to burne a Lampe in his Cabbin, for ſuch neceſſaries as hee had to doe. The Beares skinne vvas nine foot long, and ſeuen foot broad.

The thirteenth, it was faire cleere vveather with a hard Weſt winde, at whith time we had more light in our houſe by burning of Lampes, whereby we had meanes to paſſe the time away, by reading and other exerciſes, which before (when we could not diſtinguiſh Day from Night, by reaſon of the darkeneſſe, and had not Lamps continually burning) vvee could not doe. The foureteenth, it was faire cleere weather, with a hard Weſt wind before noone, but after noone, it was ſtill weather, then fiue of vs went to the Ship to ſee how it lay, and found the water to increaſe in it, but not much. The fifteenth, it was foule weather, with a great ſtorme out of the South-weſt, with great ſtore of Snow, whereby the Houſe was cloſed vp againe, that Night the Foxes came to deuoure the dead body of the Beare, vvhereby we were in great feare, that all the Beares thereabouts would come thither, and therefore wee agreed, as ſoone as we could to get out of the houſe to burie the dead Beare deepe vnder the Snow.

The ſixteenth of February, it was foule weather, with great ſtore of Snow and a South-weſt vvind, that day was Shroue-tueſday, then wee made our ſelues ſomewhat merrie in our great griefe and trouble, and euery one of vs dranke a draught of Wine.

The nineteenth, it vvas faire cleere vveather, vvith a South-weſt winde, then we tooke the height of the Sunne, vvhich in long time before vvee could not doe, becauſe the Horizon vvas not cleere; as alſo for that it mounted not ſo high, nor gaue not ſo much ſhadow, as vve vvere to haue in our *Aſtrolabium*, and therefore vve made an Inſtrument that was halfe round, at the one end hauing 90. degrees marked thereon, vvhereon we hung a thread vvith a Plumet of Lead, as the vvater Compaſſes haue, and therewith vve tooke the height of the Sunne, when it was at the higheſt, and found that it vvas 3. degrees eleuated aboue the Horizon, his Declination 11. degrees and 16. minutes, which being added to the height aforeſayd, made 14. degrees and 16. minutes, vvhich ſubſtracted from 90. degrees, there reſted 75. degrees and 44. minutes for the height of the Pole, but the aforeſayd 3. degrees of height, being taken at the loweſt ſide of the Sunne, the 16. minutes might well be added to the height of the Pole, and ſo it was iuſt 76. degrees, as we had meaſured it before. The twentieth, it was foule weather, with great ſtore of Snow, the vvind South-weſt, vvhereby vve vvere ſhut vp againe in the houſe.

The two and twentieth, it vvas cleere faire vveather, vvith a South-weſt vvind, then vve made ready a Sled to fetch more Wood, for need compelled vs thereunto; for as they ſay, hunger drieueth the Wolfe out of his denne, and eleuen of vs went together, all well appointed with our Armes, but comming to the place where we ſhould haue the Wood, we could not come by it, by reaſon it lay ſo deepe vnder the Snow, whereby of neceſſitie we were compelled to goe further, where with great labour and trouble we got ſome: but as vve returned backe againe therewith, it was ſo ſore labour vnto vs, that we were almoſt out of comfort, for that by reaſon of the long cold and trouble that we had indured, vve vvere become ſo vveake and feeble, that vve had little ſtrength, and we began to bee in doubt, that we ſhould not recouer our ſtrengths againe, and ſhould not be able to fetch any more Wood, and ſo we ſhould haue dyed with cold, but the preſent neceſſitie and the hope wee had of better weather, increaſed our forces, and made vs doe more then our ſtrengths afforded, and when we came neere to our houſe, we ſaw much open vvater in the Sea, which in long time we had not ſeene, which alſo put vs in good comfort, that things would bee better.

The

The fiue and twentieth, it was foule weather againe, and much Snow, with a North winde, whereby we were cloſed vp with Snow againe, and could not get out of our Houſe.

The eight and twentieth of February, it was ſtill weather, with a South-weſt wind, then ten of vs went and fetched another Sled full of Wood, with no leſſe paine and labour then wee did before, for one of our companions could not helpe vs, becauſe that the firſt joynt of one of his great Toes was frozen off, and ſo hee could doe nothing.

The firſt of March, it was faire ſtill weather, the wind Weſt but very cold, and we were forced to ſpare our Wood, becauſe it was ſo great labour for vs to fetch it, ſo that when it was day, we exerciſed our ſelues as much as we might, with running, going, and leaping, and to them that lay in their Cabins, wee gaue hot ſtones to warme them, and towards night we made a good fire, which we were forced to endure. The ſecond, it was cold cleere weather, with a Weſt wind, the ſame day we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 6. degrees and 48. minutes, and his Declination was 7. degrees and 12. minutes, which ſubſtracted from 90. degrees, reſteth 76. degrees for the height of the Pole. The third, it was faire weather with a Weſt wind, at which time our Sicke men were ſomewhat better, and ſate vpright in their Cabins, to doe ſome thing to paſſe the time away, but after they found that they were too ready to ſtirre before their times. The fourth, it was faire weather, with a Weſt wind, the ſame day there came a Beare to our Houſe, whom we watcht with our Pieces, as wee did before, and ſhot at her, and hit her, but ſhee runne away, at that time fiue of vs went to our Ship, where we found that the Beares had made worke, and had opened our Cookes cupbord, that was couered ouer with ſnow, thinking to finde ſome thing in it, and had drawne it out of the Ship where we found it. March.

The ſeuenth, it was ſtill foule weather and as great a winde, ſo that wee were ſhut vp in our Houſe, and they that would goe out, muſt climbe vp through the Chimney, which was a common thing with vs, and ſtill we ſaw more open water in the Sea, and about the Land, whereby wee were in doubt that the Ship in that foule weather, and driuing of the Ice, would bee looſe (for as then the Ice draue) while we were ſhut vp in our Houſe, and wee ſhould haue no meanes to helpe it. The eight, it was ſtill foule vveather, with a South-weſt ſtorme, and great ſtore of Snow, whereby vve could ſee no Ice in the North-eaſt, nor round about in the Sea, whereby vve were of opinion, that North-eaſt from vs there was a great Sea. The ninth, it was foule vveather, but not ſo foule as the day before, and leſſe ſnow, and then vve could ſee further from vs, and perceiue that the vvater vvas open in the North-eaſt, but not from vs towards *Tartaria*, for there vve could ſtill ſee Ice in the *Tartarian* Sea, otherwiſe called the Ice Sea, ſo that vve vvere of opinion, that there it was not very wide, for vvhen it was cleere vveather, vve thought many times that wee ſaw the Land and ſhewed it to our companions, South and South-eaſt from our houſe, like a hilly Land, as land commonly ſhoweth it ſelfe, when we ſee it. Note.

The eleuenth, it was cold, but faire Sun-ſhine vveather, the vvind North-eaſt, then we tooke the height of the Sunne vvith our *Aſtrolabium*, and found it to bee eleuated aboue the Horizon 10. degrees and 19. minutes, his Declination was 3. degrees and 41. minutes, which being added to the height aforeſayd, made 14. degrees, which ſubſtracted from 90. degrees, there reſteth 76. degrees for the height of the Pole. Then twelue of vs went to the place where wee vſed to goe, to fetch a Sled of Wood, but ſtill vve had more paine and labour therewith, becauſe we were vveaker, and when we came home vvith it, and were very vvearie, we prayed the Maſter to giue each of vs a draught of Wine, which hee did, vvherewith we were ſomewhat releeued and comforted, and after that were the willinger to labour, vvhich vvas vnſupportable for vs, if meere extremitie had not compelled vs thereunto, ſaying oftentimes one vnto the other, That if the Wood vvere to be bought for Money, we would giue all our Earnings or Wages for it.

The twelfth, it was foule weather, the Winde North-eaſt, then the Ice came mightily driuing in, which the South-weſt Wind had beene driuen out, and it was then as cold, as it had bin before in the coldeſt time of Winter.

The fifteenth, it was faire vveather, the Wind North, that day wee opened our doore to goe out, but the cold rather increaſed then diminiſhed, and was bitterer then before it had beene.

The ſixteenth, it vvas faire cleere weather, but extreame cold with a North Wind, which put vs to great extreamitie, for that vve had almoſt taken our leaues of the cold, and then it began to come againe. This continued till the one and twentieth.

The one and twentieth, it vvas faire weather, but ſtill very cold, the Wind North, the ſame day the Sunne entred into *Aries* in the Equinoctiall Line, and at noone vvee tooke the height of the Sunne, and found it to be eleuated 14. degrees aboue the Horizon, but for that the Sunne was in the middle Line, and of the like diſtance from both the Tropickes, there was no declination, neither on the South nor North ſide, and ſo the 14. degrees aforeſayd being ſubſtracted from 90. degrees, there reſted 76. degrees for the height of the Pole. The ſame day, we made ſhooes of Felt or Rugge, which we drew vpon our feete, for vve could not goe in our ſhooes, by reaſon of the great cold, for the ſhooes on our feet vvere as hard as hornes, and then vve fetcht a ſled-full *Sol in Aries.* Shooes of Felt and Rugge.

Digitized by Google

Sled full of Wood home to our house, with sore and extreame labour, and with extremitie of cold which we indured, as if March meant to bid vs farewell, for our hope and comfort was, that the cold could not still continue in that force, but that at length the strength thereof would bee broken.

The three and twentieth, it was very foule weather, with infernall bitter cold, the wind North-east, so that we were forced to make more fire, as we had beene at other times, for then it was as cold as euer it had beene, and it froze very hard in the floore and vpon the walls of our house. The foure and twentieth, it was alike cold, with great store of snow, and a North wind, whereby we were once againe shut vp into the house, and then the Coles serued vs well, which before by reason of our bad vsing of them, we disliked of. The sixe and twentieth, it was faire cleare weather, and very calme, then we digd our selues out of the house again, and went out, and then we fetcht another Sled of Wood, for the great cold had made vs burne vp all that we had.

The eight and twentieth, it was faire weather, the wind South-west, whereby the Ice draue away very fast. The same day, sixe of vs went aboord the ship to see how it lay, and found it still in one sort; but we perceiued that the Beares had kept an euill fauoured house therein.

Aprill. The second of Aprill, it was faire weather, the wind North-east and very calme, then wee tooke the height of the Sunne, and found it to be eleuated aboue the Horizon 18. degrees and 40. minutes, his declination being 4. degrees and 40. minutes, which being substracted from the height aforesaid, there rested 14. degrees, which taken from 90. degrees, the height of the Pole was 76. degrees.

Beare assault the house. The sixt, it was still foule weather, with a stiffe North-west wind, that night there came a Beare to our house, and we did the best we could to shoot at her, but because it was moist weather, and the cocke foisty, our Peece would not giue fire, wherewith the Beare came boldly toward the house, and came downe the staires close to the doore, seeking to breake into the house, but our Master held the doore fast to, and being in great haste and feare, could not barre it with the piece of Wood that wee vsed thereunto; but the Beare seeing that the doore was shut, shee went backe againe, and within two houres after shee came againe, and went round about and vpon the top of the house, and made such a roaring, that it was fearefull to heare, and at last got to the chimney, and made such worke there, that wee thought shee would haue broken it downe, and tore the sayle that was made fast about it in many pieces, with a great and fearefull noise, but for that it was night, we made no resistance against her, because wee could not see her, at last she went away and left vs.

The fourteenth, it was faire cleare weather, with a West wind, then we saw greater hills of Ice round about the ship, then euer we had seene before, which was a fearefull thing to behold, and much to be wondred at, that the ship was not smitten in pieces. The fifteenth, it was faire calme weather with a North wind, then seuen of vs went aboord the ship, to see in what case it was, and found it to be all in one sort, and as wee came backe againe, there came a great Beare toward vs, against whom we began to make defence, but she perceiuing that, made away from vs,

Beares Den. and we went to the place from whence shee came to see her Den, where we found a great hole made in the Ice, about a mans length in depth, the entrie thereof being very narrow, and within wide, there we thrust in our Pikes to feele if there was any thing within it, but perceiuing it was empty, one of our men crept into it, but not too farre, for it was fearefull to behold, after that we went along by the Sea-side, and there we saw, that in the end of March, and the beginning of Aprill, the Ice was in such wonderful manner risen and piled vp one vpon the other, that it was wonderfull, in such manner as if there had beene whole Townes made of Ice, with Towres and Bulwarkes round about them.

The sixteenth, it was foule weather, the wind North-west, whereby the Ice began somewhat to breake. The seuenteenth, it was faire cleare weather, with a South-west wind, and then seuen of vs went to the ship, and there we saw open water in the Sea, and then wee went ouer the Ice-hills as well as we could, to the water, for in sixe or seuen moneths we had not gone so neere vnto it, and when we got to the water, there we saw a little bird swimming therein, but as soone as it espied vs, it diued vnder the water, which we tooke for a signe, that there was more open water in the Sea then there had beene before, and that the time approached that the water would open.

The eighteenth of Aprill, it was faire weather, the wind South-west, then wee tooke the height of the Sunne, and it was eleuated aboue the Horizon 25. degrees and 10. minutes, his declination 11. degrees and 12. minutes, which being taken from the height aforesaid, there rested 13. degrees and 58. minutes, which substracted from 90. degrees, the height of the Pole was found to be 75. degrees 58. minutes; then eleuen of vs went with a Sled to fetch more Wood, and brought it to the house, in the night there came another Beare vpon our house, which we hearing, went all out with our Armes, but the Beare ran away.

The eight and twentieth, it was faire weather, with a North wind, then we tooke the height of the Sunne againe, and found it to bee eleuateed 28. degrees and 8. minutes, his declination 14. degrees and 8. minutes, which substracted from 90. degrees, there rested 76. degrees for the height

height of the Pole. The nine and twentieth, it was faire weather, with a South-west wind, then we played at Colfe, both to the ship, and from thence againe homewards, to exercise our selues. The thirtieth, it was faire weather, the wind South-west, then in the night wee could see the Sunne in the North (when it was in the highest) iust aboue the Horizon, so that from that time wee saw the Sunne both night and day.

§. III.

Their preparation to goe from thence: they depart in a Boat and Scute both open, and come to Cola, 1143. *miles. Their many dangers by Beares, Ice, Famine, Scorbute, in the way.*

THE first of May, it was faire weather with a West wind, then wee sod our last flesh, which for a long time we had spared, and it was still very good, and the last morsell tasted as well as the first, and we found no fault therein, but onely that it would last no longer. The second, it was foule weather, with a storme out of the South-west, whereby the Sea was almost cleare of Ice, and then wee beganne to speake about getting from thence, for we had kept house long enough there. The third, it was still foule weather, with a South-west wind, whereby the Ice began wholly to driue away, but it lay fast about the ship, and when our best meate, as flesh, and other things beganne to faile vs, which was our greatest sustenance, and that it behooued vs to be somewhat strong, to sustaine the labour that wee were to vndergoe, when we went from thence, the Master shared the rest of the Bacon amongst vs, which was a small Barrell with salt Bacon in pickle, whereof euery one of vs had two ounces a day, which continued for the space of three weekes, and then it was eaten vp. May.

The fourth, it was indifferent faire weather, the wind South-west, that day fiue of vs went to the ship, and found it lying still as fast in the Ice as it did before, for about the middle of March it was but seuenty fiue paces from the open water, and then it was fiue hundred paces from the water, and enclosed round about with high hills of Ice, which put vs in no small feare, how wee should bring our Scute and our Boat through or ouer that way into the water, when wee went to leaue that place. That night there came a Beare to our house, but as soone as shee heard vs make a noyse, she ranne away againe, one of our men that climbed vp in the Chimney, saw when shee ranne away, so that it seemed that as then they were afraid of vs, and durst not bee so bold to set vpon vs, as they were at the first. The fift, it was faire weather, with some snow, the wind East, that Eeuening, and at night wee saw the Sunne when it was at the lowest, a good way aboue the Earth. The sixt, it was faire cleare weather, with a great South-west wind, whereby we saw the Sea open both in the East and in the West, which made our men exceeding glad, longing sore to be gone from thence. The seuenth, it was foule weather, and snew hard, with a North wind, whereby we were closed vp againe in our house.

The tenth, it was faire weather with a North-west wind, that night the Sunne by our common Compasse being North North-east, and at the lowest, we tooke the height thereof, and it was eleuated 3. degrees and 45. minutes, his declination was 17. degrees and 45. minutes, from whence taking the height aforesaid, there rested 14. degrees, which substracted from 90. degrees, there rested 76. degrees for the height of the Pole.

The fourteenth, wee fetcht our last Sled with fire-wood, and still ware our shooes made of Rugge on our feet.

The fiue and twentieth, it was faire weather, with an East wind, then at noone time wee tooke the height of the Sunne, that was eleuated aboue the Horizon 34. degrees and 46. minutes, his declination 20. degrees and 46. minutes, which taken from the height aforesaid, there rested 14. degrees, which taken from 90. degrees, rested 76. degrees for the height of the Pole.

The sixe and twentieth, it was faire weather, with a great North-east wind, whereby the Ice came in againe. The seuen and twentieth, it was foule weather, with a great North-east wind, which draue the Ice mightily in againe, whereupon the Master, at the motion of the companie, willed vs to make preparation to be gone.

The nine and twentieth in the morning, it was reasonable faire weather, with a West wind, then ten of vs went vnto the Seute to bring it to the house to dresse it, and make it ready to sayle, but wee found it deepe hidden vnder the snow, and were fayne with great payne and labour to digge it out, but when wee had gotten it out of the snow, and thought to draw it to the house, wee could not doe it, because wee were too weake, wherewith wee became wholly out of heart, doubting that wee should not bee able to goe forward with our labour, but the Master encouraging vs, bade vs striue to doe more then wee were able; saying, that both our liues and our well-fare consisted therein: and that if wee could not get the Scute from thence, and make it ready, then hee said wee must dwell there as Burgers of *Nona Zembla*, and make our Graues in that place: but there wanted no good-will in vs but onely strength, Burgers of *Nona Zembla*.

Digitized by Google

which made vs for that time to leaue off worke and let the Scute lie ſtill, which was no ſmall griefe vnto vs, and trouble to thinke what were beſt for vs to doe; but after noone being thus comfortleſſe come home, wee tooke hearts againe, and determined to turne the Boat that lay by the houſe with her keele vpwards, and to amend it, that it might bee the fitter to carrie vs ouer the Sea, for wee made full account that we had a long troubleſome Voyage in hand, wherein wee might haue many croſſes, and wherein wee ſhould not bee ſufficiently prouided for all things neceſſarie, although wee tooke neuer ſo much care, and while wee were buſie about our worke, there came a great Beare vnto vs, wherewith wee went into our houſe, and ſtood to watch her in our three doores, with Harquebuſſes, and one ſtood in the Chimney with a Muſket, this Beare came boldlier vnto vs then euer any had done before, for ſhee came to the neather ſtep that went to one of our doores, and the man that ſtood in the doore ſaw her not, becauſe hee looked towards the other doore, but they that ſtood within ſaw her, and in great feare called to him, wherewith he turned about, and although he was in a maze, he ſhot at her, and the Bullet paſt cleane through her body, whereupon ſhe ranne away. Yet it was a fearefull thing to ſee, for the Beare was almoſt vpon him before hee ſaw her, ſo that if the Peece had fayled to giue fire (as oftentimes they doe) it had coſt him his life, and it may bee, that the Beare would haue gotten into the houſe. The Beare being gone ſomewhat from the houſe lay downe, wherewith wee went all armed and killed her out right, and when wee had ript open her bellie: we found a piece of a Bucke therein, with haire, skinne and all, which not long before ſhee had torne and deuoured.

Bucke.

The one and thirtieth of May, it was faire weather, but ſomewhat colder then before, the wind being South-weſt, whereby the Ice draue away, and we wrought hard about our Boat, but when wee were in the chiefeſt part of worke, there came another Beare, as if they had ſmelt that wee would be gone, and that therefore they deſired to taſte a piece of ſome of vs, for that was the third day, one after the other, that they ſet ſo fiercely vpon vs, ſo that wee were forced to leaue our worke, and goe into the houſe, and ſhee followed vs, but we ſtood with our Peeces to watch her, and ſhot three Peeces at her, two from our doores, and one out of the Chimney, which all three hit her: but her death did vs more hurt then her life, for after we ript her belly, we dreſt her Liuer and eate it, which in the taſte liked vs well, but it made vs all ſicke, ſpecially three that were exceeding ſicke, and wee verily thought that wee ſhould haue loſt them, for all their skins came off, from the foot to the head, but yet they recouered againe.

Beares Liuer venomous.

Iune.

The third of Iune, in the morning it was faire cleare weather the wind Weſt, and then wee were ſomewhat better, and tooke great paines with the Boat, that at laſt we got it ready, after we had wrought ſixe dayes vpon it: about Eeuening it began to blow hard, and therewith the water was very open, which put vs in good comfort that our deliuerance would ſoone follow, and that we ſhould once get out of that deſolate and fearefull place.

The fourth, it was faire cleare weather, and indifferent warme, and about the South-eaſt Sunne, eleuen of vs went to our Scute where it then lay, and drew it to the ſhip, at which time the labour ſeemed lighter vnto vs then it did before, when wee tooke it in hand and were forced to leaue it off againe. The reaſon thereof was, the opinion that wee had that the ſnow as then lay harder vpon the ground, and ſo was become ſtronger; and it may be that our courages were better, to ſee that the time gaue vs open water, and that our hope was that wee ſhould get from thence; and ſo three of our men ſtayed by the Scute to build her to our minds: and for that it was a Herring Scute, which are made narrow behind, therefore they ſawed it off behind, and made it a broad ſtearne: and better to brooke the Seas, they built it alſo ſomewhat higher, and dreſt it vp as well as they could, the reſt of our men were buſie in the houſe to make all other things ready for our Voyage, and that day drew two Sleds with victuals and other goods vnto the ſhip, that lay about halfe way betweene the houſe and the open water, that after they might haue ſo much the ſhorter way, to carrie the goods vnto the water ſide, when wee ſhould goe away: at which time all the labour and paines that wee tooke, ſeemed light and eaſie vnto vs, becauſe of the hope that wee had to get out of that wilde Deſart, irkeſome, fearefull, and cold Countrey.

The fift, it was foule weather, with great ſtore of haile and ſnow, the wind Weſt, which made an open water, but as then we could doe nothing without the houſe, but within we made all things ready, as Sayles, Oares, Maſts, Sprit, Rother, Swerd, and all other neceſſarie things. The ſixt, in the morning it was faire weather, the wind North-eaſt, then wee went with our Carpenters to the ſhip, to build vp our Scute, and carried two ſleds full of goods into the ſhip, both victuals and Merchandiſe, with other things, which wee meant to take with vs; after that there roſe very foule weather in the South-weſt, with ſnow, haile, and raine, which wee in long time had not had, whereby the Carpenters were forced to leaue their worke, and goe home to the houſe with vs, whereby alſo we could not be drie, becauſe wee had taken off the Deales, therewith to amend our Boat and our Scute, there lay but a ſayle ouer it, which would not hold out the water, and the way that lay full of ſnow began to be ſoft, ſo that wee left off our ſhooes made of Rugge and Felt, and put on our Leather ſhooes.

The

Digitized by Google

The eight, it was faire weather, and wee drew the wares to the ship, which wee had packed and made ready, and the Carpenters made ready the Scute, so that the same euening it was almost done, the same day all our men went to draw our Boat to the ship, and made ropes to draw withall, such as wee vse to draw with in Scutes, which wee cast ouer our shoulders, and held fast with all our hands, and so drew both with our hands and our shoulders, which gaue vs more force, and specially the desire and great pleasure wee tooke to worke at that time, made vs stronger.

The tenth, wee carried foure Sleds of goods into the ship, the wind then being variable, and at euening it was Northerly, and wee were busie in the house to make all things ready, the Wine that was left we put into little vessels, that so wee might diuide it into both our vessels, and that as wee were enclosed by the Ice, (which wee well knew would happen vnto vs) wee might easilier cast the goods vpon the Ice, both out and into the Scutes, as time and place serued vs. The eleuenth, it was foule weather, and it blew hard North North-west, so that all that day we could doe nothing, and we were in great feare left the storme would carrie the Ice and the ship both away together, (which might well haue come to passe) then wee should haue beene in greater miserie then euer wee were, for that our goods both victuals and others, were then all in the ship, but God prouided so well for vs, that it fell not out so vnfortunatly. The twelfth, it was indifferent faire weather, then we went with Hatchets, Halberds, Shouels, and other instruments, to make the way plaine, where we should draw the Scute and the Boat to the water side, along the way that lay full of knobs and hills of Ice, where wee wrought sore with our Hatchets and other instruments, and while we were in the chiefest of our worke, there came a great leane Beare out of the Sea vpon the Ice towards vs, which we iudged to come out of *Tartaria:* for we had seene of them twenty or thirty miles within the Sea, and for that wee had no Muskets, but onely one, which our Surgeon carried, I ranne in great haste towards the ship to fetch one or two, which the Beare perceiuing ranne after mee, and was very likely to haue ouer taken me, but our companie seeing that, left their worke and ranne after her, which made the Beare turne towards them, and left me, but when she ran towards them, she was shot into the body by the Surgeon, and ranne away; but because the Ice was so vneuen and hilly, she could not goe farre, but being by vs ouertaken, we killed her out right, and smote her teeth out of her head, while she was yet liuing. Beare slayne.

The thirteenth, it was faire weather, then the Master and the Carpenters went to the ship, and there made the Scute and the Boat ready, so that there rested nothing as then, but onely to bring it downe to the water side, the Master and those that were with him, seeing that it was open water, and a good West wind, came backe to the house againe, and there hee spake vnto *William Barents* (that had beene long sicke) and shewed him, that he thought it good, (seeing it was a fit time) to goe from thence, and so willed the companie to driue the Boat and the Scute downe to the water side, and in the name of God to beginne our Voyage, to sayle from *Noua Zembla*: then *William Barents* wrote a Letter, which he put in a Muskets charge, and hanged it vp in the Chimney, shewing how he came out of *Holland*, to sayle to the Kingdome of *China*, and what had happened vnto vs being there on Land, with all our crosses, that if any man chanced to come thither, they might know what had happened vnto vs, and how we had beene forced in our extremitie to make that house, and had dwelt ten moneths therein, and for that wee were put to Sea in two small open Boats, and to vndertake a dangerous and aduenturous Voyage in hand, the Master wrote two Letters, which most of vs subscribed vnto, signifying how wee had stayed there vpon the Land in great trouble and miserie, in hope that our ship would bee freed from the Ice, and that we should sayle away with it againe, and how it fell out to the contrary, and that the ship lay fast in the Ice, so that in the end the time passing away, and our victuals beginning to faile vs, we were forced for the sauing of our owne liues, to leaue the ship, and to sayle away in our open Boats, and so to commit our selues into the hands of God. Which done, he put into each of our Scutes a Letter, that if wee chanced to lose one another, or that by stormes or any other misaduenture we happened to be cast away, that then by the Scute that escaped, men might know how we left each other, and so hauing finished all things as we determined, we drew the Boat to the water side, and left a man in it, and went and fetcht the Scute, and after that eleuen Sleds with goods, as Victuals, with some Wine that yet remayned, and the Merchants goods, which we preserued as well as we could, *viz.* sixe packes with fine woollen Cloth, a Chest of Linnen, two packets with Veluet, two small Chests with Money, two Dri-fats with mens Clothes and other things, thirteene Barrels of Bread, a Barrell of Cheese, a flitch of Bacon, two Runlets of Oyle, sixe small Runlets of Wine, two Runlets of Vineger, with other packes belonging to the Saylers, so that when they lay all together vpon a heape, a man would haue iudged that they would not haue gone into the Scutes, which being all put into them, we went to the house, and first drew *William Barents* vpon a Sled to the place where our Scutes lay, and after that we fetcht *Claes Adrianson*, both of them hauing beene long sicke, and so we entred into the Scutes, and diuided our selues into each of them alike, and put into either of them a sicke man, then the Master caused both the Scutes to lie close one by the other, They depart.

The Letter is omitted. It was ſubſcribed by *Iacob Hemſkerke, Peter Peterſon Vos*, Maſter *Hans Vos, Laurence Williamſon, Peter Corneliſon, Iohn Remarſon, William Barents, Gerrat de Veer, Leonard Hendrickſon, Iacob Iohnſon Schedam, Iacob Iohnſon Sterenburg.*

Orange Iland.

Open Scutes.

and there we ſubſcribed to the Letters which he had written, and ſo committing our ſelues to the will and mercy of God, with a Weſt North-weſt wind, and an indifferent open water, we ſet ſayle and put to Sea.

The fourteenth of Iune in the morning, the Sunne Eaſterly, wee put off from the Land of *Noua Zembla*, and the faſt Ice thereunto adioyning, with our Boat and our Scute, hauing a Weſt wind, and ſayled Eaſt North-eaſt all that day to the Ilands point, which was fiue miles, but our firſt beginning was not very good, for we entred faſt into the Ice againe, which there lay very hard and faſt, which put vs into no ſmall feare and trouble, and being there, foure of vs went on Land, to know the ſituation thereof, and there we tooke many Birds, which wee kild with ſtones vpon the clifts.

The ſixteenth, we ſet ſayle againe, and got to the Iland of *Orange*, with a South wind, which is eight miles diſtant from the Point of *Deſire*, there we went on Land with two ſmall Barrels, and a Kettle, to melt ſnow, and to put the water into the Barrels, as alſo to ſeeke for Birds and Egges, to make meate for our ſicke men. We put to the Sea againe with a South-eaſt wind and drowſie miſeling weather, whereby we were all dankiſh and wet, for wee had no ſhelter in our open Scutes, and ſayled Weſt, and Weſt and by South, to the *Ice-point*, and wee made our Scutes faſt to a great piece of Ice, and there eate ſomewhat, but the weather was ſtill fouler and fouler, ſo that we were once againe encloſed with Ice, and forced to ſtay there.

The ſeuenteenth in the morning, when we had broken our faſts, the Ice came ſo faſt vpon vs that it made our haires ſtare vpright vpon our heads, it was ſo fearefull to behold: by which meanes we could not make faſt our Scutes, ſo that we thought verily that it was a fore-ſhewing of our laſt ende, for wee draue away ſo hard with the Ice, and were ſo ſore preſt betweene a flake of Ice, that we thought verily the Scutes would burſt in a hundred pieces, at laſt, being in this diſcomfort, and extreme neceſſitie, the Maſter ſaid, if we could take hold with a rope vpon the faſt Ice, we might therewith draw the Scute vp, and ſo get it out of the great drift of Ice, but as this counſell was good, yet it was ſo full of danger, that it was the hazard of his life that ſhould take vpon him to doe it, and without doing it, was it moſt certaine, that it would coſt vs all our liues: this counſell as I ſaid was good, but no man (like to the tale of the Mice) durſt hang the Bell about the Cats necke, fearing to bee drowned, yet neceſſitie required to haue it done, and the moſt danger made vs chooſe the leaſt, ſo that being in that perplexitie, I being the lighteſt of all our companie, tooke on me to faſten a rope vpon the faſt Ice, and ſo creeping from one piece of driuing Ice to another, by Gods helpe got to the faſt Ice, where I made a rope faſt to a high howell, and they that were in the Scute, drew it thereby vnto the ſaid faſt Ice, and then one man alone could draw more then all of them could haue done before, and when we had gotten thither, in all haſte wee tooke our ſicke men out, and layed them vpon the Ice, laying clothes and other things vnder them, and then tooke all our goods out of the Scutes, and ſo drew them vpon the Ice, whereby for that time we were deliuered from that great danger, making account that we had eſcaped out of deaths clawes, as it was moſt true.

Dangerous attempt to draw the Boat ouer the Ice.

The eighteenth, we repaired and amended our Scutes againe, being much bruiſed and cruſhed with the racking of the Ice, and were forced to driue all the nayles faſt againe and to piece many things about them, God ſending vs Wood, wherewith we molt our Pitch, and did all other things that belonged thereunto, that done, ſome of vs went vpon the Land to ſeeke for Egges, which the ſicke men longed for, but we could finde none, but we found foure Birds, not without great danger of our liues, betweene the Ice and the firme Land, wherein wee often fell, and were in no ſmall danger.

The nineteenth, it was indifferent weather, the wind North-weſt, and Weſt South-weſt, but we were ſtill ſhut vp in the Ice, and ſaw no opening, which made vs thinke that there would be our laſt abode, and that we ſhould neuer get from thence.

W. Barents dieth.

The twentieth, *Claes Adrianſon* and *William Barents* died, the death of *William Barents* put vs in no ſmall diſcomfort, as being the chiefe Guide, and onely Pilot on whom wee repoſed our ſelues, next vnder God.

The two and twentieth in the morning, it blew a good gale out of the South-eaſt, and then the Sea was reaſonable open, but we were forced to draw our Scutes ouer the Ice to get vnto it, which was great paine and labour vnto vs; for, firſt we were forced to draw our Scutes ouer a piece of Ice of fifty paces long, and there put them into the water, and then againe to draw them vp vpon other Ice, and after drew them at the leaſt an hundred paces more ouer the Ice, before we could bring them to a good place where we might eaſily get out, and being gotten vnto the open water we committed our ſelues to God, and ſet ſayle the Sun being about Eaſt North-eaſt, with an indifferent gale of wind out of the South, and South South-eaſt, and ſayled Weſt, and Weſt and by South, till the Sunne was South, and then we were round about encloſed with Ice againe, and could not get out, but were forced to lie ſtill, but not long after the Ice opened againe like to a ſluce, and we paſt through it and ſet ſayle againe, and ſo ſayled along by the Land, but were preſently encloſed with Ice, but being in hope of opening againe, meane time wee eate ſomewhat, for the Ice went not away as it did before: after that wee vſed all the meanes wee could

Encloſed again with Ice:

and againe.

Digitized by Google

could to breake it, but all in vayne, and yet a good while after, the Ice opened againe, and we got out, and ſayled along by the Land, Weſt and by South, with a South vvind.

The three and twentieth, wee ſayled ſtill forward Weſt and by South, till the Sunne was South-eaſt, and got to the *Truſt-point*, which is diſtant from the *Ice-point* fiue and twentie miles, and then could goe no furtheer, becauſe the Ice lay ſo hard and ſo cloſe together, and yet it was faire weather: the ſame day we tooke the height of the Sunne with the *Aſtrolabium*, and alſo with our Aſtronomicall Ring, and found his height to be 37. degrees, and his Declination 23. degrees and 30. minutes, which taken from the height aforeſayd, there reſted 13. degrees and 30. minutes, which ſubſtracted out of 90. degrees, the height of the Pole was 76. degrees and 30. minutes, and it was faire Sun-ſhine weather, and yet it was not ſo ſtrong as to melt the Snow, that we might haue water to drinke, ſo that wee ſet all our Tinne platters and other things full of Snow to melt, and ſo molt it, and put ſnow in our mouthes, to melt it downe into our throates, but all was not enough, ſo that we were compelled to endure great thirſt.

From the Weſt point of the* White Sea, *to the ſeuen* Ilands, *the courſe North-weſt fourteene miles. From the ſeuen* Ilands, *to the VVeſt end of* Kilduin, *the courſe North-weſt, twentie miles. From the VVeſt end of* Kilduin, *to the place where* Iohn Cornelis *came vnto vs, the courſe North-weſt and by VVeſt, ſeuen miles. From thence to* Cola, *the courſe VVeſt Southerly, eighteene miles.*

The ſtretching of the Land from the houſe where we wintred, along by the North-ſide of *Noua Zembla*, to the Straights of *Wey-gats*, where we paſt ouer to the Coaſt of *Ruſſia*, and ouer the entrie of the white Sea to *Cola*, according to the Card here inſuing.

So that wee ſayled in the two open Scutes, ſometimes in the Ice, then ouer the Ice, and through the Sea, three hundred and eightie one miles Flemiſh, *which is one thouſand one hundred fortie and three miles* Engliſh.

The foure and twentieth of Iune, the Sunne being Eaſterly, we rowed heere and there in the Ice, to ſee where we might beſt goe out, but wee ſaw no opening, but when the Sunne was South, we got into the Sea, for the which we thanked God moſt heartily, that hee had ſent vs an vnexpected opening, and then we ſayled with an Eaſt winde, and went luſtily forward, ſo that we made our account to get aboue the point of *Naſſawes* cloſe by the land, and wee could eaſily ſee the point of *Naſſawes*, and made our account to bee about three miles from it.

The ſixe and twentieth, it ſtill blew hard out of the South, and broke the Ice whereunto we were faſt in pieces, and we thereby draue into the Sea, and could get no more to the faſt Ice, whereby we were in a thouſand dangers to bee all caſt away, and driuing in that ſort in the Sea, wee rowed as much as we could, but we could not get neere vnto the Land, therefore we hoyſed vp our Focke, and ſo made vp with our ſayle, but our Fock-maſt brake twice in peeces, and then it was worſe for vs then before, and notwithſtanding that there blew a great gale of Wind, yet we were forced to hoyſe vp our great Sayle, but the winde blew ſo hard into it, that if wee

Digitized by Google

had not presently taken it in againe, we had sunke in the Sea, or else our Boate would haue been filled with water, for the water began to leape ouer-boord, and wee were a good way in the Sea, at which time the waues went so hollow, that it was most fearefull, and wee thereby saw nothing but death before our eyes, and euery twinckling of an eye looked when wee should sinke. But God that had deliuered vs out of so many dangers of Death, holpe vs once againe, and contrary to our expectations, sent vs a North-west wind, and so with great danger wee got to the fast Ice againe, when we were deliuered out of that danger, and knew not where our other Scute was, wee sayled one mile along by the fast Ice, but found it not, whereby we were wholly out of heart, and in great feare that they were drowned, at which time it was mystie weather, and so sayling along, and hearing no newes of our other Scute, we shot off a Musket, which they hearing shot off another, but yet we could not see each other, meane time approching neerer to each other, and the weather waxing somewhat cleerer, as wee and they shot once againe, we saw the smoake of their Piece, and at last we met together againe, and saw them lye fast, betweene driuing and fast Ice, and when we got neere vnto them, we went ouer the Ice, and holpe them to vnlade the goods out of their Scute, and drew it ouer the Ice, and with much paine and trouble brought it into the open water againe, and while they were fast in the Ice, wee found some Wood vpon the Land by the Sea side, and when we lay by each other, we sod some Bread and Water together, and eat it vp warme, which did vs much good.

The eight and twentieth, when the Sunne was in the East, wee layd all our goods vpon the Ice, and then drew the Scutes vpon the Ice also, because we were so hardly prest on all sides, with the Ice, and the wind came out of the Sea vpon the Land, and therefore wee were in feare to be wholly inclosed with the Ice, and should not be able to get out thereof againe, and being vpon the Ice, we layd sayles ouer our Scutes, and lay downe to rest, appointing one of our men to keepe watch, and when the Sunne was North, there came three Beares towards our Scutes, where-

Three Beares. with hee that kept the Watch cryed, *three Beares, three Beares,* at which noyse wee leapt out of our Boates with our Muskets, that were laden with hayle-shot to shoote at Birds, and had no time to discharge them, and therefore shot at them therewith, and although that kinde of shot could not hurt them much, yet they ranne away, and in the meane time they gaue vs leasure to lade our Muskets with bullets, and by that meanes wee shot one of the three dead, which the other two perceiuing ranne away, but within two houres after they came againe, but when they were almost at vs and heard vs make a noyse, they ranne away, at which time the winde was West, and West and by North, which made the Ice driue with great force into the East.

One Beare carryeth another in his mouth and eat it. The nine and twentieth of Iune, the Sunne being South South-west, the two Beares came againe to the place where the dead Beare lay, where one of them tooke the dead Beare in his mouth, and went a great way with it ouer the rugged Ice, and then began to eate it, which vve perceiuing shot a Musket at her, but she hearing the noyse thereof ranne away, and let the dead Beare lye, then foure of vs went thither, and saw that in so short time she had eaten almost the halfe of her, we tooke the dead Beare and layd it vpon a high heape of Ice, that we might see it out of our Scute, that if the Beare came againe we might shoot at her, at which time we try-

Strong Beare. ed the great strength of the Beare, that carryed the dead Beare as lightly in her mouth, as if it had beene nothing, whereas wee foure had enough to doe to carry away the halfe dead Beare betweene vs.

Iuly. The first of Iuly, it was indifferent faire vveather, with a West North-west wind, and in the Morning the Sunne being East, there came a Beare from the driuing Ice towards vs, and swam ouer the water to the fast Ice whereon we lay, but when she heard vs, she came no neerer but ran away, and when the Sunne was South-east, the Ice came so fast in towards vs, that all the Ice whereon we lay with our Scutes and our goods, brake and ran one peece vpon another, whereby vve were in no small feare, for at that time most of our goods fell into the water, but wee with great diligence drew our Scutes further vpon the Ice towards the Land, where vve thought to be better defended from the driuing of the Ice, and as we went to fetch our goods, we fell into the greatest trouble that euer we had before, for that wee endured so great danger in the sauing thereof, that as we layd hold vpon one peece thereof, the rest sunke downe with the Ice, and many times the Ice brake vnder our owne feete, vvhereby we were wholly discomforted, and in a manner cleane out of all hope, expecting no issue thereof, in such sort that our trouble at that time surmounted all our former cares and impeachments, and vvhen wee thought to draw vp our Boates vpon the Ice, the Ice brake vnder vs, and we were carryed away vvith the Scute, and all by the driuing Ice, and when vve thought to saue the goods, the Ice brake vnder our feet, and with that the Scute brake in many places, especially that which wee had mended, as the Mast, the mast planke, and almost all the Scute, wherein one of our men that vvas sicke, and a Chest of money lay, which we with great danger of our liues got out from it, for as we were doing it, the Ice that was vnder our feet draue from vs, and slid vpon other Ice, vvhereby we were in danger to burst both our armes and our legges, at vvhich time, thinking that wee had beene cleane quit of our Scute, vve beheld each other in pittifull manner, knowing not vvhat vve should doe, our liues depending thereon, but God made so good prouision for vs, that the peeces of Ice draue from each

Digitized by Google

each other, wherewith we ranne in great haste vnto the Scute, and drew it to vs againe in such case as it was, and laid it vpon the fast Ice by the Boate, where it was in more securitie, which put vs vnto an exceeding and great and dangerous labour, from the time that the Sunne was South-east, vntill it was West South-west, and in all that time wee rested not, which made vs extreame wearie, and wholy out of comfort, for that it troubled vs sore, and it was much more fearefull vnto vs, then at that time when *William Barents* dyed, for there we were almost drowned, and that day we lost (which was sunke in the Sea) two Barrels of Bread, a Chist with Linnen Cloth, a Dry Fat with the Saylors Clothes, our Astronomicall Ring, a packe of Scarlet Cloth, a Rundlet of Oyle, and some Cheeses, and a Rundlet of Wine, which bouged with the Ice so that there was not any thing thereof saued.

The fourth, it was so faire cleere weather, that from the time we were first in *Nova Zembla*, we had not the like. The fifth, it was faire weather, the Wind West, South-west, the same day dyed *Iohn Franson* of *Harlem*.

The seuenth, it was faire weather with some Raine, the Winde West, South-west, and at Euening VVest, and by North, then we went to the open water, and there killed thirteene Birds, which we tooke vpon a piece of driuing Ice, and laid them vpon the fast Ice.

The ninth, in the morning, the Ice began to driue, whereby we got open water on the Land side, and then also the fast Ice whereon we lay, beganne to driue whereupon the Master and the men went to fetch the Packe and the Chist, that stood vpon the Ice, to put them into the Scute, and then drew the Scutes to the water, at least three hundred and fortie paces, which was hard for vs to doe, in regard that the labour was great, and we very weake, and when the Sunne was South South-east we set sayle with an East-wind, but when the Sunne was West, we were forced to make towards the fast Ice againe, because thereabouts it was not yet gone, the Winde being South, and came right from the Land, whereby wee were in good hope that it would driue away, and that we should proceed in our Voyage. The tenth, from the time that the Sunne was East North-east, till it was East, we tooke great paines and labour to get through the Ice, and at last we got through, and rowed forth, vntill we happened to fall betweene two great flakes of Ice that closed one with the other, so that we could not get through, but were forced to draw the Scutes vpon them, and to vnlade the goods, and then to draw them ouer to the open water on the other side, and then we must goe fetch the goods also to the same place, being at least one hundred paces long, and when we were in open water againe, we rowed forward as well as we could, but we had not rowed long, before wee fell betweene two great flakes of Ice, that came driuing one against the other, but by Gods helpe, and our speedy rowing, we got from betweene them, before they closed vp, and being through we had a hard West Winde, right in our Teeth, so that of force we were constrayned to make towards the fast Ice that lay by the shoare.

The eleuenth, in the morning as we sate fast vpon the Ice, the Sunne being North-east, there came a great Beare out of the water running towards vs, but we watcht for her with three Muskets, and when she came within thirtie paces of vs, wee shot all the three Muskets at her, and killed her out-right, so that she stirred not a foot, and we might see the fat runne out at the holes of her skinne, that was shot in with the Muskets, swimme vpon the water like Oyle, and so driuing dead vpon the water, we went vpon a flake of Ice to her, and putting a Rope about her necke, drew her vp vpon the Ice, and smit out her Teeth, at which time we measured her bodie, and found it to be eight foot thicke, then we had a West Wind with close weather, but when the Sunne was South it began to cleere vp, then three of our men went to the Iland that lay before vs, and being there, they saw the *Crosse* Iland, lying West-ward from them, and went thither to see if that Summer there had beene any *Russian* there, and went thither vpon the fast Ice, that lay betweene the two Ilands, and being in the Iland, they could not perceiue that any man had beene in it since wee were there, there they got seuentie Egges, but when they had them, they knew not wherein to carrie them, at last one of them put off his Breeches, and tying them fast below, they carried them betweene two of them, and the third bare the Musket: and so came to vs againe, after they had beene twelue houres out, which put vs no small feare to thinke what was become of them, they told vs that they had many times gone vp to the knees in water, vpon the Ice betweene both the Ilands: and it was at least sixe mile to and fro, that they had gone, which made vs wonder how they could indure it, seeing we were all so weake. With the Egges that they had brought, wee were all well comforted, and fared like Lords, so that we found some reliefe in our great miserie, and then wee shared our last Wine amongst vs, whereof euery one had three Glasses.

Huge Beare.

The twelfth, in the morning, when the Sunne was East, the Wind began to blow East, and East North-east, with mystie weather, and at Euening sixe of our men went into the Land, to seeke certayne stones, and found some, but none of the best sort, and comming backe againe, eyther of them brought some Wood. The thirteenth, it was a faire day, then seuen of our men went to the firme Land to seeke for more stones, and found some, at which time the VVind was South-east. The fourteenth, it was faire vveather, with a good South VVind, and then the Ice began to driue from the Land, whereby wee were in good hope to haue an open water, but the

Wind

Digitized by Google

Wind turning Weſterly againe, it lay ſtill, when the Sunne was South-weſt, three of our men vvent to the next Iland that lay before vs, and there ſhot a *Bercheynet*, which they brought to the Scute, and gaue it amongſt vs, for all our goods vvere common.

The ſixteenth, there came a Beare from the firme Land, that came very neere vnto vs, by reaſon that it was as vvhite as Snow, vvhereby at firſt vve could not diſcerne it to be a Beare, becauſe it ſhewed ſo like the ſnow, but by her ſtirring at laſt we perceiued her, and as ſhe came neere vnto vs, vve ſhot at her and hit her, but ſhee ranne away: that morning the Wind was VVeſt, and after that againe, Eaſt North-eaſt with cloſe weather. The ſeuenteenth, about the South South-eaſt Sunne, fiue of our men went againe to the neereſt Iland, to ſee if there appeared any open water, for our long ſtaying there was no ſmall griefe vnto vs, perceiuing not how wee ſhould get from thence, who being halfe way thither, they found a Beare lying behind a piece of Ice, which the day before had beene ſhot by vs, but ſhee hearing vs went away, but one of our men following her with a Boat-hooke, thruſt her into the skinne, wherewith the Beare roſe vp vpon her hinder feet, and as the man thruſt at her againe, ſhe ſtrooke the Iron of the Boat-hooke in pieces, wherewith the man fell downe vpon his buttockes, which our other two men ſeeing, two of them ſhot the Beare into the bodie, and with that ſhe ranne away, but the other man went after her with his broken ſtaffe, and ſtrooke the Beare vpon the backe, wherewith the Beare turned about againſt the man three times one after the other, and then the other two came to her and ſhot her into the bodie againe, wherewith ſhee ſat downe vpon her buttockes, and could ſcant runne any further, and then they ſhot once againe, wherewith ſhee fell downe, and they ſmote her Teeth out of her head: all that day the Winde was North-eaſt, and Eaſt North-eaſt.

The eighteenth, about the Eaſt Sun, three of our men went vp vpon the higheſt part of the land to ſee if there was any open water in the Sea, at which time they ſaw much open water, but it was ſo far from the land, that they were almoſt out of comfort, becauſe it lay ſo far from the land, and the faſt Ice, being of opinion that we ſhould not be able to draw the Scutes and the goods ſo farre thither, becauſe our ſtrengthes ſtill beganne to decreaſe: and the ſore labour and paine that we were forced to indure more and more increaſed, and comming to our Scutes, they brought vs that newes, but we being compelled thereunto by neceſſitie abandoned all wearineſſe and faintheartedneſſe, and determined with our ſelues to bring the Boats and the goods to the water ſide, and to row vnto that Ice, where wee muſt paſſe ouer to get to the open water, and when wee got to it, wee vnladed our Scutes, and drew them firſt ouer the Ice to the open water, and after that the goods; it beeing at the leaſt one thouſand paces, then wee ſet ſayle, till the Sunne was Weſt and by South; and preſently fell amongſt the Ice againe, where wee were forced to draw vp the Scutes againe vpon the Ice, and beeing vpon it, wee could ſee the *Croſſe* Iland, which wee gheſt to bee about a mile from vs, the Wind then being Eaſt, and Eaſt North-eaſt.

The nineteenth, lying in that manner vpon the Ice, about the Eaſt Sunne, ſeuen of our men went to the *Croſſe* Iland, and being there they ſaw great ſtore of open water in the Weſt, wherewith they much reioyced, and made as great haſte as they could to get to the Scutes againe, but before they came away they got 100. Egges, and brought them away with them, and comming to the Scutes, they ſhewed vs that they had ſeene as much open water in the Sea as they could diſcerne, being in good hope, that that would be the laſt time that they ſhould draw the Scutes ouer the Ice, and that it ſhould bee no more meaſured by vs, and in that ſort put vs in good comfort, whereupon we made ſpeed to dreſſe our Egges, and ſhared them amongſt vs, and preſently the Sunne being South South-weſt we fell to worke, to make all things ready to bring the Scutes to the water, which were to be drawne at leaſt two hundred paces ouer the Ice, which wee did with a good courage, becauſe we were in good hope that it would be the laſt time, and getting to the water, we put to Sea with Gods helpe, with an Eaſt, and Eaſt North-eaſt Wind, and a good gale, ſo that with the Weſt Sunne, we paſt by the *Croſſe* Iland, which is diſtant from *Cape de Naſſawes* ten miles, and preſently after that the Ice left vs, and wee got cleere out of it, yet wee ſaw ſome in the Sea, but it troubled vs not, and ſo wee held our courſe Weſt and by South, with a good gale of Wind out of the Eaſt, and Eaſt North-eaſt, ſo that wee gheſt that betweene euery meale-tyde we ſayled eighteene miles.

The twentieth, hauing ſtill a good gale about the South-eaſt Sunne, wee paſt along by the *Blacke Point*, which is twelue miles diſtant from the *Croſſe* Iland, and ſayled Weſt South-weſt, and about the Eeuening with the Weſt Sunne, we ſaw the *Admirals* Iland, and about the North Sunne paſt along by it, which is diſtant from the *Blacke Point* eight miles, and paſſing along by it, we ſaw about two hundred Sea-horſes, lying vpon a flake of Ice, and wee ſayled cloſe by them, and draue them from thence, which had almoſt coſt vs deere, for they beeing mightie ſtrong fiſhes, and of great force, ſwamme towards vs, (as if they would be reuenged on vs for the deſpight that we had done them (round about our Scutes) with a great noyſe, as if they would haue deuoured vs, but we eſcaped from them, by reaſon that we had a good gale of Wind, yet it was not wiſely done of vs to wake ſleeping Wolues. The one and twentieth, we paſt by Cape

Admirals Iland.

Plancio,

Plancio, about the East North-east Sunne, which lyeth West South-west eight miles from the *Admirals* Iland, and with the good gale that we had about the South-west Sunne, we sayled by *Langenes*; nine miles from Cape *Plancio*: there the Land reacheth most South-west, and we had a good North-east wind. Cape *Plancio*. *Langenes*.

The two and twentieth, we hauing so good a gale of wind when wee came to *Cape de Cant*, there we went on land to seeke for some Birds and Egges, but we found none, so we sayled forwards, but after that about the South Sunne we saw a Clift that was full of Birds, thither wee sayled and casting stones at them, we killed two and twentie Birds, and got fifteene Egges, which one of our men fetcht from the Clift, and if we would haue stayed there any longer, wee might haue taken a hundred or two hundred Birds at least, but because the Master was somewhat further into Sea-ward then we, and stayed for vs, and for that wee would not loose that faire fore-wind, we sayled forwards along by the Land, and about the South-west Sunne, wee came to another point, where wee got a hundred twentie and fiue Birds, which wee tooke with our hands out of their Nests, and some wee killed with stones, and made them fall downe into the water, for it is a thing certayne that those Birds neuer vsed to see men, and that no man had euer sought or vsed to take them, for else they would haue flowne away, and that they feared no bodie, but the Foxes and other wild beasts, that could not climbe vp the high Clifts, and that therefore they had made their Nests thereon, where they were out of feare of any beasts comming vnto them, for we were in no small danger of breaking of our legges and armes, especially as we came downe againe, because the Clift was so high and so steepe, those Birds had euery one but one Egge in their Nests, and that lay vpon the bare Clift without any straw or other thing vnder them, which is to be wondred at, to thinke how they could breed their young ones in so great cold, but it is to be thought and beleeued, that they therefore sit but vpon one Egge, that so the heate which they giue in breeding so many, may be wholly giuen vnto one Egge. Cape *Cant*. Strange Birds breeding in strong cold.

The foure and twentieth, it was faire weather, but the winde still Northerly, whereby wee were forced to lye still, and about noone we tooke the height of the Sunne with our *Astrolabium*, and found it to be eleuated aboue the Horizon 37. degrees and 20. minutes, his declination 20. degrees and 10. minutes which substracted from the height aforesaid rested 17. degrees and 10. minutes, which taken from 90. degrees, the height of the Pole was 73. degrees and 10. minutes, and for that we lay still there, some of our men went oftentimes on Land to seeke stones, and found some that were as good as euer any that we found.

The seuen and twentieth, wee had sayled from *Cape de Cant*, along by *Constinsarke*, to the *Crosse Point*, twentie miles, our course South South-east, the Wind North-west.

The eight and twentieth, it was faire weather with a North-east wind, then we sayled along by the Land, and with the South-west Sunne, got before Saint *Laurence* Bay, or *Sconce* Point, and sayled South South-east six miles, and being there, wee found two *Russians Lodgies*, or ships beyond the Point, wherewith we were not a little comforted, to thinke that we were come to the place where we found men, but were in some doubt of them, because they were so many, for at that time we saw at least thirtie men, and knew not what they were, there with much paine and labour we got to Land, which they perceiuing, left off their worke, and came towards vs, but without any Armes, and we also went on shoare, as many as were well, for diuers of vs were very ill at ease, and weake by reason of a great scouring in their bodies, and when wee met together, wee saluted each other in friendly wise, they after theirs, and wee after our manner, and when we were met, both they and wee lookt each other stedfastly in the face, for that some of them knew vs, and wee them, to bee the same men which the yeere before, when wee past through the *Wey-gates* had beene in our ship: at which time wee perceiued that they were abasht and wondred at vs, to remember that at that time wee were so well furnished with a great ship, that was exceedingly prouided of all things necessary, and then to see vs so leane and bare, with so small Scutes in that Countrey: and amongst them there were two, that in friendly manner clapt the Master and me vpon the shoulder, as knowing vs since that Voyage: for there was none of all our men that was as then in that Voyage, but we two only, and asked vs for our *Crable*, meaning our ship, and we shewed them by signes as well as we could (for we had no Interpreter) that we had lost our ship in the Ice, wherewith they said, *Crable pro pal* (which wee vnderstood to bee, *Haue you lost your ship?*) and we made answere, *Crable pro pal*, which was as much as to say, That we had lost our ship, and many more words we could not vse, because we vnderstood not each other, then they made shew to be sorrie for our losse, and to be grieued that we the yeere before had beene there with so many ships, and then to see vs in so simple manner, and made vs signes that then they had drunke Wine in our ship, and asked vs what drinke wee had now, wherewith one of our men went into the Scute and drew some water, and let them taste thereof, but they shak't their heads, and said, *No dobbre* (that is, It is not good) then our Master went neerer vnto them, and shewed them his mouth, to giue them to vnderstand that we were troubled with a loosenesse in our bellies, and to know if they could giue vs any counsell to helpe it, but they thought wee made shew that wee had great hunger wherewith one of them went vnto their Lodging, and fetcht a round Rie Loafe, weighing about eight pounds, with some Two *Russian Lodies* or *Lodgies*.

Digitized by Google

ſome ſmored Fowles which we accepted thankfully, and gaue them in exchange halfe a doozen of Muſchuyt, then our Maſter led two of the chiefe of them with him into his Scute, and gaue them ſome of the Wine that we had, being almoſt a Gallon, for it was ſo neere out: and while we ſtayed there, we were very familiar with them, and went to the place where they lay, and ſod ſome of our Miſchuyt with water by their fire, that we might eat ſome warme thing downe into our bodies, and wee were much comforted to ſee the *Ruſſians* for that in thirteene moneths time, that we departed from *Iohn Cornelſon*, we had not ſeene any man, but onely monſterous and cruell wild Beares.

The nine and twentieth, it was reaſonable faire weather, and that morning the *Ruſſians* beganne to make preparation to bee gone, and to ſet ſayle: at which time they digged certayne Barrels with Trayne Oyle out of the ſieges which they had buried there, and put it into their ſhips.

No Raine. The thirtieth, lying at Anchor, the Wind ſtill blew North-weſt, with great ſtore of Raine, and a ſore ſtorme, ſo that although we had couered our Scutes with our Sayles, yet we could not lye dry, which was an vnaccuſtomed thing vnto vs: for wee had had no Raine in long time before, and yet we were forced to ſtay there all that day.

The one and thirtieth, in the morning, about the North-eaſt Sunne, wee rowed from that Iland to another Iland, whereon there ſtood two Croſſes, wee thought that ſome men had layne there about Trade of Merchandize, as the other *Ruſſians* that wee ſaw before had done, but wee found no man there, the Wind as then beeing North-weſt, whereby the Ice draue ſtill towards the *Wey-gates*: there to our great good wee went on Land, for in that Iland wee found great ſtore of Leple leaues, which ſerued vs exceeding well, and it ſeemed that God had purpoſely ſent vs thither: for as then wee had many ſicke men, and moſt of vs were ſo troubled with a ſcouring in our bodies, and were thereby become ſo weake, that wee could hardly row, but by meanes of thoſe leaues we were healed thereof: for that as ſoone as we had eaten them, we were preſently eaſed and healed, whereat wee could not chooſe but wonder, and therefore wee gaue God great thankes for that, and for many other his mercies ſhewed vnto vs, by his great and vnexpected aide lent vs, in that our dangerous Voyage: and ſo as I ſaid before, wee eate them by whole handfuls together, becauſe in *Holland* we had heard much ſpoken of their great force, and as then found it to be much more then we expected.

Scuruy-graſſe, or Leple leaues cure their ſcowring and Scorbuticall infirmitie.

Auguſt. The firſt of Auguſt, the Wind blew hard North-weſt, and the Ice that for a while had driuen towards the entry of the *Wey-gates*, ſtayed and draue no more, but the Sea went very hollow, whereby we were forced to remoue our Scutes on the other ſide of the Iland, to defend them from the waues of the Sea, and lying there wee went on Land againe to fetch more Leple leaues, whereby we had beene ſo well holpen, and ſtill more and more recouered our healths, and in ſo ſhort time, that we could not chooſe but wonder thereat, ſo that as then ſome of vs could eate Bisket againe, which not long before they could not doe. The ſecond, it was darke miſtie weather, the Winde ſtill blowing ſtiffe North-weſt, at which time our victuals beganne to decreaſe, for as then wee had nothing but a little Bread and Water, and ſome of vs a little Cheeſe.

The third, about the North Sunne, the weather being ſomewhat better, wee agreed amongſt our ſelues to leaue *Noua Zembla* and to croſſe ouer to *Ruſſia*, and ſo committing our ſelues to God, we ſet ſayle with a North-weſt Wind, and ſayled South South-weſt till the Sunne was Eaſt, and then we entred into Ice againe, which put vs in great feare, and about the South-weſt Sunne got cleere thereof, and entred into the large Sea, where we ſaw Ice, and then what with ſayling and rowing we had made twentie miles, and ſo ſailing forwards wee thought to approch neere vnto the *Ruſſian* Coaſt; but about the North-weſt Sunne we entred into Ice againe, and then it was very cold.

The fourth, about the South-eaſt Sunne, being gotten out of the Ice, we ſayled forward with a North-weſt Wind, and held our courſe Southerly, and when the Sunne was South, at noone time we ſaw the Coaſt of *Ruſſia* lying before vs, whereat we were exceeding glad, and going neerer vnto it, we ſtrooke our ſayles and rowed on Land, and found it to be very low Land, like a bare Strand that might be flowed ouer with the water, there we lay till the Sunne was South-weſt, but perceiuing that there wee could not much further our ſelues, hauing as then ſayled from the Point of *Noua Zembla* (from whence we put off) thither full thirtie miles, wee ſayled forward along by the Coaſt of *Ruſſia*, with an indifferent gale of Winde, and when the Sunne was North, we ſaw another *Ruſſian Iolle* or ſhip, which we ſayled vnto to ſpeake with them, and being hard by them, they came all aboue Hatches, and wee cryed vnto them *Candinaes Candinaes* (whereby we asked if we were about *Candinaes*) but they cryed againe and ſaid, *Pitzora, Pitzora*, (to ſhew vs that wee were there abouts) and for that wee ſayled along by the Coaſt, where it was very dry, ſuppoſing that we held our courſe Weſt and by North, that ſo we might get beyond the Point of *Candinaes*, we were wholy deceiued by our Compaſſe, that ſtood vpon a Chiſt bound with Iron bands which made vs vary at leaſt two Points, whereby we were much more Southerly then wee thought our courſe had beene, and alſo farre more Eaſterly, for wee thought

Pitzora: Compaſſe deceiueth by ill Neighbourhood.

Digitized by Google

thought verily that we had not beene farre from *Candinaes*, and wee were three dayes ſayling from it as after we perceiued, and for that we found our ſelues to bee ſo much out of our way, we ſtayed there all night till day appeared.

The twelfth of Auguſt, it was faire weather, at which time the Sunne being Eaſt, wee ſaw a *Ruſſia* Lodgie come towards vs, with all his ſayles vp, wherewith we were not a little comforted, which we perceiuing from the Strand, where we lay with our Scutes, we deſired the Maſter that we might goe vnto him, to ſpeake with him, and to get ſome victuals of them, and to that end we made as much haſte as we could, to launch out our Scutes, and ſayled towards them, and when we got to them, the Maſter went into the Lodgie, to aske them how farre wee had to *Candinaes*, which we could not well learne of them, becauſe wee vnderſtood them not, they held vp their fiue Fingers vnto vs, but we knew not what they meant thereby, but after we perceiued that thereby they would ſhew vs, that there ſtood fiue Croſſes vpon it, and they brought their Compaſſe out and ſhewed vs that it lay North-weſt from vs, which our Compaſſe alſo ſhewed vs, which reckoning alſo we had made: but when we ſaw we could haue no better intelligence from them, the Maſter went further into their Ship, and pointed to a barrell of Fiſh that he ſaw therein, making ſignes to know, whether they would ſell it vnto vs, ſhewing them a peece of eight Rials, which they vnderſtanding gaue vs one hundred and two Fiſhes, with ſome Cakes which they had made of Meale when they ſodde their Fiſh, and about the South Sunne wee left them. *Ruſſian* Compaſſe.

The ſixteenth of Auguſt in the Morning, ſayling forward North-weſt, we perceiued that we were in a Creeke, and ſo made towards the *Ruſſian* Lodgie, which we had ſeene on our ſtarreboord, which at laſt with great labour and much paine wee got vnto, and comming to them about the South-eaſt Sunne, with a hard winde, we asked them how farre we were from *Zembla de Cool* or *Kilduin*, but they ſhooke their heads, and ſhewed vs that wee were on the Eaſt-ſide of *Zembla de Candinaes*.

The ſeuenteenth, lying at Anchor in the Morning at breake of day, wee ſaw a *Ruſſian* Lodgie that came ſayling out of the *white Sea*, to vvhom we rowed, that vve might haue ſome inſtruction from him, and when we boorded him, vvithout asking or ſpeaking vnto him, he gaue vs a loafe of Bread, and by ſignes ſhewed vs as well as he could, that hee had ſeene our Companions, and that there vvas ſeuen men in the Boate, but wee not knowing well what they ſayd, neither yet beleeuing them, they made other ſignes vnto vs, and held vp their ſeuen Fingers, and pointed to our Scute, thereby ſhewing that there was ſo many men in the Boate, and that they had ſold them Bread, Fleſh, Fiſh and other victuals: and while wee ſtayed in their Lodgie, vve ſaw a ſmall Compaſſe therin, which we knew that they had bought of our chiefe Boatſon, which they likewiſe acknowledged. About mid-night wee found a fall of freſh Water, and then we went on Land to fetch ſome, and there alſo wee got ſome Leple-leaues, and as wee thought to row forward, we were forced to ſayle, becauſe the flood was paſt, and ſtill we lookt earneſtly out for the point of *Candinaes*, and the fiue Croſſes, whereof we had beene inſtructed by the *Ruſſians*, but we could not ſee it.

The Eighteenth, in the Morning the Sunne being Eaſt, we puld vp our Stone, (which we vſed in ſteed of an Anchor) and rowed along by the Land, till the Sunne was South, and then we ſaw a point of Land reaching into the Sea, and on it certayne ſignes of Croſſes, which as vve went neerer vnto we ſaw perfectly, and when the Sunne was Weſt, we perceiued that the Land reached Weſt and South-weſt, ſo that thereby we knew it certainely to bee the point of *Candinaes*, lying at the mouth of the *white Sea*, which we were to croſſe, and had long deſired to ſee it. This Point is eaſily to bee knowne, hauing fiue Croſſes ſtanding vpon it, which are perfectly to be diſcerned, and hauing a good North-eaſt vvind (which was not for vs to ſlacke) we ſet forward in the Name of God, and when the Sunne was North-weſt, we paſt the Point, and all that night and the next day ſayled with a good Wind, and all that time rowed but while three Glaſſes were runne out, and the next Night after enſuing, hauing ſtill a good vvind, in the Morning about the Eaſt North-eaſt Sunne, we ſaw Land on the Weſt-ſide of the *white Sea* which we found by the ruſhing of the Sea vpon the Land before we ſaw it, and perceiuing it to bee full of Clifts, and not low ſandie ground with ſome Hills, as it is on the Eaſt-ſide of the *white Sea*, wee aſſured our ſelues that we were on the Weſt-ſide of the *white Sea*, vpon the Coaſt of *Lapland*, for the which we thanked God, that he had helped vs to ſayle ouer the *white Sea* in thirtie houres, it being fortie *Dutch* miles at the leaſt, our courſe being Weſt with a North-eaſt winde. *Lapland*.

The twentieth, we eſpied certayne Croſſes, with Warders vpon them, vvhereby we vnderſtood that it was a good way, and ſo put into it, and being entred a little way within it, we ſaw a great *Ruſſian* Lodgie lying at Anchor, whereunto we rowed as faſt as we could, and there alſo we ſaw certayne Houſes wherein men dwelt, and when wee got to the Lodgie, we made our ſelues faſt vnto it, and caſt our tent ouer the Scute, for as then it began to rayne, then we vvent on land into the Houſes that ſtood vpon the ſhoare, vvhere they ſhewed vs great friendſhip, leading vs into their Stoues and there dryed our wet Cloathes, and then ſeething ſome Fiſh, bade vs ſit downe and eate ſomewhat vvith them. In thoſe little houſes wee found thirteene *Ruſſians*, who *Ruſſian* Houſes.

who euery morning vvent out to Fiſh in the Sea, whereof two of them had charge ouer the reſt, they liued very poorely, and ordinarily eate nothing but Fiſh and Bread: at Eeuening when we prepared our ſelues to goe to our Scute againe, they prayed the Maſter and me to ſtay vvith them in their Houſes, vvhich the Maſter thanked them for, would not doe, but I ſtayed with them all that night: beſides thoſe thirteene Men, there was two *Laplanders* more, and three Women with a Child, that liued very poorely of the ouerpluſſe which the *Ruſſians* gaue them, as a peece of a Fiſh, and ſome fiſhes heads which the *Ruſſians* threw away, and they with great thankfulneſſe tooke them vp, ſo that in reſpect of their pouertie, we thought our ſelues to bee well furniſhed: and yet vve had little enough, but as it ſeemed their ordinary liuing was in that manner, and we were forced to ſtay there, for that the vvind being North-weſt, it was againſt vs.

Laplanders mierable life.

The one and twentieth, wee met our other Companie vvherewith we rejoyced, and ſhewed each other of our proceedings, and how vvee had ſayled too and fro in great neceſſitie and hunger, and yet they had beene in greater neceſſitie and danger then we, and gaue God thankes that hee had preſerued vs aliue, and brought vs together againe, and then we eate ſomething together and dranke of the cleere Water, ſuch as runneth along by *Collen* through the *Rhene*, and then vve agreed that they ſhould come vnto vs, that we might ſayle together.

The two and twentieth, the reſt of our men vvith the Boate came vnto vs, about the Eaſt South-eaſt Sunne, whereat wee much rejoyced, and then we prayed the *Ruſſians* Cooke to bake a ſacke of Meale for vs, and to make it Bread paying him for it, vvhich hee did, and in the meane time, when the Fiſher-men came with their Fiſh out of the Sea, our Maſter bought foure Cods of them, which we ſodde and eate, and vvhile we were at meate, the chiefe of the *Ruſſians* came vnto vs, and perceiuing that we had not much Bread, hee fetched a Loafe and gaue it vs, and although we deſired them to ſit downe and eate ſome meate vvith vs, yet we could by no meanes get them to grant thereunto, becauſe it was their Faſting day, and for that vve had powred Butter and fat into our Fiſh: nor vvee could not get them once to drinke with vs, becauſe our Cup vvas ſomewhat greaſie, they were ſo ſuperſtitious touching their Faſting and Religion, neither would they lend vs any of their Cups to drinke in, leaſt they ſhould likewiſe bee greaſed, at that time the vvind was North-weſt.

Slutterie a faſt breaker.

The foure and twentieth, the wind blew Eaſt, and then the Sunne being Eaſt, we got to the ſeuen Ilands, where we found many Fiſher-men, of whom we enquired after *Cool* and *Kilduin*, and they made ſignes that they lay Weſt from vs, (which we likewiſe gheſt to bee ſo) and withall they ſhewed vs great friendſhip, and caſt a Codde into our Scute, but for that wee had a good gale of vvind, we could not ſtay to pay them for it, but gaue them great thankes, much wondering at their great courteſie, and ſo with a good gale of vvind we arriued before the ſeuen Ilands, when the Sunne was South-weſt, and paſt betweene them and the Land, and there found certayne Fiſher-men that rowed to vs, and asked vs where our Crable (meaning our Ship) was, whereunto we made anſwer, with as much *Ruſſian* language as wee had learned, and ſayd, *Crable pro Pal*, (that is, our Ship is loſt) which they vnderſtanding, ſayd vnto vs, *Cool Brabouſe Crable*, whereby we vnderſtood, that at *Cool* there was certayne *Netherland* Ships, but wee made no great account thereof, becauſe our intent was to ſayle to *Ware-houſe*, fearing leaſt the *Ruſſians* or great Prince of the Countrey would ſtay vs there.

Kilduin.

The fiue and twentieth, ſayling along by the Land with a South-eaſt vvind, about the South Sunne, we had a ſight of *Kilduin*, at which time we held our courſe Weſt North-weſt, and ſayling in that manner betweene *Kilduin* and the firme Land, about the South South-weſt Sunne, we got to the Weſt end of *Kilduin*, and being there looked if we could ſee any Houſes or people therein, and at laſt we ſaw certayne *Ruſſian* Lodgies that lay vpon the Strand, and there finding a conuenient place for vs to Anchor with our Scutes; while wee went to know if any people were to bee found, our Maſter put in with the Land, and there found fiue or ſixe ſmall Houſes, wherein the *Laplanders* dwelt, of whom we asked if that were *Kilduin*, whereunto they made anſwer, and ſhewed vs that it was *Kilduin*, and ſayd, that at *Coola* there lay three *Brabants Crables* or Ships, whereof two were that day to ſet ſayle: wee found a ſmall Houſe vpon the ſhoare, vvherein there was three Men and a great Dogge, which receiued vs very friendly, asking vs of our affaires, and how we got thither, whereunto we made anſwer, and ſhewed them that we had loſt our Ship, and that wee were come thither to ſee if we could get a Ship that would bring vs into *Holland*: whereunto they made vs anſwer as the other *Ruſſians* had done, that there was three Ships at *Coola*, whereof two vvere to ſet ſayle from thence that day, then wee asked them if they would goe with one of our men by Land to *Coola*, to looke for a Ship, wherewith wee might get into *Holland*, and ſayd we would reward them well for their paines, but they excuſed themſelues, and ſayd, that they could not goe from thence, but they ſayd they would bring vs ouer the Hill, vvhere vve ſhould finde certayne *Laplanders* whom they thought would goe vvith vs, as they did: for the Maſter and one of our men going with them ouer the Hill, found certaine *Laplanders* there, vvhereof they got one to goe with our man, promiſing him two Ryals of eight for his paines, and ſo the *Laplander* going vvith him, tooke a Piece on his necke, and our man a Boat-hooke, and about Eeuening they ſet forward, the vvinde as then being Eaſt, and Eaſt North-eaſt.

The

Digitized by Google

The ſixe and twentieth, it vvas faire vveather, the vvind South-eaſt, at vvhich time we drew vp both our Scutes vpon the Land, and tooke all the goods out of them, to make them the lighter; vvhich done, we went to the *Ruſſians* and vvarmed vs, and there dreſſed ſuch meates as wee had, and then againe we began to make two meales a day, vvhen we perceiued that we ſhould euery day finde more people, and vve dranke of their drinke which they call *Quaſſe*, vvhich was made of broken peeces of Bread, and it taſted well: for in long time wee had drunke nothing elſe but Water. Some of our men went further into the Land, and there found blew Berries and bramble Berries, vvhich they plucked and eate, and they did vs much good, for we found that they healed vs of our looſeneſſe, the vvind ſtill blew South-eaſt.

The eight and twentieth, it was indifferent good weather, and then we drew the Scutes vpon the Land againe, that we might take the reſt of the goods out of them, becauſe the wind ſtill blew hard North, and North North-weſt, and hauing drawne the Scutes vp, we ſpred our ſayles vpon them, to ſhelter vs vnder them, for it was ſtill myſtie and raynie weather, much deſiring to heare ſome newes of our man, that was gone to *Coola* with the *Laplander*.

The nine and twentieth, wee ſpyed the *Laplander* comming alone without our man, whereat we wondred, and were ſomewhat in doubt, but when hee came vnto vs, he ſhewed vs a Letter that was writen vnto our Maſter, which he opened before vs, the Contents thereof being, that hee that had written the Letter wondred much at our arriuall in that place, and that long ſince hee verily thought that we had beene all caſt away, being exceeding glad of our happie fortune, and how that he would preſently come vnto vs with victuals, and all other neceſſaries to ſuccour vs withall, we being in no ſmall admiration who it might bee, that ſhewed vs ſo great fauour and friendſhip, could not imagine what he was, for it appeared by the Letter that he knew vs well: and although the Letter was ſubſcribed, by me *Iohn Corneliſon Rip*, yet wee could not bee perſwaded that it was the ſame *Iohn Corneliſon*, who the yeere before had beene ſet out in the other ſhip with vs, & left vs about the *Beare* Iland: for thoſe good newes we payd the *Laplander* his hyer; and beſides that, gaue him Hoſe, Breeches, and other furniture, ſo that hee was apparelled like a *Hollander*: for as then wee thought our ſelues to bee wholly out of danger, and ſo being of good comfort, we layd vs downe to reſt. Heere I cannot chuſe but ſhew you how faſt the *Laplander* went: for when he went to *Coola*, as our Companion told vs, they were two Dayes and two Nights on the way, and yet went apace, and when he came backe againe he was but a Day and a Night comming to vs, which was wonderfull, it being but halfe the time, ſo that we ſayd, and verily thought that hee was halfe a Conjurer, and he brought vs a Partridge, which hee had killed by the way as he went.

The thirtieth, wee ſaw a *Ruſſian* Ioll come rowing with *Iohn Corneliſon*, and our Companion that we had ſent to *Coola*, who being landed, wee receiued and welcommed each other, with great ioy and exceeding gladneſſe, as if either of vs on both ſides had ſeene each other riſe from death to life againe: for we eſteemed him, and hee vs to bee dead long ſince: hee brought vs a Barrell of *Roſwicke* Beere, Wine, *Aqua vite*, Bread, Fleſh, Bacon, Salmon, Suger, and other things, which comforted and relieued vs much, and we rejoyced together for our ſo vnexpected meeting: at that time giuing God great thankes, for his Mercie ſhewed vnto vs.

The firſt of September, in the Morning with the Eaſt Sun, we got to the Weſt-ſide of the Riuer of *Coola*, and entred into it, where we rowed till the Flood was paſt, and then wee caſt the Stones that ſerued vs for Anchors vpon the ground, at a point of Land till the Flood came in againe: and when the Sunne was South, wee ſet ſayle againe with the Flood, and ſo ſayled and rowed till mid-night, and then wee caſt Anchor againe till morning. The ſecond, in the Morning, we rowed vp the Riuer, and as we paſt along wee ſaw ſome Trees on the Riuer ſide, which comforted vs, and made vs glad as if we had then come into a new world, for in all the time that wee had beene out, we had not ſeene any Trees, and when we were by the *Salt Kettles*, which is about three miles from *Coola*, we ſtayed there a while, and made merrie, and then went forward againe, and with the Weſt North-weſt Sunne, got to *Iohn Corneliſons* Ship, wherein we entred and drunke: there wee began to make merrie againe, with the Saylers that were therein, and that had beene in the Voyage with *Iohn Corneliſon* the yeere before, and bad each other welcome: then we rowed forward, and late in the Eeuening got to *Coola*, where ſome of vs went on Land, and ſome ſtayed in the Scutes to looke to the goods: to whom we ſent Milke and other things to comfort and refreſh them, and we were all exceeding glad that God of his mercie had deliuered vs out of ſo many dangers and troubles, and had brought vs thither in ſafetie.

September 1.

Trees a rare ſight.

Coola.

The third, wee vnladed all our goods, and there refreſhed our ſelues after our toyleſome and wearie Iourney, and the great hunger wee had endured, thereby to recouer our healths and ſtrengths againe.

The eleuenth, by leaue and conſent of the *Bayart*, Gouernour of the great Prince of *Moſcouia*, we brought our Scute and our Boate into the Merchants Houſe, and there let them ſtand for a remembrance of our long, farre (and neuer before ſayled way) and that wee had ſayled in thoſe open Scutes, almoſt foure hundred *Dutch* miles, through, and along by the Sea Coaſts to the Towne of *Coola*.

Their Scute and Boat layd vp for a Monument: how much more worthily then the old worlds Argo.

Digitized by Google

The seuenteenth of September, *Iohn Cornelison* and our Master being come aboord, the next day about the East Sunne, we set sayle out of the Riuer *Coola*, and with Gods grace put to Sea, to sayle homewards, and being out of the Riuer, wee sayled along by the Land North-west and by North, the winde being South.

Vpon the nine and twentieth of October, wee arriued in the *Mase*, with an East North-east wind, and the next morning got to *Maseland* Sluce, and there going on Land, from thence rowed to *Delfe*, and then to the *Hage*, and from thence to *Harlem*. And vpon the first of Nouember about Noone, got to *Amsterdam*, in the same Clothes that wee wore in *Noua Zembla*, with our Caps furr'd with white Foxes skinnes. The newes thereof being spred abroad in the Towne, it was also carryed to the Princes Court in the *Hage*, at which time the Lord Chancellour of *Denmarke*, Ambassadour for the sayd King, was then at Dinner with Prince *Maurice*: for the which cause we were presently fetcht thither by the Scout, and two of the Burgers of the Towne, and there in the presence of those Ambassadours, and the Burger-masters, wee made rehearsall of our Iourney both forwards and backwards.

I thought good to adde hither for Barents *or* Barentsons *sake, certaine Notes which I haue found (the one Translated, the other Written by him) amongst Master* Hakluyts *Paper.*

This was Written by *William Barentson* in a loose Paper, which was lent mee by the Reuerend *Peter Plantius* in *Amsterdam*, March the seuen and twentieth, 1609.

Intelligence from *Samoyedi.*

THe foure and twentieth of August, Stilo nouo 1595. *wee spake with the* Samoieds, *and asked them how the Land and Sea did lye to the East of* Way-gates. *They sayd after fiue dayes iourney going North-east, wee should come to a great Sea, going South-east. This Sea to the East of* Way-gats, *they sayd was called* Marmoria, *that is to say,* A calme Sea. *And they of* Ward-house *haue told vs the same. I asked them, if at any time of the yeere it was frozen ouer? They sayd it was. And that sometimes they passed it with Sleds. And the first of September* 1595. Stilo nouo, *the* Russes *of the Lodie or Barke affirmed the same; saying, that the Sea is sometimes so Frozen, that the Lodies or Barkes going sometimes to* Gielhsidi *from* Pechora, *are forced there to Winter: which* Gielhsidi *was wonne from the* Tartars, *three yeeres past.*

1595. Barkes going from *Pechora* to *Gielhsidi*: wintering there.

Gielhsidi won from the *Tartars* 1592.

For the Ebbe and Flood there I can finde none; but with the Winde so runneth the streame. The third of September, Stilo nouo, *the winde was South-west, and then I found the water higher, then with the winde at North or North-east. Mine opinion is grounded on Experience, That if there bee a passage, it is small: or else the Sea could not rise with a Southerly Winde. And for the better proofe to know if there were a Flood and Ebbe, the ninth of September*, Stilo nouo, *I went on shoare on the South end of the* States *Iland, where the Crosse standeth, and layd a Stone on the brinke of the Water, to proue whether there were a Tide, and went round about the Iland to shoote at a Hare, and returning, I found the Stone as I left it, and the Water neither higher nor lower; which prooueth as afore, that there is no Flood nor Ebbe.*

1592. No Ebbe nor Floud.

September 9.

CHAP. VI.

A Treatise of IVER BOTY *a* Gronlander, *translated out of the* Norsh *Language into High* Dutch, *in the yeere* 1560. *And after out of High* Dutch *into Low* Dutch, *by* WILLIAM BARENTSON *of* Amsterdam, *who was chiefe Pilot aforesaid. The same Copie in High* Dutch, *is in the hands of* IODOCVS HONDIVS, *which I haue seene. And this was trauslated out of Low* Dutch, *by Master* WILLIAM STERE, *Marchant, in the yeere* 1608. *for the vse of me* HENRIE HVDSON. WILLIAM BARENTSONS *Booke is in the hands of Master* PETER PLANTIVS, *who lent the same vnto me.*

IN primis, it is reported by men of Wisedome and Vnderstanding borne in *Gronland*, That from *Stad* in *Norway* to the East part of *Island*, called *Horn-nesse*, is seuen dayes sayling right West.

Item, men shall know, that betweene *Island* and *Gronland*, lyeth a Riffe called *Gombornse-skare*. There were they wont to haue there passage for *Gronland*. But as they report there is Ice vpon the same Riffe, come out of the long North Bottome, so that we cannot vse the same old Passage as they thinke.

Gombornse-skare. The long North bottom.

Item, from *Long-nesse* on the East side of *Island* to the aboue said *Horn-nesse*, is two dayes sayle to the *Brimstone* Mount.

Item,

Digitized by Google

Item, if you goe from *Bergen* in *Norway*, the course is right West, till you bee South of *Rokenesse* in *Island*; and distant from it thirteene miles, or leagues. And with this course you shall come vnder that high Land that lyeth in the East part of *Groneland*, and is called *Swafster*. A day before you come there, you shall haue sight of a high Mount, called *Hnit-sarke*: and betweene *Whitsarke* and *Groneland*, lyeth a Head-land called *Hernoldus Hooke*; and thereby lyeth an Hauen, where the *Norway* Merchants Ships were wont to come: and it is called *Sound* Hauen. *Swafster.* *Whitsarke.* *Hernoldus Hooke.* *Sound* Hauen in *Groneland.*

Item, if a man will sayle from *Island* to *Gronland*, hee shall set his course to *Snofnesse*, which is by West *Rokenesse* thirteene miles or leagues right West, one day and nights sayling, and after South-west to shun the Ice, that lyeth on *Gomborusse-skare*; and after that one day and night North-west. So shall hee with this course fall right with the abouesayd *Swafster*, which is high Land, vnder which lyeth the aforesayd Head-land, called *Hernoldus Hooke*, and the *Sound* Hauen.

Item, the Easter Dorpe of *Groneland* lyeth East from *Hernoldus hooke*, but neere it, and is called *Skagen* Ford, and is a great Village. *Skagen* Ford.

Item, from *Skagen* Ford East, lyeth a Hauen called *Beare* Ford: it is not dwelt in. In the mouth thereof lyeth a Riffe, so that great Ships cannot harbour in it. *Beare* Ford.

Item, there ir great abundance of Whales: and there is a great Fishing for the killing of them there: but not without the Bishops consent, which keepeth the same for the benefit of the Cathedrall Church. In the Hauen is a great *Swalth*: and when the Tide doth runne out, all the Whales doe runne into the sayd *Swalth*. A great fishing for Whales. A great *Swalth*

Item, East of *Beare* Ford, lyeth another Hauen called *Allebeng* Sound: and it is at the mouth narrow, but farther in, very wide: The length whereof is such, that the end thereof is not yet knowne. There runneth no Streame. It lyeth full of little Iles. Fowle and Oxen are there common: and it is playne Land on both sides, growne ouer with greene Grasse. *Allabeng* Sound. Store of Oxen.

Item, East from the Icie Mountayne, lyeth an Hauen called *Fendebother*; so named, because in Saint *Olafes* time there was a Ship cast away, as the speach hath beene in *Groneland*; In which Ship was drowned one of Saint *Olafes* men, with others: and those that were saued did burie those that were drowned, and on their Graues did set great stone Crosses, which wee see at this day. The Icie Mountayne. The Hauen of *Fendebother.* Note.

Item, somwhat more East toward the Icie Mountayne, lyeth a high Land, called *Corse Houghe* vpon which they Hunt white Beares, but not without the Bishops leaue, for it belongeth to the Cathedrall Church. And from thence more Easterly, men see nothing but Ice and Snow, both by land and water. *Corse Houghe.* An hunting of white Beares. More Easterly all Desart.

Now wee shall returne againe to *Hernoldus Hooke*, where we first began to come to the first Towne that lyeth on the East-side of *Hernoldus Hooke*, called *Skagen* Ford: and so we will write the Names of all that lye on the West-side of the Ford or Sound. The Townes from *Hernoldus Hooke* Westward.

Item, West from *Hernoldus Hooke*, lyeth a Dorpe called *Kodosford*, and it is well built: and as you sayle into the Sound, you shall see on the right hand a great Sea and a Marsh: and into this Sea runneth a great streame: and by the Marsh and Sea standeth a great Church, on which the Holy Crosse is drawne, of colour white: it belongeth to *Enelnesse de Hakesong*, and the Land to *Peters Wike*. The Towne of *Godosford.* A great Church with a white Crosse on it. *Peters Wike.*

Item, by *Peters Wike*, lyeth a great Dorpe called *Wartsdale*, by which lyeth a water or Sea of twelue miles or leagues ouer: which is much, in which is much Fish: And to *Peters wike* Church belongeth *Wartsdale Boy* or Towne, and the Villages. *Wartsdale.* *Boy* in the *Norse* tongue signifieth a Towne.

Item, neere this *Boy* or Towne, lyeth a Cloyster or Abbey, in which are Canons Regular, it is Dedicated to Saint *Olafes*, and Saint *Augustines* name. And to it belongeth all the Land to the Sea side, and toward the other side of the Cloyster. A Monasterie.

Item, next *Godosford*, lyeth a Ford called *Rompnes* Ford: And there lyeth a Cloyster of Nuns of Saint *Benedicts* Order. *Rompnes* Ford. A Nunnerie.

Item, this Cloyster to the bottome of the Sea, and to *Wegen Kerke*, was Dedicated to Saint *Olafe* the King. In this Ford lye many small Iles. And to this Cloyster belongeth halfe the Ford and the Church. In this Sound are many warme Waters. In the Winter they are intollerable hot: but in the Summer more moderate; and many Bathing in them are cured of many diseases. *Wegen Kerke.* Hot waters in *Groneland.* A place called *Vose*, belonging to the King.

Item, betweene *Rompnes* and the next Sound, lyeth a great Garden called *Vose*, belonging to the King. There is also a costly Church dedicated to Saint *Nicolas*. This Church had the King before this. Neere it lyeth a Sea of Fresh water, called , in which is great abundance of Fish, without number. And when there falleth much Rayne, that the Waters doe rise therewith, and after fall againe, there remayneth vpon the Land much Fish drie. Saint *Nicolas* Church. *Emestines* Ford. *Southwoders Wicke.*

Item, when you sayle out of *Emestines* Ford, there lyeth an Inlet called *South-woders Wike*: and somewhat higher in the same Sound, and on the same side, lyeth a little Cape called *Bloming*: and beyond that lyeth another Inwike called *Granwike*, and aboue that lyeth a Garden called *Daleth*, which belongeth to the Cathedrall Church. And on the right hand as you sayle out of the same Sound, lyeth a great Wood, which pertayneth to the Church, where they feede all their *Bloming.* *Granwicke.* *Daleth* Garden. A great Wood Oxen, Kine, and Horses.

their Cattell, as Oxen, Kine, and Horſes: And to the Church pertayneth the Sound of *Emeſtnes* Ford. The high Land lying by *Emeſtnes* Ford, is called *The Ramos hayth*: So called, becauſe that on thoſe Hills doe runne many Roe Deere, or Reyne Deere, which they vſe to Hunt, but not without the Biſhops leaue. And on this high Land is the beſt Stone in all *Groneland*. They make thereof Pots, becauſe fire cannot hurt it. And they make of the ſame ſtone Fattes or Ciſternes, that will hold ten or twelue Tunnes of water.

Excellent Stone, that fire cannot hurt.

Item, Weſt from this lyeth another high Land, called *The long high Land*: and by another called whereon are eight great Orchards, all belonging to the Cathedrall Church. But the Tenths thereof they giue to *Warſedall* Church.

Eight great Orchards belonging to the Cathedrall Church.

Item, next to this Sound lyeth another Sound called *Swalſter* Ford, wherin ſtandeth a Church called *Swalſter*. This Church belongeth to all this Sound, and to *Romſe* Ford, lying next it. In this Sound is a great Garden belonging to the King, called Saint *Henleſtate*.

Swalſter Ford.

Item, next to that lyeth *Ericks* Ford, and entring therein lyeth an high Land called *Ericks Houghe*; which pertayneth the one halfe to *Deuers Kerke*, and is the firſt Pariſh Church on *Groneland*, and lyeth on the left hand as you ſayle into *Ericks* Ford: and *Deuers Kerke* belongeth all to *Meydon* Ford, which lyeth North-weſt from *Ericks* Ford.

Ericks Houghe.

Item, farther out then *Ericks* Ford, ſtandeth a Church called *Skogel Kerke*, which belongeth to all *Medford*: And farther in the Sound ſtandeth a Church called *Leaden Kerke*. To this Church belongeth all thereabout to the Sea; and alſo on the other ſide as farre as *Bonſels*. There lyeth alſo a great Orchard called *Grete Lead*, in which the *Guſman* (that is a chiefe or Bayliffe ouer the *Boores*) doth dwell.

Skogel Kerke.

And farther out then *Ericks* Ford, lyeth a Ford or Sound called *Foſſa*, which belongeth to the Cathedrall Church: and the ſayd *Foſſa* Sound lyeth as men ſayle out towards *Ericks* Ford; and to the North of it lye two Villages, the one called *Euer-boy*, and the other *Forther-boy*, becauſe they lye ſo.

Foſſa Sound.

Item, from thence farther North lyeth *Breda* Ford, and after that *Lormont* Ford from that Weſt, and from *Lormont* Ford to the Weſt is *Ice* Dorpe. All theſe are places built, and in them dwell people.

Breda Ford. *Lormut* Ford. *Ice* Dorpe.

Item, from the Eaſter builded Land to the Weſter Dorpe, is twelue miles or leagues: and the reſt is all waſte land. In the Dorpe in the Weſt ſtandeth a Church, which in times paſt belonged to the Cathedrall Church, and the Biſhop did dwell there. But now the *Skerlengers* haue all the Weſt Lands and Dorps. And there are now many Horſes, Oxen, and Kine, but no people neither *Chriſtian* nor *Heathen*; but they were all carryed away by the Enemie, the *Skerlengers*.

The *Skerlengers*. Many Horſes, Oxen, and Kine.

All this before Written was done by one *Iuer Boty* borne in *Groneland*, a principall man in the Biſhops Court: who dwelt there many yeeres, and ſaw and knew all theſe places. He was choſen by the whole Land for Captayne, to goe with Ships to the Weſt land, to driue away their Enemies the *Skerlengers*. But hee comming there, found no people neither Chriſtian nor Heathen, but found there many Sheepe running being wilde, of which Sheepe they tooke with them as many as they could carrie, and with them returned to there Houſes. This before named *Indo Boty* was himſelfe with them.

Iuer Boty the Author.

To the North of the Weſt Land, lyeth a great Wilderneſſe with Clifes or Rockes, called *Hemel Hatsfelt*. Farther can no man ſayle, becauſe there lye many *Swalgen* or Whirle-pooles: and alſo for the Water and the Sea.

A great Wilderneſſe called *Hemel Hatsfelt*, to the North of the Weſt land.

Item, in *Groneland* are many Siluer Hills, and many white Beares with red patches on their heads; and alſo white Hawkes, and all ſorts of Fiſh, as in other Countries.

Mines of Siluer, white Beares, white Hawkes, all ſorts of Fiſh.

Item, there is Marble ſtone of all colours, alſo Zeuell ſtone or the Load ſtone, which the Fire cannot hurt, whereof they make many veſſels, as Pots, and other great veſſels.

Item, in *Groneland* runneth great ſtreames, and there is much Snow and Ice: But it is not ſo cold, as it is in *Iſland* or *Norway*.

Groneland not ſo cold as *Iſeland* or *Norway*.

Item, there grow on the high Hills, Nuts and Acornes, which are as great as Apples, and good to eate. There groweth alſo the beſt Wheate, that can grow in the whole Land.

Fruits.

This Sea Card was found in the Iles of *Fero* or farre, lying betweene *Shot-land* and *Iſland*, in an old reckoning Booke, written aboue one hundred yeeres agoe: out of which this was all taken.

Item, *Punnus* and *Potharſe*, haue inhabited *Iſland* certayne yeeres, and ſometimes haue gone to Sea, and haue had their trade in *Groneland*. Alſo *Punnus* did giue the *Iſlanders* their Lawes, and cauſed them to bee written. Which Lawes doe continue to this day in *Iſland*, and are called by name *Punnus* Lawes.

Punnus and *Potharſe*.

The Courſe from Iſland *to* Groneland.

IF men bee South from the Hauen of *Bred* Ford in *Iſland*, they ſhall ſayle Weſt, till they ſee *Whitſarke* vpon *Groneland*, and then ſayle ſomewhat South-weſt till *Whitſarke* bee North off you, and ſo you need not feare Ice, but may boldly ſayle to *Whitſarke*, and from thence to *Ericks* Hauen.

If

If men be North the Hauen of *Bredford* in *Island*, then sayle South-west, till *Whitsarke* beare North: then sayle to it, and so come to *Ericks* Hauen.

If you see Ice, that commeth out of *Trolebothon*, you shall goe more Southerly, but not too farre South for feare of *Freesland*, for there runneth an hard streame. And it is fifteene miles or leagues from *Freesland*. *Trolebothon.*

Item, *Freesland* lyeth South, and *Island* East from *Gronland*.

Item, From the Ice that hangeth on the Hilles in *Gronland*, commeth a great Fogge, Frost and Cold. And such a Fogge commeth out of the Ice of *Trolebothon*: and it is a great Wilderneſſe. *Trolebothon*, a great Wilderneſſe.

There are Sables, Marternes, Hermelins, or Ermins, White Beares, and White Hawkes, Seales, White and Gray, Gold and Siluer Hills, also Fish dryed and salted, and thousands of Salmons: also store of Losh Hides and other Hides. There are Hares, Foxes, Wolues, Otters, and Veltfrasen. The Commodities of *Gronland*.

Now if it please God they come to *Gronland*, then shall they set but two men on shoare; who shall take with them diuers kindes of Marchandize: and let them deale with good order, and let them bee such as can make good Report, what they there doe see or finde; and let them obserue whether men may there Land or no, with the loue of the Inhabitants. Good counsell for trauelling to *Gronland*.

And I counsaile and charge those that shall Trade for *Gronland*, that they set no more folke on Land, but they keepe men enough to man the Ship. And looke well to the course you hold to *Gronland*, that if those that bee set on shoare bee taken, they may come home againe with Gods helpe. For if shipping returne, they may come home or bee releeued in a yeere and a day. And in your liuing there so demeane your selues to them, that in time you may winne the Countrey and the people.

Remember my Scholler and Clearke, which shall bee there appointed as Commander, that you send those on Land, that will shew themselues diligent Writers, and that they carrie themselues so, that they may learne thereby the State of the Countrey. They shall take with them two Boats and eight Oares, and take Tynder-boxes for fire if there be no Habitation. Also set vp Crosses of Wood or Stone, if need be. Tynder-boxes for fire.

This Note following was found in an old Booke of Accompts, in the Yeere 1596.

IN primis, From *Stad* in *Norway*, standing neere the Latitude of sixtie three Degrees, you shall hold your course due West: and that course will bring you vpon *Swartnesse* in *Gronland*. And in this course is the least streame and least perill of *Swalgen* or *Indrafts*. There is lesse perill this way, then is on the North-side; you shall keepe $\frac{2}{3}$ of the Sea on *Freesland* side, and one third on *Island* side. And if it bee cleere weather, and you haue kept your course right West, you shall see the Mount of *Sneuels Iokul* in the South-west patt of *Island*. And if you haue a storme in the North, you must shunne it as you can, till *Whitsarke* be North of you. Then shall you sayle right with it, and seeke the Land: and you shall finde a good Hauen, called *Ericks* Ford. Courses for *Gronland*. A storme in the North. *Whitsarke*. *Ericks* Ford.

Item, If you bee betweene *Gronland* and *Island*, you may see *Sneuels Iokul* on *Island*, and *Whitsarke* on *Gronland*, if it be cleere weather. Therefore men of experience doe affirme, that it is but thirtie leagues betweene both.

Also if you haue a storme betweene *Gronland* and *Island*, you must haue care you bee not laid on *Freesland* with the streame and Winde; for the streame or Current doth run strong vpon *Freesland*, out of the North.

Also if you haue a storme out of the South, you shall not sayle out of your course, but keepe it as neere as you can possibly, till *Whitsarke* in *Gronland* beare North off you: then sayle toward it, and you shall come into *Ericks* Ford, as it is afore-said in the first Article. A storme in the South.

CHAP. VII.

A Deſcription of the Countries of Siberia, Samoieda, *and* Tingoeſia: *Together with the Iourneyes leading vnto the ſame Countries toward the Eaſt and North-eaſt, as they are daily frequented by the* Moſcouites.

§. I.

Diſcouerie of Siberia, *and the ſubiecting of the ſame to the* Ruſſes.

The firſt and ſecond Paragraphs were publiſhed in *Latine* by *Heſſell Gerardus An.* 1612. here a little contracted: the laſt I found in M. *Hakluyts* Papers.

THere is in *Moſcouie*, a Kindred called the Sonnes of *Oneeko*, of a ruſticke or baſe deſcent, and firſt ſprung from one *Oneeko* a Husband-man. He being very rich in Lands, dwelt vpon a certaine Riuer called *Wichida*, or *Witſogda*, falling into the Riuer *Duina*, which about one hundred leagues beneath, neere vnto the Caſtle called S. *Michael the Archangel*, which falleth into *the White Sea*. This *Oneeko* being rich (as is ſaid) had alſo many Children, God hauing largely bleſſed and prouided him with plentie of all things. Yet neuertheleſſe, hee had an earneſt deſire and affection, to know what Countreyes were poſſeſſed and inhabited by thoſe people, which yeerely came into *Ruſſia* to trafficke, bringing with them coſtly Furres, and diuers other Merchandizes, much diffring in Language, Apparel, Religion, and Behauiour, calling themſelues *Samoieds*, and by other vnknowne names. Theſe people came euery yeere downe the Riuer *Wichida*, and exchanged their Commodities with the *Ruſſes* and *Moſcouites*, in the Townes of *Oſel* and *Vſtiug*, on the Riuer *Duina*; which at that time were the Receits and chiefe Mart Townes of all kind of Marchandizes, but eſpecially of coſtly Furres. *Oneeko* therefore (as hath beene ſaid) was moſt deſirous to know, from whence theſe people came, or what Countreyes they did inhabit, eaſily conjecturing, That great wealth was there to be gotten; ſince the Furres yeerely brought them amounted to a great ſumme of Money. Wherefore ſecretly hee got acquaintance and conſorted himſelfe with diuers of them, and ſent in their company about tenne or twelue of his owne people into thoſe parts; enjoyning them, that through what Countreyes ſo euer they ſhould trauell, they ſhould make diligent ſearch of euery particular thing therein, and fully obſerue the Manners, Rites, Dwellings, and whole courſe of life of thoſe Nations; that at their returne they might bring from thence perfect knowledge thereof. Which they hauing at length performed, he entertayned them bountifully at their returne, and ſhewed them all fauour, but with eſpeciall charge to keepe ſilence. Hee likewiſe kept all theſe things cloſe to himſelfe, not reueiling them to any man.

Arica or *Oneeko Wichida*. *White Sea* to the North of *Ruſſia*. *Samoieds*. *Oyſel* and *Vſtiug* Mart Townes for the *Samoieds*. The firſt Voyage vnto the *Samoieds* countreyes.

The ſecond Voyage.

And the next yeere following, he ſent thither a greater number of his people, joyning with them certayne of his Kindred and Alliance. Theſe carried with them diuers baſe Marchandize; as ſmall Bels, and other like *Dutch* ſmall Wares; and tooke diligent notice of euery thing in thoſe parts; and after they had paſſed many Deſerts, and diuers great Riuers, they came to the Riuer *Obi*; where making Acquaintance and Friendſhip with the *Samoieds*, they found that Furres were to be had for a ſmall price, and that great wealth was there eaſily to be gotten; and further, that this people had not any Cities, but liued together in Companies, and peaceably, and gouerned by ſome of the ancienteſt among them; that they were lothſome in their feeding, and liued on the fleſh of ſuch beaſts as they tooke: that they had no knowledge of Corne or Bread, were cunning and skilfull Archers, making their Bowes of a gentle and flexible kind of Wood, and that their Arrowes were headed with ſharpened ſtones or fiſh bones: with thoſe they killed wilde beaſts, which are exceeding plentifull in thoſe places: that they ſowed alſo with bones of fiſhes, ſeruing them for Needles; their thred being made of the ſinewes of certaine ſmall beaſts, and ſo they ſew together the Furres, wherewith they cloath themſelues: the Furrie ſide in Summer turned outward, and in Winter inward. That they couered their Houſes with the Skins of Elkes and ſuch like beaſts, little eſteemed among them. Finally, theſe Meſſengers of *Oneeko*, ſearched curiouſly into euery matter, and returned home ſtored with coſtly Furres.

Many Deſerts and diuers great Riuers. Riuer *Obi*. Great wealth to be gotten by the Trade to the Riuer of *Obi*. Conditions of the people. Gouernment. Dyet. No Bread. Shooting. Apparell. Houſes.

Now when as *Oneeko* vnderſtood by their report, that which he ſo much longed to know, he together with certayne others of his Friends, continued his Trafficke into thoſe Countreyes for diuers yeeres together: by meanes whereof the *Oneekos* grew very mightie, and bought great Poſſeſſions in all parts. Thoſe that dwelled neere vnto them beeing ignorant from whence all this wealth aroſe, greatly wondred at it. For the *Oneekos* builded Churches in ſome of their

Great wealth obtayned by continuance of this Voyage.

Digitized by Google

Villages. Yea, afterward they erected in the Towne of *Osoil* vpon the *Wichida*, where at that time they dwelt, an exceeding faire Church, which was rayſed from the very foundations of hewen ſtone. Finally, they knew no end of their goods.

Now among the *Ruſſes* it goeth for a common Prouerbe, that *Hee which hath no friends in Court, is ſcarce to be accounted in the number of the liuing*. For moſt commonly it happeneth, that they that excell others in any thing, are preſently enuyed and falſly accuſed in the Princes Court, where if they haue not a friend to ſuccour them, they are forth-with, without hearing the cauſe, oppreſſed; yea, and vtterly ruined. For which cauſe the *Oneekos* beeing growne to much wealth, as is ſaid, got into the fauour of one of the greateſt in the Court, which was *Boris odanoua*, Brother to the Wife of the Emperour *Pheodor Emanowich* then reigning; to whom alſo he ſucceeded in the Empire. Vnto this *Boris* the *Oneekos* determined to reueale the whole matter: who firſt preſenting him with gifts after the cuſtome of the Countrey, prayed him to grant them hearing in a matter, which they had to deliuer for the benefit of the whole Empire. *Boris* preſently liſtning to this Petition, receiued them with extraordinary kindneſſe: and after they had declared vnto him the ſituation of the Countreyes of *Samoiedia*, and *Siberia*, then what they had ſeene and obſerued therein, and how great Riches might thence ariſe vnto the Empire of *Muſcouia*. *Boris* preſently grew into an ardent deſire to ſet forward this buſineſſe, entertayning them as his Children, and gracing them to the vttermoſt of his power, procuring them from the Emperour a moſt ample Priuiledge, by which it was ordayned, That they ſhould for euer enjoy the Lands which they poſſeſſed, and might diſpoſe of them vnto their Heires at their pleaſure. And farther, if it happened they were abiding in the Citie of *Moſcua*, he tooke them into his owne Sled: which among the *Moſcouites* is the greateſt kind of honour, eſpecially being offered by principall Noblemen, ſuch as then was *Boris*, a man of the greateſt power, and in whom the chiefe authoritie of the Empire reſted. *Boris* pondering theſe things attentiuely, ſignified the whole matter to the Emperour, to whom it was very pleaſing; And not ſleeping about the matter, employed therein certayne Captaynes, and Gentlemen of ſmall abilitie of his owne followers: commanding them to prepare themſelues to goe to that Iourney, in company of ſuch as the *Oneekos* ſhould appoint vnto them, and that they ſhould apparell themſelues gallantly, and like vnto Ambaſſadors, adding further certayne Souldiers, and Preſents of ſmall value to be diſtributed among the people, to which they ſhould come: enioyning them further to note diligently all Paſſages, Riuers, High-wayes, Woods, and what elſe they ſhould meete with in their trauell; as alſo to commit to memorie the names of them; that at their returne they might make a faithfull and true report thereof: adding further that they ſhould intreat the people with all courteſie, and that they ſhould ſeeke out ſome conuenient place for building of Caſtles and Fortreſſes, and that in any caſe (if it were poſſible) they ſhould bring backe with them into *Moſcouia*, ſome of the Inhabitants of thoſe Countryes.

L. *Boris*, that *Theodore* Emperour. The *Ruſſes* pronounce *th* as *ph*.

Imperiall priuiledge.

Theſe Meſſengers being ſufficiently furniſhed with all things neceſſary for the Iourney, namely, Apparell, Weapons, Money, and Preſents, departing from the *Moſcua*, not long after came to the Riuer *Wichida*, and to the *Oneekos*: who alſo ſent ſome of their owne people with them. Aſſoone as they were arriued into thoſe parts, they began to performe what was giuen them in charge, ſhewing freely all tokens of courteſie vnto the barbarous people, and carefully obſeruing who were of greateſt authoritie among them, to whom they vſed reuerence and gaue gifts, ſuch as were of ſmall and almoſt no value to themſelues, but which ſeemed ſo precious vnto the other, that when the *Moſcouites* were comming a farre off towards them, they would ſtay for them with great dancings and clapping of their hands, and caſt themſelues downe at the feet of the Giuers, being ſo gallantly attyred, accounting them altogether as Gods. The *Moſcouites* vſing the *Samoieds* for their Interpretors, which had continued certayne yeeres in the Villages of *Moſcouia*, to learne their Language, began to diſcourſe with the *Barbarians* concerning their Emperour of *Moſcouie*, whom they wonderfully extolled, and made him little leſſe then an Earthly God, enterlacing other things with all, whereby thoſe people were ſtirred vp to wiſh that they might behold theſe things with their eyes. Theſe their deſires were pleaſing to the *Moſcouites*, who ſignified that they were likewiſe well contented therewithall: Adding, that they would leaue certayne pledges among them, which during the *Samoieds* abode in *Moſcouia*, might learne their Language: And by this meanes they drew vnto their purpoſe the good will of many of the people on the Weſt-ſide of *Obi*, who of their owne accord ſubjected themſelues to the authoritie of the *Moſcouites*, and ſuffered them to lay a Taxation vpon them, promiſing yeerely of euery head (not excepting the Boyes that were but yet learning to handle the Bow) two skinnes of Sables; which to themſelues were of no value, but eſteemed of the *Moſcouites* as precious as Iewels. Theſe they promiſed to deliuer to ſuch a Treaſurer as the Emperour ſhould ordayne. Neither did they faile to performe the ſame.

The firſt Voyage ſet out by *Boris Godonoua*.

They ſubmit themſelues to the *Moſcouites*.

After this the Meſſengers paſſed ouer the Riuer *Obi*, and trauelled beyond it almoſt two hundred leagues toward the Eaſt and North-eaſt, hauing ſeene by the way many wild beaſts of ſtrong ſhapes, moſt cleere Fountaynes, extraordinary Plants and Trees, pleaſant Woods, and *Samoieds* of diuers ſorts, whereof ſome did ride on *Elkes* or *Loſhes*, other were drawne in Sleds by Raine

Trauaile beyond *Obi*.

Elkes or *Loſhes*.

Digitized by Google

Raine Deere. Dogs equal in swiftneſſe to Harts.

Raine Deere, and others alſo were drawne by Dogges, which are equall to Harts for ſwiftneſſe. Finally, many other things in their whole Iourney they met with, not before ſeene, and therefore to be maruelled at: which orderly and truly noted downe, that they might more certainly report the ſame at their returne. And ſo at length taking with them ſome voluntarie *Samoieds*, and leauing there diuers of their owne people to learne their Language, they returned backe into *Moſcouia*; where at their firſt conueniencie they made knowne to *Boris*, and by him vnto the Emperour the whole ſucceſſe of their Voyage.

Samoieds shooting.

They maruelled at the *Samoieds* which were brought vnto them, commanding them to make ſome ſhew of their cunning in ſhooting; which they did ſo perfectly, that almoſt it ſeemed to any man incredible. For taking a piece of Coyne leſſe then our * Pennie, and faſtning it to the ſtocke of a Tree, and then going as farre from the ſame, as they could very hardly diſcerne it, they did euery time that they did ſhoot ſo aſſuredly hit the ſame, that they did not once miſſe it. Where at many of the beholders did aboue meaſure wonder.

* Stiuer.

And on the other ſide, the *Samoieds* as greatly wondred both at the *Moſcouites* manner of liuing and faſhions, as alſo at the ſtatelineſſe of the Citie: neither did they without a certayne terrour behold the Emperour himſelfe, ſo richly attired and mounted either on Horſe-backe, or in his Coach drawne by many Horſes together, and enuironed with ſo many Nobles moſt gallantly adorned. Then with admiration they beheld the Guards furniſhed with their Caliuers, of whom about foure hundred waited on the Emperour at his going abroad. So oft alſo as they heard the ringing of the Bells, which are very many among the *Moſcouites*, and ſaw ſo many faire ſhops, and the reſt of the Cities beautie, they were altogether aſtoniſhed, and thought themſelues to bee in ſome Manſion of the Gods; wiſhing withall, that they were a while among their Countrey-men to tell them of all things. Yea, they reported themſelues to be happie, that they had the fortune to ſerue ſo glorious an Emperour, whom they altogether accounted as a Diuine power. The Meates which the *Moſcouites* did ſet before them, they did greedily eate: whereby it plainely appeared, that the ſame were more pleaſant to their taſte, then the raw fleſh, or fiſh dried in the winde, wherewith they feed themſelues at home. Finally, they promiſed to receiue the Emperour for their Lord; and to perſwade their Countrey-men, inhabiting farre and wide to doe the ſame. They humbly alſo prayed the Emperour to vouchſafe them the fauour, to ſend them certaine Gouernours to rule ouer them, and to whom they might pay the aforeſaid Tribute. Concerning their Idolatrie, there was no ſpeech made thereof, but they were left to their owne cuſtomes. Notwithſtanding, I thinke that the *Chriſtian* Faith would eaſily be ſpred among them, if they had ſufficient and godly Teachers. Neither doubt I but the *Moſcouites* would haue taken order therein, if they had not beene hindred by theſe moſt troubleſome Warres.

Theſe things ſo done as is declared, the *Oneekes* were raiſed to great Honours, and endowed with great Priuiledges, as alſo with Supreme Authoritie ouer many places, adioyning vnto their Lands, enioying Poſſeſſions lying one hundred miles aſunder vpon the Riuers of *Duina*, *Whichida*, and *Suchana*: ſo that they are very mighty and rich, and increaſe daily in greater Honours.

It was further ordayned by the *Moſcouites*, that there ſhould bee places choſen by the Riuer *Oby*, and in the fields adioyning vnto it, fortified by the naturall ſituation for the building of Caſtles thereon, and furniſhing them with Garriſons, and that there ſhould be ſent thither a chiefe Gouernour, principally for further diſcouering the Countrey, and bringing it vnder ſubiection. Theſe things ſo ordayned, did likewiſe take effect. And firſt of all, there were builded

Caſtles builded.

certaine Caſtles encloſed with certaine ſtrong beames, cut out of the Woods thereby, and faſtned one in another in double rewes, filled betweene with earth, and fortified with Garriſons; And ſo great a multitude of men is duely ſent thither, that in ſome places there are Cities aſſembled, conſiſting of *Poles*, *Tartars*, *Ruſſes*, and other Nations mingled together. For, into theſe parts are ſent all that are baniſhed, Murtherers, Traitors, Theeues, and the ſcumme of ſuch as deſerue death: ſome of which are for a time kept in priſon, others enforced to continue there for certaine yeeres, euery one according to the rate of his offence: whereby there are very populous aſſemblies of people growne together, who with the Caſtles already builded, doe almoſt make a pretie Kingdome: Many men of the meane ſort, daily flocking thither, the rather for that they enioy great priuiledges, neither pay any thing for the Lands which they poſſeſſe.

Sinke of bad people.

Siberia and *Siber*.

The whole Countrey is called *Siberia*, the Citie builded therein *Siber*. And in deed at the firſt, the Offenders among the *Moſcouites*, did no leſſe tremble at the name of *Siberia*, then * doe euill perſons in *London*, when they are threatned with New-gate: for they were forth-with ſent away into *Siberia*. But now the often inflicting of that puniſhment is almoſt growne into contempt. But Noblemen and great Perſonages, if at any time they incurre the Princes diſpleaſure, doe as yet very much loath the name of *Siberia*. For many times both themſelues, with their Wiues and Families are ſent away into thoſe parts: where ſome Office is committed vnto them, till the Emperours anger bee aſſwaged, and they called home into *Moſcouia*.

* Then Malefactors of *Amſterdam* at the Priſon, &c.

I will now ſhew the way by which they trauell out of *Moſcouia* into thoſe parts, and that

in

Digitized by Google

in the beſt manner that I could get notice thereof. Which whatſoeuer it ſhall ſeeme to bee, I haue not attayned vnto it, without great paines and ready furtherance of ſome friends, which I found in the Court, while I continued in *Ruſſia*: who though they were ready to pleaſure me, and that I had beene very inſtant with them about it, yet with much adoe were brought to communicate this particular Iournall vnto me. For if at any time after, when the land ſhould bee at quiet, it ſhould any way come to light, doubtleſſe it would coſt them all their liues. For ſuch is the diſpoſition of the *Ruſſes*, that they will not indure to haue the ſecrets of their State to bee made knowne.

This Iournall to the North-east was hardly obtayned by ſome friends in Court.

The great danger for imparting this Iourney.

§. II.

A briefe Deſcription of the wayes and Riuers, leading out of Moſcouia *toward the East and North-east into* Siberia, Samoiedia, *and* Tingoeſia, *as they are daily frequented by the* Ruſſes: *with further Diſcoueries towards* Tartaria *and* China.

FRom the Citie *Oſoil* vpon the Riuer *Wichida*, where the *Oneekos* dwell, they goe againſt the ſtreame, vntill they come to *Iauinis*, a little Towne built by the *Ruſſes*, and it is diſtant from *Oſoil* almoſt ſeuenteene dayes iourney. Whither before they come, they paſſe many Riuers and Woods. The Riuer *Wichida* ſpringeth out of the Mountaines of *Iugoria*, which to the South ioyne vpon *Tartaria*, and from thence runne Northwards to the Ocean Sea. Out of the ſame Mountaines iſſueth the Riuer *Petſora*, which falleth into the Ocean Sea on this ſide the Streight of *Waygats*. From *Iauinis*, after three weekes iourney, they come to *Neem*; a Riuer ſo named of the gentle gliding of her ſtreames through the Woods. For *Neem* in *Engliſh* ſignifieth *Still* or *Dumbe*. On this Riuer they proceed about fiue dayes ſpace with their Boats; and then, for that the *Neem* taketh his courſe another way, for ſhortning their iourney, they muſt of force cauſe their ſtuffe to be carried by Land, the ſpace of a league: And ſo they come to the *Wiſera*, a Riuer iſſuing out of certaine Rockes adioyning to the Mountaines of *Iugoria*. Theſe Rockes the *Moſcouites* call *Camenas*. From hence they are carried downe the Riuer *Wiſera*, for the full ſpace of nine dayes, vntill they come to *Soil Camſcoy*, a ſmall Towne builded by the *Moſcouites*, for refreſhing of Trauellers for a ſhort ſpace, which hence forward are to proceed on their Iourney by Land. As for the *Wiſera*, it keeping on his courſe ſomewhat farther, at length falleth into the *Cama*, which paſſing by *Viatcam*, a Towne of *Moſcouia*, falleth into the great Riuer *Rha*, commonly called *Volga*, which entreth with ſeuenty branches into the *Caſpian* Sea, as I haue receiued from eye witneſſes.

Oſoil.

Iauinis 17. daies iourney diſtant from *Oſoil*, againſt the ſtreame.

Iugoria.

Neem Riuer 3. weekes iourney from *Iauinis.*

From *Neem* to *Wiſera* 5. dayes iourney.

From *Wiſera* to *Soil Camſcoy* 9. dayes.

Volga by the *Tartars* called *Etil.*

The Towne of *Soil Camſcoy* is reaſonably inhabited, hauing many Villages round about it. The Inhabitants, for the moſt part are *Ruſſes* or *Tartars*. Here is great ſtore of Cattell, and chiefly of Horſes. Trauellers hauing here ſomewhat refreſhed themſelues, doe lade their carriages on Horſes, and trauell for the moſt part through Mountaines full of Firres, Pines, and other trees of ſtrange ſorts. Betweene theſe Mountaines they paſſe ouer the Riuers *Soiba*, and from thence ouer *Coſna*, both running toward the North-east.

Soil Camſcoy.

The Riuer *Soiba.*

The Riuer *Coſua.*

Now theſe Mountaines are diuided into three parts; whereof the two firſt are paſſed ouer each of them in two dayes, and the third in foure dayes. The firſt part is called *Cooſuinſcoy Camen*: The ſecond *Cirginſcoy Camen*: The third *Poduinſcoy Camen*. And doubtleſſe all theſe mountainous Countries are much different from the other Countries out of which they enter into them. For the Woods vpon them, are fairer and thicker growne with trees, bearing euery where diuers ſorts of Plants. Theſe three Deſarts are frequented by none in a manner but *Tartars*, and *Samoieds*, who onely hunt after thoſe coſtly Furres, which are to pay their tribute to the Emperour of *Moſcouia*. The Mountaines of *Poduinſcoy Camen* are higher then the reſt, and for the moſt part couered with Snow and Cloudes, and therefore difficult for Trauellers to paſſe ouer: but by little and little they haue a gentle deſcent. From thence they come to *Vergateria*, in which Towne they muſt abide vntill the Spring, by reaſon of the Riues *Toera*, which ariſing not farre from thence, is all the reſt of the yeere very ſhallow.

Mountaines in three parts.

Poduinſcoy Camen.

Vergateria.

Toera Riuer.

But the Spring approaching, when the Snow melts from the hoary Hills, and the Land waters ariſe, it is paſſed ouer with Skiffes and ſmall Boats. *Vergateria* is the firſt Towne of the Countrey of *Siberia*, and was begun to be builded with ſome other Townes within theſe one and twenty yeeres. It is reaſonably full of buildings, and the lands about it are tilled as in *Moſcouia*. Heere there is reſident for the Emperour of *Moſcouia* a Gouernour, which yeerely at the beginning of the Spring, by way of the Riuers doth diſtribute great ſtore of Corne, and Victuals among the Caſtles with Garriſons throughout all *Siberia*: furniſhing alſo in like manner the *Moſcouites*, which remayne beyond the Riuer *Oby*. For in thoſe places the ground is not yet tilled; and the *Samoieds*, as before is ſaid, for the moſt part feed on the fleſh of wilde beaſts.

Fiue dayes iourney to *Iaphanis*.

Downe the Riuer *Toera*, in fiue dayes they come to *Iaphanis*, a Towne builded and inhabited within theſe two yeeres. Thence againe they paſſe downe the *Toera*, and hauing proceeded two dayes thereon, they are enforced by reaſon of the often windings and turnings of the Riuer, to cut ouer it in certaine places, for ſhortning of the way. In theſe places there now dwell here and there, *Tartars* and *Samoieds*, liuing for the moſt part vpon Cattell and Fiſhing.

Tabab a mighty Riuer 200. leagues from *Toera*. From *Iaphanis* to *Tinna* 12. dayes iourney by ſled.

At length leauing *Toera*, they come to the mighty Riuer *Tabab*, diſtant from *Vergateria* about two hundred leagues. And from thence they proceed farther to *Tinna*, a populous Towne, and builded by thoſe aboue mentioned. But many trauell alſo from *Iaphanis* to *Tinna*, by Sleds in the Winter time, in the ſpace of twelue dayes. And here is vſed much buying and ſelling of coſtly Furres, betweene the *Muſcouites*, *Tartars*, and *Samoieds*. And this is a very conuenient place, for ſuch as determine to ſtay in the Countrey not aboue ſixe moneths. But many doe ſearch the further parts, and trauell farre beyond the *Oby*, toward the Eaſt and South.

Many trauell farre beyond *Oby* toward the Eaſt & South. *Tobolſca* the chiefe Towne of *Siberia*.

From *Tinna* they come to *Tobolſca*, the chiefe of all the Townes of *Siberia*: wherein is the ſeat of the chiefe Gouernour of *Siberia*, and of the *Moſcouites* that are in the ſame. To this place yeerely are brought from the other Townes of the whole Countrey, as well on this ſide, as beyond *Oby* the tributes, which being brought together, and guarded with Souldiers, are after carried into *Moſcouia* to the Emperour. Here alſo the Law is moſt ſeuerely adminiſtred: and all the other Gouernours in *Samoiedia*, and *Siberia*, are bound to obey him onely. In this Citie beſides is the chiefe Market of commodities brought out of *Moſcouia*; the *Tartars* out of the South parts, and almoſt fartheſt parts of *Tartarie*, and men of other Nations repairing thither: who, the farther that the report of theſe Countries reacheth, doe in ſo much the greater number aſſemble thither: whereby there ariſeth great profit to the *Moſcouites*. Furthermore, in diuers places there are Churches and Chappels erected, wherein the *Greeke* Religion is exerciſed, which among the *Ruſſes*, and other Northerne People is moſt vſed, although corrupted with diuers Superſtitions. But howſoeuer, no man is forced againſt his will to their Religion: but certaine gentle meanes are vſed by the *Ruſſes*, by which theſe people are perſwaded and wonne thereunto.

Tobolſca on the Riuer *Yrtis*.

The Citie *Tobolſca* is ſituated on the Riuer *Yrtis*, which with a moſt forcible ſtreame, and as it were another *Danubius*, riſing from the South, taketh his courſe toward the *Oby*, through which it ſeemeth to runne with the ſame courſe. On the other ſide is the Riuer *Tobol*, of which the Citie taketh her name. Into this falleth the Riuer *Taſſa*, which ſeemeth to ſpring from the North-eaſt, and from certaine Mountaines there vpon the Coaſt. On the ſide of this Riuer the *Moſcouites* haue of late builded a Towne, called *Pohemy*, inhabited with dwellers drawne out of *Siberia*, for no other cauſe, but that it is enuironed with an exceeding fertile ſoyle, as alſo with very pleaſant Woods, wherein diuers ſorts of wilde beaſts doe breed, as Panthers, Ounces, Foxes, Sables, and Marterns. Now *Pohemy* is diſtant from *Tobolſca*, about two weekes Iourney toward the North-eaſt. *Yrtis* with almoſt the like diſtance from *Tobolſca*, falleth into the *Oby*. And at the mouth of it was builded a Towne, called *Olſcoygorod*, but afterward razed downe by commandement of the Gouernour of *Siberia*: The cauſe whereof was not then knowne: which notwithſtanding I gueſſe to haue been either the extremity of the cold, or that the Towne ſtood rer vnto the Sea then they thought fit, and feared leſt ſome inconuenience might grow thereby. for which cauſe about fiftie leagues aboue that razed Towne, they builded another vpon an Iland of the Riuer *Oby*, called *Zergolta*. From hence ſayling vp the Riuer, they vſe ſmall ſayles, either becauſe winds blow faintly, or for the highneſſe of the ſhoare: ſo that, though the *Oby* bee almoſt euery where very broad; notwithſtanding, they drew their Boats in it with ropes, altogether after the ſame ſort that they trauell vp the Riuers of *Moſcouia*.

Tobol Riuer. *Taſſa* Riuer. *Pohemy* a Towne. *Yrtis* Riuer. *Olſcoygorod* razed. *Zergolta* a town builded in an Iland of the Riuer *Oby*.

Noxinſcoy Caſtle 200. leagues aboue *Zergolta*.

Two hundred leagues aboue *Zergolta*, they came to *Noxinſcoi*, a Caſtle builded thirteene yeers agoe, at which time the Gouernour ſent certaine men thither out of *Siberia*, to ſeeke out Countries profitable for mankind, and fit to build Townes in. Wherefore at that time they builded this Caſtle, and furniſhed it with a certaine Garriſon, in a very pleaſant, wholſome, warme, and fertile ſoyle, and wherein were great ſtore of Beaſts and Fowles of rare kinds. The very Caſtle being ſituated toward the South-eaſt, by little and little grew to be a Citie. The Inhabitants whereof were enioyned to proceed by degrees into further and more temperate Countries, and to trafficke truely in euery place, and courteouſly and kindly to entreat all people that they met withall: whereby at length they might more largely extend the Dominion, and ſpread abroad the *Ruſſian* Name. Wherefore flocking thither in great numbers, and piercing into the Inland foure hundred leagues, they found goodly Countries, but not inhabited. And whereas ten yeeres paſt, hauing ſayled two hundred leagues vp the Riuer *Oby*, they lighted vpon a Countrey very fruitfull and pleaſant, which was very temperate, and free from all diſcommodities, and the Winters very ſhort, and in a manner none at all. They tooke occaſion thereupon to returne into *Siberia*, & to ſend word of theſe things into *Moſcouia*. *Boris Godonoua* was then Emperor there, who hauing receiued ſuch good tidings, forthwith commanded the Gouernour of *Siberia*, that with all ſpeed hee ſhould cauſe a Citie to bee builded there. The Gouernour obeyed, and there was a Caſtle builded vpon his commandement, with certaine houſes adioyned; ſo that now it

is a large Citie. The name thereof is *Tooma*, because they vnderstood, that a great multitude of *Tartars* in times past were seated there, of whom this Citie tooke that name for the pleasantnesse of the situation thereof. And it is reported that these *Tartars* had at that time a King, whose name was *Altin*: Whereby it came to passe, that the Citie which was first builded, held out many assaults of sundry people that dwelt in those Champion Countreyes. And now this Citie is so mightie, that in processe of time, some reasonable great Kingdome is likely to grow out off it.

The Citie *Tooma*.

Tartar King.

Furthermore, betweene this Castle of *Noxinscoi*, and the Citie *Tooma*, and *Siberia*, the *Moscouites* daily doe discouer many people dwelling in the In-land parts, some of whom call themselues *Ostachies*, and now are growne into one bodie with the *Tartars*, *Samoieds*, and *Russes*, liuing friendly together; they haue many Kings among them, almost like vnto the *Indians* (I speake of the pettie Kings, not of the greater Kings of *India*.) And to bee briefe, the *Moscouites* haue proceeded so farre into that mayne Land, that we haue just cause to maruell thereat. Moreouer, there are many Castles and Townes betweene the Riuers of *Obi* and *Yrtis*, builded almost at the same time when *Tobolsca* was, and are now proper Townes: whose Inhabitants are *Moscouites*, *Tartars*, and *Samoieds* of their kind, which we call, *The tame Samoieds*, in respect of those which are altogether wild.

Ostachies a people.

Tara a Towne.

Iorgoetum.

Besobia.

Manganseiscoigorod.

Narim and *Tooma* beyond *Obi*.

And the first of the Townes is *Tara*: from which place it is neere ten dayes iourney between *Obi* and *Yrtis*. Then *Iorgoetum*, builded about fifteene yeares past. *Besobia*, and *Manganseiscoigorod*, both of them builded aboue *Iorgoetum* toward the South. The Inhabitants that dwell on the west side of the Riuer *Obi*, seeke daily to discouer more and more. On this side of *Obi* are seated the Cities *Tobolsca*, *Siberia*, *Bereseia*, and certaine others, builded vpon certaine Riuers: and more are builded daily. Beyond *Obi* are *Narim*, *Tooma*, and diuers other Cities, the Inhabitants whereof insteed of Horses vse Reyne Deere, or exceeding swift Dogs, which they fatten with diuers kinds of fishes, and especially with Thornebacks; because they thinke they be made the stronger with that kinde of food. *Iorgoetum*, whereof I spake before, is builded in an Iland of the Riuer *Obi*.

Reyne Deere and exceeding swift Dogs vsed insteed of Horses, and fed with Fishes.

Also aboue *Narim* as men trauaile toward the East, they meete with the Riuer *Telta*: on the banke whereof they haue builded a Castle, named *Comgof-scoi*. The garrison Souldiers of which Castle, together with the Inhabitants of *Narim*, about seuen yeeres past, were commanded by the Gouernour of *Siberia* to trauell East, and diligently to search what vnknowne Nations dwelt in those parts. Therefore trauelling through certaine vast Deserts, for the space of tenne weekes or there abouts, passing in the way through many faire Countreys, many Woods, and Riuers, at length they espied certaine Cottages set vp in the fields, and certaine Hords or Companies of people. But because they had *Samoieds* and *Tartars* for their guides, which were acquainted with those places, they were not afraid. The people came vnto them reuerently, and with humble behauiour, and signified by the *Samoieds* and *Tartars*, that they were called *Tingoesi*, and that their dwelling was vpon the banke of the great Riuer *Ienisce*, which they said did spring from the South South-east, but that they knew not the head thereof. These people were deformed with swellings vnder their throats, and in their speech they thratled like Turkie-cocks. Their language seemed not much to differ from the *Samoieds*, which also vnderstood many of their words.

Telta Riuer to the East beyond *Obi*.

Comgof-scoi Castle.

Ten weekes trauell Eastward from *Obi*, wherein the *Tingoesies* were first discouered.

Tingoesie a people dwelling in Companies vpon the great Riuer *Ienisce*.

The *Tingoesies* deformed with swellings vnder their throats: a disease attending drinkers of Snow-water.

Ienisce being a Riuer farre bigger then *Obi*, hath high mountaines on the East, among which are some that cast out fire and brimstone. The Countrey is plaine to the West, and exceeding fertile, stored with plants, flowers, and trees of diuers kinds. Also many strange fruits do grow therein, and there is great abundance of rare Fowles. *Ienisce* in the spring ouerfloweth the fields about seuentie leagues, in like manner as they report vnto vs, as *Nilus* doth *Egipt*. Wherwith the *Tingoesi* being well acquainted, doe keepe beyond the Riuer, and in the mountaines, vntill it decrease, and then returne, and bring downe their heards of Cattell into the plaines.

Mountaines on the East side of *Ienisce* casting out fire and brimstone.

The ouerflowing of *Ienisce* in the spring: as it may seeme from melted Snow.

The *Tingoesi* being a very gentle people, by the perswasion of the *Samoieds*, without delay submitted themselues to the same Gouernours which they obeyed, whom they reuereneed as a kind of Gods. But what God they worship, or with what rites, it is vncertaine, neither as yet can bee knowne, the *Moscouites* being negligent searchers into such things.

Neither hereafter will I maruell, though the Streight of *Waygats* bee stopped vp to the North-east, with such huge Mountaines of Ice, since the Riuers *Obi* and *Ienisce*, and very many more, whose names are not yet knowne, powre out so huge a quantitie thereof, that in a manner it is incredible. For it commeth to passe in the beginning of the spring, that in places neere vnto the Sea, the Ice through the excessiue thicknesse and multitude thereof, doth carrie downe whole woods before it. And without doubt this is the cause, that about the shoares of the Streight of *Waygats*, so great abundance of floting wood is euery where seene. And whereas in that Streight neere vnto *Noua Zembla*, it is extreame cold, it is no maruell, if in regard of the narrownesse of the Streight, so huge heapes of Ice are gathered and frozen together, that in the end they grow to sixtie, or at least to fiftie fathoms thicknesse, as this present yeere (1612) they measured the same, which at the cost of *Isaac Lamer* went thither in a small Barke, in whose

Reason why *Waygats* is stopped with Ice.

Ice 60. or 50. fathoms thicke in the Streight of *Waygats*.

whoſe companie the ſaid *Iſaac Lamer* would haue ſent mee, but I would not. For I am readie to proue, that this is no paſſible way, and that they will ſtill loſe their labour, whoſoeuer ſhall attempt the ſame, vnleſſe they take another courſe in the buſineſſe. But let vs returne to our purpoſe.

The firſt voyage Eaſtward beyond the Riuer *Ieniſce*.

Furthermore, thoſe whom I mentioned before, vndertooke a long Iourney beyond the Riuer *Ieniſce* Eaſtward, and were ſomewhat afraid to turne to the South, taking with them certaine *Tingoeſies*, by whom they were informed, that many Nations dwelt toward the South, which differed much from them, whoſe Kings were moſt commonly in warre one with another. But hauing trauelled certaine dayes to no great purpoſe, at length they returned home; Yet before their returne they gaue order to the *Tingoeſies*, to ſearch thoſe Countreys more thorowly; who promiſe that they would doe ſo: And they renewed the league which formerly they had made with the *Moſcouites*. The *Moſcouites* at their departure, left diuers of their people in thoſe parts, and alſo certaine *Samoieds* and *Tartars* their confederates, after they had beſtowed ſome ſmall gifts among the *Tingoeſies*.

Many Nations dwell toward the South. Which are in warre one with another. Such are the *Zagatay Tartars*, as before in *Goes* is ſeene.

The ſecond voyage Eaſt beyond the Riuer *Ieniſce*.

The yeere following, the *Tingoeſies* ſent diuers of their owne people Eaſtward: who trauelling ſomewhat farther then they had done before, at length found another mightie Riuer, ſomewhat leſſer then *Ieniſce*, but as ſwift as it: And following the courſe thereof ſome few dayes, they lighted vpon certaine people whom they tooke, being ſwifter a foot then they: But they could not vnderſtand their language, ſauing that by certaine ſignes and words of the *Saluages*, which often repeated *om om*, they coniectured that on the other ſide of the Riuer, they heard it often thunder. They added alſo, that they had often heard the noyſe of men in thoſe parts: And pointing to the Riuer with their fingers, they often repeated the word *Piſida*: whereby the *Tingoeſies* gathered, that that ſhould bee the name of the Riuer; but by the voyces *om om*, the *Moſcouites* did afterward gather, that they were knollings of Bells. The *Tingoeſies* at their returne from thence, carried with them diuers of the people of that Countrey, which died all by the way, either for feare, or through change of ayre. The *Tingoeſies* were verie ſorrie for their deaths. For at their returne they affirmed, that they were men of good vnderſtanding, well let, with ſmall eyes, flat faced, browne colour, and enclining to tawnie.

Certaine people taken.

The Riuer *Piſida*.

Bells.

The deſcription of the people dwelling vpon the Riuer *Piſida*. Such are the people of the Eaſt both *Tartars* and *Chinois*.

When the *Moſcouites* vnderſtood theſe things by the *Samoieds*, which returned into *Siberia* out of the Countrey of the *Tingoeſies*, eftſoones they were ſtirred vp with a great deſire to ſearch out the farther parts of that Countrey, wherefore they became ſutors to the Gouernour, that they might bee ſent thither with ſome others ioyned with them. Hee preſently yeelded to their requeſt, granting vnto them a certaine companie of Souldiers, and enioyned them curiouſly to ſearch out all things, and to take with them *Tingoeſies*, *Samoieds*, and *Tartars*. So beeing about ſeuen hundred men, they paſſed the Riuer *Obi*, and came to the Riuer *Ieniſce*, through the countreys of the *Samoieds* and *Tingoeſies*. And paſſing the Riuer, they marched forth Eaſtward, hauing the *Tingoeſies* for their guides: which did not onely ſerue them as guides, but alſo plentifully prouided all the company with victuals, taking with wonderfull dexteritie, Fowles, Goats, Reyne Deere, and ſuch like wilde beaſts: as alſo no ſmall quantitie of fiſh out of the Riuers which they met in the way. Hauing trauailed as farre as the Riuer *Piſida*, they pitched their Tents on the banks thereof, with purpoſe to ſtay there till it were paſſable, the Ice being ſhortly to breake vp, becauſe the ſpring was at hand, at which time they came thither, yet they durſt not paſſe ouer the Riuer *Piſida*; hauing now plainly heard the ſound, whereof they were aduertiſed before: which they certainly iudged to bee nothing elſe but the towling of Brazen Bells; and when the wind blew from the farther ſide of *Piſida*, they ſometimes heard the noyſe of men and horſes. Moreouer they ſaw certayne ſayles, though but a few; whereby they coniectured that they were veſſels, which ſayled downe the ſtreame. They ſayd further, that the ſayles were ſquare, like the Indian ſayles, as wee ſuppoſe. But ſeeing no people at all on that ſide of the Riuer where they remained, after they had ſtaied there a certaine ſpace, and had perceiued that in the ſpring time the Riuer did greatly ſwell (which neuertheleſſe they can hardly affirme for a certaintie, ſince the ſhoare is high on both ſides:) At length by very great iourneys, and yet not before Autumne they returned home to *Siberia*; reporting, and that vpon their oathes, That in the moneths of Aprill and May, they were very much delighted with the exceeding faire ſhew of that Countrey; And that they had ſeene therein many rare Plants, Flowers, Fruits, Trees, Fowles, and wild Beaſts. But the *Moſcouites* are nothing curious in ſuch things, as men that ſeeke after nothing but gaine, in all things elſe very negligent and rude.

The towling of brazen Bells of which they haue in *China*, and perhaps in the North parts about it.

Horſes in *Piſida*.

Veſſels ſayling downe *Piſida* with ſquare ſayles.

They came not home till Autumne.

The pleſantneſſe of this Countrey in Aprill and May.

Theſe newes being brought to the Court of *Moſcouia*, the Emperour *Boris*, and the Noblemen that were with him, much wondering thereat, and inflamed with a great deſire to ſearch out exactly all particulars, reſolued the yeere next enſuing, to ſend Ambaſſadours thither, which ſhould carrie preſents with them, and ſhould take *Tartars*, *Samoieds*, and *Tingoeſies* in their companie. And they were enioyned to ſearch out the further ſide of the Riuer *Piſida*, and to make a league of friendſhip with the Kings if they found any, and ſet downe in writing all things that they could obſerue by the way, and ſhould make report of them moſt exactly. But theſe things did not take effect, becauſe of the breaking out of the ciuill warres, among the *Moſcouites* in the meane ſeaſon.

I am

Digitized by Google

I am of opinion, that in this countrey is the beginning, and the bounds of the Kingdome of *Cataia*, which bordereth vpon *China*. Yet I feare the *Moscouites* will lose their labour, if they euer returne thither. But time will declare the euent hereof. The opinon of the Author of this Story.

Yet for all this, by the commandement of the Gouernours, euen in the time of this warre, there was a voyage made into those parts, many Inhabitants of *Siberia* being employed in the same, who passing ouer the Riuer *Ienisce*, trauelled further on foot, diuers of whom died by the way, being not accustomed to hardnesse. These also found many things agreeable to the relation of the former. And they likewise did oftentimes heare the towlings of brazen Bells. But vpon the dissuasions of the *Tingoesies* they durst not passe the Riuer: But they stayed awhile in the Mountains, out of which they saw oftentimes flames of fire ascend; & they brought thence some small quantitie of brimstone, and of touch-stone: so that some rich Mines seeme to bee in those hills. Moreouer, the Gouernour of *Siberia* caused certaine couered Boats to bee made, and commanded them to saile downe by the shoare of the Riuer *Obi*, in the first beginning of the spring, and to coast the same continually till they came to the Riuer of *Ienisce*, wherein they should afterward saile certaine dayes, discharging it selfe (as hee thought) into the sea. He sent others likewise to trauell ouer Land: giuing commandement to both of them before they went: To the Land-men, that they should stay by the Riuers side vntill the Boates arriued; and that if they did not arriue there, then after one yeere they should returne. To them that were in the Boates, ouer whom he made one *Lucas* Captayne, he gaue in charge, diligently to discouer the Coast, and whatsoeuer thereon was worthy to bee obserued. They did as they were enjoyned. And the Mariners arriuing at the mouth of the Riuer *Ienisce*, met with certayne of them which trauelled ouer Land, which were sent before in Boats and Skiffes downe the Riuer. The fourth Voyage to the Riuer *Pisida*. The towling of Brazen Bells. Mountaynes casting out flames of fire. The fift Voyage by *Obi* and the Sea-coast to the Riuer *Ienisce*. *Lucas* Captain of the Discouerie by Sea.

In their journey, they found all things in a manner to fall out as the Gouernour had fore-told. But *Lucas* being dead by the way, and some others, they thought it the best course, for both of the Companies to returne the same way that they came: And when they came home into *Siberia*, they declared vnto the Gouernour the whole successe of their journey: which caused the same to be sent vnto the Emperour: And this Relation is layed vp among the Treasures of *Moscouia* vntill these Warres bee ended; and then, as it is thought, it shall bee examined. But wee feare that by this time it is perished, which if it be so, truly it is much to be lamented, in regard that they haue found so many rare and sundry Ilands, Riuers, Fowles, and wild beasts, and that farre beyond the Riuer *Ienisce*.

Moreouer, the Riuer *Taes* falleth into the Riuer of *Obi*, springing as it seemeth, out of places neere vnto the Riuer *Ienisce*, and out of a great Wood in those parts: out of which Wood another Riuer seemeth also to haue his Fountayne not farre from the Riuer *Taes*, and falleth into the Riuer of *Ienisce*. So that euen from *Obi* they trauell by water along the Coast of the *Samoieds*, and passing only two leagues ouer Lands, they meet with the Riuer *Torgalse*, downe which with the streame they fall into the Riuer *Ienisce*. And this is a very easie way, and lately found out by the *Samoieds*, and the *Tingoesies*. *Taes* Riuer falleth into *Obi*. The Riuer *Torgalse* falleth into *Ienisce*. An *Ouer-hall* of two leagues only.

Doubtlesse (it is to be lamented) that the *Hollanders* haue not had good successe in passing the Streight of *Way-gats*; but surely they know not the right way to attempt the same. For if they attempt it by shippes, though it were an hundred times, it would hardly once take effect. But if they would throughly discouer these Countreyes, then they should stay two or three yeares about *Petsora* and *Way-gats*, where they should not want good Hauens, nor Victualls: and from thence they should send out some with small Boates to discouer the further parts, by the very example of the *Russes*, whose Friendship if they would procure vnto themselues, they should easily find Guides and Pilots: and so at length all these Coasts would throughly bee discouered. The right way to discouer the North-east parts. Note.

Doubtlesse goodly Countreyes would bee found out, and not only Ilands, but the Mayne Land also. Yet there is just cause to doubt, whether *America* aboue *China* joyne not with some of the three parts of the old World: As wee see *Africa* joyned vnto *Asia*, with a narrow necke of Land vpon the Redde Sea. And doubtlesse, this seemeth likely to bee true. For who can affirme, that they bee separated? Sauing that they haue found some things in the Writings of prophane Authors, whereby it may be proued, and bring many Arguments from thence. And though these parts bee not joyned together, yet they must needs bee diuided with some small Streight.

§. III.

A Note of the Trauels of the Russes *ouer Land, and by Water from* Mezen, *neere the Bay of Saint* NICHOLAS *to* Pechora, *to* Obi, *to* Yenisse, *and to the Riuer* Geta, *euen vnto the Frontiers of* Cataia; *brought into* England *by Master* IOHN MERICKE, *the* English *Agent for* Moscouie, *and translated out of the* Russe *by* RICHARD FINCH.

Mezen. *Pechora.* *Montnaia Reca,* Th. *Volec,* or Ouer-hall, *Zelena Reca.* *Obi* Riuer. *Taes* Riuer and Castle. *Toorou-hansko Zeemouia.* *Tingoosie* Riuer. *Yenisey* Riuer. The *Boulashies.* *Secahee.* *Yenisey* the greater and lesse. *Imbaki.* *Oftaki.* *Geta* Riuer. Summers trauell from *Tingosey* to *Geta.* Vessels of greater burthen drawne with the Rope, a thing vsed in *China.*

FRom *Mezen* to *Pechora,* is a thousand Versts: and the same is trauelled with Reyne Deere. From *Pechora* to *Montnaia Reca,* or *The troubled Riuer,* and to the parts of *Mongosey,* it is trauelled in Boats called Coaches in seuen Weekes. At this place is a certayne Ouer-hal, where the foresaid Boats or Vessels are drawne ouer by men. Out off *Montnaia Reca,* or *The troubled Riuer,* passing this Ouer-hall, they enter into *Zelena Reca,* or the *Greene Riuer.* From *Zelena Reca,* or the *Greene Riuer* to *Obi,* is three Weekes rowing, running downe with the Current; but with a faire wind it is no more but three dayes and three nights Iourney. From *Obi* to *Taes* Castle, is a Weekes rowing. From *Taes* Castle to the Riuer *Yemissey* vpon long Woodden Pattens through the Snow, is three Weekes trauaile. But through the deepe Channell in the afore-said Vessels, called Coaches; is foure Weekes trauayle. It bringeth them to a place, called *Toorou-hansko Zeemouia,* that is, The Wintering place of one called *Toorouhan.* Hauing trauelled to this *Toorou-hansko Zeemouia,* they come out on the backe side to a place called, The Riuer of *Tingoosie,* being a stonie or Rocky Riuer, which falleth into the Riuer *Yenisey.* In that place liue the *Tingoosies,* and people of the afore-said Land of *Tingoosi.* Beyond them liue a people called The *Boulashees:* And beyond the *Boulashees* inhabit the people of *Seelahee.* These people report concerning *Yenisey* the *Great,* and *Yenisey* the *Lesser:* That beyond this fore-said *Yenisey* inhabit the people *Imbaki,* and the *Oftaki,* which are a kind of *Tartars.* Also beyond the *Tingoosies* is a Riuer called *Geta,* which was trauailed by the *Russes* of *Vashen,* and *Russes* of *Pechora.* These men by report liued in the parts of *Geta,* sixe yeeres. After which one of the *Russes* of *Vashen,* named *Wolfe,* returned into *Siberia;* and he reported, that he was trauailing from *Tingoosie* to *Geta* a Summer. Likewise, this said *Wolfe* reported, that a *Samoied* told him, that in *Yenisey* the greater were Vessels of a great burthen, seene to be drawne with the Rope, by a very great number of people: but hee could not tell what people they were, neither whither they did intend to trauaile with the said Vessels.

CHAP. VIII.

A Voyage made to Pechora 1611. *Written by* WILLIAM GOVADON *of* Hull, *appointed chiefe Pilot, for Discouerie to* Ob, *&c.*

40

THe eleuenth of Aprill we weighed Anchor at *Blacke-wall* in the Riuer of *Thames,* in a ship called the *Amitie;* whereof *Iames Vadun* was Master, and sayling along the Coasts of *England, Scotland, Norway,* and *Finmarke,* on the eleuenth of the next moneth of May, wee found our selues in the latitude of 71. degrees 40. minutes.

The twelfth, wee ranne sortie eight leagues North North-east, the wind being at South South-east, and found our selues in the latitude of 73. degrees 42. minutes, and at night wee had shoaldings of *Cherie* Iland: for wee were enioyned by our Commission to touch there, although it were three degrees to the North out of our way.

50

Cherie Iland. The thirteenth, being Whit-sunday it cleered vp, and then we did see *Cherie* Iland six leagues East South-east from vs.

The fourteenth, being faire weather, we stood to the Northwards, thinking to haue gone on shoare, but we could not for Ice, and labouring to Land on the South side of the Iland, wee met with *Ionas Poole* about Eeuening in the *Elizabeth,* who came as then to the Iland, and was set forth by the Right Worshipfull Company of our *Russian* Merchants, to discouer further Northward, from eightie degrees toward the North Pole. Then we stood to the Eastward, where wee found great store of Ice.

Ionas Poole.

60

The fifteenth, we spent on the South-side of the Iland, in hope of the arriuall of the *Marie Margaret,* which being a ship of nine score Tunnes, was set forth very chargeably by the aforesaid *Russian* Company, and had in her sixe *Basker,* being excellent Whale-killers of Saint *Iohn de Luz,* for the killing of the Whale on the Coast of *Greenland,* in a Road called *Crosse* Road, standing

Six *Biscainers.* *Crosse* Road.

Digitized by Google

ſtanding exceeding farre to the North, euen in the latitude of 79. degrees and better. The ſame day at night, ſeeing that there we could doe no good, we determined to proceed on our Voyage for the Riuer of *Pechora*: and Letters being giuen one to the other for Teſtimoniall of our meeting in that place, we left *Ionas Pooley*, and directed our courſe to the Eaſtward.

The two and twentieth of May, we came to a ſmall Iland, called *Bigs* Hole by *Tapani* Harbour. May. *Bigs* Hole.

The three and twentieth, we arriued at the Ile of *Kildin* in *Lappia*. *Kildin* in *Lappia*.

The foure and twentieth, *Ioſias Logan*, which was appointed Factor for *Pechora*, and my ſelfe with two more, went to *Olena*, and ſtayed there all the fiue and twentieth, being Saturday, where wee found a ſhip of *Yarmouth*, whereof *Iames Wright* of *Hull* was Maſter, of whom we learned the proceeding of the *Hollanders*. *Olena*.

The ſeuenth of Iune, in the morning we had ſight of the Coaſt of *Lappia*, a little ſhort of Cape *Comfort*, and met with a ſhip of *Amſterdam*, by which we ſent Letters to Maſter *Iohn Mericke* our *Engliſh* Agent, then Reſident in *Colmogro*; and we had two Hogſheads of Beere of them. Iune. Cape *Comfort*. A ſhip of *Amſterdam*.

The eight, we plyed to Cape *Comfort*, the wind at South-eaſt.

The ninth being Sunday, in the morning wee put off from the Coaſt of *Lappia*, to croſſe ouer the *White Sea*, to the Cape of *Callinos* corruptly, and commonly called *Candinos*. At noone we paſſed through ſome Ice, the weather being thicke and foggie.

The eleuenth, we plyed to the Cape of *Callinos*, paſſing through much Ice, the wind at North North-eaſt. And therefore wee thought it better to goe to the Southward againe: and in the Eeuening we came to an Anchor in ten fathomes. This night wee had a ſore ſtorme; the winde at North-eaſt. *Callinos*.

The twelfth, in the morning we weighed, and in weighing brake our Anchor: and then wee ſtood to the Southward, and came to an Anchor; and at night wee went on ſhoare for Wood, and Water, where was good ſtore of Drift Wood: And within a ledge of Rockes on the Weſt-ſide of *Callinos* there lay ten Lodias or *Ruſſe* ſmall ſhippes, ſome fourteene or fifteene Tunnes the biggeſt (of a Towne called *Pinega*,) all which were bound for *Noua Zembla*, to kill the Morſſe: with the men of which Fleete wee had ſome conference, and did ſee their Prouiſions: which were Launces of their faſhion, and Harping Irons; their Victuals were Salt-fiſh, Butter, Bacon, Meale, their Drinke Quaſſe. They goe on ſhoare. Ten Lodias of *Pinega* bound for *Noua Zembla*.

The ſixteenth, in the morning wee weighed and ſtood our courſe for the Ile of *Colgoiene*, the wind being at South South-weſt, and did find the Ice that was cloſe to the ſhoare to bee open: but at night finding that we could not ſayle our courſe for the Ice, we thought it better to ſtay, and ſo came to an Anchor.

The ſeuenteenth, wee weighed in the morning, and ſtood along the ſhoare, which did lye South-eaſt by Eaſt, and North-weſt by Weſt. And in the after-noone, wee went on ſhoare with our ſhallop, and came to a Riuer, which we called *Hakluyts* Riuer, where wee did ſee certayne *Samoieds*, with their Deere: but when they perceiued vs, they fled into the Land, carrying with them ſuch things as in haſte they could get together: but left moſt of their neceſſaries, as Bowes, Arrowes, long Speares, wanting Iron heads burnt at the end, Harping Irons, Wimbles, and Morſſe-skinnes, lying hid, ſome in one place, ſome in another: which wee cauſed our men to vncouer, and would not ſuffer them to take any thing away; only I tooke the Pizzell of a Morſſe which they had lately killed; and *Ioſias Logan* left a Knife, that they might not ſhunne vs hereafter. The ſame Eeuening we anchored and ſtayed all night.

The eighteenth, wee weighed, and at noone wee came to an Harbour, which, as wee thinke, was the very ſame where Maſter *Stephen Burrow* was in his Diſcouerie of *Vaigatz*, and *Noua Zembla*, 1556. where there is twelue, or thirteene foot at high water vpon the Barre, and within ſix or ſeuen fathomes. Alſo in this place were three Lodias of *Pinega*, which when they ſaw vs come in, rowed out, and at night returned, and ſome of their men came aboord of vs, and told vs that they could not paſſe for Ice; and ſaid, that they were bound for *Sharkai Gooba*, or *Shar* Bay to fiſh for certayne fiſhes; which they call *Omilie*, which are ſomewhat like a Shad, and for Morſſes. A good Harbour. *Stephen Burrow*. Three Lodias of *Pinega*. *Sharkai Gooba*, which is the great Bay of *Hayuburi*.

The twentieth, *Ioſias Logan* and my ſelfe went ouer to the Mayne, which was diſtant two leagues, and came to a great Riuer in 67. degrees and 40. minutes, where there had beene people: and there we ſaw foure or fiue great white fiſhes ſwimming, which are foure or fiue yards long, and called by the *Ruſſes Belluga*, whereof they make Oyle, whereof afterward we found at *Pechora*, great ſtore to be ſpoyled. They land the third time. A great Riuer.

The one and twentieth, we ſent our men for Wood, for there was good ſtore of Flote-wood as we had found all the Coaſt along; but none growing. Flote-wood.

The two and twentieth, in the morning we came ouer the Barre, the winde at South South-eaſt, directing our courſe for the Ile of *Colgiene*; and at noone wee paſſed through much Ice, which lay ſo thicke that wee could not ſayle, but tooke in our ſayles, and made faſt our ſhip to a piece of Ice.

The three and twentieth, in the morning wee ſet ſayle, and plyed to the Wind-ward, the wind at South-eaſt, with raine: and at night wee mored to a Cake of Ice.

Digitized by Google

The foure and twentieth, in the morning we ſet ſayle, and pyled to wind-ward, the wind at South-weſt to get cleere of the Ice; and at noone we obſerued and found our ſelues to bee in 67. degrees 12. minutes, and in the after-noone we had ſight of the Land againe, being foure leagues to the Southwards of the aforeſaid Harbour; and finding the Tyde to ſet very fore vpon the ſhoare to the Weſtward, we ſtood to the Eaſtward, bearing through the Ice, and at twelue at night wee mored to a piece of Ice.

A fore tyde vpon the ſhoare.

The fiue and twentieth, we looſed and ſayled to the Eaſtward, till we found the Ice ſo thick, that we could not paſſe further: then we made faſt to a piece of Ice: the wind at North North-eaſt, thicke fogge, and ſome raine. The ſix and twentieth, we ſet our fore top-ſayle, the wind at North North-eaſt, blowing hard and thicke fogge: we ſtood ſometimes one way, ſometimes another, as we could find the Ice open; and at noone we had ſight of the ſhoare, being foure or fiue leagues off, and the Ice lying ſo thicke, that we could make no meanes to get farther from the ſhoare: wherefore wee made faſt to a great Cake of Ice. The ſeuen and twentieth, wee lay ſtill, the Ice lying very cloſe, with thicke foggie weather: the wind at North North-weſt.

The eight and twentieth, in the morning it was cleere, and the Land did beare North by Weſt ſeuen leagues off, and then we ſet ſayle, paſſing to the Eaſtward till noone: then we made faſt to a piece of Ice, it being very foggie: the wind at Weſt North-weſt. And the ſame day at eight in the after-noone wee looſed from the Ice, it being cleere, the wind at North-weſt. And at mid-night we got cleere of the Ice, keeping our courſe Eaſt North-eaſt.

Cape Swetinos.

The nine and twentieth, at eight in the morning, we had ſight of Cape *Swetinos*, the winde at North North-weſt, with thicke foggie weather: At noone, finding the Ice to lye cloſe to the ſhoare, we caſt about to the Weſtward. And at eight in the Eeuening, wee came to an Anchor in tenne fathomes; and then I went on ſhoare, where there were two *Ruſſian* Croſſes: the Land was ſmooth, and full of freſh Ponds, being a kind of white Chalke Cliffes. At our comming aboord, we weighed and ſtood neerer to the ſhoare becauſe of the Ice.

William Gourdan goeth on ſhoare. Two Ruſſe Croſſes.

The thirtieth, in the morning the Ice came ſo extreamely vpon vs, that we could not weigh; for our men being caſt from the Capſtan, our Cable brake, and ſo wee loſt an Anchor. Then ſeeing wee could not paſſe to the Eaſtward, wee ſtood to the Weſtward of Cape *Swetinos*, into the afore-ſaid deepe Bay in ſeuen fathomes: the wind at Eaſt North-eaſt, cleere weather.

A deepe Bay Weſtward of Cape Swetinos

The firſt of Iuly, we went on ſhoare to ſee if there were any thing to take notice of: but wee found nothing worth the going. For only we ſaw a wild Deere, and an Houſe of Wood after the *Ruſſe* faſhion, where people had beene. The ſecond, likewiſe we rode ſtill, and going againe on ſhoare we did ſee the Ice all gone to the Eaſtward; and ſo came aboord. The third, at ſixe in the morning we weighed, the wind at Eaſt North-eaſt, and plyed through ſome Ice: and at foure in the after-noone we got cleere of it: and at eight of the clocke wee came to an Anchor, it being calme and cleere weather: then I went on ſhoare, where we were firſt; and came aboord becauſe of the great abundance of Muskitos or Gnats. At our comming hauing the winde at South-weſt, we ſet ſayle and ſtood along the ſhoare.

They goe on Land againe. An houſe of Wood.

They goe on Land the ſixth time.

Abundance of Muskitos.

The fourth, we ſayled along the ſhoare with faire weather, hauing the winde variable. The fifth, wee plyed to the Eaſtward; wind at North-eaſt by Eaſt faire weather. The ſixth, wee plyed along the ſhoare, the wind at North by Eaſt. And in the after-noone wee paſſed through much Ice. The ſeuenth, we plyed through the Ice to the Eaſtward, the winde at Eaſt North-eaſt, thicke and foggie. The eight, with cleere weather, the winde at North North-eaſt, we plyed to the Eaſtward; and at noone obſerued the Sunne hauing 69. degrees 40. minutes: At Eeuening we had ſight of the Land to the Eaſtward of the Riuer of *Pechora*; and thinking to get into the ſhoare we could not for the ſhoald water.

The ninth, in the morning we ſtood backe to find the Barre or entrance of the Riuer of *Pechora*. And in the after-noone, ſeeing the Sand ouer the Ice, which was not broken off from the ſhoare, I went thither with my ſhallop, and going on ſhoare, we eſpyed three Croſſes, and certayne *Ruſſes* walking vpon the Sand; who told vs, that that was the place that we deſired: and one of them came aboord our ſhip to bring vs ouer the Barre. But comming to ſhoald water, wee durſt not truſt his skill, but ſtood backe againe, and came to an Anchor in foure fathomes.

Croſſes found and certayne Ruſſes at the mouth of Pechora.

The depth of the Barre of the Riuer of Pechora.

The tenth, in the morning I went to ſound the Barre; where we had eleuen and tenne, and in one place but nine foot water. And comming aboord wee ſet ſayle to come in. And in going ouer the Barre we were on ground; but, God be thanked, wee got well ouer, and came to an Anchor in ſix fathomes.

They paſſe ouer the Barre, and ride in ſix fathoms water.

The eleuenth, the Ice brake off from the ſhoare, and came ſo faſt vpon vs, that we could not ſhift from it, but were put on ground vpon a Sand; yet God be thanked without any harme. The ſame day leauing our ſhip lying ſo, *Ioſias Logan* our Factor, my ſelfe, *William Purſglowe*, being rowed in our Skiffe by ſix of our Mariners, tooke our way toward the Towne ouer a ſhoald Sea, which the *Ruſſes* cal, *The Dry Sea*: which may very wel be ſo called. For on the ſtarboord or Weſt ſide going vp is a low dry Sand, and on the Larboord or Eaſt ſide is all ſhoald water, as two, three, or foure foote water. And ſeuen leagues within to the South-weſt is an Iland, called *Dolgoi*, that is to ſay, *The long Iland*, which you muſt keep on the Larboord or Eaſt ſide, & then ſteer away South South-weſt,

They goe vp the Riuer of Pechora, ouer The Dry Sea. Dolgoi is ſeuen leagues vp from the Barre

Digitized by Google

west, neere vpon twentie leagues, all in shoald water; and then you shall come to the sight of an high Land called The *Bolwan*; which in the *Russe* Tongue signifieth, *a Blocke*: which you must leaue on the Larboord, or East side. And be sure to keepe the channell, which doth trend South-west, and South-west by West. By report of the Inhabitants the Riuer hath two and seuentie mouthes.

The *Bolwan*, or East head-land of the Riuer *Pechora*.

The channell trendeth South-west.

The twelfth, we passed ouer the *Drie Sea*, (which the *Russes* call in their Language, *Suchoi Morie*,) to the mouth of the Riuer *Pechora*: where we found many small Ilands, some a mile, some two miles in length, and so shoald water, that wee could not get to the shoare with our Shallop, but lay in her all night at an anchor, being vncertaine which way to take: and seeing so many entrances before vs, we could hit right at none. The thirteenth, in the morning wee got to an Iland, at the very mouth of the Riuer, where wee stayed all the day, hauing much wind and fogge. The fourteenth, being Sunday, we set sayle from the Iland, the Sea going very high: and at noone we came by Gods direction, into one of the chiefest entrances of the Riuer *Pechora*; and came to an house, where there were two and their families, who made vs the best entertaynment that they could, and gaue vs directions how to goe to the Towne.

An Iland neere the mouth of the Riuer.

They find one of the chiefest entrances of the Riuer.

The fifteenth, we came to a Sari or Ferme house of one of the principall men of the Towne; who bid vs kindly welcome: and as the place and season affoorded, hee made vs good cheere. He lay there at this time, to take Duckes, Swannes, Geese, and other Fowles: for then was the time of the yeere. Their feathers they sell, and their bodies they salt for winter prouision. He also gaue vs a man to bring vs to the Towne.

They come to a Ferme house of a principall man of the Towne.

The sixteenth, we came to the Towne of *Pustozera*, which standeth vpon a Lake. There was no Gentleman or Gouernour in the Towne at our arriuall: for he had destroyed the Castle, and fled away the last Winter. For certaine dayes wee could haue no answer, whether wee might stay or no, all the chiefe men being abroad for their Winters prouision. But the chiefe Customer *Masphe*, sending men to know their mindes, the three and twentieth day of the same moneth of Iuly, we were embraced of them, and desired to stay, and they appointed vs an house to dwell in. Furthermore, they told vs that the Riuer *Pechora* was more conuenient for vs, then the Riuer of *Duyna*: and that a great part of the goods, which come to *Colmogro* vpon *Dwina*, doe passe in one place or other by the Riuer *Pechora*, which, they say, runneth through *Siberia*; and how much farther they themselues know not. The fiue and twentieth, in the morning, hauing one of their Boats full with feathers, wee departed from the Towne, taking our leaues of *Iosias Logan*, who stayed behind.

The Towne is called *Pustozera*.

Pechora runneth through *Siberia*, and farther.

The sixe and twentieth, we came downe to the *Bolwan*, where wee went aboord of two Coches of some fifteene tunnes a piece, bound for *Mongunzea*. Here I went on shoare, and bought an airie of Slight-falcons, being very young. The seuen and twentieth, in the Eeuening wee came aboord our ship, and the same night tooke in the Feathers, and laded their Boat againe with Meale, sending her vp to the Towne by the *Russes* that brought her downe.

Two Coches or Lodias, bound for *Mongunzea*.

He buyeth two Falcons.

The eight and twentieth, we got out our goods, which were appointed to be left at *Pechora*, vnder the charge of Master *Logan*, and made ready our ship. The nine and twentieth, wee weighed anchor, and fell lower downe, the wind North North-east. The thirtieth, wee rode still, and in the after-noone two Lodias that were fishing for *Omulais*, went out to Sea, the wind at North-west by West. The one and thirtieth, the wind being at West North-west, there came in foure and twentie sayles of Lodias or Coches, all bound for *Mugunzea*: but the yeere being farre spent they gaue ouer their Voyage, and went to the Towne of *Pustozera*, to winter. Out of one of the which Lodias we hired a man belonging to the Towne, to stay with *William Pursglone* and *Marmaduke Wilson*, by our goods, till the Lodia came, which we had hired. Which two were to winter with Master *Logan* in the Countrey. The aforesaid foure and twentie Lodias were of *Colmogro*, *Pinega*, *Mezen*, and *Pustozera*.

The fifteene tunnes a piece, bound for *Mongunzea*. Here I went on shoare, and bought an airie of Slight-falcons, being very young. The seuen and twentieth, in the Eeuening wee came aboord our ship, and the same night tooke in the Feathers, and laded their Boat againe with Meale, sending her vp to the Towne by the *Russes* that brought her downe.

The eight and twentieth, we got out our goods, which were appointed to be left at *Pechora*, vnder the charge of Master *Logan*, and made ready our ship. The nine and twentieth, wee weighed anchor, and fell lower downe, the wind North North-east. The thirtieth, wee rode still, and in the after-noone two Lodias that were fishing for *Omulais*, went out to Sea, the wind at North-west by West. The one and thirtieth, the wind being at West North-west, there came in foure and twentie sayles of Lodias or Coches, all bound for *Mugunzea*: but the yeere being farre spent they gaue ouer their Voyage, and went to the Towne of *Pustozera*, to winter. Out of one of the which Lodias we hired a man belonging to the Towne, to stay with *William Pursglone* and *Marmaduke Wilson*, by our goods, till the Lodia came, which we had hired. Which two were to winter with Master *Logan* in the Countrey. The aforesaid foure and twentie Lodias were of *Colmogro*, *Pinega*, *Mezen*, and *Pustozera*.

The stocke of goods left in *Pustozera*.

24. Lodias bound for *Mugunzea*, which is to the Eastward of *Ob*.

The first of August, the wind at West, we weighed, and, God bee thanked, came safely ouer the Barre of *Pechora*. From thence wee directed our course for *Noua Zembla*: and at noone we came to Ice: where hauing sayled many points of our Compasse, at mid-night wee tooke in our sayles, and made fast to a piece of Ice; the weather being very thicke and foggie. The second being very cleere, and seeing no way to passe to the Northward for Ice, we determined to return; and because the yeere was so farre spent to go for *Cherie* Iland, to see if it pleased God to giue vs there any good successe, for the bearing of the charges of this Voyage. So wee loosed, and at eight in the Eeuening wee got cleere off the Ice, keeping our course by the edge of it; which did lie East by North, and East North-east. The third, at noone we had sight of *Colgoiene* Iland, and tooke the latitude, being on the North side of the Iland which was 69. degrees 20. minutes: and at night I went on shoare to see the Land, which was high clay ground: and I came where there was an airie of Slight-falcons: but they did flie all away saue one, which I tooke vp, and brought aboord. This Ile of *Colgoiene* is but thirtie leagues from the Barre of *Pechora*.

They safely passe the Barre of *Pechora*.

Colgoiene Iland 69. degrees, 20. minutes.

Falcons.

The fourth, we passed through some Ice, and at noone wee got cleere off it, and stood to the Northward, *Colgoiene* bearing South-west sixe leagues, the wind at East North-east. The fift, we had faire weather, the wind at East South-east, wee sayled two and thirtie leagues North

Digitized by Google

70 degrees 40. minutes. North-west, we obserued, and found our selues in 70. degrees and 40. minutes. The sixt, the wind being at South South-west, we steered North North-west fortie leagues, and were in 72. degrees 34. minutes. The seuenth, the wind was variable, the weather faire: we steered North by West, eight and thirtie leagues, and at noone had the latitude of 74. degrees 30. minutes. And at eight in the Eeuening we sounded, and had eightie fathomes greene Oze. The eight, the wind at West, we sayled North twenty leagues: in the morning we sounded, and had seuenty fathoms Oze: and at three in the afternoone, the wind comming North, wee cast about to the Westward.

72. degrees 34 minutes.

74. degrees 30. minutes.

The ninth, faire weather, we sayled thirteene leagues West, the wind at North. At noone we sounded, and had an hundred and twentie fathomes, greene slime. The tenth, the wind variable, with fogge and raine: wee steered West North-west fiue and twentie leagues: and at noone we obserued, and had the latitude of 74. degrees 57. minutes. The eleuenth, was thicke foggie weather; wee sayled foure and twentie leagues West: and at eight in the Eeuening wee sounded, and had ninety fathomes, soft Oze. The thirteenth, at noone wee had sight of *Cherie* Iland, being within a mile of it, before we did see it: and the same Eeuening wee got into the *Coue*, and mored our ship. Here we stayed twelue dayes, taking what it pleased God to send, which was but little.

74. degrees 57. minutes.

They arriue at *Cherie* Iland.

The sixe and twentieth of August, we left the Iland, because the time of the yeere was farre spent, and returned for *England*, where (blessed be God) we safely arriued in Saint *Catharines* Poole, in the Riuer of *Thames*, on Saturday being Saint *Matthews* day, and the one and twentieth of September, 1611.

30. Lodias. There were in the Hauen of the Riuer *Pechora*, at our being there, about thirtie Lodias, or small *Russe* ships, hauing ten, twelue, fourteene, and sixteene men in each of them: which purposed to haue gone, some to *Noua Zembla*, some to *Tasse gorodoc*, and some to other places in *Mougumsey*, to the East of the Riuer *Ob*. These Lodias for the most part, were of *Ustiug*, *Colmogro*, *Pinega*, *Mezen*, and *Pechora*.

50. Cayucks or fishing Boats, haunting the Riuer *Pechora*. Also, we that went vp to the Towne, found about fiftie Cayucks, or Boats of foure, fiue, six, and seuen tunnes a piece, fishing in the Riuer of *Pechora* for Salmons, and other kinds of fish; most of which Cayucks come from the great Towne of *Ustiug*, and the Townes thereunto adioyning, by the Riuer *Iug*, through the Land into the Riuer *Pechora*, and at the *Boluan*, at the Riuers mouth they tooke most part of their Salmon.

CHAP. IX.

A Letter of RICHARD FINCH *to the Right Worshipfull Sir* THOMAS SMITH, *Gouernour; and to the rest of the Worshipfull Companie of* English *Merchants, trading into* Russia: *touching the former Voyage, and other obseruations.*

RIght Worshipfull, my dutie remembred vnto you, with prayer to God for the preseruation of your healths and prosperous successe in all your worthie affaires. My last Letters vnto you were from *Typani* in *Lapland*, by *Thomas Hare-castle* of *Hull*, dated the foure and twentieth of May, 1611. The other, the nine and twentieth of May from *Kyldin* neere *Camen*, by a ship of *Hamburg*: which foresaid Letters were directed to our Gouernour, the right Worshipfull Sir *Thomas Smith*, Knight. May it now please you further to vnderstand, That the ninth day of Iuly, wee came to the mouth of the Riuer of *Pechora*, which the *Russes* call *Pecherskoi Zauoret* with our ship. And being entred into the aforesaid Harbour, it was full of Ice, and hard to finde: for we found no mayne Land, saue a small Sound behind the Ice. And labouring to and fro along the same, we sent *William Gourdon* in our Shallop manned to the shoare: who, as soone as they were landed, espied two Crosses standing on the sand: and presently our men espied three men comming toward them. These men belonged to three Boats of *Pinega*, which Boats had beene in our companie not long before, at a place called by them, *Promoya*, by vs, *Obscure*, but by other Writers, *Morshouitz*. One of these *Russes* came on boord of our ship, and told vs, that wee could goe no farther with our ship, then the place, that their Vessels, called *Coaches*, rid in; and that to the Towne we must goe in small Vessels; giuing vs directions to sayle by, for the better finding of the Towne. After our getting ouer the Barre of the *Pecherskoi Zauoret*, and that we were come to an anchor, we rode in great danger by the abundance of Ice, and the strong tide both of the ebbe and floud, which droue the same so forcibly against our ship. For, the eleuenth of Iuly, lying in foure fathomes water, a piece of an Iland of Ice, set with such a power against our ship, that it droue vs out of our riding into eight foot and an halfe, and nine foot water.

They arriue in the Port of *Pechora* the ninth of Iuly.

Two Crosses standing on the sand. *Pinega*.

Ship endangered by Ice.

The

Digitized by Google

The eleuenth of Iuly, Master *Iosias Logan*, *William Gourdon*, and *William Pursglone*, with our Shallop went vp to the Towne of *Pechora*, taking directions of the *Russes* for the finding of the same. Neuertheleſſe, two dayes after their departure from our ship, they had mistaken their way, if by chance they had not met with a small *Russe* Boat, in which were *Russes* that directed them. Being about thirty Versts from the Towne, they came to the house of one *Vasili Deadoolous*, who that this present is one of the chiefest Customers: by which Customers the Towne of *Pechora* is now gouerned, since there was no Gentleman sent from the *Mosco*. This man gaue them good entertaynment, and sent vp with them a man of his owne, fearing that the people would bee amazed at our mens sudden and vnexpected comming. Yet as soone as they espied our people, they were all exceedingly afraid. Diuers of them with their women fled into the Woods, vntill that one of the chiefest Customers had sent for them other Customers, who at that time were all out of Towne. But being met together, Master *Logan* shewed them the Priuiledges, of seuerall of their Emperours granted to your Worships. After the perusing of which, with the good report giuen of Master *Mericke*, your Agent, and our Nation by one of *Colmogro*, with whom Master *Logan* was acquainted; the Towne-men were well satisfied: and appointed our people an House. And many of them sent Bread, Pies, Ducks, Fish, and such like vnto them, entertayning them very well, according to the fashion of the Country, with continuall admiration how they found the Towne.

Our men arriue at Towne of *Pechora*. People afraid of the *English*.

Touching the Inhabitants, there is no doubt, but that they will be glad of our trading thither. Neuertheleſſe, by that which I haue heard and perceiued, it is very likely, that the same will be distastfull to the Merchants of the Country, and others that trauell thither in the Winter time, out of many parts of *Russia*: and also, to them that trade in the Summer time, by Sea to *Mongosey*, and through the Riuer of *Peoza* in Cayucks to *Perm*, *Ouſt-zilme*, and *Pechora*.

The seuen and twentieth of Iuly, our Shallop with a small *Russe* Boat, returned to our ship from *Pechora* Towne, departing from the same the Thursday before, being the fiue and twentieth of Iuly, in our foresaid Shallop, and *Russe* Boat, were sent downe by *Iosias Logan*, fiue and fortie bags of white Partridges feathers, and an hundred and seuentie white Foxe skinnes. These Feathers and Foxe skinnes, are bought of a *Colmogro* man, to be payd for the same in *Russia* by Master *Mericke*; and, as I vnderstand, not so cheape as others doe buy there of the Fowlers themselues. But if two men were left, one at *Pechora*, another at *Ouſt-zilme*, and *Perm*, with ready money and a little commodities, much good might be done in the Winter time by buying of Sables, Beuers, Beuers wombs, Squerrils, Foxe skinnes white and dunne, Losh hides, and Deere skinnes. And for the transportation of your goods to *Pechora*, or bringing of your goods from *Pechora*; the same may be done from *Arch-angel* vpon the *Duyna* to *Mezen*, and from *Mezen* to *Pechora*, *Ouſt-zilme*, and *Perm*, both by Winter ouer Land, and in Summer through fresh water Riuers, or alongst the shoare with speed, and with a little charge: as by the manner of their ordinary trauell appeareth, as it hath beene of a trueth deliuered mee, from the mouthes of men of long experience.

White Partridges and Foxes.

Commodities.

The last of August, came into *Pechorskoi Zauorot*, or the Hauen of *Pechora*, sixe and twentie Lodias or Boats, which was the Fleet set out from *Ouſtiug*, *Colmogro*, *Pinega*, and *Mezen*: all of them being bound for *Mongosey*: but hauing been crossed with contrary winds, & the time of the yeere being spent, they gaue ouer their intended Voyage; purposing with the next faire wind, to sayle to the Towne of *Pechora*, there to lay vp their Lodias and commodities till the next Spring, and themselues with their small Boats or Wherries to goe home, passing from thence vp the Riuer of *Peoza*, which they told me they could easily doe in a moneths time. As soone as this Fleet of Lodias was come to an anchor, many of them came aboord of our ship, wondring to see a ship there. They demanded of me, how wee came thither, and what the intent of our comming was: and whither we purposed to sayle from thence. Among these were some which seemed to be Merchants, who asked to buy Lists, remnants of Cloth, Cap-clothes, *Aqua vitæ*, especially, they asked for small Pewter Dishes, which I vnderstand to be a commoditie sold by them to the *Samoyeds*, at a great rate. I answered them, that the goods which wee had brought, were part already at *Pechora*, and the rest was to be transported thither, as soone as the Vessell came that was hired to carrie the same vp: so that, if any of them were minded to buy of our commodities, they might haue it of one of our Country-men there. After which, two or three of them demanded of me, whether I would buy any Sables, or Squerrils: which was but a brag. At this time many of them being on boord together, some of them were in priuate talke, which was my chance to ouer-heare, and was as followeth: If these *Neamchines*, or Strangers resort to these places, it will be an occasion in short time to make vs to be without Bread. The like speeches I heard a little before, of two men of *Pinega*; and of an old man remayning in *Pechora*, that came downe to our ship with the Feathers.

The Fleet of *Mongosey* of 26. Lodias. Or *Mongal*.

From *Pechora* to *Colmogro* is a moneths trauel by Riuer.

Small Pewter Dishes, a great commoditie.

Touching the goods left with *William Pursglone*, *Marmaduke Wilson*, and the *Russe*, in regard the same lay in no good place, we were desirous to haue hired one of their *Russe* Boats, to haue carried the same to the Towne at a reasonable rate; the rather because it was on their way, and their Boats were not ouerladen: which they with two Boats might haue done with ease: yet they

Digitized by Google

they would not, vnleſſe wee would giue them thirtie or fiue and twentie Rubbels at the leaſt, and that with Condition, that they might diſtribute into each Boate ſomewhat thereof. Therefore vnderſtanding their vnreaſonable demand, hauing a Boate already hyred, wee vtterly refuſed to talke with them any further thereof: eſpecially when they were minded to diuide the goods into all the ſixe and twentie Lodias or Boates: which had beene a tricke to haue loſt all.

Auguſt 1. The firſt of Auguſt, leauing Maſter *Ioſias Logan*, *William Purſglone*, and *Marmaduke Wilſon*, at *Pechora*, wee ſayled ouer the Barre of *Pechorskoie Zauoret*, directing our courſe for *Noua Zembla*, till that wee had runne ſo farre, and were ſo incloſed in huge Ice, that in a Day and a Night we could goe neither backward nor forward: And finding no meanes to proceed on our intended Voyage for *Noua Zembla*, wee cleared our ſelues out of that place. Truth it is, that this hath beene an hard Summer to all the *Ruſſes*, both to them which were bound for *Mongozey*, and thoſe that went to kill Morſes, and fiſhing of a certayne Fiſh called *Omeli*. From the foreſayd place wee ſet our courſe for *Cherie* Iland, intending to meete with the Ile of *Colgoiene*, and *Willoughbies* Land. With *Colgoiene* wee met, but we miſſed of the other. The ſeuenth of Auguſt, *William Gourdon* and I with our Shallop went on ſhoare. This *Colgoiene*, is a very long and broad Iland with many Vallies in it. On the ſame are many Geeſe, which the *Ruſſes* vſe to take with Nets in the time of the yeere, before they bee ouer fledge. In this Iland ſeemeth to bee ſtore of Hawkes. Heere *William Gourdon* and our Cooper, caught two Hawkes, whereof one was ſpoyled in the taking, the other remayneth aliue.

Huge Ice.

Omeli Fiſhing.

They land on the Ile of *Colgoiene*.

Geeſe.

Two Hawkes taken.

Cherie Iland. The thirteenth of Auguſt, wee arriued at *Cherie* Iland, ſtanding in 74. degrees and odde minutes, and Anchored in the South Coue, finding the ſame very cleare of Ice. And preſently after our Ship was at an Anchor, *Iames Vadin* the Maſter, *Willian Gourdon*, and I, went on ſhoare on the Coue to looke for Morſes. Here we found a certayne Note, which was left there by *Thomas Edge*: the effect of which was: That he arriued there with three Shalops from *Greenland*, and that there he had found the Ship called the *Elizabeth*, and that hee was gone in her to *Greenland* the foure and twentieth of Iuly, hoping to finde the goods which hee had left there: and that hee did purpoſe to returne againe to *Cherie* Iland with as much ſpeed as could be made. Subſcribed: *Thomas Edge*.

Thomas Edge. See *ſup. c. 2.*

At our comming to the Iland, wee had three or foure dayes together very fine weather: in which time came in reaſonable ſtore of Morſes, both at the South Coue and at the North-ſide: and wee were in good hope we ſhould haue made a ſauing Voyage. Neuertheleſſe, though there were ſtore of Beaſts, yet by no meanes would they goe on thoſe beaches and places, that formerly they haue beene killed on. But fortie or fiftie of them together, went into little holes within the Rocke, which were ſo little, ſteepe and ſlipperie, that as ſoone as wee did approach towards them, they would tumble all into the Sea. The like whereof by the Maſters and *William Gourdons* report, was neuer done. For lying as they did, and being ſo ſhey as they were, it was not poſſible to doe any good vpon them. Moreouer, to get them off theſe foreſaid Rockes to make them come on ſhoare vpon their accuſtomed places, the Maſter and our men on both ſides of the Iland went to driue them away, yet they would not. But by often driuing of them out of their holes, we killed as many as wee could. In the end the weather growing ſtormie and cold, there were few or none of them left. Wherefore ſeeing all hope of good to be done of them to be paſt, wee departed from thence the ſixe and twentieth of Auguſt, 1611. for *England*. We did not perceiue any Ship of *Hull* to haue beene there this Summer.

Morſes fearefull.

Auguſt 26.

Hauing touched the chiefeſt points of our Voyage, I thinke it meete to ſet downe ſomewhat of the State, Commodities, and Trade of *Pechora*, *Ouſt Zilma*, and *Parmia*.

Pechora. The Towne of *Pechora* is ſmall, hauing three Churches in it: and the moſt part of the people are poore. In the Spring and a great part of the Summer, they liue by catching of Partridges, Geeſe, Duckes, and Swannes, of which they euery Summer take a great number. The fleſh of theſe Fowles they ſalt, and liue of them the moſt part of the Winter. But the feathers of the ſaid Fowle they gather together, and ſell to the men of *Colmogro*, *Ouſtiug*, and others, that come euerie yeere out of *Ruſſia* to buy the ſame: Some of them giue a little money before hand to the Fowlers. Which muſt be done with great care as the times are now. One *Meaſed* a mans ſonne of *Pechora*, whoſe Father is a man of great dealings, told mee, That they ſold white Partridge feathers to men of *Colmogro* for readie money, at fiue Altines the Poud, and Duckes feathers (among which was Downe) they ſold now for ſeuen or eight Altines the Poud. Likewiſe hee told me that in former times the *Ruſſes* that vſed to trade thither, before the people of the Countrey knew what Commodities were worth, had commonly a Poud of Partridge feathers for two pence of their money, and a peece of cake Sope worth at *Colmogro* ten pence of their money. So that the chiefeſt Commoditie and beſt cheape is Feathers, being bought at *Pechora* with readie *Ruſſe* money of the Fowlers themſelues, and not of the Ligers there, that vſe to ſell them to vs at *Archangel* on the Riuer of *Duyna*.

Ouſtiug.

A Poud is 37. pound, or the third part of a hundred weight. An Altene is fiue of their Pence, a Groat of ours.

A great fiſhing of Salmons, beginning the firſt of Auguſt.

Moreouer one hundred *Engliſh* miles on this ſide of the Towne of *Pechora*, is a place called by them the *Beluano*, where they take great ſtore of Salmons. But it is alwayes the firſt of Auguſt before

Digitized by Google

before they begin to caſt out their Nets. And oftentimes toward the later part of the Summer, they haue ſuch ſtore, that they are ſold ordinarily for foure-pence a Fiſh, and ſometimes for a penie a Fiſh of their money. Yea, in a plentifull yeere, I haue beene told, one may buy whole draughts of Salmons for a very ſmall ſumme of money. The Salmons heere are fat: three Fiſhes weighing commonly a Powd and no more. The beſt ſort of the people of *Pechora*, vſe to preſerue a great quantitie of their Salmon with a little ſalt. For they ſalt eightie, or one hundred Fiſhes with a Powd of Salt: and many times in pleatiful yeres, much Fiſh is caſt away for want of ſalt; which they are loath to beſtow when Salt is deare.

This Salmon is carryed by the *Pechora* men to *Mezen* in Sleds, drawne with Reyne Deere. But if they be minded to carrie the ſaid Fiſh from *Mezen* to *Colmogro*, then they carrie the ſame from thence with Sleds drawne with Horſes.

Alſo many men of *Colmogro*, *Pinega*, and *Mezen*, buy Salmons at *Pechora*, and carrie it in the Winter time to *Mezen*, to which place they pay from *Pechora* for the hyer of a Sled and a Reyne Deere, ordinarily ten Altines, being twelue dayes journey: and from *Mezen* to *Colmogro*, being ſixe dayes journey, they pay foure-pence a Powd at the moſt. The Deere that trauell from *Pechora* to *Mezen*, will not draw aboue ſeuen Powd weight. This way is trauelled euery Winter twice. The firſt is ſixe or eight weekes before Chriſtmaſſe. And the ſecond time is two or three weekes before Shrouetide: which bee the times that they very diligently obſerue to ſell the Salmon in. Moſt part of the men of *Pechora*, haue euery one his owne Deere to trauell with. And ſome particular men of the better ſort haue twentie or thirtie Deere, which they let out to hyer in the Winter time; and in the Summer time they put them foorth to the *Samoyeds* to keepe. Trauelling Deere.

Alſo when the Winter way is ſet and beaten, many Merchants and others come out of *Ruſſia* to buy Sables, Beuers, Beuers wombes, Squirrels, blacke, white and dunne Foxes, of which in the Winter time is ſtore, brought thither by the *Samoieds* round about thoſe parts: which Trading is in the Winter time and not elſe. The chiefeſt *Ruſſe* Merchants or Furriers that vſe theſe parts, I haue beene told, are the *Obleazoues*, the *Shepetkins*, and the *Teddomskoies*. The Commodities carryed by them, are red, and yellow Cloathes; but chiefly *Ruſſe* money, with which they buy Commodities there of the *Ruſſes*, as well as that which they buy of the *Samoieds* in barter.

The Commodities carryed from *Volochda*, *Ouſtiug*, *Colmogro*, *Pinega*, and *Mezen*, to *Pechora* and *Mongozei*, are Meale, Bacon, Butter, Ote-meale, Tolockno, and Salt, with ſome ſmall quantitie of Yeaſts and tanned Leather, with ſome Cloath, and other of our Commodities. Theſe Commodities at *Mongozei* are ſold at great rates. But at *Pechora*, Commodities are ſold ſometimes deare and ſometimes cheape, in reſpect of profit. For if the Fleet, being at leaſt thirtie Boates that ſet out euery Summer for *Mongozey*, laden with theſe Prouiſions and Commodities aforeſaid, bee croſſed with contrarie windes; and that by the lateneſſe of the yeere they cannot reach to *Mongozey*, but are conſtrayned to leaue the ſame and come for *Pechora*, (as this yeere 1611. they were:) Then commonly Meale, Bacon, and ſuch like Commodities with them are not deare. For by report a little quantitie of Meale doth ſerue all thoſe parts. For the greater part of them liue of freſh Fiſh ſod and dryed in ſtead of Bread, of which Fiſh they haue plentie. Fiſh in ſtead of Bread.

Likewiſe, there vſeth not to goe from *Colmogro* with theſe Prouiſions, aboue two Boates in a Summer directly to the Towne of *Pechora*: eſpecially ſince the Towne was burnt, and that there was no Gouernour in the ſame.

Alſo by the *Mongozey* men it did appeare, that there was no likelihood for them to vtter that quantitie of Commodities at *Pechora*, at any rate. For if there had, there would not haue reſolued to lay vp their goods in Ware-houſes till the next Spring, and then to proceed for *Mongozey*.

Further from the Towne of *Pechora*, is a place called by the *Ruſſes*, *Ouſt Zilma*. This is, by the deſcription giuen vnto me in diſtance from *Pechora*, as *Ouſting* is from *Colmogro*: and is likewiſe to bee trauelled by water againſt the ſtreame: And in Winter time it is to bee trauelled in Sleds drawne with Reyne Deere. In this place of *Ouſt Zilma*, is great ſtore of Squirrels, Beuers, and Beuers wombes, Foxe skinnes white and dunne, and other Furres, but chiefly Squirrels, of which is great ſtore by all mens report, that I haue talked withall. So that hauing a man in the Winter time at this place, a good quantitie of Squirrels and other Furres, may bee prouided at a reaſonable rate. Moreouer, heere are to be bought Loſh-hydes, and Deere-skinnes, which in the Winter time are brought to this Towne of *Ouſt Zilma* from *Perm*, which is not farre from thence. But to buy Loſh-hydes and Deere-skinnes, the beſt courſe is to goe from *Ouſt Zilma* to *Perm*, and to buy them there, where one ſhould bee ſure to haue Choiſe, and at a farre better rate. Alſo thoſe that vſe to come out of *Ruſſia* in the Winter time to *Perm*, to buy theſe foreſaid Hydes; toward the later part of Winter carrie all theſe Hydes by Sleds, ſome two or three dayes Iourney from *Perm* to the ſide of a certayne Riuer, neere vnto which is a ſmall Towne or Village; where as ſoone as the Ice is gone, they haue ſmall Dorſhenicks and Floates, on which they lade their Hydes, and being out of this Riuer, they enter into *Duyna*, and tranſport them to *Colmogro* and *Archangell*. *Ouſt Zilma*. *Perm*.

Likewiſe being at *Pechora*, *Ouſt Zilma*, or any of thoſe parts, there is in the Winter time to bee

Elephants teeth, whence, and which way.

bee had among the *Samoyeds*, Elephants teeth, which they sell in pieces according as they get it, and not by weight. And I haue beene told, they sell the same at a very small rate. It is called in *Russe*, *Mamanta Kaost*. Thus much may suffice at this time to bee spoken of *Pechora*, *Oust-Zilma*, and *Perm*.

1. Now I will set downe as I haue beene enformed by diuers *Russes*, the Names of the chiefest places which they vse to sayle vnto from *Slobodca*, an Hauen so called in the Prouince of *Mezen*, to the *Pechorskoie Zauorot*, or the Hauen of the Riuer of *Pechora*, and the Distances to each place: with a Direction how to sayle from *Pechorskoie Zauorot* vp to the Towne of *Pechora*.

2. I will also set downe the *Russes* sayling from the foresayd *Pechorskoie Zauorot*, to the *Towhorskoie-Share*. And from thence to the Riuer of *Ob*: and thence to *Mongozey*.

3. I will likewise set downe a true Direction, to goe by water in their Boates called *Cayooks*, through the Riuer of *Peoza*, and other Riuers, till they come from *Mezen* to *Oust Zilma*, and *Pechora*.

4. Likewise I meane to write of the *Samoieds*, trauelling from *Vaygats* to the parts of *Mongozey*, in the Winter time, and from thence backe againe to the foresayd Towne of *Mezen*, called *Slobodca*.

5. Lastly, I will intreate of such Commodities as are to bee had at *Mezen*, with the speedie passage from thence to *Colmogro* by Sea, or by Land in the Sommer time. And it is as followeth.

The things aboue mentioned, that I haue not seene my selfe, I haue not sleightly set downe from the mouthes of one or two, but from the mouthes of many ancient men, well experienced in the Trauels and Trades of all these parts, which Master *Iames Vadun* the Master of our Ship can likewise witnesse. Therefore if the same may bee any way beneficiall vnto the Company, and that thereby I haue discharged my dutie vnto your Worships, I shall bee heartily glad thereof. Thus fearing I haue beene ouer tedious by my rude Letter, I rest, with my heartie prayer vnto Almightie God, for the happie preseruations of your selues, and all yours. Written on Shipboord, the last of August, 1611.

Your Worships humble Seruant to command, RICHARD FINCH.

The Names of the principall places, which the Russes *sayle by from* Mezen *to the* Pechorskoie Zauorot, *or the Hauen of* Pechora. 1611.

FRom *Mezen* to *Candinos*, with a faire wind and stiffe gale, is thirtie houres sayle: They sayling commonly almost 40. leagues in foure and twentie houres, according to which it is 50. leagues. From *Candinos* to the Ile of *Colgoie*, is as before thirtie houres sayling, and after 40. leagues in foure and twentie houres, is 50. leagues. From *Candinos* to *Promoya* or *Obscure*, is twentie houres sayling, or 35. leagues. From the Ile of *Colgoie* to *Colocol-cona*, is fifteene houres sayling, and reckoned as aboue appeareth, is 25. leagues. Along the shoare of this place are heapes of Sand, in the forme of Bells. Therefore the *Russes* call this place *Colocol-cona*, being deriued from *Colocol*, which in *English* signifieth a Bell. From *Colocol-cona* to the *Peasaneetsa*, is three houres sayle, or 5. leagues. This place is onely a small Brooke which they vse for a Sea-marke, more then for any benefit is to bee reaped at the same. From *Peasaneetsa* to the *Pechorskoie Zauorot*, is sixe houres sayle, or 10. leagues. So that from *Colgoie* Iland to this foresayd *Pechorskoie Zauorot*, is not aboue 40. leagues at the most.

A direction to sayle from the Pechorskoie Zauorot, *where wee rode with our Ship in August* 1611. *to the Towne of* Pechora, *as followeth.*

Dolgoie Iland in the *Sooioie Mo-re.*

FRom this *Pechorskoie Zauorot*, they sayle into the *Sooioie Mora*, or *Drie Sea*, and not before: stirring away from hence South-west and by South, and in a faire gale of Winde, in foure houres they come to an Iland called *Dolgoie*. This Iland is reported to bee three or foure *Russe* Versts long, hauing on it in some time of the yeere many Geese, which the men of *Pechora* take before they bee able to flie. From this *Dolgoie*, they stirre away South South-west; and sayling this course with a faire gale of wind, in eight or nine houres sayle they come in sight of the maine Land, being an indifferent high Land. This Land is called the *Boluanon*; and this is 20. leagues at the most. This *Boluanon* they haue on their Larboord side. Neere this place are diuers that inhabite in *Russe* Houses: where in the Summer time they lye a Fowling, and fishing of a certayne Fish called *Omeli*, which are like our Maccarels. If need bee, heere a man may haue a guide or good

The *Boluanon.*

Digitized by Google

good inſtructions to conduct him to *Pechora* Towne. Hard by this *Belnanon*, is the *Ouſtia* or barre of the entring of *Pechora* Riuer. For as ſoone as you are ouer this barre, you come into the Riuers mouth, which leadeth to *Pechora* Towne. If if bee thicke foggie weather, then one of them continually ſoundeth the depth of the Channell, keeping as neere as they can in the deepeſt water: and in ſo doing, they ſeldome miſtake their way, ſo that they ſtirre away Weſt from the *Belnanan* to the Riuers mouth, keeping the Land on there Starboord ſide. And by all mens report, from the *Belnanon* to *Pechora* Towne, is with a faire winde and ſtiffe gale, not aboue twentie houres ſayle: which acoording to their ſayling, is about three and thirtie leagues. And it is not aboue fiftie leagues from the *Pechorskoie Zauorot*, where our Ship lay, to *Pechora* Towne.

The names of the places that the Ruſſes *ſayle by, from* Pechorskoie Zauorot, *to* Mongozey: *with the manner of their Trauell, and Diſtance betweene each place, or time of Sayling, Halling, and Rowing vnto the ſame.*

FRom *Pechorskoie Zauorot* to *Matpheyoue Oſtroue*, or Iland, is with a faire wind and ſtiffe gale, at the moſt thirtie houres ſayle, which being reckoned as before, after fortie leagues in toure and twentie houres, is fiftie leagues: to which they ſtirre away Eaſt. From *Matpheyoue Oſtroue* to the *Youhorskoie-ſhare*, is nine houres ſayle or fifteene leagues. When they are come to this Iland, they ſtir away from thence Eaſt to the ſaid *Youhorskoie-ſhare*. Alſo in cleere weather from *Matpheyoue Oſtroue*, they can ſee the maine Land, with the *Meedanetskoie Zauorot*: where the two Ilands bee called the *Zelentſee* or *Greene* Ilands: to which Ilands many of the *Ruſſes* reſort, to take a kinde of Fiſhes, called *Omeli*, which are like Maccarels: of which heere are ſtore. This maine Land they haue on their right hand or Starboord ſide, lying South from *Matpheyoue Oſtroue*. Alſo to the Southward of the *Matpheyoue Oſtroue*, is another Iland which the *Ruſſes* call *Dolgoie*, that is, the long Iland. So that there are two *Dolgoies*: the one, within the *Pechorskoie Zauorot*, entring into the *Seeboy Mora*, or *Drie Sea*; The other is this, which is betwixt the *Matpheyoue Oſtroue*, and the *Yougorskoie-ſhare*; lying as before was ſayd, South from the ſayd *Matpheyoue Oſtroue*. From which Iland in a cleere day they can ſee the Land of *Vaygats*, which lyeth on the Larboord ſide, being very high Land. So that ſtirring out-right, in the middle betweene the *Meadanetskoie* Land on their Starboord, and the Land of *Vaygats* on their Larboord ſide, they ſayle directly into the *Yougorskoie-ſhare*. Likewiſe there is not much of this *Yougorſkoie-ſhare*. For they ſay, that being at one end, they can ſee the Sea at the other end thereof. Alſo, about the Land of *Vaygats* are neither Flats nor Shoalds. From the *Yougorskoie-ſhare* to the *Carskoie Gooba*, is twelue houres ſayle, or twentie leagues. In this Bay or *Gooba*, is the *Meaſtnoy Oſtroue*, or *Meaſtnoy* Iland. Further it is to bee remembred, that as ſoone as they enter this *Carskoie Gooba* or Bay, they ſayle vp a Riuer, leauing this Bay on their Starboord: which Riuer bringeth them into the *Mootnoya Reca*, which ſignifieth the thicke or troubled Riuer. From *Carskoie Gooba* to this *Mootnoya Reca*, is 20. leagues. Likewiſe, being a little paſt the *Yougorskoie-ſhare*, there may bee deſcribed an high Land, which they call *Socoha Looda*, that is, *The Hawkes perch*. And being ouer the *Mootnoya Reca*, which they are eight dayes and eight nights in halling along the ſhoare by the Rope or *Beachaua*, they come into two Lakes, which two Lakes from one end to the other they commonly row ouer in one Day or two Tides: the ſame not being aboue ten or twelue leagues. Hauing gotten to the end of thoſe two Lakes, they come to a place called the *Nauoloke*, which ſignifieth an Ouer-hall. And it is almoſt two hundred fathoms, or foure hundred paces in length: And hauing emptyed their Veſſels, called Coaches, laying poles vnder them, with the Companies or men of foure or fiue Boates, hauing twelue or thirteene men in a Boate, they hall their Veſſels ouer, launching them into a third Lake, which they call the *Zelenoy Oſera*, that is, the *Greene* Lake. Theſe Ouer-halls conſtraine them to conſort themſelues into Companies: otherwayes they could not get this way to *Mongozey*. At the end of this *Zelenoy Oſera*, or *Greene* Lake, they come into the *Zelenoya Reca*, or *Greene* Riuer, into which they runne with the ſtreame, being often compelled to emptie their great Boates with their Lodias, or Wherries, laying their Goods vpon the ſhoare: which being done they row their great Lodias ouer the ſhoalds emptie; and hauing got ouer the ſhoalds, they bring their goods on boord againe. And thus they doe in diuers places of this *Zelenoya Reca*, or *Greene* Riuer: by reaſon whereof they are commonly ten dayes from the Ouer-hall, before they can get through this foreſayd Riuer, which is all with the ſtreame; but the Diſtance hereof cannot yet bee perfectly learned. Being come to the end of this *Zelenoya Reca*, they enter into the Riuer of *Ob*; and hauing rowed a little way vp the ſame, they come to a place which they likewiſe call *Zauorot*: which ſignifieth a turning, winding, or entring into a place. From this *Zauorot*, they turne into the *Tawze Reca*, ſtirring away South to *Tawze* Riuer; but it is foure and twentie houres ſayle, or fortie leagues from the Riuer of *Ob*, before they come into any part of the *Tawze Reca*.

Reca. In the Riuer of *Ob*, are neither Woods nor Inhabitants, till they sayle so farre vp the same, that they come neere to *Siberia*. But there are Woods.

Tawze Gorodoc, or Castle.

When they are entred into this *Tawze* Riuer, they haue foure dayes and foure nights sayling to *Tawze* Castle, with a faire wind and a stiffe gale: But if they bee driuen to row to the *Tawze Gorodoc* or Castle, then they are twelue dayes and twelue nights rowing thither at the least, hauing calme weather. This *Tawze Gorodoc*, or *Tawze* little Castle, with the Villages, Townes, and all other places thereto belonging, is by all the *Russes* generally called *Mongosey*. At this place are two Gentlemen or Gouernours, with three or foure hundred Gunners, and small Castles in seuerall places of these parts of *Mongosey*. Moreouer, the men of *Mezen*, from whom I had all these Notes, told me; That in the Winter time there went men from *Siberia* to *Mongosey*, to buy Sables: deliuering vnto mee, that the Sables taken by the *Samoyeds* about *Mongosey*, are richer in Furres then those that come from *Siberia*. Also they told me, that the *Samoyeds* inhabiting vpon the mayne land ouer against *Vaygats*, trauelled in the Winter time with their Reyne Deere to the parts of *Mongosey*, to kill Sables and other beasts: and doe carrie their Furres from thence to *Mezen*, to sell there at a place called by the *Russes*, *Slobodca*, to which they did commonly resort about Shroue-tide, staying not there long, but as soone as they had made sale of their Furres, they departed home againe. Further, these men of *Mezen* told me, that in the Winter time with them was to be sold store of Squerrils, Beauers, Beauers wombs, and some Sables. And that all those that trauelled in the Winter time from any part of *Mongosey*, *Sibira*, *Pechora*, and *Oust-selma*, to any part of *Russia* whether they were Merchants, or buyers vp of the Furres, or the *Samoyeds* that caught them; they must of force come to their Towne of *Mezen*, to hire Horses to carrie them to *Colmogro*. By which meanes they told mee, their Towne was well repleniſhed with all manner of Furres, especially of Squerrils. Also they informed me, that diuers of *Colmogro*, and other parts of *Russia*, that sold vs Furs, for the most part bought the same of them, lying there in the Winter time for that purpose. Therefore, said they, if that any of our Nation would trade into their parts, they would be glad thereof, and that they may be furnished of all sorts of Furres, and at a farre better rate then hitherto we haue had them at. And that wee could vpon any occasion be quickly at *Colmogro* in the Winter time by Sled, or in any part of the Spring or Summer time by Boats, at a very small charge. Lastly, that in the Spring time we should not faile of a parcell of Trane-oyle, and Deeres skinnes, which euery Summer they transported to *Archangel* to sell.

Mezen.

Peozareca.

Peaskanoy Nauolock.

HAuing embarqued themselues at *Mezen*, in these small Cayooks or Boats, couered with the barkes of trees, they sayle to a Riuer called *Peoza Reca*. From thence they sayle, or draw their Boats to a place called, the *Peaskanoy Nauolock*, or *Sandy Ouer-hall*. From *Mezen* to this Ouer-hall is ten dayes haling along the shoare with the rope. This said Ouer-hall is fiue *Russe* Versts ouer. And after they haue vnladen their goods out of their Cayooks, they draw the said Vessels ouer at times with Horses, that come from *Mezen* of purpose; lying there the most part of the Summer, to that intent: and they pay sixe pence *Russe* for drawing ouer an empty Boat. Being ouer this Ouer-hall, they driue with the streame in three dayes to the Towne of *Oust-selma*: and with the streame in foure dayes they driue to a place called *Pustozera*: and from *Pustozera* against the streame they come to the *Beluanou*, and from the *Beluanou* to the Towne of *Pechora*. Also, many of these Boats very often in their returne home with their foresaid Cayooks, carrie Furres to *Usting*, and diuers other places into the Countrey of *Russia*. All which they doe in a Summers time.

CHAP.

CHAP. X.

The Voyage of Master IOSIAS LOGAN *to* Pechora, *and his wintering there, with Master* WILLIAM PVRSGLOVE, *and* MARMADVKE WILSON. Anno 1611.

THe first of July, *William Gurdon*, *Richard Finch*, and *William Pursglone*, went on shoare at *Suatinose*, where two Crosses stand. The second, wee weighed anchor againe, and stood into the Bay because of the Ice: and that night wee went on shoare againe. The third, we weighed anchor, and stood it about *Suatinose*. The fift, we stood to the Eastwards fiue leagues more, and about twelue of the clocke at night, wee were thwart of the Iland of *Toxar*. The tenth, at eight of the clocke at night, we weighed, and went ouer a Barre, at two fathomes, and came into Harbour, where wee anchored at ten of the clocke in the morning in fiue fathoms, hauing sands round about vs, being land-locked. The eleuenth, my selfe, *William Gurdon*, and *William Pursglone*, with fixe of our men more, departed from the ship with our Shallop, to goe vp to the Towne of *Pustozer*.

The former part of the Voyage is omitted, to auoide tedious repetition.

Toxar.

Pustozera.

The fourteenth, wee arriued at the fishing house of one *Euan Vasilion sene sowhan*, where the people were afraid of vs, and were ready to runne away: but we spake to them, and gaue them some Biscuit and *Aqua vitæ*, and they sod vs some fish, and shewed vs our way to another Fishery: but they ran away from vs, so we departed on our way. The fifteenth day, at foure of the clocke in the afternoone wee met with a *Russe*, that was borne at *Ustiug*, who gaue vs Milke, and such things as he had, and we gaue him some Biscuit, and some *Aqua vitæ*, and hee directed vs vnto another Fishery, about some fiue miles from that place where wee arriued, about sixe of the clocke the same night. But comming ashoare, we found not any, saue one man, who after some conference had with vs, and giuing him some Bread, and some of our *Aqua vitæ*, hee told vs, that the Master of the house, with three of his sonnes were hunting of Duckes, and that their wiues were afraid, and were runne into the Woods to hide themselues, leauing a young childe behind them for haste. So he brought vs into the house, where by that time that we had stayed an houre (because there were so many *Muschitaes*, which are like vnto a Midge, and sting most horribly, so that we were not able to stay without) the Master of the house, and his sonnes came thither, who at the first, were afraid, thinking we came to rob them. And they were about to shoot our men in the Boat; but one of our men holding vp a Biscuit cake, they then came to them, and spake vnto them: but our men not vnderstanding them, made them signes to the house, where my selfe, *William Gurdon*, and *William Pursglone* were: who, when they came into the house, being yet afraid, they came in one after another. Now, when we had saluted them after the *Russe* manner, they asked vs of whence we were, and for what cause we came thither: whereunto I made answere, that wee were *English*-men, who because of the troubles in *Russia*, came thither to seeke a Trade, hauing heard diuers times of the fame of those parts. Then hee replied, that in times past those places had beene good for trading: but now, by reason of a bad Gouernour, in those troublesome times, vpon a spleene he had fired the Towne, and burned aboue an hundred houses: and so by that meanes they were fallen into pouerty, and trading decayed, by reason of his great exactions. Yet hee said, that they haue great store of Salmon, and that the last yeere they got aboue 15000. Salmons, and in the Winter is their chiefest Mart. For then the *Samoyeds* come thither from diuers places, and bring Sables, and Beauers, white Foxes, Rosamackes, Feathers, and some Squerrils. So hauing supped with him, we gaue him a gallon of our *Aqua vitæ*, and some fortie cakes of our white Biscuit, and three or foure pound of Raisins: for we heard, that he was one of the principallest men in the Towne. Then desiring his fauour, he holpe vs to a man to goe with vs vp to the Towne, because of the fearefulnesse of the people, which they conceiue through the Warres of the *Poles*: and so wee departed from thence that night to the Towne.

Iuly.

The sixteenth, in the afternoone we arriued at the Towne of *Pustozera*, where wee found not many people, considering the number of houses there, which are betwixt fourescore and an hundred, being of wood, built after the *Russian* manner, and they are subiect vnto the *Russe*, obseruing all their Rites as doe the *Russes*. The people were all abroad (some, in getting of Morses Oyle, and Belougaes Oyle, and some fishing of a fish called Ometta, which is a very sweet fish, and some hunting Duckes) sauing the Customers, and three or foure more, who were likewise afraid of vs, although we had one of their owne people with vs, and were ready to flee away. So we seeing their fearefulnesse, caused their man to goe first on shoare with vs three aboue mentioned, not permitting the rest of our men to come on Land as yet: then hee calling to them, they stayed, still peeping from behind the corners of their houses, vntill at the last there was a *Russe*, one of *Colmogro*, that had wintred with them, who knew me, and had seene me some two

Cola in *Lappia.* yeeres before at *Cola* in *Lappia*, at his Vncles houſe. And ſo he encouraged them, ſpeaking greatly in our commendation, ſhewing them, that I was a Merchant, and came to trade with them, and not with any intent of harme: for hee knew mee very well, and told them, that I was at *Cola* foure or fiue yeeres together, and lay at his Vncles houſe. So he came to me, and tooke me by the hand, asking me how I did, and told me his name, and how hee had ſeene mee with his Vncle at *Cola*. Then I called to mind, that I had ſeene him there, and ſo we grew acquainted: and he went with vs to the Cuſtome-houſe, where ſtaying an houre, at length the Cuſtomer came: and after many queſtions had concerning our comming thither, I craued licence, that foure of vs might winter with them: which they denyed, alledging that they durſt not without the Emperour of *Ruſſia* his licence. Whereupon I anſwered, that the Emperours Maieſtie, when he was raigning, was very gracious vnto our Nation, aboue all other ſtrangers; and ſhewed what great priuiledges hee had beſtowed on our people: and how by the *Engliſh*-mens meanes at the firſt; *Arkania.* what a trade is now at *Arkania*, and what profit came, not onely into his Maieſties Treaſurie, but alſo into all parts of his Dominions, which in time might be brought hither: and withall ſhewed the Emperours priuiledge. Wherefore then they began to put away feare, and willed vs to ſtay fiue or ſixe dayes, vntill he had ſent for the chiefeſt men of the Towneſ-men, who were abroad, and then they would giue vs an anſwer. Then I deſired, that we might haue an houſe to be in, and not to ſtay without doores. So he gaue libertie to any that would, to entertayne vs, whereto there was one *Callem* that made anſwer, that he would: whereupon wee went with him, and were in an Ambar of his, vntill wee receiued anſwer from them. In the meane time wee made much of them, and feaſted them with our *Aqua vitæ*, Biſcuit, and Figs, that we might the better obtayne their loue.

The foure and twentieth, the Cuſtomers came to giue vs our anſwere, and told vs, that they had concluded that we might ſtay if wee would: but they muſt write vp to the *Muſko* of our being here. So we thanked them, and gaue them ſuch entertaynment as we could, and ſent preſents to ſixe of them of the chiefeſt, which they tooke very thankfully, and promiſed what fauour they could. So this night I made ready my Letters to ſend for *England*.

The fourth of Auguſt, fiue and twentie Lodyas arriued at the Towne laden with Meale, and *Molgomſey.* others which were bound for *Molgomſey*: but by reaſon of contrary winds, they were forced into *Pechora*, and came vp to the Towne of *Puſtozer*, and vnladed to make ſale.

Pole baptized *Ruſſe.* The ſixe and twentieth, we remoued from the houſe where we were at the firſt, vnto a *Poles* houſe, who is chriſtened *Ruſſe*, where we are to remayne all the Winter.

Froſt in Auguſt. The nine and twentieth, the froſt was ſo ſtrong, that the *Ozera* was frozen ouer, and the Ice driuing in the Riuer to and againe, brake all the nets, ſo that they got no Salmon, no not ſo much as for their owne victuals. The ſecond of September, the froſt brake vp againe, and it was open weather. The eight of September, there was a Soyma, which the Townſ-men bought, that went downe the Riuer to haue gone for *Iugoria*, and had a faire wind: but they neglecting two dayes ſayling, that would haue carried them forth of the Riuer to the Sea, the wind came contrary, ſo that they were wind-bound, and could not get any further: and on the nineteenth, gaue ouer their Voyage, and came vp to the Towne.

The thirteenth of October, the froſt was ſo extreme, that the *Ozera* ſtood in one night, that men did walke on it the next day, and ſo continued all the Winter after.

The twelfth of Nouember, there went two men of *Penega* to *Vſt-zilma*, to buy Squerrils, and Beauers, and other commodities. The thirteenth, the Sunne aroſe at South and by Eaſt by the Compaſſe, and ſet at South-weſt and by Weſt.

The foure and twentieth, there went diuers men, with at the leaſt, three or foureſcore Sleds *Slobodca* Mart. drawne with Deere, to a place called *Slobodca*, where they hold a Mart, from the beginning of December to the middle thereof: and they carried freſh-water fiſh thither, with whom *William Purſgloue* went into *Ruſſia*. The ſixe and twentieth, the Sunne aroſe at South and by Weſt by the Compaſſe, and ſet at South-weſt and by Weſt.

The firſt of December, the Sunne aroſe at South and by Weſt Weſterly by the Compaſſe, and ſet South-weſt and by Weſt Southerly. The fourth, the Townſ-men of *Pechora* went ouer land *Iugoria.* into *Iugoria*, to trade with the Inhabitants there, and the *Samoyeds*.

The eleuenth, *Marmaduke Wilſon* ſaid that he ſaw the Sunne, but it was but the way of the Sunnes beames. The thirteenth, I ſaw the Sunnes beames my ſelfe, but I could not ſee the Sun it ſelfe, although I watched it very ſtrictly. The fourteenth, it was ſnowie, and ſtormie weather, and continued ſo vntill the foure and twentieth day, which was cloſe weather alſo.

Sunne returneth. The fiue and twentieth, being Chriſtmas day, I ſaw the Sunne, and it roſe at South and by Weſt, and ſet at South-weſt and by South, it hauing the neathermoſt part of it all the way iuſt with the Horizon. The ſixe and twentieth, it was ſtormy and ſnowy weather, and ſo continued vntill the end of the moneth.

The ſecond of Ianuarie, the Sunne aroſe at South ſomewhat Weſterly, and ſet South-weſt a little Southerly, it mounting a pretie height aboue the Horizon.

The fift, *William Purſgloue* returned from *Colmogro*. The eleuenth, the Sunne aroſe at South by Eaſt by the Compaſſe, and ſet at South-weſt and by Weſt.

The

The twelfth, there came a command from the Patriarch, that there should bee a generall Fast, both for young and old, not exempting the sucking babes; which began the thirteenth, continuing three dayes space, they neither eating nor drinking, so much as water, neither admitted they their sucking Babes, saue those that fainted, to whom they gaue a few Figs and a little water. Generall Fast for 3. dayes very strict.

The nineteenth, the Inhabitants of *Pustozer* that went into *Iugoria*, returned from thence, hauing had but an hard Voyage, by reason of the Warres which the *Samoyeds* had amongst themselues: so that they durst not goe into *Molgomsey*, where they catch the most part of the Sables which come into *Russia*.

The three and twentieth, came the *Carratchey*, which is the chiefe of the *Samoyeds*, but they had no commodities to speake of, by reason of the Warres: so that they neither durst trade with the *Samoyeds* of *Molgomsey*, neither hunt for the Sables themselues, which at other times they were wont to doe. The thirtieth, I had the chiefe *Carrvtchey*, his sonne, his sonnes sonne, and his brothers sonne at Dinner, and had some conference with him, who told mee, that they had seene ships in the *Vaygats*, two yeeres one after another: but they durst not bee seene of them, but fled from them: for the *Russes* told them, that they would kill them, or carrie them away prisoners. Yet they seemed to be glad of our comming, when they saw our behauiour, and the entertaynment that they had of vs: Neuertheless, they are very timerous, and vnreasonable couetous, as by more acquaintance I perceiued by them. *Russes* fraud.

The second of February, the most part of the *Samoyeds* went to *Slobodca* with their commodities, because in the Summer they had beene together by the eares with the *Samoyeds* of *Callenose*, and had slayne one or two of them: wherefore they went to agree with them, and to pay ransome for some of their men that were taken afterwards. February. *Samoyeds* quarrell.

The fifteenth, the Sunne arose at South-east, a little Southerly, and set at West and by South Westerly. The sixteenth, the Sunne arose at South-east, and set at West due by the Compasse as I could set it, the variation being two points Westerly: for, at a South South-west, the Sunne commeth to the Meridian. Variation.

The twentieth, I had conference with a *Russe*, concerning their trade of *Molgomsey*, who had beene there twice, and he was the first that euer attempted it, and none hath beene farther then he to the Eastwards. And he told me, that their course from *Medenskoy Zauorot*, at the mouth of *Pechora* to the Eastward, to the two Ilands called *Zyelensa*, is two dayes and three nights distance, sayling with a faire wind. From thence to *Breit-vinnose*, three dayes and three nights sailing with a faire wind, which is within the Streight of *Vaygats*. And from thence by an Iland, or rather a Rocke, called *Socolia Lowdia*, leauing it on the Starboord side for feare of Rockes, still keeping your course North-east, vntill you come to a long Point on the Starboord side, with a sand lying off into the Sea three miles, some fiue or sixe dayes sayling. Which when you haue gotten about, you must hold your course somewhat more enclining to the South, fiue or six dayes more: and then you shall come to the Riuer of *Ob*; against the mouth whereof lieth an Iland: but you must keepe the Sea-boord of it, by reason it is shoald betwixt it and the Mayne. The Land all alongst the shoare is a fine lowe Land, and the going into the Riuer, is on the East side of the Iland. The Riuer is reported to be a Summer dayes sayling ouer in bredth, and is full of Ilands: whereby they report it to be shoald. Yet, in my opinion, so great a Riuer cannot be without a mayne channell; which as yet they haue not sought for: and therefore they iudge it innauigable. Also they report it to bee very plentifull of Fish of diuers sorts: but the people here, and the *Russes* are vnwilling that wee should goe thither. Moreouer, hee told mee, that from the Riuer *Ob* to the Eastwards, the Land stretcheth East, some sixe or eight dayes sayling more. To the Eastward of the Riuer *Ob* lieth another great Riuer as large as *Ob*, and is very deepe water, and runneth from the South, how farre as yet it is vnknowne. Although that hee affirmed, that he himselfe had sayled at the least three weekes vp the Riuer: and all along as they went, they met with sundry sorts of People, differing in Language one from another, which they call *Samoyeds*. Yea, and the People there did certifie them, that vp more towards the South, there are *Tartars* inhabiting, who ride vpon Horses. And hee affirmed, that they found pieces of Ploughes that had beene driuen downe the Riuer by the flouds, caused by the Snow melting from the Mountaines. This Riuer is very high Land, and deepe water on both sides. Into this Riuer, on the East side falleth another Riuer, called *Tingussey*, and the Inhabitants thereof are so called: whereby I coniecture, that it is not farre from the Citie *Tangut* in *Cathay*. These *Tingusses* report, that there is another huge Riuer, that trendeth to the Southwards, which the necke of a Land parteth from the Riuer of *Tingussey*: wherein there are great ships, not vnlike vnto the *Russes* ships, that sayle in it, hauing many Masts and Gunnes, which when they are shot off, make all the earth shake with the noyse: which should seeme to be the *Chinians*, that trade thither in the Summer, and returne backe againe ere the Winter doth come. The like also affirmeth another, being a *Russe*, who hath beene in the Riuer of *Tingussey*, where the people make this report. The report of a *Russe*, a great Traueller of the way from *Pechora* to *Ob*. *Medenskoy Zauorot*. *Zyelensa* two Ilands. *Breit-vinnose*. *Socolia Lowdia*. A long Point. From *Medenskoy Zauorot* to *Ob* is 16. dayes sayling. An Iland. *Ob* is full of Ilands, broad and shoald. The people of *Pechora*, and the *Russes* are vnwilling that we should goe to *Ob*. The Riuer *Yenisce*. *Samoyeds*. Horses. Ploughes. The Riuer of the *Tingussys*. *Tangut* mentioned by *Polo*, a large Kingdom Northward from *Cathay*, or *China*. The Riuer *Pisida*. Gunnes.

The first of March, the *Russes* tooke their Iourney from hence, from *Pustozer* into *Russia*, with such commodities as they bought. March.

Digitized by Google

The twelfth, the Sunnes altitude by the Quadrant was 67. degrees and 40. minutes; and the declination, no degrees 52. minutes, which being added, maketh 68. degrees and 30. minutes, being the true heigth of *Pustozer*.

Pustozera in 68. degrees 30. or 35. minutes.

The thirteenth, the Sun arose at East and by South a little Southerly, and set at West North-west. This day the Sunnes altitude by the Quadrant was 67. degrees 20. minutes; and the declination, 1. degree 15. minutes: which added together, maketh 68. degrees 35. minutes: so that I conclude, that *Pustozer* standeth in about 68. degrees 30. minutes. The eight and twentieth, the Sunne arose at East and by North, and set at North-west and by West.

Aprill.

The eleuenth of Aprill, the Inhabitants of this Towne returned from *Slobodca*, bringing with them Rie, Rie-meale, and other prouisions.

The one and twentieth, hauing conference with a *Permack*, concerning what commodities were to be had at the Towne of *Vst-zilma*, he told me, that there were Losh hides, Squerrils, Sables, white Foxes, and Rosomackes. Moreouer, he told me, that beyond the Riuer of *Yenissey*, the Land trendeth due East, and then there is a Riuer called *Peaseda*, and beyond that another, called *Catonga*, which runneth into *Cathay*: whose King, these *Permacks* and *Russes* call *Teulka tsar*. The Riuer lieth North and South as they of *Yenissey* say, but they cannot tell how farre: for, there hath not any beene vp the Riuer, by reason they are afraid of their shot. And this *Permack* told me, that on the Sea coast betwixt these two Riuers, *Peaseda* and *Catonga*, they found certaine stones like vnto Gold, and some like Siluer, being about the halfe way betwixt the two Riuers.

The report of a *Permack*.

Yenissey: beyond it the land trendeth due East.

Pesida Riuer.

Catonga Riuer runneth out of *Cathay*.

Stones like Gold and Siluer in the midway betweene *Pisida* and *Catonga*.

The two and twentieth, we had newes brought that the Ice was broken, in the *Pechora*, all alongst by the sides.

The ninth of May, the Sunne arose at North-east somwhat Easterly, and set at North somwhat Westerly, it being iust foure houres by the Houre-glasse vnder the Horizon.

May.

The three and twentieth, the Sun did not goe vnder the Horizon, for it was a pretie height aboue the Horizon, at a North North-east point of the Compasse: it then being at the lowest.

The Riuer Ice breakes vp.

The foure and twentieth, we had newes that the *Pechora* brake vp, vpon the twentieth day of this instant moneth. The sixe and twentieth, at foure of the clocke in the after-noone, I departed from *Pustozer*, to goe to *Vst-zilma*, where I arriued the thirtieth day instant. And the Riuer of *Pechora* lieth most part North North-east, and South South-west, and sometimes North and South. *Vst-zilma*, is a Village of some thirtie or fortie houses, and standeth in the height of 66. degrees and 30. minutes. They haue Corne growing there, both Barley and Rie: and their Barley is passing faire and white almost as Rice.

Foure dayes iourney betweene *Pustozer* and *Oust-zilma*.

Oust-zilma is in 66. degrees 30. minutes, & there grow faire Barley and Rie.

The ninth of Iune, I departed from *Vst-zilma* backe againe to *Pustozer*, where I arriued the eleuenth of Iune. The one and twentieth, seuenteene *Soymas* departed from hence to goe to *Molgomsey*: some belonging to this place, some to *Vst-zilma*, and some to *Mezen*, and *Penega*. The two and twentieth, diuers Boats went from hence to the Sea, to fish for Omelyes and Bealowgaes Oyle. The foure and twentieth, I sent downe *William Pursglone* to the Sea side, to buy the Oyle which God shall send them.

Iune.

17. *Soymas* depart for *Molgomsey*.

The third of Iuly, I receiued a Letter forth of *England*, by the way of *Colmogro*.

Iuly.

Tom combustion.

The fift, we had newes that the Gouernour and Souldiers of *Tom* haue burnt the Towne, and fled from thence, by reason they wanted victuals, and their pay: and about three hundred of them intended to come to *Vst-zilma*, to rob the Inhabitants thereof. This day I was told, that from *Pustozer* vp *Pechora* with a faire wind, to the Riuer of *Ouse*, is three weekes trauell: and then vp the Riuer of *Ouse*, to *Podcamen*, ten dayes, and from thence to *Ob*, eight dayes, drawne by Deere: and from thence to *Beresoua*, sixteene dayes, which is a Towne of trading. This mine Host told me, that he was a prisoner at *Beresoua*, and at *Tobolsco*: and hee affirmeth, that *Tobolsco* is a Citie of great trade, and that the *Tesecks*, *Bowhars*, and *Tartars*, come thither to trade, who bring Silkes, Veluets, Grogran, Sendames, and Kindackes, and that great store of Cloth, Pewter, and Copper may be vented there. Also there is great store of Furres, as Sables, Squerrils, Foxes, Blacke, Rosamackes, and Beauers. He sayth, that from *Pustozer* to *Vade* in *Iugoria*, which is on this side *Ob*, with carriage vpon Deere, it is a moneths Iourney, and *Nosoua* is on the other side of *Ob*; and it is two weekes and an halfe with light carriage or post. Moreouer, he told me, that *Pechora* runneth into *Velekapermia*, fiue weekes iourney from *Pustozer*, and from *Veleca permia* to *Verho towria*, nine dayes iourney by Horse and Sleds: and from thence to *Tumen* by Riuer, ten dayes: and from *Tumen* to *Tobolsco*, sixe dayes by the Riuer *Irtish*, and is the chiefe Citie of all *Siberia*. And from *Tobolsco* to *Sowrgout*, is sixe weekes Iourney vp the Riuer *Ob*, from whence come all the rich Furres which come to *Arcania*. From *Sowrgout* to *Tome*, which is amongst the *Tartars*, is three weekes vp the Riuer *Ob*: and yet none knoweth how farre the *Ob* runneth further, as he sayth, he was carried these wayes to the *Musko*, in the beginning of *Rostriga* his time.

Intelligence of the Countrey.

Course of *Pechora*.

Modeneskoy zauorot.

Meastnoy Ostrous.

The sixteenth, I was told by a *Permack*, hauing some speech with him concerning the *Vaygats*, that from *Medniskoy Zauorot* to the *Vaygats*, is one day and a nights sayle with a faire wind. And as you goe forth of the *Vaygats*, there lieth an Iland called *Meastno Ostrous*, not being

being farre from *Socolia Lowdy*: and from *Vaygats* through *Yougorskey shar* into *Oarskoy gouba*, (which is a great Bay and deepe) is two dayes and one nights sayling into *Mowtnoy* Riuer, the course East; somewhat Southerly. And from *Mowtnoy* to *Sharrappa shar*, which is an Inlet, is halfe a dayes sayling: and from thence to *Yowconone* is halfe a dayes sayling, which is an high Land: and from thence to *Naromzia* is a dayes sayling. And there are three little Riuers betwixt them: and there are Morses all alongst that shoare, and farther he knew not by Sea. But he sayth, that the Riuer *Ob* is a dayes sayling right ouer. And from *Zylena reca* to the *Tax Zauorot*, the course is South-east, a dayes sayling: and from the *Zauorot* of *Tax* to the Riuers mouth, is a day and a nights sayling: and there is an Iland in the mouth thereof, being high land. And from thence vp the Riuer, the course is South-east to the Towne eight dayes iourney, to be haled with a rope, there runneth such a streame. But, ere you come to the *Tax* Riuer, there is another Riuer on the Starboord side, called *Powre*, where they get of the best Sables that come: and you must leaue the Iland at the *Tax* on the Larboord side. And from *Tax* Towne vp the Riuer *Volochanco*, is sixe dayes iourney Easterly against the streame, vntill you come to a Vollocke, about a mile and an halfe long, Marish ground, and so into another Riuer, some foure dayes rowing with the streame, to the Riuer that is called *Trowban*, which is a great Riuer, and falleth into *Yenisey*, some three dayes iourney more with the streame: at the entrance whereof lieth an Iland, called by the same name, whereon there is a little Towne of the same name. From thence downe the Riuer *Yenisey* to the Riuer *Haustke*, is twelue dayes sayling: and it is a great Riuer, and runneth to the East (as it is thought) into *Cathay*, which of the *Permacks*, is called *Kithayskoy Tsarrstua*.

Scola Lowdia. *Yowgatkoy shar.* *Carskoy Gouba.* *Mowtnoy* a Riuer. *Sharrappa Shar.* *Yowconone.* *Naromzia* Riuer. *Ob.* *Zylena* Riuer. *Tax Zauorot.* *Tax* Riuer. An Iland in the mouth of *Tax*. The Towne. *Powre* Riuer. An Iland called *Trowgan*. The Riuer *Haustke* runneth out of *Cathay*.

The fift of August, my selfe, and the Boy, went aboord the Lodia departing from *Pustozer*. The tenth, we arriued at the *Glonbocke*, which are the deepe water, whither *William Purse* & *Ione* was come with the Oyle, where we melted what we could, before we departed. The twelfth, I obserued in the *Glonbocke*, and had it on the Quadrant 56. degrees 30. minutes: and the Declination was 22. degrees 42. minutes, so it standeth in 69. degrees 12. minutes.

August. They depart from *Pustozera*.

The eighteenth, we departed from the *Glonbocke*, and entred the *Dry Sea*, and arriued at the *Zauorot* the one and twentieth.

The two and twentieth, we weighed and went out to Sea, the wind at East North-east, but the wind comming to the North-west, we put roomer againe, and came to an Anchor at the *Zauorot* againe. The foure and twentieth, I obserued at the *Zauorot*, and had it on the Quadrant 63. degrees no minutes, and the Declination was 7. degrees 26. minutes, so it standeth in about 70. degrees 30. minutes.

Glonbocke in 69 degrees 12. minutes.

The six and twentieth, we departed from the *Zauorot* about noon, the wind being at East, the land trending betwixt it & *Collocolcona* East & West, being two Voraes, or sixty Verst distance.

Collocolcona.

The seuen and twentieth, we came to an Iland called *Mezyon Shary*, being sixtie Verst to the Eastwards of *Snatnose*, and it is about ten Verst in length, and two Verst broad. At the East end thereof, *Oliuer Brunell* was carried into Harbour by a *Russe*, where he was Land-locked, hauing the Iland on the one side, and the Mayne on the other.

Mezyon Shary. *Oliuer Brunell.*

The eight and twentieth, we departed from *Mezyon Shary*, the wind at North-east, a little gale, but before night it fell thicke, and wee steered away North-west, and about mid-night, it came to the North North-east blowing a very sore storme: so that we were not able to beare our sayle aloft, and hauing sloud vnder foot, we were fogged into the Bay, and put ashoare some two houres before day, vpon the long point of the obscure Harbour, about three miles to the Westwards, the wind being at North: where we got all our goods on Land, alwayes looking when the Lodia would haue split. But, by Gods Almightie Prouidence, she beate ouer that Sand, and lay betwixt it and the beach: so that when the tyde was fallen, she sate on ground, as if she had beene in a creeke, the Sands all dry round about her. Also on the West side of *Snatnose*, in the Bay is a great Riuer, called *Indiga*, which is, deepe Water, and a good Harbour for a ship, as the *Russes* doe report.

Indiga.

The thirtieth, the storme continued all the day long. The one and thirtieth, about noone it blew lesse wind, and at night we stopped our leakes as well as we could.

The first of September, in the morning wee got our goods againe aboord. The second, in the morning, we went roomer with the obscure Harbour, the wind being at the North-west, but at noone, it came to the South-east and East South-east, so we weighed, and stood to the Westwards againe, vntill wee came to the Riues, where wee came on shoare the last yeere: which is called *Zenowea*, where wee anchored a little to the Eastwards, and ridde the most part of that night.

September.

The third, in the morning we weighed, and stood to the Westwards, but the wind comming to the West South-west blowing hard, and hauing the tyde against vs, we anchored againe about ten of the clocke on Thursday, being the third day: yet within two houres after, we were forced to weigh, and put roomer to a little Riuer or Creeke, that is, called *Creostoua*: where wee ridde vntill the ninth day. Then we loosed, thinking to haue gone forth to Sea, the wind being Easterly; but it blowing hard, and there running a great streame of fresh water, that it put vs

on ground againe, wee were in great danger againe of losing all. So wee were forced to get all things on shoare againe, and then got her off the eleuenth day, and went into the Creake againe: and stopping our leakes as well as we could, we got our goods aboord againe.

The fourteenth, the winde comming to the East South-east, wee got forth to Sea with much adoe, and soone after, the winde came to the East North-east, a faire gale: and wee stood it alongst the Land South-east and by South, and North-west and by North all that after-noone vntill mid-night; at what time we were thwart of *Callenose*. The fifteenth, about three of the clocke in the morning, the winde came to the North-east, and blew very hard, so we steered away South South-west, and at night wee fell with a shoald, which they said, is thwart of the *Mezen* mouth; but I take it, it was *Knocke Iohn*.

Knocke Iohn.

Danielone Stolbe

The sixteenth, in the morning about eight or nine of the clocke, hauing carried but an hullocke of our sayle all night, we fell with *Danielone Stolbe* on the Coast of *Lappia*, the wind being at South, and blowing hard, so that we went into Harbour at the West of the Iland, there standing fiue Crosses on it, it being a Rocke. And there are foure Warlocks on the Mayne, and another on a Rocke to the Westwards: yet it is but for Lodyes, and that a bad one also, being full of Rockes round about, where we rid vntill the six and twentieth. Then we departed forth of *Daniela Stolbe* about noone, and at night we came to *Sasnouets*, where we rid all night. The seuen and twentieth, in the morning we fell with *Chuzua Nose*. The eight and twentieth, wee arriued at *Arkania*, where wee landed our Oyle. The nine and twentieth, wee arriued at *Colmogro*.

Chuzua Nose.
Arkania.
Colmogro.

Extracts taken out of two Letters of *Iosias Logan* from *Pechora*, to Master *Hakluyt* Prebend of *Westminster*.

This piece of an Elephants Tooth was sent into *England*.

THere vse to come hither in the Winter about two thousand Samoieds *with their Commodities, which may be such as we dreamed not on yet. For by chance one came to vs with a piece of an Elephants Tooth, which he said he bought of a* Samoied. *And heere are men called* Tinguſſies, *whose Countrey is beyond the Riuers of* Obi, *and* Taes; *and bordereth vpon the great Riuer* Yeniſſe: *which is a good Riuer and a deepe, and falleth into the Sea* Naromzie: *And it should seeme it is not farre from* China. *Therefore you may conceiue what hope there is of this Enterprize, if it please God it may be followed as it ought to be. Thus beseeching Almighty God to bleſſe you and vs, I commit you to the protection of him, who is the giuer of all goodneſſe, Iul.* 24. 1611.

The Sea Naromzie.

In another Letter from *Pechora*, Auguſt 16.

THere come two or three thouſand Samoieds *hither to trade with their Sables, Reuters, Blacke Foxes, Squirrels, Wolfes, Raſomacks, Ermines. And here is caught in September, good ſtore of Salmon, Traine of a certayne great fiſh, called a Bealouga, and Morſſes, and Seales Oyle in the Summer time, and White Foxes and Feathers. I had ſome conference with a* Ruſſe, *who told mee that the* Samoieds *told him, that there lye* Minchins, *which in their Language is ſtrangers, buried in the Sand in Coffins, with their armes a croſſe their breſt: which they eſtimate to be about ſixtie yeeres ago: And that they found Writing Tables in one of their pockets, and other ſmall Triſles which they tooke away. The* Vaygats *is ſometimes open and ſometimes ſhut: and vpon them groweth Chriſtall of the Mount. The* Ruſſes *and* Permacks *trade yearely with them of the Riuer* Obi, *and beyond. They goe by Sea into the great Bay beyond* Pechora, *called* Yowgorsky Shar: *into which there fall foure Riuers; The Eaſtermoſt whereof they call* Cara Reca, *on the* Blacke Riuer; *beyond which they paſſe vnto another, called* Moetnaia Reca; *then they come to a* Voloc *or necke of Land, which continueth but three Verſts; ouer which they draw their Boats and goods, and ſo come to another Riuer, called* Zelena Reca, *or* The Greene Riuer, *which bringeth them into* Obi: *Into which on the Eaſter ſide, the Riuer* Taes *falleth, making but one mouth with the Riuer* Obi, *being ſhoald, and they report it to bee as broad toward the mouth, as a man can diſcerne ouer, hauing many Ilands therein.*

In another Letter from *Pechora*, Auguſt 16.

Zelena Reca.
Obi Riuer.
Taes Riuer.
Yeniſſey Riuer.

Moreouer, there is another great Riuer, called Yeniſſey *beyond* Taes: *which they ſay, is rather bigger and deeper then* Obi; *and it runneth vp into the Land: no man knoweth how farre: Although they haue diſcouered ſome fourteene dayes rowing vp therein: neither can they learne of the Inhabitants thereof how farre it ſtretcheth; whom they call* Tinguſſey: *who are a proper people of themſelues. And the* Samoieds *report that they haue trauelled ſo farre, that they came within ſight of a* White Citie *or Towne: which ſhould ſeeme to be builded of ſtone, for they durſt not goe to make triall: and they heard a great ringing of Bels. Alſo they ſay, that they ſaw beaſts, but they were not like their Deere; for they had a great Mane, a long Taile, no Hornes, and their footing was round, not clouen, as their Deere are: and they vſe to ride vpon their backs, and not to draw in Sleds as their Deere vſe to doe. Theſe I aſſure my ſelfe are Horſes. And further they report, that there came people vnto them all made of Iron, their heads, armes, hands, and legges: ſo that neither Arrowes, Swords, nor Speares, could enter; which, as I coniecture, were people in Armour. For they ſaid, that two hundred of them they thought were able to conquer all their Realme. By this you may gather, that they are not farre from* Cataia *and* China. *Thus haue I ſhewed vnto you the greateſt ſecret, and the neereſt to the truth that I know. Requeſting*

you, if you thinke it meet, that the Right Honourable the Earle of Salisburie *might haue a Copie thereof. Thus wishing you health and prosperitie in this World, and felicitie in the World to come, I cease.*

CHAP. XI.

A briefe Relation of a Voyage to Pechora, *and wintering there, began in the yeere* 1611. *Written by* WILLIAM PVRSGLOVE.

MAster *Iosias Logan*, and *William Gourdon*, hauing receiued directions from the Right Worshipfull Company of *English* Merchants, Trading *Russia*. The eleuenth of Aprill, 1611. departed from *Blacke-wall* in the Riuer of *Thames*, in a good ship, called the *Amitie*; whereof *Iames Vadum* of *Rederiffe* was Master.

The sixteenth of Iuly, we arriued at *Pustozera*, being much wondred at by the Inhabitants, a *Permac* receiued vs into his House, and let vs haue a Ware-house for our goods. We all continued there vntill the fiue and twentieth of Iuly. Then wee returned in our Shallop againe to our ship, hauing a small *Russe* Boate in our company, to carrie some of the Feathers and Downe, which we brought there, our owne Boat not beeing able to carrie all, being pestered with our Prouision, and some Feathers, and White Foxes. Wee came aboord our ship the seuen and twentieth of Iuly, where wee deliuered those White Foxes, Feathers, and Downe, and an exceeding rich blacke Foxe skinne, hauing laded the *Russe* Boate with part of our goods. The rest of our goods they laid vpon the Sand to be sent vp afterward, leauing mee and *Marmaduke Wilson*, and an hired *Russe* with them, where wee attended to heare of Boates from the Towne. But Master *Logan* not hearing of any aboue a tunne and an halfe, could not get any to come downe to vs; because they feared to goe ouer the dry or shoald Sea in their little Boates being laden.

They were first receiued into a *Permacks* House.

The one and thirtieth, our ship departed ouer the Barre, purposing to make their Voyage in *Noua Zembla*, or some Ilands not farre distant from thence. At their departure there were fiue and twentie Coaches or *Soymas*, in that Road of *Pechora*, with at least two hundred men in them bound for *Molgomsey*; but hindered by contrary Windes and Ice, our shippes being ouer the Barre, they all came on shoare to vs; some threatning, others flattering vs, but after I had bestowed two Bottles of Beere among some of the best of them, they all went vp to *Pustozera*: where most of them that had any goods to sell stayed all Winter, and sold their Commodities in barter with the Inhabitants, and when they could happen secretly vpon any *Samoieds*, they would be trading with them also: which is contrarie to the Priuiledges granted by the Emperour to the *Pustozerits*. Their Wintering there was no little hindrance to vs for the sale of our goods.

We arriued at the Towne the seuenth of August. In mine absence Master *Logan* had hired part of an House of one, called *Tiffon Vriawich*, a *Polonian*, who was turned *Russe*. August.

The three and twentieth of Nouember, I departed from *Pustozera* to goe for *Russia*, at three of the clocke in the afternoone, in the Company of certayne *Russes*, *Permacks*, and *Samoieds*, which *Samoieds* were our Guides ouer the Mountaynes: and one dayes journey ouer the Rocks, which they call *Cameni*, which are not Rockie Hills, as in *Norway*, but high Lands, yet in most places smooth, and most marish grounds full of little Hillocks, which being couered with Snow and frozen, did not much annoy vs. Our Argeshey or Caruan were about two hundred and ten Sleds, drawne the most part with two Deere in a Sled. They had also about two hundred spare Deere, to ease the wearied. We kept company vntill the fourth of December together, hauing passed two third parts of our way to *Slobotca*, being the first Towne in the Countrey of *Mesen*, that we saw. And then in company of foure Sleds, hauing each two choice Buckes, with a *Samoied* in the fift for our Guide, we left the Argeshey, and rid post for *Slobotca*, where wee arriued the ninth of December, at ten of the clocke at night. In this Towne I found one *Thomas Ligon* an *Englishman*, who had serued Master *Richard Cockes* of *London*, who saluting mee in *English*, maruelled much to meet me there: and carried me from the rest of my company to his Lodging, and gaue me there very kind entertaynment. The next morning I departed thence in his Sled, hauing ouer night hired an Horse to the next Towne, which was fifteenth Verstes off: And so trauelling day and night, changing Horses at euery conuenient place, I came to *Colmogro* the twelfth of December: and deliuered my Letters from Master *Iosias Logan* our Factor in *Pustozera*, to Master *Fabian Smith*, then Agent for the *English* Company. Hauing rested my selfe foure dayes there, and receiued certayne Money to helpe to put off some of our goods at *Pechora*, I departed from *Colmogro* the seuenteenth of December, and came to *Slobotca* the nineteenth day; the height of the Pole being there some sixtie fiue degrees. I stayed there till the two and twentieth of the said moneth, by which time the *Permacks* and the Inhabitants of *Pustozera*, were

Nouember. His Voyage ouer-land to *Slobotca* and *Colmogro*. Mountaynes & *Cameni*, or Rockes.

He arriueth at *Slobotca*, the 9. of December in 16. dayes. *Thomas Ligon*.

He arriueth at *Colmogro*, the 12. of December.

Digitized by Google

were readie to returne to *Pechora* with their goods, being Rie, Malt, Hops, Salt, *Aqua-vitæ*, and some course Cloth. Moreouer, diuers *Russes* hauing their Sonnes or Kinsmen Leigers there, in Winter doe send Cloth and Money ouer Land.

Hauing made my prouision for my journey, and taken my leaue of Master *Thomas Ligon*, wee set forward that night, and rid not aboue fiue and twentie Verſts, to a place where wee found the Argeshey which set out from *Slobotca* the two and twentieth day in the morning by breake of day. We had better passage in our returne, then we had in our journey from *Pustozera*, by reason of much Snow fallen in the time of our being in *Russia*, and frozen so hard, that it bare both Deere and Sleds in all places. Wee kept together with the Argeshey, being then two hundred and fiftie Sleds, till we had passed more then two thirds of our way ouer the Mountaynes: and then long before day hauing chosen Buckes of the best, wee departed the fourth of Ianuarie, being eight Sleds in company, and rid post all that day and night following, beeing Moone-light, saue sometimes for the space of an houre that wee stayed where, the *Samoied* our Guide knew there was good store of Mosse, (which is white) to refresh our Deere. The fifth of Ianuarie, we came to *Pustozera*, hauing in fortie houres trauelled three hundred and fiftie Verſts with our choice Buckes. Our Argeshey or Caruan arriued there after vs the twelfth of Ianuarie.

Snow betters their Trauell.

The fourth of Ianuarie.

Mosse food for the Deere.

The manner of trauelling with the *Samoieds*.

The *Samoieds* being the onely Guides in Winter, either from *Pustozera* to *Slobotca*, or to any other places Eastward, as *Ougoria*, *Siberia*, or *Molgomsey*; know, by their continuall trauell, the way, though it be neuer so thick weather, as also where most store of white Mosse is growing: and according as they find themselues neere vnto some mosshie place, be it somthing before night, or within night foure or fiue houres before they can come thither; there for that Night they pitch their Tents, being for the most part made of Deere and Elkes skinnes: we had in our companie foure great Tents set vp, and some twentie vnder each Tent. This worke of pitching the Tents belongeth vnto the Women. In the meane time the men vnyoake the Deere, and turne them loose to digge through the Snow, bee it neuer so deepe, for their food and sustenace. Then the *Samoieds* (of euery Tent one) out of the next Wood, prouide as much Fuell as shall serue their turnes for their abode there. First, they set on Kettles full of Snow water, which being melted, they drinke thereof euery one a good draught: then they seeth their Supper, vsing as before Snow water melted for their Drinke. Our lodgings were vpon the Snow within our Tents, round about the Fire, hauing vnder vs for our Beds the skinnes of Deere, couered with our day apparell. For all the time of our journey, the Merchants, whether Stranger, *Russe*, or *Permac*, according to the number of them, make prouision of Victuals to feed the whole familie in euery Tent, euery man his day about, together with the *Samoieds*, their Wiues and Children; who carrie all their Houshold euery where with them; and out of their Sonnes and Daughters, they appoint a watch ouer their Deere, for feare of the Wolfe and other Beasts, which notwithstanding their watch sometimes kill in a night one or two of their Deere, as it fell out two nights in our journey to *Slobotca*. This *Slobotca* is a pretie Towne, hauing in December and Ianuarie, great resort of people repayring thither, as well Rich *Russes* out of many places, with money to buy Furres, as others with prouision of Meale and Malt, and other Commodities, to furnish the *Pustozerits*, as also to buy Fish, to wit, Salmons, Oyle of *Bealugos*, Deere skinnes, and Furres of them.

Trade with the *Samoieds* of *Ougoria*.

Eight or nine hundred *Samoieds* come to *Pustozera*.

The tenth of Ianuary, the Inhabitants of *Pustozera*, returned from Trading with the *Samoieds* of *Ougoria*, on which Iourney they set forward the fiue and twentieth of Nouember: and within three dayes after, came betwixt eight or nine hundred *Samoieds* with a small quantitie of their Commodities, in respect of former yeeres, by reason of Warre betweene the *Samoieds* of *Ougoria*, and *Molgomsey*, who were wont to Trade one with another, and not to warre one against another. So Sables, and other Commodities being scant, the inhabitants sold them very deare: yet notwithstanding, the *Russes* bought vp all, striuing one to haue them before another. So that after that little money, which we had was bestowed, wee could not doe any thing in barter. Moreouer, the *Russes* did not onely informe against vs to the Inhabitants to stirre them vp against vs, but also vsed the like meanes to the *Samoieds* to dissuade them from trading with vs, either in their owne Countries, or else-where; alleadging that wee would betray them, and not onely carrie them away to make them Slaues, and robbe them, but also would murther and destroy all the rest, whereſoeuer wee should come. The Inhabitants also of *Pustozera*, being incensed by the *Russes*, doubting wee would enter farther into their Trade Eastward, began also to hinder, and forbid the *Samoieds* to come to vs. Yet by meanes of our Hoast being a *Polac* borne, we spake with diuers of the principall of the *Samoieds*, hee being our Interpreter, and wee our selues vnderstood certayne *Samoieds* speaking broken *Russe*, and by these meanes we found out more at large the despitefulnesse of the *Russes*, and the enuie of some of the Inhabitants against vs; as also their feare, least wee or any other Stranger, should enter into further Discouerie of their trafficking toward the East, but especially about the Riuer *Ob*. Some sayd we were sent as spyes to betray their Land to the *Pole* or the *Swethen*, with whom they then had warre. Some gaue counsell to put vs vnder the Water: others aduised to set vs vpon the Sand, where wee should haue beene without all doubt drowned in short space, others thought best to send vs vp

The false suggestions of the *Russes* against vs.

to

to the Nobilitie, and to ſeaze on all our goods to the vſe of the State. But diuers of the beſt in the Towne, with whom wee kept all friendſhip that poſſible we could, withſtood thoſe bloudie practiſes. The Lord therefore bee bleſſed.

The fifth of March, the Inhabitants of *Puſtozer* went againe to *Slobotca*, carrying the *Ruſſes* with their Commodities thither. March.

They returned home the eleuenth of Aprill, 1612. The one and twentieth of Aprill, water was firſt ſeene vpon the maine Riuer *Pechora* aboue the Ice, deſcending from aboue *Ouſt-zilma*. Aprill, 1612.

The twentieth of May, the Ice brake vp. The fiue and twentieth of May, certayne of the Inhabitants of *Puſtozer*, went by water vnto *Ouſt-zilma*. May 20. the Ice brake vp.

The ſixe and twentieth, *Ioſias Logan* with our Hoaſt the *Polonian*, hired a Boate and went toward *Ouſt-zilma*, carrying with him certayne Cloath and Copper Kettles, in hope to ſell them well there, being intreated in the Summer before by one of their Townesmen to come thither, or to ſend one to Winter there: alledging that they got great ſtore of Loſh-hydes, Squirrels, Sables, and Beuers. Which ſome yeeres indeed, as we were credibly informed, falleth out according to his report. But at his arriuall there, diuers of the Townesmen came againſt him, and would not ſuffer him nor any of his Boate to Land for the ſpace of ten houres: but in the end, they let him goe on ſhoare, after, as wee ſuppoſe, the Inhabitants of *Puſtozer* had bought moſt of their Commodities. So that hee ſtaying there two dayes, could get but nine Loſh-hydes, and halfe a timber of courſe Sables, in barter for ſome Cloath and Copper. The principall cauſe of his going thither, was, to meete with ſome of the *Permacks* out of *Permia*, who ſome yeeres come downe with Rie, and Rie-meale, and thought to haue giuen notice to thoſe *Permacks* of our being at *Puſtozer*, and to haue willed them to haue perſwaded their Countrey-men to bring thither the next Spring following all their Commodities, being Waxe, Honey, Loſh-hydes, and Furres, which they might doe for halfe the charge that they are at in bringing them to *Archangell*, on the Riuer *Duina*. Our men intreated to winter at *Ouſt-zilma*.

Ouſt-zilma is a pretie Towne of ſome ſixtie Houſes: and is three or foure dayes ſayling with a faire wind againſt the ſtreame from *Puſtozer*, but backe againe they may ſayle it in two dayes. *Ouſt-zilma*.

The third of Iune, came the firſt *Ruſſes* in their Cayooks by Riuer out of *Ruſſia* to *Puſtozer*. Theſe Cayooks, be ſmall Boates of two tunnes, hauing two men in each Boate. Iune 3.

The twentieth of Iune, nine *Ruſſe* Coaches or Soymas, paſſed by *Puſtozer* from *Ouſt-zilma* for *Molgomſey*. The one and twentieth, ſixe *Ruſſe* Soymas more departed from *Puſtozer*: all the reſt hauing giuen ouer their Voyage, which came thither the Summer before, 1611. The two and twentieth, one Soyma belonging to the Towne of *Puſtozer*, departed for *Molgomſey*. Sixteene *Soymas* depart for *Molgomſey*.

The three and twentieth, and foure and twentieth, the Inhabitants of *Puſtozer*, went to Fiſh for *Bealugos* vnder the *Beluan*, being the higheſt Land neere vnto the *Drie Sea*, and two dayes ſayling from the Towne. Fiſhing for *Bealugos* vnder the *Beluan*.

The fiue and twentieth, I departed after them, and arriued there the ſeuen and twentieth, hoping to haue prouided good ſtore of *Bealugos* Oyle. But it fell out contrarie: though there were aboue fiftie Boates, hauing in euery Boate three men, and in many foure, by reaſon it pleaſed God to ſend ſuch windie and ſtormie weather, that the Boates could not goe to Sea in many dayes together, during their wonted time of Fiſhing for thoſe Beaſts; being till the twentieth of Iuly. Then euery man leaueth that Fiſhing, and repaire to their owne Fiſherie, to hunt Ducks, Geeſe, and Swannes, which moſt yeeres they get in abundance, and make good profit of their Feathers and Downe: as alſo of their Fleſh, which they ſalt vp in Caske for Winter prouiſion, ſeruing them alſo all the Summer for Fleſh dayes. Theſe *Bealugos* they catch with harping Irons, tyed faſt to a long rope of ninetie or an hundred fathoms, with a ſtaffe of the length of two yards or ſomewhat longer, being put looſe into the Iron, wherewith when the beaſt commeth within the reach of him that ſtriketh, he ſmiteth him with the Iron, leauing it in the Beaſt: then the rope being layed out cleere to vere out, the man holding his Staffe ſtill in his hand: but the Beaſt being wounded haſteneth to the bottome, where hauing beate himſelfe neare to death, they hall in their rope by little and little, the Beaſt aſcending thereby. And if they finde him not neere death, they ſtrike him againe: and being dead they cut off his skinne with the fat on it in many parts, ſome the breadth of two hands, ſome more or leſſe. Then comming on ſhoare, they take the Fat from the skinne, and cut it in ſmall peeces to diſſolue it to Oyle, caſting away the Fleſh which is red, to the Fowles of the Sea; except ſome poore *Samoied* come that way, who taketh it, though it haue lyen putrifying two or three dayes, and dreeth it, and maketh good cheare with it with his Familie. This Beaſt is as bigge as two good Sturgions. Moreouer, I was informed by an ancient Traueller, that the Fleſh and Fat of that Beaſt, being cut as Beefe and ſalted in Caske, is a great and rich Commoditie in *Italie*; which cannot chuſe but to bee much better then young Whales, which I haue heard that the *Biskayners* vſe to preſerue for good meate. With the Fat of ſome one of theſe Beaſts, they will fill three Barrels, of ſome leſſer two barrels, and ſome yeeld but one barrell of Blubber, which they call *Shilliga*. In that Summer when I was there, by reaſon of Northerly windes blowing hard, they killed by all their Boates not aboue fortie Beaſts: with ſome Boate they killed two, with other three, with ſome foure. But with moſt not one. Manner of killing them. The *Ruſſes* vpon the Ice vſe to kill the Morſe as they doe their *Bealugo*: but their rope is longer, and a barrell made faſt at one end to buoy it. *Samoieds* pouertie. *Bealugo* made meate in *Italie*

The

July 13. A Boate ſent by Riuer to *Puſtozera*, to fetch home Maſter *Logan* and his Company into *Ruſſia*.

The thirteenth of Iuly, I receiued a Letter from Maſter *Ioſias Logan*, the effect whereof was; That the Company of our *Engliſh* Merchants of *Ruſſia*, had ſent a Boate out of *Ruſſia* by Riuer, which ſtood them in foureteene Rubbels or Marks for vs to goe in her, or by Lodia for *Ruſſia*. For they were purpoſed not to ſend a Ship for vs that yeere.

Auguſt. The *Glowbuc*.

The ninth of Auguſt, Maſter *Ioſias Logan*, and *Marmaduke Wilſon*, came from the Towne of *Puſtozera* in a Lodia to goe for *Ruſſia*, and Anchored in the *Glowbuc*, which is a deepe place of the Riuer. Heere wee ſtayed ten dayes to make vp our Oyle. In the meane time the Lodia got her full lading with Omelies, and Seegies ſalted in Caske, attending a faire winde.

The ninth of Auguſt, wee ſet ſayle out of the *Glowbuc*, and entred the *Suchoi-morie*, that is, *The Drie or ſhoald Sea*, and ſtirred away next hand North North-eaſt.

Promoi Coſkoi.

The nine and twentieth, a little before day, not thinking wee had beene ſo neere the Land, we were on the Breches of *Promoi Coſkoi*, or the Sands of *Promoi*, a bad Harbour ſo called by the *Ruſſes*, and beate ouer one Sand by Gods prouidence onely, ſo high, being halfe full of water, that in diſpaire of euer getting her off againe, wee vnladed moſt of the goods, as Fiſh, Oyle, Feathers, Downe, and Loſh-hydes, as ſoone as it began to bee day-light, and that the *Ruſſes* knew vs to bee vpon the mayne Land. The thirtieth day, being ſomewhat calme, and the wind Eaſterly, but thicke weather ſtill, there came three men from *Vaſilie Beregen* his Lodia, who was our Conſort, while wee were working to get our Lodia a floate againe, and told vs, that their Lodia was beaten in peeces vpon the mayne Land, ſome ſeuen or eight Verſts to the Weſtward off vs. The one and thirtieth, wee laboured againe, and by Gods aſſiſtance got her a floate, hauing taken out almoſt all her goods: and that night laded ſome part againe.

September.

The firſt of September, wee got all our goods aboord, and at Night-tide being faire weather, the winde North-weſt and Moone-light, wee put from that comfortleſſe place, and went into the *Promoi* Harbour, hauing on the Barre nine or ten foote water; but within foure or fiue fathoms. A South-weſt Moone maketh there a full Sea. It is in the great Bay betweene *Snetinos* and *Candinos*. The ſecond, the winde at Eaſt North-eaſt faire weather, wee ſet ſayle with our leake Lodia, the Pumpe neuer reſting.

The third, the winde variable, wee ſayled along the the ſhoare till about Noone: then the wind comming to the Weſt, wee put backe againe for *Chriſtoua Stanouecha*, which is the Croſſe Harbour, where wee rode in a fine Riuer, hauing a bad Barre.

The ninth, in the Morning wee purpoſed to put to Sea againe, the winde Eaſterly: but the Barre was ſo growne and warped vp with ſands, when wee came vpon the entrance of it, that we could not paſſe ouer, neither with Wind nor Oares, but were forced vpon the mayne: where our Lodia was beaten ſo high vpon the ſand, that all hope of ſauing her was paſt. That day wee got out of her an hundred Barrels of Fiſh and Oyle, and yet we could not get her off againe.

North-weſt windes cauſe high Tides on this Coaſt. Much Snow.

The tenth, the winde being at North-weſt, cauſed high Tides, by which meanes we got her off, and brought her againe into Harbour. The eleuenth wee had ſo much winde and Snow, that we could not get our goods aboord all that day. The twelfth, we got all aboord, hauing ſtopped moſt of our leakes with Moſſe and old Cloutes.

Candinos.

The thirteenth, the wind at Eaſt, faire weather, wee put to Sea out of that bad Harbour, leauing one of our Boates there, and eight Barrels of Fiſh to eaſe our leake Lodia. The fourteenth, about mid-night we were thwart of *Candinos*, and ſtirred South-weſt, and South South-weſt all the next day: but the Night following being much winde, the *Ruſſes* eſteeming themſelues to bee on the Weſterne ſhoare, ſtrooke ſayle, and by Day-light we ſaw Land to the Weſtward of the *White Sea*, being the ſixteenth day: and wee were forced againe into another bad Harbour, called *Danilo Stolb*, that is, *Daniels Piller*, on the Coaſt of *Lapland*, where we made our Lodia faſt among the Rockes: where ſhee lay drie halfe-tide, and lay there beenept and wind-bound vntill the ſixe and twentieth day: and then at Tide-time wee got out of that place.

Danilo Stolb in *Lapland.*

Archangel.

The eight and twentieth, wee entred into the Riuer of *Duyna*, and landed that night at the Caſtle of *Archangel* in the *Engliſh* Houſe, all our Oyle, Loſh-hydes, and other goods, as Feathers, Downe, &c.

Colmogro.

The nine and twentieth, about mid-night we came to the *Engliſh* Houſe at *Colmogro*, and there continued all the Winter.

The three and twentieth of Aprill 1613. the Riuer of *Duyna* brake vp at *Archangel*.

Other Obſeruations of the ſayd WILLIAM PVRSGLOVE.

Medeniskoie Barre. *Vaygats* Iland. The Riuer *Ob*. The Riuer *Tas*

FRom *Medenskoie Zauorot* to the Iſle of *Vaygats*, is two dayes ſayliug with a *Ruſſe* Lodia. From *Vaygats* to the Riuer *Ob*, is foure dayes ſayling. The Riuer *Ob* lyeth North and South. The courſe from *Vaygats* to *Toukoi-coſcoy*, is North-eaſt; and from thence Eaſt to the mouth of *Ob*. Within the *Ob* ſome three dayes ſayling, is a Riuer on the Eaſt ſide called *Tas*, hauing as it were a Barre at the entrance thereof: yet there is alwayes eleuen or twelue foote water vpon it,

Digitized by Google

it, but within it is very deepe. Within two dayes ſayling within the *Tas*, the *Ruſſe* hath builded a Towne and a Caſtle, being called *Molgomſey*; where all the Hunters of Beaſts aſſemble, and bring their Furs with them. Alſo the *Ruſſe* Soymas or Boats and thoſe of *Puſtozera*, come thither with their Meale and other Merchandizes. And hauing ſold or bartered their Commodities, euery one returneth home, ſome to *Puſtozera*, and others to *Ruſſia*. The Hunters alſo prouide againſt the next Winter for Hunting againe. *Molgomſey* a great Mart.

There are three Riuers vnder the high Land of *Ougoria* and *Naramzey*, and great ſtore of Morſſes about the point of *Naramzei*, whither the Inhabitants of *Puſtozera* doe ſend a Lodia in the Autumne, with diuers Commodities to trade with the *Ougorian Samoieds*. Alſo they kill many Morſſes, onely taking their Teeth, and trauell among the *Samoieds* all the Winter to trade with them, and returne ouer Land to *Puſtozera* in Ianuarie next following. Some yeeres, if the winde doe not ſerue them inſtantly, they are glad to giue ouer that Voyage by Sea. As for example, in the yeere 1611. when we wintered there, the froſt came vpon them before they had wind to ſerue them; whereupon they were forced to giue ouer that Voyage. And aſſoone as they could trauell by Sled, ſome of the richeſt of the Sonnes and Seruants of the Townſmen, were ſent with certayne Commodities to barter with the *Samoieds*, againſt their Fathers or other Friends ſhould come after in the Winter, and to buy vp all the beſt Furs and other Commodities. *Ougoria* and *Naramzei*. Store of Morſſes. They returne from *Ougoria* in Ianuarie.

The *Ruſſes* when they ſayle for *Molgomſey* in their Soymas, goe not about *Naramzei* point to the mouth of the Riuer *Ob*, but ſayle vp a narrow Riuer, called *Moetnaia Reca*, that is to ſay, the Muddie Riuer, & at the head therof they hale their Boats ouer a little neck of land into the Riuer *Zelenai*, that is, the Green Riuer, & ſo fall down into the Riuer *Ob*: and ſo ſaile Southward vp the Riuer *Ob* till they come to the Riuer *Tas*. From the Barre of *Tas* to the Riuers mouth, is aboue a daies & a nights ſailing. There is an Iland in the mouth of *Tas*, being very high land. From thence the Riuer to the Towne, leauing the Iland on the left hand are eight dayes ſayling. But ere you come to the *Tas* Riuer, there is a ſmall Riuer called *Power*, or *Piet*; where they get the beſt Sables of all *Molgomſey*. And vp the Riuer *Tas* to *Volochanke*, againſt the ſtreame are ſixe dayes ſayling Eaſtward, till you come to a Voloc, or necke of Land a mile and an halfe ouer, beeing mariſh ground, ouer which the *Ruſſes* and *Puſtozerits* hale their Boats into another Riuer, called *Torowhan*, and rowing downe with the ſtreame three dayes, they fall into the mightie Riuer *Teniſce*. At the mouth of the Riuer *Torowhan*, there dwell people on an Iland, hauing builded them a little Towne and a Church. And from thence they ſayle downe the Riuer to *Hawtick*, which is a great Riuer, and runneth vnto the Eaſt. *Moetnaia Reca*. *Zelenai Reca*. *Ob Reca*. *Tas* Riuer. An Iland in the mouth of *Tas*. A Towne. A necke of Land. The Riuer *Torowhan*. The Riuer *Hawtick*.

The Riuer of the *Tinguſſies*, is three dayes and three nights ſayling within the Riuer *Yeniſcey*. There are no Woods neere vnto the mouth of *Ieniſce*. But in the Riuer of *Tinguſſie* are great ſtore of Woods. There are two or three Riuers betweene the mouth of *Yeniſce* and *Tinguſſie*, but not ſo large as the *Tinguſſie* Riuer is; neere vnto which the *Ruſſes* doe fiſh: and aſſoone as it freezeth, they go againe to their old trade of hunting the Sables, Beuers, and Foxes. And hauing in two winters ſo laboured for themſelues, thoſe that be good Husbands return rich into *Ruſſia*: And except they fall againe into pouertie through fire or other wayes, neuer returne thither againe. The Riuer of the *Tinguſſies*. Two or three Riuers from *Tinguſſie* to the mouth of *Yeniſce*.

The *Tinguſſies* are a taller people then the *Samoieds*, and weare their Garments made of skins ſhorter, and made cloſer to their bodies then the *Samoieds*. They be a very gentle people to conuerſe withall.

From the mouth of *Ob* to the great Riuer *Ieniſce*, as a *Ruſſe* told mee, is foure dayes and foure nights ſayling. Betwixt *Ob* and *Yeniſce*, is high blacke Land.

Beyond *Ieniſce* Eaſtward is another great Riuer, called *Piſida*. The Land trendeth due Eaſt beyond the Riuer *Ieniſce* to *Piſida*: and to another Riuer, called *Catowga*, which commeth out of *Cathay*, whoſe King the *Permackes* call *Teulka Tſar*. The Riuer lyeth North and South, they know not how farre. For the *Tinguſſies*, of whom they had intelligence of this Riuer, are afraid of Gun-ſhot that they doe heare, which they vſe on the South part of that Riuer, and dare not trauell vp it. In it they ſaw Veſſels with two or three ſayles; which in the Spring, ſayle downe the Riuer Northward, and in the Autumne, returne againe to the South. But they know not whether they fiſh, or goe to gather ſome Mynes, which are ſuppoſed to be in thoſe Countreyes, not daring to goe neere them. It was told me, that betwixt *Piſida* and *Catowga*, about the midway vpon the Sea-coaſt were found diuers Stones, ſome like vnto Gold in colour, other white and like Siluer. Alſo the *Tinguſſies* haue ſeene people about that great Riuer, called *Catowga*, riding on Horſes: and it is ſaid, that there is great ſtore of Corne, Beefes, Horſes, Sheepe, and Goates in this Countrey. The Riuer *Piſida*. The Riuer *Catowga*. Ships with two or three ſailes. Horſes about the Riuer *Catowga*.

The trauell from Pechora *to* Permia, Ougoria, *and to the Riuer* Ob, *and the Townes ſituated thereupon, ouer Land.*

FRom *Puſtozera* vp the Riuer *Pechora*, with a faire wind to the Riuer *Ouſe*, is fourteene dayes ſayling by Riuer. From *Ouſe* to *Podcamen*, ten dayes. From *Podcamen* to *Ob* eight dayes by Deere

Bereſeua. Deere in Winter time, aſſoone as the Snow is fallen and frozen. From thence to *Bereſeua* ſixteene dayes; which is a Towne of Trade, it is from *Puſtozera* to *Vade* in *Ougoria*, beeing on the Weſt ſide of *Ob*, a monethes journey or trauell by Deere. This *Vade* is a little Towne, hauing the Houſes thereof builded vnder the ground.

The Riuer of *Pechora*, runneth through great *Permia*; and the head thereof is fiue Weekes trauell from *Puſtozera*.

Verchie-towria. From Great *Permia*, is nine dayes trauell by Horſe and Sled to *Vercho-towria*. *Vercho* ſignifieth in the *Ruſſe* Tongue, The higher: as *Vercho-towria*, is *Towria* The higher. From thence by Riuer is ten dayes journey to *Tumen*. From *Tumen* to *Tobolſca*, ſixe dayes downe the Riuer *Irtiſh*. *Tobolſca* is the chiefeſt Citie in *Siberia*. From *Tobolſca* to *Surgout*, or *Sergalt*, is ſixe Weekes journey vp the Riuer *Ob*. From *Surgout* to the Citie *Tom*, ſeated among the *Tartars*, is three Weeks vp the Riuer *Ob*. The *Ruſſes* know no farther of the Riuer *Ob*; nor how farre it ſtretcheth to the Southward: But they ſuppoſe that it runneth much farther to the South, by reaſon there come ſo many ſeuerall Nations downe the ſaid Riuer to trade at *Surgout*, and *Tobolſca*: as namely, the people of *Bough ar*, the *Teſicks* or *Perſian* Merchants, and many ſorts of *Tartars*. *Abraham Michaelouich* was chiefe Cuſtomer at *Surgout*, 1611. And hee told me, that hee receiued for the Emperours Cuſtome for goods, bought and ſold that yeere, the ſumme of ſixteene thouſand Robles, or Markes.

Tumen. *Tobolſca.* *Surgout.* *Tom.*

Many Nations come downe the Riuer *Ob*, from the South to trade at *Surgout* and *Tobolſca*.

Moreouer, he told me, that the people of *Cathay* doe trade to *Surgout*, and people from diuers other Kingdomes, as from *Alteen Tzar*, or King *Alteen*, who among other things bring Plates of Siluer and ſell them. Another *Ruſſe* named *Philat*, who had trauelled farther among the *Tinguſſies*, then any other *Ruſſe*, and ſpeaketh their Language, told mee he had bought of a *Tinguſſie*, a Plate of Siluer weighing in *Ruſſe* Money fortie two Alteens, foure Dingoes, for twentie blue Glaſſe Beades.

The Country of King *Alteen*.

An Altine is ſix pence, a Dingo is a penie.

Bereſoua vpon the *Ob*, before you come neere *Tobolſca*, is a Towne of Trade for Furres, but eſpecially for Loſh-hides; which are bought for tenne Alteenes a piece. I was told by a *Permac*, that there was a *Ruſſe* which bought foure thouſand Elkes, or Loſh-hides, there for a fourth part of a Roble or Marke a piece.

To the Eaſtward of *Pechora* are ſtore of Hawkes, which I hold to bee as good as the *Turkie* Hawkes, namely, ſlight Falcons, Goſhawkes, and Ier-falcons, whereof ſome are as white as Snow, others ſpeckled White and Red. Likewiſe, there are all kinds of the richeſt Sables brought from *Molgomſey*, and blacke Foxes. There is alſo Chriſtall of the Mountayne. If we might haue libertie to trauell thoſe Countreyes, wee might haue theſe Commodities cheaper there then at *Pechora*. And within the *Ob* we might vent our Commodities at a better rate.

Hawkes as white as ſnow.

Commodities for Pechora, Siberia, Permia, Ougoria, *and among the* Tinguſſies.

Ruſſe Money. FIrſt, at *Pechora* readie Money, being *Ruſſe* Money, is the beſt and principalleſt both to put off other goods to profit, as alſo to get credit among the Merchants ſtrangers at our firſt comming thither, till Trade be ſetled and knowne through *Permia*, and *Siberia*. Salt, Rie, Meale, white *Danske* Rie Kil-dryed for heating in the ſhip, Oat-meale and Butter for the *Samoieds*; all ſorts of courſe Cloth, ſome fine Cloth, Copper, and Braſſe Kettles of the middle ſize, from two pound to thirtie, or thirtie fiue. But Braſſe not aboue fifteene pound with eares of Braſſe, all the Kettles and eares of one piece. Alſo Files to ſharpe Arrowes and other things, ſmall Horſe-bels, courſe Canuaſſe for vpper Gownes. Foure peny, ſixe peny, and ten peny Nayles: ſmall Anchors of foure and twentie pound a piece. Frankincenſe for their Churches and Houſes.

Commodities for the Tinguſſies.

A courſe *Hamborough* Cloth. PEwter, Pewter Sawcers, Little Platters, Flat Poringers, ſome grauen, ſome vngrauen. Neſts of Cups, ſome grauen, others vngrauen. Salt-ſellers. Plates, or ſheets of Latten being white. *Hamborough* Lichenaes, Blue, Red, and Tawny. But I think our courſe Northerne dozens, and courſe Kerſies Northerne dyed into thoſe colours, would vent as well and better then they: they being thicker walked. And the *Samoieds* delight altogether in thicke Cloth. Grey doozens of an eaſie price would vent well among the *Permacks*, which were much grey or mingled coloured courſe Cloth. And ſome courſe doozens died Yellow, or Northerne courſe Cloth Red and Yellow, would bee no bad Commoditie.

Aqua vita of two ſorts, the beſt and indifferent for the *Samoieds*. Glaſſe Beades, Skie coloured. Needles round and three ſquare. Braſſe Baſons, *Ruſſe* Linnen Cloth, or *Poliſh* Linnen Cloth. Hops, Mault, *Ruſſe* Sope. All ſorts of ſtrong Wines, as Sacke and *Canarie* Wine. Bacon is a good Commoditie in *Siberia*.

CHAP. XII.

Later Obſeruations of WILLIAM GOVRDON, *in his Wintering at* Puſtozera, *in the yeares* 1614. *and* 1615. *with a Deſcription of the* Samoyeds *life.*

THE twentieth of Nouember, I departed from *Puſtozera*, to goe to *Tougorie*, at foure in the after-noone, and did ride moſt of the Night, before wee came to the Choome, going East South-east. The one and twentieth, *Mihiloe* returned to the Towne, and we remoued and went our Iourney, faire and little wind. The two and twentieth, little wind North, wee kept on our courſe East South-east, hauing gone from the Towne 50. miles, at night *Mihiloe* came to vs. The three and twentieth, little wind, we went on our Iourney, and at Noone paſſed ouer a little Riuer, called *Coy*, falling North into *Pechora*, 14. leagues below the Towne, and at Night came all the *Ruſſes* from the Towne, hauing gone 24. miles East South-east. Nouember. 1614. His Iourney within 30. leagues of *Ob*, and neere to *Berſoma*. The Riuer *Coys* falling into *Pechora*.

The foure and twentieth, wee remoued on our Iourney being very cold, and went not aboue ten miles East South-east, at Night wee broke one of our Sleds, which went laden with Victuals.

The fiue and twentieth, wee went forward very ſlowly, at Noone I receiued a Letter from Maſter *Copman* by *Foma Creticone*, this after-noone another had his Sled broken, we went 10. or 12. miles. The ſixe and twentieth, we continued on our Iourney, and at Eeuen we paſſed ouer a Riuer, called *Shapkina*, falling South into *Pechora*; halfe way betwixt *Puſtozer* and *Ouſt-zilma*, a Sled broken and mended out of hand, going East South-east 15. miles. The ſeuen and twentieth being Sunday, the wind at South-weſt, did blow very hard, and Snow all the day, the ſnow driuing that wee could hardly ſee which way to goe, yet we kept on East South-east 18. miles. The Riuer *Shapkina*, falling into *Pechora*.

The eight and twentieth, in the Morning, wee paſſed ouer *Nougorotka* Riuer, which falleth West South-weſt into *Shapkina* Riuer, ſixe dayes Iourney aboue *Ouſt-zilma*, the wind South-weſt, and Snow all day, wee kept on ſtill East South-east 15. miles. The nine and twentieth, the wind South, with Snow all day, being not cold, we went on East South-east 20. miles. The thirtieth, the wind East South-east, very cold in the after-noone, we paſſed ouer *Habeaga* Riuer, which falleth into *Pechora*, ſixe dayes Iourney aboue *Ouſt-zilma*, going 20. miles. The Riuer *Nougorotka*, falling into *Shapkina*. *Habeaga* Riuer, falling into *Pechora*.

The firſt of December, the wind East blowing very hard, the Snow did driue ſo hard, that we could not goe forward, but ſtood ſtill all day and did not remoue. The ſecond, calme and not ſo cold, wee went on East South-east 10. miles. The third, in the Morning it was very warme, at Noone the wind North, it was extreame cold, the Snow driuing very thicke, in the after-noone we paſſed ouer the Riuer *Haryena*, which falleth into *Coluoy* South-east, hauing gone East South-east 15. miles. December. The Riuer *Haryena*, falling into *Coluoy*.

The fourth day warme, we went East, at Eeuen we came to a Riuer called *Coluoy*, which falleth South into the Riuer *Ouſe*, where wee ſtayed all Night, hauing gone 20. miles. The fift, in the Morning we went on vpon the Riuer ſix or ſeuen miles East and by North, and came where it parted in two, the one keeping North-east, the other being called *Sandanets*; from the South-east wee went betwixt them both East and by South 12. miles, and tooke vp our lodging vpon a Playne where no Wood is to bee ſeene. The Riuer *Coluoy*, falling into *Ouſt*.

The ſixt, being Saint *Nicholas* day, which with the *Ruſſes* is held a principall day, in the morning they cauſed their Images to bee brought into the Choome, lighting Wax-candles before them, making their Prayers to them, according to their order; after which, I gaue them a bottle of *Aqua vita*, wherewith the Guides were drunke, that they could not guide their Deeres, but ſet me to direct the way by Compaſſe, which I did all the day, although I had but little skill, we went South-east and by East 20. miles. Saint *Nicholas* Bay.

The ſeuenth, being very faire weather, our Guides lay all the day with *Pohmeall*, and could not goe forward. The eight, faire and calme, we went forward South-east and by East 10. miles, and tooke vp our lodging by a ſmall Riuer which falleth into *Sandanets* Riuer. The ninth, very cold, that we had much adoe to keepe our ſelues from freezing, going on foot all the day ouer a playne where no Wood groweth, going South-east 15. miles, and lay by a Wood ſide all night. The tenth, the Froſt was ſo extreame, that wee lay ſtill and could not proceed. The eleuenth, being Sunday, the Froſt continued extreame, we remouing, there were few in the Companie that had not ſome part of their faces frozen, and my ſelfe, although I was ſomething better prouided then any of them, yet I had ſomething to doe to keepe my ſelfe from freezing, going on foot moſt part South-east and by East 15. miles. The twelfth, the Froſt was ſo extreame, that there was no looking forth, but lay ſtill all day. The thirteenth, not altogether ſo cold, wee proceeded on our Iourney 20. miles South-east & by East, and at night we paſſed ouer the Riuer *Hoſeda*, which falleth South-east into the Riuer *Azua*. The fourteenth, the winde South, with Snow and not ſo cold, we went thorow Woods 20. miles, East South-east. The fifteenth, the wind South, with A ſmall Riuer falling into *Sandanets*. Terrible Froſt. The Riuer *Hoſeda*, falling into *Azua*.

Digitized by Google

The Riuer *Azua*, falling into *Ouſe*.

Snow, and not ſo cold, we went East South-east, at Noone wee paſſed ouer *Azua* Riuer, which falleth South into *Ouſe*, we continued ſtill East South-east 30. miles.

The Mountain *Yangoda*.

The ſixteenth, the wind South, in the Morning we ſet forth East South-east, ouer a high ridge or Mountayne, called *Yangoda*, and vpon the top of the ſame the wind ſhitling North, with Snow ſo thicke, that our Guides did not know well which way to goe, yet ſometimes backe and ſometimes forward, with much adoe we got ouer, in the Eeuening paſſing ouer the Riuer *Roganaya Menſha*, falling South into *Ouſe*, where we ſtayed all Night, hauing gone 20. miles.

The Riuer *Roganaya Menſha*, falling into *Ouſe*.

The ſeuenteenth, faire and warme, wee paſſed thorow Woods, where the Snow was very deepe, and came to a Playne, called *Correapin Tundra*, where a *Ruſſe* whoſe name was *Correapa* dyed; (and was buried, therefore they gaue that place that Name) ſome thirtie yeeres paſt, where we ſtayed all Night, hauing gone 15. miles South-east and by East. The eighteenth, in the Morning wee went on thorow Woods, the Snow being very deepe, and at Mid-night we came to the Riuer *Roganaya Bolſha*, where the *Ruſſes* had a Gorodocke, and bartering with the *Samoits*, hauing gone 30. miles East South-east, the Riuer falleth with turnings to the Southward into *Ouſe*; heere I ſtayed till the ſixth of Ianuary.

The Riuer *Roganaya Bolſha*, falling into *Ouſe*.

Altitude and Variation.

The thirtieth of December, I obſerued with my Aſtrolobia, and had the Sun 2. degrees aboue the Horizon. Latitude 65. degrees and 48. minuts, the variation of the Compaſſe being 20. degrees.

Ianuarie. Returne.

The ſixth of Ianuary, at three in the after-noone, wee departed from the Gorodocke, the wind South South-weſt blowing very hard, going North-weſt 30. miles, and at mid-night came to the Choome. The ſeuenteenth, the wind South South-weſt, blowing very hard, the Snow driuing ſo thicke, that we could not goe ouer the Mountayne, called *Yangoda*, but ſtayed by a Wood ſide, hauing gone Weſt North-weſt 15. miles. The eight, in the Morning wee paſſed ouer the Riuer, called *Roganaya Menſha*, and at Noone ouer the *Yangoda*, keeping backe our way 30. miles Weſt North-weſt, faire and warme. The ninth, little wind North but ſharpe, we went on North-weſt and by Weſt, at Noone we paſſed ouer *Azua* Riuer, and in the after-noone came to a Herd of wilde Deere, the *Samoits* killed three, giuing me a haunch; going in all 30. miles.

Wilde Deere.

The tenth, calme and very cold, we went on 20. miles, Weſt North-weſt. The eleuenth, little wind South-east; at Noone we paſſed ouer *Hoſeda* Riuer, which falleth South-east into *Azua*, we went 30. miles North-weſt & by Weſt. The twelfth, the wind South and cold, we went Weſt and by South, ouer many Creeks & Ponds 25. miles. The thirteenth, this day the wind South and not cold, we went Weſt & by South 30. miles, thorow many woods and plaines. The fourteenth, faire and warme, at Noone we paſſed ouer *Sandaets* Riuer, which falleth South-weſt into *Colmoy*, we went Weſt and by North 30. miles.

The fifteenth, being Sunday, we went Weſt North-weſt ouer a broad playne, with many great Ponds, at Night we paſſed ouer *Colmoy* Riuer, going South into the Riuer *Ouſe*, which falleth into *Pechora*, nine dayes journey from *Ouſt-zilma*, we went 30. miles, hauing moſt of our Deere tyed, the Snow was ſo deepe. The ſixteenth, little wind, we went on Weſt North-weſt, at noone we paſſed ouer *Haryena* Riuer, which falleth South-east into *Colmoy*, going 20. miles. The ſeuenteenth, the wind South, blowing very hard, the Snow driuing, wee went Weſt North-weſt 25. miles, at Night we tooke vp our lodging vpon the Riuer *Habcaga*, which falleth into *Pechora*, ſixe dayes journey from *Ouſt-zilma*.

The eighteenth, we went on Weſt North-weſt 10. miles, where the Towneſmen ouer-tooke vs, riding poſt to the Towne, where making our ſelues ready, wee followed, the ſame Eeuening we paſſed ouer *Nougerotka* Riuer, which falleth Weſt South-weſt into *Shapkina* Riuer, which falleth South-weſt into *Pechora*, halfe way betwixt *Puſtozer* and *Ouſt-zilma*, and in the Morning we paſſed ouer *Coy* Riuer, which falleth into *Pechora* 14. leagues Northward from *Puſtozer*; and the ſame day, being the nineteenth day in the after-noone, wee came to the Towne, hauing rid aboue 150. miles without reſt. The laſt of Aprill, 1615. being Sunday, was the firſt appearing of the water, increaſing at *Puſtozera*. The ſeuenth of May, *Euan Croticone*, had almoſt ſlaine with a knife his two Vncles, *Foma Croticone*, and *Eraſmi Croticone*.

Aprill. Riuer increaſing. May.

The eighteenth, the water was at the higheſt, being ſo extreame that many were forced out of their Houſes, and we our ſelues in like manner, hauing the water a foot deepe in our bed Chamber. The twentieth, the water did a little begin to fall, and ſo continued falling by degrees.

Ouſt-zilma.

The ninth of Iune, my ſeruant *Marmaduke Wilſon* came from *Ouſt-zilma*, hauing Wintered there, to buy and ſell goods, bringing with him ſuch Commodities as the place doth affoord, as Sables, Roſomacks, Wolues, Ermins, Squirrils, &c.

The fifteenth, we laded three ſmall Lodias with goods, to carrie downe to the *Glouboka*. The three and twentieth, I departed from *Puſtozer*, and came to the *Glouboka* the fiue and twentieth, with two ſmall Lodias laden with goods. The eight and twentieth of Iune, I obſerued at the *Glouboka*, which I found to lye in the height of 67. degrees 55. minutes, and the Compaſſe varyed 18. degrees. The laſt of Iune, I went from the *Glouboka* to paſſe ouer the *Drie Sea*, the wind at South, but the wind comming to the North, I returned backe the next day. The ſecond of Iuly, being Sunday, the wind at South South-east, I departed the ſecond time, to come to the *Zauorot*, but comming neere *Dolgoy*, an Iland lying in the *Drie Sea*, the Ice lay ſo firme, that we could not paſſe but returned backe to the *Glouboka*.

Glouboka is 67. degrees 55. minutes.

The

The fourth of Iuly, *Iohn Copman* came to the *Glouboka*, bringing with him all our goods for sayle, hauing payed all Customes and duties for the same. The sixth of the same, I departed the third time from the *Glouboka*, the wind at South, but did not continue, but came to the East, and East North-east, so rowing alongst the shoare, wee passed to the West side betwixt the shoalds and the shoare, and hauing passed the Wester Iland, called *Lonetskoy*, we came to the *Zackharreuceborgge* or Coast, which doth lye South-west and North-east, and put into a small Riuer, where we stayed (the seuenth) all night, and the next day with Sayle and Oares, wee came to a Bay to the South of *Casnots* Nose, where we stayed all night, the wind East South-east. Iuly.

The eight, in the Morning we passed by *Cuenetsf*-Nose amongst the Ice, hauing much adoe to get cleare, the wind at North North-west, and at Night we came to the *Zauorot*, where were fiue and twentie sayle of small Lodias, some going for *Mungazea*, other for Fish, and some going to *Pustozer*, who told me they had beene aboord our Ship at Sea. The ninth, this day being Sunday, our Ship came quer the Barre, where I was receiued, not looked for. The eleuenth, at Night we departed from the ship, and went to get downe our goods from the *Glouboka* and the Towne.

The sixteenth, I departed from the *Glouboka*, with three small Lodias laden with goods, but the wind at East North-east, two of them returned backe, but I kept on and came aboord our Ship the eighteenth in the morning. The twentieth, the other two came with the goods aboord, and the one and twentieth, we returned to the *Glouboka* with three Boates, and got thither that night. The three and twentieth, I came the second time from the *Glouboka*, with three Boates with goods, and the next morning came to our Ship, where I remayned, sending vp all the Boats the sixe and twentieth of Iuly.

The eight of August, came *Iohn Copman* with *Thomas Dogget*, bringing two Boats laden with goods, fitting to set sayle for *Holland*, but did not depart till the 21. of August. And the three and twentieth of September, (giuing heartie thankes to God) we arriued at *Dort* in *Holland*.

NOw for the manner of the *Samoits* in their Iourney, their vpper Coat is called a *Parka*, which is for the most part of Deere-skin, and some of white Foxe or Woluerin, which they weare the hayre or furre outward, vnder that they haue another Coat, which is called a *Malkek*, made of young Fawne-skins, or Hare-skins, or Swan-skins, very soft and well dressed, a Cap of Beuer, double and close to their heads, with two flaps for their Eares, tyed vnder their Chin, a payre of Breeches of Deere-skin with the hayre inwards, vpon their Feete they haue sockes or stockins of Deere-skin, the hayre to their skin, vpon that long Bootes which they call *Pemyes*, made of the legges of Deere-skins, thus apparelled, they sit vpon their Sleds crosse-legged, with a Deere-skin vnder them. Two Deere being yoaked to a Sled, they will runne with such swiftnesse, and so long to continue, as is not to be beleeued, except to those that haue seene the same. For riding post, they will ride without rest or sleepe, two hundred miles in foure and twentie houres; but with their Argish or stuffe, thirtie miles in twelue houres; their Women vsually doe guide their Argish, which is ten Sleds, and to euery Sled a Bucke, all made fast one after another, the Men in the way doe prouide Wood for firing, and doe hunt for all manner of Beasts & Fowle, which the women dresse. It is the Womans labour to set vp the Choome or Tent, making one place therein alwayes Holy, which the woman must not set her foot into, neither goe about the Tent round; which if they chance to doe, they will presently remoue all, for feare of the Wolfe or Beare, which they say, would deuoure them if they did not remoue.

Apparell of Samoyeds. Sleds. Deere swiftnesse. Women. Tent and Chappell. Superstition.

Their Tent or Choome, is made in this manner; first, they set vp long Firre-poles, then they haue sixe quarters double of Deere-skin, which being set vp, they throw Snow round about the edges a yard thicknesse, leauing the top open for to vent smoake, making a Fire in the middle, spreading Deere-skins, vpon which they lye, in which manner, it is altogether as warme as the Stoues in *Russia*, they haue no Townes, neither any certaine place of abode, but with their Deere they trauell from place to place, where they finde the best Mosse for their Deere.

No Townes.

Their Wiues they buy for Deere, and will haue if hee haue abilitie foure or fiue Wiues, with whom he lyeth by turn euery night seueral; he is the richest man that hath most Deere or Daughters, selling them to any that will giue most for them. In their Marriages hauing agreed of price, they vse not great Ceremonies; onely they make a Feast to their friends, after which the Woman is brought to the Man that hath bought her, shee being hung with many Iron Rings and Brazen Bels, all departing out of the Tent saue they two till the next Morning, and then he departeth; but if he bee one of wealth, they will continue their Feast seuen dayes. It falleth out many times, that after they haue had their Wiues halfe a yeere or a yeere, they will turne them backe to their Friends, taking their Deeres againe, paying for the charge of the Feast, which is alwayes to bee made at her Fathers charge, and losing the increase of his Deere.

Marrie Wiues, bought and sold. Marriages. Rings and Bels. Diuorce.

They haue not knowledge of the true God, but worship Blocks and Images of the Deuill, vnto which, they will strangle tame Deere, rubbing the bloud on the Idols, and eating the meate themselues.

Religion.

When a Rich man dyeth, because hee should not trauell on foot, his friends will kill three Deere to draw him in the new World, and they will strangle a Slaue to tend on him. The Deere

Funerals.

Digitized by Google

they kill in this manner to ſerue the dead man, they make a Stake ſharpe, which they thruſt into the Beaſts fundament, with many howlings and cryings, till they be dead. The Maſter with the Slaue they burie, the Deere they eate as well raw, as boyled or roaſt, although they vſe all. three

Their yeere but halfe a yeere. If a young Child dye vnder foureteene of their yeeres, which is ſeuen of ours, they doe hang it by the necke on ſome Tree, ſaying, it muſt flie to Heauen.

Iudgement or Oath. If any Controuerſie bee, which cannot bee decided or the truth knowne, then one of the two betwixt whom the Controuerſie is, muſt bee ſworne, which is in this manner; they will make an Image of a Man of Snow, bringing a Wolues noſe, deliuering a Sword to him that muſt ſweare, he rehearſing by name all his Friends, deſiring that they might all bee cut in peeces in that manner, as hee doth cut that Image of Snow. Then he himſelfe, doth cut the Image of Snow all to peeces with the Sword; then after, the Wolues noſe being layd before him, he deſires that the Wolfe may deſtroy all his tame Deere, and that hee may neuer more take or kill any wilde Deere after that, if hee ſpeake not the Truth, ſo cutting the Wolues noſe in peeces, there is no more to bee ſayd of that Controuerſie.

Their perſons. The *Samoit* is ſtout and bold of Spirit, not very tall but broad Breſted, broad Faces, with hollow Eyes. Their ordinary inſtruments for Warre, are Bowes and Arrowes, very dangerous, they haue long Speares, (the heads bee made in *Monganzey*, by another ſort of *Samoits*) and ſhort Swords, not much vnlike ſome that I haue ſeene brought from East *India*.

Diuination. When they would know any thing to come, they ſend for their Prieſt or Witch to conuerſe with the Deuill, ſitting in one ſide of the Tent, hauing before his face a peece of an old ſhirt of Mayle, hung with Bels and peeces of Braſſe, in his right hand a great Tabor made with a Wolues skinne, beating vpon the ſame with a Hares foot, making a very dolefull ſound, with ſinging and calling for the Deuill, to anſwer his demand, which being ended, they ſtrangle a Deere for a Sacrifice, making merrie with the Fleſh.

Womens hardineſſe. The Women be very hard of Nature; for at their Child-bearing, the Husband muſt play the Midwife, and being deliuered, the Child is waſhed with cold water or Snow, and the next day the Woman able to conduct her Argiſh.

The *Ruſſes* haue a yeerely Trade with the Merchants of *Boghar*, at a place called *Tumen* in *Tartarie*, whither they of *Boghar* come with Camels euery yeere.

From *Tumen* in *Tobal* in *Siberia*, they come in foureteene dayes.

From *Tobal*, they come to *Bereſowa* in nine dayes, all downe the Riuer *Ob*.

From *Bereſowa*, partly by the Riuer *Ob*, then ouer a necke of Land of halfe a mile ouer, into the Riuer *Ouſe*, and downe the Riuer *Ouſe* into the Riuer *Pechora*, and ſo to *Puſtozera* in three weekes. At *Puſtozera*, the *Engliſh* haue Wintered three yeeres.

CHAP. XIII.

Diuers Voyages to Cherie *Iland, in the yeeres* 1604. 1605. 1606. 1608. 1609. *Written by* IONAS POOLE.

* This was Maſter *Bennets* ſecond Voyage thither. His firſt Voyage thither *A.* 1603. I haue added at the end of this Chapter, after *Pooles* Relations: this being ſet before I ſaw that.

WE ſet ſayle * from *London* the fifteenth of Aprill 1604. in a Ship called the *God Speed*, of ſixtie Tunnes, with thirteene Men and a Boy; our Merchant was one Maſter *Thomas Welden*, our Maſter was one *Steuen Bennit* of Saint *Catherins*. We arriued at *Cola* in *Lapland*, the firſt of May, where wee tarried till the laſt of the ſame Moneth, at which time wee ſet ſayle from *Cola*, and went to an Harbour called *Pechingo*, which lyeth betweene *Cola* and *Ward-houſe*. In which Harbour of *Pechingo*, we continued vntill the thirtieth of Iune. At which time wee ſet ſayle from thence, and through contrarie windes and foule weather, were put into *Ward-houſe*, where we tooke in freſh water, and ſtayed vntill the ſixth of Iuly.

The ſame day, the wind came Southerly, and we ſteered away Northweſt and by North about 56. leagues, wee obſerued the Sunne at twelue of the clocke at Noone, and found our ſelues to be in 73. degrees 5. minutes of Northerly Latitude. The ſeuenth of Iuly, it was all day calme, and wee ſounded, but had no ground in two hundred and fiftie fathoms. The eight day, we had little winde, which was at South-eaſt, and foggie weather; and at eight of the clocke at Night, wee ſaw great flockes of Sea-fowles, which we call Willockes: ſome of theſe Fowles had each of them a ſmall Fiſh in their bills, and flew toward the North-weſt and by North. The other without Fiſh, ſome of them flew contrarie to the former, and ſome ſate in the Sea very neere our Ship.

About twelue of the clocke at night we ſounded, and had ground at one hundred and twentie fathomes. We ſteered away North-weſt and by North, till foure of the clocke the eight day in the morning, then it fell calme: and as the ſhip lay ſtill, our Maſter ſpied a Morſſe, which came to our ſhip and ſwamme round about it. While we were all gazing at this Monſter, I ſpied

A Morſe.

the

Digitized by Google

the Iland ten leagues off, bearing North North-west halfe a point Westerly, which shewed very high Land, and much Snow vpon it. The wind came to the North-east. The ninth day, wee came to an Anchor on the South South-east side, in fiue and twentie fathomes streamie ground. We hoysed out our Boate, and Master *Welden* went toward the Land: but thinking to haue landed he could not, because there went a great Sea, and great store of Ice all along the shoares side. Within one houre the Boate came aboard, and they said, there were so many Fowles, that they couered the Rockes, and flew in such great flockes, that they shewed like a Cloud. While thus they were talking close by the Boate, rose vp an huge Morse, putting his head aboue the water, looking earnestly at the Boate, and made such an horrible noyse and roaring, that they in the Boate thought he would haue sunke it.

Cherie Iland described.

Store of fowles.

Morses roaring

The same day, at eight of the clocke at night, we weighed and stood away South-west and by South about foure miles, where wee doubled the Southermost point of the Iland, and found the Land to trend North North-west, and all along the shoare some scattering Ice. We sayled along the shoare, finding seuenteene, eighteene, and sometimes twentie fathomes, streamie ground with white shels. We held this course till wee saw all the Northermost part of the Iland: and being within three miles of it, and about thirteene miles from the Point, wee came round about it. And some two miles from the Land, we anchored in sixteene fathomes, streamie ground. We had not ridden one houre to an end, but a great piece of Ice came directly with the tyde vpon vs; and before wee could weigh, it strooke the ship with such force, that it hilded on the one side. Assoone as it was past, we went on shoare, where wee found abundance of Sea Fowles, as Willocks, Gulles, Noddies, Sea-mewes, a small Fowle like a Willocke, and diuers others, as wilde Geese, Sea-pidgeons, Oxbirds, and such like: whereof Master *Thomas Welden* killed so many with his Peece, that we almost laded our Boate with them. The same night we shot three heaps of fishing-lines, but when we haled them, wee found neither fish nor bayte; for the Seales had eaten them all off.

Abundance of Sea-fowles found on shoare.

The ninth day, Master *Welden* and our Master went on shoare, to see what they could finde. They went in the fore-noone about eight of the clocke, and came againe about foure in the after-noone very weary, seeing nothing but small Foxes, almost like Dogges in euery respect, saue their smell and their tayles. In the meane time, the Masters Mate and my selfe obserued the Sunne, and found that part of the Iland to be in 74. degrees and 45. minutes.

Small Foxes.

74. degrees, 45. minutes.

The tenth day we weighed, hauing the wind Southerly, and found the Land to trend away East South-east. The length of this side is about ten miles, good ground. We had not sailed past sixe miles, but we saw a sandie Bay, against which we came to an Anchor in nine fathomes. We had not furled our Sayles, but we saw many Morses swimming by our ship, and heard withall so huge a noyse of roaring, as if there had beene an hundred Lions. Immediately wee manned our Boate, wherein was Master *Welden* and sixe men more: we landed, and saw abundance of Morses on the shoare, close by the Sea-side; and drawing neere vnto them, wee perceiued that they were all of the same company, which wee had seene before. It seemed very strange to vs to see such a multitude of Monsters of the Sea, lye like Hogges vpon heapes: In the end wee shot at them, not knowing whither they could runne swiftly or seize vpon vs or no. To be briefe, wee had but three Peeces, Master *Welden* a Fowling Peece, my selfe a Musket, and another a Musket. Their Peeces were spoyled instantly. For Master *Weldens* was cloyed, the other man when hee had shot one by himselfe, thought to knocke him on the head with the stock, but split his Peece. I shot still, and some when they were wounded in the flesh, would but looke vp and lye downe againe. Some were killed with the first shot; and some would goe into the Sea with fiue or sixe shot: they are of such an incredible strength. When all our Powder and shot was spent, wee would blow their eyes out with a little Pease shot, and then come on the blind side of them, and with our Carpenters Axe cleaue their heads. But for all that we could doe, of aboue a thousand we killed but fifteene. We tooke off their heads, and when we had done, we went straggling vp and downe to see what we could find. I found the first Tooth that was cast vpon the Iland, and going a little farther alone, I found as many Teeth more, as I and three men more could carrie, which filled an Hogshead: all which we did deliuer to Master *Welden*.

Note.

They kill the Morses.

The Morses Teeth.

The next day following, being the eleuenth day, we went on shoare againe, and killed about sixe more: And afterward wee went vp into the Land, and saw nothing but Fowle and Foxes. I perceiued in deed a great print of a Beares foote; and after that many other footings, but yet saw no Beare or other wild beast.

The twelfth, wee weighed from thence, and stood to the Eastward: wee had not gone past foure miles, but we found the Land to fall away South-east and by South. The length of this side is about twelue miles. All this side we went close by the shoare with our Boate, and the ship sayled along about three miles off. We went oftentimes on shoare, but could see nothing on all that side but Fowle, and abundance of Drift Wood, the most part whereof was Firres, which haue beene beaten vp and downe the Sea. This day being Sunday, about eight of the clocke at night, we anchored within two miles of the place where we arriued at the first. The same night wee went on shoare, and in a Bay vnder an huge Cliffe of a Rocke, vpon the Beach, wee found

Abundance of Drift Wood.

Digitized by Google

A thousand Morses found.

neere a thousand Morses: wee killed thirtie or thereabouts, and when wee had taken off their heads, we went aboord.

The thirteenth, wee went on shoare againe, and with our Pieces fell a killing of the beasts. One of our company, named *Richard Lang-castle* split his Piece, and with all his hand: but Master *Welden* with Salues of his owne, healed it so skilfully, that he hath the vse of it againe. We killed that day sixtie Morses, all the heads whereof were very principall. When we had done, wee went about a mile to the Eastward, to see what wee could finde: And landing at a Bay where Master *Bennit* had beene the yeere before, and found a piece of Lead Vre, wee looked for the same, but found none. The same day returning aboord, wee set sayle for *Pechingo* in *Lapland*, where wee arriued the fiue and twentieth of Iuly; and stayed there foure dayes: at which time we set sayle for *Cola*, and arriued there the eight of August, where wee continued till the sixteenth day, at which time we departed thence for *England*, and arriued in the *Thames* the fifteenth of October, of the yeere aforesaid 1604.

1603. Lead Vre was found.

Pechingo.

Cola.

Why the Iland was called *Cherie* Iland.

When wee came to *London*, because Sir *Francis Cherie* Knight and Merchant was at the charges of this Discouerie, this Iland was called *Cherie* Iland.

The third Voyage to Cherie *Iland, performed by Master* WELDEN *Merchant, and* STEPHEN BENNET *Master, in the yeere* 1605.

IN the yeere aboue said, wee set sayle from *London*, the first of May, with one ship of sixtie tunnes, and two and twentie men and boyes. The three and twentieth of the said moneth, we were taken by a ship of *Dunkirke*. They tooke from vs two Hogsheads of strong Beere, our Muskets, a Fowling Peece of Master *Weldens*, which cost three pounds sterling. After the Captayne had misused vs at his pleasure, though we were in peace with his Countrey, he let vs goe.

Assumption.

The eight and twentieth of Iune, we put off from *Assumption Point*, which is a place not farre from the North Cape, and about 70. degrees in latitude, but by contrarie winds wee were put backe againe. Yet the second of Iuly, we came to *Cherie* Iland, and anchored on the South-east side: and hauing a Shallop in pieces to set vp, we carried it on shoare, and went to worke vpon it; and the third day after we had it on flote. The sixth day we entred into a Coue, hauing all our men on shoare with shot and iauelings, and slue abundance of Morses. The yeere before we slue all with shot, not thinking that a iaueling could pierce their skinnes: which we found now contrarie, if they be well handled, for otherwise, a man may thrust with all his force and not enter: or if he doe enter, he shall spoyle his Lance vpon their bones; for they will strike with their fore-feet, and bend a Lance round, and breake it, if it bee not all the better plated. They will also strike with their Teeth at him that is next them: but because their Teeth grow downward, their strokes are of small force and danger. After we had opened the beasts which we had slaine, we tooke out the blubber, and carried it a mile into the Bay, where wee set vp the shallop. The reason why we carried it thither, was, because we thought that the fire of our Furnace would scare them away: for wee did boyle all their fat to bring it into Oyle. Thus wee followed our business till the foure and twentieth of Iuly, at which time wee had very foule weather with fogs. Now the ship riding in the same Coue, where we killed our Morses, had taken in eleuen tunnes of Oile, and the teeth of all the beasts aforesaid. Then we made preparation to be gone home: and I was sent with our shallop, and eight men with me to fetch our Tent, and our boyling Coppers, our mens Clothes and some Teeth. At my returne, when I was almost aboord, comming through a place betweene the Iland and a Rocke, which of necessitie we must needs passe, the tyde being against vs, and a stiffe gale of winde blowing out of the Sea, made the Sea flye very high vpon the Rockes, whereby we had like to haue beene sunke: for our Boat was almost full of water; and if wee had not speedily rowed backe againe, wee had dyed each man of vs. To make short, we got into a Coue, where the Rockes did keepe the growne Seas from vs, & we lighted our Boat. In this Coue I found a Myne of Lead Vre, and digged vp about thirtie pounds weight of it, which I brought into *England*. And calling to mind that wee were in sight of our ship, when we shipped the water which I spake of before, I mistrusted that they thought, as they did indeed, that we were all drowned. Therefore I demanded who would goe with me, to the top of a Cliffe which stood ouer against the ship? And one *Iohn Ienings* said, that he would goe: he had not gone halfe way, but hee would goe no farther because it was so cold, and the Hill stood sloping very steepe toward the Sea, and all the side of it was loose Earth, which we must needs passe. Then I went forward all alone, and found all our men on shoare, saue an old man, and a sicke man. But the Cliffe being so high and steep, that they vnder it could scarce vnderstand what I said, nor I what they said, but with much adoe: They demanded, as I tooke it, if all our men were wel: I told them yea, as loud as I could: And then I threw downe a piece of the lead Vre which I had found, which M. *Welden* took vp: And when I was going away I heard

Many Morses killed with shot and Iauelings.

The fight of the Morse.

Oyle made of the fat of the Morses

Eleuen tuns of Oyle.

A Myne of Lead.

Digitized by Google

I heard them ſhout, and looking behind me, I ſaw them all point toward the Skiffe that lay at anchor hard by the ſhoare; whereby I perceiued that the rope was broken, which made it faſt to the ſhoare, and the Skiffe was gone off to the length of her rope, ſo that they could not go aboord except one of them did ſwim to the Skiffe, which was exceeding dangerous, both becauſe it was extreame cold, and alſo for feare of being killed by the Morſes, that were in the Sea all about the Boat. Whereupon with all ſpeed poſſible I ranne to helpe our men in that diſtreſſe; and comming to the Shallop, ſome were willing, and ſome vnwilling: But I ſaid that out I would; and taking nothing aboord with me but a few teeth, wee got out: and in the place where we had like to haue beene ſunke before, wee had a great hollow Sea: but our Boat being light, and the tyde with vs, wee got through: whereat M. *Welden*, and *Steuen Bennet* our Maſter, with all the company were not a little ioyfull, and gaue God humble thankes, that had of his great mercy defended vs from a great many of dangers that day. For that day wee ſaw abundance of yce driuing toward the Iland, but the winde and tyde ſhifting, put it another way. Likewiſe two boyes had like to haue beene ſlaine with the fall of a rocke, which fell cloſe by them, they being but newly ſtepped out of the place where the rocke fell.

Extreame cold the 25. of Iuly.

Abundance of driuing Ice.

In the time that we were in this diſtreſſe, I called the Mountaine by the name of *Mount-miſerie*, which is ſo called at this day. Likewiſe there is a very high Mountaine on the Eaſt South-eaſt point of this Iland: which, becauſe Maſter *Welden* and I got two Foxes neere it, I called it *Mount maleperdus*, alluding to the name in the merrie booke of *Reinold* the Fox.

Mount Miſery.

The ſixe and twentieth of Iulie, wee got out of the Coue with the Ship, hauing ſuch a fogge, that although wee ridde ſo neere the land, that we could heare the fowle that were on ſhoare, yet wee could not ſee the land. This fogge continued vntill the eight and twentieth of Iuly: on which day hauing cleerer weather, wee got our water and other prouiſion aboord; and ſet ſayle for *England*, and paſſing by the coaſt of *Finmarke* and *Norway*, we arriued at *London* the foure and twentieth of *Auguſt*. 1605.

A monſtrous fogge.

The fourth Voyage to Chery Iland, 1606.

WE ſet ſayle from *London* in a Ship and a Pinnaſſe; the Ship being of burden ſixtie Tuns, and the ſame that I was in the Summer before; Maſter *Thomas Welden* was Merchant, and Maſter *Bennet* Maſter, hauing in all two and twentie men and boyes. The Pinnaſſe was of twentie Tunnes, and had eight men in her, and I *Ionas Pool* was Maſter of her: we were ſet out by Maſter *Ruſſell*, one of the *Moſcouie* Company.

Auguſt. 24. A Ship and Pinnaſſe ſet forth.

The eight and twentieth, wee had ſight of land on the coaſt of *Norway*, in the latitude of ſixtie degrees and a halfe; nine leagues off.

The ſixteenth of Iune, we fell with the *Aſſumption*, it bearing South and by Weſt eight leagues off: and we lay beating betweene the North Cape and it, till the eighteenth of Iune: At what time wee put off, and ſteered away North North-weſt about fiftie fiue leagues, and found much Ice: wee thought to haue gotten through it, but could not: and when wee had ſpent twelue houres in it, and hauing the wind Northerly, we put backe againe. The two and twentieth, we fell with the North Cape againe, at twelue of the clock at noone. The foure and twentieth, we put off againe, and being fiue and fortie leagues from the Cape, wee met with Ice, and vpon a piece of Ice we ſaw a Beare. The Ship being on head of vs, bare cloſe to the Ice; and Maſter *Welden* ſhot the ſaid Beare dead at the firſt ſhot. This Beare was from the neereſt land aboue ſeuen and twentie leagues, and liued of Seales or other fiſh that he could prey vpon.

The *Aſſumption*.

Much Ice 55. leagues from the North Cape.

Ice within 45. leagues of the North Cape.

A Beare on Ice 27. leagues from any land.

The ſecond of Iuly, we ſaw *Cherie* Iland at a North ſound: the land bearing North and by Weſt about ten leagues off. The ſame time we ſounded and had ground at ſeuentie fiue fathoms, white ſmall ſhelly ground with ſmall blacke ſtones.

Iuly 2.

The third of Iuly wee anchored on the Weſt ſide of the Iland in twentie fathoms, hauing verie much Ice. I obſerued the Sunne at the loweſt, and found the latitude of that place to bee in 74. degrees, 55. minutes. It followeth there South-weſt and by South; and the floud commeth from the South-weſt.

Part of *Cherie* Iland in 74. degrees, and 55. minutes.

The floud commeth from the South-weſt.

The fifth and ſixth dayes, we were troubled with much Ice; but it being broken, we brought the ends of our Cables to our maine Maſts; and hauing a good tyde, we did ſheere, as wee tearme it, cleere off the Ice. We ridde thus in Ice ſixe dayes, to wit, vntill the thirteenth day; at what time the Ice began to goe way, and the Morſes came on ſhoare. For their nature is ſuch, that they will not come on land as long as any Ice is about the land.

The thirteenth of Iuly.

The nature of the Morſes.

The fourteenth, we went on land; Maſter *Welden*, and Maſter *Bennet*, with the Ships company, and I with the company of the Pinnaſſe. And being altogether on ſhoare, and ſeeing of the beaſts ſufficient to make our voyage, wee prepared to goe to killing. Maſter *Welden* and Maſter *Bennet* appointed mee to take eleuen men with mee, and to goe beyond the beaſts where they lay; that they and wee might meet at the middeſt of them, and ſo incloſe them, that none of them ſhould get into the Sea.

As

A great white Beare.

As I fetched a compaſſe about, before we were aware, roſe a great white Beare within a Pikes length of vs: whereupon we made a ſtand, and my ſelfe hauing both a Musket and a Lance, thought to haue ſhot him: but remembring my ſelfe, that the report of my Peece might make all the Morſes goe into the Sea, and ſo hazard our Voyage, I went to him with my Lance. All this while he ſate foming at the mouth, and would not ſtirre, but gaped and roared as though he would haue eaten vs all: but preſently wee pricked him in the ſnout; and then with an eaſie pace we proceeded on with our buſineſſe; and before ſix houres were ended, we had ſlayne about ſeuen or eight hundred Beaſts. And after that Maſter *Welden* ſlue the Beare. For ten dayes ſpace we plyed our buſineſſe very hard, and brought it almoſt to an end.

Seuen or eight hundred beaſts ſlayne in ſixe houres.

A great Froſt the 24. of Iuly.

The foure and twentieth of Iuly, wee had the winde at North-eaſt: and it freezed ſo hard, that the Ice did hang on our Clothes.

The ſixe and twentieth, we had taken in two and twentie tuns of the Oyle of the Morſes, and three hogſheads of their Teeth.

The ſeuen and twentieth, Maſter *Welden* ſlue another Beare.

The eight and twentieth, we tooke in Water and Wood.

The nine and twentieth, we ſet ſayle for *England*.

The fifteenth of Auguſt, 1606. we arriued in the *Thames*.

The ſixth Voyage made to Cherie *Iland, the South part whereof ſtandeth in 74. degrees and 40. minutes of Northerly latitude, in the yeere* 1608.

THe ſixteenth of Aprill, in the yeere 1608. we ſet ſayle from *Blacke wall*, and came to *Grauſ-end* in a ſhip called the *Paul*.

May 21. *Ward-houſe. Tipany.*

The one and twentieth of May, we were within 4. leagues of the North Cape, ſtanding in 71. degrees and ⅔ of North latitude. The foure and twentieth, wee came to *Ward-houſe*. The fiue and twentieth, we weighed, and came to *Tipany* in *Lapland* the ſixe and twentieth: where we ſtayed about our buſineſſe till the thirteenth of Iune.

Iune 13. *Cherie* Iland.

The thirteenth of Iune aforeſaid, wee weighed anchor, and directed our courſe for *Cherie* Iland. The eighteenth, at foure of the clocke in the morning wee ſaw *Cherie* Iland, it bearing North North-weſt 10. leagues off: and at foure of the clocke at night wee anchored on the North-weſt ſide of it: and Maſter *Welden* went on Land on the North ſide, and ſlue a Beare.

A Beare ſlaine.

Another Beare ſlayne.

The nineteenth, we rid ſtill, and Maſter *Welden* went to the North ſide againe, and ſlue another Beare. The ſame day we ſent two men to the South ſide of the Iand, to ſee if there were any Morſes on ſhoare. They came againe the next day, and ſaid, that there were great ſtore.

Great heate the 20. and 21. of Iune.

The twentieth and one and twentieth dayes it was calme, and the weather cleere, and wee had it as hot as I haue commonly felt in *England* at that time of the yeere. For the Pitch did runne downe the ſhips ſides; and that ſide of the Maſts that was to the Sunne ward, was ſo hot, that the Tarre did frye out of it, as though it had boyled.

1000. Morſes killed in ſeuen houres.

The two and twentieth, at a North-eaſt Sun, we weighed and went to the South ſide of the Iland, and came into a Coue, where the Morſes were, and ſlue about 900. or 1000. of them in leſſe then ſeuen houres: and there wee plyed our buſineſſe vntill the ſecond of Iuly: at what time we had taken into our ſhip 22. tunnes and three hogſheads of Oyle.

Iuly 3. A Voyage ſet out by Maſter *Duppa* to *Cherie* Iland, 1607.

The third of Iuly, being Sunday, one *Richard Steuens* of *Harewich* came to the ſaid *Cherie* Iland, in a ſhip called the *Dragon*, being ſet out by Maſter *Duppa*, a Brewer dwelling in Saint *Catharines* neere the Tower of *London*; which ſet out a ſhip with Maſter *Thomas Welden* the yeere before 1607.

A liuing Morſe brought into *England*.

The ninth day, we made our Voyage, and came out of the Coue, hauing taken in 31. tunnes of Oyle, and one hogſhead, one barrell, and one terce of Morſes teeth: beſides 400. other teeth.

The twelfth, we tooke into our ſhip two young Morſes, male and female, aliue: the female died before we came into *England*: the male liued aboue ten weekes. When wee had watered, we ſet ſayle for *England* about foure of the clocke in the morning.

The fourteenth day, we ſaw the Iland bearing North North-weſt, 15. leagues off vs, and ſounded, and had 85. fathoms, greene Oze, like Doues dung.

The twentieth of Auguſt, wee arriued at *London*; and hauing diſpatched ſome priuate buſineſſe, we brought our liuing young Morſe to the Court, where the King and many honourable perſonages beheld it with admiration for the ſtrangeneſſe of the ſame, the like whereof had neuer before beene ſeene aliue in *England*. Not long after it fell ſicke and died. As the beaſt in ſhape is very ſtrange, ſo is it of ſtrange docilitie, and apt to be taught, as by good experience we often proued.

The

The seuenth Voyage to Cherie *Iland, made in the yeere* 1609.

WEe were furnished with two ships, determining to goe to *Tipany* in *Lapland*, to buy fish of the *Lappes* and *Russes*, and afterward to goe to *Cherie* Iland: the one was called the *Lioneſſe*, in which I went for Master, the other, the *Paul*, which was there the last yeere, 1608.

The one and twentieth day of March, we weighed anchor at *Graueſend*: and the sixe and twentieth, we came to *Harwich*: where it was concluded, that the *Lioneſſe* should goe directly to *Cherie* Iland. The fifteenth of Aprill, we weighed at *Harewich*: and the last of the same moneth we fell betweene *Lofoot* and *Zenam* vpon the Coast of *Finmark*. *Lofoot. Zenam.*

The second of May, we came to the North Cape; and the same day wee stood for *Cherie* Iland: but meeting with contrary winds and foule weather, we bare backe againe for the Cape, and fell with the Land the fourth day. The fift day in the morning, we put the second time from the North Cape; and the eight day wee anchored at *Cherie* Iland. It did freeze very hard, but we found no Ice about the Iland, saue that which claue to the Rockes. We went into the Coue with our Shallop, and found eight Morses on the Ice hard by the shoares side: And we also found all the beasts that were killed the last yeere not washed away with the Sea, couered ouer with Snow and Ice. Wee thought to haue gotten abundance of Fowle as wee had done in the yeeres before: but they would not sit; the reason was, because they were but new come to the Iland, and not setled as then: yet some Fowle we got, and came aboord. And because the wind was Northerly, that we could not conueniently goe to the North side with the ship, we determined to send some men ouer Land, to see if there were any Morses on shoare vpon that side. The ninth day, I prepared to goe ouer Land to the North side, about a North-east Sunne, with three men in my companie. I my selfe had a Musket, and about a quarter of a pound of Powder, and sixe Bullets; an Halfe-pike in mine hand, and an Hatchet at my backe. One of the men had a birding Peece; the other two had each of them a Iauelin. Wee went ouer the Snow and Ice apace outward; but came wearily homeward, by reason we rested not any where. And when we were within a mile of the other side, one of my companie said, he saw a Beare: whereupon we looked vp, and saw three great ones. Whereupon I made a stand, and gaue each of my companie some *Aqua vitæ*, and a little Bread, and told them, that wee must not in any case seeme fearefull, because the nature of them is such, that whosoeuer seemeth fearefull, or offereth to runne away, they will seize vpon him. In this time I made my Musket readie: and the Beares seeing vs to come toward them, stood vpon their feet, and two of them went toward the Sea: The third stood still champing and foming, as though hee would haue eaten vs. When I was within shot of him, he beganne to follow his fellowes, still looking behind him with his former gesture: In the meane while I got ground of him, the three men following mee with their weapons. In the end the angry deuill turned backe, and came directly toward mee: I let him come within two long Pikes lengths, and gaue him such a welcome, that hee fell downe stone dead. The company that were with me were glad as well as I: yet I had beene at the killing of Beares before. After this Beare was slayne, we told seuenteene more, whereof three were young ones. This done, we went on to the Sea side, where we found the Shallop which we left the yeere before. Wee were no sooner set to eate a little food, but there came a Beare with two young ones as big as Lambes of a moneth old: they skipped about their dams necke, and played with one another very wantonly. The dame came so neere that I shot at her, and being loth to hurt the young ones, being playing about her fore-parts, I shot her through the top of the shoulder; then she went away. Immediatly we saw another Beare comming toward vs, which before he came to vs, stood vpon his hinder feet twice or thrice, vsing the same countenance that the first did, which I slue. I let him come very neere, and thinking to giue him his pasport, the flint of my Musket was broken, which made him come very neere vs. Then the fellow that had the birding piece shot him into the foote: whereupon he ran away faster then wee could follow him. Wee seeing so many Beares, and hauing no store of Powder nor Shot, bent our iourney toward our ship againe. Wee had not come a quarter of a mile, but wee saw a huge Beare fast a sleepe on the Snow. I went softly toward him, and gaue him such a filip, that he neuer rose out of the place where he lay. His skin when he was flayed was thirteene foot long. A neere neighbour of his hearing the report of my Peece came toward me: and him I slue also. Now, hauing but one shot left, I thought it not best to bestow it there, although I saw another lie vpon the Snow hard by. While we sate downe to rest vs in the mid-way, there came toward vs another Beare with one young one: they came almost within shot, and went backe againe: presently shee turned againe, and came within shot of me, and stood on her hinder legs directly vpright, and so did the young one. I made account they would haue come neerer; but they to the contrarie ran away. Wee came being very wearie aboord our ship about a North-west Sunne. Then wee weighed, and stood to the Northward, hauing the wind at South; and by three of the clocke the next morning, wee came to the North-east Point with the ship. There wee manned our Shallop,

They arriue at Cherie Iland the 8. of May.

Fowle.

Sixe Beares slayne. All the Beares flayed.

Shallop, and Master *Thomas Welden* and I went on shoare, where hee slue fiue Beares, and I one, and I wounded two more very sore. And before a North Sunne, our men had fleyed them all; both them that I slue the day before, and them that wee slue this last time: for they were all together.

The eleuenth day, we went on Land, and washed some old fleyed Morses skinnes, which had lyen there two yeeres: but they will hardly proue good. The twelfth day, we rid at the West side, and got some Fowle with shot, and there we rid till the thirteenth.

The thirteenth, wee saw very much Ice to the Southwards and Westwards, wich came driuing so fast toward the shoare where wee rid, that wee were forced to weigh, and stood to the North side of the Iland. The Ice followed vs still: then wee stood to the East side of the Iland: and there wee found both the Iland and our selues encompassed round with Ice. But the winde being Westerly, and a good stiffe gale, it blew the Ice about a mile and an halfe from the Eastern side; by which meanes wee got betwixt the Ice and the Iland, and stood to the Southward, but saw not any thing in all the Sea saue Ice; sauing close by the Land a little open Sea trending to the South-westward. That way wee stood with our fore top-sayle, and stood one while one way, and another while another way, and could not see open Sea till the fifteenth of the same moneth; at a North-west Sunne wee saw the open Sea: onely a ledge of Ice which began to part insunder, was betwixt vs and it. Toward that place we stood, and intending by Gods helpe to get through, we made prouision to defend the ship from the Ice, by hanging Cables ends, and Plankes, and Capstan barres about the bowes of our ship. But for all our tendors, our ship had a great knocke vpon a piece of Ice. About a North Sunne, we got out into the open Sea; with humble thankes to God for our deliuerance.

Frost the 16. of May.

The sixteenth day, the Iland did beare North-east and by North, eight leagues from vs: and it did freeze all that day, the wind being at North, which was almost calme. The seuenteenth, at noone the Iland did beare North-east and by North, about nine leagues off, the wind Southerly, snowy weather. The same day we saw a sayle, bearing East North-east off vs about 5. leagues.

Snow.

The eighteenth, the Iland did beare North about 15. leagues off, the wind being at East and by North, Snow and frosty weather.

Snow.

The nineteenth, at twelue of the clocke at noone the Iland bare North and by East: and we finding the Ice somewhat scattered, and the wind Southerly, put roome toward the Iland, and vpon one piece of Ice we saw fiue Seales: one I killed, and one I tooke aliue, and brought it aboord our ship.

Fiue Seales.

But wee could not come neere the Iland by sixe leagues. The wind came to the West with thicke weather and Snow.

Snow.

The twentieth, at twelue at noone the Iland beare North North-west, about twelue leagues off. We sounded, and had 100. fathoms, greenish Oze, faire weather, but cold.

The one and twentieth, we saw the ship that wee had seene the seuenteenth day; wee spake with them about 12. at noone. The Master told vs he was of *Hull*. Wee demanded whether he was bound? He told vs, to *Cherie* Iland, and that there he would make his Voyage. The Iland at this time did beare North and by East about nine leagues off; and it was faire, but cold frostie weather.

A ship of *Hull*.

Frosty wether.

The 22. 23. 24. and 25. dayes, we did beate vp and downe in the Ice. The 26. 27. and 28. dayes, likewise wee sayled vp and downe in the Ice; hauing the wind Northerly, and the Iland bearing betweene the North and the North North-east, cold weather. The nine and twentieth, the Iland beare North nine leagues off, the wind at North-east, snowy weather and Frost.

Snow & frost.

26. Seales.

The thirtieth day, we slue 26. Seales, and espied three white Beares: wee went aboord for Shot and Powder, and comming to the Ice againe, we found a shee-Beare and two young ones: Master *Thomas Welden* shot and killed her: after shee was slayne, wee got the young ones, and brought them home into *England*, where they are aliue in *Paris Garden*. The one and thirtieth, we beate vp and downe in the Ice, but could not come neere the Land for Ice; the winde was Northerly.

A Beare killed on the Ice. Two young white Beares brought into *England*.

The first of Iune, we got within fiue or sixe miles of the Iland: but finding very much Ice close by the Land, we stood off againe, the wind being at North-east, cold weather. The second day, we got within three leagues of the Iland: but finding exceeding much Ice round about vs, we stood off againe, the wind at North-east, cold frostie weather. From the second day to the fift, wee sayled first one way, and then another, as the wind and Ice would giue vs leaue. The wind being at North and by East, and the Iland being betweene the North-west and by North, within sixe leagues and lesse.

Iune 1.

Frost.

The *Hull* man. 20. leagues North-west off the Iland.

The sixth day, we spake with the *Hull* man, who told vs, that he was put twentie leagues to the North-west of the Iland, being fast in the Ice. We had the wind Northerly, and frosty weather; the Land bearing North North-west. The seuenth and eight, we beate vp and downe in the Ice: the Iland did beare North-west eight leagues off. The winde was Northerly, with cold and frostie weather.

No fog in a moneths space.

The ninth, the Land beare North-west off vs about six leagues off. That day we had the first fogge since the time of our arriuall, which was the eight of May. Neither lost wee the sight of the Iland aboue eighteene houres in all this time. This day, about a North-east Sunne it began

gan to thaw ; and in ſixe houres the ſnow was melted, which lay vpon the Ice aboue ſixe inches thicke : which put vs in good hope that the Ice was almoſt paſt. The firſt thaw.

The tenth, we got within ſixe miles of the ſhoare : where I made an attempt to haue got to the land with the Shallop : but comming within three miles of the ſhoare, I could get no farther, the Ice was ſo thicke, and ſuch foggy weather. I made another attempt the ſame day, and got within one mile of the Land : but the Ice was ſo thicke that I could get no farther. The ſame day wee ſaw good ſtore of Morſes on the Ice and in the Sea.

The eleuenth and twelfth, we plyed vp and downe fayre by the Iland, to ſee if wee could get on Land with our Shallop ; but the Ice was ſo cloſe about the Land, that wee could not by any meanes. This day the wind was at South-eaſt, thicke foggie weather. The thirteenth, we had thicke fogge and calme weather ; and when it began to cleere, wee had ſight of the Souther part of the Iland, bearing Eaſt South-eaſt, about ſixe miles off ; but it fell thicke ſuddenly againe. There wee anchored in fortie fathoms, white ſhelly ground ; and rid till ten of the clocke at night : at what time I prepared to goe on ſhoare, as faſt as I could with a Shallop and ſixe men. About eleuen of the clocke we put from the Ship, and with great labour got through the Ice to the Iland, by a North-eaſt Sunne. Fogges.

The fourteenth day, I landed on the Weſter ſide of the Iland, and determined to goe from thence to the North ſide, where wee ſlew the Beares. The ninth of *May* I left three men with the Shallop, and tooke three men with me. In my iourney I found ſuch bad way, that I had no ſtomacke to goe through ; for where there was no ſnow, the ground was ſo ſoft, and without graſſe, that we went vp to the anckles in dirt ; and where the ſnow lay, which was in ſome holes, three or foure fathoms thicke, it was ſo ſoft, that we ſlipt each ſtep vp to the twiſt ; ſo that wee were aboue three houres in going ſcarce two miles. Whereupon, conſidering it would bee long before I ſhould get ten miles and backe againe, I returned to our Shallop, and found that the men which I left had killed ſome fowle, which wee ſod, and when wee had eaten them, I prepared to goe in the Shallop to the North ſide. I went cloſe by the ſhoare ; for the Sea was full of Ice. As wee went along by the Cliffes, we got good ſtore of Fowle ; which made vs glad and ioyfull, becauſe there was no hope to get aboord the Ship that day, nor the next. About a North-weſt Sun wee got to the place aboueſaid, and found nine Beares, three of them I ſlew, the other tooke the Sea. Thoſe three that were ſlaine we ſkead, and tooke their fleſh and ſalted it in their skinnes ; which I ſtowed in the Shallop for feare of a dearth. I had a terce full of ſalt there, which wee left in that place the eleuenth of May. The Beares ſlaine on the North ſide. Three Beares ſlaine, powdered, and eaten.

The fifteenth day, when wee had ended our buſineſſe, and eaten ſome of our Beares fleſh, and ſet vp an Enſigne in token of our poſſeſſion of the Iland, wee prepared to be gone : and about an Eaſt North-eaſt Sunne the wind came Weſterly ; which made me thinke, as it proued, that the Ship would be on the South-eaſt ſide of the Iland ; and when wee were comming, and almoſt at the North-eaſt point, we ſaw nine men ; preſently I knew them to bee the men of *Hull*. Along I came to the Eaſt ſide, where we tooke in drift wood, and a broad ſtone to make a fire vpon in our Boat. While wee were there, wee eſpied our ſhip vnder her Fore-topſayle, and her Miſen. We made all the haſte we could, and came to the Coue, where wee made our voyage the Summer laſt paſt. There likewiſe I ſet vp a Pike, with a white cloth vpon it, and a letter ſignifying our poſſeſſion for the right worſhipfull Company trading to *Moſcouie*. When I had done, I eſpied the *Hull* mans Boat rowing into the Coue, and a Tent ſet vp in the bottom of the Bay. I went thither, and told him we had taken poſſeſſion there, the eight of May laſt. He anſwered, That if the beaſts came on ſhoare, he would kill them if he could ; and that there were as good men which ventured in that Ship, as the Company. I told him he durſt not anſwer theſe words in *England*, and ſo departed and got ſome Fowle. About a South-weſt Sunne wee ſtood toward our Ship, hauing the wind at Weſt South-weſt, and the Ship bearing from vs South-eaſt about foure leagues. I had not ſailed ten miles, but the Ice was ſo cloſe and firme, that I could not get aboord, nor backe againe ; for it cloſed with ſuch force, that it made the Shallops ſides cracke, as though they would haue met together. Wee laboured very ſore to ſaue our Boat, becauſe it did concerne our liues, and got her into a place where ſhee lay betweene two pieces of Ice. After this ſort we draue with the Ice till we had loſt ſight of our Ship, which was about a North ſun ; and ſtill wee draue, being not able otherwiſe to moue till we were aboue eight leagues from the Iland. Poſſeſſion taken of *Cherie* Iland for the *Muſcouie* Company. Driſt wood on the Eaſt ſide. The Coue.

The ſixteenth day, at an Eaſt South-eaſt Sun, the Ice began to open. Then, although my Company were in deſpaire, and ſaid it was impoſſible to get out, to worke wee went, and by cutting off Ice, and remouing of it one piece from another, we made way through toward the Land. The neerer to the Land wee got, wee found the more open Sea ; and by a North Sunne wee got on ſhoare. After wee had giuen God thankes for our deliuerance out of ſuch extreame danger, wee eate ſome Fowle and Beares fleſh, which wee ſod vnder a Cliffe. There wee found nine young Foxes, and killed the old one. There alſo we ſlept vpon the cold Sand, which was not paſt three inches thicke, and vnderneath Ice ; and ſtaied here till a South-eaſt Sunne the ſeuenteenth day. They feed on Beares fleſh. Nine Foxes found.

The ſeuenteenth, we went from this place to the Coue, where we found the *Hull* mans Boat. I made a tilt of the Shallops ſayle, and ſod ſome Beares fleſh and Fowle ; and ſtayed about the

Coue

Three Mynes of Lead found on *Gull*-Iland.

Coue all that day. And vpon an Iland, commonly called *Gull*-Iland, I found three Mynes of Lead Vre: but hauing no fit tooles to breake the Rocks, and alſo becauſe it was in the view of the *Hull* mans Tent, I was forced to let it reſt, till the Ships could get into the Coue.

Good Sea-coles found on the Iland.

The eighteenth day, wee went to the North ſide of the Iland, and in our way wee found good Sea-coales to burne: ſome wee tooke with vs to try them, and found them good. And on the North ſide I ſlew two Beares. Then wee ſhared the bread that was left; and wee had but two cakes to a man: for ſome of my Company while I was aſleepe, or killing of the Beares, had broken open the cheſt wherein the bread was, and had conueyed ſome away. Our beere was ſpent before this time, and we were faine to drinke ſnow water.

Two Beares ſlaine.

An huge compaſſe of Ice.

The ninteenth, wee went to the Coue, the wind being Weſterly, to ſee if wee could eſpy our Ship; but wee could not, neither could ſhee come neere the Iland for Ice; for all the Sea, as farre as I could ſee from the top of an high Hill was couered with Ice, ſauing that within a quarter of a mile off the ſhoare, it was cleere round about once in a tyde.

Another Beare ſlaine.

The twentieth day, I went to the North ſide againe, and ſlew a Beare. Thus wee ſpent the time, ſometimes on one ſide, ſometimes on the other, neuer ſtaying aboue one day in one place till the Ship came in; vvhich vvas the ſeuen and twentieth of Iune, on vvhich day I ſlew another Beare. I ſlew ſeuen in all, vvhoſe fleſh vve eate full ſauerly, forgetting the oyly rankneſſe of it; for hunger is a ſauourie ſawce.

Another Beare ſlaine.

Their Ship got in the ſecond time.

The ſeuen and twentieth, our ſhip came to an anchor on the North ſide, where we then were; aſſoone as vve ſaw her, we needed no bidding to go aboord. When we were come to the ſhip ſide, they bad vs vvelcome: but vvhereas vve thought to haue releeued our ſelues, vvee found it farre otherwiſe; becauſe the Ship had a knocke vvith a piece of Ice in the Sterne, vvhich brake in the corner of a Planke vnder the vvater, ſo that our bread-roome vvas full of vvater, and all our bread ſpoyled, ſauing about one hundred vweight: vvhich vvas but a ſmall quantitie for three and forty men. This day a Ship called the *Matthew* came to an anchor by vs. Then Maſter *Welden* and I vvent on ſhoare, vvhere vve found one *Iohn Skinner*, Maſters mate of the *Matthew*, vvith eleuen men by him. We ſet vp our Tent, and told him there vvas no voyage for him to make: but our neceſſitie vvas ſuch, that vve vvere faine to take foure hundred of bread of them, vpon ſome condition, vvhich I vvill not ſpeake of here. The ſame day vvee thought to haue taken a Copper aboord, vvhich I digged out of the ſnow; but by negligence it vvas let fall into the Sea, yet afterward taken vp againe and carried aboord. The ſame day, another Ship called the *Mary Margarite* came into the ſaid Coue on the South ſide.

The *Matthew*.

The *Marie Margarite*.

The eighteenth, I vvent to the Coue vvith the Shallop and ſixe men, vvhere I found the *Marie Margarite*; there paſſed no great kindneſſe betweene them and me. I ſlew three Horſes there, two vvere loſt, the others head I brought aboord. The next day I came aboord our Ship, and vve rid on that ſide, looking ſtill vvhen any beaſts vvould come on ſhoare, till the ſecond of Iuly. Then vve vveighed, and ſtood to the Eaſt ſide of the Iland; becauſe the vvind vvas at Weſt North-weſt, and great ſtore of Ice came from thoſe parts. We had not rid one houre to an end, but vve ſaw a Skiffe comming towards vs. In this Skiffe vvas one *Ioſias Logan*, and *Thomas Edge*, Factors in the *Paul* for the vvorſhipfull Company. They told vs that the *Paul* vvas in the Coue, and the ſhip of *Hull*. They vvent aboord againe, and vvhen the tyde vvas ſpent, vve weighed and thought to haue anchored neere the Coue; but the vvind vvas ſo far Eaſterly, that vve could not: ſo vvee vvent to the Weſter ſide, and ridde there till the fourth day, vvhere vve got Fowle; for in all the time of our being about the Iland, and in the Ice, they vvere our chiefeſt food.

Iuly.

Logan and *Edge*.

Fowle their chiefeſt food in extreamitie.

The fourth, vve vveighed and vvent to the North ſide; vvhere vve vvere troubled vvith much Ice: The vvind vvas at Weſt and by North, vvhich brought the Ice vvhole vpon vs; ſo that we vvere forced to vveigh againe.

A Beare ſlaine.

Another Beare ſlaine.

The ſixth, vve came into the Coue; vvhere Maſter *Welden* ſlew a Beare. The eight day, he ſlew another Beare; and the ſame day I vvent to the North ſide, vvith the Shallop and victuals for the men vvhich kept on that ſide. I ſtayed there till the fourteenth of Iuly: on vvhich day vve had the vvind Northerly, vvith ſnow and froſt, and the Iland enuironed round with Ice. In this time the Ships Company on the South ſide did digge ſome Minerall Lead. And vve caught aboue twentie Foxes, vvhich vve did eat as ſauerly as if they had beene Veniſon.

Snow and Froſt.

Some Minerall Lead digged.

Aboue twentie Foxes eaten.

The fifteenth day, by a North-eaſt Sunne vve came aboord the Ship, vvhich lay in the Coue, vvith our Shallop and all our prouiſion that vvas on the North ſide. And the *Lioneſſe* prepared to goe to Saint *Nicolas* in *Ruſſia*, as it was appointed before in *London*.

The ſixteenth, the wind being North-eaſt brought ſuch ſtore of Ice to the Iland, that it vvas compaſſed round cloſe to the ſhoare; and filled the Coue ſo full, that by no meanes poſſible the Ships could get out, but ridde ſtill ſhut in for fiue dayes.

The ſeuenteenth, the Ice began to open at the mouth of the Coue, and ſome were willing to goe out with their Ships; but couetouſneſſe had like to haue brought vs all to great miſery: for each man ſtriuing to ride longeſt in the Coue, ſuppoſing that there the Horſes would come firſt on ſhoare, they found it cleane contrary; for the wind came Southerly, and blew all the Ice from this ſide of the Iland, ſaue that which was in the Coue: which preſſed ſo ſore vpon our Ships,

Dangers by the Ice.

Digitized by Google

Ships, that our Anchors could not hold vs. For the *Matthew* was put from three Anchors, and droue with that small tyde, that runneth there within her length of a sunken Rocke: but a great piece of Ice on ground vpon the Rocke did keepe her from it. And when the floud came againe, she was driuen within halfe her length of the Rockes; so that they were glad to get most of their victuals out of her vpon the Rockes, looking each minute when she should split in sunder. And though the rest of the ships did not driue as she did, yet they had many a sore stroke with the Ice. For the Southerly wind caused a hollow Sea to come in; so that our ships strooke with such force against the Ice, that wee could hardly stand on our feete in them. Then each man layed to his hand to saue his ship, by putting Plancks and old Cables ends, and bundels of Hoops betweene their ships and the Ice. But they were beaten all to pieces presently. Then we put pieces of Elme Plancke betweene the bowes of the *Paul*, in which ship I was: Immediately, they also were beaten into small pieces, although they were aboue foure inches thicke. With the stroke that brake the Plancke, the Carpenter said, the ships side did cracke, and two timbers were broken. Then presently wee also got out of the ship most of our victuals, and carried it to the shoare. There might you see a sorrowfull spectacle. For all the ships, being fiue in number, were so fast in the Ice, that all the men that were in them all, which were one hundred eightie two, could not imagine how to saue one. Among the rest, we made account that the *Matthew* would sinke, ere long: because the Ice had broken nine timbers on one side, and eleuen on the other; so that the Greene Sea did come into the ship: and her mayne beame was broken at that instant likewise. In this sort we continued till the twentieth day following; when we looked still to bee put on the Cliffes with the force of the Ice, that pressed vpon our ships so sore, that our Anchors could not possibly hold.

Vpon the twentieth day, it pleased God to bring the wind Westerly, then the Ice began to open, and to driue out of the Coue by little and little, to our great comforts. But that Ice that did not get cleane out, came backe againe, and ranne round in a Circle; so that wee had a continual labor to defend the ships from it. Whereupon we made meanes to get out by long [l] Warps, as wee terme them. Wee were faine to let slip one Cable, and the *Lioneſſe* one. The *Matthew* had but one Cable and Anchor; but they borrowed one of vs. By a North-west Sunne, all the ships got out of the Ice to the Coues mouth; where we stayed for the ebbe. When the ebbe was come, the *Lioneſſe* departed on her Voyage to Saint *Nicholas* in *Russia*. And presently the *Matthew*, and the *Mary Margarite* set saile and got out. Then wee in the *Paul* set sayle, and before our Anchor was vp, it got hold vpon one of *Matthewes* Cables, that shee lost, when shee droue out, and brought vs vp to a [m] *Bitter*, so that wee were very neere the Rockes: but wee got off againe, and ride there till a North-west Sunne the next day.

The one and twentieth day, we weighed and stood to the East side of the Iland, where wee found the *Mary Margarite*, which had lost her Boat. Streight way we sayled to the North side, where we anchored and rid till a North Sunne.

The two and twentieth day, it cleered vp of a fogge, which had continued since the time of our comming out of the Coue. And wee thought it best to fetch the victuals aboord, which we carried on shoare when the ship was like to be split with Ice.

Then *Iosias Logan* and I tooke seuen men more with vs, and came to the Coue on the South side: where wee found abundance of Morses lying on the Ice, that was in the Coue. I slue one of them, and tooke off his head: we could not get to the shoare where our victuals lay, but we made a fire vnder a Cliffe in the same Coue.

The three and twentieth day, wee got to our victuals, and *Iosias* went with it to our shippe: but I tarried at the Coue, hoping that the beasts would come on Land when the Ice was gone; as they did afterward. There I tarried till the fiue and twentieth of Iuly; at what time *Iosias Logan* came to mee with the Shallop, and a Skiffe loden with Caske and other prouision; and told mee, that they had slaine fiue or sixe hundred Morses on the North side.

Hee tarried with mee till the seuen and twentieth of Iuly: now seeing no beastes did come on Land, because the Ice did hang about the Coue, he went to the North side againe: but the same day after he was gone, they began to come on Land.

The next day following, being the eight and twentieth, wee slue about eightie, and tooke their Blubber and Teeth. Then they began to come on shoare againe the thirtieth day: at what time Master *Bonner* was come into the Coue to seeke his Anchors. Then his men came on shoare, and we slue about one hundred and fiftie beast more. But there rose a storme at South-east, that brought in such a surge, that it washed aboue sixtie beasts into the Sea; so that most of them were lost.

The next day being the last of Iuly, Master *Welden* and Master *Iones* came to the Coue with about twelue men, being all very wearie. For they had left the Shallop in a Coue on the North-west side of the Iland, and came ouer Land. Then to worke wee went on all hands, and placed our Coppers. And by the fift day of August we had ended our businesse; and the ship came from the North side into the Coue.

[l] A warpe, is a Rope (commonly a Hawser) vsed to warpe a ship, that is, with an Anchor bent to the Hawser and layd out to hale the ship forward: which is done when they want wind to carrie out, or into a Harbour.

[m] A *Bitter*, is a turne of the Cable about the Bitts, for when they come to Anchor, they take a turne with it about the *Bitts* (two mayne square pieces of Timber, which stand Pillar wise in the loofe of the ship, to make fast the Cable vnto) that they may by little and little vere it out at ease: otherwise, if a stopper faile, the Cable would runne out end for end, that is altogether; but thus stopped, the shippe is said to bee brought to a Bitter. The Bitter end is that end of the Cable within boord at the Bitts.

Auguſt. The ſixt of Auguſt, I tooke the Skiffe and ſeuen men to fetch the Shallop to the Coue, that Maſter *Welden* had left in a Coue, on the North-weſt ſide of the Iland, the laſt of Iuly. When I came to the place, conſidering I was neere the North ſide, where we commonly make our Voy-
Note. age, and alſo deſired by Maſter *Welden*, if I could goe, to doe ſo, I went thither, and found about fiue and fortie as good headed beaſts for Teeth, as euer I ſaw. Wee had no more Launces to kill th m with all, but two, I tooke one, and a luſtie fellow that was our Cooper had the other: we had not killed paſt ten but his Lance brake. Then I ſlue all the reſt in leſſe then two houres; and wee tooke their Teeth; and the next day by a Weſt Sunne wee came aboord the *Paul* with them.

The eight day, wee got the Southermoſt Point of the Iland: where wee rid all that day. Their Skiffe from their long Boats ſterne, and we manned our Boat to fetch her againe: but then roſe ſuch a fogge, that we had like to haue loſt both our Boats and men; but they got to the ſhip againe with much adoe.

The ninth day, it was calme; but wee had ſuch a fogge, that wee could not ſee two Cables length from the ſhip. And about eight of the Clocke at night, wee loſt our Skiffe altogether.

The tenth day, we had a little Wind at North-weſt and by Weſt. Then ſeeing no amendment of the weather, wee left the ſhip of *Hull* behind vs in the Iland, and about ſixe of the Clocke ſet ſayle for *England*, and arriued ſafely at *London* the laſt of Auguſt, 1609. Bleſſed bee God.

A Voyage performed to the Northwards, Anno 1603. *in a ſhip of the burthen of fiftie tunnes, called the* Grace, *and ſet forth at the coſt and charges of the Worſhipfull* FRANCIS CHERIE. *Written by* WILLIAM GORDEN; *being the firſt Voyage to* Cherie *Iland; which came to my hands ſince the former (or rather later Voyages) were in the Preſſe.*

THe ſhip being readie the tenth of Aprill, whereof was Maſter *Stephen Bennet*, and for Factor and Ouer-ſeer *William Gorden*, our Directions from the ſaid Merchant, were firſt to proceed to *Cola*, and there to make ſale of ſuch goods as we had, and to take in ſuch other as the Countrey of *Lappia* did affoord, and then to proceed vpon ſome Diſcouerie. Wherefore omitting our Iourney to *Cola*, as a matter of ſmall importance, being ſo well knowne before, after our Affaires ended, we were readie to proceed forward. But our men not being hired thereunto would haue refuſed, if there had not beene made an agreement by meanes of *Ioſias Logan*, who was to lye there as Factor for Maſter *Cherie*, the Maſter and my ſelfe, partly with promiſes, partly with gifts. And thus ſetting forward the ſixt of Auguſt, from the Riuer of *Cola*, being determined to haue ſayled into 80. degrees of latitude, if nothing
An Iland. did hinder vs; or if we did not light vpon ſome land: our determination was hindered by meanes of meeting with an Iland, and likewiſe the yeere being farre ſpent, keeping our courſe from the Weſt end of *Kilden*, to the Ilands of *Ward-houſe*, which wee paſſed the tenth of Auguſt with little wind; then directing our courſe North North-weſt, the wind at South-weſt eaſie wind, ſo that the eleuenth day we did reckon our ſelues to haue ſayled twentie leagues North-weſt. The twelfth day, it was moſt part calme and foggie. The thirteenth day, it was cleere, and the wind at South, and we had ſayled twentie two leagues North North-weſt. The fourteenth day, the wind at Eaſt, we kept our courſe and ſayled ten leagues, and the ſame day being thicke and foggie, we had thought wee had ſeene Land about foure of the clocke in the after-noone, bearing from vs Weſt North-weſt, and North-weſt by Weſt, but ſayling towards it three houres, keeping ſtill his forme, and not altering till the wind increaſing, cauſed it to fade away (for it was no other then a banke of fogges) after we had ſayled three leagues changing our courſe, we ſayled then fifteene dayes twentie leagues, North-weſt and by North, ſtill hauing cloſe weather, that we could not make any obſeruation. The ſixteenth day in the morning, at two of the clock, we did ſee two great high Hils, which did ſeeme to vs aboue the Clouds, and did ſeeme very neere; but we found it otherwiſe for ſayling towards it, we found it further then we did expect, for it was ſixe of the clocke at night before wee could come neere vnto the Land, where wee anchored in thirtie fathomes. In which time we could not ſayle leſſe then eighteene leagues North and by Weſt. That night our Maſter knowing, better what did belong vnto thoſe Affaires, would not ſuffer the Boat to goe aland till the morning: which was the ſeuenteenth day of Auguſt, and before our going aland, the Maſter cauſed a ſhanke of Lines to bee ſhot for, to toy for fiſh, and then he and my ſelfe with foure of our Company went aland. Firſt, vpon a little Iland neere adjoyning, where we had much adoe to get to our Boat againe, by reaſon of the ſteepnes

of

of the Rockes: then we went on shoare vpon the Mayne, where at our comming on Land, wee did see two Foxes, one White, the other Blacke. Thus spending most part of the day, wee returned aboord our ship without any profit: only one of our men tooke vp a piece of Lead, and I found a piece of a Morses Tooth, by which we perceiued that the Sea Morses did vse thither, but the time for that yeere was past, for we did see none. After our comming aboord, hauing haled the Line, we found nothing but one bue fish thereon, wherefore presently weighing Anchor, we sayled West to see if we could haue any true obseruation, the next day which wee had, and found our selues to bee in 74. degrees 30. minutes. The same day directing our course for *London*, where we arriued the tenth of September, by Gods helpe, in health and safetie.

CHAP. XIIII.

Diuers Voyages and Northerne Discouries of that worthy irrecouerable Discouerer Master HENRY HVDSON. *His Discouerie toward the North Pole, set forth at the charge of certaine Worshipfull Merchants of* London, *in May* 1607. *Written partly by* IOHN PLAYSE *one of the Company, and partly by* H. HVDSON.

Anno 1607. Aprill the nineteenth, at Saint *Ethelburge* in Bishops Gate street, did communicate with the rest of the Parishioners these persons Seamen, purposing to goe to sea foure dayes after, for to discouer a Passage by the North Pole to *Iapan* and *China*. First, *Henry Hudson* Master. Secondly, *William Colines* his Mate. Thirdly, *Iames Young*. Fourthly, *Iohn Colman*. Fiftly, *Iohn Cooke*. Sixtly, *Iames Benbery*. Seuenthly, *Iames Skratton*. Eightly, *Iohn Pleyce*. Ninthly, *Thomas Baxter*. Tenthly, *Richard Day*. Eleuenthly, *Iames Knight*. Twelfthly, *Iohn Hudson* a Boy.

The first of May 1607. we weyed Anchor at *Graues-end*, and on Tuesday the sixe and twentieth day in the morning, we made the Ilts of *Shotland*, and at noone we were in 60. degrees 12. minutes, and sixe leagues to the Eastward of them: the Compasse had no variation. We had sixtie foure fathomes at our sounding, blacke, ozie, sandie, with some yellow shels. Our ship made more way then we did suppose. On Saturday the thirtieth of May, by our obseruation we were in 61. degrees 11. minutes, This day I found the Needle to incline 79. degrees vnder the Horizon. For foure dayes space we made very little way by contrary winds.

May. The Ilts of *Shotland*. No variation. 61. degrees 11. minutes. The inclination of the Needle.

On Thursday the fourth of Iune, we were by our obseruation still in 61. degrees and 14. minutes, eight and twentie or thirtie leagues from the Norther part of *Shotland*: the Land bearing by our Accompt East and by North off vs, I found variation in fiue degrees Westerly.

Iune.

The seuenth of Iune, wee were in 63. degrees 25. minutes. The eighth, all the fore-noone we had a fresh gale Southerly; we steered away North and by West, and by obseruation we were in 65. degrees 27. minutes.

65. degrees 27. minutes. 67. degrees 30. minutes.

The eleuenth, wee saw sixe or seuen Whales neere our shippe: wee were in sixtie seuen degrees thirtie minutes. About fiue of the clocke, the winde came vp at North-east and by East; wee steered away North North-west with a fresh gale all the night at East. The twelfth, the winde was at East North-east, a stiffe gale, wee steered away as afore, and accounted wee had runne by this day noone thirtie leagues. In the after-noone wee steered away North and by West fifteene leagues, all the night prooued a great fogge with much wind.

The thirteenth, betweene one and two in the morning, we saw some Land on head of vs, and some Ice: and it being a thicke fogge, we steered away Northerly, and hauing much wind wee stood away South and by East, sixe or eight leagues. Our sayle and shroudes did freeze. At eight in the morning it cleered vp, the wind being at North-east and by East, with much wind wee were hardly able to maintayne a sayle. This was a very high Land, most part couered with Snow. The neather part was vncouered. At the top it looked reddish, and vnderneath a blackish Clay, with much Ice lying about it. The part which we saw when wee cast about, trended East and West: And the Norther part which we saw, trended North-east and by North, and North-east: and the length which wee saw was nine leagues; wee saw much Fowle. Also wee saw a Whale close by the shoare. We called the Head-land which we saw, *Youngs Cape*; and neere it standeth a very high Mount like a round Castle, which wee called, the *Mount of Gods Mercie*. All the after-noone, and all the Eeuening it rained. At eight in the Eeuening we cast about, and steered all night North and by West, and sometimes North North-west.

Youngs Cape. The *Mount of Gods mercie*. Snow.

The fourteenth, being neere the Land we had Snow. At foure in the morning, the wind vering Northerly, we cast about and stood South-east and by South. This day wee had much wind and raine, we shorted sayle being neere the Land. The fifteenth, in the morning it blowed so much wind at North-east, that wee were not able to maintayne any sayle, wee then strooke a

hull, and let our ſhip driue, wayting for a fitter wind; this night was very much raine. The ſixteenth, was much wind at North-eaſt. The ſeuenteenth, we ſet ſayle at noone, we ſteered away Eaſt and by South, and Eaſt South-eaſt. The eighteenth, in the afternoone a fine gale South-eaſt, which toward the Eeuening increaſed, and we ſteered North-eaſt three Watches, twelue leagues. The nineteenth we ſteered away North North-eaſt ſixteene leagues. At noone wee had raine with fogge. From twelue to foure we ſteered North North-eaſt eight leagues, and did account our ſelues in ſeuentie degrees neereſt hand: purpoſing to ſee whether the Land which we made the thirteenth day, were an Iland or part of *Groneland*. But then the fogge increaſed very thicke with much wind at South, which made vs alter our courſe, and to ſhorten our ſayle, and we ſteered away North-eaſt. Being then as we ſuppoſed, in the Meridian of the ſame land, hauing no obſeruation ſince the eleuenth day, and lying a hull from the fifteenth to the ſeuenteenth day, wee perceiued a current ſetting to the South-weſt. This day wee ſaw three Whales neere our ſhip, and hauing ſteered away North-eaſt almoſt one watch, fiue leagues, the Sea was growne euery way: we ſuppoſed wee were thwart of the North-eaſt part of that Land which we made the thirteenth day, and the current ſetting to wind-ward. The reaſon that mooued vs to thinke ſo; was, that after we had ſayled fiue or ſixe leagues in this Sea, the wind neither increaſing nor dulling, we had a pleaſant and ſmooth Sea. All this night was foggie with a good gale of wind, we ſteered away North-eaſt vntill the next day at noone, and ſayled in that courſe twentie leagues.

The twentieth, all the morning was a thicke fogge with the winde at South: wee ſteered North-eaſt till noone. Then we changed our courſe, and ſteered away North North-eaſt, hoping for an open Sea in our courſe to fall with the bodie of *Newland*. This day at two in the afternoone it cleered vp, and wee ſaw the Sunne, which wee had not ſeene ſince the ſecond of this moneth. Hauing ſteered North North-eaſt, two watches and an halfe, fifteene or ſixteene leagues wee ſaw Land on our Larboord, about foure leagues off vs, trending as wee could gheſſe North-eaſt and South-weſt. We ſteered away Eaſt North-eaſt, the wind at South a good gale, but reaſonable cleere: wee ſaw many Birds with blacke backes, and white bellies in forme much like a Ducke: we ſaw alſo many pieces of Ice driuing at the Sea. We * loofed for one and went roomer for another. And this morning about foure, a thicke fogge we ſaw a head of vs.

Note. Land on their Larboord.

Many Fowles. Muchdrift Ice.

* To loofe, is to keepe cloſe to the wind: to goe roomer, to goe.

The one and twentieth, in the morning we ſteered North-eaſt, and Eaſt North-eaſt two watches, fiue or ſixe leagues. Then it grew thicke fogge. And we caſt about, and ſteered North-eaſt and Eaſt North-eaſt two watches, ſixe leagues, finding wee were embayed. The wind came at Eaſt South-eaſt a little gale: we * tacked about and lay South. All this night was a thicke fog with little wind, Eaſt we lay with the ſtemme.

* To tacke the ſhip, is to bring her head about to lye the other way.

The two and twentieth, in the morning it cleered vp, being calme about two or three of the clocke: after we had a prettie gale, and we ſteered away Eaſt and by North three leagues. Our obſeruation was in 72. degrees 38. minutes, and changing our courſe, we ſteered North-eaſt, the wind at South-eaſt a prettie gale. This morning when it cleered vp, we ſaw the Land, trending neere hand Eaſt North-eaſt, and Weſt South-weſt, eſteeming our ſelues from it twelue leagues. It was a mayne high Land, nothing at all couered with ſnow: and the North part of that mayne high Land was very high Mountaynes, but we could ſee no ſnow on them. We accounted by our obſeruation the part of the mayne Land, lay neereſt hand in 73. degrees. The many fogs and calmes with contrary winds, and much Ice neere the ſhoare, held vs from farther Diſcouery of it. It may bee objected againſt vs as a fault, for haling ſo Weſterly a courſe. The chiefe cauſe that moued vs thereunto, was our deſire to ſee that part of *Groneland*, which (for ought that we know) was to any *Chriſtian* vnknowne: and wee thought it might as well haue beene open Sea as Land, and by that meanes our paſſage ſhould haue beene the larger to the Pole: and the hope of hauing a Weſterly wind, which would be to vs a landerly wind if wee found Land. And conſidering wee found Land contrarie to that which our Cards make mention of; we accounted our labour ſo much the more worth. And for ought that wee could ſee, it is like to bee a good Land, and worth the ſeeing.

Land not couered with Snow.

On the one and twentieth day, in the morning while we ſteered our courſe North North-eaſt, we thought we had embayed our ſelues, finding Land on our Larboord, and Ice vpon it, and many great pieces of Drift Ice: we ſteered away North-eaſt, with diligent looking out euery cleere for Land, hauing a deſire to know whether it would leaue vs to the Eaſt, both to know the bredth of the Sea, and alſo to ſhape a more Northerly courſe. And conſidering wee knew no name giuen to this Land, wee thought good to name it, *Hold with hope*, lying in 73. degrees of latitude.

The Land of *Hold with Hope* in 73. degrees.

The Sunne was on the Meridian on the South part of the Compaſſe, neereſt hand. Heere is to bee noted that when we made *The Mount of Gods Mercie*, and *Youngs Cape*, the Land was couered with ſnow for the moſt part, and extreame cold, when wee approached neere it: But this Land was very temperate to our feeling. And this likewiſe is to be noted, that being two dayes without obſeruation; notwithſtanding, our lying a hull by reaſon of much contrary wind, yet our obſeruation and dead reckoning were within eight leagues together, our ſhippe beeing before

before vs eight leagues. This night vntill next morning prooued little Winde.

The three and twentieth, in the morning we had an hard gale on head of vs, with much rayne that fell in very great drops, much like our Thunder showers in *England*; wee tacked about and stood East Northerly with a short sayle, to our feeling it was not so cold as before we had it. It was calme from noone to three of the clocke with fogge. After the winde came vp at East and East South-east, we steered away North-east with the fogge and rayne. About seuen or eight of the clocke, the winde increased with extreame fogge, wee steered away with short sayle East North-east, and sometimes East and by North. About twelue at mid-night, the wind came vp at South-west, we steered away North, being reasonable cleere weather.

The foure and twentieth, in the morning about two of the clocke, the Masters mate thought he saw Land on the Larboord, trending North North-west Westerly, and the longer we ranne North, the more it fell away to the West, and did thinke it to bee a mayne high Land. This day the wind being Westerly, we steered away North, and by obseruation wee were in 73. degrees neerest hand. At noone we changed our course, and steered away North and by East, and at our last obseruation, and also at this, we found the Meridian all Leeward on the South and by West, Westerly part of the Compasse, when we had sayled two Watches eight leagues. *A mayne high Land.*

The fiue and twentieth, the wind scanted and came vp at North North-west, we lay North-east two Watches 8. leagues. After the wind became variable betweene the North-east and the North, we steered away East and by North, and sometimes East, we had thicke fogge. About noone three Granpasses played about our shippe. This After-noone the wind vered to the East and South-east, we haled away North and by East. This night was close weather, but small fogge (we vse the word *Night* for distinction of time, but long before this the Sunne was alway aboue the Horizon, but as yet we could neuer see him vpon the Meridian North.) This Night being by our accompt in the Latitude of 75. degrees, we saw small flockes of Birds, with blacke Backes and white Bellies, and long speare Tayles. We supposed that Land was not farre off, but we could not discrie any, with all the diligence which we could vse, being so close weather, that many times we could not see sixe or seuen leagues off. *75. Degrees. Land not farre off.*

The sixe and twentieth, in the morning was close weather, we had our wind and held our course as afore. This day, our obseruation was 76. degrees 38. minutes, and we had Birds of the same sort as afore, and diuers other of that colour, hauing red Heads; that we saw when we first made the Mount of *Gods Mercy* in *Greenland*, but not so many. After we steered away North and by East: two VVatches 10. leagues, with purpose to fall with the Souther part of *Newland*, accounting our selues 10. or 12. leagues from the Land. Then wee stood away North-east one VVatch fiue leagues. *76. degrees 38. minutes.*

The seuen and twentieth, about one or two of the clocke in the morning we made *Newland*, being cleere weather on the Sea; but the Land was couered with fogge, the Ice lying very thick all along the shoare for 15. or 16. leagues which we saw. Hauing faire wind wee coasted it in a very pleasing smooth sea, and had no ground at an hundred fathoms, foure leagues from the shoare. This day at noone, wee accounted we were in 78. degrees, and we stood along the shoare. This day was so foggie, that we were hardly able to see the Land many times, but by our account we were neare *Vogel Hooke*. About eight of the clocke this Eeuening, we purposed to shape our course from thence North-west. Heere is to bee noted, that although we ranne along neere the shoare, we found no great cold, which made vs thinke, that if we had beene on shoare the place is temperate. Holding this North-west course, about ten of the clocke at night, we saw great store of Ice on head off vs, bearing Wester off vs; which we could not goe cleere off with the foresayd course. Then we tact about, and stood away betweene the South and the South-east, as much desirous to leaue this Land as we were to see it. *Greenland* or *Newland* discouered. *78. Degrees. Vogel Hooke. Temperate ayre.*

The eight and twentieth, was a hard gale of wind all the fore-noone betweene the South and the South-west. We shaped our course , we did it to bee farther from the Ice and Land. It pleased God that about twelue of the clocke this night it cleered vp, and we found that we were betweene the Land and the Ice; *Vogel Hooke* then bearing neerest hand East off vs. Then we tacked about, and stood in for the shoare, hauing Sea-roome between the Ice and the Land. The nine and twentieth, at foure in the morning the wind at North-east, a pretie gale, we thought best to shorten our way, so we tacked about and stood North North-west, the wind a little increasing. About twelue at noone, we saw Ice a head off vs; we cast about again, and stood away East South-east with very much wind, so that we shortned our sayles for the space of two Watches. Then about eight this Eeuening, we strucke a Hull, and it proued the hardest storme that we had in this Voyage. The thirtieth, in the morning was stormie; about noone it ceased, at seuen in the Eeuening it proued almost calme.

The first of Iuly, all the fore-noone the wind was at South-east, we stood North-east for the shoare, hoping to finde an open Sea betweene the shoare and the Ice. About noone wee were embayed with Ice, lying betweene the Land and vs. By our obseruation we were in 78. degrees 42. minutes, whereby we accounted we were thwart of *The great Indraught*. And to free our selues of the Ice, we steered betweene the South-east and South, and to the Westward, as *Iuly. 78. degrees 42. minutes.*

Digitized by Google

The great Inlet.

we could haue sea; And about six, this Eeuening it pleased God to giue vs cleere weather; and we found we were shot farre into the Inlet, being almost a Bay, and enuironed with very high Mountayne, with low Land lying betweene them; wee had no ground in this Bay at an hundred fathoms. Then being sure where we were, we steered away West, the wind at South-east and calme, and found all our Ice on the Norther shoare, and a cleare Sea to the Southward.

The second, it pleased God to giue vs the wind at North-east, a faire gale, with cleere weather, the Ice being to the Northward off vs, and the weather shoare, and an open Sea to the Southwards vnder our Lee. We held on our course North-west till twelue of the clocke; hauing sayled in that course 10. leagues, and finding the Ice to fall from vs to the , we gaue thankes to God, who miraculously preserued vs from so many dangers, amongst so huge a quantitie of Ice and Fogge. We steered away North-west, hoping to be free from Ice, we had obseruation 78. degrees 56. minutes, we fell with Ice againe, and trended it as it lay betweene the West and South South-east. The third, we had obseruation 78. degrees 33. minutes. This day wee had our shrouds frozen, it was searching cold, we also trended the Ice, not knowing whether we were cleare or not, the wind being at North.

78. Degrees 56. Minutes.

78. degrees 33. minutes.

The shroudes and sayles frozen.

The fourth, was very cold, and our shroudes and sayles frozen, we found we were farre in the Inlet. The wind being at North, we beare vp and stood South South-east, and South and South-west by West till ten this night. The fift, was very much wind at North Easterly: at twelue we strooke a Hull, hauing brought our selues neare the mouth of the Inlet.

The mouth of the Inlet.

77. degrees 30. minutes.

The sixth, in the morning the wind was as before, and the Sea growne. This morning we came into a very Greene Sea, we had our obseruation 77. degrees 30. minutes. This after-noone the wind and Sea asswaged. About foure of the clocke we set sayle, and steered North-west and by West, the wind being at North North-east. This day proued the cleerest day we had long before. The seuenth, at foure in the morning was very cleare weather, and the faireſt Morning that we saw in three weekes before, we steered as afore, being by our account in 78. degrees nearest hand, and out of the *Sacke*. We found we were compassed in with Land and Ice, and were againe entred into a *Blacke Sea*, which by proofe we found to be an open passage. Now hauing the wind at North North-east, we steered away South & by East, with purpose to fall with the Southermost part of this Land: which we saw, hoping by this meane, either to defray the charge of the Voyage, or else, if it pleased God in time to giue vs a faire wind to the North-east, to satisfie expectation. All this day and night afterward proued calme.

78. degrees. The end of the *Sacke*. A *Blacke* and open Sea.

Much Drift-wood.

Many Seales. Morses.

The eight, all the fore-noone proued calme, and very thicke fogge. This morning we saw many peeces of Drift-wood driue by vs, we heaued out our Boate to stop a leake, and mended our riggings. This day wee saw many Seales, and two Fishes which we iudged to bee Sea-horses, or Morses. At twelue, this night we had the winde at East and by South, wee stood away North-east.

The ninth, all the fore-noone was little wind at South-east, with thicke fogge. This day we were in amongst Ilands of Ice, where we saw many Seales.

The tenth, in the morning was foggie, afterward it proued cleere, we found we were compassed with Ice euery way about vs; wee tacked about, and stood South and by West, and South South-west one Watch fiue leagues, hoping to get more Sea-roome, and to stand for the North-east, we had the wind at North-west.

From hence it seemeth it taken out of *Hen. Hudsons* owne Notes. *Blue* and *Greene Seas*.

The eleuenth, very cleere weather, with the winde at South South-east, we were come out of the *Blue Sea* into our *Greene Sea* againe, where we saw Whales. Now hauing a fresh gale of wind at South South-east, it behooued mee to change my course, and to sayle to the North-east, by the Souther end of *Newland*. But being come into a *Greene Sea*, praying God to direct mee, I steered away North ten leagues. After that, we saw Ice on our Larboord, we steered away East and by North three leagues, and left the Ice behind vs. Then we steered away North till noone. This day wee had the Sunne on the Meridian South and by West, Westerly, his greatest height was 37. degrees 20. minutes. By this obseruation we were in 79. degrees 17. minutes, we had a fresh gale of wind and a smooth sea, by meanes whereof our ship had out-runne vs. At ten this Eeuening cleere weather, and then we had the company of our troublesome neighbours Ice with fogge. The wind was at South South-west. Heere we saw plentie of Seales, and we supposed Beares had beene heere, by their footing and dung vpon the Ice. This day, many of my Companie were sicke with eating of Beares flesh the day before vnsalted.

79. degrees 17. minutes.

Sick of Beares flesh vnsalted.

The twelfth, for the most part was thicke fogge, we steered betweene South and by East, and South South-east 2. ½. leagues, to cleere vs of the Ice. Then we had the wind at South, we steered till noone North-east fiue leagues. This morning we had our shrouds frozen. At noone by our accompt we were in 80. degrees, being little wind at West South-west, almost calme with thicke fogge. This after-noone we steered away North, and sometimes North-east. Then we saw Ice a head off vs, we cast about and stood South-east, with little wind and fogge. Before we cast about by meanes of the thicke fogge, we were very neere Ice, being calme, and the Sea setting on to the Ice, which was very dangerous. It pleased God at the very instant to giue vs a small gale, which was the meanes of our deliuerance, to him be praise therefore. At twelue this night,

80. degrees.

it

it cleered vp, and out of the top *William Collins* our Boat-swaine saw the Land, called *Newland* by the *Hollanders*, bearing South South-west twelue leagues from vs.

Newland or *Greenland*, of which the *Hollanders* hath made a little Discouerie by *Barents*, as before is deliuered, but neither so farre, nor so exact, nor so vsefull: nor first as before is obserued of Sir *H. Willoughbies English* exacter Discoueries finding the Whale and Morse benefit; they also enterloped.

The thirteenth, in the Morning the wind at South and by East, a good gale, we cast about and stood North-east and by East, and by obseruation we were in 80. degrees 23. minutes. This day we saw many Whales. This fore-noone proued cleere weather, and we could not see any signe of Ice out of the top. Betweene noone and three of the cloeke, we steered away North-east and by East fiue leagues, then we saw Ice on head off vs, we steered East two Glasses one league, and could not be cleare of the Ice with that course. Then we steered away South-east two leagues $\frac{1}{2}$, after we sayled East and by North, and East foure leagues, till eight the next morning.

The fourteenth, in the morning was calme with fogge. At nine the wind at East, a small gale with thicke fogge, we steered South-east and by East, and running this course we found our *Greene Sea* againe, which by proofe we found to be freeit from Ice; and our Azure *Blue Sea* to be our Icie Sea. At this time we had more Birds then we vsually found. At noone being a thicke fogge, we found our selues neere Land, bearing East off vs; and running farther we found a Bay open to the West and by North Northerly, the bottome and sides thereof being to our sight very high and ragged Land. The Norther side of this Bayes mouth being high land, is a small Iland, the which we called *Collins* Cape, by the name of our Boat-swaine, who first saw it. In this Bay we saw many Whales, and one of our company hauing a Hooke and Line ouer-boord to trie for Fish, a Whale came vnder the Keele of our ship, and made her held, yet by Gods mercie we had no harme, but the losse of the hooke and three parts of the line. At a South-west Sunne from the North-west and by North, a flood set into the Bay. At the mouth of this Bay we had founding thirtie fathoms, and after sixe and twentie fathoms, but being farther in, we had no ground at an hundred fathoms, and therefore judged it rather a Sound then a Bay. Betweene this high ragged, in the swampes and vallies lay much snow. Heere wee found it hot. On the Souther side of this Bay, lye three or foure small Ilands or Rockes.

Greene Sea freest of Ice, and the *Blue Sea* Icie.

Collins Cape.

Whale danger.

In the bottome of this Bay, *John Colman* my Mate, and *William Collins* my Boat-swaine, with two others of our company went on shoare, and there they found and brought aboord, a payre of Morses teeth in the jaw, they likewise found Whales bones, and some dosen or more of Deeres Hornes, they saw the footings of Beasts of other sorts, they also saw Rore-geese, they saw much drift Wood on the shoare, and found a streame or two of Fresh water. Here they found it hot on the shoare, and dranke water to coole their thirst, which they also commended. Here we found the want of a better Ship-boate. As they certified me, they were not on the shoare past halfe an houre, and among other things brought aboord a Stone of the Country. When they went from vs it was calme, but presently after we had a gale of wind at North-east, which came with the Flood with fogge. We plyed too and againe in the Bay waiting their comming; but after they came aboord we had the wind at East and by South a fine gale, we minding our Voyage, and the time to performe it, steered away North-east, and North North-east. This night proued cleere, and we had the Sunne on the Meridian, on the North and by East part of the Compasse, from the vpper edge of the Horizon with the Crosse-staffe, we found his height 10. degrees 40. minutes, without allowing any thing for the Semidiameter of the Sunne, or the distance of the end of the staffe from the Center in the Eye. From a North Sunne to an East Sunne, we sayled betweene North and North North-east, eight leagues.

A Sound is a greater and deeper indraught then a Bay.

Heat beyond 80. degrees.

Sunne 10. degrees 40. min. high, about mid-night.

The fifteenth, in the morning was very cleere vveather, the Sunne shining vvarme, but little vvind at East Southerly. By a South-east Sunne vve had brought *Collins* Cape to beare off vs South-east, and we saw the high Land of *Newland*, that part by vs Discouered on our starboord, eight or ten leagues from vs, trending North-east and by East, and South-west and by West, eighteene or twentie leagues from vs to the North-east, being a very high Mountaynous land, like ragged Rockes vvith snow betweene them. By mine account, the Norther part of this Land which now vve saw, stretched into 81. degrees. All this day proued cleere vveather, little Wind, and reasonable vvarme.

81. degrees.

The sixteenth, in the morning warme and cleere weather, the vvind at North. This morning we saw that vve vvere compassed in with Ice in abundance, lying to the North, to the North-vvest, the East and South-east, and being runne toward the farthest part of the Land by vs discouered, which for the most part trendeth neareſt hand North-east and South-west, vvee saw more Land ioyning to the same, trending North in our sight, by meanes of the cleernesse of the vveather, streeching farre into 82. degrees; and by the bowing or shewing of the skie much farther. Which when I first saw, I hoped to haue had a free Sea betweene the Land and the Ice, and meant to haue compassed this Land by the North. But now finding by proofe it vvas vnpossible, by means of the abundance of Ice compassing vs about by the North, and ioyning to the land, and seeing God did blesse vs with a faire wind to sayle by the South of this Land to the North-east, vve returned, bearing vp the Helme, minding to hold that part of the Land, vvhich the *Hollanders* had discouered in our sight, and if contrary vvindes should take vs, to Harbour there, and to trie what vve could finde to the charge of our Voyage, and to proceed on our Discouerie, as soone as God should blesse vs with Winde. And this I can assure at this present, that betweene 78. degrees

Land stretching into 82. degrees.

They returned

Digitized by Google

grees and ½. and 82. degrees by this way there is no passage: but I thinke this Land may bee profitable to those that will aduenture it. In this Bay before spoken of, and about this coast, we
Abundance of Seales. saw more abundance of Seales then we had seene any time before swimming in the water. At noone, this day hauing a stiffe gale of wind at North, we were thwart of *Collins* Cape, standing in 81. degrees and a halfe: and at one of the clocke the Cape beare North-east off vs. From thence I set our course West South-west, with purpose to keepe in the open Sea free from Ice, and sayled in that course 16. leagues. At ten this night we steered away South-west, with the wind at North a hard gale, vntill eight the next morning 18. leagues.

The seuenteenth, in the morning a good gale at North: at eight, we altered our course, and steered away South till eight in the Eeuening, and ranne 12. leagues. This day proued reasonable cleere and warme. The eighteenth, in the morning the wind encreased at South and by East, with thicke fogge. All this after-noone and night proued close weather, little fogge, and reasonable warme.

The nineteenth, at eight in the morning the wind at South, with thicke fogge, we steered South-east 4. leagues till noone: then the wind vered more large; wee steered South-east and by East 4. leagues till foure: then wee vered shete, and steered East and by South Easterly, 15. leagues, till eight the next morning. This day after the morning proued reasonable cleere and warme.

The twentieth, in the morning little wind: at eight this morning wee saw Land ahead of vs vnder our Lee, and to weatherward of vs distant from vs 12. leagues, being part of *Newland*. It is very high mountainous Land; the highest that we had seene vntill now. As we sayled neere it, we saw a Sound ahead of vs, lying East and west. The Land on the Norther side of this Sounds mouth, trendeth neerest hand West North-west, and East South-east 12. leagues, in our sight being 10. leagues from vs. And the Land on the Souther side being 8. or 10. leagues in our sight; at this time trendeth South South-east, and North North-west; from eight to noone
77. degr. 26. m. was calme. This day by obseruation we were in 77. degrees 26. minutes. On the Norther side of the mouth of this Inlet lie three Ilands, not farre the one from the other, being very high mountainous Land. The farthest of the three to the North-west, hath foure very high Mounts like heapes of Corne. That Iland next the Inlets mouth, hath one very high Mount on the Souther end. Here one of our companie killed a red billed Bird. All this day after the morning, and all night proued calme, enclining rather to heate then cold. This night wee had some warme rayne.

The one and twentieth, all the fore-noone calme; at foure in the after-noone we had a small gale of wind at South South-east, with fog; we steered away East to stand in with the Land, and sayled 3. leagues vntill mid-night: then the wind came at North-east, we cast about, and steered South 10. leagues till eight the next morning. The two and twentieth, at eight in the morning much wind at East, and variable, with short sayle wee steered 3. leagues South and by East: then came downe very much wind; wee strooke a hull. All this after-noone and night, proued very much wind with raine.

The three and twentieth, all the fore-noone was very much wind at South, with raine and fogge. At foure this after-noone wee saw Land, bearing North-east of vs 6. leagues from vs. Then we had the wind at South South-west; wee steered away South-east, and South-east and by East 4. leagues, the Sea being very much growne. We accounted we had hulled North-west and by North 22. leagues; and North 3. leagues. Then fearing with much wind to be set on a lee shoare, we tackt about, and made our way good West and by North, halfe a point Northerly, all this night with much wind.

The foure and twentieth, in the morning much wind as afore, and the Sea growne. This morning wee strooke our mayne Top-mast to ease our ship, and sayled from the last Eeuening eight to this noone 15. leagues West and by North halfe a point Northerly. From twelue to eight, 6. leagues as afore, with the wind at South and by West: at eight we tackt about with the winde at South South-west, and lay South-east and by East, with much winde, and the Sea growne.

The fiue and twentieth, was a cleere morning we set our mayne Top-mast, we saw Land bearing North of vs, and vnder our Lee, we sayling South-east and by East. Then the wind scanted: we cast about, and lay South-west and by West 2. leagues ½ till noone. Then it began to ouer-cast, and the wind to scant againe: we cast about, and lay South-east and by South, the wind at South-west and by West, and sayled in that course 3. leagues till foure in the after-noone. Then the wind scanted againe, and we sayled 3. leagues South. Now, seeing how contrarie the winde proued, to doe the good which wee desired this way; I thought to proue our fortunes by the West once againe: and this Eeuening at eight, wee being the latitude of 78. with the better, and from Land 15. leagues, which leagues part whereof beare from the North-east to the East off vs, we steered away West, with the wind at South-east, and cleere weather.

The sixe and twentieth, all this day proued rayne with thicke fog, and an hard gale of wind at East and by North, and East North-east. From the last Eeuening at eight to this noone, wee

ranne

Digitized by Google

ranne 25. leagues: from noone till mid-night 19. leagues, the wind at East and by South; from mid-night till two the next morning, 2. leagues West.

The seuen and twentieth, extreme thicke fog, and little wind at East and by South. Then it proued calme, and the Sea very loftie. Wee heard a great rutte or noise with the Ice and Sea, which was the first Ice we heard or saw since we were at *Collins* Cape: the Sea heauing vs Westward toward the Ice. Wee heaued out our Boat, and rowed to towe out our ship farther from the danger; which would haue beene to small purpose, by meanes the Sea went so high: but in this extremitie it pleased God to giue vs a small gale at North-west and by West, we steered away South-east 4. leagues till noone. Here we had finished our Discouerie, if the wind had continued that brought vs hither, or if it had continued calme: but it pleased God to make this North-west, and by West wind the meane of our deliuerance: which wind wee had not found common in this Voyage. God giue vs thankfull hearts for so great deliuerance. Here we found the want of a good ship-boat, as once we had done before at *Whales Bay*: we wanted also halfe a dozen long Oares to rowe in our ship. At noone the day cleered vp, and we saw by the skie Ice bearing off vs: from West South-west to the North and North North-east. Then we had a good gale at West, we steered away South till foure 7. leagues. From foure to six South 4. leagues, and found by the Icy skie and our neerenesse to *Groneland*, that there is no passage that way: which if there had beene, I meant to haue made my returne by the North of *Groneland* to *Danis* his Streights, and so for *England*. Here finding we had the benefit of a Westerly wind, which all this Voyage we had found scant, we altered our course, and steered to the Eastward, and ran South-east foure leagues. From eight this Eeuening till noone the next day; East South-east 30. leagues. All this day and night proued very cold, by meanes, as I suppose, of the winds comming off so much Ice.

Danger escaped.

Whales Bay.

The eight and twentieth, very cold, the wind at West, not very foggie. At noone this day we steered away South-east and by East, and by obseruation we were 70. degrees 36. minutes. From noone to eight 10. leagues. Then the wind scanted to South-east and by South, we steered away East and by North 18. leagues, till the next day noone.

The nine and twentieth, all the fore-noone a thicke fog and wet, the wind at South-east and by East, neerest hand, and raw cold. From noone to foure, wee sayled three leagues East and by North, halfe a point Northerly. Then the wind vered more large, we steered East and by South 8. leagues till twelue at night. At this time to windward we heard the rutte of Land; which I knew to be so, by the colour of the Sea. It was extreme thicke fog, so that we could hardly see a Cables length from our ship. We had ground 25. fathoms, small blacke peble stones. Wee sounded againe, and had ground at 30. fathomes small stones like Beanes, at the next cast no ground at 60. fathomes. I cast about againe, and steered South-west 6. leagues, West and by North two leagues till the next day noone. All this day and night extreme thicke fog.

The thirtieth, all the fore-noone very thicke fog. At noone almost calme: after we had little wind, and steered North North-west till two: then it cleered vp, so that we could see from vs 2. leagues with the wind at North-west. Then we steered East South-east: after it cleered. At South in the Eeuening, we saw an Iland bearing off vs North-west from vs 5. leagues, and we saw land bearing off vs from vs 7. leagues. We had land likewise bearing off vs from East South-east, to South-east and by East as wee iudged, 10. leagues. Then hauing the winde at West North-west, we steered South and by East. It presently proued calme till ten this Eeuening: then wee had a little gale at South-west and by West, wee steered away South South-east till twelue this night, and accounted ourselues in 76. from Land 10. leagues: which was the likeliest Land that wee had seene on all the parts of *Newland*, being playne riggie Land of a meane height, and not ragged as all the rest was that we had seene this Voyage, nor couered with snow. At twelue this night we saw two Morses in the Sea neere vs, swimming to Land. From twelue at night to foure, calme.

The one and thirtieth, at foure this morning we had the wind at South-east, we steered South South-west. Then it proued calme, and so continued all the fore-noone. The after-noone wee had the wind at East South-east, we steered South 8. leagues. Then being like to proue much wind, contrarie to our purpose, and finding our fog more thicke and troublesome then before, diuers things necessarie wanting, and our time well nigh spent to doe further good this yeere, I commanded to beare vp for our returne for *England*, and steered away South South-west. And this night proued a hard gale of wind at South-east and by East. Wee were thwart of *Cheries* Iland the next morning at foure of the clocke, being to windward off vs 5. leagues: knowing we were neere it, we looked out carefully for the same, and it prouing cleere, we saw it, being a very ragged Land on the Wester side, rising like Hey-cockes.

Cherie Iland.

The first of August, a very hard gale of wind at East South-east, we shorted sayle, and steered away South South-west. This night was very foggie, with a hard gale of wind at East and by South, we steered by our account 27. leagues: and from eight this Eeuening till the next morning foure, 10. leagues as afore. All this night was very foggie, wet and raw cold.

The second, in the morning calme with a thicke fog, cold and slabbie weather. About noone

we

we had a little gale West and by North, wee steered away as afore. The third, in the morning calme and cleere weather, with a little gale East and by South, we sayled South South-west: then wee had the wind at South-east, wee sayled as afore. All this day and night proued close weather, a little fogge at noone, which continued not long. At twelue this night the wind vered to the East and by North, wee held our course South South-west, as afore.

The fifteenth of August, we put into the Iles of *Farre*, standing in 52. degrees; and the fifteenth of September, I arriued in *Tilberie Hope* in the *Thames*.

CHAP. XV.

A second Voyage or Employment of Master HENRY HVDSON, *for finding a passage to the East* Indies *by the North-east: written by himselfe.*

THeir names employed in this action are as followeth: *Henry Hudson*, Master and Pilot; *Robert* * *Iuet*, the Master his Mate; *Ludlowe Arnall*; *John Cooke*, Boatsonne; *Philip Stacie*, Carpenter; *Iohn Barns*; *Iohn Braunch*, Cooke; *Iohn Adrey*, *Iames Strutton*, *Michael Feirce*, *Thomas Hilles*, *Richard Tomson*, *Robert Raynar*, *Iohn Hudson*, and *Humfrey Gilby*. The courses obserued in this Iournall were by a Compasse, that the Needle and the North of the Flye were directly one on the other.

* I haue *Robert Iuets* Iournall also, for breuitie omitted.

Aprill. *Anno* 1608. the two and twentieth of Aprill, being Friday, we set sayle at Saint *Katherines*, and fell downe to *Blackewall*.

May. The twentieth of May, at noone by obseruation we were in 64. degrees 52. minutes, and at this time and place the Needle declined vnder the Horizon by the Inclinatory 81. degrees, and wee had a smooth Sea, by meanes whereof my obseruation was good.

The one and twentieth, at night thicke fog, wee sayled North North-east, with the wind at East. The two and twentieth, in the fore-noone the winde at South-east, wee steered North North-east, as afore: in the after-noone little wind and thicke fog; we accounted vs in 67. degrees, the Sea smooth, the Needle declined 82. degrees, this night was calme and cleere. The three and twentieth, in the morning the wind was Easterly, we stood North North-East, and North and by East. All the fore-noone was foggie: in the after-noone it cleered, and the wind shortned vpon vs, we made our way good North all night. The foure and twentieth, the wind at East North-east, and East and by North, we lay as neere as wee could with a full sayle; wee accounted *Lowfoot* from vs East Northerly, 16. leagues, distant from vs; at foure a clocke this after-noone, wee stood all night, as afore.

Lowfoot.

The fiue and twentieth, the wind at East North-east, we stood away North as we could lie: all this day was cleere weather, and searching cold, which cold begunne the one and twentieth day, and then my Carpenter was taken sicke, and so doth yet continue; and three or foure more of our companie were enclining to sicknesse, I suppose by meanes of the cold. All the night it was calme. The sixe and twentieth, cold but cleere weather, the wind betweene East and East North-east, we stood North-easterly till twelue a clocke at night: then wee had the wind at North-east & North North-east, we stood South-east and East till noone the next day. The seuen and twentieth, cold and drie weather, at noone we had the wind North and North-North-west; Wee stood away North-east, and East North-east, as we could, and accounted our selues in 69. degrees 40. minutes, and the Needle enclined, hauing a smooth Sea, neerest 84. degrees. All night we had wind and weather as afore.

The eight and twentieth, drie cold cleere weather; the wind betweene North North-west and North, we made our way good East North-east; wee saw the Sunne on the North Meridian aboue the Horizon 5. degrees 35. minutes. All this night we had much wind, as afore. The nine and twentieth, a hard gale at North North-west: by account we ranne from mid-night to noone 21. leagues, East North-east. Wee had the Sunne on the Meridian 5. degrees, the latitude 73. degrees 13. minutes, whereby wee found our ship to haue out-runne vs. At mid-night the wind came to South-east: we cast about, and stood East North-east. This day partly cleere weather with some snow. The thirtieth, cold cleere weather, the wind betweene North-east, and East and by North; we went East South-east, and obseruing, were in 73. degrees 50. minutes. The one and thirtieth, cold and cleere weather: from the last day till this day noone, we stood South-east and by South, in the latitude of 72. degrees 45. minutes.

Sun 5. degrees 35. minutes at mid-night.

Iune. The first of Iune, a hard gale at East North-East, with snow: we made our way good South South-east. The second, a hard gale of wind at North-east: towards night, calme with fogge, our course was South-east all day. The third, in the morning we had a sight of the North Cape; and at a West and by North Sunne, the Cape bore off vs South-west, halfe a point Southerly, being from vs 8. leagues: and obseruing the variation, I found it to the Westward 11. degrees:

North Cape.

Variation west 11. degrees.

and

and hauing a ſmooth Sea, the Needle enclined vnder the Horizon 84. degrees and a halfe, the neereſt I could finde. We had the wind at South-weſt, and wee ſtood away North-eaſt and by Eaſt. It was cleere weather, and we ſaw *Norway* Fiſher-men at Sea. Needles inclination 84. degrees and a halfe.

The fourth, warme cleere ſun-ſhine, we ſtood away North-eaſt and by Eaſt. Now by Gods helpe our Carpenter recouered, and made a Maſt for our ſhip-boat, and the companie made a Sayle, we had the Sunne in the ſight on the North Meridian: his height was 5. degrees 40. minutes. Inclination 23. degrees 21. minutes: Poles height 72. degrees 21. minutes. The fift, in the morning calme weather: wee ſounded, and had 140. fathoms, ſand Oze: here wee ſaw a ſwelling Sea ſetting North-eaſt and by Eaſt, and South-weſt and by Weſt, with ſtreame-leches: and we ſaw drift wood. After we had wind; and we ſayled and made our way North North-eaſt: towards night we ſounded, and found ground at 150. fathoms, ſand Oze. This day cleere weather, and not cold. The ſixt, wee had cleere weather, the wind being at Eaſt North-Eaſt, from the laſt day till this day noone; we ſhaped our way on diuers courſes North and by Weſt, in the latitude of 73. degrees 24. minutes. We found that our ſhip had out-runne vs, ſounding in 160. fathoms: in the after-noone little wind.

The ſeuenth, in the morning the wind at South, after at South South-eaſt: from the laſt day till this day noone, wee accounted our way from diuers courſes North-eaſt, 15. leagues. This day was cloſe but cleere weather, and we had a good gale of wind at this time. And three dayes before this, our Cooke and one more of our companie were very ſicke. In the morning, we had ground at 150. fathoms, and at night we had no ground at 180. fathoms, which encreaſed hope. This night we had ſome ſnow, which continued foure houres: then the wind came at North-eaſt and by Eaſt with ſtorme; and with ſhort ſayle we ſtood North and by Weſt: here the Needle enclined 86. degrees. I accounted that we were in 74. degrees and a halfe at neereſt hand. This night we ſaw the Sunne on the North Meridian, his height was 7. degrees 40. minutes, which maketh the Poles height 74. degrees 23. minutes. The eight, from twelue a clocke laſt night till noone, we accounted our way on diuers courſes, North and by Eaſt: then our latitude was 74. degrees 38. minutes, and we had no ground at 200. fathoms. In the after-noone the wind came at South South-eaſt, and South-eaſt and by Eaſt. This day and night wee had cleere weather, and we were here come into a blacke blue Sea. 74. degrees 30. minutes. Darke blue Sea.

The ninth, cleere weather, the wind came at South-eaſt and by Eaſt: from the laſt day till this day noone, wee had a good way North-eaſt, in latitude of 75. degrees 29. minutes: then wee entred into Ice, being the firſt we ſaw in this Voyage: our hope was to goe through it, we ſtood into it, and held our courſe betweene North-eaſt, and Eaſt North-eaſt, looſing for one, and bearing roome for another, till foure in the after-noone: at which time we were ſo farre in, and the Ice ſo thicke and firme ahead, being in it foure or fiue leagues, that wee had endangered vs ſomewhat too farre; wee returned as wee went in, and with a few rubbes of our ſhip againſt the Ice; by eight a clocke this Euening wee got free of it. Wee made our way till next day at noone, South-weſt and by South, 18. leagues: in the middeſt of this way wee had no ground at 180. fathoms. The tenth, in the morning haſey weather; but at noone it cleered vp, and then we caſt about, and ſtood away North and by Eaſt, the wind being at Eaſt South-eaſt, two watches, fiue leagues: then we had the wind at Eaſt, we caſt about, and ſtood South South-eaſt, and made a South way, ſixe leagues. The eleuenth, in the morning a hard ſtorme at Eaſt, and Eaſt and by South we ſtrooke a hull.

The twelfth, in the morning fog, and all day after cleere weather, the wind at South South-weſt, we ſteered Eaſt and by North: at noone being in the latitude 75. degrees 30. minutes. From noone till foure a clocke, fiue leagues Eaſt and by North; then we ſaw Ice ahead of vs, and vnder our Lee trending from the North-weſt to the North and Eaſt of vs: We had ſounding 100. fathom, greeniſh Oze. Here we ſaw diuers pieces of drift wood by vs driuing, and ſtreame Leeches lying South South-weſt, and North North-eaſt. We many times ſaw the like ſince we ſaw the North Cape. The thirteenth, cleere weather, the wind at Eaſt, we made a South way 6. leagues, two watches: then we caſt about, and made a North way one watch 3. leagues $\frac{1}{2}$: At twelue at night, much wind with fog, we ſtrooke ahull and layed our ſhips head to the Southward. The fourteenth, in the fore-noone fog, and our ſhroudes were frozen: the after-noone was cleere Sun-ſhine, and ſo was all the night.

The fifteenth, all day and night cleere ſun-ſhine; the wind at Eaſt, the latitude at noone 75. degrees 7. minutes. We held Weſtward by our account 13. leagues. In the after-noone the Sea was aſſwaged; and the wind being at Eaſt we ſet ſayle, and ſtood South and by Eaſt, and South South-eaſt as we could. This morning, one of our companie looking ouer boord ſaw a Mermaid, and calling vp ſome of the companie to ſee her, one more came vp, and by that time ſhee was come cloſe to the ſhips ſide, looking earneſtly on the men: a little after, a Sea came and ouerturned her: from the Nauill vpward, her backe and breaſts were like a womans, (as they ſay that ſaw her) her body as big as one of vs; her skin very white; and long haire hanging downe behind, of colour blacke: in her going downe they ſaw her tayle, which was like the tayle of a Porpoſe, and ſpeckled like a Macrell. Their names that ſaw her, were *Thomas Hilles* and *Roberts Rayner*. Mermaide ſeene, and deſcribed.

The

The sixteenth, cleere weather, the wind being at East. From the last day till this day noone, we made our way South and by East 9. leagues; and from noon to eight a clocke in the Eeuening, 6. leagues: then we cast about and stood to the Northwards.

The seuenteenth, cleere weather, the wind at South-east and by East; from the last day till this day noone, our way was North-east and by East, at noone being in the latitude of 74. degrees 40. minutes. At after-noone we sounded, and had ground at 86. fathom, greene Oze, and our water whitish greene: Here we saw Whales, Porpoises, and the Sea full of Fowles: from noone to mid-night North-east and by East we had the Sunne at lowest, on the North and by East, Easterly part of the Compasse: latitude 74. degrees 54. minutes. Sounding we had 92. fathoms water, Oze as before.

The eighteenth, faire weather, the wind at South-east and by East, from mid-night till this day noone, wee sayled North-east and by East, in the Latitude of 75. degrees 24. minutes, and had ground at ninetie fiue fathome Oze, as afore. Heere we had Ice in our sight to the Northward off vs. In the after-noone, hauing little wind at North-east, we cast about and lay East South-east, and at sixe a clocke, had ground at ninetie fiue fathoms and a halfe Oze, as afore. From noone to twelue a clocke at night, our way was South-east, and South-east and by East, and had the Sunne on the Meridian, North and by East halfe a point Eastward. The Sunnes height was eight degrees 40. minutes. Sounding ninetie fathom. All this day, we had Ice on our Larboord trending: and at this time, from the North-west off vs to the East South-east, I haue some reason to thinke there is a Tide or Current setting to the Northwards; the course wee held and the way we made betweene this noone and mid-night Obseruations, doe make mee suspect it the more.

Current.

Needles inclination 89. degrees and a halfe, in 75. degrees 22. min.

The nineteenth, faire and warme weather, the sea smooth. Here the Needle inclined vnder the Horizon 89. degrees and a halfe, being in the Latitude at noone of 75. degrees 22. minutes; Sounding wee had ground in an hundred fathom. From twelue a clocke last night till this day at noone, we accounted our way from East and by North to South-east, ten leagues, hauing Ice alwayes in our sight trending on our Larboord, wee had the winde betweene North, and North North-west. We saw the Sunne at the lowest on the North and by East, halfe a point Easterly, his height was 8. degrees 10. minutes, which maketh the Poles height 74. degrees 56. minutes; Sounding we had ground in one hundred and twentie sixe fathom. From noone to this time, wee accounted our way East and by South, and East South-east, twelue leagues.

Beares roaring

Store of Seals.

The twentieth, faire warme weather, this morning at foure of the clocke, wee had depth one hundred and twentie fiue fathom. Heere we heard Beares roare on the Ice; and we saw vpon the Ice and neare vnto it, an incredible number of Seales. We had sounding one hundred and fifteen fathom, and after ground at ninetie fiue fathom sandie Oze. We had the Sun on the Meridian North and by East, halfe a point Easterly; his height was 7. degrees 20. minutes. From twelue a clocke last night, to twelue a clocke this night, our way was made good by our account South-east and by South, twelue leagues, and South-east, three leagues and a halfe, the Ice alwayes being on our Larboord. The wind this day, betweene North and North-west.

Sunne at mid-night high 7. degrees 40. minutes, in 74. degrees 33. minutes.

Iuets notes tell of a sudden variation of the Compasse, from the North to the East one point, which had been two immediately before.

The one and twentieth, at foure a clocke in the morning wee sounded, and had one hundred and twentie fathome greene Oze, and the Ice bore off vs East, the winde variable; in diuers courses wee made our way good South South-east; our Latitude at noone being 74. degrees 9. minutes, we were haled to the Northward beyond expectation. All this day faire, cleere, and warme weather, and Ice on our Larboord at a North and by East Sunne; being then at lowest, his height was 7. degrees 40. minutes, which made the Poles height 74. degrees 33. minutes. From the last day at noone, till twelue a clocke this night, by account of our ships way, wee made our way good East North-east, sixe leagues and a halfe; whereby it doth appeare how we were haled to the Northward. Heere wee had ground at one hundred and thirteene fathome, greene sandie Oze.

The two and twentieth, faire cleare weather, the winde at West North-west. At eight a clocke in the Morning, we had ground at one hundred and fifteene fathom, greene Oze. From mid-night to noone, our course was North-east and by East, being in the Letitude of 74. degrees 35. minutes, and we found that our ships way, and our obseruation were not but there was carefull heed taken of both. Heere we had Ice a head off vs, trending to the South-east; and all day before Ice on our Larboord. Here we stood South-east fiue leagues, then the Ice trended South and by West sixe leagues; we sayled by it, and doubled it by eight a clocke in the Eeuening, and then it bore East off vs. Heere hauing a smooth sea, the Needle inclined 85. degrees, from eight a clocke to twelue, North and by East Easterly. Then we had the Sunne on the Meridian, North and by East ½. a poynt Easterly. The Sunnes height was 7. degrees 45. minutes, which made the Latitude 74. degrees 43. minutes.

The three and twentieth, in the morning thicke fogge, the wind at North North-west. From mid-night till foure a clocke this morning, we sayled North-east fiue leagues, and then we were among the Ice; we cast about, and stood two houres South-west, two leagues, and had no ground at one hundred and eightie fathom. Then we cast about againe, and stood East till eight a clocke

two

two leagues, and then it cleered vp, and we had Ice a head off vs. And from North, we ſtood to South-eaſt, and our ſhroudes were frozen. Then till noone wee went East and by South, foure leagues, and were neere Ice on our Larboord, in the Latitude of 74. degrees 30. minutes. In the after-noone the wind being at North, wee ſtood two houres and a halfe, fiue leagues and a halfe; three houres South South-eaſt, fiue leagues; one houre South-eaſt and by South, one league and a halfe; an houre East halfe a league, which brought eight in the Eeuening alwayes Ice on our Larboord. This after-noone, wee had ſome ſnow. From eight a clocke to mid-night, South South-weſt foure leagues, with Ice as afore. We ſaw the Sunne at the loweſt, North North-eaſt, his height was 7. degrees 15. minutes, the Poles height 74. degrees 18. minutes.

The foure and twentieth, cleere, but cold and ſome ſnow, the wind betweene North North-eaſt, and North-eaſt, from mid-night to foure a clocke, wee ſtood Southward two leagues, and South-eaſt and by East two leagues. And from foure a clocke till noone, South-eaſt Southerly nine leagues, ſounding we had ground in one hundred and fortie fathome. From noone to three a clocke, we ſtood South-eaſt and by South three leagues; from three to foure, South-weſt and by South one league; and had Ice from the North-eaſt to the South-eaſt off vs. From foure a clocke to eight, we ſtood South-weſt two leagues and a halfe, Southward halfe a league, with Ice neere vs vnder our Lead.

The fiue and twentieth, cold and cleare, the wind at East South-eaſt; from eight a clocke laſt night till foure this morning, our way was South and by East foure leagues and a halfe; ſounding we had ground in eightie fathome, then we had little wind till noone, at East North-eaſt, and the Sunne on the Meridian, on the South-weſt and by South point of the Compaſſe, ere it began to fall, wee were in the Latitude of 72. degrees 52. minutes, and had Ice on our Larboord, and our hope of paſſage was gone this way, by meanes of our neareneſſe to *Noua Zembla*, and the abundance of Ice. We had from Noone to eight a clocke in the Eeuening, the wind between North North-eaſt, and North-eaſt, we ſtood South-eaſt three leagues and a halfe, and had Ice on our Larboord, and ſhoalding ſixtie eight fathome.

The ſixe and twentieth, faire Sun-ſhining weather, and little wind at East North-eaſt. From twelue a clocke at night till foure this morning, we ſtood Southward two leagues, ſounding wee had ſixtie ſixe fathome Oaze, as afore. From foure a clocke to noone, South-eaſt and by South foure leagues, and had the Sunne on the Meridian, on the South-eaſt and by South point of the Compaſſe, in the Latitude of 72. degrees 25. minutes, and had ſight of *Noua Zembla* foure or fiue leagues from vs, and the place called by the *Hollanders*, *Swart Cliffe*, bearing off South-eaſt. In the after-noone, wee had a fine gale at East North-eaſt, and by eight of the clocke, we had brought it to beare off vs East Southerly, and ſayled by the ſhoare a league from it.

No paſſage that way. *Swart* Cliffe.

The ſeuen and twentieth, all the fore-noone it was almoſt calme; wee being two mile from the ſhoare, I ſent my Mate *Robert Iuet*, and *Iohn Cooke* my Boat-ſwaine on ſhoare, with foure others, to ſee what the Land would yeeld that might bee profitable, and to fill two or three Caskes with water. They found and brought aboord ſome Whales Finnes, two Deeres Hornes, and the Dung of Deere, and they told me that they ſaw Graſſe on the ſhoare of the laſt yeere, and young Graſſe came vp amongſt it a ſhaftman long; and it was boggie ground in ſome places, there are many ſtreames of Snow water nigh, it was very hot on the ſhoare, and the ſnow melted apace, they ſaw the footings of many great Beares, of Deere, and Foxes. They went from vs at three a clocke in the morning, and came aboord at a South-eaſt Sunne; and at their comming, wee ſaw two or three companies of Morſes in the ſea neere vs ſwimming, being almoſt calme. I preſently ſent my Mate, *Ladlow* the Carpenter, and ſixe others a ſhoare, to a place where I thought the Morſes might come on the ſhoare, they found the place likely, but found no ſigne of any that had beene there. There was a Croſſe ſtanding on the ſhoare, much Drift-wood, and ſignes of Fires that had beene made there. They ſaw the footing of very great Deere and Beares, and much Fowle, and a Foxe; they brought aboord Whale finnes, ſome Moſſe, Flowers and greene things that did there grow. They brought alſo two peeces of a Croſſe, which they found there. The Sunne was on the Meridian on the North North-eaſt, halfe a point Eaſterly, before it began to fall. The Sunnes height was 4. degrees 45. minutes, Inclination 22. degrees 33. minutes, which makes the Latitude 72. degrees 12. minutes. There is diſagreement betweene this and the laſt obſeruation; but by meanes of the cleereneſſe of the Sunne, the ſmoothneſſe of the Sea, and the neerneſſe to Land, wee could not bee deceiued, and care was taken in it.

They goe a ſhoare.

The eight and twentieth, at foure a clocke in the Morning our Boat came aboord, and brought two dozen of Fowle, and ſome Egges, whereof a few were good, and a Whales finne; and wee all ſaw the Sea full of Morſes, yet no ſignes of their being on ſhoare. And in this calme, from eight a clocke laſt Eeuening, till foure this Morning, we were drawne backe to the Northward, as farre as wee were the laſt Eeuening at foure a clocke, by a Streame or a Tide; and we choſe rather ſo to driue, then to aduenture the loſſe of an Anchor, and the ſpoyle of a Cable. Heere our new Ship-boate began to doe vs ſeruice, and was an incouragement to my Companie, which want I found the laſt yeere.

Digitized by Google

The nine and twentieth, in the morning calme, being halfe a league from the ſhoare, the Sea being ſmooth, the Needle did encline 84. degrees, we had many Morſes in the Sea neere vs, and deſiring to find where they came on ſhoare, wee put to with Sayle and Oares, towing in our Boat, and rowing in our Barke to get about a point of Land, from whence the Land did fall more Eaſterly, and the Morſes did goe that way. VVee had the Sunne on the Meridian on the South and by VVeſt point, halfe a point to the VVeſter part of the Compaſſe, in the latitude of 71. degrees 15. minutes. At two a clocke this after-noone we came to anchor in the mouth of a Riuer, where lieth an Iland in the mouth thereof, foure leagues: wee anchored from the Iland in two and thirtie fathomes, blacke ſandy ground. There droue much Ice out of it with a ſtreame that ſet out of the Riuer or Sound, and there were many Morſes ſleeping on the Ice, and by it we were put from our Road twice this night; and being calme all this day, it pleaſed God at our need to giue vs a fine gale, which freed vs out of danger. This day was calme, cleere and hot weather: all the night we rode ſtill.

Riuer and Iland.

The thirtieth, calme, hot, and faire weather, we weighed in the morning, and towed and rowed, and at noone we came to anchor neere the Ile aforeſaid in the mouth of the Riuer, and ſaw very much Ice driuing in the Sea, two leagues without vs lying South-eaſt and North-weſt; and driuing to the North-weſt ſo faſt, that wee could not by twelue a clocke at night ſee it out of the top. At the Iland where wee rode, lieth a little Rocke, whereon were fortie or fiftie Morſes lying aſleepe, being all that it could hold, it being ſo full and little. I ſent my companie aſhoare to them, leauing none aboord but my Boy with mee: and by meanes of their neereneſſe to the water, they all got away, ſaue one which they killed, and brought his head aboord; and ere they came aboord they went on the Iland, which is reaſonable high and ſteepe, but flat on the top. They killed and brought with them a great Fowle, whereof there were many, and likewiſe ſome Egges, and in an houre they came aboord. This Ile is two flight-ſhot ouer in length, and one in breadth. At mid-night our Anchor came home, and wee tayld aground by meanes of the ſtrength of the ſtreame, but by the helpe of God, wee houed her off without hurt. In ſhort time wee moued our ſhip, and rode ſtill all night; and in the night wee had little wind at Eaſt, and Eaſt South-eaſt. VVee had at noone this day an obſeruation, and were in the latitude of 71. degrees 15. minutes.

Iuly.

The firſt of Iuly, we ſaw more Ice to Sea ward of vs; from the South-eaſt to the North-weſt, driuing to the North-weſt. At noone it was calme, and we had the Sunne on the Meridian, on the South and by VVeſt point, halfe a point to the VVeſterly part of the Compaſſe, in the latitude of 71. degrees 24. minutes. This morning I ſent my Mate *Eueret*, and foure of our companie to rowe about the Bay, to ſee what Riuers were in the ſame, and to find where the Morſes did come on land; and to ſee a Sound or great Riuer in the bottome of the Bay, which did alwaies ſend out a great ſtreame to the Northwards, againſt the tide that came from thence: and I found the ſame in comming in, from the North to this place before this. VVhen by the meanes of the great plenty of Ice, the hope of paſſage betweene *Newland* and *Noua Zembla* was taken away; my purpoſe was by the *Vaygats* to paſſe by the mouth of the Riuer *Ob*, and to double that way the North Cape of *Tartaria*, or to giue reaſon wherefore it will not be: but being here, and hoping by the plentie of Morſes wee ſaw here, to defray the charge of our Voyage; and alſo that this Sound might for ſome reaſons bee a better paſſage to the Eaſt of *Noua Zembla*, then the *Vaygats*, if it held according to my hope conceiued by the likeneſſe it gaue: for whereas we had a floud came from the Northwards; yet this Sound or Riuer did runne ſo ſtrong, that Ice with the ſtreame of this Riuer was carried away, or any thing elſe againſt the floud: ſo that both in floud and ebbe, the ſtreame doth hold a ſtrong courſe; and it floweth from the North three houres, and ebbeth nine.

His purpoſe altered.

Strong ſtream.

The ſecond, the wind being at Eaſt South-eaſt, it was reaſonable cold, and ſo was Friday; and the Morſes did not play in our ſight as in warme weather. This morning at three of the clocke, my Mate and companie came aboord, and brought a great Deeres horne, a white locke of Deeres haire; foure dozen of Fowle, their Boat halfe laden with drift Wood; and ſome Flowers and greene things, that they found growing on the ſhoare. They ſaw a herd of white Deere, of ten in a companie on the land; much drift wood lying on the ſhoare, many good Bayes, and one Riuer faire to ſee to on the North ſhoare, for the Morſes to land on: but they ſaw no Morſes there, but ſignes that they had beene in the Bayes. And the great Riuer or Sound, they certified me, was of breadth two or three leagues, and had no ground at twentie fathoms, and that the water was of the colour of the Sea, and very ſalt, and that the ſtreame ſetteth ſtrongly out of it. At ſixe a clocke this morning, came much Ice from the Southward driuing vpon vs, very fearefull to looke on: but by the mercy of God and his mightie helpe, wee being moored with two Anchors ahead with vering out of one Cable, and heauing home the other, and fending off with Beames and Sparres, eſcaped the danger: which labour continued till ſixe a clocke in the Eeuening, and then it was paſt vs, and we rode ſtill and tooke our reſt this night.

Herd of white Deere.

The third, the wind at North a hard gale: At three a clocke this morning wee weighed our anchor, and ſet ſayle, purpoſing to runne into the Riuer or Sound before ſpoken of.

The

Digitized by Google

The fourth, in the morning it cleered vp with the wind at North-west, we weighed and set sayle, and stood to the Eastwards, and past ouer a Reefe, and found on it fiue and a halfe, sixe, sixe and a halfe, and seuen fathoms water: then we saw that the Sound was full, & a very large Riuer from the North-eastward free from Ice, and a strong streame comming out of it: and wee had sounding then, foure and thirtie fathoms water. Wee all conceiued hope of this Northerly Riuer or Sound, and sayling in it, wee found three and twentie fathomes for three leagues, and after twentie fathomes for fiue or sixe leagues, all tough Ozie ground. Then the winde vered more Northerly, and the streame came downe so strong, that wee could doe no good on it: wee came to anchor, and went to supper, and then presently I sent my Mate *Iuet*, with fiue more of our companie in our Boat, with Sayle and Oares to get vp the Riuer, being prouided with Victuall and Weapons for defence, willing them to sound as they went; and if it did continue still deepe, to goe vntill it did trende to the Eastward, or to the Southwards, and wee rode still. The Riuer searched.

The fift, in the morning we had the wind at West: we began to weigh anchor, purposing to set sayle and to runne vp the Sound after our companie: then the wind vered Northerly vpon vs, and we saued our labour. At noone our companie came aboord vs hauing had a hard rought; for they had beene vp the Riuer sixe or seuen leagues, and sounded it from twentie to three and twentie; and after brought it to eight, sixe, and one fathome; and then to foure foot in the best: they then went ashoare, and found good store of wilde Goose quills, a piece of an old Oare, and some Flowers, and greene things which they found growing: they saw many Deere, and so did we in our after-dayes sayling. They being come aboord, we presently set sayle with the wind at North North-west, and we stood out againe to the South-westwards, with sorrow that our labour was in vaine: for, had this Sound held as it did make shew of, for breadth, depth, safenesse of harbour, and good anchor ground, it might haue yeelded an excellent passage to a more Easterly Sea. Generally, all the Land of *Noua Zembla* that yet wee haue seene, is to a mans eye a pleasant Land: much mayne high Land with no Snow on it, looking in some places greene, and Deere feeding thereon: and the Hills are partly couered with Snow, and partly bare. It is no maruell that there is so much Ice in the Sea toward the Pole, so many Sounds and Riuers being in the Lands of *Noua Zembla*, and *Newland* to ingender it; besides the coasts of *Pechora*, *Russia*, and *Greenland*, with *Lappia*, as by proofes I finde by my trauell in these parts: by meanes of which Ice I suppose there will be no nauigable passage this way. This Eeuening wee had the wind at West and by South: wee therefore came to anchor vnder *Deere* Point; and it was a storme at Sea, wee rode in twentie fathomes, Ozie ground: I sent my Mate, *Ladlow*, with foure more ashoare to see whether any Morses were on the shoare, and to kill some Fowle, (for we had seene no Morses since Saturday, the second day of this moneth, that wee saw them driuing out of the Ice.) They found good landing for them, but no signe that they had beene there: but they found that fire had beene made there, yet not lately. At ten of the clocke in the Eeuening, they came aboord, and brought with them neere an hundred Fowles called Wellocks; this night it was wet fogge, and very thicke and cold, the winde at West South-west. *Noua Zembla* pleasant to the eye. Cause of much Ice in those Seas, which make no nauigable passage.

The sixt, in the morning wee had the wind stormie and shifting; betweene the West and South-west, against vs for doing any good: we rode still and had much Ice driuing by vs to the Eastward of vs. At nine of the clocke, this Eeuening wee had the wind at North North-west: we presently weighed, and set sayle, and stood to the Westward, being out of hope to find passage by the North-east: And my purpose was now to see whether *Willoughbies* Land were, as it is layd in our Cardes; which if it were, wee might finde Morses on it; for with the Ice they were all driuen from hence. This place vpon *Noua Zembla*, is another then that which the *Hollanders* call *Costing Sarch*, discouered by *Oliuer Brownell*: and *William Barents* sons obseruation doth witnesse the same. It it layd in plot by the *Hollanders* out of his true place too farre North: to what end I know not, vnlesse to make it hold course with the Compasse, not respecting the variation. It is as broad and like to yeeld passage as the *Vaygats*, and my hope was, that by the strong streame it would haue cleered it selfe; but it did not. It is so full of Ice that you will hardly thinke it. All this day, for the most part, it was fogge and cold. *Willoughbies* Land, a conceit of Cardmakers: it seeming to be no other then *Newland* or *Greenland* (as is before obserued *cap.* 2.) as *Costing Sarch* of *Brunell* is to others *Noua Zembla*. Note.

The seuenth, cleere but cold weather: in the morning the wind was at the North; from the last Eeuening to this morning, we set saile and kept our course West and by South, fifteene leagues. from morning to eight a clocke in the Eeuening it was calme: then we had the wind againe at North, and we sayled till nine a clocke next morning West South-west, eight leagues; then the wind being West and by South, wee went North and by West, three leagues, and wee had the Sunne at the highest South South-west, in the latitude of 71. degrees 2. minutes. The eight, faire weather; at noone we had the wind at East North-east, we stood North three leagues till foure a clocke: then the wind being at west and by North, wee stemmed North and by West one league and a halfe, till six a clocke in the Eeuening; then the wind was at North-east a hard gale, and wee stood till next day at noone West and by North, by account three and twentie leagues: we had the Sunne on the Meridian, South and by West, halfe a point neerest West, in

Digitized by Google

the latitude of 70. degrees 41. minutes. The ninth, cleere weather: from this to the next day at noone, we sayled South-west and by West, twelue leagues, and Northward three leagues: and in these courses had these soundings, 41. 42. 46. 48. and 45. fathoms: we had the Sunne South and by VVest, halfe a point to the VVest part of the Compasse. The Sea was loftie: our latitude was 70. degrees 20. minutes.

The tenth, cleere but close weather: from this till next day noone, wee had little wind at West North-west: by account we made our way fiue leagues North-easterly. Wee had the Sun at the highest on the South and by West point, and a terce Westward, in the latitude of 70. degrees 55. minutes, and I thinke we had a rustling tide vnder vs; and in this time had sounding betweene fortie fiue and fortie fathomes, white sand. The eleuenth, cleere weather: from this to the next day at noone, little wind at North North-east, and sometimes calme; wee sayled West and by North by account fiue leagues; and had the Sunne on the Meridian on the South and by West point ½. West in the latitude of 70. degrees 26. minutes, and found a rustling vnder vs. This fore-noone we were come into a greene Sea, of the colour of the mayne Ocean, which we first lost the eight of Iune: since which time wee haue had a Sea of a blacke blue colour, which (both by the last and this yeeres experience) is a Sea pestered with Ice.

Greene Sea.

The twelfth, faire weather: from noone to mid-night wee had the wind shifting betweene the North and West; our course was betweene VVest North-west, and South South-west. Then we had the wind at South, we sayled till the next day at noone, West and by North, thirteene leagues: wee accounted our way from the last day till this day noone Westward, eighteene leagues. This after-noone wee saw more Porpoises then in all our Voyage afore. The thirteenth, close weather: in the after-noone hauing much wind at South, with short sayle we stood away West and by North, till eight a clocke in the Eeuening: then we had the wind at South, but most times calme till noone the next day: wee stood away as afore, foure leagues, which made in all twelue leagues: we had the Sunne ere it began to fall, South and by West, in the latitude of 70. degrees 22. minutes.

The fourteenth, wee stood West North-west till mid-night, seuenteene leagues: then the wind scanted and came at West, we stood North North-west, one league and a halfe; then the wind being more Southerly, wee sayled West North-west, fiue leagues. From the last till this day at noone, our way was out of diuers courses North-west and by West, foure and twentie leagues. We had the Sunne beginning to fall at South and by West, in the latitude of 70. degrees 54. minutes.

Thunder.

The fifteenth, faire; but towards night like to be stormie with thunder, the wind betweene South and South South-east; from this, till the sixteenth day at noone, our course was West and by North, seuen and twentie leagues, and the Sunne then began to fall at South, three quarters of a point Westward, in the latitude of 70. degrees 42. minutes. The sixteenth, faire; our way was from this till next day at noone North-west, twelue leagues, out of diuers courses: and we had the wind shifting, sometimes at East, at West South-west, and West and by North; the latitude by a bad obseruation, 71. degrees 44. minutes. The seuenteenth, in the fore-noone faire; the wind being at West and by North. At foure a clocke this morning we saw Land beare off vs, West and South South-west, which was about *Ward-house*: this after-noone wee had a storme at West and by North, we layed it to trie till eight a clocke in the Eeuening, and then set sayle with the wind betweene West North-west, and North-west: our course till the next day at noone, was South-west and by South, twelue leagues: the Cape *Hopewell* bore off vs South South-west, and we were foure or fiue leagues from land.

The eighteenth, gusty, with raine all the fore-noone; then we had the wind shifting till next day at noone from South South-east to East, and South-east: our course in generall was North-west, foure and twentie leagues: then did North *Kent* beare off vs West halfe a point Southward, being from vs foure leagues; and the North Cape in sight bearing West and by North, &c.

No night in ten weekes.

The seuen and twentieth, cold with raine and storme; this night we began to burne Candle in the Betacle, which we had not done since the nineteenth of May: by reason wee had alwaies day from thence till now. The thirtieth, we had the Sunne vpon the Meridian due South, in the latitude of 68. degrees 46. minutes; whereby we found vs to bee afore our ship, ten or twelue leagues, and *Lowsoe* bore East of vs, but not in sight.

The seuenth of August, I vsed all diligence to arriue at *London*, and therefore now I gaue my companie a certificate vnder my hand, of my free and willing returne, without perswasion or force of any one or more of them: for at my being at *Nona Zembla*, the sixt of July, voide of hope of a North-east passage, (except by the *Vaygats*, for which I was not fitted to trie or proue) I therefore resolued to vse all meanes I could to sayle to the North-west; considering the time and meanes wee had, if the wind should friend vs, as in the first part of our Voyage it had done, and to make triall of that place called *Lumleys Inlet*, and the furious ouer-fall by Captayne *Danis*, hoping to runne into it an hundred leagues, and to returne as God should enable mee. But now hauing spent more then halfe the time I had, and gone but the shortest part of the way, by meanes of contrary winds; I thought it my dutie to saue Victuall, Wages, and

See Hak. 3.

Tackle

Tackle, by my speedy returne, and not by foolish rashnesse, the time being wasted, to lay more charge vpon the action then necessitie should compell, I arriued at *Gravesend* the six and twentieth of August.

CHAP. XVI.

The third Voyage of Master HENRIE HVDSON *toward* Noua Zembla, *and at his returne, his passing from* Farre *Ilands, to* New-found Land, *and along to fortie foure degrees and ten minutes, and thence to* Cape Cod, *and so to thirtie three degrees; and along the Coast to the Northward, to fortie two degrees and an halfe, and vp the Riuer neere to fortie three degrees. Written by* ROBERT IVET *of* Lime-house.

ON Saturday the fiue and twentieth of March, 1609. after the old Account, we set sayle from *Amsterdam*; and by the seuen and twentieth day, we were downe at the *Texel*: and by twelue of the clocke we were off the Land, it being East of vs two leagues off. And because it is a journey vsually knowne, I omit to put downe what passed, till we came to the height of *The North Cape of Finmarke*, which we did performe by the fift of May *(stilo nouo)* being Tuesday. On which day we obserued the height of the Pole, and found it to bee 71. degrees and 46. minutes; and found our Compasse to vary six degrees to the West: and at twelue of the clocke, the North Cape did beare South-west and by South, tenne leagues off, and wee steered away East and by South, and East. May 5. *stilo nouo.*

After much trouble with fogges, sometimes, and more dangerous of Ice. The nineteenth, being Tuesday, was close stormie weather, with much wind and snow, and very cold: the wind variable betweene the North North-west, and North-east. We made our way West and by North till noone. Then we obserued the Sunne hauing a slake, and found our heigth to bee 70. degrees 30. minutes. And the ship had out-runne vs twentie leagues, by reason of the set of the streame of *The White Sea*: and we had sight of *Wardhouse*. Then at two of the clocke wee tacke to the Eastward: for we could not get about the North Cape, the wind was so scant; and at eight of the clocke at night, on the one and twentieth, the North Cape did beare South-east and by South seuen leagues off. And at mid-night *Assumption* Point did beare South and by East, fiue leagues off vs. *Beale Mort. Wardhouse.* They doubled the North Cape. *Assumption* Point.

The two and twentieth, gusting weather with haile and snow, the Sunne breaking out sometimes: we continued our course along the Land West South-west. And at tenne of the clocke at night we were thwart off *Zenam*. The bodie of it did beare East off vs fiue leagues: and the course from the North Cape to *Zenam*, is for the most part West and by South, and West South-west, fiftie foure leagues. *Zenam.*

The three and twentieth, faire Sun-shining weather; the wind at East and by South, and East South-east, wee steered along the Land South-west, and South-west and by West, eight leagues a Watch, for so we found the Land to lye from *Zenam* to *Lofoote*. And the distance is fiftie leagues from the bodie of *Zenam*, to the Westermost Land of *Lofoote*. And from the one to the other, the course is South-west and by West. For the Needle of our Compasse was set right to the North. At twelue of the clocke at night, the bodie of *Lofoote* did beare South-east, sixe leagues off. *Lofoote.*

The foure and twentieth, faire cleere Sun-shining weather: the wind variable vpon all points of the Compasse, but most vpon the South-east, and sometimes calme. We continued our course West South-west as before. And at eight of the clocke at night, the Souther part of *Lofoote* did beare South-east ten leagues off vs.

The fiue and twentieth, much wind at North-east, with some snow and haile. The first watch the wind came to the East a fine gale, and so came to the North-east, the second watch at foure of the clocke, and freshed in: And at eight of the clocke it grew to a storme, and so continued. At noone we obserued, and made the ship to be in 67. degrees 58. minutes. Wee continued our course South-west, twelue leagues a watch. At nine of the clocke, *Lofoote* did beare East of vs 15. leagues off. And we found the Compasse to haue no variation. The wind increased to a storme. No variation.

The six and twentieth, was a great storme at the North North-east, and North-east. Wee steered away South-west afore the wind with our fore-course abroad: for wee were able to maintayne no more sayles, it blew so vehemently, and the Sea went so high, and brake withall, that it would haue dangered a small ship to lye vnder the Sea. So we skudded seuenty leagues in foure and twentie houres. The storme began to cease at foure of the clocke.

The seuen and twentieth, indifferent faire weather, but a good stiffe gale of wind at North,

Digitized by Google

and North North-east, wee held on our course as before. At noone wee obserued and found our heigth to be 64. degrees 10. minutes. And wee perceiued, that the Current had hindred vs in fortie eight houres to the number of 16. leagues to our best judgement. We set our mayne-sayle, sprit-sayle, and our mayne-top-sayle, and held on our course all night, hauing faire weather.

A great current setting to the North-east.

The eight and twentieth, faire weather and little wind at North-east, we held on our course South-west. At noone wee obserued the heigth, and were in 62. degrees and 30. minutes. The after-noone was little wind at North North-west. The second watch it fell calme. At foure of the clocke wee had sight of the Ies called *Farre*, and found them to lye out of their place in the Sea Chart fourteene leagues to farre Westerly. For in running South-west from *Lofoote*, wee had a good care to our steerage and obseruations; and counted our selues thirtie leagues off by our course and obseruation: and had sight of them sixteene or eighteene leagues off.

Farre Ies set 14. leagues to farre West.

The nine and twentieth, faire weather sometimes calme, and sometimes a gale with the wind varying at South-west, and so to the North-east. Wee got to the Ilands, but could not get in. So we stood along the Ilands. The ebbe being come, we durst not put in.

The thirtieth faire weather; the wind at South-east and East South-east. In the morning we turned into a Road in *Stromo*, one of the Ilands of *Farre*, betweene *Stromo* and *Mugge-nes*, and got in by nine of the clocke: for it flowed so there that day. And assoone as we came in, we went to Romage, and sent our Boat for water, and filled all our emptie Caskes with fresh water. Wee made an end of our Romaging this night by ten of the clocke.

Stromo.

The one and thirtieth, faire Sun-shining weather, the wind at East South-east. In the fore-noone our Master with most of his Company went on shoare to walke, and at one of the clocke they returned aboord. Then we set sayle.

Iune.

The first of Iune, *stilo nouo*, faire Sun-shining weather, the wind at East South-east. We continued on our course South-west and by West. At noone wee obserued the Sunne, and found our heigth to be 60. degrees 58. minutes: and so continued on our course all night with faire weather. This night we lighted Candles in the [m] Bittacle againe.

[m] The Bittacle is a close place in which the Compasse standeth.

The second mystie weather, the wind at North-east. At noone we steered away West South-west, to find *Busse* Iland, discouered in the yeere 1578. by one of the ships of Sir *Martin Frobisher*, to see if it lay in her true latitude in the Chart or no: wee continued our course as before all night, with a faire gale of wind: this night we had sight of the first stars, and our water was changed colour to a white greene. The Compasse had no variation.

Busse Iland. Their first sight of stars: for further North, they had continuall Sun-light. Change of water.

The third, faire Sun-shining weather, the wind at North-east. We steered on our course South-west and by West, with a stiffe gale of wind. At noone we obserued and found our heigth to bee 58. degrees 48. minutes. And I was before the ship 16. leagues, by reason of the Current that held vs so strong out of the South-west. For it is eight leagues in foure and twentie houres. We accounted our selues neere *Busse* Iland: by mid-night we looked out for it, but could not see it.

A strange current out of the South-west.

The fourth, in the morning was much wind with fogge and raine. Wee steered away South-west by west all the fore-noone, the wind so increasing, that wee were enforced to take in our top-sayle: the winde continuing so all the after-noone. Wee steered away South-west all the fore-part of the night, and at ten of the clocke at night it was little wind, and that was at South, and so came vp to the South South-east.

The fift, stormie weather, and much wind at South, and South by East, so that at foure of the clocke in the morning, we tooke in our fore-sayle, and lay a try with our mayne corse, and tryed away West North-west foure leagues. But at noone it was lesse wind, and the Sunne shewed forth; and we obserued, and found our heigth to be 56. degrees 21. minutes. In the after-noone the wind vered to and fro betweene the South-west and the South-east, with raine and fogge, and so continued all night. Wee found that our ship had gone to the VVestward of our course. The sixth, thicke hasie weather with gusts of wind, and showers of raine. The wind varied betweene East South-East and South-west, wee steered on many courses a West South-west way. The afternoone watch the wind was at East South-east, a stiffe gale with myst and raine. Wee steered away South-west, by West eight leagues. At noone the Sunne shone forth, and we found the heigth to bee 56. degrees 8. minutes. The seuenth, faire sun-shining weather all the fore-noone, and calme vntill twelue of the clocke. In the after-noone the wind came to the North-west, a stiffe gale. We steered South-west by West, and made a South-west way. At noone we found the height to bee 55. degrees one minute, and it continued all night a hard gale. The eight, stormy weather, the wind variable, betweene West and North-west much wind: at eight of the clocke wee tooke off our Bonnets. At noone the Sunne shewed forth, and wee obserued, and our height was 54. degrees 30. minutes. The ninth, faire sun-shining weather, and little wind all the fore-part of the day vntill eleuen of the clocke. Then the wind came to the South South-east, and we steered away West South-west. At noone we found our height to bee 53. degrees and 45. minutes, and we had made our way South by West ten leagues. In the after-noone the wind increased and continued all night at East North-east and East.

Note well.

Bonets are those which are laced and ecked to the sayles to enlarge them: with reference whereto the mayne course, misen course, fore course, is vnderstood of those sayles without their Bonets.

The twelfth, faire weather, the wind variable betweene East North-east and South-east, wee steered on our course as before. At foure of the clock in the afternoon the wind came vp at South-east.

Digitized by Google

east. And we held our course as before. At noone wee obserued and found our height to be 52. degrees 35. minutes.

The eleuenth, in the morning was thicke and foggie, the winde varying betweene South South-west, and North-west. At foure of the clocke in the morning, wee tacke about to the Southward: At eleuen of the clocke the winde came to the North-west, and so to the West North-west. This day we had change of water, of a whitish greene, like to the Ice water to the North-west. At noone it cleered vp, and became very faire weather: wee put out our mayne top-sayle: then we obserued the Sunne, and found our height to be 51. degrees 24. minutes. We had sayled many courses and found our ship gone to the Southward of our account ten leagues, by reason of a current from the North-ward. The Compasse varied on point to the East.

A current from the North. Variation one point East.

The twelfth, faire Sun-shining weather, but much wind at the West: we stood to the South-ward all day, the wind shifting betweene the South-west and the West and by North. Wee made our way South halfe a point West, eight and twentie leagues. Our height at noone was 50. degrees 9. minutes. At eight of the clock at night we took off our Bonets, the wind increasing.

The thirteenth, faire Sun-shining weather: the wind variable betweene the West, and North North-west. We made our way South South-west seuen and twentie leagues. At noone we obserued, and found our heigth to be 48. degrees 45. minutes. But not to be trusted, the Sea went so high. In the after-noone the winde was calmer, and wee brought to our Bonets, and stood to the Southward all night with a stiffe gale.

The fourteenth, faire and cleere Sun-shining weather: the winde variable betweene the North-west and South-west by West. At mid-night I obserued the North starre at a North-west by West Guarde; a good obseruation 49. degrees 30. minutes. And at noone wee obserued the Sunne, and our heigth was 48. degrees 6. minutes. And I made account we ranne betweene the two obseruations twelue leagues. At one of the clocke in the after-noone, wee cast about to the Westward, and stood so all night: the winde increased to a storme, and was very much winde with Raine.

Latitude 48. degrees 6. minutes.

The fifteenth, we had a great storme, and spent * ouer-boord our fore-mast, bearing our fore corse low set. The sixteenth, we were forced to trie without mayne sayle, by reason of the vnconstant weather. So wee tried foure watches South-east and by South eight leagues and an halfe, and two watches sixe leagues. The seuenteenth, reasonable faire weather: the wind variable betweene West South-west, and West North-west. And a stiffe gale of wind, and so great a swelling Sea out of the West South-west, that wee could doe nothing. So one watch and an halfe wee droue North foure leagues and an halfe, and foure watches and an halfe South and by East halfe a point East twelue leagues. The eighteenth, reasonable weather but close and cloudie, and an hard gale of wind, and a great Sea. The winde being at the North-west, wee lay to the Southward, and made our drift South and by West, fiue leagues. The after-noone prooued little wind, and the night part calme. The nineteenth, in the fore-noone faire weather and calme. In the morning we set the piece of our fore mast, and set our fore corse.

* To spend the Mast, is vnderstood of breaking it by foule weather only.

The one and twentieth, faire Sun-shining weather, but much wind and a great Sea. We split our fore saile at ten of the clocke; then we laid it a trie * with our mayne sayle, and continued so all day. In the night it fell to be little wind. This day our heigth was 45. degrees 48. minutes.

* That is, bare no more sayle but the mayne sayle, &c.

The two and twentieth, very faire Sun-shining weather, and calme all the after-noone. At noone we made a very good obseruation, and found our heigth 44. degrees 58. minutes. At eight of the clocke at night wee had a small gale of winde at South-east. And wee steered away West for *Newfound* Land. The true Compasse varied one point East.

Variation.

The three and twentieth, thicke weather with much wind and some raine. At eight of the clocke in the morning, the wind came to the West South-west, and West so stiffe a gale, that we were forced to take our top-sayle, and steered away North North-west vntill foure of the clock in the after-noone. Then we tack to the Southward the winde at West North-west. At eight of the clocke at night wee tooke in our top-sayles, and laid it a trie with our mayne sayle, the winde at West.

The foure and twentieth, a stiffe gale of wind, varying betweene the West and North North-west, we tried till sixe of the clocke: at which time we set our foresaile, and steered way West and by South by our Compasse eight leagues in foure watches: and wee tried away South in one watch and an halfe.

The fiue and twentieth, faire Sun-shining weather, the wind at North North-west and North, we steered away West by South by our Compasse till twelue of the clocke: at which time we had sight of a sayle, and gaue her chase but could not speake with her. She stood to the Eastward; and we stood after her till sixe of the clocke in the after-noone. Then wee tack to the Westward againe, and stood on our course. It was faire all night, and little wind sometimes.

The six and twentieth, all the fore-part of the day very faire weather and hot, but at foure of the clocke in the after-noone it grew to bee much winde and raine: the winde was at South South-east. At noone wee obserued and found our heigth to bee 44. degrees 33. minutes. At eight of the clocke at night, the wind came to South-west, and West South-west. Wee steered North-

Digitized by Google

North-weſt, one Watch, and at twelue in the night, to the Weſt, and Weſt and by South, very much wind. So we could lye but North North-weſt.

The ſeuen and twentieth, very much winde and a ſoare ſtorme, the wind Weſterly. In the morning at foure of the clocke, wee tooke in our fore-corſe, and layd it a trie with our mayne-corſe low ſet; and ſo continued all the day and night, two watches to the Northward. At eight of the clocke at night, we tackt to the Southward.

The eight and twentieth, faire ſun-ſhining weather, the wind at Weſt and by South; we lay a trie to the Southward till eight of the clocke in the morning. Then wee ſet our fore-corſe, and ſtood to the Southward a ſtiffe gale of wind, but faire weather and a great Sea, out of the Weſter-boord, and ſo continued all night.

The nine and twentieth, faire ſun-ſhining weather, the wind at Weſt and by South; we ſtood to the Southward vntill ſixe of the clocke at night, and made our way South and by Eaſt, foure leagues. Then the winde came to the South-weſt, and wee caſt about to the VVeſtward, and made our way VVeſt North-weſt all night. At noone, I found the height 43. degrees 6. minutes. The variation one point VVeſt.

The thirtieth, faire ſun-ſhining weather, the winde at South-weſt and by VVeſt, we ſteered North-weſt and by VVeſt. And made our way ſo, by reaſon of the variation of the Compaſſe. At noone, I found the height to bee 43. degrees 18. minutes; wee continued our courſe all night, and made our way North-weſt and by VVeſt, halfe a point VVeſterly, fiue and twentie leagues.

Iuly. The firſt of Iuly, cloſe, myſtie and thicke weather, but a faire gale of wind at South-weſt, and South-weſt by South. We ſteered away North-weſt and by Weſt, Weſterly, and made our way ſo, by reaſon of the variation of the Compaſſe. At eight of the clocke at night, wee ſounded for the Banke of *New-found Land*, but could get noground.

The Banke of *New found Land*. The ſecond, thicke myſtie weather, but little wind, and that at Weſt, and Weſt and by South. At eight of the clocke in the morning, we caſt about to the Southward, and when our ſhip was on ſtayes, we ſounded for the Banke, and had ground in thirtie fathoms, white ſand and ſhells, and preſently it cleered: and we had ſight of a ſayle, but ſpake not with her. In the night we had much Rayne, Thunder and Lightning, and wind ſhifting.

Variation weſt 17. degrees. The third, faire Sun-ſhining weather, with a faire gale of wind at Eaſt North-eaſt, and wee ſteered away Weſt South-weſt by our Compaſſe, which varyed 17. degrees Weſtward. This morning we were among a great Fleet of *French*-men, which lay Fiſhing on the Banke; but we ſpake with none of them. At noone wee found our heighth to bee 43. degrees 41. minutes. And we ſounded at ten of the clocke, and had thirtie fathoms gray ſand. At two of the clocke wee ſounded, and had fiue and thirtie fathoms gray ſand. At eight of the clocke at night, we ſounded againe, and had eight and thirtie fathoms gray ſand, as before.

French-men Fiſhing on the Banke.

The fourth, at the fore-part of the day cleere, with a faire gale of wind, but variable betweene the Eaſt North-eaſt, and South and by Eaſt, wee held on our courſe as before. The after-noone was myſtie, the wind ſhifting betweene the South and the Weſt, till foure of the clocke. Then we tooke in our top-ſayle and ſprit-ſayle, and ſounded and had no ground in ſeuentie fathoms. The winde ſhifted ſtill vntill eight of the clocke, then it came to the North North-eaſt, and North-eaſt and by North, and we ſteered away Weſt North-weſt, by our varyed Compaſſe, which made a Weſt way halfe point North. The Compaſſe varyed 15. degrees from the North to the Weſt.

Variation 15. degrees North-weſt.

The fift, faire ſun-ſhining weather, the wind at North-eaſt and by North, we ſteered away Weſt North-weſt, which was Weſt halfe a point North. At noone we found our heighth to be 44. degrees 10. minutes, and ſounded, and had no ground in one hundred fathoms. The after-noone proued calme ſometimes, and ſomtimes little wind, vntill nine of the clocke in the night. Then the wind came to the Eaſt, and we held on our courſe. At mid-night I obſerued and found the height to bee 44. degrees 10. minutes, by the North Starre and the *Scorpions* heart. The Compaſſe varyed 13. degrees.

Variation 13. degrees.

The ſixth, the fore-part of the day faire weather, and a ſtiffe gale of wind, betweene South South-eaſt, and South-weſt, wee ſteered Weſt and by North, and Weſt North-weſt. The after-part of the day from two of the clocke, was all foggie and thicke weather; the wind a hard gale, varying betweene South-weſt and by South, and Weſt and by North, we made our way North-weſt halfe a point Northerly, nineteene leagues, vpon many points foure Watches. At night at eight of the clocke, we ſounded and had no ground at one hundred fathoms.

Foggie and thick weather.

The ſeuenth, faire ſun-ſhining weather, the wind varying betweene Weſt and by North, and Weſt and by South. At foure of the clocke in the morning, we caſt about to the Southward, and ſtood ſo till one in the after-noone. At noone we found our height to be 44. degrees 26. minutes. At ſeuen of the clocke, we tackt to the Northward. At eight at night, we tackt to the South-ward, and ſounded, and had nine and fiftie fathoms, white ſand.

The eight, in the fore-noone faire weather, but the morning foggie till ſeuen of the clocke. At foure of the clocke in the morning we ſounded, and had fiue & fortie fathoms, fine white ſand, and we had runne fiue leagues South and by Weſt. Then wee ſtood along one Glaſſe, and went

one

one league as before. Then we ſtood one Glaſſe and ſounded, and had ſixtie fathoms. Then wee take and ſtood backe to the Banke, and had fiue and twentie fathoms; and tryed for Fiſh, and it fell calme, and we caught one hundred and eighteene great Coddes, from eight a clocke till one, and after Dinner wee tooke twelue, and ſaw many great Scoales of Herrings. Then wee had a gale of wind at South, and it ſhifted to the Weſt North-weſt, and we ſtood three Glaſſes and ſounded and had ſixtie fathomes, and ſtood two Glaſſes, and had two and fortie fathoms, red ſtones and ſhells. So wee ſounded euery Glaſſe and had ſeuerall ſoundings 35. 33. 30. 31. 32. 33. and 34. fathoms.

Many great Cods taken. Many great Scoales of Herrings. To ſound is to trie the depth by Line and Lead, or Pole, &c.

The ninth, faire calme weather, we lay becalmed all day and caught ſome Fiſh, but not much, becauſe we had ſmall ſtore of ſalt. At three of the clocke in the after-noone, wee had a gale at South-eaſt, and South South-eaſt, and we ſteered away Weſterly, our Compaſſe was Weſt and by South halfe a point South. At foure of the clocke, we ſounded and had but fifteene, ſeuenteene, and nineteene fathoms on a fiſhing Banke; and we ſounded euery Glaſſe. Then we could get no ground in fiue and twentie fathoms, and had ſight of a ſayle on head off vs. At noone our height was 44. degrees 27. minutes. We ſtood to the Weſtward all night, and ſpake with a *French*-man, which lay Fiſhing on the Banke of *Sables*, in thirtie fathoms, and we ſaw two or three more.

The tenth, very myſtie and thicke weather, the wind at South-weſt, a faire gale. We ſtood to the South-ward, and made our way South-eaſt and by Eaſt. At twelue of the clocke we ſounded, and had eight and fortie fathoms: againe at two we ſounded, and had fiftie fathoms. And at ſixe of the clocke we ſounded: and had eight and fortie fathoms on the end of the Banke. Againe, at eight of the clocke at night wee ſounded, and had no ground in eightie fathomes, and were ouer the Banke. So wee ſtood along till mid-night. The Compaſſe varyed 17. degrees to the Weſtward.

Variation 17. degrees.

The eleuenth, very thicke and myſtie weather. At twelue of the clocke at night, we caſt about to the Weſtward, and ſtood ſo all day, and made our way Weſt North-weſt. We ſounded at twelue of the clocke, but had no ground; ſo we ſtood to the Weſtward all the fore-part of the night, and ſounded but could get no ground in fiftie or ſixtie fathoms till mid-night. Then I ſounded and had ground at fifteene fathoms, white ſand.

The twelfth, was very foggie, we ſtood our courſe all the morning till eleuen of the clocke; at which time we had ſight of the Land, which is low white ſandie ground, right on head off vs; and had ten fathoms. Then we tackt to the Southward, and ſtood off foure Glaſſes: then we tackt to the Land againe, thinking to haue rode vnder it, and as we came neere it, the fog was ſo thicke that we could not ſee; ſo wee ſtood off againe. From mid-night to two of the clocke, we came ſounding in twelue, thirteene, and foureteene fathoms off the ſhoare. At foure of the clocke, we had 20 fathoms. At eight of the clocke at night 30. fathoms. At twelue of the clocke 65. fathoms, and but little winde, for it deeped apace, but the neerer the ſhoare the fairer ſhoalding.

Land, being low, white and ſandie.

The thirteenth, faire ſun-ſhining weather, from eight of the clocke in the fore-noone all day after, but in the morning it was foggie. Then at eight of the clocke we caſt about for the ſhoare, but could not ſee it; the wind being at South by our true Compaſſe, wee ſteered VVeſt and by North. At noone we obſerued, and found our height to bee 43. degrees 25. minutes; ſo we ſteered away VVeſt and by North all the after-noone. At foure of the clocke in the after-noone, we ſounded and had fiue and thirtie fathoms. And at ſixe of the clocke, wee had ſight of the Land, and ſaw two ſayles on head off vs. The land by the waters ſide is low Land, and white ſandie Bankes riſing full of little Hils. Our ſoundings were 35. 33. 30. 28. 32. 37. 33. & 32. fathoms.

43. degrees 25. minutes. Sight of Land againe, and of two Ships.

The foureteenth, full of myſts flying and vading, the wind betweene South and South-weſt, we ſteered away Weſt North-weſt, and North-weſt and by Weſt. Our ſoundings were 29. 25. 24. 25. 22. 25. 27. 30. 28. 30. 35. 43. 50. 70. 90. 70. 64. 86. 100. fathoms, and no ground.

The fifteenth, very myſtie, the winde varying betweene South and South-weſt, wee ſteered Weſt and by North, and VVeſt North-weſt. In the morning we ſounded, and had one hundred fathoms, till foure of the clocke in the after-noone. Then we ſounded againe, and had ſeuentie fiue fathoms. Then in two Glaſſes running, which was nor aboue two *Engliſh* miles, we ſounded and had ſixtie fathoms, and it ſhoalded a great pace vntill we came to twentie fathoms. Then we made account we were neere the Ilands that lie off the ſhoare. So we came to an Anchor, the Sea being very ſmooth and little wind, at nine of the clocke at night. After ſupper, we tryed for Fiſh, and I caught fifteene Cods, ſome the greateſt that I haue ſeene, and ſo we rode all night.

The ſixteenth, in the morning it cleered vp, and wee had ſight of fiue Ilands lying North, and North and by VVeſt from vs, two leagues. Then wee made ready to ſet ſayle, but the myſt came ſo thicke, that we durſt not enter in among them.

Fiue Ilands.

The ſeuenteenth, was all myſtie, ſo that wee could not get into the Harbour. At ten of the clocke two Boates came off to vs, with ſixe of the *Sauages* of the Countrey, ſeeming glad of our comming. VVe gaue them trifles, and they eate and dranke with vs; and told vs, that there were Gold, Siluer, and Copper mynes hard by vs; and that the *French*-men doe Trade with them; which is very likely, for one of them ſpake ſome words of *French*. So wee rode ſtill all day and all night, the weather continuing myſtie.

Sixe *Sauages* come aboord them.

The

Digitized by Google

A large Riuer.

44. Degrees 10. minutes.

The eighteenth, faire weather, wee went into a very good Harbour, and rode hard by the shoare in foure fathoms water. The Riuer runneth vp a great way, but there is but two fathoms hard by vs. VVe went on shoare and cut vs a fore Mast, then at noone we came aboord againe, and found the height of the place to bee in 44. degrees 1. minute; and the Sunne to fall at a South South-west Sunne. VVe mended our sayles, and fell to make our fore-Mast. The Harbour lyeth South and North, a mile in where we rode.

The nineteenth, we had faire sun-shining weather, we rode still. In the after-noone wee went with our Boate to looke for fresh water, and found some; and found a shoald with many Lobsters on it, and caught one and thirtie. The people comming aboord, shewed vs great friendship, but we could not trust them. The twentieth, faire sunne-shining weather, the winde at South-west. In the morning, our Scute went out to catch fresh Fish halfe an houre before day, and returned in two houres, bringing seuen and twentie great Coddes, with two hookes and lines. In the after-noone wee went for more Lobsters, and caught fortie, and returned aboord. Then wee espied two *French* Shallops full of the Countrey people come into the Harbour, but they offered vs no wrong, seeing we stood vpon our guard. They brought many Beauer skinnes, and other fine Furres, which they would haue changed for redde Gownes. For the *French* trade with them for red Cassockes, Kniues, Hatchets, Copper, Kettles, Treuits, Beades, and other trifles.

The trade of the *French* with the *Sauages*.

The one and twentieth, all mystie, the wind Easterly, wee rode still and did nothing, but about our Mast. The two and twentieth, faire Sun-shining weather, the winde all Northerly, we rode still all the day. In the after-noone our Scute went to catch more Lobsters, and brought with them nine and fiftie. The night was cleere weather.

The three and twentieth, faire sun-shining weather and very hot. At eleuen of the clocke, our fore Mast was finished, and we brought it aboord, and set it into the step, and in the after-noone we rigged it. This night we had some little myst and rayne.

The foure and twentieth, very hot weather, the winde at South out of the sea. The fore-part of the day wee brought to our sayles. In the morning, our Scute went to take Fish, and in two houres they brought with them twentie great Coddes, and a great Holibut, the night was faire also. We kept good watch for feare of being betrayed by the people, and perceiued where they layd their Shallops.

They spoyle Houses of the *Sauages*.

The fiue and twentieth, very faire weather and hot. In the morning wee manned our Scute with foure Muskets, and sixe men, and tooke one of their Shallops and brought it aboord. Then we manned our Boat & Scute with twelue men and Muskets, and two stone Pieces or Murderers, and draue the *Sauages* from their Houses, and tooke the spoyle of them, as they would haue done of vs. Then wee set sayle, and came downe to the Harbours mouth, and rode there all night, because the winde blew right in, and the night grew mystie with much rayne till midnight. Then it fell calme, and the wind came off the Land at West North-west, and it began to cleere. The Compasse varyed 10. degrees North-west.

Variation 10. degrees toward the North-west

The sixe and twentieth, faire and cleere sunne-shining weather. At fiue of the clocke in the morning, the winde being off the shoare at North North-west, we set sayle and came to sea, and by noone we counted our ship had gone foureteene leagues South-west. In the after-noone, the winde shifted variably betweene West South-west, and North-west. At noone, I found the height to bee 43. degrees 56. minutes. This Eeuening being very faire weather, wee obserued the variation of our Compasse at the Sunnes going downe, and found it to bee 10. degrees from the North to the VVestward.

The seuen and twentieth, faire sun-shining weather, the winde shifting betweene the South-west, and West and by North, a stiffe gale, we stood to the Southward all day, and made our way South and by West, seuen and twentie leagues. At noone, our height was 42. degrees 50. minuts. At foure of the clocke in the after-noone, wee cast about to the Northward. At eight of the clocke, we tooke in our top-sayles and our fore-bonnet, and went with a short sayle all night.

The eight and twentieth, very thicke and mystie, and a stiffe gale of wind, varying betweene South South-west, and South-west and by VVest; we made our way North-west and by VVest, seuen and twentie leagues, wee sounded many times and could get no ground. At fiue of the clocke, we cast about to the Southward, the wind at South-west and by VVest. At which time we sounded, and had ground at seuentie fiue fathoms. At eight, wee had sixtie fiue fathoms. At ten, sixtie. At twelue of the clocke at mid-night, fiftie sixe fathoms, gray sand. The Compasse varyed 6. degrees the North point to the VVest.

Variation 6. degrees to the West.

The nine and twentieth, faire weather, we stood to the Southward, and made our way South and by VVest a point South, eighteene leagues. At noone, we found our height to bee 42. degrees 56. minutes, wee sounded oft, and had these 60. 64. 65. 67. 65. 65. 70. and 75. fathoms. At night, wee tryed the variation of our Compasse by the setting of the Sunne, and found that it went downe 37. degrees to the North-ward of the VVest, and should haue gone downe but 31. degrees. The Compasse varyed 5. ½. degrees.

Variation 5. & a halfe degrees.

The thirtieth, very hot, all the fore-part of the day calme, the wind at South South-east, wee steered

Digitized by Google

steered away VVest South-west and sounded many times, and could find no ground at one hundred and seuentie fathomes. VVe found a great current and many ouer-falls. Our current had deceiued vs. For at noone we found our height to be 41. degrees 34. minutes. And the current had heaued vs to the Southward fourteene leagues. At eight of the clocke at night, I sounded and had ground in fiftie two fathomes. In the end of the mid-night watch, wee had fiftie three fathomes. This last obseruation is not to be trusted.

A great current and many ouer-falls.

The one and thirtieth, very thicke and mystie all day, vntill tenne of the clocke. At night the wind came to the South, and South-west and South. We made our way West North-west nineteene leagues. Wee sounded many times, and had difference of soundings, sometimes little stones, and sometimes grosse gray sand, fiftie six, fiftie foure, fortie eight, fortie seuen, fortie foure, fortie six, fiftie fathomes; and at eight of the clocke at night it fell calme, and we had fiftie fathomes. And at ten of the clocke we heard a great Rut, like the Rut of the shoare. Then I sounded and found the former Depths; and mistrusting a current, seeing it so still that the ship made no way, I let the lead lie on the ground, and found a tide set to the South-west, and South-west by West, so fast, that I could hardly vere the Line so fast; and presently came an hurling current, or tyde with ouer-fals, which cast our ship round; and the Lead was so fast in the ground, that I feared the Lines breaking, and we had no more but that. At mid-night I sounded againe, and we had seuentie fiue fathomes; and the strong streame had left vs.

A great Rut.

A current to the South-west and South-west by West, with ouer-fals.

The first of August, all the fore-part of the day was mystie, and at noone it cleered vp. We found that our height was 41. degrees 45. minutes, and we had gone nineteene leagues. The afternoon was reasonable cleere. We found a rustling tide or current, with many ouer-fals to continue still, and our water to change colour, and our sea to bee very deepe, for wee found no ground in one hundred fathomes. The night was cleere, and the winde came to the North, and North North-east, we steered West.

August.

The second, very faire weather and hot: from the morning till noone we had a gale of wind, but in the after-noone little wind. At noone I sounded and had one hundred and ten fathomes; and our height was 41. degrees 56. minutes. And wee had runne foure and twentie leagues and an halfe. At the Sun-setting we obserued the variation of the Compasse, and found that it was come to his true place. At eight of the clocke the gale increased, so wee ranne sixe leagues that watch, and had a very faire and cleere night.

The third, very hot weather. In the morning, we had sight of the Land, and steered in with it, thinking to goe to the North-ward of it. So we sent our shallop with fiue men, to sound in by the shore: and they found it deepe fiue fathomes within a Bow-shot of the shoare; and they went on Land, and found goodly Grapes, and Rose trees, and brought them aboord with them, at fiue of the clocke in the Eeuening. We had seuen and twentie fathomes within two miles of the shoare; and we found a floud come from the South-east, and an ebbe from the North-west, with a very strong streame, and a great hurling and noyses. At eight of the clocke at night, the wind began to blow a fresh gale, and continued all night but variable. Our sounding that wee had to the Land, was one hundred, eightie, seuentie foure, fiftie two, fortie sixe, twentie nine, twentie seuen, twentie foure, nineteene, seuenteene, sometimes Oze, and sometimes gray sand.

They goe on Land neere Cape *Cod*.

The fourth, was very hot: we stood to the North-west two watches, and one South in for the Land, and came to an Anchor at the Norther end of the Headland, and heard the voyce of men call. Then we sent our Boat on shoare, thinking they had beene some *Christians* left on the Land: but wee found them to bee Sauages, which seemed very glad of our comming. So wee brought one aboord with vs, and gaue him meate, and he did eate and drinke with vs. Our Master gaue him three or foure glasse Buttons, and sent him on Land with our shallop againe. And at our Boats comming from the shoare he leapt and danced, and held vp his hands, and pointed vs to a riuer on the other side: for we had made signes that we came to fish there. The bodie of this Headland lyeth in 41. degrees 45. minutes. We set sayle againe after dinner, thinking to haue got to the Westward of this Headland, but could not; so we beare vp to the Southward of it, & made a South-east way; and the Souther point did beare West at eight of the clocke at night. Our soundings about the Easter and Norther part of this Headland, a league from the shoare are these: at the Easterside thirtie, twentie seuen, twentie seuen, twentie foure, twentie fiue, twentie. The North-east point 17. degrees 18. minutes, and so deeper. The North-end of this Headland, hard by the shoare thirtie fathomes: and three leagues off North North-west, one hundred fathomes. At the South-east part a league off, fifteene, sixteene, and seuenteene fathomes. The people haue greene Tabacco, and pipes, the boles whereof are made of Earth, and the pipes of red Copper. The Land is very sweet.

Sauages.

The fift, all mystie. At eight of the clocke in the morning, wee cast about to the Westward, and stood in till foure of the clocke in the after-noone; at which time it cleered, and wee had sight of the Head-land againe fiue leagues from vs. The Souther point of it did beare West off vs: and we sounded many times, and had no ground. And at foure of the clocke we cast about, and at our staying wee had seuentie fathomes. Wee steered away South and South by East all night,

Digitized by Google

night, and could get no ground at seuentie and eightie fathomes. For wee feared a great Riffe, that lyeth off the Land, and steered away South and by East.

The sixth, faire weather, but many times mysting. Wee steered away South South-east, till eight of the clocke in the morning; Then it cleered a little, and wee cast about to the Westward. Then we sounded and had thirtie fathomes, grosse sand, and were come to the Riffe. Then wee kept our Lead, and had quicke shoalding, from thirtie, twentie nine, twentie seuen, twentie foure, twentie two, twentie and an halfe, twentie, twentie, nineteene, nineteene, nineteene, eighteene, eighteene, seuenteene; and so deeping againe as proportionally as it shoalded. For we steered South and South-east till we came to twentie sixe fathomes. Then we steered South-west for so the tyde doth set. By and by it being calme we tryed by our Lead; for you shall haue sixteene or seuenteene fathomes, and the next cast but seuen or six fathomes. And farther to the Westward you shall haue foure and fiue foot water, and see Rockes vnder you; and you shall see the Land in the top. Vpon this Riffe we had an obseruation, and found that it lyeth in 40. degrees 10. minutes. And this is that Headland which Captaine *Bartholomew Gosnold* discouered in the yeere 1602. and called Cape *Cod*; becausse of the store of Cod-fish that hee found thereabout. So we steered South-west three leagues, and had twentie, and twentie foure fathomes. Then we steered West two Glasses halfe a league, and came to fifteene fathomes. Then we steered off South-east foure Glasses, but could not get deepe water; for there the tyde of ebbe laid vs on; and the streame did hurle so, that it laid vs so neere the breach of a shoald, that wee were forced to Anchor. So at seuen of the clocke at night, wee were at an Anchor in tenne fathomes: And, I giue God most heartie thankes, the least water wee had was seuen fathomes and an halfe. We rode still all night, and at a still water I sounded so farre round about our ship as we could see a light; and had no lesse then eight, nine, ten, and eleuen fathomes: The myst continued being very thicke.

This dangerous Riffe is in 41. degrees 10 minutes, and lyeth off East from Cape *Cod* into the Sea.

The seuenth, faire weather and hot, but mystie. Wee rode still hoping it would cleere, but on the floud it fell calme and thicke. So we rode still all day and all night. The floud commeth from the South-west, and riseth not aboue one fathome and an halfe in nepe streames. Toward night it cleered, and I went with our shallop and sounded, and found no lesse water then eight fathomes to the South-east off vs: but we saw to the North-west off vs great Breaches.

The eight, faire and cleere weather. In the morning, by sixe of the clocke at slake water wee weighed; the wind at North-east, and set our fore-sayle and mayne top-sayle, and got a mile ouer the Flats. Then the tyde of ebbe came, so we anchored againe till the floud came. Then wee set sayle againe, and by the great mercie of God, wee got cleere off them by one of the clocke this after-noone. And wee had sight of the Land from the West North-west, to the North North-west. So we steered away South South-east all night; and had ground vntill the middle of the third watch. Then we had fortie fiue fathomes, white sand, and little stones. So all our soundings are twentie, twentie, twentie two, twentie seuen, thirtie two, fortie three, fortie three, fortie fiue. Then no ground in seuentie fathomes.

The Flats.

The ninth, very faire and hot weather, the wind a very stiffe gale. In the morning, at foure of the clocke, our shallop came running vp against our sterne, and split in all her stemme; So we were faine to cut her away. Then wee tooke in our mayne sayle, and lay atrie vnder our fore-sayle vntill twelue of the clocke at mid-day. Then the wind ceased to a faire gale, so wee stood away South-west. Then we lay close by, on many courses a South by West way fifteene leagues; and three watches South-east by East, ten leagues. At eight of the clocke at night, wee tooke in our top-sayles, and went with a low sayle; because we were in an vnknowne sea. At noone we obserued and found our heigth to be 38. degrees 39. minutes.

The tenth, in the morning some raine and cloudie weather: the winde at South-west, wee made our way South-east by East, ten leagues. At noone, wee obserued and found our heigth to bee 38. degrees 39. minutes. Then wee tackt about to the Westward, the wind being at South and by East, little wind. At foure of the clocke it fell calme, and we had two Dolphines about our ship, and many small fishes. At eight of the clocke at night, wee had a small lingring gale. All night we had a great Sea out of the South-west, and another great Sea out of the North-east.

The eleuenth, all the fore-part of the day faire weather, and very hot. VVee stood to the VVest South-west till noone. Then the wind shorted, and we could lye but South-west and by South. At noone, wee found our heigth to bee 39. degrees 11. minutes. And that the current had laid vs to the Northward thirtie two minutes contrary to our expectation. At foure of the clocke in the after-noone there came a myst, which endured two houres. But wee had it faire and cleere all night after. The Compasse varied the North point to the VVest one whole point.

A current setting to the North.

Variation one point.

The twelfth, faire weather, the wind variable betweene the South-west and by South, and the North little wind. In the morning we killed an extraordinary fish, and stood to the Westward all day and all night. At noone we found our heigth to be 38. degrees 13. minutes. And the obseruation the day before was not good. This noone, we found the Compasse to vary from the North to the West ten degrees.

Variation 10. degrees.

The thirteenth, faire weather and hot: the wind at North-east. Wee steered away West and by

by our Compaſſe two and twentie leagues. At noone wee found our height to bee 37. degrees 45. minutes, and that our way from noone to noone was Weſt South-weſt, halfe a point Southerly. The Compaſſe was 7. degrees and a halfe variation, from the North point to the Weſt.

The fourteenth, faire weather, but cloudie, and a ſtiffe gale of wind, variable betweene North-eaſt and South-weſt, wee ſteered away Weſt by South, a point South all day vntill nine of the clocke at night; then it began to Thunder and Lighten, whereupon we tooke in all our ſayles, and layd it a hull, and hulled away North till mid-night, a league and a halfe.

The fifteenth, very faire and hot weather, the winde at North by Eaſt. At foure of the clocke in the morning we ſet ſayle, and ſtood on our courſe to the Weſtward. At noone wee found our height to bee 37. degrees 25. minutes. The after-noone proued little wind. At eight of the clocke at night, the winde came to the North, and wee ſteered Weſt by North, and Weſt North-weſt, and made our way Weſt. The Compaſſe varyed 7. degrees from the North to the Weſt. 37. Degrees 25. minutes.

The ſixteenth, faire ſhining weather, and very hot, the wind variable betweene the North and the Weſt, wee ſteered away Weſt by North. At noone wee found our height to bee 37. degrees 6. minutes. This morning we ſounded and had ground in ninetie fathomes, and in ſixe Glaſſes running it ſhoalded to fiftie fathoms, and ſo to eight and twentie fathoms, at foure of the clocke in the after-noone. Then wee came to an Anchor, and rode till eight of the clocke at night, the wind being at South and Moone-light, we reſolued to goe to the Northward to finde deeper water. So we weighed and ſtood to the Northward, and found the water to ſhoald and deepe, from eight and twentie to twentie fathomes. 37. Degrees 6. minutes.

The ſeuenteenth, faire and cleere Sun-ſhining weather, the winde at South by Weſt, wee ſteered to the Northward till foure of the clocke in the morning, then wee came to eighteene fathomes. So we Anchored vntill the Sunne aroſe to looke abroad for Land, for wee iudged there could not but be Land neere vs, but we could ſee none. Then we weighed and ſtood to the Weſtward till noone. And at eleuen of the clocke wee had ſight of a low Land, with a white ſandie ſhoare. By twelue of the clocke we were come into fiue fathomes, and Anchored; and the Land was foure leagues from vs, and wee had ſight of it from the Weſt, to the North-weſt by North. Our height was 37. degrees 26. minutes. Then the wind blew ſo ſtiffe a gale, and ſuch a Sea went, that we could not weigh; ſo we rode there all night an hard rode. A low Land with a white ſandie ſhoare. 37. degrees 26. minutes.

The eighteenth, in the morning faire weather, and little winde at North North-eaſt and North-eaſt. At foure of the clocke in the morning, we weighed and ſtood into the ſhoare to ſee the deeping or ſhoalding of it, and finding it too deepe, we ſtood in to get a rode; for wee ſaw as it were three Ilands. So wee turned to windward to get into a Bay, as it ſhewed to vs to the Weſtward of an Iland. For the three Ilands did beare North off vs. But toward noone the wind blew Northerly, with guſts of wind and rayne. So we ſtood off into the Sea againe all night; and running off we found a Channell, wherein we had no leſſe then eight, nine, ten, eleuen, and twelue fathomes water. For in comming ouer the Barre, wee had fiue, and foure fathomes and a halfe, and it lyeth fiue leagues from the ſhoare, and it is the Barre of *Virginia*. At the North end of it, it is ten leagues broad, and South and North, but deepe water from ninetie fathoms to fiue, and foure and a halfe. The Land lyeth South and North. This is the entrance into the *Kings* Riuer in *Virginia*, where our *Engliſh*-men are. The North ſide of it lyeth in 37. degrees 26. minutes, you ſhall know when you come to ſhoald water or ſounding; for the water will looke Greene or thicke, you ſhall haue ninetie and eightie fathomes, and ſhoalding a pace till you come to ten, eleuen, nine, eight, ſeuen, ten, and nine fathomes, and ſo to fiue, and foure fathomes and a halfe. Barre of *Virginia*. *Kings* Riuer.

The nineteenth, faire weather, but an hard gale of winde at the North-eaſt, wee ſtood off till noone, and made our way South-eaſt by Eaſt, two and twentie leagues. At noone wee caſt about to the Weſtward, and ſtood till ſixe of the clocke in the after-noone, and went fiue leagues and a halfe North-weſt by North. Then wee caſt about againe to the Eaſtward, and ſtood that way till foure the next morning. Note.

The twentieth, faire and cleere weather, the winde variable betweene Eaſt North-eaſt, and North-eaſt. At foure of the clocke in the morning, wee caſt about to the Weſtward, and ſtood till noone; at which time I ſounded; and had two and thirtie fathomes. Then we takt to the Eaſtward againe; wee found our height to bee 37. degrees 22. minutes. We ſtood to the Eaſtward all night, and had very much wind. At eight of the clocke at night we tooke off our Bonnets, and ſtood with ſmall ſayle. 37. degrees 22. minutes.

The one and twentieth, was a ſore ſtorme of winde and rayne all day and all night, wherefore wee ſtood to the Eaſtward with a ſmall ſayle: till one of the clocke in the after-noone. Then a great Sea brake into our fore-corſe and ſplit it; ſo we were forced to take it from the yard and mend it; wee lay a trie with our mayne-corſe all night. This night our Cat ranne crying from one ſide of the ſhip to the other, looking ouer-boord, which made vs to wonder; but we ſaw nothing.

Digitized by Google

The two and twencieth, ſtormy weather, with guſts of rayne and wind. In the morning at eight of the clocke we ſet our fore-corſe, and ſtood to the Eaſtward vnder our fore-ſayle, mayne-ſayle and miſen, and from noone to noone, we made our way Eaſt South-eaſt, fourteene leagues. The night reaſonable drie but cloudie, the winde variable all day and night. Our Compaſſe was varyed 4. degrees Weſtward.

Variation 4. degrees Weſtward.

The three and twentieth, very faire weather, but ſome Thunder in the morning, the winde variable betweene Eaſt by North. At noone wee tackt about to the Northward, the winde at Eaſt by North. The after-noone very faire, the wind variable, and continued ſo all night. Our way we made Eaſt South-eaſt, till noone the next day.

The foure and twentieth, faire and hot weather, with the wind variable betweene the North and the Eaſt. The after-noone variable winde. But at foure of the clocke, the wind came to the Eaſt and South-eaſt; ſo wee ſteered away North by Weſt, and in three Watches wee went thirteene leagues. At noone our height was 35. degrees 41. minutes, being farre off at Sea from the Land.

The fiue and twentieth, faire weather and very hot. All the morning was very calme vntill eleuen of the clocke; the wind came to South-eaſt, and South South-eaſt; ſo wee ſteered away North-weſt by North, two Watches and a halfe, and one Watch North-weſt by Weſt, and went eighteene leagues. At noone I found our height to bee 36. degrees 20. minutes, being without ſight of Land.

The ſixe and twentieth, faire and hot weather, the winde variable vpon all the points of the Compaſſe. From two of the clocke in the morning vntill noone, wee made our way North by Eaſt, ſeuen leagues. In the after-noone the wind came to the North-eaſt, and vering to the Eaſt South-eaſt, wee ſteered away North-weſt fifteene leagues, from noone till ten of the clocke at night. At eight of the clocke at night wee ſounded, and had eighteene fathomes, and were come to the Banke of *Virginia*, and could not ſee the Land. Wee kept ſounding, and ſteered away North, and came to eight fathomes, and Anchored there; for the wind was at Eaſt South-eaſt, ſo that wee could not get off. For the Coaſt lyeth along South South-weſt, and North North-eaſt. At noone our height was 37. degrees 15. minutes. And wee found that we were returned to the ſame place, from whence we were put off at our firſt ſeeing Land.

The Banke of *Virginia*.

The Coaſt lyeth South South-weſt, and North North-weſt.

Latitude 37. degrees 15. minutes.

The ſeuen and twentieth, faire weather and very hot, the winde at Eaſt South-eaſt. In the morning as ſoone as the Sunne was vp, wee looked out and had ſight of the Land. Then wee weighed, and ſtood in North-weſt two Glaſſes, and found the Land to bee the place, from whence wee put off firſt. So wee kept our loofe, and ſteered along the Land, and had the Banke lye all along the ſhoare; and wee had in two leagues off the ſhoare, fiue, ſixe, ſeuen, eight, nine, and ten fathomes. The Coaſt lyeth South South-weſt, and is a white Sandie ſhoare, and ſheweth full of Bayes and Points. The ſtreame ſetteth Weſt South-weſt, and Eaſt North-eaſt. At ſixe of the clocke at night, wee were thwart of an Harbour or Riuer, but we ſaw a Barre lye before it; and all within the Land to the Northward, the water ranne with many Ilands in it. At ſixe of the clocke we Anchored, and ſent our Boate to ſound to the ſhoare-ward, and found no leſſe then foure and a halfe, fiue, ſixe, and ſeuen fathomes.

This agreeth with *Robert Tyndall*.

The eight and twentieth, faire and hot weather, the winde at South South-weſt. In the morning at ſixe of the clocke wee weighed, and ſteered away North twelue leagues till noone, and came to the Point of the Land; and being hard by the Land in fiue fathomes, on a ſudden wee came into three fathomes; then we beare vp and had but ten foote water, and ioyned to the Point. Then as ſoone as wee were ouer, wee had fiue, ſixe, ſeuen, eight, nine, ten, twelue, and thirteene fathomes. Then wee found the Land to trend away North-weſt, with a great Bay and Riuers. But the Bay wee found ſhoald; and in the offing wee had ten fathomes, and had ſight of Breaches and drie Sand. Then wee were forced to ſtand backe againe; ſo we ſtood backe South-eaſt by South, three leagues. And at ſeuen of the clocke wee Anchored in eight fathomes water; and found a Tide ſet to the North-weſt, and North North-weſt, and it riſeth one fathome, and floweth South South-eaſt. And hee that will throughly Diſcouer this great Bay, muſt haue a ſmall Pinnaſſe, that muſt draw but foure or fiue foote water, to ſound before him. At fiue in the morning wee weighed, and ſteered away to the Eaſtward on many courſes, for the Norther Land is full of ſhoalds. Wee were among them, and once wee ſtrooke, and wee went away; and ſteered away to the South-eaſt. So wee had two, three, foure, fiue, ſixe, and ſeuen fathomes, and ſo deeper and deeper.

The Point of the Land.

A great Bay and Riuers.

A ſmall Shallop needfull.

The Norther Land is full of ſhoalds.

The nine and twentieth, faire weather, with ſome Thunder and ſhowers, the winde ſhifting betweene the South South-weſt, and the North North-weſt. In the morning wee weighed at the breake of day, and ſtood toward the Norther Land, which we found to bee all Ilands to our ſight, and great ſtormes from them, and are ſhoald three leagues off. For we comming by them, had but ſeuen, ſixe, fiue, foure, three, and two fathoms and a halfe, and ſtrooke ground with our Rudder, we ſteered off South-weſt, one Glaſſe, and had fiue fathoms. Then wee ſteered South-eaſt three Glaſſes, then wee found ſeuen fathomes, and ſteered North-eaſt by Eaſt, foure leagues, and came to twelue and thirteene fathoms. At one of the clocke, I went to the top-maſt

Many Ilands.

They ſtrike.

Digitized by Google

maſt head, and ſet the Land, and the bodie of the Ilands did beare North-weſt by North. And at foure of the clocke, wee had gone foure leagues East South-east, and North-east by East, and found but ſeuen fathoms, and it was calme, ſo we Anchored. Then I went againe to the top-maſt head, to ſee how farre I could ſee Land about vs, and could ſee no more but the Ilands. And the Souther point of them did beare North-weſt by Weſt, eight leagues off. So wee rode till mid-night. Then the winde came to the North North-weſt, ſo wee waighed and ſet ſayle.

The thirtieth, in the morning betweene twelue and one, we weighed, and ſtood to the Eaſtward, the winde at North North-weſt, wee ſteered away and made our way East South-east. From our weighing till noone, eleuen leagues. Our ſoundings were eight, nine, ten, eleuen, twelue, and thirteene fathomes till day. Then we came to eighteene, nineteene, twentie, and to fixe and twentie fathoms by noone. Then I obſerued the Sunne, and found the height to bee 39. degrees 5. minutes, and ſaw no Land. In the after-noone, the winde came to North by Weſt; So wee lay cloſe by with our fore-ſayle: and our mayne-ſayle, and it was little winde vntill twelue of the clocke at mid-night, then wee had a gale a little while. Then I ſounded, and all the night our ſoundings were thirtie, and fixe and thirtie fathomes, and wee went little. Latitude 39. degrees 5. minutes.

The one and thirtieth, faire weather and little wind. At ſixe of the clocke in the morning we caſt about to the Northward, the wind being at the North-eaſt, little wind. At noone it fell calme, and I found the height to bee 38. degrees 39. minutes. And the ſtreames had deceiued vs, and our ſounding was eight and thirtie fathoms. In the afternoone I ſounded againe, and had but thirtie fathoms. So we found that we were heaued too and fro with the ſtreames of the Tide, both by our obſeruations and our depths. From noone till foure of the clocke in the after-noone, it was calme. At ſixe of the clocke wee had a little gale Southerly, and it continued all night, ſometimes calme, and ſometimes a gale; wee went eight leagues from noone to noone, North by East. Latitude 38. degrees 39. minutes. Deceitfull ſtreames.

The firſt of September, faire weather, the wind variable betweene East and South, we ſteered away North North-weſt. At noone we found our height to bee 39. degrees 3. minutes. Wee had ſoundings thirtie, twentie ſeuen, twentie foure, and twentie two fathomes, as wee went to the Northward. At ſixe of the clocke wee had one and twentie fathomes. And all the third watch till twelue of the clocke at mid-night, we had ſoundings one and twentie, two and twentie, eighteene, two and twentie, one and twentie, eighteene, and two and twentie fathoms, and went ſixe leagues neere hand North North-weſt. September. Latitude 39. degrees 3. minutes.

The ſecond, in the morning cloſe weather, the winde at South in the morning; from twelue vntill two of the clocke we ſteered North North-weſt, and had ſounding one and twentie fathoms, and in running one Glaſſe we had but ſixteene fathoms, then ſeuenteene, and ſo ſhoalder and ſhoalder vntill it came to twelue fathoms. We ſaw a great Fire, but could not ſee the Land, then we came to ten fathoms, whereupon we brought our tackes aboord, and ſtood to the Eaſtward East South-east, foure Glaſſes. Then the Sunne aroſe, and we ſteered away North againe, and ſaw the Land from the Weſt by North, to the North-weſt by North, all like broken Ilands, and our ſoundings were eleuen and ten fathoms. Then wee looft in for the ſhoare, and faire by the ſhoare, we had ſeuen fathoms. The courſe along the Land we found to be North-east by North. From the Land which we had firſt ſight of, vntill we came to a great Lake of water, as wee could iudge it to bee, being drowned Land, which made it to riſe like Ilands, which was in length ten leagues. The mouth of that Lake hath many ſhoalds, and the Sea breaketh on them as it is caſt out of the mouth of it. And from that Lake or Bay, the Land lyeth North by East, and wee had a great ſtreame out of the Bay; and from thence our ſounding was ten fathoms, two leagues from the Land. At fiue of the clocke we Anchored, being little winde, and rode in eight fathoms water, the night was faire. This night I found the Land to hall the Compaſſe 8. degrees. For to the Northward off vs we ſaw high Hils. For the day before we found not aboue 2. degrees of Variation. This is a very good Land to fall with, and a pleaſant Land to ſee. The Land like broken Ilands. The courſe along the Land from the mouth of one Riuer, to the mouth of the Norther Bay or Lake. Variation 8. degrees neere the Hills. 2. degrees variation off at Sea.

The third, the morning myſtie vntill ten of the clocke, then it cleered, and the wind came to the South South-east, ſo wee weighed and ſtood to the Northward. The Land is very pleaſant and high, and bold to fall withall. At three of the clocke in the afeer-noone, wee came to three great Riuers. So we ſtood along to the Northermoſt, thinking to haue gone into it, but we found it to haue a very ſhoald barre before it, for we had but ten foot water. Then wee caſt about to the Southward, and found two fathoms, three fathoms, and three and a quarter, till we came to the Souther ſide of them, then we had fiue and ſixe fathoms, and Anchored. So wee ſent in our Boate to ſound, and they found no leſſe water then foure, fiue, ſixe, and ſeuen fathoms, and returned in an houre and a halfe. So wee weighed and went in, and rode in fiue fathoms, Ozie ground, and ſaw many Salmons, and Mullets, and Rayes very great. The height is 40. degrees 30. minutes. High and a bold ſhoare. Three great Riuers. The Northermoſt barred. An excellent Riuer. Latitude 40. degrees 30. minutes.

The fourth, in the morning as ſoone as the day was light, wee ſaw that it was good riding

Digitized by Google

A very good Harbour.

farther vp. So we ſent our Boate to ſound, and found that it was a very good Harbour; and foure and fiue fathoms, two Cables length from the ſhoare. Then we weighed and went in with our ſhip. Then our Boate went on Land with our Net to Fiſh, and caught ten great Mullets, of a foot and a halfe long a peece, and a Ray as great as foure men could hale into the ſhip. So wee trimmed our Boate and rode ſtill all day. At night the wind blew hard at the North-weſt, and our Anchor came home, and wee droue on ſhoare, but tooke no hurt, thanked bee God, for the ground is ſoft ſand and Oze. This day the people of the Countrey came aboord of vs, ſeeming very glad of our comming, and brought greene Tabacco, and gaue vs of it for Kniues and Beads. They goe in Deere skins looſe, well dreſſed. They haue yellow Copper. They deſire Cloathes, and are very ciuill. They haue great ſtore of Maiz or *Indian* Wheate, whereof they make good Bread. The Countrey is full of great and tall Oakes.

The people of the Countrey come aboord, they are very ciuill.

Yellow Copper.

Tall Oakes.

The great Bay in 40. degrees and 30. minuts.

The fifth, in the morning as ſoone as the day was light, the wind ceaſed and the Flood came. So we heaued off our ſhip againe into fiue fathoms water, and ſent our Boate to ſound the Bay, and we found that there was three fathoms hard by the Souther ſhoare. Our men went on Land there, and ſaw great ſtore of Men, Women and Children, who gaue them Tabacco at their comming on Land. So they went vp into the Woods, and ſaw great ſtore of very goodly Oakes, and ſome Currants. For one of them came aboord and brought ſome dryed, and gaue me ſome, which were ſweet and good. This day many of the people came aboord, ſome in Mantles of Feathers, and ſome in Skinnes of diuers ſorts of good Furres. Some women alſo came to vs with Hempe. They had red Copper Tabacco pipes, and other things of Copper they did weare about their neckes. At night they went on Land againe, ſo wee rode very quiet, but durſt not truſt them.

Dryed Currants.

Mantles of Feathers, Furs, Hempe.

Another Riuer foure leagues to the Northward.

A narrow Riuer to the Weſtward.

The ſixth, in the morning was faire weather, and our Maſter ſent *Iohn Colman*, with foure other men in our Boate ouer to the North-ſide, to ſound the other Riuer, being foure leagues from vs. They found by the way ſhoald water two fathoms; but at the North of the Riuer eighteen, and twentie fathoms, and very good riding for Ships; and a narrow Riuer to the Weſtward betweene two Ilands. The Lands they told vs were as pleaſant with Graſſe and Flowers, and goodly Trees, as euer they had ſeene, and very ſweet ſmells came from them. So they went in two leagues and ſaw an open Sea, and returned; and as they came backe, they were ſet vpon by two Canoes, the one hauing twelue, the other fourteene men. The night came on, and it began to rayne, ſo that their Match went out; and they had one man ſlaine in the fight, which was an *Engliſh*-man, named *Iohn Colman*, with an Arrow ſhot into his throat, and two more hurt. It grew ſo darke that they could not find the ſhip that night, but labored too and fro on their Oares. They had ſo great a ſtreame, that their grapnell would not hold them.

Colman ſlaine, and two more hurt.

The ſeuenth, was faire, and by ten of the clocke they returned aboord the ſhip, and brought our dead man with them, whom we carryed on Land and buryed, and named the point after his name, *Colmans* Point. Then we hoyſed in our Boate, and raiſed her ſide with waſte boords for defence of our men. So we rode ſtill all night, hauing good regard to our Watch.

Colmans Point.

The eight, was very faire weather, wee rode ſtill very quietly. The people came aboord vs, and brought Tabacco and *Indian* Wheat, to exchange for Kniues and Beades, and offered vs no violence. So we fitting vp our Boate did marke them, to ſee if they would make any ſhew of the Death of our man; which they did not.

The ninth, faire weather. In the morning, two great Canoes came aboord full of men; the one with their Bowes and Arrowes, and the other in ſhew of buying of Kniues to betray vs; but we perceiued their intent. Wee tooke two of them to haue kept them, and put red Coates on them, and would not ſuffer the other to come neere vs. So they went on Land, and two other came aboord in a Canoe: we tooke the one and let the other goe; but hee which wee had taken, got vp and leapt ouer-boord. Then we weighed and went off into the channell of the Riuer, and Anchored there all night.

Treacherous Sauages.

The tenth, faire weather, we rode ſtill till twelue of the clocke. Then we weighed and went ouer, and found it ſhoald all the middle of the Riuer, for wee could finde but two fathoms and a halfe, and three fathomes for the ſpace of a league; then wee came to three fathomes, and foure fathomes, and ſo to ſeuen fathomes, and Anchored, and rode all night in ſoft Ozie ground. The banke is Sand.

The eleuenth, was faire and very hot weather. At one of the clocke in the after-noone, wee weighed and went into the Riuer, the wind at South South-weſt, little winde. Our ſoundings were ſeuen, ſixe, fiue, ſixe, ſeuen, eight, nine, ten, twelue, thirteene, and fourteene fathomes. Then it ſhoalded againe, and came to fiue fathomes. Then wee Anchored, and ſaw that it was a very good Harbour for all windes, and rode all night. The people of the Countrey came aboord of vs, making ſhew of loue, and gaue vs Tabacco and *Indian* Wheat, and departed for that night; but we durſt not truſt them.

Good Harbour

The twelfth, very faire and hot. In the after-noone at two of the clocke wee weighed, the winde being variable, betweene the North and the North-weſt. So we turned into the Riuer two leagues and Anchored. This morning at our firſt rode in the Riuer, there came eight and twentie

Digitized by Google

twentie Canoes full of men, women and children to betray vs: but we saw their intent, and suffered none of them to come aboord of vs. At twelue of the clocke they departed. They brought with them Oysters and Beanes, whereof wee bought some. They haue great Tabacco pipes of yellow Copper, and Pots of Earth to dresse their meate in. It floweth South-east by South within. 28. Canoes full of men. Oysters and Beanes. Copper Pipes.

The thirteenth, faire weather, the wind Northerly. At seuen of the clocke in the morning, as the floud came we weighed, and turned foure miles into the Riuer. The tide being done wee anchored. Then there came foure Canoes aboord: but we suffered none of them to come into our ship. They brought great store of very good Oysters aboord, which we bought for trifles. In the night I set the variation of the Compasse, and found it to be 13. degrees. In the afternoone we weighed, and turned in with the floud, two leagues and a halfe further, and anchored all night, and had fiue fathoms soft Ozie ground, and had an high point of Land, which shewed out to vs, bearing North by East fiue leagues off vs. Variation 13 degrees.

The fourteenth, in the morning being very faire weather, the wind South-east, we sayled vp the Riuer twelue leagues, and had fiue fathoms, and fiue fathoms and a quarter lesse; and came to a Streight betweene two Points, and had eight, nine, and ten fathoms: and it trended North-east by North, one league: and wee had twelue, thirteene and fourteene fathomes. The Riuer is a mile broad: there is very high Land on both sides. Then wee went vp North-west, a league and an halfe deepe water. Then North-east by North fiue miles; then North-west by North two leagues, and anchored. The Land grew very high and Mountainous. The Riuer is full of fish. The Riuer 1 mile broad. Very high and mountainous Land.

The fifteenth, in the morning was misty vntill the Sunne arose: then it cleered. So wee weighed with the wind at South, and ran vp into the Riuer twentie leagues, passing by high Mountaines. Wee had a very good depth, as sixe, seuen, eight, nine, ten, twelue, and thirteene fathoms, and great store of Salmons in the Riuer. This morning our two Sauages got out of a Port and swam away. After we were vnder sayle, they called to vs in scorne. At night we came to other Mountaines, which lie from the Riuers side. There wee found very louing people, and very old men: where wee were well vsed. Our Boat went to fish, and caught great store of very good fish. Very louing people.

The sixteenth, faire and very hot weather. In the morning our Boat went againe to fishing, but could catch but few, by reason their Canoes had beene there all night. This morning the people came aboord, and brought vs eares of *Indian* Corne, and Pompions, and Tabacco: which wee bought for trifles. Wee rode still all day, and filled fresh water; at night wee weighed and went two leagues higher, and had shoald water: so wee anchored till day. Maiz, Pompions and Tabacco.

The seuenteenth, faire Sun-shining weather, and very hot. In the morning as soone as the Sun was vp, we set sayle, and ran vp sixe leagues higher, and found shoalds in the middle of the channell, and small Ilands, but seuen fathoms water on both sides. Toward night we borrowed so neere the shoare, that we grounded: so we layed out our small anchor, and heaued off againe. Then we borrowed on the banke in the channell, and came aground againe; while the floud ran we heaued off againe, and anchored all night. Shoalds and small Ilands.

The eighteenth, in the morning was faire weather, and we rode still. In the after-noone our Masters Mate went on land with an old Sauage, a Gouernour of the Countrey; who carried him to his house, and made him good cheere. The nineteenth, was faire and hot weather: at the floud being neere eleuen of the clocke, wee weighed, and ran higher vp two leagues aboue the Shoalds, and had no lesse water then fiue fathoms: wee anchored, and rode in eight fathomes. The people of the Countrie came flocking aboord, and brought vs Grapes, and Pompions, which wee bought for trifles. And many brought vs Beuers skinnes, and Otters skinnes, which wee bought for Beades, Kniues, and Hatchets. So we rode there all night. Grapes and Pompions: Beauers and Otters skinnes.

The twentieth, in the morning was faire weather. Our Masters Mate with foure men more went vp with our Boat to sound the Riuer, and found two leagues aboue vs but two fathomes water, and the channell very narrow; and aboue that place seuen or eight fathomes. Toward night they returned: and we rode still all night. The one and twentieth, was faire weather, and the wind all Southerly: we determined yet once more to goe farther vp into the Riuer, to trie what depth and breadth it did beare; but much people resorted aboord, so wee went not this day. Our Carpenter went on land, and made a Fore-yard. And our Master and his Mate determined to trie some of the chiefe men of the Countrey, whether they had any treacherie in them. So they tooke them downe into the Cabbin, and gaue them so much Wine and *Aqua vita*, that they were all merrie: and one of them had his wife with him, which sate so modestly, as any of our Countrey women would doe in a strange place. In the end one of them was drunke, which had beene aboord of our ship all the time that we had beene there; and that was strange to them; for they could not tell how to take it. The Canoes and folke went all on shoare: but some of them came againe, and brought stropes of Beades: some had sixe, seuen, eight, nine, ten; and gaue him. So he slept all night quietly.

The two and twentieth, was faire weather: in the morning our Masters Mate and foure more

Digitized by Google

of the companie went vp with our Boat to ſound the Riuer higher vp. The people of the Countrey came not aboord till noone: but when they came, and ſaw the Sauages well, they were glad. So at three of the clocke in the after-noone they came aboord, and brought Tabacco, and more Beades, and gaue them to our Maſter, and made an Oration, and ſhewed him all the Countrey round about. Then they ſent one of their companie on land, who preſently returned, and brought a great Platter full of Veniſon, dreſſed by themſelues; and they cauſed him to eate with them: then they made him reuerence, and departed all ſaue the old man that lay aboord. This night at ten of the clocke, our Boat returned in a ſhowre of raine from ſounding of the Riuer; and found it to bee at an end for ſhipping to goe in. For they had beene vp eight or nine leagues, and found but ſeuen foot water, and vnconſtant ſoundings.

Oration.

End of the Riuers Nauigableneſſe.

The three and twentieth, faire weather. At twelue of the clocke wee weighed, and went downe two leagues to a ſhoald that had two channels, one on the one ſide, and another on the other, and had little wind, whereby the tide layed vs vpon it. So, there wee ſate on ground the ſpace of an houre till the floud came. Then we had a little gale of wind at the Weſt. So wee got our ſhip into deepe water, and rode all night very well.

They returne downe the Riuer.

The foure and twentieth was faire weather: the winde at the North-weſt, wee weighed, and went downe the Riuer ſeuen or eight leagues; and at halfe ebbe wee came on ground on a banke of Oze in the middle of the Riuer, and ſate there till the floud. Then wee went on Land, and gathered good ſtore of Cheſt-nuts. At ten of the clocke wee came off into deepe water, and anchored.

Store of Cheſt-nuts.

The fiue and twentieth was faire weather, and the wind at South a ſtiffe gale. We rode ſtill, and went on Land to walke on the Weſt ſide of the Riuer, and found good ground for Corne, and other Garden herbs, with great ſtore of goodly Oakes, and Wal-nut trees, and Cheſt-nut trees, Ewe trees, and trees of ſweet wood in great abundance, and great ſtore of Slate for houſes, and other good ſtones.

Okes, Wal-nut trees, Cheſt-nut trees, Ewe trees, Cedar trees, &c.

The ſixe and twentieth was faire weather, and the wind at South a ſtiffe gale, wee rode ſtill. In the morning our Carpenter went on Land with our Maſters Mate, and foure more of our companie to cut wood. This morning, two Canoes came vp the Riuer from the place where we firſt found louing people, and in one of them was the old man that had lyen aboord of vs at the other place. He brought another old man with him, which brought more ſtropes of Beades, and gaue them to our Maſter, and ſhewed him all the Countrey there about, as though it were at his command. So he made the two old men dine with him, and the old mans wife: for they brought two old women, and two young maidens of the age of ſixteene or ſeuenteene yeeres with them, who behaued themſelues very modeſtly. Our Maſter gaue one of the old men a Knife, and they gaue him and vs Tabacco. And at one of the clocke they departed downe the Riuer, making ſignes that wee ſhould come downe to them; for wee were within two leagues of the place where they dwelt.

The ſeuen and twentieth, in the morning was faire weather, but much wind at the North, we weighed and ſet our fore top-ſayle, and our ſhip would not flat, but ran on the Ozie banke at halfe ebbe. Wee layed out anchor to heaue her off, but could not. So wee ſate from halfe ebbe to halfe floud: then wee ſet our fore-ſayle and mayne top-ſayle, and got downe ſixe leagues. The old man came aboord, and would haue had vs anchor, and goe on Land to eate with him: but the wind being faire, we would not yeeld to his requeſt; So hee left vs, being very ſorrowfull for our departure. At fiue of the clocke in the after-noone, the wind came to the South South-weſt. So wee made a boord or two, and anchored in fourteene fathomes water. Then our Boat went on ſhoare to fiſh right againſt the ſhip. Our Maſters Mate and Boat-ſwaine, and three more of the companie went on land to fiſh, but could not finde a good place. They tooke foure or fiue and twentie Mullets, Breames, Baſes, and Barbils; and returned in an houre. We rode ſtill all night.

The eight and twentieth, being faire weather, as ſoone as the day was light, wee weighed at halfe ebbe, and turned downe two leagues belowe water; for, the ſtreame doth runne the laſt quarter ebbe: then we anchored till high water. At three of the clocke in the after-noone we weighed, and turned downe three leagues, vntill it was darke: then wee anchored.

The nine and twentieth was drie cloſe weather: the wind at South, and South and by Weſt, we weighed early in the morning, and turned downe three leagues by a lowe water, and anchored at the lower end of the long Reach; for it is ſixe leagues long. Then there came certaine *Indians* in a Canoe to vs, but would not come aboord. After dinner there came the Canoe with other men, whereof three came aboord vs. They brought *Indian* Wheat, which wee bought for trifles. At three of the clocke in the after-noone wee weighed, as ſoone as the ebbe came, and turned downe to the edge of the Mountaines, or the Northermoſt of the Mountaines, and anchored: becauſe the high Land hath many Points, and a narrow channell, and hath many eddie winds. So we rode quietly all night in ſeuen fathoms water.

Mountaines.

The thirtieth was faire weather, and the wind at South-eaſt a ſtiffe gale betwene the Mountaynes. We rode ſtill the after-noone. The people of the Countrey came aboord vs, and brought

ſome

Digitized by Google

some small skinnes with them, which we bought for Knives and Trifles. This a very pleasant place to build a Towne on. The Road is very neere, and very good for all winds, saue an East North-east wind. The Mountaynes looke as if some Metall or Minerall were in them. For the Trees that grow on them were all blasted, and some of them barren with few or no Trees on them. The people brought a stone aboord like to Emery (a stone vsed by Glasiers to cut Glasse) it would cut Iron or Steele: Yet being bruised small, and water put to it, it made a colour like blacke Lead glistering; It is also good for Painters Colours. At three of the clocke they departed, and we rode still all night.

Small skins. A pleasant place to build a Towne on.

Likelihood of Minerals.

The first of October, faire weather, the wind variable betweene the West and the North. In the morning we weighed at seuen of the clocke with the ebbe, and got downe below the Mountaynes, which was seuen leagues. Then it fell calme and the flood was come, and wee anchored at twelue of the clocke. The people of the Mountaynes came aboord vs, wondring at our ship and weapons. We bought some small skinnes of them for Trifles. This after-noone, one Canoe kept hanging vnder our sterne with one man in it, which we could not keepe from thence, who got vp by our Rudder to the Cabin window, and stole out my Pillow, and two Shirts, and two Bandeleeres. Our Masters Mate shot at him, and strooke him on the brest, and killed him. Whereupon all the rest fled away, some in their Canoes, and so leapt out of them into the water. We manned our Boat, and got our things againe. Then one of them that swamme got hold of our Boat, thinking to ouerthrow it. But our Cooke tooke a Sword, and cut off one of his hands, and he was drowned. By this time the ebbe was come, and we weighed and got downe two leagues, by that time it was darke. So we anchored in foure fathomes water, and rode well.

October.

The second, faire weather. At breake of day wee weighed, the wind being at North-west, and got downe seuen leagues; then the flood was come strong, so we anchored. Then came one of the Sauages that swamme away from vs at our going vp the Riuer with many other, thinking to betray vs. But wee perceiued their intent, and suffered none of them to enter our ship. Whereupon two Canoes full of men, with their Bowes and Arrowes shot at vs after our sterne: in recompence whereof we discharged sixe Muskets, and killed two or three of them. Then aboue an hundred of them came to a point of Land to shoot at vs. There I shot a Falcon at them, and killed two of them: whereupon the rest fled into the Woods. Yet they manned off another Canoe with nine or ten men, which came to meet vs. So I shot at it also a Falcon, and shot it through, and killed one of them. Then our men with their Muskets, killed three or foure more of them. So they went their way, within a while after, wee got downe two leagues beyond that place, and anchored in a Bay, cleere from all danger of them on the other side of the Riuer, where we saw a very good piece of ground: and hard by it there was a Cliffe, that looked of the colour of a white greene, as though it were either Copper, or Siluer Myne: and I thinke it to be one of them, by the Trees that grow vpon it. For they be all burned, and the other places are greene as grasse, it is on that side of the Riuer that is called *Manna-hata*. There we saw no people to trouble vs: and rode quietly all night, but had much wind and raine.

Treacherie of these Sauages. A skirmish and slaughter of the Sauages.

A Myne of Copper or Siluer.

The Country of *Manna-hata*.

The third, was very stormie, the wind at East North-east. In the morning, in a gust of wind and raine our Anchor came home, and we droue on ground, but it was Ozie. Then as we were about to haue out an Anchor, the wind came to the North North-west, and droue vs off againe. Then we shot an Anchor, and let it fall in foure fathomes water, and weighed the other. Wee had much wind and raine, with thicke weather: so we roade still all night.

The fourth, was faire weather, and the wind at North North-west, wee weighed and came out of the Riuer, into which we had runne so farre. Within a while after, wee came out also of *The great mouth of the great Riuer*, that runneth vp to the North-west, borrowing vpon the Norther side of the same, thinking to haue deepe water: for wee had sounded a great way with our Boat at our first going in, and found seuen, six, and fiue fathomes. So we came out that way, but we were deceiued, for we had but eight foot & an halfe water: and so to three, fiue, three, and two fathomes and an halfe. And then three, foure, fiue, sixe, seuen, eight, nine and ten fathomes. And by twelue of the clocke we were cleere of all the Inlet. Then we tooke in our Boat, and set our mayne-sayle and sprit-sayle, and our top-sayles, and steered away East South-east, and South-east by East off into the mayne sea: and the Land on the Souther-side of the Bay or Inlet, did beare at noone West and by South foure leagues from vs.

The great mouth of the great Riuer.

They leaue the Coast of *Virginia*.

The fift, was faire weather, and the wind variable betweene the North and the East. Wee held on our course South-east by East. At noone I obserued and found our height to bee 39. degrees 30. minutes. Our Compasse varied sixe degrees to the West.

We continued our course toward *England*, without seeing any Land by the way, all the rest of this moneth of October: And on the seuenth day of Nouember, *stilo nouo*, being Saturday: by the Grace of God we safely arriued in the Range of *Dartmouth* in *Deuonshire*, in the yeere 1609.

CHAP.

CHAP. XVII.

An Abstract of the Iournall of Master HENRY HVDSON, *for the Discouerie of the North-west Passage, begunne the seuenteenth of Aprill,* 1610. *ended with his end, being treacherously exposed by some of the Companie.*

Aprill 17. THE seuenteenth of Aprill, 1610. we brake ground, and went downe from Saint *Katharines* Poole, and fell downe to *Blacke-wall*: and so plyed downe with the ships to *Lee*, which was the two and twentieth day.

The two and twentieth, I causeд Master *Coleburne* to bee put into a Pinke, bound for *London*, with my Letter to the Aduenturers, importing the reason wherefore I so put him out of the ship, and so plyed forth.

May. The second of May, the wind Southerly, at Eeuen we were thwart of *Flamborough* Head.

The Iles of *Orkney*. The fift, we were at the Iles of *Orkney*, and here I set the North end of the Needle, and the North of the Flie all one.

Note. The sixt, wee were in the latitude of 59. degrees 22. minutes, and there perceiued that the North end of *Scotland*, *Orney*, and *Shetland* are not so Northerly, as is commonly set downe.

Farre Ilands 62 degrees 24. minutes. The eight day, wee saw *Farre* Ilands, in the latitude of 62. degrees 24. minutes. The eleuenth day, we fell with the Easter part of *Island*, and then plying along the Souther part of the Land, we came to *Westmony*, being the fifteenth day, and still plyed about the mayne Iland, vntill the last of May with contrary winds, and we got some Fowles of diuers sorts.

Westmony.

Iune. The first day of Iune, we put to Sea out of an Harbour, in the Westermost part of *Island*, and so plyed to the Westward in the latitude of 66. degrees 34. minutes, and the second day plyed and found our selues in 65. degrees 57. minutes, with little wind Easterly.

The third day, wee found our selues in 65. degrees 30. minutes, with winde at North-east, a little before this we sayled neere some Ice.

Groneland. The fourth day, we saw *Groneland* ouer the Ice perfectly, and this night the Sunne went downe due North, and rose North North-east. So plying the fift day, we were in 65. degrees, still encombred with much Ice, which hung vpon the Coast of *Groneland*.

Frobishers Streights. The ninth day, wee were off *Frobishers* Streights with the winde Northerly, and plyed vnto the South-westwards vntill the fifteenth day.

Desolation. The fifteenth day, we were in sight of the land, in latitude 59. degrees 27. minutes, which was called by Captayne *Iohn Danis*, *Desolation*, and found the errour of the former laying downe of that Land: and then running to the North-westward vntill the twentieth day, wee found the ship in 60. degrees 42. minutes, and saw much Ice, and many Riplings or Ouer-fals, and a strong

A current West North-west. streame setting from East South-east, to West North-west.

The one and twentie, two and twentie, and three and twentie dayes, with the winde variable, we plyed to the North-westward in sight of much Ice, into the height of 62. degrees 29. minutes.

East entrance into the Streights. The foure and twentie, and fiue and twentie dayes, sayling to the West-ward about midnight, wee saw Land North, which was suddenly lost againe. So wee ranne still to the Westward in 62. degrees 17. minutes.

Iuly. The fift of Iuly, wee plyed vp vpon the Souther side, troubled with much Ice in seeking the shoare vntill the fift day of Iuly, and we obserued that day in 59. degrees 16. minutes. Then we plyed off the shoare againe, vntill the eight day, and then found the height of the Pole in 60. degrees no minutes. Here we saw the Land from the North-west by West, halfe Northerly vnto the South-west by West, couered with snow, a Champaigne Land, and called it, *Desire prouoketh*.

Desire prouoketh.

We still plyed vp to the Westward, as the Land and Ice would suffer vntill the eleuenth day; when fearing a storme, we anchored by three Rockie Ilands in vncertayne depth, betweene two and nine fathomes; and found it an Harbour vnsufficient by reason of sunken Rockes, one of which was next morning two fathomes aboue water. Wee called them the *Iles of Gods Mercies*. The water floweth here better then foure fathomes. The Floud commeth from the North, flowing eight the change day. The latitude in this place is 62. degrees 9. minutes. Then plying to the South-westward the sixteenth day, wee were in the latitude of 58. degrees 50. minutes, but found our selues imbayed with Land, and had much Ice: and we plyed to the North-westward vntill the nineteenth day, and then wee found by obseruation the height of the Pole in 61. degrees 24. minutes, and saw the Land, which I named, *Hold with Hope*. Hence I plyed to the North-westward still, vntill the one and twentieth day, with the wind variable. Heere I found the Sea more growne, then any wee had since wee left *England*.

Iles of Gods Mercies.

Hold with Hope. A mightie growne Sea.

The three and twentieth day, by obseruation the height of the Pole was 61. degrees 33. minutes,

nutes. The fiue and twentieth day, we ſaw the Land; and named it *Magna Britannia*. The ſixe and twentieth day, wee obſerued and found the latitude in 62. degrees 44. minutes. The eight and twentieth day, we were in the height of 63. degrees 10. minutes, and plyed Southerly of the Weſt. The one and thirtieth day, plying to the Weſtward, at noone wee found our ſelues in 62. degrees 24. minutes. *Magna Britannia.*

The firſt of Auguſt, we had ſight of the Northerne ſhoare, from the North by Eaſt to the Weſt by South off vs: the North part twelue leagues, and the Weſter part twentie leagues from vs: and we had no ground there at one hundred and eightie fathomes. And I thinke I ſaw Land on the Sunne ſide, but could not make it perfectly, bearing Eaſt North-eaſt. Here I found the latitude 62. degrees 50. minutes. Auguſt.

The ſecond day, we had ſight of a faire Head-land, on the Norther ſhoare ſix leagues off, which I called *Saliſburies* Fore-land: we ranne from them Weſt South-weſt, fourteene leagues: In the mid-way of which wee were ſuddenly come into a great and whurling Sea, whether cauſed by meeting of two ſtreames, or an Ouer-fall, I know not. Thence ſayling Weſt and by South ſeuen leagues farther, we were in the mouth of a Streight and ſounded, and had no ground at one hundred fathomes: the Streight being there not aboue two leagues broad, in the paſſage in this Weſter part: which from the Eaſter part of *Fretum Danis*, is diſtant two hundred and fiftie leagues there abouts. *Saliſburies* fore-land: A great and whurling Sea: A Streight which led vs into the deepe Bay of *Gods great Mercies.*

The third day, we put through the narrow paſſage, after our men had beene on Land, which had well obſerued there, *That the Flood did come from the North*, flowing by the ſhoare fiue fathomes. The head of this entrance on the South ſide, I named Cape *Worſenholme*; and the head on the North-weſter ſhoare, I called Cape *Digs*. After wee had ſailed with an Eaſterly winde, Weſt and by South ten leagues, the Land fell away to the Southward, and the other Iles and Land left vs to the Weſtward. Then I obſerued and found the ſhip at noone in 61. degrees 20. minutes, and a Sea to the Weſtward. Cape *Worſenholme.* Cape *Digs.*

A larger Diſcourſe of the ſame Voyage, and the ſucceſſe thereof, written by ABACVK PRICKET.

WE began our Voyage for the North-weſt paſſage; the ſeuenteenth of Aprill, 1610. Thwart of *Shepey*, our Maſter ſent Maſter *Colbert* backe to the Owners with his Letter. The next day we weighed from hence, and ſtood for *Harwich*, and came thither the eight and twentieth of Aprill. From *Harwich* we ſet ſayle the firſt of May, along the Coaſt to the North, till we came to the Iles of *Orkney*, from thence to the Iles of *Faro*, and from thence to *Iſland*: on which we fell in a fogge, hearing the Rut of the Sea aſhoare, but ſaw not the Land whereupon our Maſter came to an Anchor. Heere we were embayed in the South-eaſt part of the Land. Wee weighed and ſtood along the Coaſt, on the Weſt ſide towards the North: but one day being calme, we fell a fiſhing, and caught good ſtore of fiſh, as Cod and Ling, and Butte, with ſome other ſorts that we knew not. The next day, we had a good gale of wind at South-weſt, and rayſed the Iles of *Weſtmonie*, where the King of *Denmarke* hath a Fortreſſe, by which we paſſed to rayſe the *Snow Hill* foot, a Mountayne ſo called on the North-weſt part of the Land. But in our courſe we ſaw that famous Hill, Mount *Hecla*, which caſt out much fire, a ſigne of foule weather to come in ſhort time. Wee leaue *Iſland* a ſterne of vs, and met a Mayne of Ice, which did hang on the North part of *Iſland*, and ſtretched downe to the Weſt, which when our Maſter ſaw, he ſtood backe for *Iſland* to find an Harbour, which we did on the North-weſt part, called * *Dereſer*, where wee killed good ſtore of Fowle. From hence wee put to Sea againe, but (neither wind nor weather ſeruing) our Maſter ſtood backe for this Harbour againe, but could not reach it, but fell with another to the South of that, called by our *Engliſhmen*, *Louſie* Bay: where on the ſhoare we found an hot Bath, and heere all our *Engliſhmen* bathed themſelues: the water was ſo hot that it would ſcald a Fowle. *Orkney.* *Farre* Iles. *Iſland.* The South-eaſt part of *Iſland.* *Weſtmonie* Iland. Mount *Hecla* caſteth out fire. A mayne of Ice. * Or *Diraforde.* *Louſie* Bay. An hot Bath.

From hence the firſt of Iune we put to Sea for *Groneland*, but to the Weſt wee ſaw Land as we thought, for which we beare the beſt part of a day, but it proued but a foggie banke. So wee gaue it ouer, and made for *Gronland*, which we rayſed the fourth of Iune. Vpon the Coaſt thereof hung good ſtore of Ice, ſo that our Maſter could not attayne to the ſhoare by any meanes. The Land in this part is very Mountaynous, and full of round Hils, like to Sugar-loaues, couered with ſnow. We turned the Land on the South ſide, as neere as the Ice would ſuffer vs. Our courſe for the moſt part was betweene the Weſt and North-weſt, till we rayſed the *Deſolations*, which is a great Iland in the Weſt part of *Groneland*. On this Coaſt we ſaw ſtore of Whales, and at one time three of them came cloſe by vs, ſo as wee could hardly ſhunne them: then two paſſing very neere, and the third going vnder our ſhip, wee receiued no harme by them, prayſed bee God. The firſt of Iune. Iland of *Deſolation.* Store of Whales.

From the *Deſolations* our Maſter made his way North-weſt, the wind being againſt him, who elſe

elſe would haue gone more to the North: but in this courſe we ſaw the firſt great Iland or Mountayne of Ice, whereof after we ſaw ſtore. About the latter end of Iune, we rayſed Land to the North of vs, which our Maſter tooke to bee that Iland which Maſter *Danis* ſetteth downe in his Chart. On the Weſt ſide of his Streight, our Maſter would haue gone to the North of it, but the wind would not ſuffer him: ſo we fell to the South of it, into a great Rippling or ouerfall of current, the which ſetteth to the Weſt. Into the current we went, and made our way to the North of the Weſt, till we met with Ice which hung on this Iland. Wherefore our Maſter caſting about, cleered himſelfe of this Ice, and ſtood to the South, and then to the Weſt, through ſtore of floting Ice, and vpon the Ice ſtore of Seales. We gained a cleere Sea, and continued our courſe till wee meete Ice; firſt, with great Ilands, and then with ſtore of the ſmaller ſort. Betweene them we made our courſe North-weſt, till we met with Ice againe. But, in this our going betweene the Ice, we ſaw one of the great Ilands of Ice ouerturne, which was a good warning to vs, not to come nigh them, nor within their reach. Into the Ice wee put ahead, as betweene two Lands. The next day we had a ſtorme, and the wind brought the Ice ſo faſt vpon vs, that in the end we were driuen to put her into the chiefeſt of the Ice, and there to let her lie. Some of our men this day fell ſicke, I will not ſay it was for feare, although I ſaw ſmall ſigne of other griefe.

Iland of Ice ouerturneth.

Danger by Ice.

The ſtorme ceaſing, we ſtood out of the Ice, where wee ſaw any cleere Sea to goe to: which was ſometime more, and ſometime leſſe. Our courſe was as the Ice did lye, ſometime to the North, then to the North-weſt, and then to the Weſt, and to the South-weſt: but ſtill incloſed with Ice. Which when our Maſter ſaw, he made his courſe to the South, thinking to cleere himſelfe of the Ice that way: but the more he ſtroue, the worſe he was, and the more incloſed, till we could goe no further. Here our Maſter was in deſpaire, and (as he told me after) he thought he ſhould neuer haue got out of this Ice, but there haue periſhed. Therefore hee brought forth his Card, and ſhewed all the company, that hee was entred aboue an hundred leagues further then euer any *Engliſh* was: and left it to their choice, whether they would proceed any further; yea, or nay. Whereupon, ſome were of one minde, and ſome of another, ſome wiſhing themſelues at home, and ſome not caring where, ſo they were out of the Ice: but there were ſome who then ſpake words, which were remembred a great while after.

Hudſon entred 100. leagues further then any had been.

Diſcontents.

There was one who told the Maſter, that if he had an hundred pounds, hee would giue foure-ſcore and ten to be at home: but the Carpenter made anſwere, that if hee had an hundred, hee would not giue ten vpon any ſuch condition, but would thinke it to be as good money as euer he had any, and to bring it as well home, by the leaue of God. After many words to no purpoſe, to worke we muſt on all hands, to get our ſelues out, and to cleere our ſhip. After much labour and time ſpent, we gained roome to turne our ſhip in, and ſo by little and little, to get cleere in the Sea a league or two off, our courſe being North and North-weſt.

Deſire prouokes.

In the end, we rayſed Land to the South-weſt, high Land and couered with Snow. Our Maſter named this Land, *Deſire prouokes.* Lying here, wee heard the noyſe of a great ouer-fall of a tyde, that came out of the Land: for now we might ſee well, that wee had beene embayed before, and time had made vs know, being ſo well acquainted with the Ice, that when night, or foggie, or foule weather tooke vs, we would ſeeke out the broadeſt Iland of Ice, and there come to anchor and runne, and ſport, and fill water that ſtood on the Ice in Ponds, both ſweete and good. But after we had brought this Land to beare South of vs, we had the tyde and the current to open the Ice, as being carried firſt one way, and then another: but in Bayes they lye as in a pond without mouing. In this Bay where wee were thus troubled with Ice, wee ſaw many of thoſe Mountaynes of Ice aground, in ſixe or ſeuenſcore fathome water. In this our courſe we ſaw a Beare vpon a piece of Ice by it ſelfe, to the which our men gaue chaſe with their Boat: but before they came nigh her, the tyde had carried the Ice and the Beare on it, and ioyned it with the other Ice: ſo they loſt their labour, and came aboord againe.

Exerciſes of pleaſure and profit on the Ice.

Difference of Tydes and Bayes.

Ice aboue 100. fathome.

We continued our courſe to the North-weſt, and rayſed Land to the North of our courſe, toward which we made, and comming nigh it, there hung on the Eaſtermoſt point, many Ilands of floting Ice, and a Beare on one of them, which from one to another came towards vs, till ſhe was readie to come aboord. But when ſhe ſaw vs looke at her, ſhe caſt her head betweene her hinder legges, and then diued vnder the Ice: and ſo from one piece to another, till ſhe was out of our reach. We ſtood along by the Land on the Southſide ahead of vs, wee met with Ice that hung on a point of Land that lay to the South, more then this that we came vp by: which when our Maſter ſaw, he ſtood in for the ſhoare. At the Weſt end of this Iland (for ſo it is) we found an Harbour, and came in (at a full Sea) ouer a Rocke, which had two fathome and an halfe on it, and was ſo much bare at a low water. But by the great mercie of God, we came to an Anchor cleere of it: and cloſe by it, our Maſter named them, the *Iles of Gods Mercie.* This is an Harbour for need, but there muſt be care had how they come in. Heere our Maſter ſent me, and others with me, to diſcouer to the North and North-weſt: and in going from one place to another, we ſprung a Couey of Partridges which were young: at the which *Thomas Woodhouſe* ſhot, but killed only the old one. This Iland is a moſt barren place, hauing nothing on it but

A dangerous Rocke.

Iles of Gods Mercie.

Partridges.

plaſhes

plaſhes of water and riuen Rockes, as if it were ſubiect to Earthquakes. To the North there is a great Bay, or Sea (for I know not what it will proue) where I ſaw a great Iland of Ice aground, betweene the two Lands, which with the Spring-tide was ſet afloat, and carried into this Bay or Sea to the North-weſtward, but came not backe againe, nor within ſight. Here wee tooke in ſome Drift wood that we found aſhoare. Drift-wood.

From hence we ſtood to the South-weſt, to double the Land to the Weſt of vs, through much floting Ice: In the end wee found a cleere Sea, and continued therein, till wee rayſed Land to the North-weſt. Then our Maſter made his courſe more to the South then before: but it was not long ere we met with Ice which lay ahead of vs. Our Maſter would haue doubled this Ice to the North, but could not; and in the end put into it downe to the South-weſt through much Ice, and then to the South, where we were embayed againe. Our Maſter ſtroue to get the ſhoare, but could not, for the great ſtore of Ice that was on the coaſt. From out of this Bay, we ſtood to the North, and were ſoone out of the Ice: then downe to the South-weſt, and ſo to the Weſt, where we were encloſed (to our ſight) with Land and Ice. For wee had Land from the South to the North-weſt on one ſide, and from the Eaſt to the Weſt on the other: but the Land that was to the North of vs, and lay by Eaſt and Weſt, was but an Iland. On we went till we could goe no further for Ice: ſo we made our ſhip faſt to the Ice which the tide brought vpon vs, but when the ebbe came, the Ice did open, and made way; ſo as in ſeuen or eight houres we were cleere from the Ice, till we came to weather; but onely ſome of the great Ilands, that were carried along with vs to the North-weſt.

Hauing a cleere Sea, our Maſter ſtood to the Weſt along by the South ſhoare, and rayſed three Capes or Head-lands, lying one aboue another. The middlemoſt is an Iland, and maketh a Bay or Harbour, which (I take) will proue a good one. Our Maſter named them Prince *Henries* Cape, or *Fore-land.* When we had layd this we raiſed another, which was the extreme point of the Land, looking towards the North: vpon it are two Hills, but one (aboue the reſt) like an Hay-cocke; which our Maſter named, King *Iames* his Cape. To the North of this, lie certaine Ilands, which our Maſter named, Queene *Annes* Cape, or *Fore-land.* Wee followed the North ſhoare ſtill. Beyond the Kings Cape there is a Sound or Bay, that hath ſome Ilands in it: and this is not to be forgotten, if need be. Beyond this, lieth ſome broken Land, cloſe to the Mayne, but what it is I know not: becauſe we paſſed by it in the night. Three Capes. Prince *Henries* Cape. King *Iames* his Cape. Queene *Annes* Cape.

We ſtood to the North to double this Land, and after to the Weſt againe, till wee fell with Land that ſtretched from the Mayne, like a ſhewer from the South to the North, and from the North to the Weſt, and then downe to the South againe. Being ſhort of this Land, a ſtorme tooke vs, the wind at Weſt, we ſtood to the North, and raiſed Land: which when our Maſter ſaw, he ſtood to the South againe; for he was loath at any time that wee ſhould ſee the North ſhoare. The ſtorme continuing, and comming to the South ſhoare againe, our Maſter found himſelfe ſhot to the Weſt, a great way, which made him muſe, conſidering his Leeward way. To the South-weſt of this Land, on the Mayne, there is an high Hill, which our Maſter named Mount *Charles.* To the North and beyond this, lieth an Iland, that to the Eaſt hath a faire head, and beyond it to the Weſt other broken Land, which maketh a Bay within, and a good Road may be found there for ſhips. Our Maſter named the firſt, Cape *Salſburie.* Note. Mount *Charles.* Cape *Salsburie.*

When we had left this to the North-eaſt, we fell into a Rippling or Ouer-fall of a Current, which (at the firſt we tooke to bee a Shoald: but the Lead being caſt, wee had no ground. On we paſſed ſtill in ſight of the South ſhoare, till we raiſed Land lying from the Mayne ſome two leagues. Our Maſter tooke this to bee a part of the Mayne of the North Land; but it is an Iland, the North ſide ſtretching out to the Weſt more then the South. This Iland hath a faire Head to the Eaſt, and very high Land, which our Maſter named *Deepes* Cape: and the Land on the South ſide, now falling away to the South, makes another Cape or Head-land, which our Maſter named, *Worſenhams* Cape. When wee were nigh the North or Iland Cape, our Maſter ſent the Boat aſhoare, with my ſelfe (who had the charge) and the Carpenter, and diuers others, to diſcouer to the Weſt and North-weſt, and to the South-weſt: but we had further to it then we thought; for the Land is very high, and we were ouer-taken with a ſtorme of Raine, Thunder and Lightning. But to it we came on the North-eaſt ſide, and vp we got from one Rocke to another, till we came to the higheſt of that part. Here we found ſome plaine ground, and ſaw ſome Deere; as firſt, foure or fiue, and after, a dozen or ſixteene in an Herd, but could not come nigh them with a Musket ſhot. *Deepes* Cape. *Worſenhams* Cape. Deere.

Thus, going from one place to another, wee ſaw to the Weſt of vs an high Hill aboue all the reſt, it being nigh vs: but it proued further off then we made account; for, when wee came to it, the Land was ſo ſteepe on the Eaſt and North-eaſt parts, that wee could not get vnto it. To the South-weſt we ſaw that wee might, and towards that part wee went along by the ſide of a great Pond of water, which lieth vnder the Eaſt ſide of this Hill: and there runneth out of it a ſtreame of water, as much as would driue an ouer-ſhot Mill; which falleth downe from an high Cliffe into the Sea on the South ſide. In this place great ſtore of Fowle breed, and there is the beſt Graſſe that I had ſeene ſince we came from *England.* Here wee found Sorell, and that Store of fowle and graſſe. Sorell and Scurvy graſſe.

which

Digitized by Google

which wee call Scuruy-graſſe, in great abundance. Paſſing along wee ſaw ſome round Hills of ſtone, like to Graſſe cockes, which at the firſt I tooke to be the worke of ſome Chriſtian. Wee paſſed by them, till we came to the South ſide of the Hill; we went vnto them, and there found more; and being nigh them, I turned off the vppermoſt ſtone, and found them hollow within, and full of Fowles hanged by their neckes. Then *Greene*, and I, went to fetch the Boat to the South ſide, while *Robert Billet* and hee got downe a Valley to the Sea ſide, where wee tooke them in.

Fowles hanged.

Our Maſter (in this time) came in betweene the two Lands, and ſhot off ſome Peeces to call vs aboord; for it was a fogge. Wee came aboord, and told him what we had ſeene, and perſwaded him to ſtay a day or two in this place, telling him what refreſhing might there bee had: but by no meanes would he ſtay, who was not pleaſed with the motion. So we left the Fowle, and loſt our way downe to the South-weſt, before they went in ſight of the Land, which now beares to the Eaſt from vs, being the ſame mayne Land that wee had all this while followed. Now, we had loſt the ſight of it, becauſe it falleth away to the Eaſt, after ſome fiue and twenty or thirty leagues. Now we came to the ſhallow water, wherewith wee were not acquainted ſince we came from *Iſland*; now we came into broken ground and Rockes, through which we paſſed downe to the South. In this our courſe we had a ſtorme, and the water did ſhoald apace. Our Maſter came to an anchor in fifteene fathoms water.

Wee weighed and ſtood to the South-eaſt, becauſe the Land in this place did lie ſo. When we came to the point of the Weſt Land (for we now had Land on both ſides of vs) we came to an anchor. Our Maſter ſent the Boat aſhoare, to ſee what that Land was, and whether there were any way through. They ſoone returned, and ſhewed that beyond the point of Land to the South, there was a large Sea. This Land on the Weſt ſide, was a very narrow Point. Wee weighed from hence, and ſtood in for this Sea betweene the two Lands, which (in this place) is not two leagues broad downe to the South, for a great way in ſight of the Eaſt ſheare. In the end we loſt ſight thereof, and ſaw it not till we came to the bottome of the Bay, into ſixe or ſeuen fathomes water. Hence we ſtood vp to the North by the Weſt ſhoare, till wee came to an Iland in 53. where we tooke in water and ballaſt.

From hence wee paſſed towards the North: but ſome two or three dayes after (reaſoning concerning our comming into this Bay, and going out) our Maſter tooke occaſion to reuiue old matters, and to diſplace *Robert Iuet* from being his Mate, and the Boat-ſwaine from his place, for words ſpoken in the firſt great Bay of Ice. Then hee made *Robert Billet* his Mate, and *William Wilſon* our Boat-ſwaine. Vp to the North wee ſtood, till we raiſed Land, then downe to the South, and vp to the North, then downe againe to the South: and on Michaelmaſſe day came in, and went out of certaine Lands: which our Maſter ſets downe by the name of *Michaelmaſſe* Bay, becauſe we came in and went out on that day. From hence wee ſtood to the North, and came into ſhoald water; and the weather being thicke and foule, wee came to an anchor in ſeuen or eight fathome water, and there lay eight dayes: in all which time wee could not get one houre to weigh our anchor. But the eight day, the wind beginning to ceaſe, our Maſter would haue the anchor vp, againſt the mind of all who knew what belonged thereunto. Well, to it we went, and when we had brought it to a peake, a Sea tooke her, and caſt vs all off from the Capſtone, and hurt diuers of vs. Here wee loſt our Anchor, and if the Carpenter had not beene, we had loſt our Cable too: but he (fearing ſuch a matter) was ready with his Axe, and ſo cut it.

Diſcord: ſee *Widhouſe* his Relations following.

Michaelmaſſe Day, and Bay.

Anchor loſt.

From hence we ſtood to the South, and to the South-weſt, through a cleere Sea of diuers ſounding, and came to a Sea of two colours, one blacke, and the other white, ſixteene or ſeuenteene fathome water, betweene which we went foure or fiue leagues. But the night comming, we tooke in our Top-ſayles, and ſtood afore the wind with our Maine-ſayle and Fore-ſayle, and came into fiue or ſixe fathomes, and ſaw no Land for it was darke. Then we ſtood to the Eaſt, and had deepe water againe, then to the South and Southweſt, and ſo came to our Weſtermoſt Bay of all, and came to an anchor neereſt to the North ſhore. Out went our Boat to the Land that was next vs, when they came neere it, our Boat could not flote to the ſhoare it was ſo ſhallow: yet aſhoare they got. Here our men ſaw the footing of a man and a Ducke in the ſnowy Rockes, and Wood good ſtore, whereof they tooke ſome and returned aboord. Being at anchor in this place, we ſaw a ledge of Rockes to the South of vs, ſome leaguе of length; It lay North and South, couered at a full Sea; for a ſtrong tide ſetteth in here. At mid-night wee weighed, and ſtood to goe out as we came in; and had not gone long, but the Carpenter came and told the Maſter, that if he kept that courſe he would be vpon the Rockes: the Maſter conceiued that he was paſt them, when preſently wee ranne on them, and there ſtucke faſt twelue houres: but (by the mercy of God) we got off vnhurt, though not vnſcarred.

Sea of two colours.

Footing of a man.

Sticks on a Rocke.

Wee ſtood vp to the Eaſt and rayſed three Hills, lying North and South: wee went to the furthermoſt, and left it to the North of vs, and ſo into a Bay, where wee came to an anchor. Here our Maſter ſent out our Boat, with my ſelfe and the Carpenter to ſeeke a place to winter in: and it was time; for the nights were long and cold, and the earth couered with Snow. Hauing

Digitized by Google

uing ſpent three moneths in a Labyrinth without end, being now the laſt of October, we went downe to the Eaſt, to the bottome of the Bay: but returned without ſpeeding of that we went for. The next day we went to the South, and the South-weſt, and found a place, whereunto we brought our ſhip, and haled her aground: and this was the firſt of Nouember. By the tenth thereof we were frozen in: but now we were in, it behoued vs to haue care of what we had; for, that we were ſure of; but what we had not, was vncertaine. Laſt of October. Nouember the tenth frozen in.

Wee were victualled for ſixe moneths in good proportion, and of that which was good: if our Maſter would haue had more, he might haue had it at home and in other places. Here we were now, and therefore it behoued vs ſo to ſpend, that wee might haue (when time came) to bring vs to the *Capes* where the Fowle bred, for that was all the hope wee had to bring vs home. Wherefore our Maſter tooke order, firſt for the ſpending of that wee had, and then to increaſe it, by propounding a reward to them that killed either Beaſt, Fiſh, or Fowle, as in his Iouruall you haue ſeene. About the middle of this moneth of Nouember, dyed *Iohn Williams* our Gunner: God pardon the Maſters vncharitable dealing with this man. Now for that I am come to ſpeake of him, out of whoſe aſhes (as it were) that vnhappy deed grew which brought a ſcandall vpon all that are returned home, and vpon the action it ſelfe, the multitude (like the dog) running after the ſtone, but not at the caſter: therefore, not to wrong the liuing, nor ſlander the dead, I will (by the leaue of God) deliuer the truth as neere as I can. *John Williams* dyeth.

You ſhall vnderſtand, that our Maſter kept (in his houſe at *London*) a young man, named *Henrie Greene*, borne in *Kent*, of Worſhipfull Parents, but by his leud life and conuerſation hee had loſt the good will of all his frinds, and had ſpent all that hee had. This man, our Maſter would haue to Sea with him, becauſe hee could write well: our Maſter gaue him meate, and drinke, and lodging, and by meanes of one Maſter *Venſon*, with much adoe got foure pounds of his mother to buy him clothes, wherewith Maſter *Venſon* would not truſt him: but ſaw it laid out himſelfe. This *Henrie Greene* was not ſet downe in the owners booke, nor any wages made for him. Hee came firſt aboord at *Graueſend*, and at *Harwich* ſhould haue gone into the field, with one *Wilkinſon*. At *Iſland* the Surgeon and hee fell out in *Dutch*, and hee beat him a ſhoare in *Engliſh*, which ſet all the company in a rage; ſo that wee had much adoe to get the Surgeon aboord. I told the Maſter of it, but hee bade mee let it alone, for (ſaid hee) the Surgeon had a tongue that would wrong the beſt friend hee had. But *Robert Iuet* (the Maſters Mate) would needs burne his finger in the embers, and told the Carpenter a long tale (when hee was drunke) that our Maſter had brought in *Greene* to cracke his credit that ſhould diſpleaſe him: which words came to the Maſters eares, who when hee vnderſtood it, would haue gone backe to *Iſland*, when he was fortie leagues from thence, to haue ſent home his Mate *Robert Iuet* in a Fiſher-man. But, being otherwiſe perſwaded, all was well. So *Henry Greene* ſtood vpright, and very inward with the Maſter, and was a ſeruiceable man euery way for manhood: but for Religion he would ſay, he was cleane paper whereon he might write what hee would. Now, when our Gunner was dead, and (as the order is in ſuch caſes) if the company ſtand in need of any thing that belonged to the man deceaſed, then is it brought to the Mayne Maſt, and there ſold to them that will giue moſt for the ſame: This Gunner had a gray cloth gowne, which *Greene* prayed the Maſter to friend him ſo much as to let him haue it, paying for it as another would giue: the Maſter ſaith hee ſhould, and thereupon hee anſwered ſome, that ſought to haue it, that *Greene* ſhould haue it, and none elſe, and ſo it reſted. *Henry Greenes* bad conditions

Now out of ſeaſon and time, the Maſter calleth the Carpenter to goe in hand with an houſe on ſhoare, which at the beginning our Maſter would not heare, when it might haue beene done. The Carpenter told him, that the Snow and Froſt were ſuch, as hee neither could, nor would goe in hand with ſuch worke. Which when our Maſter heard, hee ferreted him out of his Cabbin to ſtrike him, calling him by many foule names, and threatning to hang him. The Carpenter told him that hee knew what belonged to his place better then himſelfe, and that hee was no Houſe Carpenter. So this paſſed, and the houſe was (after) made with much labour, but to no end. The next day after the Maſter and the Carpenter fell out, the Carpenter tooke his Peece and *Henry Greene* with him, for it was an order that none ſhould goe out alone, but one with a Peece, and another with a Pike. This did moue the Maſter ſo much the more againſt *Henry Greene*, that *Robert Bilet* his Mate muſt haue the gowne, and had it deliuered vnto him; which when *Henry Greene* ſaw, he challenged the Maſters promiſe: but the Maſter did ſo raile on *Greene*, with ſo many words of diſgrace, telling him, that all his friends would not truſt him with twenty ſhillings, and therefore why ſhould he? As for wages he had none, nor none ſhould haue, if he did not pleaſe him well. Yet the Maſter had promiſed him to make his wages as good, as any mans in the ſhip; and to haue him one of the Princes guard when we came home. But you ſhall ſee how the deuil out of this ſo wrought with *Green*, that he did the Maſter what miſchiefe hee could in ſeeking to diſcredit him, and to thruſt him and many other honeſt men out of the Ship in the end. To ſpeake of all our trouble in this time of Winter (which was ſo cold, as it lamed the moſt of our Company, and my ſelfe doe yet feele it) would bee too tedious. *Greenes* conſpiracie. Their hard wintring.

But I muſt not forget to ſhew, how mercifully God deals with vs in this time; for the

Store of Partridges.

space of three moneths wee had such store of Fowle of one kinde (which were Partridges as white as milke) that wee killed aboue an hundred dozen, besides others of sundry sorts: for all was fish that came to the net. The Spring comming, this Fowle left vs, yet they were with vs all the extreame cold. Then in their places came diuers sort of other Fowle, as

Other Fowles succeeding in their seasons.

Swanne, Geese, Duck, and Teale, but hard to come by. Our Master hoped they would haue bred in those broken grounds, but they doe not: but came from the South, and flew to the North, further then we were this Voyage; yet if they be taken short with the wind at North, or North-west, or North-east, then they fall and stay till the winde serue them, and then flye to the North. Now in time these Fowles are gone, and few or none to bee seene. Then wee went into the Woods, Hilles, and Valleyes, for all things that had any shew of substance in them, how vile soeuer: the mosse of the ground, then the which I take the powder of

Miserable diet

a post to bee much better, and the Frogge (in his ingendring time as loathsome as a Toade) was not spared. But amongst the diuers sorts of buds, it pleased God that *Thomas Woodhouse* brought home a budde of a Tree, full of a Turpentine substance. Of this our

Medicinable budde.

Surgeon made a decoction to drinke, and applyed the buddes hot to them that were troubled with ach in any part of their bodies; and for my part, I confesse, I receiued great and present ease of my paine.

A Sauage.

About this time, when the Ice began to breake out of the Bayes, there came a Sauage to our Ship, as it were to see and to bee seene, being the first that we had seene in all this time: whom our Master intreated well, and made much of him, promising vnto himselfe great matters by his meanes, and therefore would haue all the Kniues and Hatchets (which any man had) to his priuate vse, but receiued none but from *Iohn King* the Carpenter, and my selfe. To this Sauage our Master gaue a Knife, a Looking-glasse, and Buttons, who receiued them thankefully, and made signes that after hee had slept hee would come againe, which hee did. When hee came, hee brought with him a Sled, which hee drew after him, and

Turke.

vpon it two Deeres skinnes, and two Beauer skinnes. Hee had a scrip vnder his arme, out of which hee drew those things which the Master had giuen him. Hee tooke the Knife and laid it vpon one of the Beauer skinnes, and his Glasses and Buttons vpon the other, and so gaue them to the Master, who receiued them; and the Sauage tooke those things which the Master had giuen him, and put them vp into his scrip againe. Then the Master shewed him an Hatchet, for which hee would haue giuen the Master one of his Deere skinnes, but our Master would haue them both, and so hee had, although not willingly. After many signes of people to the North, and to the South, and that after so many sleepes he would come againe, he went his way, but neuer came more.

Fishing.

Now the Ice being out of the Sounds, so that our Boat might go from one place vnto another, a company of men were appointed by the Master to go a fishing with our net; their names were as followeth: *William Wilson*, *Henry Greene*, *Michael Perce*, *Iohn Thomas*, *Andrew Moter*, *Bennet Mathewes*, and *Arnold Lodlo*. These men, the first day they went, caught fiue hundred fish, as big as good Herrings, and some Troutes: which put vs all in some hope to haue our wants supplied, and our Commons amended: but these were the most that euer they got in one day, for many dayes they got not a quarter so many. In this time of their fishing, *Henry Green* and *William Wilson*, with some others, plotted to take the net and the shallop, which the Carpenter had now set vp, and so to shift for themselues. But the shallop being readie, our Master would goe in it himselfe, to the South and South-west, to see if hee could meete with the people; for, to that end was it set vp, and (that way) wee might see the Woods set on fire by them. So the Master tooke the Sayue and the Shallop, and so much victuall as would serue for eight or nine dayes, and to the South hee went. They that remained aboord, were to take in water, wood, and ballast, and to haue all things in a readinesse against hee came backe. But hee set no time of his returne; for he was perswaded, if he could meet with the people, hee should haue flesh of them, and that good store: but hee returned worse then hee went forth. For, hee could by no meanes meete with the people, although they were neere them, yet they would set the woods on fire in his sight.

Being returned, hee fitted all things for his returne, and first, deliuered all the bread out of the bread roome (which came to a pound a piece for euery mans share) and deliuered also a Bill of Returne, willing them to haue that to shew, if it pleased God, that they came home: and he wept when hee gaue it vnto them. But to helpe vs in this poore estate with some reliefe, the Boate and Sayue went to worke on Friday morning, and stayed till Sunday noone: at which time they came aboord, and brought fourescore small Fish, a poore reliefe for so many hungry bellies. Then we wayed, and stood out of our wintering place, and came to an Anchor without, in the mouth of the Bay: from whence we wayed and came to an anchor without in the Sea, where our bread

Belly straits.

being gone, that store of cheese we had was to stop a gap, whereof there were fiue, whereat the company grudged, because they made account of nine. But those that were left, were equally diuided by the Master, although he had counsell to the contrarie: for there were some who hauing it, would make hast to bee rid thereof, because they could not gouerne it. I knew when *Henrie Greene*

Digitized by Google

Greene gaue halfe his bread, which hee had for fourteene dayes, to one to keepe, and prayed him not to let him haue any vntill the next Munday: but before Wednesday at night, hee neuer left till hee had it againe, hauing eaten vp his first weekes bread before. So *Wilson* the Boatswaine hath eaten (in one day) his fortnights bread, and hath beene two or three dayes sicke for his labour. The cause that moued the Master to deliuer all the Cheese, was because they were not all of one goodnesse, and therefore they should see that they had no wrong done them: but euery man should haue alike the best and the worst together, which was three pounds and a halfe for seuen dayes.

The wind seruing, we weighed and stood to the North-west, and on Munday at night (the eighteenth day of Iune) wee fell into the Ice, and the next day the wind being at West, we lay there till Sunday in sight of Land. Now being here, the Master told *Nicholas Simmes*, that there would be a breaking vp of chests, and a search for bread, and willed him (if hee had any) to bring it to him, which hee did, and deliuered to the Master thirty cakes in a bagge. This deed of the Master (if it bee true) hath made mee maruell, what should bee the reason that hee did not stop the breach in the beginning, but let it grow to that height, as that it ouerthrew himselfe and many other honest men: but *there are many deuices in the heart of man, yet the counsell of the Lord shall stand.*

Being thus in the Ice on Saturday, the one and twentieth of Iune at night, *Wilson* the Boatswayne, and *Henry Greene* came to mee lying (in my Cabbin) lame, and told mee that they and the rest of their Associates, would shift the Company, and turne the Master, and all the sicke men into the shallop, & let them shift for themselues. For, there was not fourteen daies victual left for all the Company, at that poore allowance they were at, and that there they lay, the Master not caring to goe one way or other: and that they had not eaten any thing these three dayes, and therefore were resolute, either to mend or end, and what they had begun they would goe through with it, or dye. When I heard this, I told them I maruelled to heare so much from them, considering that they were married men, and had wiues and children, and that for their sakes they should not commit so foule a thing in the sight of God and man, as that would bee; for why should they banish themselues from their natiue Countrie? *Henry Greene* bad me hold my peace, for he knew the worst, which was, to be hanged when hee came home, and therefore of the two he would rather be hanged at home then starued abroad: and for the good will they bare me, they would haue mee stay in the Ship. I gaue them thankes, and told them that I came into her, not to forsake her, yet not to hurt my selfe and others by any such deed. *Henry Greene* told me then, that I must take my fortune in the Shallop. If there bee no remedie (said I) the will of GOD bee done. *Wilson & Greene, their wickednesse.*

Away went *Henry Greene* in a rage, swearing to cut his throat that went about to disturbe them, and left *Wilson* by me, with whom I had some talke, but to no good: for he was so perswaded, that there was no remedie now, but to goe on while it was hot, least their partie should faile them, and the mischiefe they had intended to others should light on themselues. *Henry Greene* came againe, and demanded of him what I said. *Wilson* answered, He is in his old song, still patient. Then I spake to *Henry Greene* to stay three dayes, in which time I would so deale with the Master, that all should be well. So I dealt with him to forbeare but two dayes, nay twelue houres; there is no way then (say they) but out of hand. Then I told them, that if they would stay till Munday, I would ioyne with them to share all the victuals in the ship, and would iustifie it when I came home; but this would not serue their turnes. Wherefore I told them, it was some worse matter they had in hand then they made shew of, and that it was bloud and reuenge hee sought, or else he would not at such a time of night vndertake such a deed. *Henry Greene* (with that) taketh my Bible which lay before me, and sware that hee would doe no man harme, and what hee did was for the good of the voyage, and for nothing else; and that all the rest should do the like. The like did *Wilson* sweare.

Henry Greene went his way, and presently came *Iuet*, who because hee was an ancient man, I hoped to haue found some reason in him; but hee was worse then *Henry Greene*, for hee sware plainely that he would iustifie this deed when he came home. After him came *Iohn Thomas*, and *Michel Perce*, as birds of one feather: but because they are not liuing, I will let them goe, as then I did. Then came *Moter* and *Bennet*, of whom I demanded, if they were well aduised what they had taken in hand. They answered, they were, and therefore came to take their oath. *Robert Iuet.* See *Widhouses* notes.

Now, because I am much condemned for this oath, as one of them that plotted with them, and that by an oath I should bind them together to performe what they had begun, I thought good heere to set downe to the view of all, how well their oath and deedes agreed: and thus it was. *You shall sweare truth to God, your Prince and Countrie: you shall doe nothing, but to the glory of God, and the good of the action in hand, and harme to no man.* This was the oath, without adding or diminishing. I looked for more of these companions (although these were too many) but there came no more. It was darke, and they in a readinesse to put this deed of darknesse in execution. I called to *Henry Greene* and *Wilson*, and prayed them not to goe in hand with it in the darke, but to stay till the morning. Now, euerie man (I hope) would goe to his rest, but wickednesse Oath abused.

Digitized by Google

kednesſe ſleepeth not ; for *Henry Greene* keepeth the Maſter company all night (and gaue mee bread, which his Cabbin-mate gaue him) and others are as watchfull as he. Then I asked *Henrie Greene*, whom he would put out with the Maſter? he ſaid, the Carpenter *Iohn King*, and the ſicke men. I ſaid, they ſhould not doe well to part with the Carpenter, what need ſoeuer they ſhould haue. Why the Carpenter was in no more regard amongſt them, was; firſt, for that he and *Iohn King* were condemned for wrong done in the victuall. But the chiefeſt cauſe was, for that the Maſter loued him, and made him his Mate, vpon his returne out of our wintering place, thereby diſplacing *Robert Billet*, whereat they did grudge, becauſe hee could neither write nor read. And therefore (ſaid they) the Maſter and his ignorant Mate would carry the Ship whither the Maſter pleaſed: the Maſter forbidding any man to keepe account or reckoning, hauing taken from all men whatſoeuer ſerued for that purpoſe. Well, I obtained of *Henrie Greene* and *Wilſon*, that the Carpenter ſhould ſtay, by whoſe meanes I hoped (after they had ſatisfied themſelues) that the Maſter, and the poore man might be taken into the Ship againe. Or, I hoped, that ſome one or other would giue ſome notice, either to the Carpenter *Iohn King*, or the Maſter; for ſo it might haue come to paſſe by ſome of them that were the moſt forward.

The Carpenter ſpared.

Now, it ſhall not bee amiſſe to ſhew how we were lodged, and to begin in the Cooke roome; there lay *Bennet* and the Cooper lame; without the Cooke roome, on the ſteere-board ſide, lay *Thomas Wydhouſe* ſicke; next to him lay *Sydrack Funer* lame, then the Surgeon, and *Iohn Hudſon* with him; next to them lay *Wilſon* the Boatſwaine, and then *Arnold Lodlo* next to him: in the Gun-roome lay *Robert Iuet* and *Iohn Thomas*; on the Lar-boord ſide, lay *Michael Bute* and *Adria Moore*, who had neuer beene well ſince wee loſt our Anchor; next to them lay *Michael Perce* and *Andrew Moter*. Next to them without the Gun-roome, lay *Iohn King*, and with him *Robert Billet*: next to them my ſelfe, and next to me *Francis Clements*: In the mid-ſhip, betweene the Capſtone and the Pumpes, lay *Henrie Greene* and *Nicholas Simmes*. This night *Iohn King* was late vp, and they thought he had been with the Maſter, but he was with the Carpenter, who lay on the Poope, and comming downe from him, was met by his Cabbin-mate, as it were by chance, and ſo they came to their Cabbin together. It was not long ere it was day: then came *Bennet* for water for the Kettle, hee roſe and went into the Hold: when hee was in, they ſhut the Hatch on him (but who kept it downe I know not) vp vpon the Deck went *Bennet*.

In the meane time *Henrie Greene*, and another went to the Carpenter, and held him with a talke, till the Maſter came out of his Cabbin (which hee ſoone did) then came *Iohn Thomas* and *Bennet* before him, while *Wilſon* bound his armes behind him. He asked them what they meant? they told him he ſhould know when he was in the Shallop. Now *Iuet*, while this was a doing, came to *Iohn King* into the Hold, who was prouided for him, for he had got a ſword of his own, and kept him at a bay, and might haue killed him, but others came to helpe him: and ſo he came vp to the Maſter. The Maſter called to the Carpenter, and told him that he was bound; but, I heard no anſwere he made. Now *Arnold Lodlo*, and *Michael Bute* rayled at them, and told them their knauerie would ſhew it ſelfe. Then was the Shallop haled vp to the Ship ſide, and the poore, ſicke, and lame men were called vpon to get them out of their Cabbins into the Shallop. The Maſter called to me, who came out of my Cabbin as well as I could, to the Hatch way to ſpeake with him: where, on my knees I beſought them, for the loue of God, to remember themſelues, and to doe as they would be done vnto. They bad me keepe my ſelfe well, and get me into my Cabbin; not ſuffering the Maſter to ſpeake with me. But when I came into my Cabbin againe, hee called to me at the Horne, which gaue light into my Cabbin, and told mee that *Iuet* would ouerthrow vs all; nay (ſaid I) it is that villaine *Henrie Greene*, and I ſpake it not ſoftly.

They bind the Maſter.

Now was the Carpenter at libertie, who asked them, if they would bee hanged when they came home: and as for himſelfe, hee ſaid, hee would not ſtay in the Ship vnleſſe they would force him: they bad him goe then, for they would not ſtay him: I will (ſaid hee) ſo I may haue my cheſt with mee, and all that is in it: they ſaid, hee ſhould, and preſently they put it into the Shallop. Then hee came downe to mee, to take his leaue of mee, who perſwaded him to ſtay, which if he did, he might ſo worke that all ſhould bee well: hee ſaid, hee did not thinke, but they would be glad to take them in againe. For he was ſo perſwaded by the Maſter, that there was not one in all the ſhip, that could tell how to carrie her home; but (ſaith he) if we muſt part (which wee will not willingly doe, for they would follow the ſhip) hee prayed me, if wee came to the Capes before them, that I would leaue ſome token that wee had beene there, neere to the place where the Fowles bred, and hee would doe the like for vs: and ſo (with teares) we parted. Now were the ſicke men driuen out of their Cabbins into the Shallop; but *Iohn Thomas* was *Francis Clements* friend, and *Bennet* was the Coopers, ſo as there were words betweene them and *Henrie Greene*, one ſaying, that they ſhould goe, and the other ſwearing that they ſhould not goe, but ſuch as were in the ſhallop ſhould returne. When *Henrie Greene* heard that, he was compelled to giue place, and to put out *Arnold Lodlo*, and *Michael Bute*, which with much adoe they did.

The Carpenter let goe.

In the meane time, there were ſome of them that plyed their worke, as if the Ship had beene

entred

entred by force, and they had free leaue to pillage, breaking vp Chests, and rifling all places. One of them came by me, who asked me, what they should doe. I answered, hee should make an end of what hee had begun; for I saw him doe nothing but sharke vp and downe. Now, were all the poore men in the Shallop, whose names are as followeth; *Henrie Hudson*, *Iohn Hudson*, *Arnold Lodlo*, *Sidrack Faner*, *Phillip Staffe*, *Thomas Woodhouse*, or *Wydhouse*, *Adam Moore*, *Henrie King*, *Michael Bute*. The Carpenter got of them a Peece, and Powder, and Shot, and some Pikes, an Iron Pot, with some meale, and other things. They stood out of the Ice, the Shallop being fast to the Sterne of the Shippe, and so (when they were nigh out, for I cannot say, they were cleane out) they cut her head fast from the Sterne of our Ship, then out with their Top-sayles, and towards the East they stood in a cleere Sea. In the end they tooke in their Top-sayles, righted their Helme, and lay vnder their Fore-sayle till they had ransacked and searched all places in the Ship. In the Hold they found one of the vessels of meale whole, and the other halfe spent, for wee had but two; wee found also two firkins of Butter, some twentie seuen piece of Porke, halfe a bushell of Pease, but in the Masters Cabbin we found two hundred of bisket Cakes, a pecke of Meale, of Beere to the quantitie of a Butt, one with another. Now, it was said, that the Shallop was come within sight, they let fall the Main-sayle, and out with their Top-sayles, and flye as from an Enemy.

The names of the company exposed in the Shallop.

Then I prayed them yet to remember themselues: but *William Wilson* (more then the rest) would heare of no such matter. Comming nigh the East shoare they cast about, and stood to the West and came to an Iland, and anchored in sixteene or seuenteene fathome water. So they sent the Boat, and the Net ashoare to see if they could haue a Draught: but could not for Rocks and great stones. *Michael Perse* killed two Fowle, and heere they found good store of that Weede, which we called Cockle-grasse in our wintering place, whereof they gathered store, and came aboard againe. Heere we lay that night, and the best part of the next day, in all which time we saw not the shallop, or euer after. Now *Henrie Greene* came to me and told mee, that it was the Companies will, that I should come vp into the Masters Cabbin, and take charge thereof. I told him it was more fit for *Robert Iuet*: he said, he should not come in it, nor meddle with the Masters Card, or Iournals. So vp I came, and *Henrie Greene* gaue me the Key of the Masters Chest, and told me then, that he had laid the Masters best things together, which hee would vse himselfe when time did serue: the bread was also deliuered me by tale.

Last sight of the Shallop.

The wind seruing, we stood to the North-east, and this was *Robert Billets* course, contrarie to *Robert Iuet*, who would haue gone to the North-west. We had the Easterne shoare still in sight, and (in the night) had a stout gale of wind, and stood afore it, till wee met with Ice, into the which we ranne from thinne to thicke, till we could goe no further for Ice, which lay so thicke ahead of vs (and the wind brought it after vs asterne) that wee could not stirre backward, nor forward: but so lay imbayed fourteene daies in worse Ice, then euer wee met to deale withall, for we had beene where there was greater store, but it was not so broad vpon the water as this: for this floting Ice contained miles, and halfe miles in compasse, where we had a deepe Sea, and a Tide of flood and ebbe, which set North-west and South-east. Heere *Robert Iuet* would haue gone to the North-west, but *Robert Billet* was confident to go through to the North-east, which he did. At last, being cleere of this Ice, he continued his course in sight of the Easterne shoare, till he raised foure Ilands which lay North and South: but we passed them sixe or seuen leagues, the wind tooke vs so short. Then wee stood backe to them againe, and came to an Anchor betweene two of the most Northermost. We sent the Boat ashoare, to see if there were any thing there to be had, but found nothing, but cockle Grasse, whereof they gathered store, and so returned aboard. Before we came to this place, I might well see, that I was kept in the ship against *Henry Greenes* minde, because I did not fauour their proceedings better then I did. Then hee began (very subtilly) to draw me to take vpon me to search for those things, which himselfe had stolne: and accused me of a matter no lesse then Treason amongst vs, that I had deceiued the company of thirtie Cakes of bread. Now they began to talke amongst themselues, that *England* was no safe place for them, and *Henry Greene* swore, the shippe should not come into any place (but keepe the Sea still) till he had the Kings Majesties hand and Seale to shew for his safetie. They had many deuices in their heads, but *Henry Greene* in the end was their Captaine, and so called of them.

Foure Ilands.

The wicked flee where none pursueth

From these Ilands we stood to the North-east and the Easter Land still in sight: wee rayled those Ilands, that our Master called *Rummies* Ilands. Betweene these Ilands and the shallow ground to the East of them, our Master went downe into the first great Bay. We kept the East shoare still in our sight, and comming thwart of the low Land, wee ranne on a Rocke that lay vnder water, and strooke but once; for if shee had, we might haue beene made Inhabitans of that place: but God sent vs soone off without any harme that wee saw. Wee continued our course and rayled Land a head of vs, which stretched out to the North: which when they saw, they said plainly, that *Robert Billet* by his Northerly course had left the Capes to the South, and that they were best to seeke downe to the South in time for reliefe, before all was gone: for we had small store left. But *Robert Billet* would follow the Land to the North, saying, that he hoped in

Digitized by Google

God to find somewhat to releeue vs that way, as soone as to the South. I told them that this Land was the Mayne of *Worsenhome* Cape, and that the shallow rockie ground, was the same that the Master went downe by, when he went into the great Bay. *Robert Iuet* and all said, it was not possible, vnlesse the Master had brought the ship ouer Land, and willed them to looke into the Masters Card, and their course how well they did agree. We stood to the East, and left the mayne Land to the North, by many small Ilands into a narrow gut betweene two Lands, and there came to an Anchor. The Boat went ashoare on the North side, where wee found the great *Horne*, but nothing else. The next day wee went to the South side, but found nothing there, saue Cockle grasse of which we gathered. This grasse was a great releefe vnto vs, for without it, we should hardly haue got to the Capes for want of victuall. The wind seruing we stood out, but before we could get cleane out, the wind came to the West, so that we were constrayned to anchor on the North side.

Cockle grasse.

The next day, wee weighed and doubled the point of the North Land, which is high Land, and so continueth to the Capes, lying North and South, some fiue and twentie or thirtie leagues. To the North we stood to see store of those Fowles that breed in the Capes, and to kill some with our shot, and to fetch them with our Boat. We raised the Capes with joy, and bare for them, and came to the Ilands that lie in the mouth of the streight: but bearing in betweene the Rockie Iles, we ranne on a Rocke that lay vnder water, and there stucke fast eight or nine houres. It was ebbing water when we thus came on, so the floud set vs afloat, God guiding both wind and Sea, that it was calme, and faire weather: the ebbe came from the East, and the floud from the West. When wee were afloat, wee stood more neere to the East shoare, and there anchored.

A Rocke.

Note.

July 27. The next day being the seuen and twentieth of July, we sent the Boat to fetch some Fowle, and the ship should way and stand as neere as they could: for the wind was against vs. They had a great way to row, and by that meanes they could not reach to the place where the Fowle bred: but found good store of *Gulls*, yet hard to come by, on the Rocks and Cliffes, but with their Peeces they killed some thirtie, and towards night returned. Now we had brought our ship more neere to the mouth of the Streights, and there came to an anchor in eighteen or twentie fathom water, vpon a Riffe or shelfe of ground: which after they had weighed their Anchor, and stood more neere to the place where the Fowle bred, they could not find it againe, nor no place like it: but were faine to turne to and fro in the mouth of the Streight, and to be in danger of Rockes, because they could not find ground to let fall an Anchor in, the water was so deepe.

Sauages. The eight and twentieth day, the Boat went to *Digges* his Cape for Fowle, and made directly for the place where the Fowle bred, and being neere, they saw seuen Boates come about the Easterne point towards them. When the Sauages saw our Boate, they drew themselues together, and drew their lesser Boats into their bigger: and when they had done, they came rowing to our Boat, and made signes to the West, but they made readie for all assayes. The Sauages came to them, and by signes grew familiar one with another, so as our men tooke one of theirs into our Boate, and they tooke one of ours into their Boate. Then they carried our man to a Coue where their Tents stood toward the West of the place, where the Fowle bred: so they carried him into their Tents, where he remayned till our men returned with theirs. Our Boat went to the place where the Fowle bred, and were desirous to know how the Sauages killed their Fowle: he shewed them the manner how, which was thus, They take a long Pole with a snare at the end, which they put about the Fowles necke, and so plucke them downe. When our men knew that they had a better way of their owne, they shewed him the vse of our Peeces, which at one shot would kill seuen or eight. To be short, our Boat returned to their Coue for our man, and to deliuer theirs. When they came they made great joy, with dancing and leaping, and stroking of their brests: they offered diuers things to our men, but they only tooke some Morses Teeth, which they gaue them for a Knife, and two glasse buttons: and so receiuing our man they came aboard, much rejoycing at this chance, as if they had met with the most simple and kind people of the World.

Sauages manner of fowling.

Greenes confidence. And *Henry Greene* (more then the rest) was so confident, that (by no meanes) we should take care to stand vpon our Guard: God blinding him so, that where hee made reckoning to receiue great matters from these people, he receiued more then he looked for, and that suddenly by being made a good example for all men: that make no conscience of doing euill, and that we take heed of the Sauage people, how simple soeuer they seeme to be.

The next day, the nine and twentieth of July, they made haste to be ashoare, and because the ship rid too farre off, they weighed and stood as neere to the place where the Fowle bred, as they could: and because I was lame, I was to go in the Boat, to carrie such things, as I had in the Cabbin of euery thing somewhat: and so with more haste then good speed (and not without swearing) away we went, *Henry Greene, William Wilson, Iohn Thomas, Michael Perse. Andrew, Moter*, and my selfe. When we came neere the shoare, the people were on the Hils, dancing and leaping: to the Coue we came, where they had drawne vp their Boates: wee brought our Boate to the East side of the Coue, close to the Rockes. Ashoare they went, and made fast the

Boat

Boat to a great ſtone on the ſhoare, the people came, and euery one had ſomewhat in his hand to barter: but *Henry Greene* ſwore they ſhould haue nothing, till he had Veniſon, for that they had ſo promiſed him by ſignes.

Now when we came, they made ſignes to their Dogges (whereof there were many like Mongrels, as bigge as Hounds) and pointed to their Mountaine, and to the Sunne, clapping their hands. Then *Henry Greene*, *Iohn Thomas*, and *William Wilſon*, ſtood hard by the Boate head, *Michael Perſe*, and *Andrew Moter* were got vp vpon the Rocke, a gathering of Sorrell: not one of them had any weapon about him, not ſo much as a ſticke, ſaue *Henry Greene* only, who had a piece of a Pike in his hand: nor ſaw I any thing that they had wherewith to hurt vs. *Henry Greene* and *William Wilſon* had Looking-glaſſes, and Iewes Trumps, and Bels, which they were ſhewing the people. The Sauages ſtanding round about them, one of them came into the Boats head to me to ſhew me a Bottle: I made ſignes to him to get him aſhoare, but he made as though he had not vnderſtood me, whereupon I ſtood vp, and pointed him aſhoare. In the meane-time, another ſtole behind me to the ſterne of the Boat, and when I ſaw him aſhoare, that was in the head of the Boat, I ſate downe againe: but ſuddenly I ſaw the legge and foote of a man by mee. Wherefore I caſt vp my head, and ſaw the Sauage with his Knife in his hand, who ſtrooke at my breſt ouer my head: I caſt vp my right arme to ſaue my breſt, he wounded my arme, and ſtrooke me into the bodie vnder my right Pappe. He ſtrooke a ſecond blow which I met with my left hand, and then he ſtrooke me into the right thigh, and had like to haue cut off my little finger of the left hand. Now, I had got hold of the ſtring of the Knife, and had woond it about my left hand, he ſtriuing with both his hands, to make an end of that he had begunne, I found him but weake in the gripe (God enabling me) and getting hold of the ſleeue of his left arme, ſo bare him from me. His left ſide lay bare to me, which when I ſaw, I put his ſleeue off his left arme into my left hand, holding the ſtring of the Knife faſt in the ſame hand: and hauing got my right hand at libertie, I ſought for ſomewhat wherewith to ſtrike him (not remembring my Dagger at my ſide) but looking downe I ſaw it, and therewith ſtrooke him into the bodie, and the throate.

Sauages dogges.

Sauages trecherie.

Whiles I was thus aſſaulted in the Boat, our men were ſet vpon on the ſhoare. *Iohn Thomas* and *William Wilſon* had their bowels cut, and *Michael Perſe* and *Henry Greene* being mortally wounded, came tumbling into the Boat together. When *Andrew Moter* ſaw this medley, hee came running downe the Rockes, and leaped into the Sea, and ſo ſwamme to the Boat, hanging on the ſterne thereof, till *Michael Perſe* tooke him in, who manfully made good the head of the Boat againſt the Sauages, that preſſed ſore vpon vs. Now *Michael Perſe* had got an Hatchet, wherewith I ſaw him ſtrike one of them, that he lay ſprawling in the Sea. *Henry Greene* crieth *Coragio*, and layeth about him with his Truncheon: I cryed to them to cleere the Boat, and *Andrew Moter* cryed to bee taken in: the Sauages betooke them to their Bowes and Arrowes, which they ſent amongſt vs, wherewith *Henry Greene* was ſlaine out-right, and *Michael Perſe* receiued may wounds, and ſo did the reſt. *Michael Perſe* cleereth the Boate, and puts it from the ſhoare, and helpeth *Andrew Moter* in: but in turning of the Boat, I receiued a cruell wound in my backe with an Arrow. *Michael Perſe* and *Andrew Moter* rowed the Boate away, which when the Sauages ſaw, they ranne to their Boats, and I feared they would haue launched them, to haue followed vs, but they did not, and our ſhip was in the middle of the channell, and could not ſee vs.

Trecherie iuſt to vniuſt Trayators.

Greene ſlaine.

Now, when they had rowed a good way from the ſhoare, *Michael Perſe* fainted, and could row no more: then was *Andrew Moter* driuen to ſtand in the Boat head, and waft to the ſhip, which (at the firſt) ſaw vs not, and when they did, they could not tel what to make of vs, but in the end they ſtood for vs, and ſo tooke vs vp. *Henry Greene* was throwne out of the Boat into the Sea, and the reſt were had aboard, the Sauage being yet aliue, yet without ſenſe. But they died all there that day, *William Wilſon* ſwearing and curſing in moſt fearefull manner: *Michael Perſe* liued two dayes after, and then died. Thus you haue heard the Tragicall end of *Henry Greene* and his Mates, whom they called Captaine, theſe foure being the only luſtie men in all the ſhip.

Wicked and wretched end of wretched wicked men.

The poore number that was left, were to ply our ſhip to and fro, in the mouth of the ſtreight, for there was no place to anchor in neere hand: beſides, they were to goe in the Boate to kill Fowle, to bring vs home, which they did, although with danger to vs all. For if the wind blew, there was an high Sea, and the eddies of the Tydes would carrie the ſhip ſo neere the Rockes, as it feared our Maſter, for ſo I will now call him. After they had killed ſome two hundred Fowle, with great labour on the South Cape, wee ſtood to the Eaſt: but when wee were ſixe or ſeuen leagues from the Capes, the wind came vp at Eaſt. Then wee ſtood backe to the Capes againe, and killed an hundred Fowle more. After this, the wind came to the Weſt, ſo wee were driuen to goe away, and then our Maſter ſtood (for the moſt) along by the North ſhoare, till he fell into broken ground about the *Queenes Fore-land*, and there anchored. From thence wee went to *Gods Mercies*, and from thence to thoſe Ilands, which lye in the mouth of our Streight, not ſeeing the Land, till we were readie to runne our Boſprite againſt the Rockes in a fogge. But it cleered a little, and then we might ſee our ſelues incloſed with Rockie Ilands, and could find no ground

Digitized by Google

ground to anchor in. There our Master lay atrie all night, and the next day the fogge continuing, they sought for ground to anchor in, and found some in an hundred and odde fathomes of water. The next day we weighed and stood to the East, but before wee came heere, we had put our selues to hard allowance, as halfe a foule a day with the pottage: for yet we had some meale left, and nothing else. Then they beganne to make triall of all whatsoeuer: wee had flayed our Fowle, for they wil not pull: and *Robert Iuet* was the first, that made vse of the skins by burning of the Feathers: so they became a great dish of meate, and as for the garbidge, it was not throwne away.

Miserie pursueth the rest.

After we were cleere of these Ilands, which lie out with two points, one to the South-east, and the other to the North, making a Bay to the sight as if there were no way through, we continued our course East South-east, and South and by East, to raise *the Desolations*, from thence to shape our course for *Ireland*. Thus we continued diuers dayes: but the wind comming against vs, made vs to alter our course, and by the meanes of *Robert Iuet* who perswaded the company, that they should find great reliefe in *Newfound Land*, if our Country-men were there, and if they were gone before we came, yet should we find great store of bread and fish left ashoare by them: but how true, I giue God thankes, we did not trie. Yet we stood to the South-west, and to the West, almost to fiftie seuen degrees: when (by the will of God) the winde came vp at South-west. Then the Master asked me, if he should take the benefit of this wind, and shape his course for *Ireland*. I said it was best to goe, where we knew Corne grew, and not to seeke it, where it was cast away, and not to be found. Towards *Ireland* now wee stood, with prosperous winds for many dayes together: then was all our Meale spent, and our Fowle restie and dry: but (being no remedie) we were content with the Salt broth for Dinner, and the halfe Fowle for Supper. Now went our Candles to wracke, and *Bennet* our Cooke made a messe of meate of the bones of the Fowle, frying them with Candle-grease, till they were crispe, and with Vineger put to them, made a good dish of meate. Our Vineger was shared, and to euery man a pound of Candles deliuered for a weeke, as a great daintie. Now *Robert Iuet* (by his reckoning) saith, wee were within sixtie or seuentie leagues of *Ireland*, when wee had two hundred thither. And sure our course was so much the longer, through our euill steeredge: for, our men became so weake, that they could not stand at the Helme, but were faine to sit.

Poore Diet.

Then *Robert Iuet* dyed, for meere want, and all our men were in despaire, and said wee were past *Ireland*, and our last Fowle were in the steep-tub. So, our men cared not which end went forward, insomuch as our Master was driuen to looke to their labour, as well as his owne: for some of them would sit and see the fore-sayle, or mayne-sayle flie vp to the tops, the sheetes being either flowne or broken, and would not helpe it themselues, nor call to others for helpe, which much grieued the Master. Now in this extremitie it pleased God to giue vs sight of Land, not farre from the place our Master said he would fall withal, which was the Bay of *Galloway*, and we fell to the West of the *Derses*, and so stood along by the coast, to the South-west. In the end, there was a joyful cry, a sayle, a sayle, towards which they stood, then they saw more, but to the neerest we stood, and called to him: his Barke was of *Fowy*, and was at anchor a Fishing: he came to vs, and brought vs into *Bere* Hauen. Here we stayed a few dayes, and delt with the *Irish*, to supply our wants, but found no reliefe: for in this place there was neither Bread, Drinke, nor mony to be had amongst them. Wherfore they aduised vs to deale with our Country-men, who were there a fishing, which we did: but found them so cold in kindnesse, that they would doe nothing without present money, whereof we had none in the Ship. In the end, we procured one *Iohn Waymouth*, Master of the Barke that brought vs into this Harbour, to furnish vs with money, which hee did, and receiued our best Cable and Anchor in pawne for the same. With this money, our Master with the helpe of *Iohn Waymouth*, bought Bread, Beere, and Beefe.

Robert Iuets death.

A sayle of *Fowy* *Bere* Hauen in *Ireland*.

Now, as wee were beholding to *Waymouth* for his money, so were wee to one Captaine *Taylor*, for making of our contracts with *Waymouth*, by whose meanes hee tooke a Bill for our Cable and Anchor, and for the mens Wages, who would not goe with vs, vnlesse *Waymouth* wold passe his word for the same: for they made shew, that they were not willing to goe with vs for any wages. Whereupon Captaine *Taylor* swore hee would presse them, and then, if they would not goe, hee would hang them.

In conclusion, wee agreed for three pound ten shillings a man, to bring our Ship to *Plimouth*, or *Dartmouth*, and to giue the Pilot fiue pound: but if the winde did not serue, but that they were driuen to put into *Bristow*, they were to haue foure pound ten shillings a man, and the Pilot sixe pound. Omitting therefore further circumstances, from *Bere* Hauen wee came to *Plimouth*, and so to an anchor, before the Castle: and from *Plimouth*, with faire winde and weather without stop or stay, wee came to the *Downes*, from thence to *Gravesend*, where most of our men went a shoare, and from thence came on this side *Erith*, and there stopped: where our Master *Robert Billet* came aboord, and so had mee vp to *London* with him, and so wee came to Sir *Thomas Smiths* together.

They arriue at *Plimouth*.

Forasmuch as this report of Pricket *may happely bee suspected by some, as not so friendly to* Hudson, *who returned with that Companie which had so cruelly exposed* Hudson *and his, and therefore may seeme*

Digitized by Google

to lay heauier imputation, and rip vp occasions further then they will beleeue; I haue also added the report of Thomas Widhouse, *one of the exposed Companie, who ascribeth those occasions of discord to* Iuet. *I take not on mee to sentence, no not to examine; I haue presented the Euidence iust as I had it: let the Bench censure, hearing with both eares, that which with both eyes they may see in those, and these notes; to which, I haue first prefixed his Letter to Master* Samuel Macham.

Master Macham, *I heartily commend mee vnto you, &c. I can write vnto you no newes, though I haue seene much, but such as euery* Engluh *Fisherman haunting these Coasts can report better then my selfe.*

Wee kept our Whitsunday in the North-east end of Iland; *and I thinke I neuer fared better in* England *then wee feasted there. They of the Countrey are very poore, and liue miserably: yet we found there in store of fresh Fish and daintie Fowle. I my selfe in an after-noone killed so much Fowle, as feasted all our Companie, being three and twentie persons at one time, onely with Partridges; besides Curlue, Plouer, Mallard, Teale, and Goose. I haue seene two hot Bathes in* Iland, *and haue beene in one of them. Wee are resolued to trie the vttermost, and lye onely expecting a faire winde, and to refresh our selues to auoyd the Ice, which now is come off the West Coasts, of which wee haue seene whole Ilands, but God bee thanked, haue not beene in danger of any. Thus I desire all your prayers for vs. From* Iland *this thirtieth of May,* 1610.

Ilanders poore.

The cause of their stay at *Iland.*

A note found in the Deske of *Thomas Wydowse*, Student in the Mathematickes, hee being one of them who was put into the Shallop.

THe tenth day of September, 1610. *after dinner, our Master called all the Companie together, to heare and beare witnesse of the abuse of some of the Companie (it hauing beene the request of* Robert Iuet*) that the Master should redresse some abuses and slanders, as hee called them, against this* Iuet: *which thing after the Master had examined and heard with equitie what hee could say for himselfe, there were prooued so many and great abuses, and mutinous matters against the Master, and action by* Iuet, *that there was danger to haue suffred them longer: and it was fit time to punish and cut off farther occasions of the like mutinies.*

It was prooued to his face, first with Bennet Mathew *our Trumpet vpon our first sight of* Iland, *and hee confest, that hee supposed that in the action would bee man-slaughter, and proue bloodie to some.*

Secondly, at our comming from Iland, *in hearing of the companie, hee did threaten to turne the head of the Ship home from the action, which at that time was by our Master wisely pacified, hoping of amendment.*

Thirdly, it was deposed by Philip Staffe *our Carpenter, and* Ladlie Arnold, *to his face vpon the holy Bible, that hee perswaded them to keepe Muskets charged, and Swords readie in their Cabbins, for they should bee charged with shot, ere the Voyage were ouer.*

Fourthly, wee being pestered in the Ice, hee had vsed words tending to mutinie, discouragement, and slander of the action, which easily tooke effect in those that were timorous; and had not the Master in time preuented, it might easily haue ouerthrowne the Voyage: and now lately beeing imbayed in a deepe Bay, which the Master had desire to see, for some reasons to himselfe knowne, his word tended altogether to put the Companie into a fray of extremitie, by wintering in cold: Iesting at our Masters hope to see Bantam *by Candlemasse.*

For these and diuers other base slanders against the Master, hee was deposed; and Robert Bylot, *who had shewed himselfe honestly respecting the good of the action, was placed in his stead the Masters Mate.*

Also Francis Clement *the Boatson, at this time was put from his Office, and* William Wilson, *a man thought more fit, preferred to his place. This man had basely carryed himselfe to our Master and to the action.*

Also Adrian Mooter *was appointed Boatsons mate: and a promise by the Master, that from this day* Iuats *wages should remaine to* Bylot, *and the Boatsons ouerplus of wages should bee equally diuided betweene* Wilson *and one* Iohn King, *to the owners good liking, one of the Quarter Masters, who had very well carryed themselues to the furtherance of the businesse.*

Also the Master promised, if the Offenders yet behaued themselues henceforth honestly, hee would bee a meanes for their good, and that hee would forget iniuries, with other admonitions.

These things thus premised touching *Hudsons* exposing, and Gods iust iudgements on the Exposers, as *Pricket* hath related (whom they reserued as is thought, in hope by Sir *Dudley Digges* his Master to procure their pardon at their returne) I thought good to adde that which I haue further receiued from good Intelligence, that the Ship comming aground at *Digges* Iland, in 62. degrees 44. minutes, a great flood came from the West and set them on floate: an argument of an open passage from the South Sea to that, and consequently to these Seas. The Weapons and

Arts

Digitized by Google

Arts which they saw, beyond those of other Sauages are arguments hereof. Hee which assaulted *Pricket* in the Boate, had a weapon broad and sharpe indented of bright Steele (such they vse in *Iana*) riueted into a handle of Morse tooth.

CHAP. XVIII.

The Discoueries of M. M. NICOLO, *and* ANTONIO ZENI, *gathered out of their Letters, by* FRANCISCO MARCOLINO: *whereto is added* QVIRINO *his Ship-wracke.*

They are related by Master *Hakluit*, in his 3. *vol pag.* 121.

IN the yeere 1380. Master *Nicolo Zeno* being wealthy, and of a haughtie spirit, desiring to see the fashions of the world, built and furnished a Ship at his owne charges, and passing the Straits of *Gibralter*, held on his course Northwards, with intent to see *England* and *Flanders*. But a violent tempest assailing him at Sea, hee was carried hee knew not whither, till at last his Ship was carried away vpon the Ile of *Frisland*; where the men and most part of the goods were saued.

Friesland.

In vaine seemes that deliuerie, that deliuers vp presently to another Executioner. The Ilanders like *Neptunes*, hungry groomes, or his base and blacke Guard, set vpon the men whom the Seas had spared: but heere also they found a second escape, by meanes of a Prince named *Zichmni*, Prince of that and many Ilands thereabouts: who being neere hand with his Armie, came at the out-crie, and chasing away the people, tooke them into protection.

This *Zichmni* had the yeere before giuen the ouerthrow to the King of *Norway*, and was a great aduenturer in feates of Armes. He spake to them in *Latine*, and placed them in his Nauie, wherewith hee wonne diuers Ilands. *Nicolo* behaued himselfe so well, both in sauing the Fleet by his Sea-skill, and in conquest of the Ilands by his valour, that *Zichmni* made him Knight and Captaine of his Nauie.

Saint *Thomas* Monasterie in *Groenland*. Hote Spring and the strange effects thereof.

After diuers notable exploits, *Nicolo* armed three Barkes, with which hee arriued in *Engroneland*: where hee found a Monasterie of Friers of the *Preachers* Order, and a Church dedicated to Saint *Thomas*, hard by a Hill, that casteth out fire like *Vesuuius* and *Ætna*. There is a Fountaine of hot water, with which they heate the Church of the Monasterie, and the Friers chambers. It commeth also into the Kitchin so boyling hote, that they vse no other fire to dresse their meate; and putting their Bread into brasse Pots without any water, it doth bake as it were in an hot Ouen. They haue also small Gardens, which are couered ouer in the Winter time, and being watered with this water, are defended from the violence of the Frost and cold, and bring forth Flowers in their due seasons. The common people astonished with these strange effects, conceiue highly of those Friers, and bring them presents of Flesh and other things. They with this Water, in the extremitie of the cold, heate their Chambers, which also (as the other buildings of the Monasterie) are framed of those burning stones, which the mouth of the Hill casts foorth. They cast water on some of them, whereby they are dissolued, and become excellent white Lime, and so tough, that being contriued in building, it lasteth for euer. The rest, after the fire is out, serue in stead of stones to make walls and vaults, and will not dissolue or breake, except with some Iron toole.

Their Winter lasteth nine moneths: and yet there is a faire Hauen, where this water falleth into the Sea, not frozen: by meanes whereof there is great resort of wild Fowle and Fish, which they take in infinite multitudes. The Fishers Boates are made like to a Weauers shuttle, of the skinnes of Fishes, fashioned with the bones of the same Fishes, and being sowed together with many doubles, they are so strong, that in foule weather they will shut themselues within the same, not fearing the force either of Sea or winde. Neither can the hard-hearted Rockes breake these yeelding Vessels. They haue also as it were a Sleeue in the bottome thereof, by which with a subtill deuice, they conuey the water foorth, that soaketh into them. The most of these Friers spake the *Latine* tongue.

Estotiland.

A little after this, *Nicolo* returned and dyed in *Friesland*, whither his brother *Antonio* had before resorted to him, and now succeeded both in his goods and honour; whom *Zichmni* employed in the Expedition of *Estotiland*: which happened vpon this occasion. Sixe and twentie yeeres before, foure Fisher-Boates were apprehended at Sea by a mightie and tedious storme; wherewith after many dayes, they were brought to *Estotiland*, aboue a thousand miles West from *Friesland*: vpon which, one of the Boates was cast away, and sixe men that were in it, were taken and brought to a populous Citie; where, one that spake *Latine*, and had been cast by chance vpon that Iland, in the name of the King asked them what Country-men they were; and vnderstanding their case, hee acquainted the King therewith. They dwelt there fiue yeeres, and found it to bee an Iland very rich, being little lesse then *Iseland*, but farre more fruitfull. One of them said hee saw *Latine* bookes in the Kings Librarie, which they at this present doe not vnderstand.

Digitized by Google

ſtand. They haue a peculiar Language, and Letters or Characters to themſelues. They haue mines of Gold and other Mettals, and haue Trade with *Engroneland*. They ſow Corne, and make Beere and Ale. They build Barkes (but know not the vſe of the Compaſſe) and haue many Cities and Caſtles. The King ſent theſe Fiſher-men with twelue Barkes Southwards, to a Countrey which they call *Drogio*: in which Voyage eſcaping dreadfull tempeſts at Sea, they encountred with *Canibals* at Land, which deuoured many of them. Theſe Fiſhers ſhewing them the manner of taking Fiſh with Nets, eſcaped, and for the preſents which they made of their Fiſh to the chiefe men of the Country, were beloued and honoured. One of theſe (more expert it ſeemeth then the reſt) was holden in ſuch account, that a great Lord made warre with their Lord to obtaine him: and ſo preuayled, that he and his companie were ſent vnto him. And in this order was hee ſent to fiue and twentie Lords, which had warred one with another to get him, in thirteene yeeres ſpace: whereby hee came to know almoſt all thoſe parts; which, he ſaid, was a great Countrey, and (as it were) a new World. The people are all rude, and voide of goodneſſe: they goe naked, neither haue they wit to couer their bodies with the Beaſts skinnes which they take in Hunting, from the vehement cold. They are fierce, and eate their enemies, hauing diuers Lawes and Gouernours. Their liuing is by hunting. *Drogio.*

Further to the South-weſt, they are more ciuill, and haue a more temperate ayre: They haue Cities and Temples dedicated to Idols, where they ſacrifice Men, and after eate them; and haue alſo ſome vſe of Gold and Siluer.

Hee fledde awey ſecretly, and conueying himſelfe from one Lord to another, came at length to *Drogio*, where hee dwelt three yeeres. After this time finding there certaine Boates of *Eſtotiland*, hee went thither with them: and growing there very rich, furniſhed a Barke of his owne, and returned into *Frieſland*: where hee made report vnto his Lord of that wealthy Countrey. *Zichmni* prepared to ſend thither: but three dayes before they ſet foorth, this Fiſherman dyed. Yet taking ſome of the Mariners which came with him in his ſtead, they proſecuted the Voyage, and encountred after many dayes an Iland; where ten men of diuers Languages, were brought vnto them, of which they could vnderſtand none, but one of *Iſeland*. Hee told them, that the Iland was called *Icaria*, and the Knights thereof called *Icars*, deſcended of the ancient pedigree of *Dedalus*, King of *Scots*, who conquering that Iland, left his Sonne there for King, and left them thoſe Lawes, which to that preſent they retayned. And, that they might keepe their Lawes inuiolate, they would receiue no Stranger. Onely they were contented to receiue one of our men, in regard of the Language; as they had done thoſe ten Interpreters.

Zichmni ſayling hence, in foure dayes deſcried Land, where they found abundance of Fowle, and Birds egges, for their refreſhing. The Haueh they called Cap *Trin*. There was a Hill, which burning, caſt out ſmoake: where was a Spring, from which iſſued a certayne water like Pitch, which ranne into the Sea. The people of ſmall ſtature, wilde, and fearefull, hid themſelues in Caues. *Zichmni* built there a Citie, and determining to inhabite, ſent *Antonio* backe againe, with the moſt of his people to *Frieſland*.

This Hiſtorie I haue thus inſerted at large, which perhaps, not without cauſe in ſome things, may ſeeme fabulous; not in the *Zeni*, which thus writ, but in the relations which they receiued from others. Howſoeuer, the beſt Geographers are beholden to theſe Brethren, for that little knowledge they haue of theſe parts; of which none before had written: nor ſince haue there beene any great in-land Diſcoueries. *Abrah. Ortel. chart. 6. Hak. vol. 3. Botero. Maginus. Hondius, &c.*

The Ship-wracke of Maſter PIERO QVIRINO, *deſcribed by* CHRISTOFORO FIORAVANTI, *and* NICOLO DI MICHIEL *, *who were preſent there; heere contracted.*

* There is alſo the relation hereof by *Quirino* himſelfe, extant together with this in *Ramuſio*, *Tom. 2.* Out of which I haue heere added diuers annotations.

IT ſemeth to bee a conuenient dutie to make a memoriall, and not ſuffer to bee buryed in obliuion, that moſt lamentable, and cruell Voyage full of innumerable and extreame miſeries, which befell a *Venetian* Ship, wherein wee carryed aboue ſeuen hundred Buttes of Wine, Spices, Cottons, and other Merchandiſes of great value, furniſhed in *Candia* with threeſcore and eight men, to goe towards the * West. The Maſter whereof was Maſter *Piero Quirini*, a *Venetian* Gentleman, in the yeare 1431. Who after many troubles, and misfortunes, and wants befalne him, after his departure from *Candia* towards the West, on the ſixth of Nouember, in the foreſaid yeere of the Lord, by chance came into the mouth of the Channels of *Flanders*, and went farre beyond them, by a ſtorme from the South, towards the North-weſt, about one hundred and fortie miles, running ſtill vpon the Iland of *Vſſenti*, where, by agreement, wee *Chriſtoforo Fiorananti*, and *Nicolo Michiel*, ſay, that at noone wee ſounded the bottome of the

* The *Italians* call the ſayling into the *Mediterranean*, the Leuant or East; and thence into the *Spaniſh* Ocean, and thoſe parts the Ponent or Weſt. * Theſe are particularly related by *Quirino* the Patron or Owner. They loſt their Rudder on a Rocke, not farre from *Cales* in *Spaine*, and were faine to make thither to repaire it: another diaſh followed.

Sea

Sea with the Lead, and found our ſelues in fiue and fiftie fathome of water, and afterward toward the Euening wee ſounded, and found our ſelues in ninetie fathomes and more, but the ſtorme and furie of the windes was ſo great, that it brake fiue of the hinges off our rudder.

On the twelfth, in the morning, the ſtorme not ceaſing, but increaſing euery houre more and more, beat vpon our weake rudder with ſo great violence and furie, that it broke away all that held it, in ſuch ſort, that it hung on the one ſide, where, for the laſt remedie, wee faſtened a great Cable vnto it, with the which, for three dayes wee drew it after vs, not being able to doe it otherwiſe, in which time in our iudgement, wee thought wee had runne two hundred miles and more, againſt our wills.

Afterward we tooke away the two Rudders, and with many pieces of Timber we made another, which might rather be called a ſhadow then a true Rudder, and wee put it in his place to guide and direct the ſhip. But it could not endure longer, then till the ſix and twentieth of November, when the violence of the Sea carried it all away: ſothat then wee remayned depriued of all hope of gouernment and direction. On the fourth of December, the furie of the winde grew ſo outragious againe, that it carried away all this third ſayle, and ſo being ſpoyled and bereft of Sayle and Rudder, we went at aduenture vntill the eight day, alwayes wandering, not knowing by any meanes how to prouide for our ſafetie. Afterward the winde alwayes increaſing from the Eaſt, and with ſo great violence and furie, that the Sea beganne to ſwell ſo high, that the waues ſeemed Mountaynes, and farre greater then we had euer ſeene before, with the darkneſſe of the extreame long night, ſo that we ſeemed to goe in the bottomleſſe depth of Hell: whereby you may imagine how great the anguiſh and trembling of our hearts was, becauſe although we were liuing, yet at that inſtant wee ſeemed to bee dead, expecting death euery houre, which we ſaw preſent: In this darkneſſe the Heauen was ſometimes ſeene to open with the lightnings and ſudden flaſhes of fire ſo bright, that they tooke away the ſight of our eyes. And ſometimes we ſeemed to touch the ſtarres, the ſhip mounted ſo aloft, and then againe we ſaw our ſelues buried in Hell, inſomuch as being all aſtoniſhed, we had loſt our ſtrength and force. And being in this miſerable caſe we did nothing elſe, but with pittie behold one another: & running with ſo great violence for many houres, in the end a ſurge of the Sea came ouer the ſhip vnder the wind with ſuch furie, that the water entred into it, filled it almoſt halfe full, whereby being now much weakened, it was readie to ſinke, and turned vp the Keele. And ſurely that was the laſt houre, and our end, and truly we had beene ſwallowed vp of the Sea, if our Lord Ieſus Chriſt had not beene, who forſaketh not them that religiouſly call vpon him, who put ſuch power and ſtrength into our afflicted minds, that ſeeing the ſhip in ſo dangerous a caſe, full of water, as it could not be caſt out by any humane force, we determined to cut downe the mayne Maſt, and caſt it together with the mayne Yard and Tackling into the Sea, and ſo wee did, whereby the ſhip being disburdened, pauſed awhile, and we then taking courage, beganne to caſt out the water, which with our great trouble and labour we ouercame in the end. In this manner wee went ſcouring away all that long night. Now when the day was almoſt come, they agreed to make readie the Boat and the Schiffe, with that little prouiſion of victuall which was remayning, equally parted. And the Patron ſaid, With your conſent I command you *Nicolo di Michiel* the Notary, that you ſet downe in a note the names of thoſe that are willing to enter into the Schiffe and Boat: ſo preſently he gaue him fortie fiue perſons in a note, who were willing to enter into the Schiffe, which was capeable but of one and twentie men only, and therefore it was neceſſary to caſt Lots who ſhould goe therein: and ſo it was done, and they prepared it, and ſet it in order, and did the like to the Boate, into the which the Maſter with fortie ſeuen men entred. The one and twentie perſons to whom the lot fell, entred the Schiffe, and a rate was giuen them according to the proportion of the victuall which was remayning of Biſket, and alſo of *Friſoppi*, three hundred pound weight, of Cheeſe of *Candia* eightie pounds, of dried Bacon eight pounds, of Tallow to trim their Schiffe fortie pounds, of Oyle about two pound waight and no more: but beſides wee beſtowed there ſeuen *Carrattells* of *Tyrian* Wine, which is a kind of *Maluaſie*, for the Pinnaſſe or Schiffe would hold no more. In like manner fortie ſeuen men, reckoning the Maſter, entred into the Boate or Pinnaſſe, vnto whom rateably fell their proportion of victuals, adding thereto a little Greene Ginger in Sirrope, and Sirrope of Limons, with ſome ſmall quantitie of Spices, which wee had taken. We were (in our iudgement) diſtant from the neereſt Iland or Land about fiue hundred miles or more, from the point of Land to Lee-ward of the North part, and we ſayled with theſe Conſerues in a quiet and calme Sea, that little time of the day together with our one and twentie companions, comforting our ſelues in that which we had ſeene the beginning of ſo faire a fortune. But when the night came, a darke miſt roſe, which was a token of the euill ſucceſſe and end, which our companions of the Schiffe were to haue, of whom we had now loſt the ſight, ſo that we neuer ſaw them any more.

They leaue the ſhip.

The Schiffe loſt.

The ninteenth day, the morning appearing, and not ſeeing any token of the Schiffe, it made vs ſuſpitious of their death, whereupon our mindes were much troubled, doubting what might befall them, becauſe the windes raged in ſuch manner, that a waue of the Sea mounted with ſo great

great violence into the Pinnaſſe, behinde the Poope, where wee *Chriſtopher* and *Nicholas* were let downe, that through the force of the furie thereof, two ſtayes were battered and bent, which left a token of vnſupportable trouble and griefe, by meanes that the Pinnaſſe was more charged with the weight of the water, then with her owne burthen. Wherefore to remedie it, wee ranne all to lade it out with our hands, and being conſtrained through feare and neceſſitie, for the freeing of her, wee were faine to caſt out all that, whether with water or without, which came moſt fit and ready to our hands. The Pinnaſſe becomming drie againe, preſently in this ſtorme, wee agreed to caſt ouer-boord the greateſt part of the Wine, and wee found our ſelues in ſo great extremitie, that if wee would taſte thereof to comfort our troubled ſenſes, no more then one gobbelet of Wine apeece fell to euery mans ſhare for the whole day, and who ſo would drinke more, was conſtrayned to take the Sea-water: and this meaſure and quantitie of Wine held out eight dayes, and no more. Hard dyet.

And afterward being driuen to greater neceſſitie, wee brought our ſelues to a greater extremitie, by reſtrayning our proportion to halfe a goblet a day, and none of vs could ſecurely ſleepe, for the diuers doubts and dangers, wherein wee alwayes preſently ſtood. Wee continued euery day and night, foure or ſixe of vs at the Helme, and thoſe that were at the Pumpe, ſtood alwayes firme and vpright changing their courſes, where wee endured cold beyond compariſon farre greater then that, which not many yeeres ſince was in *Venice*, when all the Channels were frozen, ſo that from *Margara* to *Venice*, not onely Men and Women, but Oxen, Horſes, Carts, and Waggons, went ouer vpon the Ice in great multitudes, to the admiration of all the people, becauſe that Region is (without compariſon) much colder then the Countrey of *Italy*. Now conſider what our caſe was, being without Clothes to couer vs, and not hauing any thing to eate, or drinke, or other neceſſary thing for the maintenance of mans life, except a few *Friſoppi* which were left, and the nights one and twentie houres long, and alſo darke. Through the which cold, wee began to loſe the feeling of our feete, and by little and little, the cold becomming more vehement, poſſeſſed the whole body, procuring a dogged and raging appetite and hunger, ſo that euery one ſought to deuoure that which was hid in a corner, and whatſoeuer hee had next at hand, whereſoeuer hee could finde it, as well as hee might, with that weake and little ſtrength which hee had remayning. Afterward, death ſeaſing vpon them, you might ſee them ſhake the head, and fall downe preſently dead. Great Froſt at *Venice*. Extreame cold

In the which Diſeaſes, of ſeuen and fortie men (which wee found in that caſe) ſixe and twentie yeelded vp the ghoſt, and it was not any wonder, conſidering wee could not haue any ſuccour, nay, it is a diuine miracle that any one remayned aliue. And thoſe few of vs that are remayning, liue onely to commend to memorie, and highly to exalt the great power of God. Thoſe ſixe and twentie dyed, from the three and twentieth of December vntill the fifth of Ianuary, now one, now two, and ſometimes more, in one day, whom we buryed in the Sea. The death of ſixe and twentie.

The one and thirtieth of December, our Wine being wholly ſpent, and hauing ſeene the cruell and lamentable experience of our ſixe and twentie Companions, who dyed with drinking of the Sea-water, neceſſities gaue vs a good ſtomacke, that is to ſay, to take our owne water to quench our thirſt. Now, there were ſome of the companie exceedingly troubled with giddineſſe: for, wanting the abundant plentie of Wine, they were not able to indure thirſt, nor to expell it, but they accounted it a great fauour to bee able to obtayne of their companions, whereof there were ſome who denyed it to their deareſt friend, to keepe it for themſelues. It is true, that ſome of vs warily mortified it, by mingling a little ſirrop of greene Ginger, or Limons therewith, which by chance we had remayning. During this time, vntill the fifth of Ianuary, we were euery houre more accuſtomed to greater extremities. Great thirſt.

The third of Ianuary, 1431. wee had ſight of the firſt Land, which gaue vs great hope, although it ſo fell out, that it was very farre diſtant, where wee ſaw certayne Rockes to weatherward couered to the top with infinite heapes of Snow, to the which, the windes being contrary, wee were not able to approach with the ſayles, and much leſſe with Oares, becauſe our armes were exceedingly weakened: wherefore wee ſtroue to come neere them with the winde, but paſſing beyond them through the current of the water, wee loſt ſight of them altogether. Sight of Land.

And after difficult eſcape from the Rockes, ſayling forward towards a very high Rocke, wee had ſight of a Valley ſcituated betweene the two next Mountaynes, into the which deſiring to enter about the fourth houre of the night, the cruell and outragious windes would not ſuffer vs. Notwithſtanding, inflamed through an exceeding great deſire to goe on Land, wee tooke courage and ſtrength, and (through force of the Oares, and the helpe of God) entred into the ſayd Valley, at a point of Land in the leaſt doubtfull and dangerous place, as it were at the very beginning and entrie thereof, in the which, as ſoone as they perceiued the Pinnaſſe to touch vpon the ſand, fiue of our companie being more deſirous of drinke, then of any other refreſhing and recreation, leaped into the water without any regard, although it were very deepe, and went their way toward the Snow, and ſo glutted themſelues therewith, that it was an incredible Hot ſtrong ſtomackes to cold ſmall drinke.

Digitized by Google

thing. And afterward, they brought a great quantitie thereof vnto vs, who remayned in the Pinnasse, to defend it from the beating of the Sea, of the which wee also with great greedinesse, receiued without measure.

And running according to our iudgement, as wee had runne in this Pinnasse for eighteene dayes, from the day that wee departed from the ship, vntill this sixth of Ianuarie, sayling alwayes betweene the North-east and the East, and not with lesse winde then after sixe miles an houre, wee had runne about two thousand fiue hundred miles and more, without euer seeing any Land.

They goe on Land.

On the sixth of Ianuary, at the time of the solemne day of the *Epiphanie*, nineteene of vs went on land in this desolate and drie place, called the Iland of the *Saints*, in the Coast of *Norway*, subiect to the Crowne of *Denmarke*, leauing two other to looke to the weake Pinnasse, that it might not bee broken with the beating of the Sea. And being landed there by meanes of an Oare, we endeauoured to kindle fire, and with a tynder boxe and steele to strike fire, wee retired our selues into the closest place from the winde, and at the sight of the fire, nature thereby receiued a little strength.

Iland of *Saints* or *Santi*, bearing off the coast of *Norway*. See *Ortelius* his Map of *Scandia*: hee placeth *Santi* and *Rustene* in 74. degrees, but too Northerly then they are from the North Cape, from which this Rocke (saith *Quirino*) bare Westward 70. miles other Rockes: not farre distant, some inhabited some not. This is off *Rustene* three miles in compasse, and called in their Language for the extreame remoteneſſe, *The arse of the World*.

Finding this Iland not inhabited, and seeking to goe in the Pinnasse to another Iland fiue miles off, shee so leaked, that part of vs landing, as it were all in the water, and some of vs vp to the middle in shallower water, wee stroue to draw her on land, and despairing to bee euer able to goe in her againe, wee determined to fit her in such sort, that shee might serue our turne to couer vs, after the best manner that wee could. Wee broake her into two parts: and of the greater wee made a shelter, or Cottage for thirteene of vs, and of the lesser a shedde, capable of fiue men, vnder the which wee entred couering them with part of our sayles, and with the rest, and the cordage of the sayd Pinnasse, wee made continuall fire to preserue our liues.

Foure dye and others after.

Now being vtterly destitute of all sustenance of meate and drinke, wee went wandring vpon the Sea shoare, where Nature gaue vs food to maintayne life, with certrine Perewinckles, or Shel-fish and Barnacles. And of these, not as many nor when wee would, but in very small quantitie. And remouing the Snow in some places, wee found a certayne Herbe, which together with the Snow wee cast into the Caldron, and when wee thought it was boyled, wee eate it. Nor could wee satisfie our selues therewith, and thus wee liued for thirteene dayes together, with small charitie amongst vs, by reason of the great scarcitie of all thinges and extreame famine, leading rather a brutish life, then the life of men.

Great weakeneſſe.

Continuing in this rude and homely kinde of life, it happened, that through the intollerable wants foure of our companions of the greater retiring place, failed euen where the afflicted Master was, with those remedies and slender comforts for their soules and bodies: so that you may thinke their bodies remayning neere vnto vs, who being very weake had lost all our strength, wee were not able to remooue them two yardes out of sight: and yet I will say more, that wee had no sooner taken the frozen or warme water in our mouthes, but presently Nature of it selfe cast it vp againe, wee not beeing able to abstaine from it, nor almost to stand on our feete.

Miserable cold

The cold season of the yeere had brought vs to such neceſſitie, that (to warme vs) wee stood close thronged, in such sort, that wee seemed (as it were) to bee sewed together. Wherefore I entred vnder the sayles, which couered both our Cottages round about downe to the ground, the smoake not being able to issue foorth, which proceeded (as I thinke) from the Pitch which was within certaine peeces of the Pinnasse, which we burned, so that our eyes were swolne that wee could not see: neuertheleſſe wee indured all, that wee might bee warme. And our garments which wee neuer put off, were full of vermine, and the Lice swarmed in such number, that taking them from our backes, wee cast them by whole handfuls into the fire, and they had entred into the flesh in such manner through the skinne, euen to the bones, that finally they brought a young man of our company (that was a Notarie) euen vnto death, so that hee was neuer able to defend himselfe from so loathsome a litle vermine. A thing of most manifest example, to abase and abate our pride, and haughtineſſe of minde.

Abundance of Lice.

Now concord sayling among vs, euery one vsed his owne proper aduise, whereupon part of our companie wandring through the Sauage and vn-inhabited place, came to the knowledge of a solitarie and ancient retiring place made by the Shepherds heretofore, for the time of their abode, and it was seated on the highest part of the Coast of the sayd Iland towards the West, distant from ours about a mile and a halfe. Vnto the which, sixe of the companie of the number of those eight, which were found in that first and greater retiring place, determined to remoove themselues to that new-found solitarie habitation, for their lesse inconuenience leauing the other two, their other companions alone, in an abandoned and forsaken place, as well because they were not able to trauell, as also for that wee were altogether vnable to conduct them.

They finde a Fish.

It came to passe, that those sixe through the gracious goodneſſe and gift of God, found an exceeding great Fish, to the which I know not what name to giue, whether Whale, or Porpisse

piſſe of the Sea, which wee are to thinke was ſent from the Diuine and excellent bountie to feed vs. And conſidering that wee ſaw it caſt vp by the Sea vpon the ſhoare, dead, freſh, good and great, and at the time of our ſo great neceſſitie, wee rendred thankes vnto our moſt gracious Lord God, who at that time would ſuſtayne our ſo weake and diſeaſed bodies, with that foode, appeaſed peraduenture through the prayers of ſome vigilant and deuout ſoule.

With this Fiſh, wee fedde our ſelues for nine dayes ſufficiently. And as it happened, thoſe very nine dayes were ſo tempeſtuous with windes, rayne and ſnow, that by no meanes the cruell ſtorme would haue ſuffered vs to goe one pace out of our Cottage.

The miraculous Fiſh being ſpent, the furious tempeſt was ſomewhat aſſwaged, wherefore not hauing wherewith to maintayne life, like Wolues that oppreſſed with famine, goe to ſeeke out other places of abode, wee aroſe out of the Cottage, and went wandring through the deſert Rockes to finde any ſuccour to ſuſtayne our life with Perewinckles of the Sea and Barnacles; with the which wee were of neceſſitie to bee contented, although they were very little thinges, and ſo wee maintayned our ſelues vntill the laſt of Ianuary, 1431. and therefore wee were leane, pale, afflicted, and but halfe aliue. In which time finding certayne dung of Oxen ſcorched and dryed with the cold and winde, (whereof wee gathered euery day to make a fire) wee certainely knew that place to bee frequented by Oxen: which thing gaue vs aſſured hope of ſome good end, and through this perſwaſion wee indured part of our grieuous cares and ſorrowes. 1432. in Foraine account.

In the end the houre came, wherein our benigne Creator and moſt gracious Lord, purpoſed to conduct his little flocke ſo much afflicted, into the Hauen of their ſafetie: and it was in this manner. Two young Heifers of a Fiſher-man neere vnto this Iland within fiue miles, beeing ſtrayed the former yeere from the place where hee vſed to dwell, and neuer vnderſtanding any newes of them within the yeere, nor hauing any hope to finde them againe, on the very firſt day of February, 1431. at night, one of the Sonnes of the ſaid Fiſher-man of *Ruſtene* (for ſo the ſaid Iland was called) being of the age of ſixteene yeeres, dreamed that certainly the two Heifers were eſcaped, and gone vp to the Iland of *Saints* diſtant from them, where wee were lodged, at the point of the Weſt part, vpon the which no man durſt euer goe at the low water. Whereupon the Sonne who had ſuch a viſion or dreame, prayed the Father, and an elder Brother of his, that they would accompany him to goe to ſeeke them. Ile of *Ruſtene.*

And ſo, all three in a Fiſher-boate tooke their way towards the ſayd Iland, and came to the point where wee were, and the ſayd young men landing there, left their Father to looke to the Boate, and hauing aſcended a little vpon the Cliffe, they ſaw a ſmoake ariſe in the ayre, from their retiring place which they had formerly vſed. Whereupon through feare and aſtoniſhment they maruelled, and that not a little, how, whence, and by what meanes it might come to paſſe. Wherefore, they ſtood a long time much amazed. And deſiring to know the cauſe, they began to talke one with another. And although wee perceiued the noyſe, and heard the voyce; yet wee could not conceiue whence it ſhould bee, but rather iudged it to bee the crying of Crowes, then the voyce of men. And wee were the rather induced thereunto, becauſe ſome few dayes before, wee had ſeene (vpon the miſerable Carkaſſes of our eight companions caſt to the winde) multitudes of Crowes, that rent the ayre with their croking, feeding themſelues vpon them: whereupon wee thought it could bee no other.

But continuing from good to better, the voyces of the children of God ſent to ſaue vs, wee cleerely perceiued that they were the voyces of Men, and not the crying of Fowles. And at that inſtant *Chriſtophoro Fiorananti* aroſe out of the Cottage, and ſeeing the two young ſtriplings, crying with a loude voyce came towards vs, ſaying, Reioyce, behold two come to ſeeke vs. Whereupon, inflamed with an earneſt deſire, wee rayſed our ſelues on our feete, going rather with the heart then with the feete, and drawing neere vnto them, wee perceiued that through the ſudden and extreame ſtrangeneſſe of the matter, they were afraid, and their countenances began to waxe pale. But contrarily wee cheered our ſelues, and being comforted with an aſſured hope, ſhewed with actions and geſtures of humilitie, that wee came not to offend them in any wiſe. Diuers thoughts came in our mindes, whether wee ſhould detaine one of them or both, or whether one or two of vs ſhould goe with them. The firſt determination was againſt vs, becauſe wee knew not with whom, nor with how many wee had to doe, for that wee vnderſtood not them, nor they vs.

But being aduiſed by the holy Ghoſt, wee went downe to their Boate, in the beſt and moſt amiable manner that wee could, where the Father was, who expected them: and when he ſaw vs, hee alſo remayned aſtoniſhed and amazed. In this meane ſpace, wee looked whether there were any thing in their Boate to ſuccour our neceſſities, to maintayne life: but wee found nothing there. So, they moued through pitie, ſeeing vs affamiſhed, by ſignes and actions which wee made vnto them, were contented to carrie with them *Ghirardo da Lione*, a Sewer, and *Cola di Otranto*, a Marriner, who had ſome knowledge, and were able to ſpeake the *French* and the high *Dutch*, leauing vs in great hope of preſent ſafetie and helpe.

Digitized by Google

Their Boate comming to *Rustene* with our two companions, all the people flocked together, and seeing the countenance and habite of our companions, astonished at so great and strange a matter, they demanded among themselues, whence, & how such like fellowes as these appeared, or from what place they landed: and that they might be the better aduertised, they attempted to speake vnto them in diuers Languages, but in the end an *Almaine* Priest of the Order of the Preachers, spake with one of the said companions in the high *Dutch*, and by that meanes, they were certified what wee were, from whence, and how wee had arriued there. The which matter the morning following, which was the second day of Februarie dedicated to the glorious Mother of Christ, the said Priest published to all the people of *Rustene*, exhorting them, that through our misfortune, they would bee mooued to pitie and to helpe vs, according to their abilitie.

A *Germaine* Priest.

In this meane space, through the Catholike remembrance of the *Almaine* Priest, on the third day of February, 1431. at the very instant of the day of Saint *Biagio*, the curteous and pittifull Inhabitants of *Rustene* came vnto vs with great plentie of all sustenance, which they vse for their prouision, to feed vs and preserue vs, being desirous to conduct vs to their kinde habitations, to refresh our weake bodies. And so wee were guided and receiued into *Rustene* vpon the sayd day, where wee had great restoratiues, which were rather hurtfull for vs, through the exceeding abundance thereof, because wee could neuer satisfie our selues with eating, and our weake stomackes not being able to indure it, it made our hearts to grieue, so that wee thought wee should haue dyed.

There were remayning in the first and greater of our two retiring places, two of the companie which were impotent and weake, who knew nothing of this our so miraculous succour. Wherefore giuing these Catholike Countrey people notice of them, and likewise of the other eight that were dead and vnburied, assembling themselues together, they went with the Priest singing Psalmes and Hymnes, as well to burie those eight that were dead, as to conduct to the Hauen of safetie the two that were remayning behinde, and arriuing at the Iland of *Saints*, they performed a worke of mercy to the eight that were dead, to the which number, one of the two remayning was added, whom they found dead. Now imagine, how the other could continue being depriued of companie and all humaine sustenance, and yet hee was brought to *Rustene* with some little shew of life, where, at the end of two dayes hee departed this transitorie life.

Eleuen of vs being come to *Rustene*, wee landed and went into the house of our Guide, Host, and Lord, as hee and the rest desired, whereinto our most prudent Master, Master *Piero Quirini* entring, vsing his wisedome and discretion, performed an action of exceeding great humilitie, as soone as hee saw the companion of our Conductor and Sergeant Maior, declaring by semblance that hee would acknowledge her to bee the Mistresse of the house, hee cast himselfe downe at her feet: but shee refused and lifted him vp from the ground, embracing him and bringing him to the fire, and with her owne hand gaue him somewhat to eate.

Rustene described.

In this Iland there are twelue little Houses, with about one hundred and twentie persons, for the most part Fishermen, and they are by nature indued with vnderstanding to know how to make Boates, Buckets, Tunnes, Baskets, Nets of all sorts, and euery other thing necessarie for their vse and trade. And they are very curteous one toward another and seruiceable, desirous to please rather for loue, then for hope of any gift or good turne to bee done them againe. Fishes called Stock-fish, in all their payments and bartering, are vsed in stead of coyned money, and they are all as it were of one bignesse and measure, of the which euery yeere they drie an infinite number in the winde: and in the time of May fraight themselues with them, carrying them through the Realmes of *Denmarke*, that is to say, *Sweden*, *Denmarke*, and *Norway*, being all Subiect to the King of *Dacia*: where they barter and exchange the said Fish, for Leather, Cloathes, Iron, Pulse and other things, whereof they haue scarcitie.

Stock-fish in stead of mony.

Their drinke and bread.

Few other things for maintenance of life are found there, except Fish, yet at certaine times, they haue some small quantitie of Beefe, and Milke of Kine, of the which, with Rice, and I know not what other mixture, they make Bread of a naughtie taste. Their Drinke is sowre Milke, displeasing vnto them, who haue not beene accustomed thereunto. They vse also Ale, that is to say, Wine drawne out of Rie. Wee eate of the Plaice or Halibut fish, which are exceeding great, so that you would not beleeue it. Wee saw some of them somewhat longer then sixe feete of the common *Venetian* measure, aboue two foote broad vpon the Chine, and more then three quarters of a foote in thicknesse: a wonderfull thing to bee spoken. They cloath the men with redde Hides, and likewise blacke, able to defend them from the water, and they vse cloathes very course, of azure, redde, and ash-colour, brought from *Denmarke*, of small price and estimation.

Halibuts very great.

Sinceritie.

These Countrey people vse much to frequent the Church, because they are very deuout, and yeeld great reuerence to the worship and seruice of God. Auarice, is as it were altogether extinguished, for, they vnderstand not in any sort, nor know not what thing of anothers may become theirs, but by barter: and therefore they vse not to locke Doore, House, nor Windowes,

Digitized by Google

dowes, nor any Cheſt for feare to bee robbed, but onely by reaſon of the wilde Beaſts.

The Inhabitants of this place both young and old, are of ſo great ſimplicitie of heart, and obedient to the Commandement of God, that they neither vnderſtand, know, nor imagine in any wiſe, what Fornication, or Adulterie may bee: but vſe Marriage according to Gods Commandement. And to giue you a true proofe hereof I *Chriſtophoro* ſay, that we were in the houſe of our foreſaid Hoſt, and ſlept in one and the ſame Cottage, [m] where hee alſo and his Wife ſlept, and ſucceſſiuely in one Bed neere adjoyning, were their Daughters and Sonnes of ripe age together, neere to the which Beds we alſo ſlept, almoſt cloſe adjoyning to them: ſo that when they went to ſleepe, or when they aroſe, or when they ſtripped themſelues naked, and wee in like manner, we indifferently ſaw one another, and yet with that puritie, as if wee had beene little children. But I will tell you more, that for two dayes together, our ſaid Hoſt, with his elder Sonnes aroſe to goe a fiſhing, euen at the time of the moſt delightfull houre of ſleepe, leauing his Wife and Daughters in the Bed, with that ſecuritie and puritie, as if he had properly left them in the armes and embracements of the Mother, not returning to his home in leſſe time then the ſpace of eight houres.

Simplicitie. Thus the *Italians* thought in regard of their differing iealouſie, which ſcarſly permits the growne Sonne of Brother to ſleepe vnder the ſame roofe with the Mother or Siſter.

m *Quirino* ſaith in the ſame Chamber, their houſes being built of timber in round forme, with one light in the top, which in winter by reaſon of the vnſupportable cold is couered with skinnes of great fiſhes, which caſt a great luſtre.

The Inhabitants of this Iland, eſpecially the elder ſort, are found ſo vnited in their wils to the will of God, that in euery caſualtie of naturall death, which befalleth Father, Mother, Husband, Wife, Children, or whatſoeuer other Kinſman, or Friend, when the houre of their paſſage vnto another life appeareth, preſently without any griefe of heart and complaining, they aſſemble themſelues together vnto the Cathedrall Church, to thanke and prayſe the Heauenly Creator, who hath permitted ſuch an one to liue ſo many yeeres, and at that preſent, as his creature vouchſafed to call him, or her into his gracious fauour, and neere vnto him: and at the appointed houre they cauſe them to be waſhed cleane, to haue them pure and neate, as they were borne. Whereupon rejoycing and contenting themſelues with his infallible will and pleaſure, they giue him prayſe and glorie, not ſhewing any paſſion either in words or geſtures, as if properly they had but ſlept. Surely we may ſay, that from the third of February 1431. vntill the fourteenth of May 1432. which amounteth to an hundred dayes and one, we were within the circuit of Paradiſe, to the reproch and ſhame of the Countries of *Italie*.

Funerall.

There at the beginning of May we ſaw great varietie and alteration. Firſt, their women vſe to goe vnto the Bathes, which are very neere and commodious, as well for puritie, as for the cuſtome they obſerue, which they hold agreeable vnto Nature: they vſe to come forth of their houſes ſtarke naked, as they came out of their Mothers wombe, going without any regard to their way, carrying only in their right hand an heape of graſſe, in manner of a broome, as they ſay, to rub the ſweat from their backe, and the left hand they hold vpon their hip, ſpreading it as it were for a ſhadow to couer their hinder parts, that they ſhould not much appeare: where hauing twice ſeene them, we paſſed away by them, as eaſily as their owne people, the Countrey was ſo cold, and the continuall ſeeing of them, that it cauſed vs to make no account thereof. On the contrary part, theſe very women were ſeene on the Sunday to enter into the Church in long and comely Garments. And that they might not by any meanes be ſeene in the face, they weare on their head a thing like a compleat Morion with a Gorget, which hath an hole to ſee through at the end, like the hole of a Pipe, through the which they behold within that, no further off from their eyes then the hole is long, ſo that they ſeeme to haue it in their mouthes to pipe: and worſe then that, they can neither ſee nor ſpeake, vnleſſe they turne themſelues a yard or more, from the hearer. I thought good to note theſe two extreame varieties, as worthy to bee vnderſtood.

Bathing.

From the twentieth of Nouember, vntill the twentieth of February, the night continueth and laſteth there about one and twentie houres or more, the Moon neuer wholly hiding her bodie or her rayes at leaſt. And from the twentieth of May vntill the twentieth of Auguſt, either the whole Sunne is alwayes ſeene, or elſe his beames neuer faile.

Long nights. *Quirino* ſaith, that it is three moneths night with continual light of the Moone; and three others day with continuall ſight of light at leaſt of the Sunne.

In this Countrey there is infinite plentie of white Birds, in their Language called *Muxi*, but we called them Cockes of the Sea, which by nature conuerſe, and willingly abide where men inhabit, whether they find them in Barkes or on the Land. And they are ſo domeſticall and tame, as Houſe-doues are with vs.

Birds, *Muxi*.

In this Iland, and in the Countries of *Suecia*, we ſaw very white skins of Beares as white as Armelins, much longer then twelue *Venetian* feete. Wee abode in *Ruſtene* three moneths and eleuen dayes, expecting a fit time to paſſe with our Hoſt into *Sweden*, with his vſuall fraight of Stock-fiſh, which is in the time of May, when theſe Countrey people depart, carrying with them infinite plentie thereof through the Realmes of the aforeſaid King of *Dacia*.

They returne.

On the fourteenth day of May 1432. came the houre ſo much deſired, to turne our faces towards our amiable and beloued Countrey, as our minde and deſire alwayes was, and leaue the charitable place of *Ruſtene*, which was the laſt ſuccour and refreſhing to our miſeries. So wee tooke our leaue of our Domeſticall friends of the Houſe, and of our Miſtreſſe and Hoſteſſe, to whom in token of our loue we left, not that whereunto we were in dutie bound, but what wee had remayning: and that was certayne ſmall trifling things of little value in our opinion, as

Digitized by Google

Goblets, Girdles, and ſmall Rings. And likewiſe wee tooke leaue of the Neighbours, and the Prieſt, and generally of all, ſhewing them by ſignes and words, as the Interpeter might vnderſtand then, that we acknowledged our ſelues bound vnto them all. And hauing performed due ſalutations, we entred into a Barke of the burthen of twentie tunnes, or thereabouts, laden with the ſaid fiſh, guided by our Patrone and Hoſt, with three of his Sonnes, and certayne of their Kindred. And we departed on the ſaid day bending our courſe towards *Bergie*, which is the firſt conuenient and fit Hauen for the diſpatch and riddance of ſuch fiſh, which place is diſtant from *Ruſtene*, about ſome thouſand miles. So we conducted the ſaid Barke through certaine direct and ſafe channels, rowing moſt commodiouſly and at eaſe.

Berga.

Tokens of the Skiffe drowned.

But after we were about two hundred miles off from *Ruſtene*, wee found certaine Relikes of the plankes and ribs of our Skiffe, whereby we plainly knew, that our companions which were in it, were periſhed and drowned, the firſt night that they departed from vs.

Trondon.

The nine and twentieth of May 1432. we arriued with the ſaid Barke at *Trondon*, vpon the Coaſt of *Norway*, the Princely Seate of the King of *Denmarke*, where the Honourable bodie of glorious Saint *Olaus* reſteth. There wee ſtayed ten dayes to waite for paſſage, and a fit time for our Voyage: but not finding it, becauſe we would loſe no more time, wee tooke leaue of our beloued Hoſt, his Sonnes and the reſt, to proceed on our journey by Land.

Saint *Olaus.*

Vaſtena.

The ninth of Iune we departed from *Trondon*, trauelling on foot, going towards *Vaſtena*, a place ſubject to the King of *Denmarke*, within the Prouince of *Sweden*, where the cheek-bone and part of the bone of the head of Saint *Bridget* remayneth. Being there, wee vnderſtood by the *Venetians*, that the Inhabitants for the reuerence of their glorious King Saint *Olaus*, vnto whom (as they well knew) our *Signiorie* of *Venice* did great fauour in his going and returning from his Voyage to *Hieruſalem*, were diſpoſed with deeds to prouide for vs by their counſell, helpe and money. And firſt, they aduiſed vs not to goe the direct way into *Dacia*, by reaſon of the dangers of wilde beaſts, which might befall vs, but to addreſſe our ſelues to goe directly to *Stichimborgi*, to find out a valiant *Venetian* Knight called *M. Giouan Francho*, from whom wee ſhould receue fauour and helpe in plentifull manner, for loue of our Countrey, although the way were thirtie dayes iourney, quite contrary to our direct way. On the eighteenth day we came to the Court of the ſaid *Canallier M. Giouan Francho*, an Honourable Baron, and highly eſteemed of the Crowne of *Dacia*, where (with great joy) we found our two ſtraggling companions.

Venetian Knight.

The valorous Knight being now informed of our comming, with a cheereful conntenance declared well vnto vs how great the loue of his Countrey was, and eſpecially knowing the calamitie and penurie of vs his Countrey-men, and being eaſily able to releeue it. And therefore he could not ſufficiently ſatisfie himſelfe in honouring, clothing and feeding vs, but gaue vs money for our neceſſities, and furniſhing vs afterward with good Horſes, in his owne proper perſon, together with his only Sonne *M. Mapheo*, with an hundred and twentie Horſes of his owne Seruants he accompanied vs many dayes journeyes through his Territories, trauelling alwayes at his owne charge. Afterward, vpon his limits and bounds wee tooke our leaue to depart, thanking him with the moſt reuerent and kind ſpeeches that poſſibly we could. Whereupon he being departed, left vs for our Guide, his ſaid ſonne *M. Mapheo* with twentie ſeruants on Horſe-backe, who kept vs company vnto *Vaſtena*, the place from whence about fortie dayes before we had departed, vnto the which place, for the auoyding of two monethes trauell, wee were faine to returne: ſo that on the thirtieth day of Iuly wee entred into *Vaſtena*, where wee abode vntill the ſecond of Auguſt, being alwayes accompanied, and our charges borne by the ſaid *M. Mapheo*.

Lodeſe.

On the ſecond of Auguſt, we tooke our leaue of the foreſaid *M. Mapheo*, yeelding him ſuch thankes as we could. And being departed from him wee went to *Lodeſe*, where wee arriued the eleuenth of the ſaid moneth; in which place we found two paſſages, the one for *England*, and the other for the *Low Countries*: and there we voluntarily diuided our ſelues into two parts.

* *Quirino* ſaith when he ſet foot on *England*, hee ſeemed to bee comne out of Hell and reuiued. Hee came to *Combridge*, an Vniuerſitie where a *Benedictine* gaue him ſixteene Crownes, thence to *London*, where he ſtayed two moneths, &c.

The two and twentiech of Auguſt 1432. we *Chriſtophoro Fioranante*, one of the Councell of the vnfortunate ſhip, together with *Girardo da Lione*, the Sewer, and *Nicolo di Michiel* of *Venice* the Notarie, now Writer of this preſent Diſcourſe, departed from the other eight of our companions, they going towards *London* and we to *Venice*, by the way of *Roſtoch*, pretending to goe to *Rome* for a Pardon: and after many troubles and moleſtations, paſſing ouer Mountaynes, Valleyes, Riuers, ſometimes on foot, and ſometimes on Horſe-backe, through the helpe of the Omnipotent God, we came vnto our ſo much deſired Countrey of *Venice*, on the twelfth of October, 1432. ſafe and ſound, leauing the ſaid *Girardo da Lion* at *Vaſeneck*, who from thence went vnto his Countrey: and thoſe that went into * *England* were theſe; Maſter *Franceſco Quirini*, Sonne of Maſter *Iacomo* a *Venetian* Gentleman, being Merchant of the vnhappie ſhip. Maſter *Piero Gradenico*, Sonne of Maſter *Andrea*, of the age of eighteene yeeres, a young Merchant, *Bernardo da Cagbire*, Pilot of the ſhip, whoſe Wife being young, aſwell through the long delay of time paſſed, as for that it was many times certainly reported, that the ſaid ſhip with all them that were therein, were in great danger, and no token at all appearing to the contrary, being aduiſed more haſtily, then vpon mature conſideration, as is the manner of needie women,

ſhe

she married her selfe at *Trinisso*. But hearing of our comming, and the certayne newes of her liuing and true Husband, she presently separated the bond of the second Marriage, and shut her selfe vp in an honest Monasterie, aswell to declare the Integritie of her minde, as to expect the returne of her true Husband, who about some three moneths after came to *Venice* safe and sound, and tooke her againe vnto him, &c.

CHAP. XIX.

Ancient Commerce betwixt ENGLAND *and* NORWAY, *and other Northerne Regions.*

GReat *Alexander* is said in hearing a Flatterers Historie of his conquests, making them (how great soeuer in themselues) farre greater then they were, to haue caused that booke to bee throwne into the Sea, with iust indigantion exclaiming, that those incredibilities would make that which hee had indeed done, seeme incredible to posteritie. And a Liar (said *Alexanders* Master, *Aristotle*) gets this by lying, that when he speakes truth he cannot be beleeued. So hath it fared with that *Brittish* worthy, King *Arthur*, whose Great Acts by great Flatterers, seeking to light candles to the Sunne, haue made others suppose it to be night, and his worth to be a worke of darkenesse and lyes. Neither doth the later posteritie know how to distinguish the one from the other; and the Writers for and against the truth of thee *Brittish* storie, as *Iessery* of *Monmouth* and *William* of *Newbridge* of old, and others since, haue seemed to me to let the truth (as in altercation is vsuall) to fall downe betwixt them, for others more moderate spirits to take vp. Although therefore many things related of *Arthur* are absurd, yet so are not all, nor that altogether which is spoken of his Northerne conquests, eleuen hundred yeeres since, and of commerce at least, if not some kind of tributarie acknowledgment, of *Guillaumarius* the King of *Ireland*, *Gunfacius* of the *Orcades*, *Malnasius* of *Island*, * *Doldanis* of *Gotland*, *Aschilius* of the *Danes*, and *Lot* King of *Norway*. Some * adde, that King *Arthur* left people to inhabite the Ilands, and that the *Norwegian* Nobles tooke them *Brittish* wiues, and that the *Norwegians* professing their *Brittish* bloud, and liking *Englands* fertilitie better then that their own sterilitie and rockie barrennesse, sought by force of warres often to conquer that which would not be peaceably yeelded; till King *Edward*, a maintainer of peace, with consent of the Kingdome, permitted them to dwell heere at pleasure, as sworne brethren to the *English*. *Other*, subiect and seruant to King *Alfred* aboue seuen hundred yeeres since, related to his said Lord his voyage from *Helgoland* (where he then dwelt) to the North Cape, and (as probable circumstances argue) along the coast to the Bay of Saint *Nicolas*.

Galf. Monmuth. l.9.c.10,12,19. & l.11.c.17.

* *Ger. Mercator. Lambart his Agnatorum. f.137.*

Others voyage see Hak. to.1.

Ædgar, that famous founder of Monasteries, is said by *Ranulphus Cestrensis* to haue in annuall vse foure thousand ships, and by *Flores Historiarum* foure thousand eight hundred, vsing yeerely to compasse this Iland, with his Nauie quadripartite, twelue hundred in the East, as many in the West, and like proportions on the North, and on the South coasts, to scoure the Seas and secure his subiects: And in the Charter of the foundation of the Cathedrall Church of *Worcester*, he vseth these words; *Mihi autem concessit propitia diuinitas cum Anglorum Imperio, omnia Regna Insularium Oceani cum suis fercissimis Regibus vsque Norwegiam, Maximamque partem Hyberniæ, cum sua nobilissima ciuitate Dublinia, Anglorum Regno subiugare, &c.* Hee also stiles himselfe King and Emperour of the *Ocean*, and the Ilands about *Britaine*, beginning, *Ego Ædgarus Anglorum Basileus, omniumque Regum, Insularum, Oceanique Britannicam circumiacentis cunctarumque Nationum quæ infra eam includuntur, Imperator & Dominus.* So potent was he first of the *English* Kings (for *Arthur* was a *Briton*) by his strong shipping, and well manned and mannaged Nauie.

Ædgars greatenesse.

Florentius Wigornienses stileth him, *Flos & decus antecessorum Regum, Pacificus Rex Ædgarus, nostrisque memorabilis Anglis quam Romulus Romanis, Cyrus Persis, Alexander Macedonibus, Arsaces Parthis, Carolus Magnus Francis*; and addeth, as before is notified, *Is itaque dum viueret* 3600. *robustas sibi congregauerat naues, ex quibus Paschali emensa solemnitate omni Anno* 1200. *In orientali,* 1200. *in occidentali,* 1200. *in septentrionali insulæ plaga coadunare & ad occidentalem cum orientali classe, & illa remissa ad borealem cum occidentali, ipsaque remissa cum boreali ad orientalem classem remigare, eoque modo totam insulam omni æstate consueuerat circumnauigare, viriliter hoc agens ad defensionem contra exteras Regni sui, & suum suorumque ad bellicos vsus exercitium.* Both *Florentius* and *Malmesbury*, and *Mat. Westminster* record, that hee sitting at the Sterne, was rowed by eight Kings his Tributaries; *Kinad* King of *Scots*, *Maselus* of *Cumberland*, *Macon* of *Man* and many Ilands, *Dufnal* of *Demetia*, *Siferth* and *Howel* Kings of *Wales*, *Iacob* King of *Galwales*, and *Inkil* of *Westmar*, hauing the same day there met at his summons, and sworne fealtie and assistance to him by Sea and Land. These rowed him in the Riuer *Dee*, to the Monastery from his Palace, and thence after seruice backe againe: So rightly did he instile himselfe in his Charter

Ranulphus Cestrensis saith 4000. Matthew Westminster hath 4800. viz. 1200. for the South coast also.

to *Malmesbury*, *Ego Ædgarus totius Albionis Basileus, nec non Maritimorum seu insulanorum Regum circumhabitantium, &c.*

This Sunne being set, darke and stormy times followed, by reason of *Danish* incursions. These *Danes* (as M. *Camden* recordeth) began to be knowne to the world, about the yeere of Christ 570. for their piracies called *Wiccings*; of them *Dudo de S. Quintino* hath this testimony, *Dani è Scanza* (that is, *Scandia*) *velut examen apum è canistro & gladius è vagina, diuersitate multimoda, &c.* The Danes, *like a swarme of Bees out of their hiue, and a sword out of a sheath, in diuersified manner and barbarous custome leaped forth from Scanza* (or *Seandia*) *after that with petulant lust they had multiplied their innumerable generations. These being growne, contended with their parents and progenitors about their possessions, and ouerflowing their native Bankes, a multitude of them (according to their ancient custome) are compelled by lot to seeke forraine places, where by force they might plant themselues. In the consummating this expulsion or expedition, they anciently sacrificed to Thur, not with beasts, but the blood of men, esteeming that the most precious Holocaust. Their Priest vsed to diuine with yokes of Oxen, the heads of each chosen by lot being clouen asunder by one stroke, the heart veyne on the left side being searched, and with the blood thereof the heads of theirs being anointed, they presently set sayle. Ditmarus*, somewhat ancienter then *Dudo*, mentioneth a place, called *Lederun*, where euery ninth yeere in Ianuary, they all assembled and sacrificed ninetie nine Men, and as many Horses, with Dogs and Cocks, in stead of Haukes, to pacifie their Gods. Hereby wee see that by *Danes*, in our *English* stories, are intended not onely those which now we properly so call, but * *Norwegians* also, *Gothes*, *Vandals*, *Frieslanders*, and the Inhabitants generally of those North-eastern parts; three Ships of which, in the yeere 787. landed in the West parts, slew the *Reeue* of *Beorhstricke* King of the West *Saxons*, and were by the Countrie people forced backe to their Ships. *Ann.* 795. a few Ships of them made the like assay in *Scotland*, and soone after some of them entred *Tynemouth* Hauen, in the North part of *England*, and returned with the spoyles of the Churches of *Hercanes* and *Tynemouth*. This was in the yeere 800. Thirtie three yeeres after, in the reigne of *Egbert*, they were beaten at *Dunmoth*, but spoyled *Sheepie*, with murthers and robberies, entring *Thames* with thirtie fiue sayle.

sayle. The next yeere they preuailed in battell against King *Egbert*, and after that ioyned with the *Welshmen* to inuade and destroy this Kingdome, but were both chased by the victorious power of the King; and *An.* 836. another hoast of them was beaten. Another Fleet of thirtie foure Ships landed at *South-Hamton*, *An.* 838. and slew Duke *Æthelhelm*: after which they proceeded with continuall incursions (two *Hydras* heads still succeeding, when any *English Hercules* had cut off one) that it breeds horror to read or thinke of the spoyles, rapes, fires, murthers, barbarisme, heathenisme, desolation and destruction, which they brought euery where with them. And although *Alfred*, *Edward*, and *Adalstane* somewhat healed the Land of that pestilence; yet in *Ethelreds* time such a mortall relapse happened, that first he charged the people with an insupportable tribute of *Danegelt*, arising to 48000. pounds yeerely (euen after the account of those times) and buying herewith nothing but perfidie on their part, and beggerly on his, by the aduice of one *Huna* the Generall of his Armie, he wrote Letters to all places, that on Saint *Brices* day (which is the morrow after Saint *Martins* night, the *Danes* not hauing digested that drunken solemnitie should be all massacred, which accordingly was effected on man, woman, and child, not sparing those which fled to the Altars. A few in *London* escaped, and caused *Sweyne* with a *Danish* Army and vnspeakable crueltie to repay that butcherie. *Etheldred* fled with his wife and children into *Normandie* (the seed of a new Conquest) so that *Suanus** hauing made the sheepefold a shambles and shepheardlesse, proclaimed himselfe King of *England*, which *Canutus* or *Cnuto* and his two sonnes, *Harold* and *Hardicanute*, held after him some thirtie yeeres space.

Danegelt continued till *Edward* the Confessor. *A.* 1012.

* This *Swanus*, or *Sueno* lived killed his father.

And such was the *Danish* tyranny, that euery *Dane* was stiled *Lord Dane*, and had at his commandement the wiues, daughters, and the whole household where hee became. But after the death of *Hardicanutus*, that title was turned into the reproachfull terme of *Lurdane*, and the day of his death * (as the *Roman Fugalia*) was celebrated with open pastime and feasting in the streets, called *Hocktide* or *Hucktide*, as if *England* (then absolutely freed) made a mocke or scorne of her enemies. *Canutus* by treason of *Eadrike Streona* obtained the Kingdome, first as partner with *Edmund Ironside*, and after his death the whole by other perfidie, slaying *Eadwy* brother of King *Edmund*, and sending *Edmunds* two sonnes, *Edward* and *Edmund*, to the King of *Sweden* to be there made away. But hee hating such crueltie, sent them to *Salomon* King of *Hungary* to bring vp, where *Edmund* dyed, and *Edward* married *Agatha* daughter of *Henry* the Emperour, by whom hee had *Ædgar Athling*, and *Margaret* married to *Malcolm* King of *Scots* (the mother of *Maud* wife to *Henry* the first) and *Christine* a Nun.

* *A.* 1042. *Hocktide.* Hardicanute keeps with publike feasting in the streets, the women binding men, or compelling them to some ransome; the Tuesday following after Easter.

Canutus diuided the Kingdome into foure parts, of which hee reserued West *Saxonie* to himselfe, East *England* hee committed to Earle *Turkill*, *Mercia* to Duke *Edrike*, and *Northumberland* to Earle *Erike*. Soone after, he caused Duke *Edrike* (which treacherously had aduanced him to the Crowne) to bee slaine, (a iust reward of treason) and then banished Earle *Turkill* and Earle *Erike* picking quarrell with them (weary of any stalking horses) the former of which was presently after his landing in *Denmarke* slain. And now did *Canutus* seeke to win the fauour of the *English* by building and endowing Monasteries, making good Lawes, and marrying *Emma* the relict of King *Ethelred*. Thus hauing *Denmarke* by inheritance, and *England* by conquest & treachery, his ambition next aimed at *Sweden*, where first he had the worse, but after compelled *Vlf* and *Eglaf* the Kings of that Countrie to composition with him, Earle *Godwin*, the Generall of the *English*, prouoking and animating the *English* to recouer their pristine glory, and by solid vertue to ouercome them, who had ouercome their new Lord, whose fortune had subiected the *English*. Thus *Canutus* preuailed by *Godwines* policie and *English* valour, they by night without the Kings knowledge, or assistance of the *Danish* Armie, assaulting and ouerthrowing the *Swedens*: hee, the next day, missing the *English*, and fearing they had turned to the Enemy, till giuing the onset with his *Danes* vpon the forsaken Campe of the Enemy, he found there nothing but carkasses and spoyle.

English Conquest in *Sweden*. *A.* 1024.

Anno 1027. hauing intelligence that the *Norwegians* contemned their King *Olaue* for his simplicitie, he sent great summes of Gold and Siluer to the *Grandes* of *Norway*, to corrupt them, and caused them to reject *Olaue*, and to choose him for their King. For peruerted with gifts they sent him word to come to them, whom he should find readie to entertayne him. *An.* 1028. he went with a fleet of fifty sayle to *Norway*, and expelled *Olaue*, subiecting that Kingdome to himselfe. *Olaue* which had beene the King, Doctor, Preacher and Apostle of the *Norwegians*, (as *Florilegus* stileth him) the sonne of *Harald* King of *Norway*, was slayne, *Anno* 1030. and cruelly butchered by his treacherous *Norwegians* with an Axe or Hatchet, for disanulling their Pagan superstitions, and hee since is there superstitiously worshipped for a Saint, whom then trayterously they permitted not to reigne or breathe. The same yeere perished at Sea, or (as some say) was slayne in one of the *Orcades*, Earle *Hacun*, whom *Canutus* fearing had banished in colour of sending him Embassadour.

Saint *Olaue*.

His greatnesse (hauing to wife his sisters daughter) made him grow suspicious: And according to the deuotion of that time. *Anno* 1031. *Canutus* or *Cnuto* went to *Rome* on Pilgrimage, and there made magnificent Offerings, and obtayned diuers Immunities of the Emperour and Pope. After his returne he inuaded the *Scots*, and ouercame King *Malcolme* with two other Kings,

herſelfe, and became a Nunne. *Sueno* King of *Norway* after fiue yeeres deceaſed, and *Canutus* his ill-gotten *Engliſh* and *Norwegian* wings were quickly not only pulled, but cut off.

The *Engliſh* had occaſion of further inuaſion to and from *Norway*. For *Suanus* deceſſing, the *Norwegians* choſe *Magnus* the Sonne of Saint *Olaue* for their King; which when *Hardecanutus* vnderſtood (as the *Daniſh* Storie ſet forth by *Erpold Lindenbruch* teſtifieth) hee inuaded *Norway* with his *Engliſh* and *Daniſh* forces, where he and *Magnus* came to compoſition that the Suruiuour ſhould enjoy both Kingdomes. When *Hardecanute* was dead, *Sueno* the Sonne of *Eſtrid* his Siſter, ſucceeded, and *Magnus* King of *Norway* fought with *Sueno* to obtayne his couenanted Kingdome of *Denmarke*, and ouercame him. *Sueno* fled into *Sweden*, and there abode till the death of *Magnus*, after which he recouered his *Daniſh* Scepter. *Florentius* writeth that *Suanus* ſent to King *Edward* the Confeſſor, intreating his aide with a Nauie againſt *Magnus*; Earle *Godwine* counſelled to ſend fiftie ſhips, but Earle *Leofrike* and the people refuſed; and *Magnus* with a great Nauie fought with *Suanus*, and expelled him his Kingdome, which hee after recouered.

Hiſtoria Danica.

Second *Engliſh* Expedition into *Norway*.

Harald Harnager the Sonne of *Siward* King of *Norway* and Brother by the Mothers ſide to Saint *Olaue* obtayned *Norway* after his Nephew *Magnus*, and ſent an Embaſſage to King *Edward*, whereby Peace and Amitie was concluded betwixt both the Kings. He (after King *Edwards* death) inuaded *England* with a great Nauie [m] of three hundred ſhips, and diſcomfited the Earles *Edwine* and *Morcar* neere *Yorke*; but fiue dayes after *Harald* then King (Sonne of Earle *Godwin*) ſlue his Brother *Toſti* and *Harnagre* at *Stamford* Bridge, permitting his Sonne *Olaue* to returne vpon conditions to *Norway*. But whiles he conuerted the ſpoyle to his owne proper vſe, he gaue ſuch diſguſt to the *Engliſh*, that a few dayes after in the battayle with *William* Earle of *Normandie*, they were leſſe zealous of his cauſe; where a new *Norman* period beganne: thoſe Northerne quarrels hauing had no other end but this ſucceſſion.

[m] *Trecentis coggonibus.*

From 787. to 1065.

I ſhall not need to adde what followed (the *Norman* Acts in *Italie*, *Paleſtina* and other places I haue handled elſe-where) little occurring of *Mars*, but *Mercurie*, of which I haue by me Letters from King *Henry* the Third, the firſt yeere of his Reigne to *Hacon* or *Haquin*, then King of *Norway*, for mutuall Trafficke betwixt both their ſubjects. It is remarkable that the Northerne humour of ſpoile, ſlaughter and bloud continued whiles they were Pagans, and expired in manner with their Paganiſme both in *Norwegians* and *Danes*: as if God would firſt by them puniſh the vices of thoſe times, and withall conquer the Conquerours, with the Religion of the conquered, and by ſo ſtrange a way bring the Northerne World (by this way of deſtroying) to ſaluation. Since that time, the State of *Norway*, *Iſland* and other parts hath decayed in numbers of ſhipping, courage of men, and other meanes of Earthly greatneſſe. Somewhat yet for Hiſtory and an Hiſtorians ſake, I will adde of *Matthew Paris* an *Engliſhman* his Voyage to *Norway*.

vid. ſup. l. 8. c. 6. §. 1.

Note.

In the yeere 1247. *Matthew Paris* recordeth, that on the day of Saint *Olaue*, a famous Saint in the Regions and Ilands of *Norway*, *Hacon* was crowned King, and ſolemnely anointed at *Berga* by the Biſhop of *Sabine* then Legate (from the Pope) in thoſe parts. For the honour whereof the ſaid King gaue the Pope 15000. Markes ſterling, beſides inualuable Gifts which the Legate himſelfe had; and fiue hundred Markes by him extorted (ſaith our Author) from the Church of that Kingdome. The King alſo receiuing the Croſſe for the *Holy Land* Expedition, obtayned of the Pope the third part of the Eccleſiaſticall Reuenues of that Kingdome towards his charges. Which *Lewis* the *French* King knowing, writ in friendly termes to *Hacon*, to beare him company in the ſaid Expedition, offering him full power (in regard of his Sea-skill) ouer his Nauie, and ouer the *French* Army. This Letter was carried by our Authour *Matthew Paris*, to whom King *Hacon* anſwered that he gaue great thankes to that deuout King: but knew in part the nature of the *French*, & as ſaith the Poet, *Omnis quę poteſtas Impatiens conſortis erit*; and I ſay, *Omnis quę ſuperbus, Impatiens conſortis erit*. My people is impetuous, indiſcreet, and impatient of wrongs, which might occaſion irreparable damage; and therefore it is fitter for each to goe by himſelfe. But I haue written to the King for quiet paſſage thorow his Countrey, and prouiſions as need required. The Kings Anſwere thereto and Letters Patents were alſo deliuered to him by this our Author in this forme.

Ma. Paris p. 981.

The Pope and his Legates deere friends to all Kingdomes. Saint *Lewis* his offers.

His Letter.

Ludouicus Dei gratia Francorum Rex, vniuerſis amicis & fidelibus ſuis, Balliuis, Maioribus, & Prepoſitis, ad quos preſentes litera peruenerint, ſalutem. Cum clariſſimus noſter Illuſtris Hacon Rex Norwegię in ſubſidium Terra ſancta tranſfretare proponat, ſicut nobis per ſuas literas intimauit, vobis mandamus, quatenus ſi eundem Regem vel ipſius Nauigium per mare contiguum terra noſtra tranſire contingat, vel in Terram noſtram, vel in feuda noſtra alicubi applicare, ipſum & ſuos benignè & honorificè recipiatis, permittentes eoſdem in terra noſtra victualia emere, & ſibi per forum legitimum de ſibi neceſſarijs prouidere. Actum apud Sanctum Germanum in Laia, A. D. 1248.

When the King of *Norway* had read this (for hee is a diſcreet, and modeſt, and well learned man) hee reioyced much, and was gratefull to the bearer, reſpecting him with Royall and bountifull gifts. Thus writeth *Matthew Paris* of himſelfe, and his employment. The cauſe of his going into *Norway* he further relateth, that King *Cnute* (or *Canutus*) hauing founded a famous

M. Par. his voyage to *Norway*. *John Abbie.*

Digitized by Google

mous Monaſtery of Saint *Bennet*, of *Holm* in *Norway* (of which title and order hee had founded another in *England*) it happened that the ſaid Abbie, with the appurtenances was almoſt ruined by an impious Abbat, who forſaking his Order, and ſtealing away priuily the Seale of the Chapiter, either ſold, or by forged writings fraudulently engaged almoſt all the poſſeſſions thereof: wherein hee had the Sacriſt, the keeper of the Seale, his copartner, both in this fugitiue apoſtacie and treacherie. Heereupon the Archbiſhop of *Nidroſia*, in whoſe Dioceſſe the ſaid Abbie was ſituate, ſeiſed the ſame and the appurtenances into his hands, alledging that the Monkes had only the habite, but were altogether ignorant of Monaſtike order, and Saint *Bennets* rule, ſome of them alſo theeues and fugitiues. The Monkes appealed to the Pope (which cauſed the Archbiſhop to ſuſpend his proceedings) and the Prior recouering ſomewhat, and gathering together a ſumme of money, went to the Roman Court, where the Abbat had beene a little before, and intangled by writings the ſaid houſe in fiue hundred markes; which cauſed the Prior to returne fruſtrate and full of griefe. But in his way, hearing that the ſaid Abbat was dead, in the Abby of Saint *Alban* in *Selio* (in *Norway*) he and the Conuent made choice of an Abbat, and this Prior, with another Monke, and three hundred markes in mony, together with the Kings letter, being ſent to *Matthew Paris* to take paines for their freedome, it was procured happily that the temporalties of the ſaid houſe were freed from the *Caurſines* (the Popes Vſurers) then reſiding at *London*, within one yeeres ſpace. But their Spiritualities were much maimed, they by bribes purchaſing delayes, leſt the Archbiſhop ſhould take poſſeſſion of the Iland which wholly belonged to the Abby, and of it alſo, expelling the Monkes.

Monkes ignorant of their owne order.

Popes long hands and Lime-fingered Appeales.

Now the Cardinall Biſhop of *Sabine* then comming Legate into *Norway*, the Monkes ſought to him for ſuccour, and hee counſelled them to go and petition the Pope to prouide them of an Inſtructor and Reformer, and he would write in their behalfe.

The Abbat therefore and Prior went with Letters from the King and Legate to the Pope, who gaue them leaue to chuſe any man of whatſoeuer Region or Monaſterie to be their Inſtructer. They anſwered the next day, that all the World had not Monkes of that Order liuing in more compoſed order then *England*, nor *England* any comparable by report, to Saint *Albans*: of which Houſe they deſired *Matthew* to be their Reformer, of whoſe wiſdome and faithfulnes they had had experience; a man alſo almoſt familiar and friendly to their King, and able by his meanes to order the rebellious and vnruly. Hereupon the Pope gaue them this Briefe to the Abbat of Saint *Albans*,

Innocentius, &c. Dilecto Filio Abbati Sancti Albani in Anglia Ordinis S. Benedicti, &c. Cum ſicut ex parte dilecti filij Abbatis Monaſterij de Holm, Ordinis S. Benedicti Niſtorſienſis Dioceſis, fuit propoſitum coram nobis; idem Monaſterium propter Predeceſſorum ſuorum negligentiam, ſit in his quæ ad Monaſticum Ordinem pertinent deformatum; nec inueniatur in illis partibus aliquis qui ſtatuta & obſeruantias eiuſdem Ordinis bene ſciat: Nos ad ſupplicationem eiuſdem Abbatis, diſcretionem tuam rogamus, attentius & hortamur per Apoſtolica tibi ſcripta mandantes, quatenus dilectum filium Fratrem Mattheum Monachum tuum, qui dicitur probata vitæ ac religionis experta, ad idem Monaſterium vt dictum Abbatem & Monachos ſuos in regularibus diſciplinis & ſtatutis quæ ad eundem ordinem pertinent, informet & inſtruat, tranſmittere pro diuina & Apoſtolicæ ſedis ac noſtra reuerentia non poſtponas. Datum Lugduni, &c. Hereto the Abbat obeying, and *Matthew* to his Abbat, the buſineſſe luckily ſucceeded, and Monkerie both in that of *Holm*, and other *Norwegian* Monaſteries was reformed.

I might here ſhew [1] the great ſtirres which in the firſt Ages after the Conqueſt the *Norwegians* haue cauſed in *Ireland*, *Wales*, *Man*, *Angleſey*, the *Hebrides*, and *Orcades*: as alſo of *Harald* (whom the Conquerour ſlue) his two ſonnes and daughter fleeing to *Sueno* King of *Denmarke*, who gaue the daughter in Marriage to *Ieruſlaus*, or *Waldemarus* King of *Ruſſia*: and of *Nicolas de Lynna*, a *Franciſcan* Frier and Mathematician of *Oxford*, before mentioned, of whom *Iacobus Cnoyen* ſaith in his Iournall that he learned of a Prieſt who had deſcended of thoſe which King *Arthur* had left to people the Ilands of *Norway*, *Anno* 1364. that in the yeere 1360. the ſaid Frier had comne into thoſe Ilands, and proceeding further by Art Magicke, had deſcribed thoſe Artike parts (as the [n] Map preſents) with foure Whirl-pooles or In-draughts. Yea (as Maſter *Dee* addeth) at the Northerne Ilands, the Record whereof at his returne he gaue to the King of *England*, the Booke being called *Inuentio fortunata* or *fortuna*, contayning a deſcription from fiftie foure degrees to the Pole. I might alſo adde out of *Thomas* of *Walſingham*, the Trauels of *Henrie* Earle of *Darbie*, (afterwards *Henrie* the Fourth, King of *England*) into *Pruſſia* and *Lettow*, or *Lithuania*, where by his helpe eſpecially was taken *Vilna* the chiefe Citie (*Skirgalle* the King of *Lettow*, hauing fled thither for refuge) his Colours being firſt aduanced on the walls, foure thouſand ſlaine, of which the King of *Polands* Brother, and three thouſand captiued. Alſo I might adde the Voyage of *Thomas* of *Woodſtocke* Duke of *Gloceſter*, ſonne to King *Edward* the Third, along the Coaſts of *Denmarke*, *Norway*, and *Scotland*. Other Letters likewiſe of King *Edward* the Second to *Haquin* or *Hacon*, King of *Norway* in behalfe of *Engliſh* Merchants there arreſted: with Entercourſes betwixt the *Engliſh* and the *Dutch* Knights in *Lieſtland*. But hauing only briefe mentions of theſe, and them or the moſt of them recorded by Maſter *Haklуyts*

1 Of theſe ſee *Hak. tom. 1.*

meane commoditie: and if they keepe and sell it, they dye for it. Hee hath seene one piece of Amber taken vp, in the middest whereof was to be seene through the transparent Amber a Frog in similitude and full proportion: (Master *Vassall*, his *brother, a friend of mine, told me of a piece of Timber in the keele of a ship, where by occasion of a stiuer, one cutting nine inches within the Timber euery way, he found a great liuing Tode in the hollow thereof at Woolwich*) betwixt this *Frishnering* and the Land is a great water *Frishhoff*, where at Saint *Georges* day they begin to fish, of which there is exceeding plentie, and for three halfe pence one may buy a cast as much as they shall draw the next time. One here in his Net drew vp a company or heape of Swallowes as bigge as a bushell fastned by the legs and bills in one, which being carried to their stoues, quickned and flew, and comming againe suddenly in the cold Aire dyed.

A Frogge in a piece of Amber.

Strange report of Swallowes.

The *Visle*.

From *Danske* he went to *Marienberg*, a Towne also standing on the *Visle*, whereby it runneth in another channell, and betwixt both these makes an Iland wherein stands *Nerdeich*, which Iland is compassed with a wall to fortifie it against the comming downe of the *Visle* in the Spring at the thaw of the snowes, &c. This wall seemeth in some places as high as *Paules* Steeple, and other-where as high as *Paules* Church, where yet it hath sometime beene ouerflowne: full it is of Hoffes and Villages belonging to the Lords of *Danske*.

High wall.

Marienberg.

Marienberg is a free Towne for Religion (*Danske* then professing only *Lutheran*) saue certayne Friers and Nunnes liuing in Cloysters closely. There a *Lutheran* when he preacheth must make an end at his houre, and then a Iesuit preacheth to the *Rom.* Catholikes as long, the former both company, and Preacher being auoyded of himselfe, or by force. It was built by the *Kreitzherne* (*Dei-parini milites*) Knights of the Crosse, who hauing lost their footing in the *Holy Land*, [m] by consent of the Empire assaulted and conquered *Prussia*, being in this Conquest sixtie foure

Dutch Knights of our Ladie. m See *Tom.* 1. *lib.* 8.

yeeres

Digitized by Google

yeeres, who after carried themselues so tyrannously, that the people yeelded themselues to the *Pole*, and destroyed the *Kreitzherno*, saue those that made a head about the North parts, with whom after some doubtfull fights, was made a league, that This Order should cease; Their Captayne should be married, and should haue seuentie two Townes in *Prussia*, to him and his Heires Males, and in defect of such Heires to returne to the *Pole*. His Townes are not adjoyned together, but the *Poles* Townes betwixt. *Kinningsburge* is the Dukes Court.

Thence he went to *Elbing*, a faire Towne, where our Trade is now for Flaxe, which was before at *Danske*, thence remoued for their insolencies. Here our men only pay Custome: others are free, and this they did voluntarily, and haue in this respect very much authoritie amongst the Lords there: the Towne still flourisheth with buildings, &c.

Thence he went to *Bransperg*, (the Poles Towne) where is a Colledge of Iesuites: From this place to *Kinningsberg*, and thence to *Liba* in *Curland*, thence to *Samaiden*, and thence to *Reca*, or *Rie* in *Liefland* also. (This *Reca* is vnder the *Pole*) thence to *Derpt*, and thence to *Reuel*. At *Derpt* he went to schoole three yeeres: it is vnder the *Pole*. *Liuonia* is exceedingly distracted betwixt *Bransperg*. *Rigato*.

Reuell. Straw Caſtle.

quered all ſaue *Reuell*: againſt which he made a Caſtle with water and ſtraw, the froſt binding them together as faſt as they were laid. The Countrey is inhabited with the ancient *Indigena*, called *Momeſe*, and others of the *Dutch* called by them *Sac's*. Who by occaſion of ſhip wracke being caſt on theſe Countries, did buy of the ſimple Inhabitants ſo much ground as a Roſe hide, &c. ſo building in one place *Reuel*, in another farre diſtant *Rie*, and ſo other Townes; by this meane commanding and ſubduing all the Countrie. *Derpt* was one Turfe of ground bought as before.

Momeſe & Sac's

Idolatry.

The *Momeſes* are almoſt *Saluadoes*, retaining ſtill their old ſuperſtitions, as to worſhip the Sun, or the firſt Beaſt they meet with, and eſpecially they haue in religious reckoning their *Leaue*.

This which they call *Se-leaue*, or *the Groues*, is a company of Trees, which it is religious to touch; and he knew a *Dutchman*, *Martin Tekell* of *Derpt*, who breaking a bough was ſwelled a yeere together as big as his skinne would hold. Heere at Marriages and Burialls they pray, but without Image. Their marriage is thus. The man and his Bride are ſet ſtridling on a Horſe, and blinded; and ſo led into *Se-leaue*, there taken downe and married by their Rites; then ſet vp againe, blinded as before, and conueyed with their company, and Muſicke to their houſe, ſinging *Koſoku Koſoku Coniku, ſeamoha:* there taken downe and had to bed, ſtill blinded till the next morrow, in the meane while they reſt drinking, &c.

Marriage.

They mourne when one is borne, reioyce and make merry at death. Their mourning (in *Curland*) is then, and when they walke alone, or fetch wood, *Yerow, yerou yerou, maſculine babe:* the words themſelues vnderſtand not, but thinke it to haue remained ſince that *Babyloniſh* Towre. When the *Momeſes* die, they are buried in their *Leaues*, with their knife vnder their arme, and their coate hanging ouer the graue. The *Momeſes* are very ignorant, and aske who learne the Hares in the woods their prayers. At *Rie* the women haue a thing of Red veluet on their heads, made like a Ship with the keele vpward, at each end a lock of hayre.

The women of the *Sacs* differ in their faſhion of attire each City from other, a pleted Petticote, with a damaske Vpper-body, a veluet Square on their heads, and thereon a Cloke, &c. The maid vncouered, if ſhe haue had a child and refuſe to goe couered, ſhe is brought to the Pillory, her haire cut off, and there nayled, and a Kerchiefe put on. Here and in *Norway*, and in White *Ruſſia*, &c. ſtrangers pay nothing for entertainment, but ſalute, ſit downe, and expect the Hoſts expences. Their bed they muſt bring with them, which is commonly a Beares skin, or elſe they there haue a locke of ſtraw. To offer money is a diſgrace, which yet might ſeeme to ariſe of the baſeneſſe of the coyne. Their houſes are all of Timber beames laid ſquare, and others laid on them in notches, ſo till they come to the roofe, which they couer with ſtraw, diuided in two roomes; the inner being the Parlour or ſtoue, where they haue as it were one Ouen ouer another: the middle hearth being of ſtones ſet grate-wiſe, the fire is put in on the Back-ſide or Hal-ſide, & there alſo the Sinke iſſueth. Before that mouth in the Stoue is ſet a veſſell of water, which, when they wil haue the heat exceeding, they beſprinkle on thoſe hot ſtones. A fire laſteth a day, at night they renew it. Sometimes the old *Pruſſes* on the borders of *Curland*, according to their old heatheniſh Rites do ſacrifice their Prieſt in fire.

Hoſpitalitie.

Houſes.

Peibus.

From *Derpt* hee went to the *Peibus*, whereinto runne ſeuentie two Riuers making a great Lake full of Fiſh. In the *Peibus* betweene *Pleske* and *Narue*, the Ships (whereof are many, and ſome an hundred Tunne, with one Maſt) are ſowed together with Oſiers, hauing no Iron workes, called *Boidacks*. They goe to Markets in Sleds, where comming to a walled Towne, and waiting the opening of the Gates, the Sled is drawne in ſometime, with his Maſter ſitting as before ſtarke dead with cold. Thence he went to *Narue*, which runneth out of this Lake, where the Riuer being twice ſo bigge as the *Thames*, hath a fall a mile ſteepe on a Rocke. Here the *Sweden* (as is reported) made a Bridge ouer with the bodies of *Ruſſes*, as the *Ruſſe* had done before with his owne people about 40000. hence to *Iuanogrod*. Theſe 40000. were onely bearded men ſlaine, &c. not women or children; theſe hee daſhed by the heeles, the dryed braines whereof hee hath ſeene on the wals, &c. theſe all out of two Townes, *Narue* and *Iuanogrod*. The Caſtle of *Iuanogrod* is ſo fortified, that it muſt bee thrice conquered before conquered, and built in a yeere, of Stone, which none elſe is in *Ruſſia*. Hence hee went to *Yeraſlaue*, where he and his companion were apprehended by the *Ruſſes*, for trauelling without licence, and as they came at any Towne, blinded, and after ſome feares ſent thence into *Letto*, or *Lithuania*: paſſing through Woods full of Beaſts, Beares, &c. none hurtfull but *en luxe*, a kind of ounce or Cat-a-mountaine, with a tayle a handfull long, ſpotted, as big as a Dogge, in forme like a Cat, which would from off a tree leap on Trauellers and kill them. Here they came to the *Weild* or *Vilna*, the chiefe Citie where the old Dutcheſſe a *Caluiniſt* (whom therefore they called the *Engliſh* Queen) kept her Court. Her two ſons being ſummoned to the Parliament in *Poland*, went garded with 30000. Here they vſually ſteale their wiues; a man viewing one to his content, comes with his company to the place where ſhe dwels, and lies in ambuſh till night when ſhe comes forth to make water, and then they catch her, and on a Sled carry her away, &c. her friends not knowing what is become of her perhaps a moneth, and yet know what to ſuſpect becauſe of the cuſtome. Their Churches are thin, and in the Villages they haue a Croſſe of Wood, with a Pentiſe, and a Crucifixe.

Sowed Ships.

Letto.

Vilna.

HONDIVS *his Map of* POLONIA.

Turkes are holden to be slaine by them. No Townes very strong but *Cammeniecx* built within a Rocke, the light let in at holes. The *Turke* went ouer it but could not win it.

The *Polanders* had a great murraine of beasts attributed to the *Iewes*: two *Iewes* comming to a woman offered her mony for some of her milke, she answered, her child but then sucked, they left their glasse there, promising to fetch it anon and to satisfie her: her husband meane while comming home and seeing so strange a thing as a glasse, asked from whence it came, and why; being answered two *Iewes* had left it there for milke for a medicine, bid her fleet Cowes milke and fill the glasse: which the *Iewes* receiuing, and hauing entertained a Boy, caused him to climbe vp one of the Ladders which there stand together with their three square gallowes made of stone, with woodden rafters crosse, and to poure it into the mouth of one of the dead men (which there alway hang after execution) his mouth, who presently cryed like a beast, as the boy reuealed, and they thereupon cryed they were cosined: a murren followed which should haue been a plague. Many *Iewes* executed for it; which yet the *Iewes* said to bee a pretence for their money. The *Iewes* that farmed the Custome at *Samaiden* in *Curland*, killed a *Polonish* Merchant without punishment, beating out his braines for delaying to open his packe. Hee returned out of *Poland* into *Prussia* to *Torne*, the first place obtained by the *Kreitzherne*, where they built a Castle about an Oake which standeth there still, but is dead. Thence along the *Vistle* (where the *Polac* haue their Masts, &c. with wares three miles together tyed downe the streame) to *Dantzike*; thence into *Pomerland* farre more barren then *Prussia*, to *Cassubia*, *Cosslin*, *Colberg*. Thence to *Statin*, euery way exceeding pleasant and good. Thence to *Rostock* in *Meckelberg*. Thence to *Lubeck*, a fairer Citie then *Danske*, so to *Oldsloe*, to *Hamberg*, to *Breme*, to *Limeneburg*, to *Mansuelt*, to *Bamberg*, and thence through *Bohemia* into *Silesia*, to *Bresslaw*, where hee went to schoole three yeeres: whence into *Polonia* againe, and thence to *Pruss*. Thence home into *England*.

Torne.

Norway.

Hee went againe iuto *Norway*, to *Nilus*, *Bashus*, &c. It is a barren soyle, as being nothing but Rockes and Valleyes: the Rockes are couered with grasse, and the ground betweene they digge and sow with Corne, which yet is not able to satisfie the Country. The difference betweene the

Gentlemen

Gentlemen and Bore, is in his command, being otherwise, as raggedly apparrelled as hee, with twentie patches on his breech, and barefoot in winter.

Sweden.

In *Sweden* he was, at *Stockholm* the chiefe Citie. These now * vnder Duke *Charles*, hold warre with their King, yet all things passing vnder his name, but so hating the *Poles*, that though of another Nation, neither the long attire, neither their Curb, or hooked Sword can passe safely among the Bores for suspition of being *Poles*: and the rather becaus they were made beleeue that the *Pole* was ayded against them by the *Tartars* that were man-eaters. They are strong in shipping and had giuen the *Dane* the ouerthrow at the battle at *Bornaholm*, had he not beene assisted by the *Lubeckers* with money, &c. One also of whose Ships with a shot fired and blew vp the Admirall of the *Sweden*. The *Lubeckers* therefore pay no custome to the *Danes*, and for their costs hold *Boraholm* till they be satisfied out of the Reuenewes thereof.

* When he was there.

In *Sweden* (as in *Friesland* and other those Countries) the Lord holdeth the other his Tenants as Villaines and Slaues, and at his pleasure ships their Horses and Daughters to *Reuell*, and there sells them; a bushell and halfe a Culmet of Salt for a woman, which yet is of person and complexion very comely, and very able to doe worke. He came againe to *Leefland*; and thence to *Finland*, where hee was with an *English* Captaine in a Castle: and thence into *Liuonia*, and so into *Russia*, &c.

His other trauells.

Besides those his Easterne trauels, he hath bin in our neerer neighbor places, as in *Belgia*, *France*, *Spaine*, *Portugall*, *&c.* and passed to the West *Indies* by the Ilands of Cape *Verd*: in three of which *S. S. Anton. Vincent*, *Lucie*, the Inhabitants cannot prosper nor liue long, saue in those Ilands which yet are vnkind to other forrainers. He hath also beene in *Guinea*, in *Barbary*, in the Straits, at *Carthage*, where the old ruines remaine, and the stones of Marble, &c. worth the bringing home, in *Italy*, *Slauonia*, *Morea*, at *Venice* often, at *Ferrara*, *Padua*, *Mat. Angelo*, thence to *Ferme*, to *Loretto* (where he visited the Ladie of *Loretto*) it is one street, walled about, the Temple faire, and in the Temple of our Ladies house, inscriptions innumerable of diuers languages, affirming it to haue fled the *Turkes* conquests from *Iury* into *Sclauonia*, and from thence also hither. Here forsooth it was placed in a piece of ground belonging to two Brethren, which because of this new queſt and requeſt could not agree on the proprietie: and to auoyde further suite, in the night it was found remooued to a vacant place by the high-way, and there this Temple built whither resort Pilgrimes in troopes, as to a Mart from diuers Nations. The street on one side all Innes, on the other makers of Images, Beades, and such other holy bables heere sanctified by touch of *Madonne*.

Loretto.

The Temple is hanged about with Monuments of her exploits, vpon vowes conceiued in distres of Warres, Diseases, &c. heere hang the old Swords, &c. There are two Vestries of incredible wealth, and Priests of diuers Nations for their proper Pilgrimes. The House low and meane builded with white Brickes, such as in *Barbarie* they burne in the Sun. There are two roomes, in one whereof the Chimney where shee dressed her meate, and her dishes, &c. In the other her selfe, or statue with a Childe, aloft of blacke colour: to whom one whose office it is, on a staffe like a Musket-rest doth lift vp Beades, &c. by her touch to bee hallowed. The *French* Queene sent her a Present to hang about her necke, which present would pull her in peeces by the weight. It is round, two foot in diameter made like a Sunne, in the center a Carbuncle, the rest set with Diamonds, the rayes pointed with orient Pearles, the Brickes (miraculously) cannot bee remooued, to which end they report of a Bishops superstitious steale: who was not able to passe without restitution.

Trauelling in diuers places of *Italy*, *Rome*, &c. hee returned by the *Alpes*, from *Venice* to *Mestre*, thence to *Treuise*, so to *Seranalle*, a Towne of Blade-smithes, which with Water-workes grinde and hammer their Mettals: thence vp the *Alpes* by a passage so narrow cut out of the Rocke, that sometime the Horse hoofe hung ouer, it beeing a steepe mile high, a Riuer running vnder. Thus to *Basill*, thence backe to *Tiroll*.

Alpes.

After all these trauels in these parts of Europe *better knowne, and those others in the more vnknowne,* and in Africa *and* America, *hee much affecting the* Virginia *businesse and especially that of* Bermuda, *went thither to order publike affaires. And after all this (as you haue heard) went in place of Cape Merchant to the East* Indies, *and being Captaine of the* English *House at* Bantam, *there and thence trauelled to his long home. This I thought good to adde to the former relations, which I receiued many yeeres since from his owne mouth, beeing my louing and familiar friend, and for a generall Traueller by Sea and Land, in hote and cold Countries of the old and new world, not easily matchable. Had hee liued, I would haue better perfected these short Notes; but Death it selfe hath not taken from mee his loue, shall not from the world his memory; I rather chusing to giue the world these vnpolished Notes, as his, then either to burie them with him, or by refining and illustrating to make them mine. The best illustration seemes that of Mappes, some of which out of* Hondius *I haue added.*

CHAP.

CHAP. XXI.

Collections out of MARTIN BRONIOVIVS de Biezerſedea *ſent Ambaſſadour from* STEPHEN *King of* Poland, *to the* Crim Tartar: *Containing a Deſcription of* Tartaria, *or* Cherſoneſus Taurica, *and the Regions ſubiect to the* Perecop *or* Crim Tartars, *with their Cuſtomes priuate and publike in Peace and Warre.*

The fields *Sauramenſes* and *Oczacouienſes*, betwixt the Riuers *Bogus* and *Neſter*.

BRaſlaw is a Towne in *Podolia* with a Caſtle, numbreth aboue fiue hundred Inhabitants, good Gunners, and well exerciſed in *Tartarian* skirmiſhes. They are good Guides in the Playnes to auoyde the *Tartars* and *Kozackes*. From thence thorow Woods not very thicke, after ſome miles journey to the ſmall Riuer *Silnica*, where the *Braſlawens* keepe good guard alwayes againſt the Excurſions of the *Tartars* and *Walachians*. Downe the Riuer *Bogus* or *Hipanis*, you may goe almoſt to *Oczacow*. In the way are the Riuers *Triſtenet*, *Berſad*, *Olſank*, *Sauran* (whence they are called the Fields of *Sauran*) a ſtone Bridge and Bathe ſometimes belonging to *Vitoldus*, Great Duke of *Lithuania*, ruines and graues, *Sinawod* Riueret, the ſtrong rockie Ile *Probite*, a good refuge for ours againſt the *Tartars* (the *Braſlawens* in May and Iune, vſe there and in the other many Ilands of *Bogus* to fiſh, armed with their Pieces) *Certelna* Riuer the greater and the leſſe, and that of *Capcacley*, and *Hancocricus* (the *Tartars* call it *Cham*) and the Lake *Berezania*. That Field is fiftie miles, or as they call it ſeuen dayes journey to a ſpeedie traueller, from *Braſlaw* to *Oczacow*. There are wilde Beaſts, Biſonts, Elkes, Horſes, Harts, Rammes with one horne, Goates, Swine, Beares: which ten yeeres ſince were ſayd to bee killed with the ſharpneſſe of the Winter, and huge heapes of their bones are found in the fields. They had alſo innumerable herds of Horſes, *Turkiſh* and *Tartarian*; Kine and Sheepe which fedde there, by the borderers of *Ruſſia*, *Volſinia*, *Kiow*, *Podolia*, and *Moldauia*, not long ſince deſtroyed. The hills called *Mogili*, are teſtimonies of Burials and Warres. The Field is fertile, rich of paſture and pleaſure.

Long miles in thoſe parts: and ſo vnderſtand in the reſt of this ſtorie.

Sharpe winter.

HONDIVS *his Map of* TAVRICA CHERSONESVS.

Paſſing

Digitized by Google

Passing ouer *Prut* or *Hierat*, a Riuer of *Moldauia*, you come to *Stepanowetia* or *Iassi*, chiefe Towne of *Walachia*; or righter to *Prutum Technia*, a Towne and Fort of the *Turkes*, not long since fortified on the *Nester*; and there are found some *Moldauian* passages in the *Nester*, right into the champaines. It diffuseth it selfe into the Lake *Vidono* or *Obidono* (so called, as some fabulously conceiue of *Ouidius*) and soone after disembokes into the *Euxine* Sea, ouer against *Bialogrod* (named by the antients *Moncastrum*) not long since taken by the *Turkes*, from the *Valachian* or *Moldauian* Princes, & holden by them. In the very mouth of *Tyras* or *Nester*, bearing name of *Neoptolemus* as may seeme by *Strabo*, who there-awayes placeth *Nicouia* on the right hand, and *Ophiusa* on the left hand of the Riuer.

Part of *Moldauia* or the lower *Walachia*, called sometimes *Bessarabia*.
Lake *Vidono* in *Nester*.
Bialogrod.

After followeth *Beriboncum* with deepe and large ditches neere the Sea, washed by the Lake where sometimes was a good Port. *Adrigoli* hath three Ditches, many salt Lakes nigh the Sea, where many *Cozaks* resort and often kill each other in mutuall warres and quarrels, which makes it terrible to Trauellers. Then follow *Domnina Dolnia*, and the Lake *Berezania*, and the Bay *Caremusa*. *Strabo* placeth fiue hundred furlongs in the Sea, from the mouth of *Tyras* the Iland *Leuca* sacred to *Achilles*.

Beriboncum.
Adrigoli.
Domnina Berezania, Carinitus.
Leuca.

Ocz.acouia called antiently *Olbia*, *Olbis*, and *Olbiopolis*, is seated on *Boristhenes* or the *Carcenite* Bay; sometimes builded by the *Meletians*: the Tower is of Stone, the Towne but meane, is subiect to the *Turkes*. *Boristhenes* or *Neper*, a deepe, wide and swift streame, runneth from the North into the Bay, and neere to *Ocz.acouia* into the *Euxine*. Foure miles higher *Bogus* empties it selfe into *Boristhenes*. There the *Turkes* exact Customes. The *Isthmus* betwixt *Boristhenes* and the Sea, is a dayes iourney, ouer sandie plaines, with Hills, Lakes, Salt-pits; with Deeres, Beares, Goates, wilde Swine well stored. It is extended to *Perecopia* aboue thirtie miles in length, containing Medowes, Riuers, and *Tartarian* Cottages (which they call *Vlus*) made of small pieces of wood, daubed with mud or myre and dung of beasts, and thatched with reed. The *Tartars* liue not in them in Summer and Autumne, but in April begin their progresse, with their wiues, children, slaues, and houses which are round, couered with clothes, scarsly commodious for foure or fiue men, carried on two-wheeled carts, with one or two Camels or Oxen, together with their houshold. They carry with them Camels, Horses, Flockes, and Herds innumerable, leauing others in commodious pastures. They goe towards *Perecopia*, and sometimes into *Taurica*, or ouer against *Perecopia*, to *Ossow* or *Azaph*, as the *Turkes* call it, a Towne by the *Don* (*Tanais*, a great and swift Riuer) sometimes fortified by the *Greekes*, and since by the *Genuois*; where the *Turkes* now haue a Garrison, and a Commander. They alway trauell into the *Isthmus*, or the large Plaines which are betwixt *Boristhenes*, and the Lake *Meotis*, and the *Pontike* Sea, where they find best pastures. In October the raines, colds, and perpetuall windes force them to returne to their Cottages. For they are afraide of our *Nizouian Cozaks*, which passe downe the streame in Boats, and the Gunners, which then make incursions on them. *Neper* is frozen ouer in Winter. *Ptolemey* calls that *Isthmus*, *Zenos Chersonesus*, and *Strabo* writes that the *Roxans* and *Roxolans* (whom we call *Russians*) pastured those Fields twixt *Tanais* and *Boristhenes* (describing their life like that of these later *Tartars*)

Ocz.acouia.

The *Isthmus*.
Their houses and pasture-progresse.
Tanais or *Don*.

Perecopia (antiently called *Eupatoria*, *Pompeiopolis*, Holy *Grone*, *Achilles* Race, *Gracida*, *Heraclea*) is seated in the confines of *Taurica*, or the *Scythian Chersonesus*, the Towne obscure and small, the Tower of stone, not well fortified; in which the *Tartar Chans* haue their perpetuall *Palatine* or *Beg*, which keepeth the Marches and passages of *Boristhenes* and *Don*, with all the borders, and is Generall Lieutenant ouer all the *Tartars* in the Playnes adioyning. *Strabo* writes that there was a deepe Ditch made, whence the Towne had, and still in the *Tartarian* and *Turkish* language hath the name. When *Sachinbgieres* raigned there (hee ouerthrew the *Nagay Tartars* at *Perecopia* with a memorable victory) there were seuenteene stone Forts raised in that Ditch, some of them of the Skuls of the slayne, and the ditch repayred. Heere the *Tartars* keepe continuall Guard, permitting no Stranger thence to passe without the *Chans* Letters. And there in occasions of Warres is their principall assembling.

Perecopia.

Coslow is seuen miles distant on the right hand, on the shore, where the *Chan* hath a perpetuall garrison. *Ingermenum* is hence twelue miles or more: it hath a stone Fort, a Temple, and Vaults vnder the Castle and ouer against it, with wonderfull Art cut in the stone, being situate in a great and high Mountaine; and therefore the *Turkes* giue it the name of the *Vaults*. It hath beene a wealthy Towne. Ouer against it the Promontorie trendeth some furlongs broad, and three or foure miles long. There appeare euident signes in the stonie Mountaines, that the ancient *Greekes* thence cut huge stones and carried them by Ships to build *Cherson* a Citie in those times famous, as the *Greeke Christians* still report. The *Heraclians* of *Pontus* sent thither a Colony. The Fort of *Ingermenum* was also built by the *Greekes*, as appeareth by *Greeke* Inscriptions and Scutcheons therein: and thorow all the *Isthmus* to the walls were sumptuous buildings, and innumerable Wells digged. There were also two great High-wayes or Causies of stone. There were many good Vineyards and Gardens, now called *Belbec*, and possessed by *Greeke Christians*, or *Italians*, and *Iewes*, and a few *Turkes*. Of the ruines the *Turkes* and *Tartars* make great Stalls and Enclosures for their beasts. This *Cheronesus*, *Corsunum*, or *Cherson* the *Turkes* called *Suri*

Coslow.
Ingermanum.
Cherson.

Germa-

Germenum, or *Yellow Tower* of the colour of that Tract; whereof admirable ruines remaine to testifie the *quondam* splendor. There are channells or conduits of hewen stone vnder ground foure miles to the Citie walls, still containing cleere water. From a place where is a Village of note, and not farre off, neere the Sea is a *Greeke* Monastery of Saint *George*, with anniuersarie deuotion frequented of the *Greekes* remaining in *Taurica* with great concourse. The Citie hath not beene inhabited these many ages; the Walls and Towers sumptuously built are yet seene entire. But the *Turks* carry thence excellent Marble, and Serpentine Columnes and great stones by Sea, for the vse of their publike and priuate buildings. Of the Temples the very ruines are vtterly ruined, and the houses lye buried in that Monument and Selfe-sepulchre.

The walls of a *Greeke* Monasterie remayne very large, but without roofe, and the ornaments spoyled. The *Russian* and *Polonian* Chronicles relate that *Volodomir*, great Duke of the *Russians* or *Kiou*, carried thence two doores of *Corinthian* Brasse, and some artificiall *Greeke* Images which *Broleslaus* the second King of *Poland* translated from *Kiou* to *Gnesna*, there yet in the great Church to be seene. *Volodimir* tooke that Citie from *Iohn Zemisca* the *Constantinopolitan* Emperour: but after, marrying *Anna* the sister of Emperour *Basilius*, and being baptized in that Monastery after the *Greeke* Rites by a certayne Patriarch, hee restored it, as is still related by the *Christian* remainders in those parts. Before the Citie was the Promontorie *Parthenium* with a Temple and Image of that Goddesse, and other Antiquities by *Strabo* related.

Kiou.

Parthenium.

The Citie *Balachei*, or *Lamboli.*

That which the *Greekes* called *Iamboli*, the *Turkes* haue stiled *Balachei*, as the *Towre of fishes*, in regard of the plentie in that Sea. It was fortified in a high, great and stonie Mountayne by the *Genuois*, whiles the proud cowardly *Grecians* which held that part of *Taurica* quarrelling amongst themselues, lost it to them. There they had a notable Port, a strong and sumptuous Fortresse; and there the Towres, houses and walls with the *Genuois* Ensignes and Inscriptions, lye ruined. It is now inhabited of a few *Greekes*, *Iewes* and *Turkes*, and frequented by fewer Merchants and strangers by Sea.

Marcopia, or *Mangat* a City.

Marcopia stretcheth further to the Mountaynes, and Woods, and is not so neere the Sea: it hath had two Castles, *Greeke* Temples and Houses sumptuous, with many cleere Rils running out of the stone: but eighteene yeeres after that the *Turkes* had taken it (as the *Greeke Christians* affirme) it was destroyed by a sudden and horrible fire. Neither hath any thing remayned of note but the higher Fort, in which is a goodly Gate, adorned with *Greeke* writing and store of Marble, and a high house of stone. Into that house the Messengers of the *Muscouites* are by the barbarous *Chans* sometimes thrust, and there endure hard keeping. There remaynes the *Greeke* Church of Saint *Constantine*, and another meane one of Saint *George*. One *Greeke* Priest and some *Iewes* and *Turkes* dwell there; Obliuion and Ruine hath deuoured the rest; nor are there men or Stories of the *quondam* Inhabitants, which I with great care and diligence euery-where sought in vaine. An old Priest which I saw there, said that a little before the *Turkes* besieged it, two *Greeke* Dukes of the Imperiall bloud of *Constantinople* or *Trapezond*, there resided, which were after carried aliue into *Constantinople*, and by *Selim* the *Turkish* Emperour slaine. In the *Greeke* Churches on the walls are painted Imperiall Images and Habits. The Tower and Citie *Marcopia* is nigh to *Cercessigermenum* a new *Turkish* Fort taking name from *Cercessimo*; but the *Turkes*, and *Tartars*, and *Greekes* also haue now lost the name. The *Greeke* Dukes are said to haue there committed much wickednesse. And in that stony Hill whereon it is seated, it hath houses cut with admirable Artifice in the Rocke, which still for the most part remayne entire, although the place be become wooddie. A Temple adorned with Marble and Serpentine Pillars, now laid prostrate on the ground, testifie the *quondam* glorie.

Cercessigermenum.

Admirable Vaults.

The Palaces or Houses of the *Chans* reach vnto the *Mediterranean Taurica* (as *Strabo* calsit.) It hath a famous Towne, and a principall Store-house, called *Baccasaray*, wherein he perpetually resideth. That Towne is situated betweene two Mountaynes, and a little Riuer flowes betweene, whereof the Towne is named. There is a stone *Mosche*, and the *Chans* Sepulchres built within the Townes Liberty of the *Christians* ruines. Not farre also from that Towne there is a *Mahometan* Monasterie, and very many *Tartarian* Graues curiously rayled out of the *Grecian* ruines. In the further end of that Towne, there is another Towne called *Salaticum*, adorned with faire buildings by the *Turkes* there inhabiting. The Royall Seate or Mansion of the *Chans* is sumptuously garnished by the ancient *Tartarian* Princes with Houses, Temples, Sepulchres, and exquisite Baths. When the Princes with their Wiues, oft giue themselues to ease, pastimes, pleasures, and recreation, they go thither. For that place or Region is commodious for huntings, it hath Orchards, Vineyards, Gardens, and many store of good grounds, and it is watered with Chrystaline streames. There are Mountaynes and store of Woods, wherein are seene very many ruines of Houses, and large Forts and Cities, yet they remayne desert, and are of few or none inhabited.

Baccasaray.

Salaticum.

Almassarai.

Almassaray at the meeting of the Riuer *Alma*, is a house of the Kings, where he is woont not often to reside, because he liues not there so commodiously, as in other places, and cannot lodge there with his Court: for there is only one base Village. There are some more obscure bordering Townes and Fortresses, where they are woont to maintayne their Wiues. Also not a few

Castles

Castles where the *Sultans*, the *Chans* brothers, or their sonnes and wiues perpetually dwell. That part of *Chersonesus*, which the *Chan* with his *Tartars* possesse from *Perecopia*, toward the Fenne or Lake to the Citie *Cremum*, is cultiuated, plaine, champian, fertile, and plentifull of grasse; but toward the Sea and the Palace of the *Chan*, and his Townes, Castles, and Villages, the Countrey is Mountaynous, woodie, well husbanded, and very fruitfull. The Mountaynes in that Coast are huge and remarkable. But the greatest is the highest of all, and hath in the top a Lake of no small quantitie. And although I did not ascend it, yet it is well discerned many miles off, and demonstrates no ordinary height and greatnesse. Plentie of Riuers and no small ones runne from those Mountaynes. Also they haue much fish, but not of any greatnesse (for the Riuer is shallow) yet very sauourie and daintie. But because the *Tartars* doe not often feed on fish, the *Christians* only and our strangers when they come thither take paines to catch them. There is also abundance of delicious Fowles, which sometimes *Christian* or *Turkish* Gunners are woont to seeke after, seldome our strangers. There is much game of Harts, Goates, Boares, and Hares neere the Sea vnder the *Tartars* and *Turkes*. Oftentimes also the *Chan* himselfe is wont to hunt some dayes there, but more often he goes into the champion with *Turkish* and *Tartarian* hunting Dogges. *Perecopia.* *Cremum.*

Sortassus is a *Tartarian* Village adjoyning to the *Chans* Regall Mansion, wherein the *Lettow* and *Muscouie* Ambassadors doe often lodge; it is spacious and delightsome. But when *Taurica* or the *Peninsula* beganne subiect to the *Chans* Dominion, diuers *Italian* Gentlemen *Genuois* after *Capha* was taken by the *Turkes*, or *Tartar* Princes, hauing their Charters written and sealed of their right and proprietie (which I haue seene among them) they held that Village with speciall Priuiledges, or purchased it with that Gold which they carried with them out of their Countrey, or with their seruice to the *Chans*. In going Ambassador to *Christian* Princes, it was permitted them to build a Catholike Temple in that Village, wherein I sometimes entred while I abode there. There was in that Temple one Priest a *Franciscan* Fryer, whom those *Christians* had then redeemed with their money from *Turkish* slauerie. *Sortassus.*

Cremum, or as the *Tartars* call it *Crimum*, is a Citie and a Castle much vnlike in the antiquitie, magnitude, and height of the wall, ampleneſſe and renowme, to the other Cities of *Taurica*; It is vnlike the *Mediterranean* (for so *Ptolomie* cals it) perhaps this was called by *Ptolomie Taphros*, but by *Plinie Taphrę*. Now in these latter times before the comming of the *Genoes* into *Taurica*, it seemes to haue beene husbanded and inhabited by a great *Mahometan* Nation, who remooued thither out of *Asia*. For there are seene ancient *Mosches* or *Mahometan* Temples not only in the Citie it selfe, but also beyond the Citie very many with *Chaldaicke* Characters engrauen in great stones. There are very few *Turkish* or *Tartar* Inhabitants, yet the *Greekes* are fewer, who report this, that their Ancestors haue constantly deliuered, that that Citie was whilome dwelt in by the *Persian* Nation, and that it was a *quondam* noble and excellent Store-house of Mechanick Mysteries. A man may certainly conjecture by the ruines and largenesse of the place that it hath beene a famous Citie and a great Colonie of people. The *Tartars* are now vulgarly nominated from that place *Crims*. They haue a Mint in that Citie. In the Towre which is the greatest in the Citie, the *Chans* wiues are alway kept and spend their liues. *Cremum.* *Crim Tartars* why so called.

Sidagios of the *Greekes*, but *Sudacum* of the *Genoes*, was called a Castle and Citie. The *Tartars* are vtterly ignorant of it. In a loftie rockie and spacious Mountaine standing neere the Sea in the top of it, it hath a higher Towre, a second indifferent, and a third of baser esteeme. The *Greekes* or *Italian Genoes* founded their Castles enuironed and fortified with Walls and Towres. There are seene innumerable *Grecian* Churches, and seeme but few, as though they were Chappels, not a few vndemolished, but very many are ruinated, and lye ouerturned in the dust. The haughtie dissentious and idle *Greekes* being ouerthrowne and weakened by the *Italian Genoes*, lost that Citie. There are seene no contemptible signes of the *Genoes* much more illustrious then those of the *Greekes*. *Sidagios* or *Sudacum.*

But it is euident by the ruines, that it was once a famous place, & so it is reported by the *Greek Christians*, of whom there are a very few Relikes. Moreouer, many *Christians* haue erected a multitude of Temples which they report to haue beene some hundreds. There are three great Catholike Churches, Houses, Walls, Gates, and faire Towres with Arrace and Ensignes of the *Genoes*, are seene in the lower Castle. I heard from a certayne Metropolitane a *Greeke* and an honest man, who then came thither from the *Grecian* Iles to visit their Priests, and entertayned mee, That when the most barbarous Nation of the *Turks* had besieged that Citie with a great Armada, it was valiantly and manfully defended by the *Genoes*: but when the *Genoes* could no more hold out the daily siege and famine, neither could longer sustaine the violence of such a great Armie of *Turkes*, some hundreds, or, as hee auouched, about a thousand stout-hearted men conueyed themselues into the greatest Church which yet abides entire, and some dayes hardly and couragiously preseruing themselues in the lower Towre, into which the *Turkes* forceably entred, hauing made a notorious and memorable slaughter of the *Turkes*, at the length they were all slaine in that Temple. The doores and windowes of that Temple being stopt vp with a wall by the *Turkes*, the slaine bodies lye vnburied to this day. I was prohibited by the *Saniak* of *Capha* sometimes

Digitized by Google

times a *Turke*, that I should not enter into that Temple. The Custome of the Citie is not meane: it hath very fruitfull Vineyards and Orchards, which doe extend aboue two miles, now manured by *Caphaes*, *Turkes*, *Iewes*, and *Christians*: For the best Wine of all *Taurica* growes there; all that tract abounds with pleasant Riuers, which runne downe from the highest and middle Mountaynes and Woods, which are there very frequent.

Hauing now passed ouer those vpper Cities, and at the last *Sudaco*, also as farre as *Theodosia*, which the *Italian Genoes* call *Capha*, the banke of *Taurica* is in Longitude a thousand furlongs, craggie, mountaynous, and tempestuous with North windes. Before the Citie the Promontorie that is there seene, doth hang out into the Sea on the South-side toward *Paphlagonia*, and the Citie *Amastrum*, and *Strabo* relates, that it is called of the *Greekes*, *Orium* and *Oxon*, the Rammes forehead. And there is another Promontorie *Carambis* of the *Paphlagonians* opposite to it, whereby the *Euxine* Sea is diuided into the double Sea, and *Euripus* straightens them both. *Strabo* sayth, that *Carambis* is distant from the Citie of the *Cheronesitay*, two thousand fiue hundred furlongs, but from the Rammes forehead, a farre lesser quantitie. Behind that hilly Countrey, as *Strabo* calls it, hee affirmes the Citie *Theodosia* to bee founded, and that it hath large Fields notable for fertilitie, and a Hauen able to receiue a hundred Ships, and that that Limit was assigned to the territorie of the *Bosphorines* and *Taurikes*.

Orium and *Oxon.*

Capha or *Theodosia*, is the excellentest and best defensed Citie of all *Taurica*. It was built by the *Italian Genoes*, and is placed by the Sea. It hath a Hauen alway frequented. It is perspicuous, that in the times of the *Genoes*, it was a wealthy and populous Citie. But after it was taken from the *Genoes* by the *Turkes* aboue a hundred yeeres since, the *Italian* Christians were brought into such a straight, that there are but a very few and obscure remaines of them left. The Citie hath in a manner lost her pristine splendour. The Romish Churches of *Christians* are demolished, the Houses cast downe, the Walls and Towers, wherein are seene many tokens of honour of the *Genoes* and *Latine* inscriptions, are fallen. Onely two *Catholicke* Temples and two *Armenian* remayne whole, in which it is granted them of the *Turke*, after their owne custome to maintaine their proper Priests, and to bee present at their publike deuotions. It is replenished with *Turkes*, *Armenians*, *Iewes*, but very few *Italian* and *Greeke* Christian inhabitants: Now also it is famous ouer all that part of *Taurica* for Nauigation and the Hauen. It hath almost innumerable Vineyards, Orchards and Gardens. Men sayle often to *Capha*, from all the bordering and remote Ilands of *Greece*, but oftner from the Citie *Constantinople*; for with a prosperous winde they come thither by Ship, in the space of two dayes or little more.

Theodosia, now *Capha.*

The *Petigoren* Prouince, or *Colchis* is inlarged, as farre as the *Caspian* or *Hircan* Sea, and is much subiect to Mountaines and very large Woods, which are now seene in these Confines. It is a very free people, and hath many braue Commanders, to whom all the Nations and Families obey. Moreouer they professe themselues *Christians*, and it is manifest in the time of the *Genoes* very many of them were *Christians*, but now wanting Priests and Churches, they onely retayne the opinion of Religion. Most and the greatest part of them are Idolaters, amongst themselues rapacious and cruell, but to Strangers hospitall and free-hearted. The Parents, although they bee of the more Noble or of the Rustickes, sell their owne Children, their Sonnes for Slaues, their Daughters for Wiues to the *Turkes* and *Tartars*, also to many *Christians*, and those which they are wont to steale secretly among themselues, they sell closely beyond the Sea to barbarous strangers after a more then barbarous manner.

Petigorenses or *Colchis.*

Idolaters.

Betweene *Perecopia*, *Cremum*, and *Customa*, are Townes on the North. *Taurica* or the *Peninsula* is exceeding plaine, not very hilly, and altogether champaine. It hath a very fertile soyle, in great part stonie, but great scarcitie of good water. Yet there are found in diuers places very many extraordinarie deepe Fountaynes or Wells of a wonderfull profunditie and difficultie, in times past digged and made by the elder *Greekes*, or those great and antique Nations, who inhabited the *Peninsula* before the *Greekes*.

Deepe Wells.

From *Perecopia* the space of a mile, there is a great Lake congealed naturally of admirable Salt, from whence the purest and best Salt is continually gathered, as if it were frozen; it hath many other Salt lakes. In certayne commodious and in very many places, in Mountaynes and Groues are found in great number, ancient huge *Grecian* ruines of Castles, Cities, Temples and Monasteries, which while they haue many ages beene destitute of inhabitants, by reason of their antiquitie, haue lost their names. All *Taurica* or that *Peninsula*, from the West and North is plaine and champaine, and hath few Townes, many Villages; extends in length the summe of fiftie miles. But from the South and East, it is mountaynous and wooddie, and hath euery where maruellous high, large, stony Mountaynes. In which, betweene *Cremum* and *Capha*, it is reported that veynes of Gold and Siluer, and the best Iron, were whilom found by the Inhabitants. It hath a very fruitfull ground, Floods, delightsome Riuers, Fishes, Meadowes, Pastures, abundance of wilde Beasts, Harts, Goates, Boares, Beares, Vineyards, Orchards, Territories, Champaines, Townes, Villages, Hamlets, many and large Granges. *Taurica* or the *Peninsula*, is spread in Latitude after a sort into a circle; in some places, the distance of one or two dayes journey, but in most places about the quantitie of one.

Salt Lake.

The

Digitized by Google

The Castles and Sea-cities, and the rest of all the *Peninsula*, which are described in their order, with many Villages and Hamlets of *Greeke Christians*, except the Holds and Sea-townes, and many lesse suspected walled Townes in *Perecopia* and *Cassiouia*, and a few Villages of *Greeke Christians*, are subiect to the *Turkish* Emperour, and all obey his behests, and are kept with a sure Garrison. The *Peninsula*, which lyes in the middle from the East and South against *Perecopia*, hath a milde winter and temperate ayre. For in the end of December is the beginning of winter, but in the midst of Februarie the sharpenesse of winter, which is more snowie then cold, or subiect to Ice, neither yet doth that endure aboue three dayes together, neither continues it any longer then to the beginning of March. Therefore about the beginning of the Spring, and alway in a hot Autumne the ayre is very contagious.

In *Bratislauia*, the *Sauranen*, *Oczaconien*, and *Bialodogroden*, Plaines are situate betweene *Hipanis* or *Bogus*, *Tyra* or *Nester*. From the North toward *Neper* or *Boristhenes* and *Bogas*, are somewhat plaine and champion grounds, but from the West towardes the Riuer *Nester* and *Pruth* or *Hieraſus*, more wooddie and hilly. *Podolia*, *Camenecia*, and *Moldauia* betweene the streames *Nester* and *Pruth*, euery where border on the middle *Tachnia* and *Bialogrod*, which is by the Lake *Vidouo* or *Obidouo*, and the *Euxine* Sea, on the West confine on the Plaines, and on the *Euxine* Sea, on the South *Bralogrod*, *Kibia*, and the Riuer *Danubius*. *Oczacouia* hath on the North *Boristhenes*, (into which *Bogus* there dischargeth it selfe) and spatious Plaines, on the South the *Euxine* Sea, and the ouerflowing Salt meere *Berezania*, from the West the adioyning Riuer *Nester*.

Further, that Continent which is betweene *Oczacouia* and *Boristhenes* in the fashion of an Ile, hath into the West *Boristhenes*, as though it were betweene *Boristhenes*, the Fen *Meotis*, and the *Euxine* Sea; on the North the Riuers *Tanais* or *Donum*, on the South the *Euxine* Sea, and that *Isthmus* or Continent, but beyond *Oczacouia* and *Boristhenes*, as far as *Perecopia*, that Continent is verie narrow in many places: but beyond *Perecopia* to the Castle *Ossonum*, a ranke soyle, and all champion and plaine: For in that neck of Land almost all the *Perecopian* and *Ossonen Tartars* feed their Flockes and Cattle, and liue there all Summer and Autumne. That Continent or *Isthmus* from *Oczacouia*, as farre as *Ossonum*, for there it is limitted, is stretched out in Longitude, as is manifest out of the *Tartars* Diaries more then a hundred miles, but in Latitude not after an equall manner. For it is larger, as well beyond *Perecopia*, as toward *Oczacouia*, or *Boristhenes*.

The *Taurican* or *Chersoneſen Tartars*, who are now called *Perecopen* or *Crims*, doe certainely seeme by the ancient Writers of the *Schythians* to haue been the *Ianolgenses*, and to haue had their originall and appellation from *Rha*, or the Riuer *Volga*. Moreouer between the famous, deepe, and great Riuers of the North *Tanais*, or *Don* and *Boristhenes*, it manifestly appeare that they passed by little and little into the Plaines, and a hundred and sixtie yeeres since, or very little more to haue come into *Taurica* or the *Peninsula*.

The stocke of the *Chans*, or of their *Tartar* Princes was anciently called *Cygis* race, from whom was *Lochtonus* a certaine *Chan*, of whom all the *Chans* take their originall. Hee was the first Emperour of *Taurica* or *Chersonesus* in *Taurica*, or the *Peninsula*. They haue procreated the *Sirinen*, *Bachinien*, *Manguten*, and other *Kinazij* or Dukes, from whom are the *Caiacei*, who are the *Chans* Counsellours and chiefe Officers, who also marry the *Chans* daughters and sisters. The *Vlani*, which are anciently descended of the *Chans* bloud, and (if the lawfull posteritie faile) succeed in the Regall Throne. It is very true that the *Mursies* are the noblest of each, now also their posteritie remaine & other warlike *Tartars*; of whom it is certaine he had diuers Hords, of some ten thousand a piece in his company passed into *Taurica*, or the *Peninsula* with him. *Cygis.* *Lochton.*

The *Chans* predecessors sincerely and constantly much esteemed the *Grecian* Chiefetaines, who inhabited at *Mancopia*, and *Ingermene*, and the *Italian Genoes*, who dwelt at *Iambold* and *Capha*, as also the other people they found in the *Peninsula*, with whom they had friendship, peace, and league, vntill they were ouercome by the *Turkes*, and consumed in warre: they had also many yeeres common mony which I haue seene there.

But *Selim*, Emperour of the *Turkes*, compelled and subiugated *Mechmet Gererius Chan* to his Empire. Those Nations being weakned, almost all the Castles and Cities of the *Maritime Peninsula*, being taken and possessed: *Sachmates* the Prince of the *Ianolgan Tartars* put him to flight, with a singular and memorable slaughter hauing destroyed his Armie of a hundred thousand. Since which time the *Chans* acknowledge, as chiefe, the Empire of the *Turkes*. The Viceroyes, or Princes of the *Tartars* of *Taurica*, or the *Peninsula* are constituted by them, they receiue thence a Banner, and giue their sonnes and brothers *Soldans* for perpetuall pledges to the *Turkes*. *Selim.* *Gerey Chan.* *Sachmates.*

Notwithstanding, after the ancient custome of their Nation, they make a Galga or successor to the Empire (as the *French* doe their Dolphines) the brother or eldest sonne and more sufficient, who hath the greatest sway in peace and warre, but the *Chans* themselues perpetually depute and elect them, but with the approbation of the *Tartar* Nobles. And if also any dissention or war be raised betweene the *Soldans* or the *Chan* about the Empire, the *Turkish* Emperour neglects not to *The Galga or heyre apparant.*

Digitized by Google

dispatch the *Soldans* pledge, with an Armie and Standard into *Taurica* or the *Peninsula*: and it is sufficient for him to be Prince, the *Chan* and *Sultan* being appeased or forced to goe away by warre, for which cause he hath alwaies many *Ianizaries* in *Taurica*, of the *Peninsula*.

Election of the *Chan*.

The election of the *Chans*, after the ancient custome of the Nation, did whilelome consist in the free suffrages of the *Dukes*, *Mursies*, and noblest *Tartars*. Furthermore, for their frequent discord and hidious warres which were occasioned by the *Nogaien Tartars* bordering on *Taurica*, or the *Peninsula* about the Empire, *Sachibgiereius* and *Dealetigereius*, being *Chans* ouer the *Tartars*, hauing by subtilty destroyed the more noble and potent *Tartars*, and cast them into fetters, began absolutely to domineere ouer the *Tartars*, and by force to draw the election to their posteritie, the Emperour of the *Turkes* ayding them.

Sachibgiereius.

But if the *Chan* will not constitute his brother *Galga*, but his owne sonne, as it often fortunes, by reason of those discords and reciprocall butcheries among themselues, hee circumuents craftily and subtilly all the *Soldans* brothers, and couertly makes them away. Yet most of them flye to the *Turke*, of whom they are bountifully entertained and comforted, and receiue a perpetuall stipend of him.

The *Soldans* younger sonnes of the *Chans* are educated and tutered by the *Tartars*, or more noble *Mursies*, lest that when they are at mans estate, by reason of their pluralitie, dissentions, or warres might arise: for each *Chan* acknowledge a supreme Dominion, and when they are growne vp, those that are fit are set ouer certaine *Tartar* troupes, and allure many voluntary *Tartars* vnto them, notwithstanding they make leaders of the *Nogaien Tartars*, and remunerate with monyes and horses most of their parents, whom they esteeme more speciall and substantiall. Very often also through feare of treacheries or seditions among themselues, being ayded by their Gardians fauour, they flye vnto the *Christian* or bordering Princes of their people.

Attalich.

The *Chan* hath *Attalike* Councellours, whom they so terme from the care of their women, parents, or their wiues, by whom those *Sultans* also are continually from their youth educated and

Haniati.

prouided for: hee hath *Haniatts*, who are the Agents for exotick Princes affaires with him, and also perpetuall Court Officers. But especially hee conuocates to him the Dukes, *Coracei*, *Vlani*, and the nobler *Mursi*, and alwayes vseth to consult with them in weightie affaires. Hee hath principall and meet men Ministers of his Court, whose seruice hee vseth in his Ambassages, and in his diuers other necessary businesses and imployments, who also are exalted to Counsellours and Court Officers. He alwayes maintaines those who are chosen out of the more renowned and illustrious *Tartarian* youth, who are conuersant in his Court by moneths interchangeably, and when they are made fit, are honoured with those dignities. Yet hee is chiefly and most delighted with the *Cercesins*, *Nogaiens* and *Petegorens*, who are very industrious, valiant, bold, and warlike. On the principall hee bestowes honourable gifts and annuall pensions, and of these his Court is alwayes repleniished. In the Princes Court, the better reputed and nobler *Tartars*, are very richly and ciuilly decked, not to pride or superfluous luxurie, but for necessitie and decencie. For they are so inriched by the lazie cowardise, and especially by the irreligious impiety of the neighbouring *Christians*, through making often inrodes, and getting rich booties, that the greater nobler of them in priuate wealth and domestick splendor, are little inferiour to the *Turkes*. They

Wiues and children.

may haue as many women by the *Mahometicall* Law as they will, and for the most part, they buy wiues of the *Petigorens*, which although they sustaine and maintaine, not proudly, but very comely and ciuilly according to the countrey guise, but those by whom they haue issue very ho-

Arabike letters

nourably and gorgeously. They deliuer their sonnes in their infancie to be instructed in the *Arabike* Letters, but they keepe not their daughters at home, but commit them to the neerest in bloud to be prouided for. They place their sonnes growne to mans age in the *Chans* or *Sultans* seruice, their mariageable daughters in wedlock to the more honourable and nobler *Tartars* or *Turkes*.

Mahumetan Religion.

Those *Tartars* are *Mahometans*, and haue Priests and *Mosches*, they vse the *Chaldaick* or *Arabike* Letters, which they haue receiued somewhat corrupted from the *Turks*, although before they came into *Taurica* or the *Peninsula*, they seeme to haue beene a sauage and brutish Nation, and of very sauage conditions, which now also is very perspicuous by the rusticks: for they wanted then altogether those Lawes, Rites, Letters, and Manners. But the *Tartars* being taught by the *Turks* humanitie, and that false worship, the more nobler now generally practise hospitality.

Gouernment and Lawes. The *Cadi* and *Begs*.

Law or Iustice, is administred in the Towns or Cities of the *Chan* & other *Sultans* among the *Tartars* after the *Mahometane* Law. There are alwayes presbiterall *Cadi* or Iudges in the Villages. *Begi* or Iustices, who heare and decide particular iniuries: but causes of life, bloud, theft, which we call Criminall, or of Land, which we call Ciuill or Officiall; the *Chan* himselfe decideth with his

No Attornies nor Lawyers: they plead their owne cause.

Counsellours. In resoluing of which they need no Lawyer, nor vse tricks of law, calumnies, excusations nor procrastinations. The *Tartars* or Strangers, of meane condition, lay open themselues very freely their wrongs before the Iudges and *Chan*, of whom they are alwayes heard and speedily discharged, for at any time any may haue accesse to him. When hee comes in publike, men of the basest degree are not excluded, but being seene of the *Chan* are examined, to wit,

if

Digitized by Google

if they haue any suit, that they relate it. For they doe not onely performe great obedience to the Lawes: they adore and venerate their Princes in Gods steed. All spirituall Iudges (after *Mahomets* Law) are accounted among them for Saints, men of all equitie and integritie, fidelitie and opinion. The Princes and Magistrates execute and dispatch whatsoeuer is bidden or commanded suddenly and faithfully, with alacritie, promptnesse, and great feare. They are far from controuersies, criminations, iustices, vnnecessary and personall brawlings, enuy, hatred, filthy excesse, luxury, and ambition in their victualls and array. I abode their nine moneths, neither heard I Criminall or Ciuill Act to haue happened among them, or any composition by reason of enmitie. Great peaceablenesse to the shame of alway lawing Gospellers.

In the Princes Court they weare not, nor at home Swords, neither Bowes nor any other weapon; except Wayfarers and Trauellers, to whom they are very courteous and friendly. They are alwayes secure from Spoylers; but except they keepe perpetuall watch, they are lesse safe from High-way-theeues, and Night-robbers, who steale nothing from them but their Horses. No daily vse of weapons.

Although they haue a rich soyle, yet very few Gentlemen, or Plebeians prouide for the houshold estate, for many neither till nor sow their ground: they abound with Horses, Camels, Oxen, Kine, Sheepe and Flockes of all Cattle, and thereof liue. Yet the Gentlemen haue bread, flesh, meate, distilled * wine and *Metheglin*; but the rusticks want bread, but vse stampt Millet, and macerated with milke and water, which they vulgarly call *Cassa*, for meate (and for drinke they vse Mares milke) and cheese. They feed on Camels, Horses, and Oxen vnprofitable for burthen, and kill them when they are about to dye, sometimes eate sheeps flesh. The Gentlemen dwell not in the Plaines, but in the Villages of *Taurica* or the *Peninsula*. They which are neere Woods liue in them, although many doe not possesse proper Villages; yet they haue peculiar Lands and Manors. They vse the *Vngarian*, *Russian*, *Moschouian*, *Valachian*, or *Moldauian* slaues, which they keepe, and whereof they haue great plentie, as beasts to euery worke. Their houses are of Timber, much after the *Turkish* fashion: but the *Greeke Christians*, who are in a few Townes, labour and till their grounds as beasts. The *Tartars* serue the *Chan* or *Tartarian* Nobles, being hired at no price, but onely that they may haue meate and apparell: but the rest, and the greatest part of them are alwayes idle. In the Cities or Townes are very few Merchants: but some few practise Mechanick crafts, and some Merchants or Artificers are found there, either *Christian* Slaues or *Turkes*, *Armenians*, *Iewes*, *Cercessians*, *Petigorens*, (which are *Christians*) *Phylistins*, or *Cyngans*, men of obscure and lowest degree. Those *Tartars*, which liue in the Plaines beyond *Perecopia*, or in the *Peninsula* haue no woods, euery where digge Wells. They vse in stead of Wood Beasts dung, which their Bond-men gather in the Fields, and dry in the Sunne, and houses of the same forme, whereof mention is made in the former description. Those *Tartars*, which are Slaues and Subiects of the *Chans*, *Sultans*, and other Noble-men, are drudges, and alwayes keepe and pasture their Lords innumerable Herds of Cattle; and although they goe from place to place, into the Plaines and Pastures, in seuerall Streets, Hamlets, Townes, or Villages, by separated troupes (or hords) whereof they beare the Names, and of their Masters, so that men may easily find there, those *Tartars* Slaues which they seeke to buy.

Tartar slaues.

The *Chan* hath alwayes by the leagues and agreements, an annuall Donatiue of the King of *Polonia*, the great Dukedome of *Lituania*, the *Palatine* of *Moldania*, and *Cercasian*, and *Nogaien Tartars*. The Legats, Orators, Messengers, Truchmen of those Princes come to him yeerely, whom sometimes he entertaines benignely and bountifully, but sometimes receiues, misuses, and detaynes a great while after a more then brutish manner. When therefore they come into *Perecopia*, one of the *Chans* men meets them in the Summer, in the Medow or Plaine, where they rest vnder a Tent: in the Winter they are opportunely and commodiously conuayed into the Village of *Alma*, or *Bacchasanium* more safely bordering on the Towne of the Kings Palace. But after they are lodged there, they are saluted by the Counsellours or Seruants of the Court in the *Chans* name, which procure them refreshing or victuals, two oxen, or one, some sheep, bread, wine, and barley, not liberally, but in a kind of hospitalitie, and moderately sufficient for once. But when they are called to the *Chan*, hee heares them, the *Soldans*, *Tuians*, *Vlans*, *Marzies*, chiefe Counsellours, and many other Ministers of his Court and principall *Tartars* being present, they are conducted onely by one man to the *Chans* gate, but are brought in by two Counsellours. When as therefore they are entred in, they reuerence the *Chan*, after the ancient custome of the Nation, and hauing saluted him on bended knees declare their message, and are admitted to eate with him. They are honoured with cups and goblets gilded and embossed with gems, filled with Mead or Methegline reached from the *Chans* hand, after the order of that people, in signe of clemencie and beneuolence, which they drinke on bended knees. And when they are dispatched, the *Chan* inuites them againe to a Feast. The Feast being ended, they goe backe a little from the Palace doores, and are rewarded with Silke Vests wouen with Gold as low as the anckles, prepared after the guise of the Nation, with one Horse or two, not seldome with Captiues of their owne people. And so attired with those Vests they returne againe to the *Chan*, and render thankes to him for his hospitalitie and liberalitie, and hauing saluted him, depart from the Banket.

ket. Sometimes a ſmall prouiſion is procured for them by one of the *Chans* men in his Dominions when he takes his iourney, and he is conuayed by him as farre as *Boriſthenes*.

Baſſa of Capha. The *Turkiſh* Emperours haue made that authoritie conſtant to the *Chan*, in *Taurica*, or the *Peninſula*, ſo that when the *Baſſa* of *Capha*, or the *Saniak* dye, he rules all the *Signiories* in the *Peninſula*, vntill the *Turke* hath ſent thither another *Saniak*, or whom he will preferre ouer *Capha*. The *Chan* hath a common Cuſtome-houſe with the *Turke*, at *Perecopia*, *Caſſlouia*, *Capha*, and other Cities of *Taurica*, or the *Peninſula*, which are of the *Turkiſh* Empire. Hee demands annually a contribution of the *Tartars*, *Armenians*, *Iewes*, *Cercaſians*, *Petigorens*, and *Grecian Chriſtians*, of whom he hath very few in his Dominion; the *Turkes* are only excepted: euery day are paid for a perpetuall ſtipend out of the *Turkes* Exchequer twentie fiue Dollers to the *Chan*, twelue Dollers and a halfe to the *Galga*, to the *Soltan* pledge two and a halfe, and to the ſame Hoſtage, Villages, and ample Farmes neere *Adrianople*, called *Ianboly*, are giuen by the *Turke*. To the Dukes, *Caiaks*, *Vlans*, and *Murzies*, and many others which take pay, are giuen conſtant wages according to each of their eſtates. Notwithſtanding the *Chan* alwayes payes euery yeere to the *Turkiſh* Emperour Captiues taken in warre of both ſexes, the moſt excellent and precious Furs, and alſo baſer, Butter and Salt, wherewith *Taurica* or the *Peninſula* abounds. And into whatſoeuer warre he ſhall bee ſent or called, he may refuſe; neither may hee wage warre with any, but the Duke of *Moſcho*, without the Emperour of the *Turkes* leaue or knowledge. The *Chan* exacts annuall pecuniarie Rents from the better ſort of Captiues taken in warre, three pieces of Gold; of the raskalitie one Doller, and a tenth of them; but from each of the Fountaines, which are many in his Dominions, in the Plaines of *Taurica*, or the *Peninſula*, one Horſe of the *Tartars*; but any neceſſitie enforcing the *Chan*, all the *Tartars* decree a certaine contribution to him. The *Tartars* Nobles, alwayes at home, and in warre alſo, yeeld him ſuſtenance of diuers ſorts; for hee neither tills nor ſowes. Hee hath alwayes proper Herds of Horſes, Camels, Oxen, and infinite Flockes of Sheepe. Hee hath a peculiar money of baſe Copper, which is coyned in *Crimum*, a Towne of his Dominion, round money, whereof tenne are eſteemed at a *Turkiſh* Siluer Aſper, which makes one *Polonian* Groat or leſſe. But I being preſent, there were ſtamped greater Copper money ſiluered ouer, which was valued at fiue Aſpers. In coyning it he hath a great and plentifull gaine; for in three or foure yeeres, of the ſame money, which is carried by all the *Tartars* or Strangers into the Mint, new inuented money is alway ſtamped. For in all *Taurica*, or the *Peninſula*, it is lawfull for none (*Tartar* or ſtranger) euen in the Cities of the *Turkes* Dominion, vnder a capitoll puniſhment and confiſcation of goods, of what eſtate ſoeuer hee bee, to exchange *Turkiſh* pieces of Gold, or the Doller of Strangers, or the *Turkes* Siluer Aſper into *Tartar* coyne of the other value. Neither is it lawfull to buy with Gold or Siluer coyne, but *Tartarian*, which all ſtrangers (none excepted) perpetually receiue by the *Chans* Edict.

Warres.

Money.

Prouiſion for warre. When the *Chan* is about to go to any war, he firſt ſignifies to all the *Tartars* of his Dominions by the Seruitors of his Court, and commands them that they prepare themſelues for war, within three (or at the moſt) in foure weekes, and that they prouide for themſelues victualls for three or foure moneths. That ſuſtenance is carried in Leather-bags, and thoſe Bags among the Gentlemen are carried on Horſes. And they carrie with them food of Millet parched in the fire, or ſtamped, or ground; for they haue Mills, and thereof ſteeped in water, the moſt make meate or drinke. They carry Cheeſe and Fleſh, and Mares-fleſh dried in the Sun: they cut them in pieces boyled or drie, and taking out the bones put them in Sackes. They liue with Mares-milke and Cheeſe, and ſowre milke, which they tempering with a certaine Art, hold an excellent food. The *Chan* hath only one Chariot with him for any danger of ſickneſſe; alſo a few Camels, whereon is carried for his owne perſon *Aquauitæ*, or ſome other prouiſion wherewith he is eaſily ſatisfied. But the *Tartars* ſeuerally ſet meat before him and his Courtiers, the gentlemen (yet very few of them) not ſeldome carry a little drie bread, and a little *Aquauitæ* on Camels, or in lighter Carts.

Manner and Art of warre. But after the *Chan* hath determined any warlike Expedition, he prepares very ſpeedily ſome exerciſed men in an indifferent number, and chooſeth them ſometimes *Tartars*, but more frequently *Cerceſians*, *Petigorens*, and thoſe which are accounted ſpies of Regions and Prouinces of other Princes, and expert Way-leaders, they verie well know each particular paſſage of Places and Borders, and Fords of Riuers. And when they come into the Marches, they goe into the neere confining circuits, and each in ſundrie places view all things, and diligently ſeeke for Captiues, which when they haue intercepted, they returne with them ſpeedily to the *Chan*, of whom, vſing interrogatories, the *Chan* quickly is acquainted with the eſtate of thoſe Prouinces where his skouts haue beene. Forthwith therefore hee aſſignes the day of progreſſion to the *Tartars*, wherein hee ſtirres alone, and premiſeth ſpeedily ſome ſeruants of his Court, through all that Hord or Prouince. They conſtraine and inforce to goe to warre and follow the *Chan* all *Tartars* and *Chriſtians* of his gouernment, men and youth, if they can but ſit on horſes (beſides impotent old men and children) who although they want Armes and Horſes, yet are accommodated by the welthier in hope of ſpoyle. But in eight, or at the vtmoſt in ten dayes after the *Chans* departure, al of them follow him into certain new defined places, which are beyond *Perecopia* toward *Boriſthenes*; the *Galga*, *Soltans*, *Dukes*, *Murzies*, & the moſt approued valiant and chiefe

Warriours

Warriours and Souldiers, being gathered and conuocated together: and they being called to his Councell, first the later Captiues and priuie Searchers also are examined, at length they suddenly consult of the seasonablenesse of time, places, occasion of well ordering the matter, and whether the warre be then commodiously to be prosecuted. And mutuall consent and counsell being made and determined; yet none of these things is confusedly diuulged to the multitude.

From the same place therefore the Ministers of the Court of the *Chan*, *Galga*, and *Soltans* going before the companies of the Dukes, *Murzons* and other *Tartarian* Nobles (which they lead and rule according to the ancient claime of their kindred, and call them by various appellations in their Language) the *Chan* moues the Armie vnder the Enlignes, following in a meane order after the ancient custome of the Nation: but after they haue set foot in their enemies Land, againe he sends before a certaine number of the most experienced and skilfullest Espials. They goe before the Armie, and send backe to the *Chan* whatsoeuer Countreymen or others they shall take and meet with; from whom hee may bee certified of the condition and armie of the enemies. But when the *Chan* is certainly informed that no armie of enemies comes out against him, he againe makes a Campe-councell with his Nobles and Peeres, how farre and wide he ought to endamage his enemies Dominions. Then at length he goeth slowly forward in a perfect order with all his Hoast, and commands vpon penaltie of their heads to kill all the obuious Rustickes, lest after they should be taken by the *Tartars*, they should peraduenture make an escape, and certifie his enemies of his bands to the hurt of his men. Moreouer, they kill not women nor children, nor lay hold on them, nor dare lay hands of any of the prey, lest his armie should be surcharged with it, and cause some stay in his proceeding.

But when the *Chan* comes with his armie to the Castles, Townes, Villages, Hamlets and manured places, he elects ten, or at the most fifteene thousand Souldiers with their Dukes, *Murzons*, and chiefe of his Court, and most notable, best tryed, and principall men of Armes of all his Hoast, and leaues them in his owne jurisdiction in his standing Campes, or in the siege of some Fortresse; then he makes ready the *Galga*, other *Soltans*, Dukes, *Murzons*, and the rest of the Armie, which then is mustred some thousands. And that Armie being spread abroad in diuers bands, ouer each of which the best esteemed and ablest men are made Captaynes, is extended in longitude more then ten miles, and in latitude as much. And as they assemble among themselues at the farthest in seuen or eight dayes, but at the soonest in three or foure running about in troupes through diuers places, and leading straying preyes, and wasting with fire and Sword whatsoeuer they meet with, returne to the Campe: but if they come not backe at the prefixed day to the fortified Campe, they waite not for them, but all the Armie with wonderfull celeritie moue in their arrayes, out of the standing Campe.

And when as then also the *Chan* is truly signified that no Armie pursues him, he prouides for places not medled with by his troupes, an Armie of some thousands of selected Horsemen; and as yet vnwearied. He employes as many more also in ambushes in diuers places neere the Townes and Castles obuious to the *Tartars*, lest that Armie might without delay fall into the lying in waite on any of their companies. But if he bee certified by his Scouts of any numerous hoast of Enemies, he neuer commits the matter to an vniuersall fight, but goes forward slowly and cautelously with his bands: but if the *Chan* be certainly assured that the Troups of his Aduersaries are many and valiant, he retires a little, and seekes for the better husbanded and peaceabler places, and with wonderfull agilitie in his precipitious flight, spoyles them with fire and sword, and intends to returne home with the bootie that hee had hastily driuen away. But if then hee hopes his enemies cannot ouertake him, he marcheth with his Armie, yet not too securely, almost in the order to his confines.

The *Chans* tenth.

But assoone as the *Chan* is entred into his Borders, he takes the tenth of the principall Captiues throughout all the Armie. But the Captaynes of companies, and they which haue brought a greater number of captiues, cull out of each Band the principall for themselues. The other *Tartars* of the promiscuous multitude diuide the Prisoners among their troupes. Notwithstanding before they come to that partition, they first satisfie all those which running about by Bands haue lost Horses, Garments, or any thing else. They sell to the *Tartars* both Noble and Ignoble captiues, if they shall appoint no price whereby they may free themselues, because the *Chan* being vitiated with the Merchants gifts hath set a great value on them.

Misery of Captiues.

The condition of captiues is very miserable among the *Tartars*, for they are grieuously oppressed by them with hunger and nakednesse, and the Husbandmen with stripes, so that they rather desire to dye then to liue. Many of them moued with the present calamitie, and follie, tell the *Tartars* that they are Gentlemen, and haue wealthy and rich parents and friends. They promise of their owne accord a great and almost inestimable ransome, which the barbarous, impious, couetous, hungry, and cruell Nation seekes almost daily to increase with all kind of subtilties and Examinations, tyes them in fetters, vseth them therefore more hardly. But when they vnderstand that an Agent of their people is come to the *Chan*, they meete him with their captiues, of whom sometimes they require the price falsly nominated by themselues, or some-

Digitized by Google

times promised by the Prisoners: but the Agent who wel knowes the craft and deceitfulnesse of the *Tartars*, finds fault with the captiues foolishnesse, and tell the *Tartars* that they are neither noble nor rich, and that they knew not, nor will euer be able to pay the price, and as though they were neither moued with Pietie nor Religion reiect them. Yet the Agent is diligent that they be inscribed in the Catalogue, and if they haue a purpose to ransome any with their own mony, they hold it expedient to suborne *Iewes* or *Tartars*, and other Merchants being corrupted with mony: by whom, being as it were neglected and rejected by the Agent, they are relealed at a far easier rate. Nothing therefore is more frequent to the captiues, then to promise and offer to the *Tartars* this price, for which they are sold to the *Turkes*, *Iewes*, and stranger Merchants, and others beyond the Sea, or a little more, or twice so much, if they bee able to performe it: but if they cannot learne of the Rustickes or others what they are, as the *Tartars* are for the most part, went often to enquire of their captiues, they are content with little. Neither doe they sell them to strangers, but rather to the Agent of their Nation: but if they are not redeemed by the Agent, they command them to write to their Parents or Kinsfolke. Also many captiues are deliuered with the exchange of *Tartar* captiues, in prouiding for and freeing of whom, the *Tartars* exhibite and shew farre greater pietie, friendlinesse and care, then our *Christians*. For disrepecting all price, they first demand their *Tartar* captiues in exchange of ours, which often promising the same and not able to performe it, vse to bring vpon themselues a farre greater discommoditie. For they aske of them almost an vnualuable summe, wherewith they prize their *Tartars*, which when they are not able to pay, they sell them to barbarous Nations ouer the Sea for perpetuall slaues, for as great a price as they can, and very often at an excessiue rate, or if the *Tartars* are wealthy, they condemne them to perpetuall slauery.

Manner of redemption.

Ars deluditur arte.

The *Chan* hath all his *Tartar* Armie gathered of Horsemen, except some hundred Gunners *Ianizaries*, Footmen, which are either *Turkish* Auxiliaries, or some of his owne which he maintaynes. He is accustomed to carrie with him some smaller Ordnance to warre. From *Taurica* or the *Peninsula* the *Perecopens*, and *Crims*, *Ossouiens*, *Nogariens*, *Cerceßians*, are Tributaries and Souldiers for aide, the Duke of the *Cerceßians*, *Petigorens* are Stipendaries and Mercenaries, and are wont to goe voluntaries to the *Chans* warres. The *Oczacouiens* and *Bialogrodens*, also they who by the continuall couenants which they haue with the *Turkish* Emperour, sometimes also the *Dobrusen Tartars* and Inhabitants of *Danubius*, by the command of the Emperour of the *Turkes* follow him to warre. All that Hoast collected out of those *Tartars*, is wont to make the number of a hundred and twentie thousand, sometimes also thirtie thousand more, but not seldome to exceed that Summe. I haue bin truly informed by many credible *Christians*, which often follow the *Chans* warres, and by some captiued Gentlemen of our Nation, who haue many times seene his Armie.

All haue according to their vse *Tartarian* Horses, neat, excellent, stomackfull, swift, and indifferent good and commodious to vndergoe great labours. The *Chan*, most of the *Soltans*, and *Tartar* Nobles vse in warre *Turkish*, *Caramanian*, *Arabian*, and other *Asian*, *Tartarian*, and the best Out-landish Horses. The swiftest Horses are accounted among them at a great and almost inestimable price. They alwayes feed them Summer and Winter in the Plaines of *Taurica* or the *Peninsula*, but very often as farre as the Riuers *Boristhenes* and *Tanais*: the Gentlemen nourish at home very few Horses, only for their vrgent occasions, not for any arrogancie or luxurie. They seldome put their Iades and vnprofitable Horses for riding in the Waggon, for they doe all their businesse with Camels and Oxen.

Their Horses.

The *Tartars* vse their ancient weapons, a two-edged Sword, or *Tartarian* Cymiter somewhat long, and a *Turkish* Dart, or a *Persian*, shorter and broader of the best Iron, and well wrought; a peculiar *Tartarian* Bow, a long Arrow, and swift, a Quiuer, sometimes a short Speare after the old guize of their people. They goe with Brest-plates and Helmets, and in *Persian* or *Moscouian* Armes, wherewith they abound being enriched by the spoyle of *Christians*. They haue ancient Saddles and Bridles after the custome of the Nation, very fitting, not for pride or superfluitie: the Nobles haue them prepared very elegantly, strongly and compendiously for their vse. But most in the *Tartar* Armie are altogether vnarmed and cowards, and they carrie with them to warre by reason of their great Hoast, almost an infinite number of Horses. For a *Tartar* euen of the basest condition will scarcely be content with one or two Horses, but three, foure, and more, which he may haue alwayes readie with him at his hand. Therefore the Armie of the *Tartars* is made so numerous, great and terrible, which when it is seene afarre off, is deemed by our men almost an infinite and innumerable Hoast.

Their Armes.

Store of Horses.

Now when the *Tartarian* Armie is come into their enemies Country, the *Tartars* ranke not themselues in bands or troupes, but all set forward and proceed leisurely. They dispose many Watchmen in all parts throughout their companies, which they make greater or lesser for their supply, but after that the foremost of them haue descryed their enemy, they counterfeit a flight, that they may more easily allure them into those troupes, which they haue laid in ambushments, and

Flight fayned.

and so ouer-charge him. But when they espie a great Armie of enemies, they make a retraite quickly and speedily to their Armie, Rankes, and Banners.

There is great celeritie in constituting and gouerning their troupes, seeing that they are not ruled ~~onely by the aduertizements of the Generals and Prefects~~ of their Regiments, but also by the shew of Whips, as is the long continued practice of the Nation: and they are subject so to a becke, that they are very easily brought into their Ranges, whensoeuer it is necessary. Their Discipline.

The *Chan* is alwayes fortified in warre, with a band of some thousands of noble and courageous *Tartars* in number, some hundreds of *Ianizaries*, Footmen, and some small Ordnance. In the *Chans* Regiment a very great white Mares tayle, and a piece of Greene and Red Silke of the *Turkish* Emperour is carryed before on a great Pike for the Standard. There appeare in the troupes of the other *Tartars*, many Ancients and Ensignes of various colours. His strength. The principall Ensigne a Mares tayle.

The more famous Souldiers, and they which are notable in reputation, dexteritie and warlike Prowes, and haue atchieued in warre some Noble Seruice and Enterprize, are greatly honoured by the *Chan, Soldans, Kiuiazons*, and *Murzons*. And that respect is had to them, that the *Chan* doth not only reward them with certayne great benefits and such liberalitie, as he can shew them, but also is so mindfull of their deserts and merits, that he assignes them and their successors in the Assembly, and as the fashion is, at his Table a perpetuall place of honour among his more noble *Murzons*. That dignitie among the *Tartars* is the greatest, and Hereditary, for they going to warre able and experienced men which possesse that place, are dignified by the *Chan*, with the glorie of leading the Troupes. The *Chan* also frees some *Tartar* captiues with the permutation of captiues, and in ransoming others he largely powres out his owne Treasure, and willingly comforts them as he is able.

CHAP. XXII.

DITHMAR BLEFKENS *his Voyages, and Historie of* Island *and* Groenland.

IN the yeere 1563. ■ two *Hamburg* Merchants ships determined to sayle to *Island*, the Mariners, by an ancient custome, desirous to haue a Minister of Gods Word with them, commend this care to the Ministers of the Church of *Hamburg*, and intreat them to prouide them a Minister. One Doctor *Paulus ab Etzen* was then Superintendent of the Church of *Hamburg*. While therefore I stayd at *Hamburg*, expecting my Library from *Rostock*, I entred into some familiaritie with *Paulus*, and the rest of the Ministers. This Office was bestowed vpon me, which I vndertooke the more willingly, because I had a longing desire to know strange things, and diuers Countries, yeelding to their perswasion. Taking ship therefore the tenth of Aprill, wee sayled vpon the Coast of *England* and *Scotland*, and passing beyond the *Ilands Orcades*, in number fifteene, whereof the most part lye vnmanured for the barrenesse; *Ferow* and *Hitland* are inhabited: Here wee saw a very high Rocke, which in the top representeth the head of a cooled Monke, where also there is a safe Harbour against all winds, and this Monke deliuereth many from present dangers. The fourteenth of Iune we descryed *Island*, which seemes afarre off, like winter clouds. The next day we attayned the Land and Hauen of *Haffenefordt* toward the South. ■ He published this Booke *Anno* 1607.

Iseland is a rough, hilly and snowie Land, which is supposed to bee twice bigger then *Sicilia*: it is thought to be a hundred leagues in length, which also *Olaus Magnus* testifieth in his eleuenth Booke. It hath the name of the perpetuall Ice, and coldnesse of the Ayre, which is there most sharpe: for eight whole moneths it is troubled with Ice: It burneth notwithstanding with heat and inward fire in many places. The extremitie of cold increaseth this heate in the bowels of the earth, which cold continueth the greater part of the yeere (a few Summer moneths excepted) and so bindeth the pores in the vpper part of the Earth, that it can haue no free vent. And this Iland hath so great a Latitude from the Æquator, that the Arctick Circle diuides it in the middest, that is to say, sixtie fiue degrees and a halfe. The Ilands called *Ebuda*, are obiect to the North part of this Iland. But whether that be of these, which *Ptolemie*, and ancient Writers call *Thule*, or rather *Iseland*, that great Iland, I dare neither affirme, nor altogether denie, because there is no Iland found where *Ptolemie* set *Thule*. Now, the later Writers make another manner of longitude about *Scotland*, and the bordering Ilands, then *Ptolemie* euer thought.

I will draw the Descent of this Nation from their first originall, following the truth of the *Iseland* Chronicles. In the yeere of Christ 900. in the time of *Alebrand* Bishop of *Breme*, certayne of the Nobilitie of East *Frisia*, and of the Countrey of *Breme*, desirous to discouer strange Countries toward the North, set sayle from *Weser*, and passing beyond the *Orcades*, found this Iland almost in the vtmost skirts of *Europe*, yet habitable, but full of Snow: which they called *Iseland*, for the coldnesse and roughnesse thereof. And when they had sayled further towards the North about two hundred leagues, they found another Iland, which (by contraries) they

Digitized by Google

HONDIVS *his Map of* ISLAND.

Groneland. Mists ordinary in those Seas.

See of *Island* originall the next Chapter. Antiquities are often mystical, or mythical & fabulous

they named *Groneland.* Endeauouring to sayle further towards the North, through the frozen or congealed Sea, being long hindred by the Ice, at length with great labour getting out, they fell into whirle-pooles of the Sea, and thicke darkenesse. 40

In these whirle-pooles and darknesse, this Fleet (one onely Ship excepted) perished. They that were preserued, after many long labours and perils, sayling through the *Tartarian* Sea, came into a very hote Countrey, and entring into a large Bay, they went on shoare vpon the next Land. And when the Inhabitants had hid themselues in secret places, by reason of the great heate and scorching of the Sunne, they saw Gold, and other precious things set heere and there, without a guard. And when they had carryed away asmuch as they would, and hasted to the Ship, they saw some pursue them with Dogs of strange bigneſſe. One, who was hindred and laden with a prey that hee could not escape, was torne in peeces of the Dogges. The rest, after long sayling, shunning these Whirle-pooles, arriued in *Muscouia*, thence by the *Baltick* Sea returning vnto *Breme*, they brought backe these tidings to *Alebrand* the Bishop, with part of the prey. 50

Much about this time, the *Norwegians*, by example of the *Heluetians* in *Iulius Cæsars* time, are supposed to haue come out of *Norway*, who then long time possessed that part of *France*, which now also is call *Normandie*. And when they had performed great attempts by Sea and Land against the *Britaines*, they did not onely scoure the Sea by hostile incursions, but also expelled the *Saracens*, who at that time came into *Italy*, and sought to seat themselues in *Calabria* and *Apulia*. After they brought Colonies Northward into *Hitland*, *Ferow*, and *Island*: which way, they learned of the *Bremians*, by meanes of the Nobilitie of *Frisia* aforesaid. And euen the very propriety of their speech doth testifie, that they came out of *Norway*: for the pronunciation of the *Islanders* doth agree with the antient Inhabitants of *Norway*. For vpon the Sea coast of *Norway*, especially where the famous Hauen and Citie of *Bergen* is, by reason of the resort and familiaritie with the *Germaines* and *Danes*, the Language is changed. 60

Of

Of the Iſelanders *Religion.*

IN the yeere of Chriſt 1398. *Woldemarus*, the ſecond of that name gouerned the *Daniſh* Kingdome, whereunto *Norway* was added, whoſe poſteritie held it, vntill *Ericus* Duke of *Pomerania*, and *Chriſtopher Banar*. Vnto this *Waldemarus* all the *Ariſtoian* Colonies obeyed, ſo that now, vnder that *Woldemarus*, the *Iſelanders* were firſt inſtructed in the Chriſtian Religion, when before they had worſhipped ſtrange Gods. And when almoſt all Chriſtian people, in that lamentable darkeneſſe and title of a Church, as it were by Witchcraft deceiued, were detayned in moſt deepe bonds of ſuperſtition; it could not bee but they, who were furtheſt remoued from the ſocietie of Learned men, and dwelling vnder an vnciuill and barbarous Climate, ſhould fall into moſt foule Idolatrie, when ſometimes (as hereafter ſhall bee declared) they had Deuils to ſerue them, as familiar as domeſticall ſeruants. But after *Luther* began to bee knowne, *Chriſtianus* the King of *Denmarke* procured purer Doctrine to himſelfe, and purged the Churches in the Kingdome of *Denmarke*, *Norway*, and all the Ilands ſubiect vnto him; ſending Miniſters into *Iſeland*, to ſow the ſeede of the Goſpell there. Hee ſent a Printer alſo out of *Denmarke*, to ſet forth the Bible, the common places of *Philip Melanchthon*, the Workes of *Vrbanus Regius* and others, in the vulgar Tongue, to the Paſtors who were ignorant of the *Latine*, as at that time almoſt all of them were. And alſo ſent for fit and apt young men out of *Iſeland*, whom hee maintayned in the *Haffnian* Vniuerſitie at his owne coſts, and gaue them charge ouer Churches and Schooles.

The Chriſtian care of King *Chriſtian.*

King *Woldemare*, as ſoone as they ſhould profeſſe *Chriſtian* Religion in *Iſeland*, ordayned them two Biſhops, one in *Scalholden* in the Eaſt part, and another in *Hollen* in the Weſt, whoſe Succeſſours at this day retayne nothing but a ſhadow, and a bare Title, for they haue no other reuenues but Butter and Fiſh. But when that reformation (whereof I ſpake) was made by King *Chriſtian* in the Churches of *Iſeland*, one of the Biſhops in *Scalholden*, conſpiring with the people, reiects the Doctrine of the Goſpell, and making a rebellion they kill the Kings Lieutenant. The yeere following, which was 1535. the King ſent a Noble man of the Order of Knighthood, one *Paul Hitfelt* (whom I ſaw an old man in *Denmarke*) furniſhed with a Fleet, Souldiers, and Munition into the Iland. The ſeditious being ſlaine, hee renueth the reformation of the Doctrine of the Goſpell, and returneth into *Denmarke*, leauing a certayne Noble man to take charge of the Church and Iland.

Two Biſhops in *Iſeland.*

The greateſt man in *Iſeland* at that time was one *Tadde Bonde*. Hee, after the Kings Armie was departed, conſpiring with the principall men (whom by his Authoritie hee drew to take his part) reuolted from his Allegiance, and perſwaded the reſt of the Ilanders to follow. They meete together in a place called *Waloe*, and conſpiring to rebell, and caſt off the Kings ſubiection, they impart their counſels together, and *Tadde* had his poſſeſſions not in one place, and many retayners, and for theſe cauſes hee thought they could not eaſily bee ſuppreſſed. The Biſhop who dwelt in the Eaſt, had a ſpeciall care to acquaint the Kings Lieutenant with all that was done (for the Lieutenant was abſent in the Weſt part of that Iland) and the Biſhop hated *Tadde* a long time. For in that firſt Rebellion, hee had falſly accuſed him to the Lieutenant as guiltie, and author of the Rebellion. This accuſation onely brought great and extreame calamitie vpon him.

Tadde Bonde.

Waloe.

The Lieutenant being certified what was done, hee perſwadeth by fit inſtruments, ſome of the Complices of the faction, to continue in their Allegiance, propounding rewards and puniſhments. Then many of them when they ſaw the greatneſſe of the danger, leauing him, came humbly to the Lieutenant, and begge pardon, and obtayne it. *Tadde* therefore is adiudged an Enemie, both of the King and of his Countrey, they promiſe therefore by an Oath and giuing of their Faith, that they will purſue him.

Then hee, through feare of the danger, with a few of his Domeſtickes which hee had gathered together, kept himſelfe at the foote of *Hekelueld*, but being circumuented they were all ſlaine, and hee taken. They that tooke him, brought him to the Biſhop, to commit him to Priſon, but hee refuſed to receiue him. Therefore they draw him to another certaine man of thoſe who had the chiefe place in Iuſtice, neither would hee receiue him, fearing the hatred of the people. There was at that time there a certayne *Iſelander*, *Ionas* by name, a man of courage. I know (ſayth hee) to whom I will commit him, that will diligently keepe him, and foorthwith hee ſlew him and buryed him. And ſo the Sedition was appeaſed. And from that time vntill this day, the Word of God is taught amongſt Barbarous men, after the manner of the Confeſſion of *Auguſta*.

The Life and Manners of the Iſelanders.

IN the whole Iland, there are three ſorts of men, who are held in any reckoning and account: for the common people, by reaſon of the ſcarcitie of Ships wherewith they fiſh, make themſelues ſlaues to the richer. Of thoſe three ſorts, the firſt is of them whom they call *Loſhmaders*, that

Three ſorts of people.

Digitized by Google

that is to say, *Men of Iustice:* for *Loch* in their language, signifieth *Law.* These men administer Iustice, and there are many of them, but twelue of them onely haue the yeerely charge of Iustice. All men obey their Iudgement and Decrees. Another sort is of them, who are called *Bonden:* They are in the place of Nobles, and as euery one of them is richest in Shipping, and Cattle, so hee hath most Fishers, and followers. This onely power they know. The third sort is of Bishops and Ministers of the word of God, of the which many are found euery where throughout the whole Iland.

Twelue Iustices each yeere

Strength.

There are many of the *Islanders* very proud and high minded, especially by reason of the strength of body which they haue. I saw an *Islander*, who easily put an *Hamburg* Tunne full of Ale to his mouth, drinking off it as if hee had had but one small measure.

Habite.

Both Sexes in *Iseland* haue the same habite, so that by the garments you shall not easily discerne whether it bee Man or Woman. They want Flaxe, except it bee brought vnto them by our Countrey-men. The Women-kinde there are very beautifull, but ornaments are wanting.

Superstition and Witchcraft.

The whole Nation of the *Islanders* is much giuen to Superstitions, and they haue Spirits familiarly seruing them. For they onely are fortunate in Fishing, who are raised vp by night of the Deuill to goe a fishing.

Night Rauens.

And although the Ministers of the Gospell vse all diligence in disswading them from this impietie; yet this wickednesse hath taken roote, and sticketh so deepely in their mindes, and they are so bewitched of Sathan, that they can admit no sound Doctrine and Dehortation. Yea, by the Deuils meanes, if you offer them money, they promise a prosperous wind and performe it, which I know, as hereafter shall bee spoken. *The like* Olaus Magnus *writeth of the* Finlanders *in his third Booke.* They hold Ships also by inchantment almost immoueable, and that in a prosperous wind.

Sweet sacrifice for the Deuill, letice sutable his lips.

And truely it is a wonder that Sathan so sporteth with them. For hee hath shewed them a remedie in staying of their Ships, to wit, the Excrements of a Maide being a Virgin: if they annoynt the Prow, and certaine planckes of the Ship, hee hath taught them that the Spirit is put to flight, and driuen away with this stinke.

Learning:

In the rest of the carriage of their life, they thus behaue themselues. The Parents teach their male Children (euen from their child-hood) letters and the Law of that Iland, so that very few men are found throughout the whole Iland, but they know Letters, and many Women vse our letters, and haue also other characters, with the which they expresse some whole words of theirs, which words can hardly bee written with our letters. They giue themselues to hardnesse, and fishing from their Infancie; for all their life consists in Fishing. They exercise not Husbandrie, because they haue no Fields, and the greatest part of their foode consisteth in Fish, vnsauerie Butter, Milke and Cheese. In stead of Bread they haue Fish bruised with a Stone. Their Drinke is Water or Whay. So they liue many yeeres, without medicine or Physitian. Many of them liue till they bee one hundred and fiftie yeeres old. And I saw an old man who sayd hee had then liued two hundred yeeres. Nay, *Olaus Magnus* in his twentieth Booke sayth, that the *Islanders* liue three hundred yeeres.

Fiwing & fish.

Drinke.

An old man or a loud lie.

Bread.

The greater part of *Islanders* hath neuer seene Bread, much lesse tasted it. If our men at any time sell them Meale or Corne, they mingle it with Milke, and lay it vp for a long time, as delicates for Nobles. They call this sauce or mixture, *Drabbell.*

Commodities.

The *Germaines* that trade in *Iseland* haue a place in the Hauen of *Haffenefords* fenced by Nature, where vnder Tents they set their Merchandise to sale, as Shooes, Garments, Glasses, Kniues, and such kinde of Merchandise of no price. The *Islanders* haue Oyle molten out of the bowels of Fishes, knowne to our Tanners and Shoomakers: they haue Fish, Brimstone, white Foxe skinnes, Butter and other things. They barter all these for our Commodities, nor is the bargaine ratified, before they bee well stuffed with our Meat, Wine or Beere, together with their Wiues and Children whom they bring with them, how many soeuer they haue.

Whoores.

Comming into the Hauen, they haue their Daughters with them which are marriage-able: they after they haue inquired of our companie, whether they haue Wiues at home, or not, they promise a nights lodging for Bread, Bisket, or any other trifling things. Sometimes the Parents yeeld their Daughters freely, euen for a whole moneth, or as long as they stay. If shee proue with Child by that lying with her, the parents loue their Daughter better then before, and the Child being borne, they bring it vp some yeeres, while either the Father returne, or they giue it to their Sonne in law that shall bee, for a Dowrie with their Daughter, who doth not despise it, because it is borne of the *Germaine* blood. If any Virgin haue familiaritie with a *Germaine*, shee is honoured among them, and therefore shee is sought of many Suiters. And the time was before this, that Whoordome, which was without the degrees of Consanguinitie and Affinitie, had no Infamie. And although Preachers crie out against it, and the offenders are seuerely punished, yet they hardly abstaine.

Drinking and singing.

They lay not vp Wine and Beere which they buy of our Countrey-men, but quaffe it vp house by house by course one with another, and that freely or for nothing. While they drinke, they sing the heroicall acts of their ancestors, not with any certaine composed order or melodie, but as it commeth in euery mans head. Neither is it lawfull for any one to rise from the Table to make

Digitized by Google

make water, but for this purpoſe the daughter of the houſe, or another maid or woman attendeth alwayes at the Table, watchfull if any becken; to him that beckeneth ſhee giues the chamber-pot vnder the Table with her owne hands; the reſt in the meane while grunt like Swine, leaſt any noiſe bee heard. The water being powred out, hee waſheth the Baſon, and offereth his ſeruice to him that is willing, and hee is accounted vnciuill who abhorreth this faſhion. They entertaine them that come vnto them with a kiſſe, and they behold and looke each on other, if paraduenture they may ſee Lice creeping on their garments, which greatly trouble them for want of linnen: if thy ſee any, each taketh them from the other, and as often as he taketh away one, ſo often doth he thanke him, with his head diſcouered, and this they doe one to the other, as long as they ſee one. Louing wormes. Louſie loue.

By night the Maſter of the houſe, with all his family, his wife and children lye in one roome, couered with a cloth made of Wooll which they make. And the like clothes they lap vnder them, without ſtraw or hay put vnder. All of them make water in one chamber-pot, with the which in the morning they waſh their face, mouth, teeth, and hands; they alledge many reaſons thereof, to wit, that this makes a faire face, maintaineth the ſtrength, confirmeth the ſinewes in the hands, and preſerueth the teeth from putrifaction. If Cattle periſh in the waters or ſnow (which often commeth to paſſe) they ſay, they are killed of God, and are accounted among the delicates. And it happened in the yeere 1564. in a place called *Ackermiſſe*, that in the month of Ianuary ſome Kine ſtrayed in the darke, and the fogge was ſo great, and the depth of ſnow, that they could not be found. In the moneth of April they were firſt found vntainted, and without any euill ſmell, and being diſtributed among the neighbours, ſome part was brought to the Gouernour, with whom I liued at that time, which was not lawfull for him to deſpiſe, yet he commanded it to bee giuen to the poore. Lodging.

In the Winter time, before and after the *Solſtitium*, when the Sunne declineth, and being in *Sagitarius*, *Capricornus*, and *Aquarius*, it departeth from them, neither doth it aſcend aboue the Horizon, while it touch *Piſces*, therefore they haue no light but of the Moone and Starres. In like manner about the Summer *Solſtitium*, when the Sunne aſcendeth to *Gemini*, *Cancer*, and *Leo*, it neuer goeth downe vnder the Horizon, therefore at that time they haue no Night. In the Winter time, they keepe their Beds many dayes, and exerciſe themſelues in the game of Cheſſe, the inuention wherof is due to *Xerxes* the Philoſopher: the meane while the ſeruants bring them their meate dreſſed to their beds. They keepe Lampes of the oyle of Fiſh continually burning, others burne Tallow candles. Long night. Cheſſe.

In the moneth of Februarie, as ſoone as the Sunne aſcends aboue the Horizon, by little and little the dayes grow longer, then they begin to Fiſh, whereof there is ſo great plentie, that it is ſcarce credible; for the Fiſhes which for three whole moneths ſwamme in the darke, as ſoone as they ſee a fiſh of Tinne faſtened to an Iron, they ranne to it in ſchoales, that they are not onely drawne vp by the jawes, but whereſoeuer the Iron toucheth them. Hauing taken them, they plucke out the bones, and lay vp their bowels, and make Fat or Oyle of them. They heape vp their Fiſh in the open ayre, and the puritie of the ayre is ſuch there, that they are hardened onely with the winde and Sunne, without Salt, better ſurely then if they were corned with ſalt. And if they kill any Beaſts, they preſerue the fleſh without ſtinke or putrifaction, without ſalt, hardened onely with the winde. Dryed Fiſh.

Of the wonderfull ſtanding Pooles, Lakes and Fountaynes in Iſeland.

IN diuers places almoſt throughout the whole Iland, are Bathes and ſcalding Fountaynes, which flow out in great abundance. This water as ſoone as it begins to coole, hath a Sulphurie ſubſtance in the top thereof. In theſe ſcalding waters, wherein I could ſcarſe dippe my finger, red Diue-doppers are ſeene afarre off, if you come neerer, they vaniſh, if you depart, they appeare againe, ſo all day long (if any pleaſe) they play boe-peepe with men. Whether they bee Diue-doppers indeed, I leaue it to others to decide. Hot Bathes. Diue-doppers.

At the Weſt of this Iland, there is a huge ſmoakie Lake, and very cold, which turneth all things that are caſt into it into ſtones, and that in few dayes, and (which is worthy of great admiration) if you put a ſticke vpright into the bottome, the lower part which is ſtucke into the earth, hath the reſemblance and hardneſſe of Iron after two dayes, that which was in the water hath the hardneſſe and ſhew of a Stone, the vpper part which remayned aboue the water, keepeth his wonted forme: And I twice proued the truth of this thing, but when I put the lower part (which repreſented Iron) to the fire that it might melt, it burned like a Coale. Stone-making water. Note.

There are two Fountaynes of moſt different qualitie, in a place vpon the Sea coaſt, which is called *Turlocks* Hauen, the one cold, the other hot; theſe Fountaynes by pipes are drawne into one place, and tempered for bathing, they make a moſt wholeſome Bath. Not farre from theſe Fountaynes, there is a certaine other Fountayne, which bubbles foorth liquor like Wax, which notably cureth the *French* diſeaſe, which is very common there. *French* diſeaſe.

Not farre from the Hauen *Haffneford*, there is a cleft in a Rocke like to a Fountayne of vnmeaſu-

Digitized by Google

meaſurable depth. If you looke into it, you cannot ſee the water, but if you caſt in a ſtone, halfe an houre after, you ſhall heare it falling, as if it fell into brazen Veſſels, and forthwith the water ariſeth, and it is filled to the top of the Wels brimme, and it is a moſt cleere water, which notwithſtanding no man dare touch, nor taſte, neither doth it flow out, but ſo long after, as the ſtone which is caſt in, ſinketh to the bottome. There is another Lake in the middle of the Iland, which caſteth forth a peſtiferous fume, inſomuch as it killeth Birds flying ouer it with the poyſon thereof.

Of the wonderfull Mountaynes in Iſland.

THere are three Mountaynes in *Iſland* very admirable, the one is called the Mountayne of the *Croſſe*, the other *Snenelſiockell*. Theſe two pierce the cloudes with their heigth, whoſe heads, or tops no man euer ſaw, nor are they euer ſeene without Ice and Snow; in thoſe, Lightnings and horrible Thunders are daily heard, when neuertheleſſe, in the neighbouring Valleyes the Aire is faire and cleere, as in Summer time. The third Mountayne lyeth on the North of the Iland, and not very high, but it hath burned very many yeeres; with what fire or matter, it is vnknowne; but ſeeing Brimſtone is digged out of the Earth throughout the whole Land, it ſeemeth, that the Sulphurie matter is ſometime inflamed. This Mountayne is not farre from the Sea, and the Sea on one ſide beates vpon it: it is called *Hecla*, ſometimes it caſteth forth flame, ſometimes fierie water, then blacke aſhes and Pumis ſtones, in ſo great abundance, that it darkeneth the Sunne. No man alſo can dwell neere it by ſixe mile, neither are there any paſtures about it. Sometimes bold men, and ſuch as regard not their liues, caſt ſtones into the hollow places; for ſometimes there is a wonderfull calme in the Mountayne; eſpecially when the Weſterne wind blowes, it caſteth backe the ſtones flung into it with an horrible noyſe and ſound: the common people thinke the ſoules of the damned to be tormented heere: it is certayne that diuers and horrible ſpirits are obſerued in this Mountayne and about it; for if a Battaile be fought in any place, the *Iſlanders*, eſpecially they that ſayle and fiſh in the Sea neere to *Hecla*, know the day of the Battaile fought, although they know not where it be done: for they ſee (as they report) wicked ſpirits going forth, and returning, and bringing ſoules with them. And ſuch a ſtorie is reported all *Iſland* ouer.

Hecla a burning Hill.

Conceit of Purgatorie.

A Fiſherman ſayling by *Hecla*, met with another ſhip, both had a proſperous wind, and when (after the manner of Saylers) he was demanded who hee was and of what place, hee anſwered, that hee had the Biſhop of *Breme* in his ſhip, whom hee would conuay to *Hecla*: and it was knowne that the Biſhop dyed the ſame day, which notwithſtanding, I would not ſet downe for truth. If any periſh by Sea, or otherwiſe dye, ſometimes leauing their Friends and Acquaintance, they appeare very heauie, being demanded whither they goe, and from whence, they anſwere they are brought to *Hecla*, vnder a cruell Maſter the *Deuill*, and ſo vaniſh. And they are ſo bewitched of Satan, that they thinke them the ſoules of the departed.

Colluſions of men, or Illuſions of Deuils. *Arngim Ionas* an *Iſlander* ſcoffes at it as fabulous.

But becauſe no man that is well in his wits, will thinke that Hell is in this Mountayne, yet it may be demanded, whence the Hill hath this matter, whereby it ſhould bring forth ſo many yeeres flames, ſo many aſhes, and ſuch abundance of Pumis ſtones? For wee ſee the moſt ſollid and firme bodies, and all things to be conſumed by fire: and for that cauſe ſome thinke, that it ſhall come to paſſe that theſe flames ſhall once be extingiſhed? for the cauſe fayling, they deny that any effects can follow. But heere (what I thinke) I will freely ſpeake, yet ſauing other mens iudgements. It is manifeſt by watry Meteors, that there is a continuall generation of water, by the vapours gathered together in the cauities of the Earth; which iſſueth forth by Fountayns; but the efficient and materiall cauſes abiding perpetually, the effects alſo continually remayne: ſo alſo in the bowels of the Earth, there are certayne places, which by their owne nature draw vnto them a hote and dry exhalation, and that it reſolues it into flames, aſhes, and Pumis ſtones, which may eaſily be done in this Mountayne, by reaſon of the Sulphur matter, which is found in *Iſland* throughout the whole Land. And as Fountaynes ſend forth more abundance of water in the Winter time, then in the Summer, nay, ſome of them are dry, becauſe matter failes; ſo is it with this Mountayne: for ſometimes matter failing, it hath neither flames, nor ſmoke, and all is quiet, whereby it appeareth that the matter and efficient cauſe faile. Howeuer it bee, I know this, that no man may come to the foot of the Mountayne without danger and feare, as hereafter ſhall be declared.

Strange Story.

The ſame yeere I was in *Iſland*, the nine and twentieth of Nouember, about midnight in the Sea, neere *Hecla*, there appeared a flame, which gaue light to the whole Iland, ſo that all of vs aſtoniſhed, wondred, and carefully expected the iſſue thereof: the elder ſort and ſuch as were skilfull in this matter, ſaid, that this light came from *Hecla*: an houre after, the whole Iland trembled, as it ſhould haue beene moued out of the place: after the Earthquake followed a horrible cracke, that if all warlike Ordnance had beene diſcharged, it had beene nothing to this terrour. It cannot be thought, much leſſe expreſſed by word, how horrible it was. Wee thought that the whole frame of the World would fall, and that the laſt Day was at hand: but it was

knowne

Digitized by Google

knowne afterwards that the Sea went backe two leagues in that place, and remayned dry.

About the beginning of Iuly, at a certayn time of the yeere great ſtore of Ice ſuddenly floteth to the Iland about *Hecla*, and there goes a rumour through the whole Iland, nay it is beleeued, that the damned ſoules are tormented in this Ice by courſe, in the Flame, in the Mountayne, and after in the Ice. This Ice for three whole moneths ſwimmeth only about *Hecla*. If you take any part of this Ice out of the Sea, and wrap it in a linnen cloth, and lay it vp in a Cheſt, it remayneth ſo long vnmelted, as it ſwimmeth in the Sea; but if the Ice in the Sea vaniſh, which ſuddenly in one night happeneth, this appeareth not, nor leaueth any ſigne of moyſture in the linnen cloth, which is not a hard thing for Satan to doe, to take away the Ice without moyſture, to increaſe their incredulitie. *Olaus Magnus maketh mention of this Ice in his eleuenth Booke.* But becauſe I determined to ſearch out all things diligently, I ſayled not without great feare vnto this Ice, and I obſerued, that this Ice was violently caſt againſt the Rockes by force of the winds, and ſo made a mournfull ſound afarre off, as if miſerable howlings were heard there. Hereupon the *Iſlanders* thinke the ſoules of the damned are tormented in this Ice. Another wonder.

Of the Riches of the Islanders.

I Haue ſaid that *Island* was a rough and ſnowie Countrey, and beſides, it is full of Rockes and ſtones; and ſo truly, that there is not a field in the whole Iland: they haue not ſo much as Gardens, wherein they may haue Pot-herbes or Pulſe: they know no kinde of Corne nor Apples, Peares, nor Cheries, nor any fruit of Trees. And, which is almoſt incredible, they neither vſe Bread nor Salt, yet they are well liking, and ſtrong. There is no Citie in the whole Iland: they ſeldome haue two or three dwellings together. They haue their Cottages on the Sea ſide for fiſhing, and vnder ground by reaſon of the fierce windes. No fruits.

There is no lone of money among them, for wares are changed for wares. Brimſtone groweth on the South part, and almoſt throughout the whole Iland, which is digged out in great abundance: they ſell this ſtuffe purged for a ſmall price. Mines of Gold or Siluer, nor of any other mettall they haue none. They vſe Iron, but ſuch as is brought vnto them. You ſhall ſcarſe finde a man, who hath not Iron Nayles in a Bagge, wherewith Horſe-ſhooes are faſtened. Barter. Brimſtone.

All their houſes are vnder ground, for they haue no matter for building. There is not a tree in the whole Iland, except the Birch-tree, and that in one place, which alſo exceedeth not the ſtature of a man in length, and that by reaſon of the vehemencie of the winds, that it cannot grow higher. This Birch-tree after the Summer *Solſtitium* beginnes firſt to bud, the leaues haue a moſt ſweet ſmell, and of ſo fragrant a ſauour, that the *Germanes* put them in their Tents, and vpon their meats for a ſingular delight. Yet ſometimes great abundance of Firre-trees from *Tartaria*, or elſe-where carried by force of the waues and the Ice, arriued in *Island*. The chiefe vſe of them is in building Cabbins vnder the ground: you ſhall ſcarſly find a houſe out of the earth, by reaſon of the ſtrong winds, which ſometimes ouerthrow Horſes and their Riders. They haue great plentie of Butter, for the fatnes of the graſſe: for the *Island* graſſe is ſo fat, that Oxen after a certaine time are to be driuen from the Paſtures, leſt they burſt. And it is of ſo pleaſing a ſent, that our men lay it vp in their Cheſts with ſingular care for their garments. The moſt part (for ſcarcitie of Veſſels) lay their Butter aſide in the corners of their Houſes, (as we doe Lime or other matter) and that without Salt. They haue domeſticall cattle, as kine; but many of them are without hornes. Al their Horſes are amblers & very fit for carrying of burdens. They haue very great ſheepe, they keepe not a Hogge nor a Hen, for want of graine, if fodder or hay faile them in the Winter, they feed their cattle with fiſh. They haue rough Dogs bred without tayle and eares for their pleaſure, which they ſell deere and greatly eſteeme, when notwithſtanding they offer their children to any that will aske them, and that freely. Beſides, this Iland hath white Foxes, and huge Beares of the ſame colour. They haue no Birds but water-fowle, whereof there are diuers kinds and ſorts found there, vnknowne vnto vs. Crowes ſometimes are changed white; and excellent Falcons, and ſome among them white, which being taken and gotten, with the great coſt of the *Spaniards* and *Portugals*, are alſo carried away in great number, which thing was done, while I was in *Island*, to my great profit. *Island* alſo hath white Partridges. There are alſo euery where through the whole Iland moſt pleaſant Riuers, which yeeld the Inhabitants fiſh in great plentie, Salmon Trowts, and Sturgeons. There is one only bridge in all the Iland, made of the bones of a Whale. They that goe from one part of the Iland to another by the Continent, haue no way which they may follow, for the ſolitarineſſe thereof: but as Saylers in the Sea, ſo they by the helpe of the Load-ſtone performe their journeyes. The depth of the Sea neere *Island* is very exceeding. In theſe gulfs there are Whales of wonderful bignes, and many Sea-monſters which cannot bee killed or taken of men, the Ice only through the force of the winds daſheth them againſt the Rockes, and killeth them. I ſaw ſuch a Monſter caſt vpon the ſheare dead, whoſe length was thirty ells, his heigth more then a very long Warlike Pike. Great winds. Fat graſſe. Their kine, horſes, and ſheepe. Dogs of more price then children. Beares and Foxes. White Crowes Riuers. Whale-bone-bridge. Trauell by compaſſe. Whales.

A Whale being dead or killed, the Inhabitants make Buildings and Dwellings of the bones thereof with great dexteritie and skill, they make alſo ſeates, benches, tables, and other Huge Whale.

Digitized by Google

vtenſils, ſmoothing them ſo that they ſeeme like Iuory. They that ſleepe in theſe houſes, are ſaid alwayes to dreame of ſhipwrack. And although it bee a huge and fearfull creature, and haue great ſtrength, yet notwithſtanding oftentimes he is not onely withſtood, but ouercome of his capitall enemie (not ſo great) which is called *Orca*; this fiſh hath the ſhape of a ſhip turned vp-ſide-downe, and vpon his backe very ſharpe and long finnes, wherewith hee woundeth the ſoft of the belly of the Whale, and killeth him; and the Whale ſo feareth this fiſh, that in ſhunning him, he often daſheth himſelfe againſt the ſhoare.

Note.

Orca.

The *Iſeland* Sea hath a Monſter alſo, whoſe name is vnknowne. They iudge it a kinde of Whale at the firſt ſight, when hee ſhewes his head out of the Sea, hee ſo ſcarreth men that they fall downe almoſt dead. His ſquare head hath flaming eyes, on both ſides fenced with long hornes, his body is blacke, and beſet with blacke quills; if he be ſeene by night, his eyes are fiery, which lighten his whole head, which he putteth out of the Sea, nothing can either bee painted or imagined more fearfull. *Olaus Magnus maketh mention of this Monſter in his twentieth Booke*, and ſaith, *that it is twelue cubits long*. Such a Monſter at that time tore in pieces with his teeth a Fiſher-boate, wherein there were three Fiſher-men, ſo that they were drowned, one of them, who held in his hand a little cord, wherewith hee vſed to draw the hooke, and the fiſhes, laid hold of the boord which floted in the Sea; ſo he was ſaued getting out of the bottom vpon the planke and ſwam foorth, and declared this to the Kings Gouernour in my preſence, adding moreouer that he was ſaued from heauen, that he might get maintenance for his children, who otherwiſe were readie to periſh with hunger, when the other two though married, yet were without children.

A Sea-monſter.

Another Monſter alſo is often there ſeene and taken, of ten or twelue elles long, it is called *Hacfal*, it is all fat; it is taken after a wonderfull manner: they haue a very long pike whereunto they faſten an Iron with a forked point, that it cannot goe backe, vnto the ſtaffe a cord of a maruailous length is faſtned; they ſticke this ſpeare in the Monſter, which ſwimmeth vnto it for prey, perceiuing a man in the little boates; as ſoone as the Monſter feeles himſelfe ſtrooken and wounded, forthwith he hides himſelfe in the Deepe, and there (his bloud being powred out) dyes, afterward the Fiſhers draw him to the land by the long cords faſtned to the ſpeare.

Hacfal another Monſter.

Beſides, it hath diuers Sea Monſters: a Dogge fiſh, which putting his head out of the Sea barketh, and receiueth his whelps ſporting in the Sea againe into his belly, while they come to more growth. It hath Horſes and Kine, and what not? and it is a maruell, how skilfull Nature ſports, in expreſſing the ſhape of all earthly Creatures and Fowles in the Sea. Neither ſhould any man perſwade me that theſe things are true, although ten *Ariſtotles* ſhould affirme them vnto me, vnleſſe I had ſeene moſt of them with mine eyes. Let no man therefore preſently cry out, that what he knowes not is fabulous.

Dog-fiſh.

Note.

The men of *Lubeck*, *Hamburg*, and *Breme*, were often wont to goe to this Iland, and leaue their ſeruants in the winter lodgings; but now it is prouided by the Kings authoritie, that no *Germaine*, either by reaſon of trading or learning of the language, leaue his ſeruants there in the winter; but vpon what occaſion this came to paſſe, the matter ſtandeth thus. In the yeere of Chriſt 1561. there was a Citizen of *Hamburg*, one *Conradus Bloem*, left by an other in *Iſeland* in the winter lodgings with the Biſhop in *Scalholden*, for trading and learning of the tongue: the Biſhops fiſhers find a whole Vnicornes horne in the Ice, brought out of *Groneland* (as it is thought) where yet at this day Vnicorns are ſaid to be, & thinking it to be a Whales tooth, nor did the Biſhop beleeue otherwiſe, they bring it to their Maſter, who gaue it to *Conradus* begging it; he being ſomewhat craftie, ſold it after at *Antwerp* for ſome thouſands of Florins. When this thing came to the King of *Denmarks* eares, he forbad that no *Germaine* ſhould winter in *Iſeland* in any cauſe.

Horne of a Sea-fiſh. See *Ionas Poole* and *Baffin*, *l.* 4.

Of the iudgement of the Iſelanders.

THere is a moſt pleaſant place almoſt in the midſt of the Iland, you would ſay it were a Paradiſe in the Spring time, where ſometimes there was a high Mountaine, which burned with inward fire, as *Hecla* doth at this day; which matter after it was conſumed, made a Plaine, but the Rocks which were erected about the Mountaine, ſtand yet, therefore this place is ſo fenced by Nature, that they that enter it, muſt goe one by one. This place is famous for two great falls of water, where two Riuers from the higheſt Rocks caſt themſelues ſteepe downe one againſt the other, with an aſtoniſhing and horrible daſhing of the waters againſt the Rocks. Theſe Riuers meete together in the middle of the field, and by a great whirlepoole are ſwallowed vp into the ground.

Heere yeerely the nine and twentieth of Iune, the Inhabitants who haue any controuerſie, meete together: for in no other place or time Iuſtice is adminiſtred: after they are entred, ſtandings are placed by the Gouernours guard, who admit all that deſire to come in, no man hath libertie to goe out, without the conſent and authoritie of the Gouernour. When they are come thither, the Gouernour offreth his Charter to bee publikely read, whereby hee procureth credit to his Office, and hauing ſpoken before ſomewhat of the Kings goodwill, and his owne towards the Ilanders, he exhorteth them to communicate Iuſtice vnto all, without reſpect of perſons, hee after

Iſlanders terme

Digitized by Google

after departeth, and keepes himſelfe in his Tent, hauing heard a godly Sermon, the twelue men, whom they call *Lochmaders*, as it were men of Iuſtice, ſit downe on the ground, each of them hath a Booke in his hand, contayning the Law of that Iland, written in the vulgar tongue. Accuſation and anſwer being made, they goe apart into ſeuerall places, euery one reades ouer his Booke diligently, going afterwards againe to his place, without Scribe, without replication or doubling, and iuglings of ſuch brabling Lawyers, they conferre of the ſentence and pronounce it: If any thing bee worthy of deliberation, it is brought to the Gouernour for conſultation and for his honours ſake, when notwithſtanding they leaue no power of deciding it to him. Manner of trials and ſuites.

There are many accuſations of Theft and Adulteries, they make no queſtion of their Bonds, of their Fees, their Hereditarie fields, or any ſumme of money: there are no controuerſies there. Theſe twelue men, ouer which one is chiefe, are greatly honoured amongſt them. Theſe doe determine, and diligently inquire of all publike Controuerſies. If there bee any wicked Act committed that yeere, if Murther bee committed any where, if Theft, if Adulterie, if Cattle be ſtolen away (which vſeth oft to bee done) then theſe men ſet downe the puniſhment. They that are condemned to dye, are beheaded: the reſt, who are any way to bee puniſhed, they burne with a marke, this puniſhment with them is moſt grieuous: for they are marked in the forehead: they that are ſo marked are accounted in the number of wicked men: others are beaten with roddes: and I ſaw when the Father and the Sonne for theft (for they were Cattell ſtealers) were held Captiues, that the Father was compelled to beate his Sonne with roddes, and hee afterwards beheaded. Sentence and execution.

Of Groneland.

ISeland by Nature is ſomewhat long, it hath *Norway* on the Eaſt, the *Orcades* and *Scotland* on the South, *Groneland* on the Weſt, and the *Hyperborean* or *Congealed Sea* vpon the North. Although I purpoſed to paſſe ouer *Groneland* with ſilence, yet ſeeing I touched vpon the Land, and ſaw ſome few things, I thought it was to bee added. There was in a certaine Monaſterie in *Iſeland* called *Helgafiel*, a certayne blinde Monke left (for the Abbot of the Monaſterie had conuerted the Reuenues to the Kings vſe) who liued miſerably there: hee was borne in *Groneland*, of a darke complexion and broad face. The Gouernour commanded him to bee brought vnto him, that hee might know ſome certaintie of the ſtate of *Groneland*. Hee ſayd, there was a Monaſterie of Saint *Thomas* in *Groneland*, into the which his Parents thruſt him when he was but young, and after that, hee was taken out by the Biſhop of *Groneland*, when hee was thirtie yeeres of age, to ſaile with him into *Norway*, to the Archbiſhop to *Nidroſia* (or *Dronten*) to whom the *Iſeland* Biſhops are ſubiect: in his returne hee was left in a Monaſterie by the Biſhop, whoſe Countrey *Groneland* was: this was done (as hee ſayd) 1546. Hee ſaid, that Iland was called *Groneland*, Antiphraſtically. For that it ſeldome or neuer waxeth greene, and that there is ſo great cold there throughout the whole yeere, except Iune, Iuly and Auguſt, that being clothed and couered with Furres, they could ſcarſe bee warme; and that they had at home certayne round peeces of wood, which being continually mooued with the feete, kept their feet warme. Hee ſayd, it aboundeth as *Iſeland* doth with Fiſhes, and that they had Beares and white Foxes, nay *Pigmies*, and *Vnicornes*, and that day did not appeare, till the Sunne had runne through *Piſces*. Their *Pigmies* are Beaſts and Vnicornes. Fiſhes.

This Monke told vs maruellous ſtrange things: that there was in the Monaſterie of Saint *Thomas* (where hee liued) a Fountayne, which ſent forth burning and flaming water, that this water was conueyed through pipes of ſtone, to the ſeuerall Cells of the Monkes, and that it made them warme, as Stoaues doe with vs; and that all kinde of meates might bee boyled in this Fountayne and fierie water, no otherwiſe, then if it had beene fire indeed. Hee added moreouer, that the walls of the Monaſterie were made of Pumice ſtones, out of a certayne Mountayne (not farre from the Monaſterie) like to *Hecla*: for if yee powre theſe burning Waters vpon the Pumice ſtones, there will follow a ſlimie matter, which in ſtead of Lime they vſe for Morter.

After the Gouernours conference with the Monke, I came priuatly vnto him, to demand certayne particular things touching the *Pigmies* and other things; hee had little skill in the *Latine* tongue, hee vnderſtood mee ſpeaking *Latine*, but anſwered by an Interpreter. Hee ſayd, the *Pigmies* repreſent the moſt perfect ſhape of Man, that they are hairy to the vttermoſt joynts of the fingers, and that the Males haue beards downe to the knees. But although they haue the ſhape of men, yet they haue little ſenſe or vnderſtanding, nor diſtinct ſpeech, but make ſhew of a kinde of hiſſing, after the manner of Geeſe; that his Abbot kept two of them in his Monaſterie, male and female, but they liued not long, and that they were vnreaſonable Creatures, and liue in perpetuall darkneſſe. That ſome ſay, they haue warre with the Cranes, that hee knew not. *Pigmies*, our men haue not ſeene ſuch.

He affirmed, that the ſame maner of food was in *Groneland*, as in *Iſland*, to wit, of fiſh but not of cattle, becauſe they haue no cattle, & that the country is not populous. Forthwith from *Iſland* begins the *Hyperborean Sea*, which beats vpon *Groneland*, and the Country of the *Pigmies*, which at this day is called *Nona Zembla*, & there the frozen Sea hath a Bay which is called the *White Sea*, Of this the *Engliſh* Diſcouerics in this and the next Booke will giue better light.

Digitized by Google

or *Mare Album*, and there are there certayne paſſages whereby they ſayle into the *Scythian* Ocean, if they can for Ice. And the Gouernour had the King of *Denmarkes* Ship, furniſhed with all neceſſaries: but when hee heard (by the Monke) of theſe paſſages, and ſhort cut into the Kingdome of *China*, hee affected this commendation, that hee might open theſe paſſages and Ice vnto the Kingdome of *China* by the *Tartarian* Sea, which had often beene attempted by others, but in vaine.

The Authors Voyage for Diſcouerie.

The laſt day therefore of March, in the yeere 1564. hee commanded that Ship to ſayle to thoſe places, and mee alſo together with them, being willing of mine owne accord: and enioyned me to marke diligently the ſcituation of the places, and whatſoeuer wee met with worthy of ſight or report. Wee were in the Ship threeſcore and foure men, as well *Danes* as *Iſelanders*, and the twentieth day of Aprill wee arriued at a certayne Promontorie of *Groneland*, and when wee found no Hauen, to the which wee might ſafely commit our ſelues, and letting downe the lead, wee had ſounded the depth of the Sea, it was ſuch as wee could not anchor there, and the abundance of Ice was ſo great, that it was neither ſafe nor poſſible to ſayle neerer to the Rocks; foure and twentie therefore of vs armed, with great labour and danger went on ſhoare in our Skiffes among whom I alſo was) to trie whether wee could finde a harbour, and what kinde of men *Groneland* had. In the meane time, the great Ship floated in the Sea and Ice, in a great calme, halfe of our companie abode in the ſhoare to keepe the Skiffe; another part (and I with them) ranne abroad to diſcouer: they that were left on ſhoare to keepe the Skiffe, going hither and thither, found a little man dead with a long beard, with a little Boate, and a crooked Hooke of the bone of a Fiſh, and a leather cord: foure fiſh Bladders were bound vnto the Boate (as is ſuppoſed) that it ſhould not bee drowned, whereof three were ſunke and fallen flat: This Boate (becauſe it was very vnlike ours) the Gouernour ſent to the King of *Denmarke*.

Olaus Magnus *in his firſt Booke writeth, that there is a Rocke in the middeſt of* Iſeland *and* Groneland, *called* Hutiſocke, *which wee ſayled by, and that there they haue Ships of leather, which hee teſtifieth hee ſaw, but it was not ſuch an one: but* Petrus Bembus *in his ſeuenth Booke, in the* Venetian *Hiſtorie, deſcribeth a Ship, which was like vnto this, where hee writeth thus: While a* French *Ship kept her courſe not farre from* Britaine, *ſhee tooke a Boate built of Oſiers the middeſt beeing cut out, and the ſolid barke of Trees ioyned together, wherein there were ſeuen men of a middle ſtature, ſomewhat darke coloured, of a large and broad face, marked with ſtrange ſcarres and violet colour; theſe had their garments of Fiſhes skinnes, full of ſpots, they bore a painted Crowne of reede wouen in, as it were with ſeuen eares; they did eate raw Fleſh, and drunke Blood, as wee doe Wine; their ſpeech could not bee vnderſtood, ſixe of them dyed, one young man was brought aliue to the* Aulercos, *where the King was.*

In Sir *Thomas Smiths* Hall in *London* is a kind of Boate ſomwhat like, of Barke ſowed Seales skins.

It is not vnlikely to bee true, that this Ship with theſe ſeuen men, were driuen out of Groneland, *into the* Britaine *Ocean: ſeeing the deſcription of* Bembus *his Ship agreeth with that found in* Groneland.

Wee wandred in the meane ſeaſon, in a Land vnknowne vnto vs, which was couered with Snow and Ice, wee found neither footing of men, not any habitation, nor fit Port, but the Sea was cloſed and fenced on euery ſide with craggie Rockes. Yet we met with a great white Beare, which neither feared vs, nor could bee driuen away with our cryes, but came full vpon vs, as to his certaine prey, and when hee came neere vnto vs, being twice ſhot through with a Gunne, hee ſtood bolt vpright with his fore-feet as a man ſtandeth, till hee was ſhot through the third time, and ſo fell downe dead: his Skinne was ſent to the King of *Denmarke*. We agreed amongſt our ſelues before wee went on ſhoare, if wee found a fit Harbour, or elſe had need of their helpe, that wee ſhould plucke vp our ſtanderd, which wee carried out with vs for that purpoſe, and that they, if they would call vs backe, ſhould ſignifie the ſame with their Ordnance. A tempeſt ariſing in the meane while, the Maſter of the Ship giues vs a ſigne to returne, by the diſcharging of a piece of Ordnance, and calls vs backe vnto the Ship: all of vs therefore returned with great labour after three dayes vnto the Ship with the Beares skinne; wee ſayled therefore to the other ſide of the Iland toward the North, to the Countrey of the *Pigmies* or *Noua Zembla*, that by the mouth of the *White Sea*, wee might come into the *Scythian*, or *Tartarian* Sea, from whence (they ſay) there is a paſſage to the Kingdome of *China*, and *Cathay*; but beeing hindred by the Ice, wee could not paſſe the mouth of that Sea: therefore without doing any thing, wee returned into *Iſeland* the ſixteenth of Iune.

A Beare.

The Authors Iourney to Mount *Hecla*.

I ſayd before, that the *Iſelanders* the nine and twentieth of Iune yeerely came together almoſt in the middle of the Iland to Iudgement, and after our returne, the Gouernour went thither, and I with him. Some of the next inhabitants of *Hecla* then came to Iudgement, whom the Gouernour inuited twice or thrice to dinner and ſupper. Theſe men while they were at ſupper, reported wonderfull things of the Mountayne *Hecla*, and other things; I was foorthwith inflamed with a deſire to ſee and heare all. Wherefore the Gouernour commended mee to theſe men, that they ſhould bring mee thither, and commanded all things ſhould bee ſhewed me, which they knew there worthy to bee ſeene. This Gouernour was a *Dane*, a Noble man, and excellently well learned: to this man ſurely I am much bound for his great liberalitie towards mee, in that

Digitized by Google

that he cauſed me to be conueighed at his charge to diuers places of the Iland, where any notable thing was to be ſeene. I accompanied with two *Iſlanders*, and a certaine *Dane*, who carried prouiſion, and a Tent on Horſe-backe, ſpent foure whole dayes, while we go through rough places, Hilly and deſolate vnto this Mountayne. For ſome Miles about *Hecla*, all was full of blacke aſhes and Pumis ſtones. The *Iſlanders* aduiſed me that I ſhould goe no neerer, leading away the Horſe, which they had lent me.

I, becauſe I purpoſed to ſee, and ſearch out all things diligently; accompanied with the *Dane*, came neerer, as though I went to climbe the Hill, and although at the firſt ſight we were afraid, yet I would not leaue off my purpoſe, and by reaſon of my young yeeres, not vnderſtanding the danger, I went through the aſhes and Pumis ſtones alone to *Hecla*, leauing the *Dane*. There was there at that time a wonderfull calme, ſo that I ſaw neither fire nor ſmoke. But behold, ſuddenly in the bowels of the Earth, a great noyſe was heard, after this, followed flames of a greene colour, which had almoſt killed me with their Sulphurie and filthy ſtinke, ſo that I ſcarſe eſcaped to my forſaken horſes and companions. Vpon that ſudden aſtoniſhment I fell into a ſickneſſe, and vehement cogitation, ſeeing theſe horrible flames were alwayes preſent before mine eyes: inſomuch that my *Iſland* companions were compelled to carry me away vnto their houſe, with whom I lay ſicke two whole monethes: while in the meane time the *Dane* returned to the Gouernour, and to the *Hamburgers*, and acquainted them with my ſtate. I liued miſerably amongſt the *Barbarians*, ſicke and vnknowne; they had Biſket which I ſteeped in Milke, and and ſo for that time, I indured hunger, while (being ſtronger) I might returne to the Gouernour.

The *Hamburgers*, by reaſon of the time of the yeere, leaſt they ſhould looſe the opportunitie of ſayling, deſpairing now of my returne, ſet ſayle (for they depart before the foure and twentieth of Auguſt, leſt being hindered after by the Ice, they cannot get out) yet with ſpeciall care commended me to the Gouernour (if at any time I did returne) leauing Biſket, Wine, and Beere. The Gouernour hath a dwelling fit enough for the manner and faſhion of this Countrey, on the South of this Iland, not farre from the Hauen of *Hafneforde*, the place is called *Beſtede*. I was brought hither of the *Iſlanders*, to the Gouernour, who, for our common ſtudies, entertayned me willingly and honorably. But although wee were plentifully furniſhed with all neceſſaries, yet being very wearie of that life in ſuch darkneſſe, I expected the ſhips out of *Germany* the next yeere with great deſire.

Hafneforde. His abiding there two winters.

There grew then warre betweene *Ericus* of *Suetia*, and *Frederick* the Second King of *Denmarke*; which was continued with great courage for ten yeeres after. The *Lubekers* were Conſorts and Confederates of Warre vnto the *Dane*. So moſt part of the Cities on the Sea-coaſt, vpon the *Balthicke* Sea, hindred or intangled with this Warre, intermitted their ſayling into *Iſland* this yeere, therefore wayting in vaine, I muſt ſtay. The yeere following, when I had wayted till the end of Iune, all hope of returning into *Germany* that yeere was taken away, and which was worſe, the yeerely ſhip came not from *Denmarke*: and bread and Wine failed vs almoſt foure monethes.

There lay *Portugals* at anchor at that time in *Iſland* in a ſmall ſhip; who came thither to fowle, they caried away excellent Falcons, and white ones among them, in great number. I thought good rather to croſſe ouer into *Portugall* with them, then to wayte another yeere, either for *Danes* or *Germanes*. And when they gaue the Gouernour his Cuſtome, he dealt with them in my behalfe concerning the charge, that I might paſſe with them, and he liberally paid the charges, and honorably ſent me away with a worthy Preſent. Not far from the Kings houſe, there was a certayn Miniſter, *Ionas* by name, he familiarly ſaluted me before I departed: for the time I was in *Iſland*, I had ſome familiaritie with him, to whom alſo I left my Bookes when I departed: he for friendſhips ſake, knit three knots in a handkerchiefe, and promiſed me a proſperous wind, ſaying, if by chance the winds at any time grow contrary at Sea, open theſe knots, and then remember me. When therfore about the twentieth of September we had ſayled, and now *Spaine* was in our view, there was ſo great a calme, that we felt not a breath of wind, and that for three whole dayes. In this calme my friends promiſe came into my minde, and I deſired to proue it. I looſed the firſt knot, by and by, after one houre, there aroſe a very proſperous winde, but blowing very gently, I vntye the ſecond and the third, forthwith a Tempeſt beganne more and more to grow, ſo truly that after two dayes we ridde in the Riuer *Tagus*, which beateth vpon *Liſbone*.

His Nauigations on the Coaſt of *Africa*, &c. hee mentions in his Preface, which I haue for breuitie omitted.

CHAP. XXIII.

Extracts of ARNGRIM IONAS * *an* Islander, *his* Chrymogæa *or Historie of* Island: *published*, Anno Dom. 1609.

* This learned *Islander* published *A.* 1593. one Booke of *Island*, which M. *Hak.* translated and set forth in the first Tome of his Voyages. This worke is larger in three Books out of which I haue taken some things which I held conducent to our purpose. In the former worke he confuteth the errours of diuers Authors which write fasly many things of his Countrey.

§. I.

Of Island, *the Situation, Discouerie, Plantation and Language.*

Hola in 65. degrees 44. minutes.

ISland is an Iland of the North, compassed about with the huge Ocean: whose Gosmographicall latitude towards the North, to wit, at *Hola*, the Episcopall Seat of North *Island*, is 65. degrees, and 44. minutes: and the longitude 23. degrees and 30. minutes, or thereabouts: for I will not precisely affirme the same, by reason of that scruple, arising from the Paralaxis of the Moone in the obseruation of the Eclipses to be doubted: which only way of finding out the longitude, that most famous man, *Gudbrandus Thorlacius*, now Bishop of North *Island*, hath hitherto shewed: who hath imparted vnto vs this longitude and latitude of his Sea: and was the first, that I know, among our Countreymen, who hath deliuered any certaintie in Writing, concerning this matter.

And surely, that which at this day, and so from the first entrance of Inhabitants, beareth the name of *Island*, (while as yet it remayned barren and desolate) had diuers names allotted orgiuen vnto it from diuers Discouerers: whereof three are mentioned.

Diuers names of *Island*.

Sneland.

Naddoc first Discouerer.

Farre Ilands.

For first of all it was called *Snelandia*. For a certaine Pyrate called *Naddoccus*, going towards the *Farensian* Ilands (commonly called *Farenar*, for the multitude of Egges) was brought vnto the shoares of East *Island*, through a Tempest, not farre from the Mountayne *Reidarsiall*, (so called afterward) to the Bay *Reidarfiard*: who ascending the Mountayne, and beholding the bordering Countrey farre and neere, found it all Desert. And departing from the Coast about Autumne, he perceiued the higher tops of the Mountaynes to bee couered with exceeding much Snow; and therefore, as the present case required, he called the Iland *Snelandia*, that is to say, *The Snowie Countrey*.

Gardar second Discouerer.

Another following him, one *Gardarus* the sonne of *Suanarus* a *Suecian* borne, perswaded through the report which *Naddoccus* had brought concerning *Snelande*, went to seeke it: he found it, who arriued also neere the Easterne shoare, and from thence being carried about the Iland, he abode in the Bay of North *Island* called *Skialfanda*, and wintered there in the yeere of

A.D.864.

Christ 864. and called the name of the Hauen, *Husawich*, from the wintering places, or houses built there. But the Spring beginning, *Gardarus* being about to depart into *Norway*, the ship Boat was driuen away by a tempest, into an Hauen neere vnto the former, and in the same Boat there was a certayne Mariner called *Natfare*: from whom also this hauen had the name of

Gardarsholme.

Natfarawicke. Moreouer, *Gardarus* returning to his friends, called that new Countrey *Gardarsholme*, as it were, the Iland of *Gardarus*, neglecting the name of *Snelanda*.

Floco third Discouerer.

Moreouer, the desire also of visiting a Countrey newly discouered, possessed many. For the third also, one *Floco*, and he a most famous Pirate purposing to visit *Gardarsholme*, set sayle out of an Hauen of *Norway*, which lyeth neere the watch-towre or rather *Pharus Flokawarda*, situate in the limits of the Prouinces of *Hordaslandia*, and *Rogalandia*: and passing by *Hietlandia*, (misnamed by some *Schetlandia*) called a certayne Hauen by the name of *Flokawogur*, and there the deepest part of the Sea (where *Geirhilda* the daughter of *Floco* by chance was drowned) was caled *Geirhildarwata*, from her: no otherwise then that Sea was called *Hellespontus*, wherein by misfortune *Phryxus* lost his sister *Helle*. There was yet no vse of the Mariners Compasse: wherefore *Floco* leauing *Hietlandia*, tooke certayne Rauens vnto him: and when hee thought hee had sayled a great way, he sent forth one Rauen, which flying aloft, went backe againe to *Hietlande*, which she saw behind. Whereupon *Floco* perceiuing that he was yet neerer to *Hietland* then other Countryes, and therefore couragiously going forward, he sent forth another Rauen: which because she could see no Land, neither before nor behind, light into the ship again. But lastly, the third Rauen was sent forth by *Floco*, and hauing for the most part performed his Voyage, through the sharpnesse of her quicke sight attayning the Land, which the Mariners desired, she speedily flew thither: whose direction *Floco* following, beheld first the Easterne side of the Iland, as his Predecessors did: and from thence directing his course to the South, found a very wide and open Bay twelue *Islandish* miles broad, betweene the two Promontories or high Lands, afterwards called *Renkanes*, and *Snafelsnes*. And hearing by a certayne Mariner (whom he had with him) a *Scot* borne, named *Faxa*, that the Bay they now met with, was the huge mouth of a Riuer or Floud;

Rauen Guides.

Floud; *Floco* to reproue the folly of *Faxa*, supposing so huge a Bay of the Sea to be the mouth of a Riuer, called the name of the Bay inclosed betweene the foresaid Promontories, *Faxaos*, which signifieth *the mouth of Faxa*. This Bay, by reason of the multitude of Hauens, was afterwads called *Hafnafiordur*: which name *Hafnafiordur* at this day is more specially vsed of a most safe Hauen of the same Bay.

After this, *Floco* saying along the West side of the Iland, entred somewhat within the Bay *Breidafiord*, remaining in a certaine Hauen of the Prouince *Bardestraund*, called *Watnsfiordur* (for I vse the names giuen them afterwards) and there preparing wintering places, he liued very commodiously and well with fish of diuers kindes, wherewith that Bay doth abound. But hauing the Spring time here very vntemperate through cold, hee found a Bay (which entreth this part of the Land on the North) to be filled with Ice of the Sea, which wee call *Gronelandish* Ice. From which Ice, *Floco* deuised the third name for the Iland, and called it *Island*. Moreouer also *Floco* turning to the South side, passed another Winter in *Island*: and returning into *Norway* (from the Rauens, which hee vsed in stead of the Mariners Compasse) he allotted it the surname of *Rasnasloke*. The name *Island* of Ice.

And *Island* surely obtained these names consequently from the finders, or discouerers thereof. For as touching the fourth, *Thule*, imposed vpon this Land by some, I cannot bee perswaded to beleeue, it is true; chiefly by this argument; That *Thyle*, or *Thule* among the ancient Writers, was often in the mouth and writings not onely of *Pliny* in his second booke of *Naturall Histories* 75. Chapter and fourth booke, and sixteenth Chapter (and *Pliny* flourished about the eightieth yeere of Christ) and of him who was more ancient then *Pliny*, *Pythias Massilienſis*: but also of *Pub. Virgilius*, who liued not aboue fourteene yeeres after Christ: but *Island*, till the yeere of Christ 874. remained altogether desert, as hereafter I shall speake. *Thule* therefore, which *Virgil* said should serue *Augustus* (*Geor.* 1. *tibi ſeruiat vltima Thule*: where euen euery child knoweth that *Thule* is *Synecdochically* spoken, for the Inhabitanes of *Thule*) not onely inhabited in the times of *Augustus* and *Virgil*, but also knowne to the *Romanes*, is not *Island*, which many ages after began first to be inhabited. Besides, *Plinie* himselfe seemeth in the later place recited to reckon *Thule* with the Ilands of *Britaine*: for, saith hee, *Vltima omnium quæ memorantur eſt Thule*: to wit, of the *Brittish* Ilands, for hee speaketh of them. It is likely also that *Virgil* meant the same, who said *Thule* was the last, in the place before recited: and likewise, *Pentus toto diuiſos orbe Britannos*: that is to say, the last. Let me yet vrge the same argument further, from the age of *Claudianus Alexandrinus*, and *Pub. Papinius Statius*, farre more ancient then he. For *Claudianus* about the yeere of Christ 390. writeth thus concerning the successe of the *Getick* Wars atchieued by *Theodosius*. *Island* is not *Thule*. *Thule* further of the *Brittish* Iles.

Famaque ingrantes ſuccincta pauoribus alas,
Secum cuncta trahens, à Gadibus vſque Britannum
Terruit Oceanum: & noſtro procul axe remotam
Inſolito Belli, tremefecit murmure Thulen.

Then blackwing'd Fame Feare girt, frights all the World with Warre.
From *Cades* to *Britaine*, from Our World shakes *Thule* farre.

But did Report and Fame cause *Island* not inhabited, and desert to tremble? And *Statius* more ancient by three hundred yeeres then *Claudian*, in his third Booke *Sylua*, writeth thus.

Quanquam etſi gelidæ iremanſurus ad Arctos,
Vel ſuper Heſperiæ vada caligantia Thules.

Though I should dwel in *Artike* frosts,
Or mystie shelues of *Thules* West coasts.

You heare, not onely a slight report of *Thule* came to *Statius* eares, but that the shallow places, quicke sand, or shelues found in approching to the Iland were sufficiently knowne vnto him, by the often relation of Nauigators: of which sort in the circuit of *Island*, there are none that I know, which experience speaketh: but in comming to the Ilands of *Britaine* they are very ordinarie and common, as they say.

The Longitude thereof from the East vnto the West, hath not hitherto beene expressed by any certaine or assured measure that I know, nor yet the Latitude from North to South; saue that in an ancient Codicall or Writing I found that the Longitude was twentie dayes iourney: and the Latitude (where it is broadest) foure dayes, but the iourneyes, as elsewhere, so also with vs are not alike, (yet here I vnderstand *Pyngmannaleid* twentie, in the Authors owne hand-writing it is *Dagleider*) nor is it expressed whether of Horse-men or Foot-men. But the Latitude it selfe is not euery where the same; by reason of *Bayes* on both sides, to wit, from the Sotth and North entring the Land it selfe with vnequall distances. The Easterly bound is *Austurhorn*: the Westerne *Randesandur* (for the Promontory *Sua-fellenes* lyeth more toward

* The Author proceedeth in this disputation, further then our Reader perhaps would permit vs. The learned and curious may there find enough: and more yet in *Ortelius* his both. *Thesaurus* and *Theatrum*,

who proueth out of *Pompeius*, *Ptolemæus*, and *Procopius*, that *Island* is not *Thule* but (as the name sounds) *Tylemarke*, a Region in *Norway*, or all *Scandia*, of which that is a part, still retaining the name.

the

Digitized by Google

the South-west) but the North bound is *Langanes*, and the South *Reikranes*. The Iland also from the foure quarters of the World, is diuided into North, South, East and West, and the Promontorie *Langanes* diuideth North *Island* from East *Island*; from West *Island*, the Bay *Rutafiordur*: from South *Island*, the vast and huge deserts of rough, and inaccessable places extended the whole length of the Iland. But South *Island*, opposite to the North, through these rough and inaccessable places lying betweene the Riuer *Ioculsa*, running through the deserts of *Solsciuasande*, diuideth from East *Island*: from West *Island* also, a famous Riuer, named *Albis*, emptying it selfe into the Bay *Borgarfiord*. So that, if it pleased me to represent the Iland in humane shape, East *Island* should haue the proportion of the head. The two more famous Promontories *Langanes* and *Reikranes*, or bounds; the one Northerly, the other Southerly (as hath been said) should serue in stead of armes. And the deserts extended the whole length of the Iland should make the backe, or backe bone: then North and South *Island*, the shoulders with the sides; the two opposite Bayes *Borgarfiords*, and *Ratafiordar*, the one on the South, the other on the North, should diuide the forepart about the short ribs, from both the thighes or hips. But West *Island* should resemble the rest of the parts of a mans bodie, from the forepart about the short ribbes: which the Bay *Breidisiordur* comming in from the West, should contract and straighten into the right and left foot.

The Circuit.

The circuit also of the Iland, is no more certainely knowne; yet an ancient rumour and opinion (as in another place where it is noted) reckoneth one hundred and fortie foure *Norwegian* miles (as I thinke) that is to say, two hundred eightie eight *Germane* miles, *Chytraus* accounting the *Norwegian* mile, to equall two *Germane* miles, sayling from one Promontorie to the other, not by the Bayes: whereof North *Island* is esteemed to haue eleuen, East *Island*, twentie one, South *Island* sixe, and West *Island* seuentie.

* *Harald Harefagre* finding many pettie Princes made an absolute Monarchy of *Norway*, whereupon some sought to free themselues by new discouries: and hence arose the plantation of *Island*

Haraldus Pulcricomus * swaying the Scepter in *Norway*, much neglected the chiefe Nobilitie of *Norway*: which the *Norwegian* Historie setteth downe at large, yet particular Histories of noble Families expulsed by *Pulcricomus*, more largely prosecute the same, as hereafter wee purpose to write. For *Pulcricomus* not contented with Kingly authoritie, or chiefe soueraignetie, that is to say, with the right of Lawes, Magistracie, and appeale of Warre and Peace, challenged all vnto himselfe, by the right of a proprietarie. Insomuch, as very many chose rather to leaue their Countrey and rich inheritances, then to exchange their Generositie for slauerie and tributes: for they thought it altogether vnworthy and ill beseeming their owne valour and their ancestours. Hence, for the most part arose mutuall iniuries against the King, or the Kings partakers; as murdering of the Kings friends, allyes, or faction; then the exercises both at Sea and Land were rapines and robberies. From these noble Families therefore, refusing the violence of *Harald*, this our *Island*, with the neighbouring Ilands began first to be inhabited, and that almost by these steps and voyages.

A.D. 874. *Ingulfus.*

In the yeere of our Redemption 874. a certaine Inhabitant of *Norway*, one *Ingulfus*, going out of his Countrey, following the steps of *Naddocus*, *Gardarus*, and *Floco* mentioned before, was made Standard-bearer of the Inhabitants which were to bee conueyed into *Island*, and that vpon this occasion. *Ingulfus* was famous for his parentage and riches, whose father, called *Orne*, which signifieth an Eagle, was Duke of *Fyrdafylce* in *Norway*; the sister of *Ingulfus* was *Helga*, a Virgin indued with all womanly ornaments, and his cousin germaine *Leifus*; who for a notable sword, which through his singular warlike prowesse he got in *Ireland*, was named *Hiorleifus*. For *Hir* is a Sword. Moreouer, at that time among the Nobilitie of *Norway*, there were three naturall brothers, *Hallstenn*, *Holmsten*, and *Herstenn*; the sonnes of *Atlas*, or *Atlantes*, a certaine Baron of *Norway*: who bore certaine priuie grudges to the foresaid *Ingulfus* and *Hiorleifus*; which presently after brake forth into cruell and bloudie slaughters. For when by chance they feasted together, after the manner of that age, they inioyned euery one to make some solemne Vow. *Herstenus* therefore first vowed, that he would take *Helga*, *Ingulfus* sister to wife, or marrie none. Then presently *Ingulfus* vowed, that hee would admit none into his Fathers Inheritance with him, saue only *Hiorleifus*: meaning thereby that his sister *Helga*, by his consent should marry none but *Hiorleifus* (contrary to the vow of *Herstenus* for the marrying of her only.) After that *Helmstenus* vowed, that if he were chosen Arbitrator betweene the aduerse parties, he would by no meanes be compelled, to suffer an vniust sentence. And so the rest after them. Not long after succeeded the Vow of *Ingulfus*, for *Hiorleifus* tooke his Cousin Germane *Helga* to wife. For at that time the Marriages of Cousin Germanes were lawfull. From hence arose the extreame hatred, and enmitie of *Herstenus*, against the foresaid *Hiorleifus*, and *Ingulfus*: who therefore joyning with his Brother *Holmstenus*, with sixe ships filled with Souldiers, set vpon *Hiorleifus* vnawares, hauing but three ships only, preparing his Voyage into forreine Countreyes. Whose violence *Hiorleifus* a long time, and stoutly sustayning, holpen by a certayne friend comming in the meane-while, hauing slaine *Herstenus* got the vpper hand. But *Holmstenus* prouiding for himselfe by flight, and not a little exasperated and grieued through the violent death of his Brother, after some few monethes, came with an armed power to *Ingulfus* and *Hiorleifus* to surprize them suddenly at home. Whereof they being certified by Spies, receiue him with an armed force, and kill him. *Halstenus* the third brother, wiser then the rest, who

Rash vowes and bloudie quarrells ensuing.

consorted

Digitized by Google

consorted not with the vnjust routes of his Brethren, remayned yet aliue; to whose arbitrement *Ingulfus* with *Hiorleifus* commit the whole matter to be determined, holding him mindfull of his Vow, concerning equitie not so be violated. *Halstenus* therefore pronounceth his brother *Herstenus* to be justly slaine: But not *Holmstenus* who compelled through bitter griefe, desired to reuenge the death of his brother, by any slaughter whatsoeuer. For killing therefore of him, he commanded them both to be banished out of the Prouince of *Fyrdasilfe*. They readily obey his award, to whom they willingly committed the censure, & with a purpose to leaue their Countrey, they sell their Lands and Possessions for mony and Merchandizes, and conceiue in their minds a worthy attempt of planting a strange people in a strange Country: and that not to gratifie *Halstenus* (with whom through this agreement they returned into fauour; with whom they might otherwise easily haue contended in strength) but also for feare of *Pulcricomus* himselfe, raging against his Countrey, and innocent Countreymen, for the obtayning (as hath beene said) not only of the Monarchie, but *Pampesia*, of all their Possessions: nor was that to bee doubted, concerning the violence and oppression of *Harald*: for in the Historie of *Haquinus Adalstenius* his succeeding Sonne it is expressly read, that he was contented with Kingly authoritie, and restored to euery one their owne, which his Father vnjustly challenged vnto himselfe.

It was the yeere of Christ 870. wherein *Ingulfus* with *Hiorleifus* first visit *Island*, but they inhabit it not presently, but foure yeeres after, in the yeere 874. as hath beene said: bringing many Families thither. *Island* first inhabited, A. 874

Moreouer *Ingulfus* comming within view of the Iland, casteth the postes of the houses which he had in *Norway* into the water, after the manner of *Ethnickes* accounting it for an Oracle, that that place was fatally chosen for his Habitation, which the postes cast out vpon the shoare should note or signifie. That custome many of the *Norwegians* retayned by turning vp the ground. But *Ingulfus* arriued not where he cast in the postes, but at the Promontorie of the South shoare (else-where erroniously, the West shoare) called by his name *Ingulfshofde*. Yet notwithstanding wanting the postes of the houses three whole yeers, at length he found them in that place, which is named *Reychiarwich*, and there he erected his Habitation. But *Hiorleifus* more estranged from *Ethnick* superstition, seated himselfe in the Promontorie *Hirleifshofda*; so called likewise from his name. There he built great houses: one of one hundred twentie six, and another of one hundred thirtie fiue feet long: who, the first yeere being ended, began to till the ground and sow seed. In which worke, when he had exercised ten seruants or slaues, which hee brought with him out of *Island*, they fayned that *Hiorleifus* his labouring beast was slaine by a wilde Beare (for it was afterwards manifestly knowne, that *Island* hath no Beares, but such as came thither by chance) which when *Hiorleifus* (with a purpose of reuenge) sought in the next neighbouring Wood, he was deceitfully slaine by these slaues lying in ambush: together with some other companions which he tooke with him: the Seruants aswell rauishing the Wiues as spoyling the goods of the slaine; and flying into the Ilands not very farre distant from the shoare: which after of the same slaues, were called *Westmasyar*, because they were of *Ireland*. The *Norwegians* call the *Irish*, *English*, and *Scots Westmen*, that is, men of the West: seeing those Countries are distant from *Norway*, to the West. *Ingulfus* pursuing these Murtherers, set vpon them suddenly, and destroyed them euery man in the same Ilands, being much grieued in minde for the vntimely and cruell death of his deere friend and allyes.

Superstition.

First houses. *Island* had anciently fairer houses then now; (hauing Timber from *Norway*, &c.) & likewise Tillage was then in vse.

Hiorleifus slaine. *Westmasyar* and Westmen.

But *Ingulfus* found and possessed *Island* altogether barren and desolate; on euery side beset with very thicke Woods, and scarsly fertile of any but Birches, so that hee was faine euerywhere to open the Woods with the Axe, for journeyes and habitation. Yet in the meane space, we might gather by certayne signes, I know not what Mariners had sometimes touched vpon certayne shoares of the Countrey, but not inhabited them. For *Ingulfus* found little sacring Bels and wooden Crosses, and other things made by the workmanship and arte of the *Irish* and *Britaynes*: but no tokens of culture, or habitation. Whereupon it is likely, that *Irish*, or *Scottish* Fishermen (as also the *English* at this day) accustomed to fish neere *Island*, as sometimes it commeth to passe, went ashoare, and so by chance left sacring Bells and Crosses, the Vtensils of Christian Religion. For at that time the *Irish* were instructed in Christianisme as they say. And those whosoeuer were the ancient *Islanders*, they called *Papa*, or *Papas*: from whom, as seemeth probable to me, the Iland of East *Island* called *Papey*, derined the name; because they were often wont to touch there: or their Monuments (such as I sayd) were chiefly found there.

Woods.

Bels and Crosses.

This side of *Island*, to such as sayle from *England*, *Ireland*, and *Scotland*, is most exposed towards the North-west. Moreouer, what and from whence these *Papæ*, or *Pappæ* came, I cannot sufficiently speake: vnlesse peraduenture from the Ilands of *Scotland*, whereof one is named *Pappa*, and another *Westrapappa*, as we may see in the Mappes: vnto which conjecture let euery one giue what credit he pleaseth. Furthermore, very many of the *Norwegians*, afterwards boldly following the steps of *Ingulfus* going into *Island*, with their wiues and children, and great multitudes of their Kindred and friends, restored themselues to libertie. Whose names and large Families are recited in the Chronicles; as by the second Booke is vnderstood. Besides, it is there recounted what coasts, what shoares, what middle-land places euery one possessed: and at what

time

Digitized by Google

time: and also how the first Inhabitants gaue name to Straights, Bayes, Hauens, narrow straights of Land, Ferryes, Clyffes, Rockes, Mountaines, Hills, Vallies, rough and inaccessible Places, Fountaines, Flouds, Riuers, Villages, Farmes or Habitations: whereof at this day many are yet retained and in vse. Which *Topography*, supposing it would bee tedious, especially to a forraine Reader, I haue here omitted; applying my selfe rather to the description of the Inhabitants, who in sixtie yeeres space so replenished with their multitudes, the habitable parts of *Island* now possessed.

Chap. 3. Of the language of the Nation. *Islanders* only retaine the ancient *Gottish*

Concerning the language of the *Islanders*, the matter it selfe speaketh, that it is the *Norwegian*; I say, that old and naturall speech, deriued from the ancient *Gothish*, which onely the *Islanders* now vse vncorrupted: and therefore we call it *Islandish*. Of the letters of which tongue we will first speake somewhat: and afterwards in the Chapter following there shall be a short discourse of the originall thereof.

Two kindes of letters.

And surely that language seemeth to haue double letters: to wit, the Old, and New. The New, which commonly wee vse at this day, are common almost to all *Europe* together with vs. Which, when they first began to bee vsed is not certainely knowne. Surely as yet, some crosses written in ancient letters, are yet seene among our Country-men, which letters also many yet know, and both reade, and write: and this naturall language it selfe is contained in the same, nothing at all changed. Moreouer it seemed good to mee, thus to present the name and shape of the ancient Characters, such surely as was offered vnto mee, placing the New or Common ouer against them, expressing the validitie thereof, adding also the agreement and discrepancie of ours, with those of *Vlphila*, the Bishop of the *Gothes*: whom *Iohannes Theodorus*, and *Iohannes Israel*, brethren and Citizens of *Francofurt*, report to haue inuented these letters: by whose relation hee agreeth with vs in all things, saue where the disagreement shall bee noted here. Moreouer also, I thought it not amisse to set downe in writing the letters of certaine other Nations, to some of our Country letters, out of the same *Francofurt* copie, which the Types or Figure subscribed will demonstrate.

A	*Ar*	ᚨ	
b	*Biarkan*	ᛒ	
z	*Knesol*	ᛋ	
d	*Stunginntyr*	ᛏ	or ᚨ and *Vlphila* thus ᛑ.
e	*Stunginn Is*	ᛖ	
f	*Fe*	ᚠ	
g	*Stunginn kaun*	ᚲ	
h	*Hagall*	ᚺ	
i	*Is*	ᛁ	
k	*Kaun*	ᚴ	
l	*Langur*	ᛚ	or ᚢ: *Vlphila* thus ᛦ: it is also ᚢ, the *Moscouit L.*
m	*Madur*	ᛘ	
n	*Nand*	ᚾ	*Vlphila* thus ᚿ
o	*Os*	ᚬ	
p	*Plastur*	ᛕ	*Vlphila* thus ᛓ
r	*Reid*	ᚱ	
s	*Sol*	ᛋ	*Vlphila* thus ᛋ
t	*Tyr*	ᛏ	*Vlphila* thus ᛐ
u	*Ur*	ᚢ	*Vlphila* thus ᚢ
y	*Yr*	ᛦ	*Vlphila* thus ᚹᚹ *th.* ᚦ *tha.* of the *Arabians.*
p	*Puss*	ᚦ	ᛋ the *æthiopian* ᚦ *d.* ᛞ *dha.*

Here wee see twentie one Characters, bnt the ancient numbred onely sixteene. And the third ᛋ, they would not acknowledge for theirs: because *z.* of the *Greekes*, that is to say *ts.* or *ds.* (as they would haue it) they might write it in their language with distinct letters. But the fourth ᛏ from the eighteenth, they distinguish with some point, or an ouerthwart line, almost thus ᛑ: otherwise it is altogether the same in shape and name, *Tyr*, but *d. Stunginn tyr*, that is to say, pointed *Tyr*, as ᚦ. *kaun k.* and pointed *kaun* ᚲ. *g.* So *Is* pointed for *e.*

but

but *Plaſtur* reſembleth *B.* with both the bellies open aboue and beneath. Beſides theſe, the reſt are numbred ſixteene, as I ſaid. For they reckoned the Diphthongs to the Syllables.

Moreouer, it retained the laſt new Conſonant of the old Alphabet, changed in name, but not in ſhape: which is *p.* This being ſet after a vowell in the ſame ſyllable, hath the ſound of *d.* as *Blap* for *Blad*, which is a leafe: which kind of writing was more vſuall with the ancient, but at this day is almoſt growne out of vſe: but being ſet before a vowell, it hath a peculiar force and pronunciation, not altogether *Th.* but ſounding ſomewhat more groſly, as it were *Tzh.* putting forth the tongue almoſt between the fore-teeth: as *þa*, that is to ſay, then. In times paſt it had the name of *Puſs:* at this day it is called *Porn*, or *Thorn*, if you put *þ.* for *th*: and therefore it cannot be written or pronounced at all, but by it ſelfe.

They alſo of later time write the Conſonant *f.* after this manner *ƒ.* The Moderne Writers alſo doe ſometimes aſpirate *L. N. R.* the ancient very ſeldome, and almoſt neuer: as *Hlutur* in old time *Lutur*, that is, a thing. *Hnifur* in times paſt (as alſo ſometimes at this day) *Knifur*; that is to ſay, a Knife. *Hrutur*, in old time *Rutur*, that is to ſay a Ram. In like manner ſometimes *Iod*, and *Vaf*, or *I.* and *u.* Conſonants: as *Hiel*, that is, a Wheele: *Hualur*, that is, a Whale: which alſo I thinke the ancient did concerning *Iod*, and *Vaf.*

In Vowels and Diphthongs, as alſo abbreuiations proper to this language, the varietie is farre greater, which I purpoſe not to touch. Moreouer alſo, the due handling of the letters, as of the reſt of the *Etymologie* and *Syntaxis* of this tongue, would bee the copious matter of a peculiar worke, eſpecially if any would adde the Poetrie, purpoſing to write the Grammer of the *Iſlandiſh* tongue, which would bee no more difficult, then that wee haue ſeene done, concerning the *Germane* and *French* tongue, beſides others.

Iſland Grammarian.

About the yeere of the Lord 1216. one of our Country-men wrote in his Countrey language, concerning the letters of the proper, or mother tongue: where hee affirmeth theſe ancient Characters to be peculiar to this language, and handleth them both, as well new as old after a legitimate and due manner of tractation, by his definitions and diuiſions of the letters into Vowels and Conſonants, and of the fiue *Latine* Vowels, maketh eighteene of his language, diſtinguiſhed in ſound and pronunciation: He diuideth the Conſonants naturally into halfe Vowels, and Mutes, and thoſe into Liquids and Firmes, theſe into open and ſhut; performing the part of a pretie Logician. And in deliuering the force and pronunciation of the letters, hee artificially aſſumeth for euery definition all the Inſtruments of framing the voyce, as well the lungs and throat, as the auxiliary parts of the mouth and tongue. The letter *þ.* alſo, he calleth *the*, peraduenture in imitation of the *Greeke Theta* (which almoſt, as we ſaid, although not altogether it expreſſeth) or *Tau* of the *Hebrewes*, which *Hebrew* letter, if *th.* or *t.* of the *Latines* rightly expreſſe, as is reported by ſome, *Thau* ſhall come nothing neerer to our *þ.* then *Theta.* The ſame Country-man of ours, from abſolute letters, proceedeth to ſet downe in writing, the figures of the word and ſentence in the Mother tongue, and illuſtrate them with examples of our language, retaining the *Greeke* titles of the Figures, or names of *Epizeuſis*, *Anadiploſis*, &c.

Norus of whom *Norway* is named.

And from this Writer of our Countrey, we receiued the Types of the old Alphabet: for there are Hiſtoricall fragments yet extant, concerning *Norus* the Name-giuer of *Norway*, and founder of the Kingdome, and thoſe *Toparchi*, or little Kings, whom hee vanquiſhed before hee obtained the Monarchie.

§. II.

A diſcourſe of the firſt Inhabitants of the Northerne *World, ſuppoſed to be Giants expelled from* Canaan. *Of the* Iſlanders *Houſes, Fewell, Victuall.*

Chap. 4. Of the firſt Inhabitants of the North parts of the world.

MOreouer concerning ſome of the anceſtors of *Norus*: among whom his father *Porre* (whom they call *Thorro*) King of *Gotland*, *Finland*, and *Kuenland*: an excellent Prince of his age, from whom the moneth of the old *Norwegians*, and now *Iſlanders* hath the name of *Thorre*, which in the *Iulian* Calender beginneth the 10. 11. 12. 13. 14. 15. or 16. of Ianuary: for it hath a moueable beginning after the manner of their Calender. And ſeeing King *Thorro* this month accuſtomed to ſacrifice vnto his gods; the *Kuenones* inſtituted yerely ſacrifices in the ſame month to him, being dead, as to a certaine god, in token of an happy yeere, which they began with the winter, after the maner of the old *Lacedemonians*; & called the ſame month *Porre*, of *Thorro*; no otherwiſe then the *Lacedemonians* gaue diuine honor to *Lycurgus* being dead, building a Temple in memory of him, where hee was honoured for a god; to whom his familiar friends inſtituted ſet Feaſting-dayes, and ſolemne aſſemblies which remained a long time; and the daies wherein the aſſemblies were celebrated, they called *Lycurgidæ:* concerning which matter looke *Cragius* in his third booke of the Common-wealth of the *Lacedemonians.*

Thorro.

Of

Digitized by Google

Fermotus. Of the Anceſtors alſo of *Norus*, all are mentioned euen to his Great-grandfather, who was *Fermotus* King of *Finland:* Moreouer, one of the three ſonnes of *Fermotus*, and therefore Great vncle of *Norus*, called *Legie*, which ſignifieth a flame; who for the excellencie of his beautie was called *Halogie*, that is to ſay, an high or excellent flame. Hee was Monarch of the *Halogienſian* Prouince, bordering vpon the Prouince of *Nidroſia*.

Goe. *Goe* alſo the daughter of *Thorro*, by the ſiſter of *Norus*, is there recorded, for recouerie of whom, being ſtolne away (as *Cadmus* was ſent by his father *Agenor* to ſeeke his daughter *Europa*) *Norus* was ſent by his father *Thorro:* which, that it might more happily ſucceed, *Thorro* inſtituted new ſacrifices to the Gods, in the moneth next following the former (afterwards called *Thorra*) and intituled the ſame moneth with the name of *Goa*, after the name of his daughter *Goe:* which name of the moneth likewiſe the *Iſlanders* that now liue doe yet retaine. Furthermore, ancient Hiſtories make mention of *Gorus*, the naturall brother of *Norus:* as alſo the nephew of *Gorus*, named *Gylnus*, hauing the ſoueraigne authoritie in *Suecia*, in whoſe time *Odinus* happened to come (others call him *Othinus*) Standerd-bearer of the *Aſian* Immigration, made in the foure and twentieth yeere before Chriſt was born, which we mentioned before: and *Gylnus* had a father called *Geiterus*, and an Vncle *Besterus*, the ſonnes of *Gorus*; from *Beiterus*, the Hauen neere the Citie *Nidroſia*, is named *Beitſted*.

Gorus.

I thought good to exhibit theſe things in a Table.

Fermotus King of *Finland*,

Hlar.	*Kare.*	*Legie.*
The ſame alſo is *Agier*, which other-wiſe ſignifieth the *Sea*; hee is ſuppoſed another *Neptune*, to haue dominion ouer the Sea.	That is to ſay, the *Winde*, for in the number of the Gods, after death, he is thought to be another *Æolus*, to rule the Windes.	Signifieth a *Flame*, honoured in ſtead of *Vulcan* after death (as hauing power ouer the Fire) and for the excellency of his beautie was called *Halogie*, ſo named of the Prouince of *Halogalande* in *Norway*.

Froſte.
Otherwiſe called *Iokul*, both from the Froſt and Cold.

Snar.
That is to ſay, *Snowe:* ſurnamed the *Ancient*, becauſe hee is reported to haue liued three hundred yeeres: he left one ſonne, and three daughters.

Dryfa.	*Porre.*	*Fiunn.*	*Miol.*
A ſnowy ſhower.	King of *Gothland*, *Kuenland*, and *Finland*.	Signifieth Snowe gathered together in thicke heapes by a Tempeſt.	Is thin Snowe deſcending without winde.

Goe.	*Nor.*	*Gor.*
A daughter.	Of whom *Norway* is named, and the firſt Monarch.	*Beiter-Geiter.*

Gylni.
The ſaid *Aſian* immigration happened in the time of this *Gylni*.

From this *Norus*, *Haraldus Pulcricomus* is the twelfth of them that deſcended from the right Line, whom ſome make the firſt Monarch of *Norway*, but amiſſe, being ignorant of Antiquitie: ſeeing hee was the third Reſtorer of the Monarchy of *Norway:* for betweene him and *Norus*, *Hemngus* the ſonne of *Odinus* * obtayned the Monarchy alſo.

* This *Odinus* is ſaid to haue made his plantation with his *Aſian* followers, about four and twentie yeeres before Chriſt was borne.

Theſe (I ſay) beſides many other things, are the manifeſt tokens of the Inhabitants of the Northerne World, farre more ancient then the immigration of *Odinus:* of whoſe originall notwithſtanding, there is not one word. But becauſe it is moſt repugnant to a Chriſtian man, knowing the Bookes of *Moſes* concerning Originals, to affirme themſelues to be *Autochtone*, as both others, but eſpecially the *Greekes* did concerning their Anceſtors (yet with better leaue then the reſt of the people of *Europe:* who next to the *Chaldees*, *Egyptians*, and *Iewes*, might worthily boaſt of Antiquitie in compariſon of other people.) It were better truly to confeſſe the vnknown originall of Anceſtors, then to be carried away with the opinion and error of Earth-bred men: leſt ſurely wee ſhould heare ſome ſuch thing, as ſometimes one wittily vpbraided the *Grecians* with, ſo much boaſting by reaſon of their pretended ſelfe-originall, to wit, that *Moſes* the Law giuer of the *Iewes*, was more ancient then the Gods of the *Grecians*.

Earth-bred or Land-ſprung men, which had their originall in that Land.

In the meane ſpace, becauſe through the onely confeſſion of ignorance or doubt, truth doth

not

not so soone appeare; somewhat is to be alleaged touching the proposed question: that the historicall Reader may haue some thing here which hee may either confute or confirme. Wee are therefore by probable reasons to inquire, who were the first inhabitants of the Northerne World, and from whence they came: then, when they began to inhabit this our World: that from hence some coniecture may arise concerning the originall of the language. And that I may here acquit my selfe without circumstances; I thinke the first inhabitants of the Northerne World, were of the number of Giants, nay, mere Giants; men that inhabited the mountaines of an huge and sometimes a monstrous body, and of monstrous and exceeding strength: and that they were the posteritie and remnant of the *Canaanites*, expulsed from the Territories of *Palestina*, about the yeere of the World 2500. by *Iosua* and *Caleb* remooving into *Palestina* through Gods pleasure and direction: and that this Countrey of the World euen vntill those times, or peraduenture longer, remayned altogether not inhabited.

Giants first inhabiters of the Northerne parts of the World. Their originall from the *Canaites*.

For thus *Saxo Grammaticus* argueth in the Preface of his *Dania*. *But* (sayth he) *the stones of exceeding bignesse fastened to the Tombes and Caues of the ancient, testifie that the Countrey of* Denmarke *was sometimes troubled with the inhabiting of Giants. But if any doubt, that it was done by monstrous strength; let him looke vp to the high tops of certayne Mountaynes, and say, if he know it well, who hath brought Rockes of such huge greatnesse to the tops thereof? For euery one that considereth this Miracle, shall perceiue that it is beyond common opinion, that the simple labour of mortalitie, or vsuall force of humane strength, should rayse so huge a weight (hardly, or not at all moueable vpon the plaine ground) to so high a top of mountaynous sublimitie.*

A long discourse of the Author to proue that there haue bin Giants, is omitted.

This *Saxo* writeth, who shall be a sufficient Author vnto vs concerning the first Inhabitants of *Denmarke*, that is to say, his owne Countrey. So concerning *Norway* and *Suecia*, and the bordering Countreyes, as whatsoeuer is most ancient; so it most resembleth a Giant-like disposition and nature. Whereof examples are to be taken out of Histories, which would bee tedious here. For that I may omit ancient examples, those things are knowne of late memory to haue beene done: Concerning the Giant *Doffro*, inhabitant of the Mountayne *Doffræfiall* in *Norway*; and Foster-father of *Haraldus Pulcricomus* King of *Norway*. Also concerning *Dunubo* who liued in the time of *Droffon*: from whom the Bay *Boddick* or *Bothnicke*: in time past was called *Dumbshaff*, who in a Sea-fight, encountring eighteene Giants alone, sent twelue of them first to Hell before he himselfe was slaine. Of thirtie Giants at once destroyed by fire, by *Dumbos* Sonnes left, in reuenge of their Fathers death. There is yet a later example of certayne Giants of *Norway*, destroyed by authoritie of *Olaus Triggo* King of *Norway*, about the yeere of Christ 995. But the latest in the yeere 1338. *Magnus* the Sonne of *Ericus*, being King of *Norway*, that a Giant of fifteene Cubits was slaine by foure men: as it is found recorded in the Chronicles. Hereunto adde, that a certayne Prouince of *Norway*, [or bordering vpon *Finmauchia*, in ancient time was called *Risalande*, that is to say, the Land of Giants (for *En Rise*, and *Rese*, signifie a Giant) from whence *Iotum Heimar*, that is, the habitation of Giants is not farre dissonant (whereupon as yet, *En Iæt*, is said to be a Giant) that I may speake nothing heere of *Iotumland*: by which name, that which at this day is called *Iytland*, was sometimes called by our Countrey men, and very many other also, the Land of the *Cimbri*, or *Chersonesus*: the same name also being giuen it of *Kemper*, that is, fighting Giants of *Nephilheimar*, and *Karnephill*, else-where, and peraduenture by others shall be spoken, as also of the *Gothes*, and *Getts* (peraduenture also *Ietts*) and such like others. Moreouer, the remnant of the Giants came into *Island*, whose Names, Habitations, worthy Acts and Enterprizes, are sufficiently knowne, and before our eyes. Seeing therefore Giants first inhabited this our World; it is demanded, when, or whence they came?

Giants in the time of *Haraldus Harefayre* and since.

1338. a Giant reported of 15. Cubits.

Iutland.

Gilb. Genebrand. Chronol. Lib. 1. *The first Age*, sayth hee, *(from the Creation of the World vnto the Flood) seemeth to haue beene passed and spent within the mid-lands of the World, and that they came not to the borders of* Asia, Africa, *and* Europe. *Bodinus* sayth, that *Moses* wrote the Historie of the whole World (he meaneth inhabited) euen to the yeere of the World, 2450. And *Genebrand* againe, *Lib.* 1. *Chronol. pag.* 11. *As the first Originall of Mankind was in* Armenia, Mesopotamia, Chaldæa, *and* Syria: *and men before the Flood dwelt only there: so other Countreyes themselues, were first inhabited after the Flood.* Also *Genebrand* sayth yet further, *ibid. pag.* 35. *Before three thousand yeeres (for hee wrote in the yeere of Christ* 1597.) *almost all* Europe *was emptie, that is, about the yeere of the World* 2541. which is chiefly to bee vnderstood of the Northerne World, if of the rest of *Europe*. But hee said, almost, not altogether, that hee might not take away the migrations of the Nations then presently beginning after the yeere of the World 2500. wee doe not therefore tye the time (wherein this further *Europe* began to bee inhabited) to the yeere of the World 2500. But wee say, that that troublesome time wherein the Nations (and among them the Giants of *Canaan*) were cast out of their places and dwellings, and compelled to seek new habitations, euen in *Europe*, happened in this yeere; as was proposed by vs in the beginning. And that *Europe* receiued her Inhabitants from hence, among the Ancient, *Procopius* is my Author, a Writer borne at *Cæsarea* of *Palestina*, Collector of the worthy Acts of *Iustinianus*, about the yeere of the Lord 530. who to proue this very thing, allea-

Digitized by Google

geth diuers Writers of the Hiſtorie of the *Phœnicians*. The words of *Procopius* are theſe, in his fourth Booke of the Warres of the *Vandalls*, not in one place only, cited by *D. Cythræus*: out of the which, among other things, I gather mine opinion. *The* Hebrewes (*ſaith* Procopius) *after they returned out of* Egypt, *and remayned ſtill in the borders of* Palæſtina, Moſes *(who led them in their iourney) dieth: whom* Ioſua *the ſonne of* Nun *ſucceeded, who alſo brought the people into* Palæſtina, *and ſhewing ſtrength and courage far beyond the nature of man, obtayned the Country; whereby deſtroying Nations, he eaſily vanquiſhed many Cities, ſeeming inexpugnable vnto all. Then therefore all the Countrey vpon the Sea-coaſt, from* Sidon *euen to the borders of* Egypt, *was called* Phœnicia: *ouer which one long ſince raigned; as all witneſſe, who writ the ancient Hiſtory of the* Phœnicians; *here great multitudes of people dwelt: the* Gergaſites, Iebuſites, *and others named in the* Hebrew *Volumes, who when they ſaw the Armie of the ſtrangers to be inexpugnable, leauing their Country bounds went into* Egypt *next adioyning, and there increaſing in number and poſteritie, when they found not ſufficient, and conuenient place for ſo grat a multitude, they entred into* Africa, *where inhabiting very many Cities, they poſſeſſed all that Coaſt, euen vnto the Pillers of* Hercules, *vſing the halfe* Phœnician *Tongue and Dialect, and built the Towne* Tingen *in* Numidia, *moſt ſtrongly fortified in the ſituation thereof: where two Pillers of white ſtone are erected neere the great Fountayne, whereon in the* Phœnician *Language theſe Letters are ingrauen.* Nos ſumus *Cananæi, quos fugauit Ieſus Latro.* For *Ioſua* in the *Hebrew* is *Ieſus*. This *Procopius* writeth, to which purpoſe the Hiſtorians of the *Hebrewes* are cited by *Genebrand*: *Ioſua (ſaith he) partly expelled the* Canaanites; *and partly ſlue them. The remnant of theſe are reported to haue gone into* Germany, Sclauonia, *and the next adioyning Countreyes, &c. Into* Seder Olam, &c. *Alſo: And ſurely in that Age, that the whole Weſt was emptie and vnpeopled, ſaue that the Nations of the Eaſt came by little and little into the Countreyes thereof, it appeareth by the often infuſions.* This *Genebrand* writeth. And *Bodinus Method. Hiſt. chap. 9.* The *Canaanites* being caſt out of the Land of *Palæſtina*, by the *Hebrewes*, went into *Illyricum* and *Pannonia* (to wit, by thoſe migrations and remoues, which out of the place before alleadged by *Procopius*, wee vnderſtand) as *Rabbi Dauid Kimchi* witneſſeth at the end of *Abdias*.

Chap. 5. Of their Cuſtomes and manner of life.

The ancient *Iſlander* ſeeme to haue beene ordayned for great frugalitie, wherein firſt their habitations or buildings are briefly to be touched, next their food and manner of apparell: and laſtly, the reſt of the exerciſes of their common life.

Separate dwellings.

For firſt as touching their habitations, the *Iſlanders* haue followed the firſt and moſt ancient manner of dwelling. To wit, not by Cities and Townes; but as *Tacitus* ſpeaketh of the *Germanes* of his time, they dwelt aſunder, as a Field, as a Fountayne, as a Wood, as an Hill, or Valley, Shoare, or Bay of the Sea pleaſed them: Not only imitating here the example of the firſt Age of the World, but alſo of the latter Age: as the people of *Athens* and *Laconia*, in the beginning dwelt by Villages (as they write) not together or by Cities: and as in the time of *Tacitus*, about the yeere of Chriſt 120. with the *Germanes* there was no vſe of Mortar nor Tyles: (whereupon any man may rather judge the like concerning the Northerne World) ſo, nor after, with the *Iſlanders*, but they built their houſes with Timber and Turffe. Nor ſurely was it momentany worke which laſted but a while, nor yet deformed in ſhew, the walls were ſometimes made only of Turffe, ſometimes of rough Stones, adding Turffe in ſtead of Mortar: which afterwards they couered with workmanſhip of plankes, as alſo the raftering it ſelfe; eſpecially in more notable buildings. And ſo you might ſee the Roofe with the walls before mature old age ouer-growne with greene graſſe euery yeere, for you muſt vnderſtand, that the Roofe and walls were couered with greene Turfe. Windowes were made in the Roofe, ſeldome in the walls, and certayne Roofes not very high, ſuch as is reported the building of houſes with the Eaſterne people was wont to be. The Inhabitants had ſtore of Timber, caſt vpon the ſhoare by the ſwelling of the waues of the Sea; through the miraculous teſtimonie of Gods Prouidence, conſidering their Woods at home yeelding plentie, as I thinke only of Birches, were not ſufficient for their huge houſes: which yet were a great helpe alſo; with thoſe which the Inhabitants, as oft as they would, fetched out of bordering *Norway*, and peraduenture alſo out of *Groneland*: for the *Iſlanders* ſayled yeerely to both a long time. Euery one therefore had the houſes of their Villages almoſt joyning together on their ground: beſides the ſtalls of their Herds, ſeated ſome diſtance from the houſes themſelues. Alſo certayne piles of fuell, not altogether joyning together, to auoid the danger of fire: peraduenture alſo certayne ſtore-houſes, which being ſolitary, might better receiue the Ayre and drying winds.

Houſes.

Fewell.

Some maintayned their fires with home-growing Wood: others with clammie Turfe (as I thinke *H. Iunius* aptly calleth it) whereof there are two kindes with vs: the one ſoft and ſpongie, growing vnder the ſuperficies of the Earth; which wee call *Suordur*: Another more thicke, and therefore more weightie; which peraduenture wee may very well call digged Turfe, by the opinion of the ſame *Iunius*: becauſe it is taken out of the deepe Quarries or Mines, digged a great depth out of the Earth. And both kindes of Turfe (but this much more) muſt bee firſt baked with the Sunne and winde, before it be fit to burne. This latter kind we, as alſo ſome of the *Germanes* call it *Torff*: the inuentor whereof in the *Orchades* a certayne *Orchadenſian* Duke is ſaid to be; one *Einarus* the Sonne of *Rangnualdus* a *Norwegian* Duke of *Mære*, in the time

Turfes of two ſorts, both vſed in *England*; the one in fennie, the other in heath grounds.

Einarus the Inuenter of Turfe-fewel in the *Orcades*.

time of *Pulnicomus* King of *Norway*, who was therefore called *Torffeinarus*. He had a brother called *Rolfus*, whom *Crantzius* nameth *Rollo*, who possessed part of *France*, afterwards called *Normandie* of the *Normans*, or *Norwegians*. The Inhabitants chiefly wanted fewell to expell the distemper of cold, besides other vses sufficiently knowne: especially in the Winter time, when Hot-houses and Chimneyes are in vse, heaped together of Rocks and stone, through which the flame might easily breake forth, which as soone as through the force of the fire they were throughly heate, and when the Hot-house began now to leaue smoking, the cold parts of the Chimney were besprinkled with hote glowing stones: by which meanes heate vseth effectually to disperse it selfe throughout the whole house, which also is very well so preserued by the wall, and Roofe couered with Turfe. Stoues.

Yet lest the *Islanders* might seeme through meere pouertie or want of knowledge, to haue vsed rude buildings and poore houses; I can cal to remembrance certayne houses of an hundred and twentie sixe foot long, and some of one hundred thirie fiue, as I haue before declared concerning the buildings of *Ingulfus*: and some of one hundred and twentie feet in length, and sixtie feet broad: whereof we shall hereafter speake; some also, whose hollowed rafters, and boarded seeling of the walls carued by art, report the ancient Histories, of worthy and memorable Acts. They therefore incloſed their habitations built after this manner, with certayne spaces of fruitfull fields ordayned for tillage, which spaces through toylesome labour, they afterwards compassed about with a banke cast vp, to keepe out the Heards of cattle. Moreouer, sufficient huge pastures were assigned to euery Farme or plot of ground, diuided by certayne limits, or inclosures from others, whereof we shall speake in the eight Chapter. And euery Farme or Habitation for the most part, and in like manner euery plot of ground receiued the name from the first Founders: sometimes also from some other: so Mountaynes and Riuers as hath beene aduertized before; so that by this meanes the places themselues, euen by their names only declared to all posteritie their first Inhabitants, and *conquest*. Greater houses in *Island* in old times.

I proceede from buildings to their victuals, and tillage of the field and ground, which partly succeeded well to the first Inhabitants, to procure Corne and fruit from thence: but I know not whether euery where alike. Yet in the meane space, that *Hiorleifus* mentioned before, exercised his slaues in tillage of the ground: and one *Gunnerus* of *Lidarwalle*, sowing his Seed, was wounded by the enemie on the ball of the cheeke; and likewise *Hofebuldus Huitarneſsode* busily imployed in sowing the Seed, was slaine. Hence from the fields there are proper names of certayne places. Hence came that Law concerning the gathering together, and carrying of Corne after Harueſt (where they speake of the seruices which the Lawyers call *precatil.*) All which are manifeſt tokens of the tillage of the ground, amongst the first *Islanders*: which also, euen vnto this day, I heare, is practised by some Inhabitants of South *Island*, but with lesse increase: the ground and temper of the Ayre degenerating from the first goodnesse thereof after so many Ages: peraduenture also the care of the Husbandmen beeing lesse diligent, may bee the cause; since Corne comming from forreigne parts began more to be in vse. And because that tillage of the ground seemed in the beginning either not vsed of all, or lesse fruitfull for Corne, and all manner of graine; a peculiar manner of tillage of the ground presently began: whereby they compassed with dunge those fields or spaces, which I said they incloſed within their owne circuit, especially with kowes dunge, at the mowing of the best hay, to the intent they may the better feed the Heards; and especially the Kine, that they might yeeld the more plenty of Milke. Which tillage of the ground is yet retayned: and they only exercise the same for the most part, almost by mid-land Inhabitants: seeing such as dwel vpon the Sea-coast liue most by fishing: whither also those more remote or mid-land people yeerely send their Seruants to fish. Both Plaines, that is to say, the ground and the Sea, was to bee ploughed after a sort by the *Islanders*, for the comforts of life. To whom besides instead of victuals, Sheep, Oxen, Swine and Kiddes, sufficiently abounded: and also fishes of diuers kindes, besides Sea-fish out of the Flouds, Lakes and Riuers, they met with euery where: so that they might take them as it were out of a certayne weele, especially in that Age: also Milke and White-meate, with goodly plentie of Butter from the Heards of cattle. Besides Fowle in great number, some tame, as Hennes and Domesticall Geese, or Fowle of another kind liuing in the open Ayre, wandring also solitarily in Mountaynous places: which the possessors marked in the feet, that euery one might more easily demand his owne. They had others also not tame, which they tooke by certayne ginnes: as Geese and Duckes of the Medow, Partridges, and Swannes: and very many Sea-fowle, whose names and properties I doe not know. But Fowle of either kind tame or wilde, they either presented their Egges or themselues, or both, for the vse of men. Besides the naturall Drinke or pressed Whay of Milke (whereof the great plentie is so much the better, as the Milke is more excellent: so that halfe an ounce of water mixed with an ounce of Whay, doth not wholly diminish the taste thereof; but that it relisheth more of the Whay then of the water) they also boyled Barley Flowre, sometimes adding thereto the Honey Combe, or Water mingled with Honey: sometimes also a Liquour made of certayne Berries growing heere. Moreouer, the ancient *Islanders*, Victuals and Husbandry. Tillage anciently in vse. Beasts. Fowle. Fish. Drinke. Whay. Meade. Ale.

Digitized by Google

brought in drinke made of Corne, from forreigne parts, as alſo all manner of graine, and other things: for they were furniſhed with ſhips of their owne, wherewith they yeerely viſited at their pleaſure, *Denmarke, Norway, Suecia, Scotland, Saxonie, England*, and *Ireland*.

Our ancient *Iſlanders* wanted not honeſt Banquetings and meetings: and that ſurely without miſerable ſparing, whether we reſpect the number of the gueſts, or the time of the Banquets exhibited. For *Theodorus* and *Thornaldus*, brethren, and Citizens of *Hialtedal* of North *Iſland*, ſolemnizing the Funerals of their Father *Hialta*, made a Banquet for fourteene dayes together, of twelue hundred perſons, preſenting the men of better note with ſome gift. And an Inhabitant of Weſt *Iſland*, ſurnamed *Olaus Pa*, with his two brethren, were at the charge to banquet nine hundred men, euen for fourteene dayes ſpace; not ſending the chiefe men away without reward.

I find money was not vſuall with the *Iſlanders*, I meane, thoſe of ancient time: but ſiluer was weighed by the ballance: and bartering of Merchandizes was very commonly vſed. Moreouer, Rings of Gold, and Bracelets, were both often ſent for tokens of remembrance from Superiours to priuate men, or from one friend to another.

§. III.

Of their Politie, and Religion in old times.

Chap. 6. Of their Common-wealth & Religion.

THe *Iſlanders* going about to eſtabliſh an *Ariſtocratie*, or State of Nobilitie (conſidering they dwelt ſcattered in the Countrey, and not together) firſt diuided their Citie into Fourths or *Tetrades*, named from the foure principall quarters of the World, and diſtinguiſhed beſides by ſetting of bounds (ſuch alſo as was the Geographicall partition of the Iland it ſelfe, mentioned before at the end of the firſt Chapter) diuided into North, Eaſt, South, and Weſt quarter. And againe, they diuided the Fourths into Thirds, except the North quarter: For this, as it was larger then the reſt, was parted into Fourths. But theſe Thirds they ſubdiuided againe into their parts: ſome Tenths and others ſomewhat otherwiſe. For the which not finding a fit name, I haue retayned the proper name of the Countrey, that which with them is *Hreppar*, wee may counterfeitly call *Reppe*: vnto the which alſo we may imagine no vnapt *Etymon*, from the word *Repo*. For here was the firſt ἀρχὴ or ἀρχεῖα of them that executed any publike Office, for equitie either of opinion and judgement, and the equall ballancing of mindes, to be preſerued in the reſt of the Magiſtrates, worthily ought to begin there, vnleſſe any would rather thinke they had reſpect heere vnto *Reeb*, that is to ſay, Coards, with the which the diuiſion was made, after the moſt ancient manner of the *Hebrewes* themſelues. Euery *Reppa* regularly contayned twentie Inhabitants at the leaſt (for oftentimes it contayned more) limited by a certayne increaſe of the wealth of their Family, vnder which they might not be reckoned to the poorer *Reppes*; to the richer they might.

Moreouer in euery Third, as alſo in the Fourths of the North *Tetrade*, (which Iuriſdictions in times paſt they called *Pyng*, at this day alſo *Syſſa herad*) they appointed three more famous places conſecrated to the Seat of Iuſtice and Iudgements; beſides alſo dedicated to *Ethnicke* Sacrifices, which they call *Hoff*: we call them Holy Places, and *Temples*. Euery Chappell after the manner of this Countrey was ſumptuouſly built: whereof wee reade of two, of one hundred and twentie foot long. One in the Iuriſdiction of *Waſhdall* of North *Iſland*: the other in *Rialarnes* of South *Iſland*: and this ſurely ſixtie foot broad. Moreouer, euery ſuch holy place had a kind of Chappell adjoyning. This place was moſt holy. Heere ſtood the Idols and Gods made with hands, vpon a low ſtoole or a certayne Altar; about which the cattle which were to be ſacrificed vnto them, were orderly placed. But the chiefe and middlemoſt of the Gods was *Iupiter*, by them called *Por*, from whom theſe Northerne Kingdomes yet call *Thors* day *Thorſdagh*. The reſt of the Gods were collateral vnto it; whoſe certayne number, and names I haue not heard. Yet in the ancient forme of oath (whereof mention ſhall be made hereafter) three beſides *Thorus*, are ſpecially noted by name: *Freyr*, *Niordur* and *As*: whereof the third, to wit *As*, I thinke to be that famous *Odinus*, not accounted the laſt among thoſe *Ethnicke* Gods (of whom I made mention before) Synecdochically called *As*: becauſe hee was the chiefe of the people of *Aſia*, who came hither into the North: for in the ſingular number they called him *As*, which in the plurall they called *Æſer*, or *Æſer*. This *Odinus*, as aforeſaid, for his notable knowledge in Deuilliſh Magicke; whereby like another *Mahomet*, hee affected a Diuinitie after his death; was reckoned among the number of the Gods: from whom at this day, *Wedneſday*, is called *Odens Dagur*, the day of *Odinus*: whereupon iperaduenture, I ſhall not vnaptly call *Odin Mercurie*, as *Thor Iupiter*. Yet the ancients honoured *Odin* in the place of *Mars*: and ſuch as were ſlaine in the warres, they ſay were ſacrificed to *Odin*. And the companions, or Sonnes of *Odin* were *Freyr* and *Niordur*: who through

through the same artes which their Father or Prince *Odinus* practised, obtayned an opinion of Diuinitie. I haue before aduertised you, that chiefly in the North Countrey, Kings, after their death, are honoured for Gods. But the worshipping of them hath not yet come vnto the *Islanders:* wherefore we will speake nothing of them in this place.

Before that seate of the Gods placed in the foresaid Temples, stood an Altar erected, couered aboue with Iron, that it might not be hurt with fire, which must bee continually there. A Caldron also or brasen vessell was set vpon the Altar, to receiue the bloud of the sacrifices, with an holy water sticke or sprinkle, to bedew the standers by with the bloud of the sacrifices. The Altar. Holy water sprinkle.

Besides, on the Altar a siluer Ring was kept (or of copper) of twentie ounces, which being anointed with the bloud of the sacrifices, they who executed any office pertayning to Iustice, being now readie to take their oath, religiously handled while they were sworne. Foure-footed beasts, for the most part, were appointed for sacrifices; to bee conuerted to the food of the Sacrificers. Although in the meane space, I finde (a lamentable matter) that the blinde *Ethnicks* in the foresaid place of *Rialarus* vsed also humane sacrifices: where at the doore of the Temple, was a very deepe Pit, wherein the humane sacrifices were drowned; which Pit was called *Blotkelda*, from the Sacrifice. Holy Ring. Sacrifices. Humane-inhumane sacrifices

Also in West *Island*, in the Prouince of *Thornsthing*: in the middle of the Market place there was a round circle, into the which, men appointed to be sacrificed to the Gods, were gathered: who being violently smitten against an exceeding great stone set there, were cruelly slaine. The indignitie whereof, that stone is reported to haue declared many ages after, by the bloudy colour, which no shower of raine, or water, could euer wash away. An abominable crueltie surely, yet not wanting examples, deriued euen from the most ancient times. I omit those of later time, and found in the neare bordering Countries, as the humane sacrifices of the *French*, whereof *Cicero pro Fonteio*, speaketh: and also the custome of nearer bordering Countries. I doe not mention the *Roman* sacrifices: among which, *Luperca Valeria*, appointed to be sacrificed, was deliuered from present death by an Eagle. Let the παρθενοκλονία, and sacrificing of noble Virgins of the *Greekes*, not be remembred: with whom *Helena* was likewise freed from imminent perill of sacrificing, by the benefit of an Eagle. But who is it, that can be ignorant of *Benhennon* or *Gehennon* of the *Hebrewes*, and their crueltie farre greater then this, exercised not vpon slaues or guiltie persons, but euen vpon their dearest children? Concerning which matter I thought good to set downe the wordes of *Christoph. Adricomus Delphus*. *Gehennon*, saith he, *was a place in the suburbs of* Ierusalem *ouer against the East, vnder the Mountayne of Offence, neare the Fish poole of the Fuller, most pleasant, like* Tempe. *In this Valley stood a Pauilion, and the brasen Idol of* Moloch, *cunningly wrought in the shape of a King, hollow within; whose head resembling a Calfe, the other parts a man, had armes stretched forth to sacrifice children: who through the vehement heat of the Idol, were burned amidst those cursed embracements: For when by the fire put vnder in the concauity of the Idoll, it became all fiery, then the most wicked parents, with incredible crueltie, deliuered their dearest children, to wit, their Sonnes and Daughters to be burned within these detestable embracements. And least the miserable cry of the children in horrible torment being heard, might moone the bowels of the parents, the Priests of* Moloch *filled the ayre and skie on euery side with the harsh sound of Trumpets, and striking vp of Drummes, so long as the sacrifice continued. Whereupon also the place was named* Tophet, *which signifieth a Drumme.* This *Adricomus* writeth. And I aske any might thinke, that the common people onely of the *Iewes* became thus blinde; behold Kings: *Ahaz*, 2. *King.* 16. 2. *Paralip.* 28. *Manasses* there in the 21. and 33. where also the ancient custome of the Nations may bee alleaged. Deuill-circle. Of this place and the cries of the children confused with sounds of instruments and the vnnaturall horror, Hell was called *Gehenna* and *Tophet.*

But that crueltie, and those sacrifices of *Saturne* seeme not to haue continued long with the *Islanders:* and surely, they were vsed no where else, saue in the two places assigned. Nor yet of all the Inhabitants of that Prouince, where it was exercised. For it is reported of *Hiorleifus*, the companion of *Ingulfus* before mentioned, that he altogether abhorred the worshipping of Idols. And *Helgo* also surnamed *Biola*, descended from the Barons of *Norway*, an inhabitant of the Prouince of *Rialarues* fauoured the *Ethnick* Religion but a little: for he receiued an *Irish* man, a banished *Christian*, into his neighbourhood; one named *Ornulfus*, with his families (which came with him:) and did not onely receiue him, but also permitted him to build a Church consecrated to Saint *Columbe*, in the Village of *Esenberg*. A yong man also of the same Prouince, called *Bue*, destroied that most accursed Temple of humane sacrifices with fire, and burned all the Gods, although afterward it was repaired by the Proprietors.

Moreouer, *Torchillus* surnamed *Mane* (it may bee becaufe hee honoured the Moone, called *Mane*, and the rest of the Starres, with more Religion then the rest) a man of a very vpright life, and famous among the Nobilitie of *Island*, a little before the agonie of death, caused himselfe to bee set forth ouer against the Sunne, and openly admiring the workmanship of Heauen, and the whole World, commended his Soule departing when he was readie to die, to that God who created the Sunne, and the rest of the Starres. He liued about the yeere of Christ 970. The same, or the like may be reported of very many others, while *Ethnicisme* yet continued. As of *Hallerus* a certaine inhabitant of South *Island:* who, because hee followed not the worship of

Digitized by Google

Idols, was called *Godlaus*, that is to ſay, ἄθεος, as was alſo his ſonne *Helgo*.

Chap. 7. Of Magiſtrates and Courts.

The publique Offices, ſome of them are diſtinguiſhed from hence; others haue their originall from ſome other place. Thoſe which are taken from hence, are a *Reppagogie* (that I may deuiſe a word) and the adminiſtration of Prouinces, to wit, as that partition into *Reppes*, and Prouinces, ended as it were in ſundrie *ſpecies*, but both had ſome kinde of gouernment ioyned with it. For aſwell the *Reppagogi* (for ſo I may call the Maſters of *Reppes*) as the prouinciall Gouernours, proclaimed Aſſemblies, eſtabliſhed Iudgements (euery one in their Court) and puniſhed the guiltie: whereby it is euident that they alſo vſed the Law of Appeale in forren Cauſes (for in their own, euen priuate men had libertie of Appeale) ſo that I need not doubt that the *Reppagogi* alſo were comprehended vnder the Title of a Magiſtrate. Who is defined by *Bodinus* to bee *Hee, that hath part of a publique gouernment. Metho. hiſt. cap.* 16. I added, ſaith he, the word *Publique*, that it might be diſtinguiſhed from the gouernment of a Maſter, or a Father. If therefore any would deſire a more perfect diſtinction of a Magiſtrate, it ſhould be ſuch: A Magiſtrate is inferior, or ſuperior. The inferior is a *Reppagogie* or Gouernour of fiue men, which fiue inhabitants choſen for gouernment of the *Reppes*, vſed in euery *Reppe*, whom we are here compelled to call *Reppagogie*, and *The fiue men*, they call them *Hreppſtior ar*, appointed firſt for their wiſedome and integritie, next for the poſſeſſion of immoueable goods; vnleſſe concerning this latter, it ſeeme good to doe otherwiſe, by the common opinion.

A Magiſtrate, who.

Care of the Poore.

Moreouer, the Office of the *Reppagogi*, is limited by the care of the Poore. But that which the care of the Poore required, euery one within the bounds of their *Reppe*, endeuored to attaine by theſe two meanes. Firſt, that they ſhould prouide, that none ſhould bee ſuddenly brought to extreme pouertie: as much ſurely as conſiſteth in mans pollicy. Secondly, how they might prouide for ſuch as were become Beggars, to be maintayned by the common aide.

Lawes againſt Beggars.

And ſurely, they attempted the firſt part of their office three manner of wayes: firſt, by making Lawes againſt ſuch as through their owne fault (ſpeaking after the manner of men) became beggars: of which ſort are thoſe, *titul. de exheredandis, cap.* 3. *Parentibus mendicis natus, & ipſe hoſtiatim victum quærendo educatus (niſi morbo affectus) hæreditatem nullam adito &c.* that is to ſay, So long as he liueth from doore to doore: The 18. chapter of the ſame; and the firſt three yeere, next from the time of begging, *cap.* 20. Leaſt any vnder a feigned ſhew of vertue, ſhould deceiue and abuſe the Lawes. Alſo, *Altera lex de eiuſmodi mendicis impunè caſtrandis, etiamſi cum eorundem nece coniunctum foret, titul. de pupillis, cap.* 33. to wit, Leſt liuing from doore to doore, they might beget children like vnto the parents, which afterwards ſhould be a burden to the Commonwealth. Alſo, a third Law, *De ijſdem mendicis non alendis, titul. de mendicis cap.* 39. 63. (not repugnant to the commandement of the Apoſtle, *Hee that laboureth not, let him not eate*, 2. *Theſ.* 3.) and of not receiuing them, ſo much as into their houſe, *cap.* 45. of the ſame: a grieuous penaltie being inflicted, if any offended againſt this Law; in the ſame place.

By which Decree, what other thing I pray you is meant, then the cuſtome of the *Athenians* in times paſt? among whom the *Areopagita* inquired of the particular Citizens, by what art euery one liued; and prouided to haue them called in queſtion, who gaue themſelues to filthy and ſlothfull idleneſſe? What other thing, I ſay, then what was meant by the Decree of the *Maſſilienſes*, who forbad them to enter their Citie, who knew no arte whereby to ſuſtaine their life? and leſt any ſhould practiſe either vnprofitable or diſhoneſt artes: they gaue no place to Players, counterfeit Ieſters, laughing Companions, ſawcy Scoffers and Iugglers. To conclude, What other thing, then what the Decree of *Solon* meant, who ordayned a Law, that the children ſhould owe no thanks nor fauour to their parents, by whom they had beene inſtructed in no honeſt arte to get their liuing? The ancient World had ſo great and vehement prouocations vnto Vertue, euen with our Countrimen, which in this laſt age (ah, too degenerate) you may finde wanting with griefe; all theſe Conſtitutions being taken away. Wherefore the number τῶν ἀτάκτων (that I may vſe the word of *Paul*) is more abundantly increaſed, that is to ſay, of them, who being void of all diſcipline, liue infamous to themſelues, and grieuous and troubleſome to their common Countrey, in ſlothfull and filthy idleneſſe, inuerting and changing that order inſtituted by God himſelfe. The care of which thing, if the Magiſtrate would yet vndertake, ſurely many ſhould fare the better.

Inordinate men.

The ſecond meanes and way of preuenting pouertie, was a Law or Edict, concerning thoſe who deſired to be admitted into a *Reppe*, or become Citizens of *Reppes*. For none was to be receiued into a *Reppe*, vnleſſe hee had firſt gone vnto the ſolemne aſſembly of that *Reppe*, and deſired that he might be admitted; which they might not iuſtly denie, vnleſſe to one conuicted of theft, or otherwiſe of ſome other crime, or ſo poore, that therefore hee was vnfit for the *Reppes*, and that hee could not ſuſtaine himſelfe and his family without the common almes of the beggars. But if any could not be preſent at this aſſembly, hee was bound to intreat leaue of cohabitation of fiue inhabitants, hauing lands of their owne, and next vnto him, whom hee was about to goe vnto. If any of honeſt fame and rich in abilitie, would notwithſtanding goe into the *Reppes* without demanding leaue, he retayned his habitation, but yet was excluded from the Law and priuiledges of the *Reppes*. But if any wicked and diſhoneſt perſon had thruſt himſelfe in with-

Our tithings and hundreds in their originall, had ſome reſemblance thereof.

out

Digitized by Google

out leaue (although he had lawfully hired void and emptie land from the Lord and Owner ther-of) the ſame was to be expelled by force: *Titulus de Reppis cap.* 48. To the ſame purpoſe appertaineth that Edict concerning ſeruants taken out of the *Rep. cap.* 47. of the ſame.

The third Statute againſt pouertie was, concerning the reſtitution of priuate loſſe in the title recited before *cap.* 47. whereof an example ſhall bee giuen, firſt in houſes by chance conſumed by fire: and thoſe of foure ſorts. For if a Store-houſe, Kitchin, Bed-chamber, or Bed, and Chappel had been burned; the loſſe receiued was to be valued within fourteene dayes, by fiue of the next neighbours, as well of the houſe it ſelfe, as of the moſt neceſſary things contained therein: as of the prouiſion of victuals, apparell, and houſhold-ſtuffe daily vſed onely, properly belonging to the Maſter of the family, excluding other mens goods, as treaſures, and other things more precious; becauſe a man might bee a ſufficient Citizen of *Reppes* without theſe. Then the halfe part of the loſſe valued by the whole *Reppe*, was to bee reſtored within an appointed time, by Subſidies contributed in common, according to the abilitie of euery Inhabitant. Another example of this liberalitie enioyned by the Lawes, is, concerning Cattle deſtroyed by the Murren or Rot: for if the fourth part of any mans Cattle, or more dyed, the loſſe likewiſe being valued within fourteene dayes after the Murren ceaſed, was to bee releeued by common ſupplies for the halfe part, as the former was. But concerning both, there was a caution added, that this benefit ſhould not be performed the fourth time; leaſt any thing through too much careleſneſſe, and retchleſſe negligence, ſhould procure damage to himſelfe, *De Reppis cap.* 47. & 48.

The other part of the Office of the *Reppagogi* was imployed about the care of the poore, concerning the maintaining of ſuch with certaine contribution of almes as were now become beggers, either through ſickneſſe or age, or other caſualties not in their owne power: and alſo concerning the excluding of others, who ſhould not appertaine vnto the almes, and diuers caſes thereunto belonging. This almes was either priuate or publike. Priuate, for the which a law was made concerning the receiuing of the beggers, into the number of their family by their kindred, or couſins, one or more, inabled by a certaine increaſe of wealth limitted by law, and to bee maintained by certaine lawes, according to the degree of hereditarie ſucceſſion: For as any was next to the inheritance of the begger, if hee poſſeſſed goods, ſo was hee accounted the firſt that ſhould ſuſtaine him. But the next degree failing, or the ſame being poore, or not hauing wherewith to maintaine himſelfe and his, beſides that begger, that neceſſitie was impoſed vpon the ſecond, or third degree of kindred, &c. to be releeued. Lawes of Almes.

Publike almes was, as often as the kindred or couſins of the beggar failed, they liued by the helpe and reliefe of the *Reppes*: euery one was to bee maintained in his *Repp*; whereof there are preſcript conſtitutions of lawes, to wit, what beggars ſhould belong to what *Repp*, and what not; and concerning the driuing away and expelling of them by proceſſe of law, who appertaine not thereunto. Therefore the *Reppagogi* partakers of a publike Office limited with theſe bounds, proclaimed aſſemblies: Some ſurely both in time and place, ſtanding, or ordinary: others not ſtanding, or extraordinary; that is to ſay, as often as any new matter came pertaining to their charge to bee determined. Alſo priuate men might call extraordinary aſſemblies, to wit, they who had any cauſe worthy of an aſſembly and iudgement. But the ſigne and token of hauing an aſſembly (after the thouſand yeere, when they had now ſworne to the *Chriſtian* Faith, peraduenture before *Iupiters* Hammer and battle Axe, *Hamor pers*) was according to the religion of that time, a woodden Croſſe, which euery Inhabitant carryed to his neighbour at the day, place, and occaſion of the aſſembly proclaimed, of which ſigne intermitted or neglected, a certaine penaltie was inflicted. There therefore the *Reppagogi*, concerning the matters appertaining to their charge, conſulted according to equitie and right, determined them, and puniſhed the guiltie: There the guiltie perſon, if the iniury were priuate, was cited into the Court of Iuſtice by him that was iniured, euen without publike authoritie (which alſo wee reade was vſed by the *Spartanes:*) but if the iniury were publike (or if the partie iniured in a priuate offence would not cite the guiltie perſon, or could not) then was hee cited by ſome of the *Reppagogi*. Priuate men alſo had libertie and power to ſue the *Reppagogi* negligent in their Office, or otherwiſe iuiurious: where a penaltie of money fell to the Citizens of the *Reppes*: all which, and other things here belonging are handled, *in codice legum de Reppagogijs, cap.* 43. And concerning the inferiour Magiſtrates, that is to ſay, the *Reppagogi* onely, to wit, the firſt *ſpecies* of the Ciuill Magiſtrate.

Now followeth the ſuperiour Magiſtracie, which is diſtinguiſhed into Gouernours of Prouinces, and Iuſtices. They were each of them Gouernours in euery Prouince (which before I called *Thirds*, to wit, of euery *Tetrade*) executing as well the publike Offices of the Courts of Iuſtice, as of holy myſteries: or they were Interpreters of the Law, and matters of Religion: (although afterward the interpretation of the Law belonged more to the Iuſtices.) As with the *Romanes*, the *Ædiles* alſo vſurped part of the *Prætorian* Iuriſdiction. Among the ancient *Hebrewes* alſo the High Prieſts: alſo among the *Romanes* the High Prieſts were ſacrificers. Whereupon *Horatius carm. lib.* 3. *Ode* 23. *Victima Pontificum ſecures cernice tingit.*

Theſe Gouernours therefore, in that they had the charge of holy Myſteries, were Prieſts: in that they had to doe with the Court of Iuſtice and Iudgement, they were Iudges: we call them Noble-men

Noble-men in this place, and the state of the Common-wealth gouerned by their ouersight, an *Aristocratie*. The same are called by our Country-men *Godar*, and *Hoffsgodar*; from the Church or Temple (which is *Hoff*) as it were Ouer-seers of the Church, and their Office or Dignitie was called *Godord*; to wit, their name being next deriued from their *Ethnick* gods, which they called *God*: that euen by the name it selfe, they (who almost represented the Name and Office of the Gods) might bee put in minde of the Vertues, Wisdome, and Iustice, &c. requisite in such a Gouernour.

And that they might shew themselues such, I suppose the same place was appointed to iudgements of the seate of Iustice, which was ordained for Sacred Mysteries; to wit, at the foresaid Temples. And also therefore, because the place of holy Mysteries, was religiously thought fitter for *Augusta*, or the taking of good counsell, whereof there is especiall vse in the Court of Iustice. Moreouer, the Prouinciall Gouernours had their two-fold assemblies, as the *Rappagogi* had; yeerely or ordinary meetings, and proclaimed: or extraordinary, any necessitie requiring (those former assemblies, containing many dayes: *vid. Kaph. cap.* 8. *Torn. Log.*) and that, as it is likely, assembled by some signe of holding a meeting; as we haue already said of *Reppagogies*: which surely, what it was in times past, is not well knowne; vnlesse it were that, which afterwards, and yet remaineth in vse; the forme of a *Norwegian* axe of Wood, carried about after the same manner, among the prouinciall Citizens: as we said a little before, of the woodden crosse. This token of the Iudiciall Court, is called *Bod* in our language, which signifieth a message.

Moreouer, euery one paid some yearely tribute or reuenue to the Temples: whereof the Guardian or Ouerseer of the Church was the Collector: for speaking of holy mysteries pertaining to the Church, I call euery Noble man so. To him also came the penaltie of the Temple, and Court of Iustice prophaned: who likewise ought to maintaine the Temple, or keepe it in reparations, at his owne charge. Lastly, the necessity, and specially care to amend and make good whatsoeuer damage done vnto the Prouince, or to foresee and preuent it being imminent, vsing the helpe of the Prouincials, lay wholly vpon him: so that, for the destroying of Theeues and publique Robbers, you may finde some who were prodigall of their owne life. Contrarily, it is a lamentable case, how at this day we see it euery where come to passe, where they make a great conscience to condemne a notorious Theefe by the Law, or any other conuicted once or twice of any capitall crime, much more to put him to death. These are the Gouernours of Prouinces: The *Nomophylaces* or Iustices follow. The *Nomophylax* was the other kinde of the superiour Magistrate, somewhat later then these: of which sort, in the whole auncient Citie of *Island* (for we yet describe it) at one and the same time, there was onely one: who of pronouncing or deliuering the Law, was called *Logmann* and *Logsogumann*. For the Commonwealth began not suddenly, but by little and little to be framed: therefore the Prouinciall Lawes were first, of the like meaning, though peraduenture not euery where the same, before they had them compact, and gathered into one body: which when they attained, for the custody and preseruation of the same, they admitted trustie and wise men, whom I call *Nomophylaces*; and whose Office I shall very well describe in the words of *D. Nicolaus Cragius*, declaring the Office of the *Spartan Nomophylaces*. *The Office of the* Nomophylaces (*saith* D. Cragius Li. 2. cap. 6. de Repub. Lacedæm.) *was, as we perceiue by the matter it selfe, to haue charge of the custody and preseruation of Lawes, for the benefit of the Commonwealth; and that they should not suffer them to be abolished, changed, or taken away by any. Moreouer, they indeuoured that the force of the Lawes might not grow out of vse, or the memory thereof be forgotten: but they compelled the Magistrates to the often obseruation of them, and execution of their duties. And further, we may thinke these very men were the interpreters of Lawes, if peraduenture any thing doubtfully set downe, or hardly vnderstood, should come in disputation.* This *Cragius* writeth: the same which I doe ours; adding this, that they had some manner of authority in their power, together with the rest of the Nobility, of changing, or renewing Lawes, and also inlarging them, as it were Orators and Counsellours; the consent of the people being added. Therefore the *Nomophylaces* or chiefe Iustices, tooke nothing away from the forme of an *Aristocratie*: but were, as hath beene said before, Interpreters, and preseruers of the Law, armed with publique authority for this purpose, in whose power also the custody of the Booke of the Lawes remained.
